Settlements of all relevant structures shall be measured, recorded and shown in diagrams according to IS: 8009 – "Code of Practice for calculation of settlement of foundation".

d) Foundations at Different Depths

Foundations at different levels should be based beyond a load-spread angle of 30° (against the horizontal). Otherwise, the load influence (e.g. earth pressure)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[20]	25.09.2014

of the higher-level structures on the lower ones must be taken into consideration.

e) Replacement

If unsuitable soils are encountered below the grade slabs or basement floor, they are to be replaced by suitable layer wise compacted material down to the good bearing soil.

Materials and compaction method as well as quality control are described in clause 'Earth and Rockworks' of this section. Selected fill is to be employed below all grade paving and basement floors.

f) [Liquid Retaining Structures]

RCC water retaining structure like storage tanks shall be leak proof and designed as un-cracked section in accordance with IS: 3370 (Part 1 to IV) by working stress method. However the parts of such structures not coming in contact with liquid may be designed according to IS: 456.

Water channels and substructure of pump houses shall be designed as cracked section with steel stresses as per IS: 3370 (Part 1 to IV) by working stress method and limiting crack width to 0.2 mm.

All water retaining / storage structures shall be designed assuming liquid upto the height of wall irrespective of provision of any over flow arrangement. No pressure relieving devices shall be permitted in underground structures.

In all liquid retaining structures, PVC water bar shall be provided at each construction / expansion joint. The sequence of construction shall also be specified on drawings showing construction joints.

The walls shall be designed for a surcharge load of 2000 Kg/m² or actual whichever is higher.

Liquid Retaining Structure shall be checked for two loading conditions. With water inside up to operating level and no earth fill outside or water in one compartment and no water in the other compartment (where two compartments are provided).

Base slab / raft of all liquid retaining structure shall be designed to withstand the uplift pressure.]

g) Modification of the existing foundation (as required) for the new equipment supplied

The new equipment shall be supported on an RCC deck which in turn shall be supported over steel helical springs and viscous dampers. The steel helical springs and viscous dampers shall be supported over structural steel beams which in turn shall rest over columns. The columns shall be supported over foundation. The modification of existing foundation may involve partial to full

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[21]	25.09.2014

dismantling and reconstruction of new foundation as per design & constraints of space.

Precautions shall be taken not to disturb the basic building structure & other foundation and it shall be ensured that no excavation work is carried out beyond the founding level of existing nearby building/equipment. Any damage to adjoining structure/ foundation shall be rectified by the Bidder without any extra cost to Owner.

The contractor shall be responsible for maintaining all safety norms including the stability of existing structures. Any propping, shoring and under pinning required to this effect shall be put in place before the dismantling work is undertaken.

Wherever any existing concrete member is required to be partially dismantled, a coat of epoxy paint shall be applied to the exposed reinforcement and the cut surface of concrete shall be built up by providing 40 mm thick concrete with wire mesh.

h) Machine Foundations

General

Design of equipment foundation for block type machine foundation (if any) shall be done for the actual equipment loading data. The foundation arrangement shall be decided keeping in mind the existing structural arrangement and space limitation.

The design of machine / equipment foundation shall be as per IS: 456 and IS: 2974. The provisions of DIN 4024 shall also be followed for machine foundations. All machine / equipment foundations and structures subject to vibrations shall be suitably proportioned so that amplitude and frequency of the foundation / structures are within permissible limits.

Dynamic analysis shall be carried out to calculate natural frequencies in all modes including coupled modes and to calculate vibration amplitudes. Frequency and amplitude criteria as laid down by the relevant codes or machine manufacturers shall be satisfied. Minimum reinforcement shall be governed by IS: 2974 and IS: 456.

For the foundations supporting minor equipment weighing less than one ton or if the mass of the rotating parts is less than one hundredth of the mass of the foundation, no dynamic analysis is necessary. However, if such minor equipment is to be supported on building structures, floors, etc. suitable vibration isolation shall be provided by means of springs, neoprene pads, etc. and such vibration isolation system shall be designed suitably. All such foundation shall be separated from adjoining part of building and other foundations. Joints at floor/ slab shall be suitably sealed. All appendages to such foundations shall be reinforced suitable to ensure integral action.

The extent of foundation shall be based on the general arrangement of the equipment and the design requirement. However minimum width of any

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[22]	25.09.2014

foundation shall not be less than one meter. Water table has to be considered at finished ground level for design of all foundations.

Suitable arrangement shall be made for prevention of transmission of vibration from the proposed foundation to the nearby structure/ foundation/ paving slab.

All design calculations and drawings shall be submitted to Owner for approval.

In case any modification to any existing nearby structural steel bracing/support system/ concrete work is required, the contractor shall check the adequacy of the design of the existing structures for the new loads. Suitable modification to the existing structure as required shall be carried out by the contractor.

Loose pockets if any found below the foundation shall be removed and filled up with PCC of grade M10.

Loads

All static and dynamic forces / loads which equipment supplier considers applicable shall be considered for analysis and design of machine foundations.

Foundation Sizing

The outline plan dimensions of foundations as given by the machine supplier will be adopted. The height of foundation will be selected after taking into consideration soil strata and operating level of the machine. The eccentricity of common CG of machine and foundation with respect to the centroid of base area should not exceed 5 % of the corresponding base dimensions of foundation. Partial contact between the foundation and soil strata shall be considered wherever applicable. The footing will be checked for minimum contact area of 80 % and maximum bearing pressure will be calculated for the actual contact area only.

Analysis and Design

The minimum grade of reinforced cement concrete shall be M25, unless specified otherwise.

The analysis and design of machine foundations will be carried out to ensure the following:

- Compliance with the manufacturer's requirements and relevant standards
- No resonance phenomenon of a disturbing nature to machine operation should exist at the normal running speed
- Calculations to be performed for dynamic as well as static cases for reinforced concrete block type pedestal
- Soil bearing capacities
- Deep foundation capacities
- Lateral earth pressures
- Allowable settlements

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[23]	25.09.2014

- Structure, equipment and environmental loadings
- Equipment performance criteria
- Access and maintenance requirements
- Temporary construction loadings

The foundation will be designed for the most critical combinations of forces and moments, resulting from all possible combinations of the various loading from the equipment system. The foundation sections will be sized and reinforced adequately for bending moments and shear stresses and uplift.

The foundation shall be checked for overturning, sliding and uplift as per relevant IS Codes. The foundation will be checked for overturning with minimum and maximum vertical loads.

For analysis of machine foundation following data will be furnished by the equipment manufacturer:

- Loading diagram showing static and dynamic loads and points of application of loads
- Operating speed of machine
- Weight of rotating parts, maximum eccentricity of rotating mass from the geometric axis of rotation
- Location of C.G. of machines in all three axis
- Mass moment of inertia
- Allowable amplitude / velocity of vibration at machine bearing points
- Temperatures at various areas during operation

While designing following aspects shall also be taken care of:

- All dynamic foundations shall be isolated from building foundations. The isolation gap shall be of minimum 25 mm.
- Natural frequencies of structures and components shall be away from running speed of equipment by at least 20 % generally but for important ones it shall be away by at least 30 %.
- For design of foundation of large fans etc., provision shall be kept in the foundation for addition of mass / area for retaining of the foundations if required at a later date

However following minimum factor of safety shall be followed:

- Factor of safety against overturning due to wind, seismic or other lateral loads shall be 1.5
- Factor of safety against sliding shall be 1.5
- Factor of safety against uplift due to hydrostatic forces shall be 1.2 and due to any other loads shall be 1.5. Uplift check shall be carried out during construction stage also.

For miscellaneous machines, most suitable type of foundation shall be provided. Foundation for pumps, and minor rotating equipment etc., are usually in the form of solid block foundations, resting on the ground or on a floor of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[24]	25.09.2014

building. At such machine supports, floor may be thickened and extra reinforcement may be provided. Also the machines, which are almost vibration free, light to moderately heavy, may be supported in the above manner. Rubber or neoprene pads under some of these machines to reduce transmission of vibrations to the supporting floor will be provided if required.

All block foundations resting on soil shall be designed using the elastic half space theory. The mass of the RCC block shall not be less than three times mass of the machine. Dynamic analysis shall be carried out to calculate natural frequencies in all modes including coupled modes and to calculate vibration amplitudes. Frequency and amplitude criteria as laid down by the relevant codes or machine manufacturers shall be satisfied. Minimum reinforcement shall be governed by IS: 2974 and IS: 456. Suitable vibration isolation shall be provided by means of springs, neoprene pads, etc. and such vibration isolation system shall be designed suitably. All such foundation shall be separated from adjoining foundations.

Temperature Control of Concrete

The temperature of fresh concrete shall not exceed 25°C when placed. For maintaining the temperature of 25°C in the top decks of machine foundations, crushed ice shall be used in mixing water.

Non-Shrink Grout for Equipment Foundations

Special non-shrinking grout of approved make shall be provided in strict accordance with the manufacturer's instructions / specifications. Ready mix non-shrink grout of GP2 brand or equivalent, of approved make shall be used for base grouting of major rotating equipments.

i) Increase in Stresses

Where stresses due to wind (or seismic) and temperature are combined with those due to other loads, the allowable stresses in concrete and reinforcement steel shall be increased by 33.33% in case of working stress design.

Bearing capacity of the soil shall be allowed to be increased by 25 % under seismic/ wind load condition.

j) Elevated Foundations

Design of all equipment foundations shall be done for the actual equipment loading data. The foundation arrangement shall be decided keeping in view the existing structural arrangement and space limitation. Adequacy of the design of the existing structures, for the new loads shall be, checked by the contractor. Suitable modification as required shall be carried out by the Contractor and complete design for the same shall be furnished to owner for approval. Where ever new columns/foundation is required the same shall be designed and constructed by the contractor as per relevant Indian Standard Code.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[25]	25.09.2014

For the foundations of the all equipments details static and dynamic analysis shall be done. The static analysis shall include all operating condition, load cases and abnormal loads like short circuit, loss of blades & unbalance and seismic forces as per IS:1893. The dynamic analysis shall consist of free vibration analysis and forced vibration analysis. Design of RCC foundations/as well as structures, checking of design of existing structure shall be carried out by working stress method. A fatigue factor of 2.0 shall be considered for dynamic forces.

The foundation general arrangement shall be such that the spring units are placed over the structural steel beams. The isolation efficiency for steel helical springs and viscous dampers shall be at least 90%. The vibration amplitudes at the bearing locations shall not exceed the limits as per VDI 2060 or limits specified by the machine supplier whichever is more stringent. The ratio of actual spring supported weight to the nominal spring capacity shall not exceed 0.80. At least 3% to 5% of critical damping shall be provided in the form of viscous dampers.

The grade of concrete for the top deck shall be M35.

k) Steel Helical Springs and Viscous Dampers

The supporting structural beam and columns shall be designed for the loads transferred through springs and all other loads such as piping loads, seismic loads as per IS:1893. The stiffness of the beams supporting the springs shall be at least 10 times the stiffness of the springs supported over it along both vertical and horizontal direction.

The scope of work shall be deemed to include all activities which may not have been explicitly mentioned but are reasonably implied for the successful completion of the work for which these specifications are intended.

Scope of work of the bidder shall include manufacturing, testing, supply, transport to site, pre-stressing, erection, supervision of erection, release of pre-stress, alignment, commissioning etc of Steel helical springs and viscous dampers:

- Steel helical spring units and viscous dampers along with viscous liquid including associated auxiliaries for installation of the spring units and dampers like steel shims, adhesive pads, etc.
- Frames for pre-stressing of spring elements.
- Suitable hydraulic jack system including electric pumps, high- pressure tubes etc. required for the installation, alignment etc, of the spring units. One set of extra hydraulic jacks, and hand operated pumps shall also be provided.
- Any other items which may be required for the complete installation and satisfactory commissioning of the spring system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[26]	25.09.2014

Supervision of complete erection and commissioning of the steel helical springs and viscous dampers including pre-stressing of elements, placing of elements in position, checking clearances on the shuttering of the RCC top deck, releasing of pre-stress in spring elements and making final adjustments and alignments after machine installation etc.

The steel helical springs and viscous dampers supplied should be of proven make. The bidder or his sub-contractor should have designed spring supported machine foundations, manufactured, supplied and installed steel helical springs and viscous dampers (conforming to DIN 2096 & DIN2089) and viscous dampers (providing damping resistance in all three planes) for not less than 2 (two) machine foundations of heavy rotating machine systems.

The damper units or spring-cum-damper units should be of viscous type offering velocity proportional damping. The damper units should be suitable for temperatures ranging from 0 to 50°C. The damping resistance of individual damper units should be such that the designed damping can be provided using reasonable number of units.

All design calculations and drawings shall be submitted to Owner for approval.

5.3. Stability of Structures

Design shall be checked against buoyancy due to the ground water during construction and maintenance stages for structures like underground storage tanks, pits, trenches, basements, etc. Minimum factor of safety of 1.2 against buoyancy shall be ensured considering empty condition inside and ignoring the superimposed loading. For the purpose of calculating downward load due to any overburden, only the mass located vertically above the projected area of the base slab shall be taken in to consideration.

All building sub-structures including pump houses shall be checked for sliding and overturning stability during both construction and operating conditions for various combination of loads. Factor of safety for these cases shall be taken as mentioned in IS: 456 and other latest relevant IS codes. However following minimum factor of safety shall be followed:

- Factor of safety against overturning due to wind, seismic or other lateral load shall be 1.5 minimum
- Factor of safety against sliding shall be 1.5 minimum
- Factor of safety against uplift due to hydrostatic forces shall be 1.2 and due to any other loads shall be 1.5

Stability of the structure shall also be investigated for loading conditions during construction, repair or other temporary measures. Lower factor of safety may be used for such loading conditions as per relevant IS codes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[27]	25.09.2014

In cases where dead load provides the restoring force, only 0.90 times characteristic dead load shall be considered. Imposed loads shall not be considered as restoring force.

5.4. Minimum Thickness of Concrete Structural Elements

The following minimum thickness shall be followed:

Table 2.5
Minimum Thickness of Concrete

S.No	Description	Thickness, mm
a)	Suspended floor / slab / walkways /canopy slabs, etc.	125
b)	Ground floor slab (non-suspended)	150
c)	Water Retaining slabs / walls	200
d)	Cable/pipe trenches/underground pits/Laundry walls and base slab	125
e)	All footings (including raft foundations)	300
f)	Parapets	125
g)	Sunshades	75 at edge
h)	Precast louvers / fins	50
i)	Precast trench cover slabs / floor slabs / louvers	75
j)	Paving	100
k)	Basement walls and base slab	200
l)	Underground tank:	
	Below ground water table	200
	Above ground water table	150

From fire resistance point of view minimum cover to reinforced concrete members shall be as per Table 16A of IS: 456.

5.5. Minimum Heights for Pedestal of Steel Columns

Pedestals to Steel Columns for building structures:

Top of RCC foundations (pedestals) shall normally be kept at a minimum [250 mm] above finished floor level (FFL) unless specified otherwise. Foundation levels for columns shall be decided to accommodate underground services, pits, trenches, etc.

Stair and ladder pedestal shall be kept [200 mm] above the finished floor level.

Pedestals to Steel Columns for Equipment structures:

a) Equipment in open area : as required [(300 mm min)]

b) Equipment in covered area : as required [(150 mm min)]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[28]	25.09.2014

c) Structures and equipment

Supplied by vendor : as per vendor's data subject to minimum as specified above.

5.6. Minimum heights for encasement of steel columns

In case the top of pedestal is kept at a lower level so that the column base plate together with gussets and stiffeners remain below finished floor level (FFL) the column bases as well as the column sections shall be encased in concrete above FFL as per following:

- a) Open area : [300 mm] above paved level
- b) Covered area : [150 mm] above FFL

5.7. Concrete Works

i) General Description, Proportions and Mixing

Mix Design

At the commencement of the contract the Bidder shall make preliminary tests to determine the proportions by weight of cement, fine aggregates, coarse aggregates and water necessary to produce required grades of concrete. The mix proportions shall be selected to ensure that workability of the fresh concrete is suitable for the conditions of handling and placing and when concrete hardens, it shall have the required strength, durability and surface finish. The Bidder shall get approval of Owner/Consultant to such proportions before he starts concreting. However, such approval shall not relieve the Bidder of his responsibility to produce concrete having compressive strengths as laid down in the foregoing Table.

No departure from the approved proportions will be permitted during the works unless and until the Owner/Consultant gives written authorisation for any change in proportion. The Owner/Consultant shall have authority at any time to check whether the mixing of concrete is being carried out according to the approved proportions.

For the all major and important R.C. works and for all special works, the design of mixes shall be made by the Bidder at his own cost, for each grade of concrete as well as for various workability. The design of mixes shall be made according to I.S. 10262 or any other approved standard methods.

The concrete made by designing the mix is termed hereinafter as "Design Mix Concrete".

The cement content for various grades of concrete shall be based on design mix. However, irrespective of requirement of cement found out from design mix, cement content of concrete shall not be reduced below the quantities specified as under.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[29]	25.09.2014

Grade of concrete	Minimum cement content per Cu.m finished concrete
M-15	290 kg
M-20	320 kg
M-25	380 kg
M-30	not less than 400 kg
M-35	not less than 400 kg

Water Cement Ratio

Where a particular water cement ratio is stipulated in the design or drawing along with the characteristic grade of concrete the design of mix shall be carried out by adjusting the other variable factors to obtain the characteristic strength of concrete with stipulated water cement ratio.

In the structures where the impermeability and shrinkage of concrete have an important bearing on the durability and serviceability of the structures, such as water retaining structures, basements, underground premises, tunnels, pump houses, pre-stressed structure, thin precast members etc. the water cement ratio shall be kept low and preferably not exceeding 0.45.

The water cement ratio, as achieved in the Mix Design, or as specified in the drawings shall be adhered to strictly and shall not be varied without the permission of the Owner/Consultant.

Workability

The workability of fresh concrete shall be such that the concrete is just suitable for the conditions of handling & placing so that after compaction it becomes completely consistent and homogeneously surrounds all the reinforcement and completely fills the formwork.

The workability of fresh concrete at the place of batching/mixing shall be measured by compacting factor test and at the place of disposition by means of slump test. During the finalisation of Trial Mixes, the relationship between compacting factor and slump test shall be established for each grade of concrete as well as for various levels of workability. The workability tests shall be carried out in accordance with IS:1199.

Normally, in the condition of low water cement ratio as well as for medium/high workability, the workability shall be achieved by increasing the cement content, in consistent with added water.

In cases where the cement content is to be limited to reduce the heat of hydration, and the water/cement ratio is also to be kept low to reduce the permeability or due to other requirements the desired workability may be achieved with use of limited doses of plasticiser or air entraining agent. In such cases the method of mixing and dosage of the plasticiser/air entraining

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[30]	25.09.2014

agent shall be according to the manufacturer's specification and with the approval of the Owner/Consultant.

The usual limits of consistency for various types of structures are given below:

Limits of consistency

Degree of Workability	Slump in mm with Standard - Cone		Use for which concrete is suitable as per IS : 1199
	Minimum	Maximum	
Very low	0.0	25.0	Large mass concrete structure with heavy compaction equipment, roads and the like.
Low	25.0	50.0	Uncongested wide and shallow R.C.C structures
Medium	25.0	75.0	Deep but wide R.C.C structures with congestion of reinforcement and inserts
High	75.0	125.0	Very narrow and deep R.C.C structures with congestion due to reinforcement and Inserts

Durability

The durability of concrete, depending on the exposure condition, is to be taken into account while designing the mix. For given aggregates, the cement content should be sufficient to make sufficiently low water cement ratio and Appendix A of IS: 456 shall be taken as guideline for durability considerations.

Minimum fire rating of 2 hours shall be considered where fire hazard is expected and accordingly minimum cover shall be taken as per Table 16 A of IS: 456. For structures below ground level which are exposed to sulphate attack, requirement of cement shall be as per Table 5 of IS: 456. Intermixing of different grades of concrete in the same structure shall not be allowed in a particular element.

Mix design concrete shall be used for all areas other than plain concrete work used for lean concrete, screeds and backfill.

The following minimum grades of concrete as per IS: 456 shall generally be used for the type of structures noted against each grade.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[31]	25.09.2014

Table 2.6
Grades of Concrete

Concrete mix/Grade	Type of structure
1:5:10	Fill concrete
1:4:8	Blinding layer below foundations, trenches and underground structures, foundation below brick wall, etc. Minimum thickness of layer shall be 75 mm
M15	Plinth protection work around buildings
M25	Base plate encasement, encasement of structural steel work, all RCC paving work, ground floor slabs, cable and pipe trenches, precast concrete work etc.
M30	All RCC structures and equipment foundations, super structure, grade beams, columns, roof slabs and all underground RCC structures, cable and pipe rack foundation, pedestals, etc. water retaining structures below and above ground, TG foundations, etc.

Inter mixing of different grade of concrete in the same structure shall not be allowed normally.

ii) Trial Mixes

- Before concreting commences, the Bidder shall, at his own expense, make trial mixes to determine the mix proportions required to produce the strengths specified for each class of concrete and for each degree of workability required to allow placing, transporting and compacting of the concrete with the equipment he proposes to use in any particular situation. Only materials which the Bidder intends to use for concreting (including all admixtures) shall be used in the trial mixes.
- Test cubes from trial mixes shall be made and tested in accordance with IS: 516.
- As per IS: 456 and IS: 516, three separate batches of concrete should be made, workability of each batch determined and three test cubes shall be made from each batch for each age (e.g. for 7 and 28 days) at which tests are required. The strength shall conform to target mean strength as per IS: 456 – Requirements for design mixes.
- The appropriate strength requirements may be considered to be satisfied if none of the strengths of the cubes is below the required characteristic strength and if the average strength of the nine cubes is not less than recommended by IS: 456 and IS: 516, trial mixes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[32]	25.09.2014

iii) Quality and Testing

Not more than 5% of the test results may fall below the 28 days specified strength. Making and curing of test specimens shall be in accordance with relevant IS: 456, IS: 516 and IS: 1199.

All mixes can only be placed following approval by the Owner/Consultant. The mean strength shall exceed the characteristic strength by a margin of 1.65 times the standard deviation expected from the batching plant. However, no standard deviation less than 3.5 N/mm² shall be used as a basis for designing a mix.

iv) Trial Mixes and Field Tests

Sufficient laboratory trial mixes shall be prepared to show that concrete complies fully with the specified performance criteria. The following tests are to be included:

- Air content < 1%
- Slump: Piles 170 + 25 mm, regular work 80 + 20 mm as per IS: 1199
- Fresh and hardened concrete densities
- Field trial mixes shall be carried out under full-scale site conditions as per IS: 4925 (for structural concrete only).
- Where directed by the Owner/Consultant, concrete incorporating reinforcement details shall be cored to assess stratification of mixes. Cores of 150 x 200 mm (diameter and length) shall be used.
- Each trial mix shall have 9 x (150 x 150 x 150 mm) cubes taken to measure 24 hours/7 days and 28 day compressive strengths. These trials shall be run for three consecutive days (for structural concrete only).
- At least 3 x sets of field trials shall be tested according to the provisions laid down in laboratory testing.
- The average 28 day characteristic strength for trial mixes shall be as per IS: 456. Failure to comply shall result in the mix having to be re-designed.
- All test results shall have to be complied before approval can be given.

v) Consistency of Concrete

The amount of water used in the concrete shall be adjusted as required to ensure such a consistency that it can be readily transported, placed and compacted without segregation of the materials or bleeding of free water at the surface. Addition of water to compensate for stiffening of the concrete before placing shall not be permitted. Consistency of the concrete shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[33]	25.09.2014

checked by slump tests measured in accordance with IS: 1199 and shall not exceed the values given in clause 7.1 of IS: 456-2000.

vi) Mixing of Concrete

- The cement and aggregate shall be thoroughly mixed in a batch-type pull mill mixer. The capacity of the mixer shall not be less than 1 (one) cubic meter and the total capacity of the batching mixing plant shall be such to accommodate the various concrete quantities to be cast in a continuous way and shall comply with the requirements of IS: 456, IS: 1791 and IS: 12119.
- The water shall not be added until all the aggregate and cement are in the drum. Mixing shall continue until the concrete is uniform in colour and for not less than 2 (two) minutes after all the materials and water are in the drum.
- Partly set or excessively wet concrete shall not be used. No concrete shall be mixed by hand.

vii) Laboratory

The Bidder shall establish and maintain a field laboratory on the site and this laboratory shall be available at all time to the owner.

The laboratory must have qualified technicians to carry out all tests and must be adequately equipped to ensure that all necessary testing work can be carried out in compliance with the standards.

5.8. Strength of Concrete

i) Testing of fresh concrete by means of test cubes

- a) All test cubes shall be made and tested for compressive strength in accordance with IS: 456, IS: 516 and IS: 1199.
- b) The minimum required strength for different classes of concrete shall be as shown in clause "General description and proportions and mixing" here above.
- c) The grade of concrete required will depend partly on the particular use and the characteristic strength needed to provide the structure with adequate ultimate strength and partly on the exposure conditions and the cover provided to any reinforcement.
- d) A minimum of four test samples (of six test cubes each) shall be taken on each concreting day (from the same mix) and for at least each 40 m³ of concrete mixed. At least one sample shall be taken for each shift.
- e) For columns, beams and cantilevers seven (7) cubes for every 15 m³ of concrete poured shall be taken. The concrete for test samples shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[34]	25.09.2014

taken directly from the concrete mixer and shall be handled (vibrated etc) under similar conditions to those prevailing during the construction. The moulds for the test cubes shall be made of steel. Tests shall be carried out in an approved laboratory.

- f) The strength level of each type and each strength concrete will be evaluated separately and the concrete strength will be considered satisfactory if:
- Compressive strength: The concrete shall be deemed to comply with the strength requirements when both the following conditions are met:-
 - The mean strength determined from any group of four consecutive test results complies with the appropriate limits in column 2 of table 11 of IS: 456.
 - Any individual test result complies with the appropriate limits in column 3 of table 11 of IS: 456.
 - Flexural strength: When both the following conditions are met, the concrete complies with the specified flexural strength:-
 - The mean strength determined from any group of four consecutive test results exceeds the specified characteristic strength by at least 0.3 N/mm².
 - The strength determined from any test result is not less than the specified characteristic strength less 0.3 N/mm².
- g) If the results are less than those specified, the Owner must suspend all concreting work and order further tests. Any concrete found not to comply with the specification shall be broken out and replaced to the satisfaction of the owner.
- h) The Bidder shall pay all costs incurred in making, curing, delivering and testing of concrete cubes.

ii) Testing of concrete in structures

- a) The types of tests described hereinafter are applicable to the finished parts of the structures. They may be used in routine inspection and for quality control.
- b) Type of tests:
- Cutting cores: The procedure used shall comply with the requirements of IS: 516 or an approved equivalent standard.
 - Gamma radiography: The testing shall be carried out in accordance with the requirement of IS: 13311, part 1 or equivalent.
 - Ultrasonic test: Such tests may be used to obtain approximate indications of the strength of the concrete in the structures (IS: 13311, part 1).

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[35]	25.09.2014

- Electromagnetic cover measuring devices: Such tests may be used to verify the position of the reinforcement and shall be in accordance with the requirements of design (IS: 13311, part 1).
 - Rebound hammer test: Such tests may be used to obtain approximate indications of the strength of the concrete (Ref. IS: 13311, part 2).
 - Load tests of structures or parts of structures: If the results of the above mentioned check tests show that the quality of the materials is inadequate or if other defects are revealed, the owner may require a loading test to be made.
- c) For the purpose of testing floors, roofs and similar structures and their supports, the test load shall be equivalent to the sum of the characteristic dead load and one-and-a quarter times (1.25 times) the characteristic imposed load for a period of 24 hours which the works or part thereof to be tested have been designed.
- d) Wherever certain procedures for testing of parts in structures are required by standards or codes of practice, these are to be followed. All tests must be conducted in the presence of the Owner/Consultant.
- e) If within 24 hours of removal of the imposed load, the structure does not recover at least 75% of the deflection under superimposed load, the test may be repeated after a lapse of 72 hours. If the recovery is less than 80%, the structure shall be deemed to be unacceptable.
- f) If the result of the test is not satisfactory, the Owner/Consultant shall instruct that the part of the works concerned be taken down or cut and reconstructed to comply with this specification. The Bidder shall at his own cost take down or cut out and reconstruct the defective work.
- g) The Owner/Consultant may require other tests to be made. Number of samples, tests and types will be as per Owner requirements.
- h) All the costs for the above mentioned tests shall be borne by the Bidder.

5.9. Materials

a) Storage of materials

All materials shall be stored and handled in a manner that will prevent contamination and/or deterioration. Storage of materials shall conform to IS-4082 "Recommendation on stacking and storage of construction materials and components at site". Deteriorated and/or contaminated material shall not be used for the concrete and shall be removed from the site at the expense of the Bidder.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[36]	25.09.2014

b) Cement

OPC/PPC Cement of reputed make conforming to relevant codes, shall be used for all Concreting works and the certificate of manufacturer shall be furnished with each batch. Cement used shall be ordinary Portland cement unless the chemical nature of the soil warrants special cement for structures below ground level.

Sampling and Testing of Cement

- All deliveries of cement to the concrete supplier shall be accompanied by a certified mill test report and shall include all of the physical and chemical properties as required by relevant IS: 8112 for grade 43 and IS-12330 for sulphate resistant cement.
- The manufacturer's test certificate will normally be accepted as proof of compliance with the specification, but the Owner may order further tests of a character specified in the appropriate Indian standards. The confirmatory tests are to be conducted by a recognized quality control organization. The Bidder shall bear all expenses required for the preparation, dispatch, and tests of the samples. In case the results of such tests show any sample to be inferior to specifications, the whole consignment from which the sample was taken shall not be used and shall be immediately removed from the site.

Delivery and Storage of Cement

- The following information shall be provided for all cement shipments (either whole or part) which are intended for delivery to site: date of manufacture, date of original loading, destinations en-route, date of unloading, intended date of delivery to site.
- The Bidder shall obtain and provide to the owner the manufacturer's average test certificate for each consignment of cement to the works.
- The certificates shall be provided before the consignments are required for use and shall show the chemical composition and physical properties determined in accordance with the relevant standard.
- Samples shall be taken from each consignment of cement and tested as directed by the owner in an approved independent laboratory.
- Consignments shall be used in the order in which they were delivered.
- Bagged cement shall be stored in a weatherproof building having dense impervious bituminous or concrete floors which shall be kept swept clean at all times. The storage arrangements shall be fully completed and approved by the owner before any cement is delivered to site.
- Each consignment of cement shall be separately stored for ease of access, identification, inspection and sampling. Sufficient stocks shall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[37]	25.09.2014

be maintained on site to ensure the proper progress of the works and the stock holdings shall be to the approval of the owner.

- No cement from any consignment shall be used in permanent works without the approval of the owner.
- Cement which contains air-set or hardened lumps, re-powdered air-set material, foreign matter or which has been contaminated or is otherwise unsatisfactory in the opinion of the Owner/Consultant will be rejected and shall be removed from site without delay.
- The Bidder shall be responsible for satisfying himself that the performance characteristics of cement are not such as to necessitate excessive cement content or be likely to cause or accentuate any undesirable properties in the fresh or hardened concrete notwithstanding apparent compliance with this specification.

c) Reinforcing steel

General

Reinforcing steel used in reinforced concrete shall comply with the following standards:-

Deformed bars shall be of grade Fe500 and conform to IS: 1786.

Mild steel shall conform to IS: 432.

Mesh reinforcement shall conform to IS: 1566.

Binding wire

Binding wire for general use shall be annealed wire 16/18/20 BWG conforming to IS 280. The number of strands shall be as per IS specification.

Reinforcement supports

- Reinforcement supports shall include all spacers, chairs, ties, slab bolster, clips, chair bars, and other devices for properly assembling, placing, spacing; supporting, and fastening the reinforcement.
- Spacers shall be cast from concrete of the same quality as that in which they will be embedded.
- Concrete block spacers shall be cast in metal moulds with an approved means of separating blocks and of ensuring that the blocks are of the proper size.
- Binding wire shall be incorporated into the blocks to enable them to be securely attached to vertical or horizontal bars and the Bidder shall demonstrate both that the blocks are of the requisite strength and that the means of attachment to the reinforcement are adequate.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[38]	25.09.2014

Certificates

Each consignment of steel reinforcement shall be accompanied by a test certificate from the manufacturer showing that the steel has been tested and analyzed and the date of such tests and analyses and that such tests and analyses comply in all respects with the standards. The following tests shall be carried out on reinforcement:-

- Cast analysis
- Carbon equivalent value
- Tensile strength, yield stress, elongation
- Bend test
- Bond classification
- Chemical analysis

Stock of reinforcing steel

In order to ensure due progress of the works, the Bidder shall at all times maintain on the site a stock of reinforcing steel sufficient for the following month's work. No reinforcing steel shall be used upon the works until it has been accepted as satisfactory by the Owner/Consultant.

Rejection

The owner at his discretion may order random testing of the reinforcement steel and in the event of any failed test reject the entire lot notwithstanding the manufacturer's or coating applicator's certificates.

The Bidder shall remove all rejected reinforcing steel from the site without delay at his own expense.

Storage

All bars for reinforcement and steel fabric reinforcement shall be stored on the site under cover on timber or concrete supports suitably spaced and of sufficient height to keep the steel not less than 150 mm clear of the ground.

Bar-bending Schedules

The Bidder shall prepare bar bending schedules based on the detailed reinforcement drawings. These shall be presented to the Owner/Consultant for review. The Bidder is fully responsible for their completeness and correctness in every way nor shall any claim for extra cost or time be allowed on the grounds of errors or discrepancies which may arise between drawings and schedules.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[39]	25.09.2014

d) Water

Water used for mixing and curing shall be clean and free from injurious amounts of oils, acids, alkalis, salts, sugar, organic materials or other substances that may be deleterious to concrete or steel. pH value of water shall not be less than 6.

Only potable water shall be used. Tests and quality of water shall be in accordance with IS: 456 or equivalent.

e) Aggregates

General

The aggregates for concrete shall be crushed natural rock subject to Owner's approval.

The aggregate to be used in the work shall be supplied from an established pit or quarry.

The concrete supplier shall obtain from the aggregate producer, or otherwise provide current test, examination, and inspection reports performed and certified by an approved laboratory for submittal to the Owner/Consultant.

As a minimum, this information shall include the following items:-

- **Item 1**

A comprehensive description, with current photographs of the pit or quarry, including but not limited to, identification by name and location, type of deposit, age, potential reserves, primary products by size including average gradation based on previous six (6) months production and the range for each sieve size; mining methods, process equipment, quality control organization and laboratory; the primary and alternate means of product transportation; listing of primary and secondary users of the product.

- **Item 2**

Petrographic examination in accordance with IS: 2386 (Part-8) and ASTM C-295 performed by a qualified concrete aggregate petrographer. This report shall be based on material produced and examined within the previous six (6) months and must be representative of the current production.

- **Item 3**

Coarse aggregate shall be sampled from current production in accordance with IS: 2386 (Part 1 to 8). Three [20 mm, 10 mm & 5 mm] nominal maximum size (NMS) aggregates shall be sampled and tested as follows:

IS 2386(Part 1): Methods of test for aggregates for cement: Part 1
Particle size and shape (Amendments 3)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[40]	25.09.2014

- IS 2386(Part 2): Methods of test for aggregates for concrete: Part 2 Estimation of deleterious materials and organic impurities (Amendment 1)
- IS 2386(Part 3): Methods of test for aggregates for concrete: Part 3 Specific gravity, density, voids, absorption and bulking
- IS 2386(Part 4): Methods of test for aggregates for concrete: Part 4 Mechanical properties (Amendments 3)
- IS 2386(Part 5): Methods of test for aggregates for concrete: Part 5 Soundness
- IS 2386(Part 6): Methods of test for aggregates for concrete: Part 6 Measuring mortar making properties of fine aggregates (Amendments 2)
- IS 2386(Part 7): Methods of test for aggregates for concrete: Part 7 Alkali aggregate reactivity
- IS 2386(Part 8): Methods of test for aggregates for concrete: Part 8 Petrographic examination
- ASTM C-295 Standard guide for petrographic examination of aggregates for concrete

Aggregates when subjected to the tests defined in items above, unless otherwise approved by the Owner/Consultant shall meet the requirements of IS: 383 and IS: 456.

Testing is to be carried out at the following intervals:

Table 2.7
Grades of Concrete

Type	Coarse Agg.	Fine Agg.
Grading	Daily	Daily
Specific Gravity	7 days	7 days
Magn Sulphate soundness	30 days	-
Clay, Silt and dust content	Daily	Daily
Shape (elongation and flakiness)	3.5 days	-
Los Angeles Abrasion	Initial stage only	Initial stage only
Moisture content	2 days	Daily
Drying shrinkage	Initial only	Initial only
Organic impurities	30 days	30 days
10% fines value for concrete	7 days	-

Combined grading shall also be done on a daily basis.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[41]	25.09.2014

Storage and handling of aggregates

- Aggregate stockpiles shall be arranged and used in a manner to avoid segregation and to prevent contamination with other materials or with other sizes of like aggregates. Aggregate delivery trucks shall be covered to prevent wind blown contamination. Aggregate stockpiles shall be located relative to prevailing winds to mitigate the accumulation of wind-borne dust.
- Adequate storage shall be provided for each aggregate. The aggregate storage area shall be on concrete pavement sloped to drain excessive moisture. The aggregate storage area shall provide bulkheads to separate piles and protect against wind blown contaminants. Provision shall be made to shade and sprinkle the aggregates with potable water.
- Aggregate stockpiles shall be built in successive horizontal layers not exceeding 1 m in thickness, with each layer being completed before the next is started. No vehicles shall be allowed to operate on top of the stockpiles.
- Rescreening Coarse Aggregate: Rescreening and washing of coarse aggregates is required, if necessary, to reduce total chloride and/or sulphate contents to a level less than the maximum allowed by the specifications. If rescreening is required, the screening and washing shall be just prior to transferring aggregate to batch plant bins. Aggregates shall be dewatered over a screen to remove excess water before being stored in the batch plant bins.
- Natural or manufactured sand shall be allowed to drain until it has reached somewhat uniform moisture content before it is used.

Fine Aggregate

Fine aggregate source shall be manufactured crushed stone or river sand, excluding fines, which are by products/rejects of coarse aggregate production. The crushed stone sand shall be graded from fine to coarse with the coarse sizes predominating to give maximum density.

The amount of fine particles as ascertained by the laboratory sedimentation method shall not exceed 10% for crushed stone nor 4% for natural sand.

The amount of material passing a 75 micron sieve (IS test sieve) shall not exceed the following limits:-

Crushed Stone Sand

- i) Concrete subject to abrasion 1% by weight
- ii) All other concrete 3% by weight

There shall be no clay or fine silt present.

The amount of hollow shells like to form voids or remain partially unfilled and present in material retained on an IS 2.36 mm sieve, determined by direct visual separation, shall not exceed 3% by weight of the entire sample.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[42]	25.09.2014

Tests are to be executed in accordance with IS: 2386. The grading of fine aggregate for concrete work shall comply with the requirements of IS: 383.

The grading of the aggregates should be such as to produce a concrete of the specified proportions, which will work readily into position without segregation and without the use of excessive water content. The grading should be controlled throughout the work so that it conforms closely to that used for the preliminary tests.

A check on the moisture content of sand should be made at least once a day before concreting. The amount of water to be added to the concrete mix should be adjusted accordingly. Any washing, screening, classifying and other operations on the fine aggregate required to meet this specification shall be done by the Bidder. Washing is required if the content of silt adhering to the aggregate is found to be unacceptably high.

Coarse Aggregate

Coarse aggregate shall be crushed rock and shall be free from decomposed stone, clay, earth or other deleterious substances. The unit weight of the coarse aggregate shall not be less than 2.5 t/m³. Aggregate of crushed natural stone is deemed adequate if the stone reveals a crushing strength of 1000 kg/cm² when tested. Friable, flaky and laminated pieces, mica and shale shall only be present in such quantities as not to affect the strength and durability of the concrete.

The grading of coarse aggregate for concrete shall comply with the requirements of IS: 383.

Samples of aggregates shall be submitted to the Owner/Consultant, together with sieve analysis showing the proportion by weight passing sieves. When aggregates which are satisfactory to the Owner/Consultant have been selected, the Bidder shall secure his entire supply of each material from the same source so as to maintain the same quality and grading throughout the work. Should it become necessary to change the source or characteristics of the material supplied this shall only be done after additional tests.

f) Concrete additives

Use of Concrete Additives

Concrete additives approved by the Owner/Consultant shall be used to improve consistency, workability, quality and strength of the concrete.

Chemical admixtures manufacturer shall provide certified test reports from qualified independent laboratories showing actual test results indicating material that complies in all respects with the applicable specification.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[43]	25.09.2014

Admixtures used in concrete shall conform to the appropriate specification and requirements as indicated below:-

- Air entraining admixtures shall conform to IS: 9103.
- Water reducing and retarding admixtures shall conform to IS: 9103. Accelerating admixtures shall not be used.
- High range water reducers shall be naphthalene-sulfonated polymer based material. No admixtures containing chlorides shall be used.
- Chemical admixture suppliers shall provide certified test reports with each shipment indicating compliance with the appropriate specification. The test reports shall include the chloride content of the admixture, specific gravity and solids content.
- Fibers: Polypropylene fibers shall be collated, fibrillated polypropylene fiber of approved manufacture.
- Admixtures used in production of concrete shall be the same as used in establishing the required concrete mix and shall be used in accordance with the manufacturer's directions.
- Liquid admixtures shall be stored in such a manner to avoid contamination, evaporation and segregation in accordance with the manufacturers' recommendations

Accelerating and Retarding Additives

Such additives shall only be used in case of necessity and after obtaining the written approval of the Owner/Consultant.

Plasticizers and Air entraining Additives

Plasticizers and air entrainers are intended to reduce bleeding of free water at the surface. It shall only be used after the written approval of the Owner/Consultant and in accordance with the manufacturer's instructions.

5.10. Dismantling/Demolishing and Modification in PCC&RCC

- The dismantling implies, carefully taking up or down and removing without damage. This shall consist of dismantling one or more parts of a structure. This includes chipping work, cutting of reinforcement, making holes/opening etc. in concrete members, according to the required shape, size and profile at all elevations.
- The term demolition implies, taking up or down or breaking up of a structure/member, in part or full, as specified or shown in the drawings or as directed by Engineer.
- In a structural member, both dismantling and demolishing work may be involved. In such case, the portion of work treated as demolishing shall be as shown on the drawing or as directed by the Engineer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[44]	25.09.2014

- All material obtained from the demolition/dismantling work shall be property of the Owner, unless otherwise specified.
- All serviceable materials obtained, shall be separated out and stacked properly upto a lead of [500 meter] or shall be returned to OWNER's stores and all unserviceable materials, rubbish etc., shall be disposed off as directed by the Engineer, upto a lead of [2kms].
- The dismantling / demolishing operations shall be carried out in proper sequence so that the serviceable material can be salvaged, without being damaged during the process or work.
- Necessary propping, shoring and under pinning shall be provided for safety of adjoining work or property which is to be left intact, before dismantling/demolishing work.
- All demolition work shall be carried out in conformity with the local safety regulations, extreme caution being exercised to avoid damage to the work and the equipment, which are to be left intact. Necessary precautions shall be taken to keep the dust nuisance down. Safety requirements stipulated in IS: 4130 shall also be followed.
- As and where necessary, the dismantled/demolished materials shall be lowered to the ground and not thrown and then properly stacked as directed by the Engineer. Wherever required, temporary enclosures shall be erected to minimize the dust or moisture infiltration.
- Wherever fresh concrete is laid over old concrete, to ensure proper bond between old concrete and fresh concrete, the surface of old concrete shall be thoroughly cleared by removing all loose particles and coat of epoxy paint shall be applied.

5.11. Minimum Cover to Foundation Bolts

Minimum distance from the centre line of foundation / anchor bolt to edge of pedestal shall be the maximum of the following:

Clear distance from the edge of base plate / base frames to the outer edge of the pedestal shall be minimum 50 mm

Clear distance from the face of pocket to the outer edge of pedestal shall be 75 mm

Clear distance from the edge of sleeve or anchor plate to the edge of pedestal shall be 75 mm

5.12. Miscellaneous Requirements

Fillets at the junction of roof and vertical walls shall be provided with cast in-situ cement concrete 1:2:4 (nominal mix) followed by 12 mm thick 1:4 cement mortar.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[45]	25.09.2014

A screed layer not less than 100 mm thick of cast in-situ concrete of nominal mix 1:3:6 shall be provided below all water retaining structures. A sliding layer of craft paper or bitumen paper shall be provided over the screed layer to destroy the bond between screed and base slab.

Plywood formwork shall be used for all water retaining / conveying structures and for all over ground concrete works. For other areas steel/ plywood formwork shall be used.

Unless specified 20 mm and down graded aggregates shall be used for all structural concrete works. However 40 mm and down graded aggregates may also be used under special conditions for foundation.

Tolerance for formed and concrete dimension shall be as per IS: 456.

5.13. Major Equipment Foundation

Special requirements for concreting of major equipment foundations shall be as given below:

Coarse Aggregates

Sound and durable crushed stone aggregates shall be used. All aggregates shall be tested for alkali aggregate reaction. Materials, which contain high percentage of reactive silica, shall not be used. In exceptional cases of high percentage of reactive silica content, aggregate may be allowed where low alkali cement shall be used. Lime stone aggregate shall not generally be used for foundations, which are subjected to high temperature and repeated temperature cycles (like in the case of all machine foundations).

Temperature Control of Concrete

The temperature of fresh concrete shall not exceed 25° C when placed. For maintaining the temperature of 25° C in the top deck of machine foundations, crushed ice shall be used in mixing water.

Admixture

Plasticizer cum retarder/accelerating type admixture shall generally be added to the concrete for promoting workability in addition to retarding / accelerating setting time for mass concreting work. The Bidder shall submit the mixing proportion/report after conducting the design mix as per the relevant codes and standards. The slump of concrete shall generally be in the range given below:

TG Top deck	: 150mm to 200mm
BFP	: 100mm to 150mm
Block foundation	: 100mm to 150mm
Column	: 100mm to 150mm

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[46]	25.09.2014

Formwork

Plywood formwork shall be used for the top deck of all machine foundations and also for columns of TG foundation. Any other type of formwork required to be used may be permitted subject to prior approval of the owner after submission of the required data.

Scheme for Concreting

Batching plants shall be mobilized for all RCC works. Concrete pump shall be mobilized for TG raft, TG Top deck, BFP Deck etc. Arrangements for stand-by Plant and Equipments shall also be made.

Placing of Concrete

Base mat as well as top deck of machine Foundations shall be cast in a single pour. However the BIDDER shall submit method statements for various structures and shall get the prior approval from the OWNER/CONSULTANT before placing the concrete.

Ultrasonic Testing

Ultrasonic pulse velocity test shall be carried out for the top deck of all machine foundations to ascertain the homogeneity and integrity of concrete. In addition, additional cubes (at the rate of one cube per 150 cum of concrete subject to a minimum of six cubes) shall be taken to carry out Ultrasonic Pulse velocity (UPV) testing on the cubes to serve as reference UPV values. Testing shall be done as per IS: 13311 (Part-1). In case of any defects, the BIDDER shall rectify the defects suitably using cement / epoxy grout etc.

5.14. Transport of Concrete

Immediately after mixing, the concrete shall be conveyed to the place of use as rapidly as possible using methods, which will prevent the segregation, loss or contamination of materials. The concrete shall be placed and compacted within 90 minutes of the addition of water to the mix. Any concrete left unplaced after this time shall be rejected and removed from the site.

The Concrete shall be transported by transit mixers of adequate capacity. Before using concrete pumps, placer pipelines, chutes or spouts it is necessary to have the written approval of the Owner/Consultant.

The Bidder shall obtain permission well in advance of any concrete pour.

5.15. Concreting Operations

Inspection prior to Concreting

All concreting methods shall be subject to the approval of the Owner/Consultant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[47]	25.09.2014

Concrete placing shall not be started until the Owner/Consultant has approved all preparation of forms, reinforcement, joints and all mixing, conveying, spreading, curing, finishing and protection equipment.

Placing of Concrete

Concrete shall be placed in the forms as close as possible to its final position in a single operation to the full thickness of slabs and beams and shall be placed in horizontal layers, not exceeding 2.5 m height in a single pour in walls, columns and similar members.

The Bidder shall organize the pouring of concrete in such a manner that once concreting of a section has started the operation shall be continuous and each operation shall be completed prior to a stoppage.

The temperature of concrete shall not exceed 40°C measured at discharge into the works.

The maximum allowable temperature of any point within any cast element is 60°C. The maximum allowable differential temperature between any two points in the same element is 15°C. Additional temperature control measures during construction (such as the use of insulated formwork) will be required. Bidder to prepare a process control chart and method statement verifying measures to achieve these requirements.

Temperature monitoring of concrete work is required where:

The minimum dimension of any casting is 0.8 metres or more, or otherwise instructed by the Owner/Consultant.

Where specified on the drawings, construction, expansion or contraction joints shall be provided and the concrete shall be poured continuously between two adjacent joints. No other joints than shown on the drawings shall be permitted. Stoppage (cold) joints formed between two concreting operations separated by more than 6 hours time shall be subject to the same treatment as the construction joints.

Concrete shall not be dropped into place from a height exceeding 1.5 metres. Trunking and chutes to Owner/Consultant's approval shall be used for any concrete to be deposited from a height exceeding 1.5 m.

Concrete which has partially hardened shall not be exposed to injurious vibration or shock, except for controlled re-vibration where specified. When concreting of a certain large structural element is specified strictly as to be poured continuously, then the concreting operations shall be organized for day and night working, in long shifts, as necessary.

5.16. Compaction and mechanical vibration of concrete

As concrete is being placed it shall be compacted by mechanical vibrators complying with IS: 2505, IS: 2506, IS: 2514 & IS: 4656, to obtain a dense material free from honeycombing, free from water and air holes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[48]	25.09.2014

The Bidder shall ensure that the vibrators are used in such a manner that the reinforcement is not displaced, the formwork not damaged and no segregation/bleeding caused, but complete compaction of the concrete is achieved.

5.17. Finish of concrete

The concrete face shall have the finishes indicated on the drawings or in the present specification. The finished surface of the concrete shall be sound, solid and free from honeycombing, protuberances, air holes or exposed aggregate. No plastering, cement wash, mortar or paint shall be applied to cover defective concrete surfaces.

5.18. Construction, expansion and contraction joints

Construction joints

The number of construction joints should be kept as low as possible consistent with reasonable precautions against shrinkage. Concreting should be carried out continuously up to construction joints.

Where it is necessary to introduce construction joints, careful consideration should be given to their exact location, which should be indicated on the drawings. Alternatively, the location of joints should be subject to agreement between the Owner/Consultant and the Bidder before any work commences. Construction joints should be at right angles to the general direction of the member and should take due account of shear and other stresses.

Concrete should not be allowed to run to a featheredge and vertical joints should be formed against a stop board.

The top surface of a layer of concrete should be level and reasonably flat unless design considerations make this undesirable. Joint lines should be so arranged that they coincide with features of the finished work.

If a kicker (i.e. a starter stub) is used it should be at least 70 mm high and carefully constructed. The kicker must be incorporated with the previous concrete. Where possible, the formwork should be designed to facilitate the preparation of the joint surface, as the optimum time for treatment is usually two to four hours after placing.

The maximum horizontal length of wall to be poured in one operation in any one direction is 7.5 metres. A period of 7 days to be allowed between adjacent pours except where water stops are provided when this can be reduced with Owner/Consultant's approval. Alternatively a gap of 600 mm width shall be left between adjacent pours and filled after 7 days from the date of formation subject to Owner/Consultant's approval.

Immediately prior to recommencement of concreting on a joint, the surface of the concrete against which new concrete will be cast should be free from laitance and should be roughened to the extent that the largest aggregate is

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[49]	25.09.2014

exposed but not disturbed. Care should be taken that the joint surface is clean immediately before the fresh concrete is placed against it.

Particular care should be taken in the placing of the new concrete close to the joint. This concrete should be particularly well compacted and if possible a vibrator should be used.

Where the Owner/Consultant considers that special preparation is necessary, i.e. for an in-situ structural connection, preparation should be carried out preferably when the concrete has set but not hardened, by spraying with a fine spray of water or brushing with a stiff brush, which is sufficient to remove the outer mortar skin and expose the larger aggregate. Where this treatment is impracticable, sand blasting or a needle gun should be used to remove the surface skin and laitance. Hacking of hardened surfaces should be avoided.

A record shall be kept on site of the time and date of placing the concrete in each section of the work.

Expansion and contraction joints

The expansion joints, contraction joints and other permanent structure joints shall be provided in positions as shown in the drawings.

Joints shall be straight and vertical, except where otherwise specified, and concrete surfaces on both sides of the joint shall be flush. Where necessary, water stoppers of a type approved by the Owner/Consultant shall be embedded in the concrete. The water stopper should be made of high quality material, which must obtain its resilience through the service life of the structure for the double function of movement and sealing. The surface of water stoppers should be carefully rounded to ensure tightness of the joint even under heavy water pressure. To ensure a good tightness with or without movement of the joints the water stopper should be provided with anchor parts. The cross-section of the water stoppers should be determined in accordance with the presumed maximum water pressure and joint movements. The complete works of fixed and welded connections must be carried out strictly in accordance with the manufacturer's instructions.

All joints between structural steel and concrete parts shall be sealed by a suitable permanent flexible compound.

5.19. Concreting at night

When approval is given to carry out concreting operations (under control of the Owner/Consultant) at night or in places where daylight is excluded, the Bidder has to provide adequate lighting at all points of mixing, transportation and placing of concrete.

5.20. Protective measures for concrete

In general, the cover of rebars shall be as per IS: 456 taking into account the site conditions. However, the minimum concrete cover shall not be less than:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[50]	25.09.2014

Concrete parts above ground (external surface)	: 40 mm
Concrete exposed to underground & groundwater	: 50 mm
Isolated footings	: 50 mm
Raft	: 75 mm
Slabs	: 25 mm
Beams	: 25 mm
Columns	: 40 mm

Immediately after the compaction of the concrete has been finished, the Bidder shall ensure adequate protection from the weather. Excessive drying can lead to crack formation as a result of plastic contraction. The concrete surface shall be covered with a layer of sacking, canvas, straw mats or similar absorbent material, special protection sprays kept constant moist for at least 7 days.

Curing compounds or other methods of preventing evaporation may be used if approved by the Owner/Consultant. Where formwork cannot be removed within 24 hours after placing the concrete, the formwork shall be kept shaded from the direct rays of the sun and shall be sprayed with water.

Owner/Consultant's approval to the use of a particular curing compound and to the method of application will only be given after the Bidder has completed satisfactory site trials and a sample panel has stood for at least 28 days.

Where large sections of concrete are poured, special precautions to the approval of the Owner/Consultant shall be taken to reduce and dissipate the heat generated by the setting and hardening of the concrete.

The minimum amount of reinforcement shall be present to prevent shrinking cracks.

No load of any kind, however light, shall be allowed on concrete which has not properly set and the Bidder shall prevent any load to be imposed on the concrete structures until it has been declared by the Owner/Consultant to be ready to carry loads.

5.21. Concrete with Special Properties

General requirements

The pre-condition for obtaining concrete with special properties is that it should be made with the appropriate composition, that it is placed in such a way that segregation does not occur and further that it is fully compacted and given appropriate curing.

Waterproof concrete

This concrete must meet the provisions of IS: 3370. Waterproof concrete must be sufficiently dense (impermeable).

Waterproofing and protection of underground concrete structures

Water aggressive to concrete should be kept away from the fresh concrete.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[51]	25.09.2014

Concrete, which is exposed for a prolonged period to “very severe” chemical attack, must be protected against direct access of the aggressive substances.

The protection, which is to be laid as protection to all concrete surfaces in contact with the ground, shall consist of an approved waterproofing membrane. The membrane shall adhere to all concrete surfaces, including undersides of structures and other surfaces where concrete is cast in contact with the membrane.

Such membranes shall be PVC sheets of minimum 0.35 mm thickness with knobs of Maxlock.

The waterproof membranes shall be installed in strict accordance with manufacturer’s instructions.

The membranes shall extend 15 cm above ground level.

When setting forms and reinforcing steel caution shall be exercised to avoid damage to the impervious membrane. The surface of the impervious membrane extending outside the forms shall be protected during subsequent operations.

Any puncture or damaged areas shall be cleaned and patched according to manufacturer’s instructions.

Concrete with high wearing resistance

Concrete which is exposed to severe mechanical action, e.g., due to intensive traffic, sliding of bulk materials, frequent impact blows or movements of heavy objects, or due to fast-flowing water carrying solids, or other causes, should possess high wearing resistance and correspond at least to grade M30.

The aggregate upto 4 mm size should consist predominantly of quartz or materials of at least equal hardness; the coarser particles should consist of stone or artificial materials possessing high abrasion resistance. In the case of particularly severe mechanical action, it will be necessary to use special hard materials. The particles of all types of aggregate should have a moderately rough surface and be of compact shape. The combined aggregate should be as coarsely graded as possible.

Furthermore, the concrete should be as stiff as possible, in order that there will be no concentration of cement slurry or water in the top layer. The concrete should be kept moist for at least 7 days after placing.

Finishing of formed surfaces

Fins and other surface projections shall be removed from all formed surfaces except exterior surfaces that shall be covered with earth backfill. Exterior surfaces that shall be exposed above grade and all interior surfaces, except those not usually exposed to view shall be cleaned and rubbed. Rubbing shall produce a smooth, uniform surface free of marks, voids, surface glaze, and discolorations.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[52]	25.09.2014

Rubbing shall be done by hand with a carborundum stone using only the mortar produced by the rubbing action and the application of water.

Projecting ends of all form ties shall be removed. The resulting recesses shall be cleaned, wetted, and filled with patching mortar. Patches on rubbed surfaces shall match the texture of the adjacent concrete.

Finishing of unformed surfaces

No surface treatment shall be required for buried or permanently submerged concrete. As a minimum, unformed surfaces shall be finished by screeding and floating. Surfaces requiring a trowelled finish shall be finished by screeding, floating, and trowelling.

Float finished and screeded surfaces shall be finished to provide a flat profile within a 6 mm deviation as measured from a 3 m straightedge. Trowel finished surfaces shall be finished to form a flat plane. The surface profile shall not deviate more than 3 mm when measured from a 3 m straightedge.

Screeding

Screeding shall provide a concrete surface conforming to the designated elevations and contours with all aggregates completely embedded in adjacent mortar. Surface irregularities in screeded surfaces shall be limited to the tolerances specified.

Floating

The surfaces shall be screeded and given an initial float finish as soon as the concrete has stiffened sufficiently to work. Coarse aggregate disturbed by the float or causing a surface irregularity shall be removed and replaced with mortar. Initial floating shall produce a surface of uniform texture and appearance.

Initial floating shall be followed by a second floating at the time of initial set. The second floating shall produce a smooth float finish of uniform texture and colour.

Floating shall be performed with hand floats or suitable mechanical compactor floats.

Trowelling

The exposed portions of the tops of equipment bases, tops of interior curbs, and the surfaces of interior slabs not receiving a separate finish shall receive a steel trowel finish. Trowelling shall be performed after the second floating when the surface has hardened sufficiently to prevent excess cement from being drawn to the surface. Trowelling shall produce a dense, smooth, uniform surface free from blemishes and trowel marks.

Surfaces to be covered with neoprene-hypalon coatings shall be lightly trowelled but not burnished.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[53]	25.09.2014

Brooming

Brooming shall follow the float finish for exterior surfaces where a nonslip surface is required. Brooming shall be done with an acceptable steel or fiber broom not less than 450 mm wide. Brooming ridges shall be transverse to the normal traffic direction and shall be between 1.5 mm and 3 mm deep. Adjacent strokes of the broom shall overlap slightly. Broomed surfaces shall be free of porous spots, irregularities, depressions, and small pockets or rough spots.

Aggregate Exposure

Surface mortar shall be removed and the aggregate exposed from surfaces that shall be covered with mortar, concrete, or grout at a later time.

Edging

Unless specified otherwise, exposed edges of floated or troweled surfaces shall be edged with a tool having a 6 mm corner radius.

Finishing mortar

Finishing mortar shall be added if there is not sufficient mortar available from the concrete mix. The proportions for this finishing mortar shall be 102 kilograms of concrete sand to one sack of Portland cement, mixed with enough water for proper application. Slump for finishing mortar shall not exceed 50 mm.

Separate finishes

Certain slabs surfaces shall be finished with a separate concrete finish or floor covering.

Base slab surfaces shall be ground or filled until each surface is within the specified tolerances. Low areas shall be filled. High spots shall be ground slightly lower than required and then filled and smoothed to the proper elevation and surface.

Surfaces that receive epoxy set quarry tile and resilient tile shall be flat with a profile that shall not deviate more than 3 mm from a 3 m straightedge placed on any part of the surface. These surfaces shall be either trowel finished concrete at the elevation indicated on the drawings or a float finished surface set 3 mm low and levelled with trowel finished fill material.

Surfaces that receive a mortar set quarry tile, ceramic tile, or vitrified finish shall be given a smooth, tight, and uniform float finish with a profile tolerance of 6 mm as measured from a 3 m straightedge.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[54]	25.09.2014

5.22. Formwork

Design and construction

For stability and type of formwork and support framing used, IS: 14687 is to be observed.

The formwork and the supporting structure are to be so dimensioned as to be able to withstand all vertical and horizontal forces safely.

Supporting structures shall be sufficiently rigid to maintain the forms in their correct position and to be true to shape and dimensions so that the final concrete is within the limits of the dimensional tolerances specified in section) "Dimensional Tolerances".

The Bidder shall submit in sufficient time in advance for the approval of the Owner/Consultant the calculations, designs and details of the methods adopted and materials proposed for the formwork.

Particular attention must be paid to the formwork supports and braces to avoid any slip when the concrete is poured.

Materials for formwork

Forms shall be constructed from steel or from sound timber well seasoned and free from shakes. Plywood lining for forms shall be of timber, which is resin-bonded and water repellent.

Formwork surfaces in contact with concrete shall be free from adhering grout, projecting nails, splits or other defects.

Joints shall be sufficiently tight to prevent the leakage of cement grout. Connections shall be constructed to permit easy removal of the shuttering and shall be either nailed, screwed, bolted, or otherwise secured so as to be strong enough to retain the correct shape during consolidation of the concrete. Where a slope exceeds 1 V: 2 ½ H, formwork shall be provided for the top of the concrete faces and anchored to prevent flotation.

The details of fair-faced concrete facades have to be to the satisfaction of the Owner/Consultant. The concrete surface for facades has to be absolutely stainless and all efforts have to be taken to achieve this. All the proposed formwork shall be properly designed before its usage.

Grading of formwork and of finished concrete surfaces

Quality of formwork, materials to be used and treatments of surface are graded according to the finish of the concrete surface as given in IS: 14687.

The type and treatment of the formwork lining (plywood, metal, plastics, etc) should be appropriate to the grade of concrete finish required.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[55]	25.09.2014

Preparation and inspection of formwork

Before concrete is placed, all formwork shall be inspected to see if it is built according to the approved plans and to see if it has been cleaned and is free from sawdust, shavings, dust, mud, earth or other contamination and properly oiled. Contact surfaces of panels shall be treated with a suitable release agent (e.g. non-staining mineral oil) where applicable. Surfaces, which are not oiled, shall be wetted thoroughly to prevent warping.

Erection and placing of formwork

All formwork shall be erected and placed in accordance with the construction drawings approved by the Owner/Consultant. Shuttering shall be true to line and braced and struttred to prevent deformation under weight and pressure of the wet concrete, live loads, wind and other forces. The deflections shall not exceed 3 mm.

The formwork for beams and slabs shall be erected so that the form on the sides of the beams and of the soffits of slabs can be removed without disturbing the beam soffit.

If the formwork for columns is erected to the full height of the columns, one side shall be provided with openings for concreting in order to guarantee a proper compaction of the poured concrete.

Formwork for walls and elsewhere shall be arranged for a maximum concreting height of 2.5 m in a single pour. Wherever necessary, panel openings are to be provided in the forms for cleaning, inspection, access of vibrators, etc.

Before placing of concrete, bolts, ties and fixings shall be positioned and all devices used for forming openings, holes, pockets, chases, recesses, etc shall be fixed to the formwork carefully.

Panels shall be put together to ensure a perfect fit at the joint and fixed in both directions.

Where concrete surfaces will be exposed to view (permanently exposed surfaces) the formwork shall be such as to produce a completely true, smooth surface, free from perceptible irregularities or to show clearly the desired texture. Such formwork shall be marked on the drawings as "Fair-faced Formwork".

Where concrete surfaces are covered (non-exposed surfaces), the formwork shall be referred to and marked as "Sawn Formwork".

Internal spacers and ties, if any, shall be so arranged that after removing of the forms no holes shall extend through the concrete, in the case of watertight concrete or to be closed by plastic plugs and epoxy mortar in all other cases.

All formwork will be inspected and approved by the Owner/Consultant before concrete placing commences but this shall not relieve the Bidder of any of his responsibilities under the contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[56]	25.09.2014

Striking of formwork

Formwork shall not be removed until the concrete has sufficient strength to carry its own weight plus any constructional or designed loads likely to be applied with a normal factor of safety. It shall be removed in such a manner that no shock or injury shall result to the concrete.

Before removal of the formwork, the concrete shall be examined and removal shall proceed only on the instructions and under the supervision of a competent person.

In accordance with IS: 456 clause 11.3.1, the striking period for cast in-situ concrete under certain conditions may be taken as follows: -

Table 2.8
Formwork

Type of Formwork	Minimum period before striking formwork
Vertical formwork to columns, walls, beams	16 to 24 hours
Soffit formwork to slabs (props to be refixed immediately after removal of formwork)	3 days
Soffit formwork to beams (props to be refixed immediately after removal of formwork)	7 days
Props to slabs:	
1) Spanning upto 4.5 m	7 days
2) Spanning over 4.5 m	14 days
Props to beams and arches:	
1) Spanning upto 6 m	14 days
2) Spanning over 6 m	21 days

Special care is necessary in the case of components, which have to carry nearly the full-calculated load as soon as the formwork is struck.

Columns, piers and walls are to be struck before the beams and slabs supported by them. Scaffolds, formwork supports and self-supporting floor formwork are to be carefully lowered by releasing the devices.

Extreme care shall be taken to avoid chipping of corners during removal of formwork.

To keep deflections through creep and shrinkage to a small amount, auxiliary supports should be left in place or immediately repositioned after striking.

5.23. Water stoppers

Water stoppers shall be of PVC or equivalent and shall be eye-letted with a minimum 25 cm width. Type and manufacturer shall be submitted to the Owner/Consultant's approval.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[57]	25.09.2014

All intersection pieces shall be prefabricated by the manufacturer and only welding of butt-joints in running lengths will be allowed to be carried out on the site.

The site welding of butt-joints shall be executed by using the manufacturer's purpose-made electrically heated jig and work shall be done by competent and trained personnel only. The manufacturer's instructions shall be carefully observed.

The wings of the water stoppers shall be formed with corrugations or bulbs to achieve a good bond. Moreover, the water stoppers shall conform to the following requirements:-

- The tensile strength not less than 10 N/sq.mm when tested.
- The ultimate elongation shall not be less than 22% when tested.
- The tear resistance shall not be less than 2 N/sq.mm when tested.
- The material shall not crack when tested.
- Under accelerated elongation, the tensile strength shall not be less than 8 N/sq.mm and the ultimate elongation shall not be less than 200%.

The water stoppers shall be installed so that they are securely held in position during the placing of concrete, which shall be fully and properly compacted around the water stoppers to prevent voids or porous areas. Adequate clearance between the reinforcement and all the water stoppers shall be kept to permit proper compaction of concrete.

No holes or nailing shall be made through any water stopper for fixing purposes. Jointing by lapping two pieces of water stoppers shall not be permitted.

The free edges of water stoppers shall at all times be protected from direct sunlight.

5.24. Curing

Concrete shall be protected from loss of moisture for not less than 7 days after the concrete is placed and if required the concrete may be protected for few more days as per the design mix / approved methodology.

Trowelled surfaces except those that receive a separate finish or coating, shall be cured with a membrane curing compound. Float finished surfaces, except those that receive a separate finish, may be cured with either a membrane-curing compound or with water. Only water curing shall be used if the surface receives a separate finish.

Water curing

Water saturation of concrete surfaces shall begin as quickly as possible after initial set of the concrete. Water curing shall begin within 12 hours in dry weather and within 24 hours in damp weather. The rate of water application

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[58]	25.09.2014

shall be regulated to provide complete surface coverage with a minimum of runoff. The application of water may be interrupted for surface rubbing. The concrete surface shall not be permitted to dry.

After the rubbing has been completed, rubbed surfaces shall be covered with burlap and kept saturated for the remainder of the curing period.

Membrane curing

Membrane curing compound shall be applied within 30 minutes after final finishing of the surface or as soon as possible after finishing without causing damage to the surface. Membrane curing compound shall be spray applied at coverage of not more than 7.4 sqm/litre. Membrane curing shall not be used on surfaces that shall be covered at a later date with mortar, concrete, damp proofing, tile, or any coating. Membrane curing shall not be used on cast-in-place concrete bases for field-erected tanks. Membrane curing will be permitted only after prior approval of the OWNER/CONSULTANT.

Floor sealer

All concrete floors shall be given two coats of clear floor sealer in addition to that applied as membrane curing compound. The first coat shall be applied at the end of the curing period before any traffic is permitted on the floor. The second coat shall be applied after the floor has been cleaned in preparation for the final inspection. Floor sealer shall be applied in strict accordance with the manufacturer's recommendations.

5.25. Waterproofing/Damp proofing

A waterproofing seal shall be provided for all below grade structures where applicable by external tanking with PVC sheets of 1.0 mm thickness with knobs for membrane type waterproofing. In addition, joints in deep underground structures shall be provided with structural waterproofing.

Damp-proof course 40 mm thick, consisting of cement concrete 1:2:4, with admixture of approved water-proofing compound shall be laid at plinth level for walls of all buildings for protection of super-structure against moisture and dampness.

5.26. Repair of damaged and defective concrete

Concrete after its final setting shall be inspected by the Owner/Consultant and any cracks, honeycomb areas, segregations, etc shall be marked. No repairs shall be carried out until directed by the Owner/Consultant.

Surface defects in formed concrete shall be repaired to the satisfaction of the Construction Manager within 24 hours. Concrete that is porous, honeycombed, or otherwise defective to a depth in excess of 25 mm shall be cut out and removed to sound concrete. Edges shall be square cut to avoid feathering. Cut surfaces shall be coated with epoxy bonding compound before the concrete is placed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[59]	25.09.2014

Defective concrete shall be replaced within 48 hours after the forms have been removed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[60]	25.09.2014

6. PRESSURE GROUTING

The work shall consist of drilling grout holes, exploratory holes and check holes, pressure testing, pressure washing, and injecting suspension grout under pressure, and shall include furnishing of all materials, labor, and equipment as described and specified.

6.1. Materials

a) Cement

Portland cement shall contain less than 0.6 percent alkali.

b) Aggregate

Aggregate shall be non reactive and shall be washed before use. When sources of aggregate are changed, test reports shall be provided for the material from the new source prior to commencing grout work. Fine aggregate shall be sand or crushed stone.

c) Admixtures

Admixtures shall be compatible with the grout and shall comply with the manufacturer's recommendations. Admixtures shall be added to the grout mix separately.

Water Reducing Retarder: Water reducing retarder shall comply with relevant Indian standard or as approved by Owner.

Lubricant: Lubricant additive for cement pressure grouting shall be Intrusion Prepakt Intrusion Aid, Sika Intraplast N, or as approved by Owner.

d) Water

Water for washing aggregate, for mixing and for curing shall be potable, shall not contain more than 1000 mg/l of chlorides as Cl, nor more than 1300 mg/l of sulfates as SO₄, and shall not contain impurities which may change the setting time by more than 25 percent or a reduction of more than 5 percent of the compressive strength of the grout at 14 days when compared to the results for grout made with distilled water.

e) Grout

Drypack Grout

Drypack grout shall be a mixture of approximately one part cement, 1.5 parts sand, water reducing retarder and sufficient water to make a stiff workable mix, branded Dry Pack or approved equal.

Cement Grout

Cement grout shall be a mixture of one part cement, two parts sand proportioned by volume admixtures for pressure grouting and sufficient water to form a workable mix.

Nonshrink Grout:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[61]	25.09.2014

- Non-shrink expansive flowable grout shall be used for under pinning work below base plate of columns. Non-shrink cum plasticiser admixture shall be added in the grout. For grouting of base of machine foundation high strength ready mixed non-shrink flowable grout shall be used.
- Type and grade of grouting for structural columns and equipment bases shall be as indicated. Crushing strength of the grout shall generally be one grade higher than the base concrete. Minimum grade of grout shall be M 30.
- Nominal thickness of grouting shall be at least 50 mm for building columns and pedestals of major equipment. For secondary posts, stair and ladder base, etc. grouting shall not be less than 25 mm thick.

Special grout, where specified on the drawings, shall be provided in strict accordance with the manufacturer's instructions/specifications. Pre-mixed Grout Conbextra GP-2 of 'FOSROC' make or equivalent of crushing strength 650 kg/cm² for major equipment foundations and Conbextra GP-1 or equivalent having crushing strength of 450 kg/cm² for other foundations where concrete grade M30 or higher is provided

- Forms and shims used to obtain adequate clearance shall not be removed and the anchor bolts shall not be tightened for at least three days after placing the grout. After the removal of forms and shims, area occupied by shims shall be filled and the area between the base and edge of the foundation shall be finished smooth to allow drainage away from the base. Attachment of interconnecting piping of machinery and complete load transfer of machinery shall not be done before the bolts are tightened. During this period, grouting work shall be properly cured using rags/gunny bags.

In view of extremely small proportion (about 0.01% by weight of cement) of the aluminium powder required, it is necessary to take all precautions to ensure thorough mixing. It is advisable to mix the blend of aluminium powder thoroughly with sand and cement before water is added because aluminium powder has a tendency to float on water.

- Proprietary material of approved manufacture used as an admixture to obtain non-shrinking grout shall be mixed in the proportion of 1:1:1 (1 cement: 1 admixture: 1 sand), or as per manufacturer's instructions.

Pre-mixed non-shrinking grout shall be used as per manufacturer's instructions and without any additional materials/admixtures such as cement, sand and aggregates etc.

Epoxy Grout for Crack Repair and Dowel Anchorage

Except for applications involving pressure grouting or crack injection, epoxy shall be a high modulus, moisture insensitive, two components, 100 percent solids, thermosetting modified polyamid epoxy compound. The material shall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[62]	25.09.2014

equal which is capable of not sagging in horizontal or overhead anchoring applications.

Epoxy for applications involving pressure grouting or crack injection, shall be a high modulus, moisture insensitive, two components, injection grade, 100 percent solids blend of epoxy resin compounds. The material shall equal which is capable of achieving complete penetration of hairline and larger cracks.

Polymer Concrete for Resurfacing and Patching

Polymer concrete shall consist of a liquid binder and dry aggregate mixed together to make a flowable mortar. The liquid binder shall be a chemical and oil resistant, stress relieved, low modulus, moisture insensitive, two component epoxy resin compound. The binder material shall equal with a consistency similar to light weight oil for proper mixing with the aggregate. The aggregate shall be oven dry, kept in sealed packages until the time of mixing and be of size and consistency compatible with recommendations of the manufacturer of the liquid binder for the intended application.

Adhesive Resin for Dowel Anchorage:

Pneumatically operated caulk gun and automatically mixed at nozzle. Subject to compliance with one of the following: HIT RE500-SD Adhesive Anchoring System, Hilti, Inc. (ICC ESR-2322), HIT-HY 150 MAX-SD Adhesive Anchoring System, Hilti, Inc. (ICC ESR-3013), SET-XP Adhesive Anchoring Systems, Simpson Strong-Tie Co. (ICC ESR-2508).

6.2. Pressure Grouting Equipment

Pressure grouting equipment shall include a mixer and holdover agitator tanks designed to place grout at pressures up to 0.345N/mm^2 (50 psi). Gauges indicating grouting pressure shall be provided and the mixer shall be equipped with a meter capable of indicating to within 0.003 m^3 the volume of grout placed.

6.3. Execution

Bonding compounds for use with grout is to be provided and installed per the manufacturer's recommendations.

a) Drypack Grout

Drypack grout is to be used for built-up surfaces, setting miscellaneous metal items and minor repairs.

Surfaces required to be built-up with drypack grout are to be roughened by brushing, cleaned and coated with the bonding compound before application of grout. The grout is to be applied to the required thickness.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[63]	25.09.2014

b) Cement Grout

Cement grout is to be used for filling nonbearing portions of equipment pads and pressure grouting.

Except for the specialized requirements for pressure grouting, grout is to be mixed and placed in the same manner as cast-in-place concrete. Grout is to be mixed for at least one minute and diluted grout is to be agitated until placed.

c) Non-shrink Grout

Nonshrink, nonmetallic aggregate grout is to be used under equipment, bearing plates and column base plates. Nonshrink, metallic aggregate grout is to be used under rotating equipment where high strength and fatigue are of concern, to grout anchor bolts and to grout reinforcing steel. Grout is to be placed and cured in accordance with the manufacturer's recommendations.

Holes required for grouting shall be blown clean with compressed air and are to be free of dust or standing water. Horizontal holes for grouting are to be drilled at a slight downward angle and with the inserted dowel or bolt bent to match.

d) Epoxy Grout

Epoxy grout shall be used for repairing cracks by pressure grouting or gravity, repairing structural concrete and may be used for setting dowels or bolts in holes. Concrete is to be primed in accordance with the grout manufacturer's recommendations.

The use of epoxy grout must comply with the following restrictions:

- Limited to areas where exposure, on an intermittent or continuous basis, to acid, chlorine gas or to machine or diesel oils, is extremely unlikely.
- Limited to applications where exposure to fire or to concrete temperatures above the product heat deflection temperature or 120 deg F (40 deg C)(whichever is less) is extremely unlikely. Overhead applications are not allowed.
- Holes for the anchors shall be drilled (not cored), shall be blown clean with compressed air and shall be free of dust or standing water.
- The anchor type, size and embedment depth shall be as shown on the drawings and the anchor must be installed in accordance with the manufacturer's recommendations.
- The anchor must not be loaded until after the full curing period has elapsed.

e) Pressure Grouting

Prior to grouting, cracks and holes to be grouted shall be washed clean. Washing is not required for grouting soil voids. Once started, grouting shall be continuous until completed. In case of a mechanical failure or other

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[64]	25.09.2014

stoppage of the work, the grout equipment shall be washed out sufficiently to ensure that fresh only grout is pumped when the work is restarted.

After grouting is completed, the Contractor shall remove the grouting plant and all related parts, equipment, and supplies from the site, including unused materials and waste.

6.4. Field Quality Control

- The Testing Laboratory will Develop and utilize an effective method of field marking anchor and dowel test locations and results.
- Testing of grout mixes for conformance to manufacturer's specified strength: The independent testing laboratory shall take four test samples of each day's grout mix and test grout mix samples at 7 and 28 days. Test reports shall be submitted to the Owner for review.
- Test 25 % of reinforcing steel dowels installed with adhesive resin on a given day in tension using pullout procedure. Test to 80% of specified yield strength of the dowel with special inspection. Dowels specifically noted on the drawings as "No test required" do not require tension testing.
- If the failure rate of dowels exceeds 10 percent, testing will be increased to 100 percent of that day's installation of similar anchors or dowels. Testing will be reduced to 25 % of that day's installation when the failure rate is reduced to 10 percent or less. Failed dowels will be replaced at no additional cost to the Owner. The Contractor will produce daily reports of all testing activities; copies of daily reports will be submitted to the Owner in a timely manner.

6.5. Submittal

- Manufacturer's data shall be provided for bonding compounds, dry pack, non-shrink, pressure grout, retardants, epoxy grout, polymer concrete.
- Test reports, accompanied by a manufacturer's statement that previously tested material is of similar type, quality, and manufacture as that which is proposed for use on this projects, shall be submitted for Cement, Aggregates, Retardants, Bonding compounds and Epoxy resin
- The Contractor's testing laboratory shall provide evidence of correction of deficiencies noted in the inspection report before materials specified in this section are delivered to the job site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[65]	25.09.2014

7. Retrofitting Works

7.1. General

- a) The Work shall, in general, conform to other works/items specified in this Specification.
 - If the specifications for any item are not available in in this Specification cited above, relevant BIS Specifications should be followed.
 - In case BIS Specifications are also not available, the decision of Engineer-in-Charge given in writing based on acceptable sound engineering practice and local usage shall be final and binding on the contractor.
- b) The work will be carried out in accordance with the architectural and structural drawings to be approved by Owner. The structural and architectural drawings shall have to be properly correlated before executing the work.
- c) For items where so desired, samples shall be prepared before starting the particular items of work for prior approval of the Owner and nothing extra shall be payable on this account.
- d) Materials brought at site of work shall not be used in the work before getting satisfactory Mandatory test results.
 - Equivalents for the various materials and the materials of approved make shall be got approved from the Owner in writing before using them on the work.
- e) The contractor shall submit the required documents regarding the genuineness of materials used such as manufacturer's certification that the firm has manufactured the supplied materials.
- f) The contractor shall get approved from the Owner the storage space for epoxy/polymer/patented/other manufacture of materials to ensure that the storage temperature is maintained between 5° C and 38° C unless recommended otherwise by the manufacturer.
- g) Contractor shall comply with manufacturer recommendations so as to comply with environmental conditions under which the repair materials may be applied.
- h) The contractor shall employ Principal Technical Representative & skilled site workers who shall have adequate qualifications and experience for the proper execution of such works and already performed works of this kind with success.
- i) Contractor shall advise all workers working with epoxies to avoid contact with eyes and skin, inhalation of vapours, and ingestion. Necessary protective and safety equipments in the form of hand gloves, welders' goggles, shall be provided by the contractor and used on site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[66]	25.09.2014

- j) Care shall be taken to ensure that vibrations are well within acceptable limits for structural safety and users of the building.
- k) For the execution of protection and repair works, properly maintained plant and equipment permitting adequate treatment of the concrete substrate, proper execution of the work and determination of the required properties of the construction materials and construction measures must be present on the construction site.
- l) To ensure efficient and effective functioning, all plant and equipment must be checked on-site and at field material testing laboratory prior to first use and at appropriate intervals thereafter.

7.2. Chipping of Unsound/Weak Concrete Material

a) Purpose

To remove weak, loose or carbonated concrete over an area from its surface with pneumatically operated or power driven tools by chiselling, chipping etc.

b) Materials and T&P

Power or pneumatically driven chisel, chipping tools complete with accessories, hand-tools like chisels, hammer, pH indicator (0.2% phenolphthalein solution) with pH range at least up to 10.5 and clinical injection syringe.

c) Safety

Safety shall be ensured in accordance with contract conditions and specifications.

d) Procedure

Step-1: Prop and support to relieve the structural member of stress and strains.

Step-2: Scaffolding, if necessary for the exterior members, shall be done for working upon the area.

Step-3: Working Platforms for interior members, if necessary, shall be erected suitably or provided as mobile.

Step-4: Provide Protective Screen, if necessary.

Step-5: Mark off the area to be repaired using straight lines between corners. The marked area shall have 90° corners with the sides parallel or normal to the direction of the reinforcement. The marked boundaries for the repair area should be a minimum of 50 mm outside the perimeter of the spall. For a single spall, the repair area should have a minimum width of 100mm in any direction. If a number of spalls are closely located to each other, these spalls should be included in a single area marked for repair.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[67]	25.09.2014

Step-6: Cut shall be made along the marked boundary, normal-to-the surface. It should be made with a diamond cutter blade. However, when diamond cutting is not practical, the normal cut can be made with a power driven chisel. Minimum depth of cut shall be 10 mm. In situations where the diamond saw could cut into the reinforcing steel due to inadequate concrete cover, the boundary edge should be formed manually by means of chisel and impact hammers. A cover meter could be used to estimate the depth of cover.

Step-7: Chipping to remove all the unsound and weak concrete material shall be done carefully from the damaged portions of structural members by adopting mechanical or manual means up to the required depth to produce sound concrete surface to a near uniform depth for the repair area.

e) **Tolerance**

The chipping tolerances shall be ± 5 mm.

f) **Chiselling**

Hand Tools are typically applicable for concrete removal for smaller, moderate and areas of limited access. Removal should begin at the interior of the repair area and progress toward the boundaries, using suitable hammer. Power Driven Chisels/Hammers are normally applicable for chiselling smaller thicknesses up to about 50 mm. Pneumatic Hammers are normally applicable for chiselling larger thicknesses in excess of 50 mm Mechanical Milling (single drum, rotary cutter head with Tungsten-carbide bits) is applicable for large areas where the concrete cover is to be removed. Care must be taken to avoid contact with the reinforcing steel as both the reinforcement and the cutter drum could be damaged. Rounded And Feathered Edges should be hand cut to form normal-to-the-surface boundaries. All the edges and cavities shall be square shouldered.

Step-8: Test for carbonation shall be carried out at embedded or exposed reinforcement locations, by spraying phenolphthalein indicator on concrete in contact and in the immediate vicinity of reinforcement soon after its chipping. As otherwise, chipped concrete surface in contact with air is likely to get carbonated soon after its coming in contact with atmospheric carbon dioxide.

Step-9: A full-depth chiselling and removal of concrete all round reinforcement shall be carried out, in case the concrete in contact and in immediate vicinity of the reinforcement is carbonated.

Step-10: Inspection and soundness testing, after concrete removal & cleaning, for weaknesses and delamination of exposed surfaces shall be visually carried out. If required, additional removal will be done.

Step-11: Cleaning of debris and dust shall be carried out from within the chiselled/ chipped area and its disposal as per direction of the Engineer-in-Charge.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[68]	25.09.2014

7.3. Removing concrete all around reinforcement including from its behind

a) Purpose

To create an average clear air gap equal to nominal size of coarse aggregate plus 5 mm all around embedded reinforcement, in contact with carbonated concrete for rust removal & passivating its surface with fresh alkaline passivating coat and concrete/ mortar.

b) Materials and T&P

Power or pneumatically driven chiselling, abrading, chipping tools complete with accessories, hand-tools like chisels, hammer, pH indicator i.e. 0.2% solution of phenolphthalein indicator for pH range preferably up to 11.5 or at least up to 10.5, clinical injection syringe.

c) Safety

Safety shall be ensured in accordance with contract conditions and specifications.

d) Procedure

Step-1: Prop and support, if not done already, to relieve the structural member of stress and strains.

Step-2: Scaffolding & working platforms for the exterior members, if not already done and if necessary, shall be erected for working upon the area.

Step-3: Working Platforms for interior members, if not already done and if necessary, shall be erected suitably or provided as mobile.

Step-4: Provide Protective Screen, if not already done and if necessary.

Step-5: Test for carbonation shall be carried out at embedded or exposed reinforcement locations, by spraying phenolphthalein indicator on freshly chipped concrete in contact and in the immediate vicinity of reinforcement.

Step-6: A full-depth chiselling and removal of concrete all round reinforcement shall be carried out, if the concrete in contact and in immediate vicinity of the reinforcement is carbonated. The concrete around reinforcement shall be removed so as to have a near uniform air gap of about 5 mm plus the nominal size of coarse aggregate to be used in repair concrete/mortar. However, the air gap shall not be less than 15 mm in any case. Power/pneumatic driven tools/chisels shall be used for such portions of carbonated concrete around reinforcement, which could not be removed manually, to achieve a near uniform required air gap all around including behind the reinforcement. Power Driven Chisels/Hammers are normally applicable for chiselling smaller depths up to about 50 mm. Pneumatic Hammers are normally applicable for chiselling larger depth in excess of 50 mm.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[69]	25.09.2014

Step-7: Cleaning of debris and dust shall be carried out from within the chiselled /chipped area and its disposal as per direction of the Engineer-in-Charge.

7.4. Cleaning reinforcement of total rust including from behind reinforcement

a) Materials and T&P

Chiselling, abrading, chipping, hammering, wire brushes, paint brush, abrading cloth, etc hand tools complete with accessories, tested and approved chemical rust remover.

b) Safety

Safety shall be ensured in accordance with contract conditions and specifications.

c) Procedure

Step-1: Cleaning by manual method-

Remove the rust manually from all round the surface along the length of reinforcement, using hand tools like chisels, hammers, wire brushes, abrading cloth/paper, etc. This shall be continued manually along the length of the rusted reinforcement till such time that the steel surface is cleared of all rust that could be removed manually.

Step-2: Cleaning by chemicals –

Remove the Rust by using tested chemicals, if directed by Engineer-in-Charge, due to unsatisfactory results of manual rust removal. Chemical rust remover shall be brush applied over the reinforcement surface thoroughly all around the circumference and along the full length of rusted reinforcement. After 24 hours (or as prescribed by manufacturer) of its application, the surface shall be cleaned with wire brush and all loose particles removed. It shall be washed with water thoroughly and allowed to dry.

7.5. Cleaning Reinforcement and exposed concrete surface of loose and foreign material by means of sand blasting

a) Purpose

Clean the prepared concrete surface of all-loose, lightly sticking materials including the foreign materials, loose concrete, aggregates etc to provide a good bond with the applied repair material and clean the reinforcement surface of any minor rust remaining after manual and chemical cleaning to achieve shining bright metal.

b) Materials and T&P

Coarse sand conforming to Zone I or II as per IS: 383, Air compressor of a minimum 35 Kilowatt capacity, spray gun for sand, all related accessories for sand blasting, hand tools like wire brushes, chisels, etc

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[70]	25.09.2014

c) **Testing of Materials and T&P**

The sand shall be tested to conform to the specification.

The air compressor shall be tested to perform to the required standards as laid down in specifications of shotcreting.

d) **Safety**

Safety shall be ensured in accordance with contract conditions and specifications.

e) **Procedure**

Step-1: Specified tested coarse sand shall be collected at site in required quantity for sand blasting.

Step-2: Make available mechanical power driven air compressor in working condition at site with all required accessories for carrying out sand blasting as well as air blasting operations.

Step-3: Coarse sand shall be sprayed under pressure over the exposed surface so as remove all loose and foreign material and to cause an intense abrading of the reinforcement and removal of rust from entire surface of reinforcement to achieve shining bright surface. The sand blasted surface shall be subsequently cleaned with oil free air blast.

7.6. Providing drilling and inserting nipples along crack lines

a) **Purpose**

To fix injection nipples and seal the remaining portion of honey combed or cracked concrete /masonry for grout injection.

b) **Materials and T&P**

12 mm diameter approved PVC/aluminium /Galvanised Iron nipples, Chisel, hammer, power driven tool for chase cutting & drilling, hand operated blow out pump, sealing putty of polyester/epoxy/polymer modified mortar etc. and all related accessories and materials.

c) **Testing**

The sealing putty and the nipples shall be tested to conform to the manufacturers specifications. The power driven tools shall be test driven and their drill/cutting bits shall be tested for effectiveness before taking up the repair operation.

d) **Procedure**

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Personnel, Supervision, Product delivery, Storage and Handling etc.

Step-2: Identify the Cracks and mark the area for injection grouting.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[71]	25.09.2014

Step-3: Prop & support the structural member, if required, to relieve it of stress and strains.

Step-4: Open up cracked surface by making 'V' notch or groove of size 12 mm x 12mm.

Step-5: Remove plaster, if required, to identify and mark the honey combed area.

Step-6: Drill holes at least 25 mm diameter and 40mm deep along crack lines at spacing of 300 mm or thickness of the structural member, whichever is less. In honey combed area @ 9 nos per sqm. as directed by Engineer-in-Charge and up to 30 mm to 40 mm depth.

Step-7: Remove coarse debris and dust in opened up cracks and drilled holes by blowing oil free compressed air, if available with air compressor, otherwise with hand operated blow out pump. Concrete surfaces required to be grouted shall be free from all loose and unsound materials by means of mechanical abrasion using stiff wire brushes, after removing all loose areas with chisel and hammer. Area shall be made free from any deleterious materials, such as oil dust dirt etc. by means of oil free jet of compressed air. All prepared concrete surfaces shall be thoroughly inspected and got approved by the contractor.

Step-8: Insert 12mm dia specified injection nipples in holes drilled along crack lines and fix them by sealing only its sides with epoxy or polymer modified mortar.

Step-9: Seal the crack or the honey combed surface between the nipples by polymer modified mortar as may be approved by Engineer-in charge. The polymer used shall be of approved grade and applied as per specifications mentioned separately elsewhere. The polymer-modified mortar shall be moist cured for 1-3 days and allowed to gain strength before actual grouting commences.

7.7. Sealing of cracks by injection of advance grout

a) Purpose

To inject the specified grout into honeycombed or cracked concrete/ masonry

b) Materials and T&P:

Cement, sand. Water and admixture for cementitious grout shall be as per clause 5 of this specification.

Polymer: It shall be as specified and shall conform to ASTM-C-1059.

Hand/power operated grouting pressure pump/gun with pressure gauge. The grouting equipment shall be capable of supplying, mixing, stirring and pumping grout to the satisfaction of the Owner. The equipment shall have the capacity to inject grout at a pressure upto 7 kg per square centimeter

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[72]	25.09.2014

measured at the grout connections. It shall be capable of mixing and pumping of cement sand grout 1:2 with water cement ratio ranging from 0.5 to 1.

Air compressor with all related accessories for carrying compressed air to the required location. Hand operated blow out pump may be allowed by Owner for small crack depths/areas.

Calibrated Spring Balance (for accurately weighing different components of materials in required proportions), Mechanical blender for mixing, Spray equipment/brush for application of polymer modified/ bonding cement slurry

c) Execution:

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Full quantity of manufactured material (e.g. specified resin, hardener, polymer, cement, etc as may be required) shall be received at site in factory sealed containers with labels legible and intact provided that the shelf life so permits. Otherwise substantial quantity as could be consumed within the storage period shall be received as per quantity approved by Engineer-in-Charge. Full quantity shall be worked out as theoretically required for consumption in the whole work.

Step-3: If directed by Owner, collect random samples of materials for test and send to approved laboratories so as to ensure that they satisfy the physical and mechanical properties. The grout pump and the pressure gauge shall be tested before taking up the repair operation.

Step-4: Identify the Cracks and mark the area for injection grouting.

Step-5: Surface Preparation: The appropriate propping/supporting, surface preparation and crack sealing as per site requirements shall be completed, which may sequentially cover one or more of the following items of work:

- Prop & support the structural member to relieve it of stress and strains.
- Provide grouting nipples.

Step-6: Blow the compressed air followed by washing with water through nipples located at the highest level and downwards to ensure removal of even fine dust particles from the cracked surface, which could obstruct the free flow of grout material and impede its bonding with cracked surface (and drying with air blast wherever epoxy injection grout is to be used).

Step-7: Saturate the cracked surface in the vicinity of crack/honeycombed concrete/ masonry with water (but without excess water), only if the cementitious grout is to be injected. Otherwise, this step may be skipped.

Step-8: Prepare the injection grout as specified under clause 5 of this specification.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[73]	25.09.2014

Step-9: Inject the approved & specified grout into the cracks by means of suitable gun or pump at a pressure of 1- 2 kg./cm² for epoxy grout and 4-7 kg./cm² for cementitious grout. In case of vertical cracks injection shall be started at the lowest nipple and continued until the injected grout begins to flow out at the next higher nipple. Whereas in other cases of horizontal locations, the injection shall be started from one nipple and continued until the injected grout begins to flow out at the other nipple.

The first nipple shall then be closed off and injection continued at the second until the grout flows out at the third. The process shall be repeated until the whole of the crack has been sealed. As soon as the system is cured, the nipples shall be cut.

In case of Honeycombed Area, each grout hole shall be grouted individually. Grouting pressures to be used in the work will vary with the conditions encountered and different areas and the pressure used shall be between 1 to 4 kg/cm². The sequence of injection shall be as per the direction of Engineer-in-Charge.

7.8. Providing and inserting shear key bars

a) Purpose

Shear key bars are used for providing a structural connection of the applied repair material with the substrate/parent surface for transfer of forces occurring at the interface.

b) Materials and T&P:

Epoxy cartridges and specified lengths and diameter of steel reinforcement.

Standard Power driven drilling/hammering equipment, Hand operated blow out pump, brushes, epoxy dispenser, epoxy cartridge holder, disposable PVC mixing nozzle for epoxy, and any other incidental accessories and T&P items.

c) Procedure

Step 1: Mark the locations of shear keys and get the same approved for structural connection from the Owner.

Step 2: Drill holes to specified depth and diameter in concrete at marked locations for the specified dia of shear key bars.

Step 3: The drilled hole in dry state shall be cleaned with round brushes and by blowing air through a tube inserted in the hole and connected to hand operated blow out pump.

Step 4: Inject epoxy from the foil pack with the help of epoxy dispenser, epoxy cartridge holder and disposable PVC mixing nozzle inserted inside the drilled hole to fill it from bottom of the hole and upwards.

Step 5: Insert the reinforcing bar and allow the epoxy adhesive to cure.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[74]	25.09.2014

7.9. Reinforcement for RCC works etc.

a) Purpose

To provide reinforcement in repair concrete for structural purposes, controlling effects of thermal variation or holding shotcrete/gunite material in position. The reinforcement material may comprise specified grade and quality with or without zinc coating.

b) Material & T&P:

Specified reinforcing material, necessary hand or power driven tools for cutting, bending, binding, transportation, handling and placement etc. Reinforcement bars if used shall conform to I.S. 432 (Part-I) or I.S. 1786. Welded wire fabric where used shall conform to I.S. 1566.

c) Procedure

The general requirements, placing in position, measurement etc. shall be generally followed as in clause 4 of this specifications excepting those specifications provided in the following clauses.

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Testing of Material: The requisite number of test specimens of specified reinforcing material shall be collected from each batch of manufacture or supply received (whichever is less) for these to be tested for conformance to the specified requirements before use on the work.

Step-3: Execution:

The required reinforcement as per approved detailed drawings in the form of round bars or welded wire fabric in such a way so as to cause the least interference with placement of repair material.

d) Overlaps:

Lapped reinforcing bars shall not be tied together. They shall be separated by at least 50 mm wherever possible. Wire mesh shall be lapped by 1-1/2 squares in all direction. Minimum requirement of lap length of bars shall be as specified in I.S. 456.

e) Clearance around reinforcement:

Sufficient clearance shall be provided around the existing exposed and additional reinforcement to permit complete encasement with sound repair material.

f) Cover:

Minimum cover to reinforcement shall be as specified under clause 4 or as per I.S. 456. As far as possible the bars shall be arranged so as to permit shooting from opposite side.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[75]	25.09.2014

g) **Fixing:**

Reinforcement shall be fixed to existing shear key bars and depth gauges driven into the concrete with wires and secured rigidly so that the vibration resulting from the deposition of repair material shall not impair or displace them.

h) **Where Guniting /shotcrete to be done in more than one layer**

In such cases, the additional reinforcement should be so fixed that it is encased in succeeding layer. No additional reinforcement is required to be fixed in first layer of guniting.

Mesh reinforcement shall be fixed in the manner so that it is firmly held at least 12 mm away from the parent concrete surface as well as from the final finished surface. It shall be ensured that it is stiffened enough and cannot belly out during the guniting / jacketing / concrete overlays with consequent lack of cover. It shall be done by tying with parent concrete surface through shear key bars or depth gauges. GI-wire mesh fabric will add sacrificial "Zinc" coating & shall reduce corrosion process in the reinforcement. The wire mesh spacing shall be as specified in the drawings.

7.10. Alkaline Passivating bond coat over Reinforcement

a) **Purpose**

To protect steel reinforcement with a passivating alkaline layer provided all around its circumference along the length with strong adhesive to bond with applied repair concrete or mortar.

b) **Materials and T&P:**

Specified alkaline passivating & bonding materials e.g. CPCC material, epoxy, epoxy phenolic IPN-RB or specified polymer and cement, mixing water, necessary T&P for mixing and applying bond coat e.g. brush, mechanical mixer, mechanical stirrer, etc.

Epoxy Adhesives shall conform to ASTM C-882.

Polymer Latex shall conform to ASTM C-1059.

Cement shall be ordinary Portland cement conforming to IS: 269.

Patented materials e.g. CPCC or epoxy-phenolic IPN-RB as per licensee's specifications

c) **Execution:**

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Full quantity of manufactured repair materials shall be received at site in factory sealed containers with labels legible and intact, if the shelf life

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[76]	25.09.2014

so permits. Full quantity shall be worked out as theoretically required for consumption in the whole work.

Step-3: Prepare the surface for treatment.

Step-4: Thoroughly inspect all the concrete surfaces prior to applications of passivating/ bond coat and get approved from the Engineer-in-Charge.

Step-5: Test the materials by taking random samples and testing in approved laboratories so as to check whether they satisfy the physical and mechanical properties.

Step-6: Make available at site all necessary mechanical equipment as under:

Calibrated Spring Balance (for accurately weighing different components of materials in required proportions),

Mechanical blender for mixing

Brush for application of specified and approved passivating/bond coat.

Step-7: Material Mixing: Components of the passivating/ bond coat mix shall be weigh batched and mixed in specified proportions in a clear container free from harmful residue or foreign particles. The components shall be thoroughly blended with a mechanical mixer to a uniform and homogeneous mixture. Small batches (upto 1 litre) may however be allowed by manual mixing using spatulas, palette, knives etc.

Step-8: Material Application: The alkaline passivating & bonding material shall be applied to prepared reinforcement substrate after tying in new reinforcement wherever specified in the form of bars or welded wire fabric. It shall be applied to reinforcement surfaces by stiff nylon bristle brush. The coating material shall be worked well all round the periphery and along its exposed length using a stiff brush ensuring that no pinholes are remaining. The second coat, if required, the same shall be applied as per manufacturer's recommendation after the first coat is touch dry.

7.11. Bonding coat for hardened concrete with repair concrete/shotcrete/cement mortar

a) Purpose

To provide adequately strong adhesion of parent concrete with applied repair concrete or mortar.

b) Materials and T&P

Specified bonding materials e.g. epoxy or polymer and cement, mixing water, necessary T&P for mixing and applying bond coat e.g. brush, spray gun, mixer, mechanical stirrer, etc.

Epoxy Adhesives shall conform to ASTM C-882

Polymer Latex shall conform to ASTM C-1059.

Cement shall be ordinary Portland cement conforming to IS: 269.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[77]	25.09.2014

c) Execution

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Full quantity of manufactured repair materials shall be received at site in factory sealed containers with labels legible and intact, if the shelf life so permits. Otherwise substantial quantity as could be consumed within the shelf life shall be received as per quantity approved by Engineer- in-Charge Full quantity shall be worked out as theoretically required for consumption in the whole work

Step-3: Prepare the surface for treatment.

Step-4: Saturate the surface with water but shall be free of excess surface water, debris and dust, where cementitious bond coat is to be applied. Otherwise, surface to remain dry and clean of debris and dust.

Step-5: Thoroughly inspect all the concrete surfaces prior to applications of adhesive and get approved from the Engineer-in-Charge.

Step-6: Test the materials by taking random samples and testing in approved laboratories so as to check whether they satisfy the physical and mechanical properties.

Step-7: Make available at site all necessary mechanical equipment as under:

Calibrated Spring Balance (for accurately weighing different components of materials in required proportions), Mechanical blender for mixing Spray equipment, brush for application of epoxy, polymer modified, bonding cement slurry.

Step-8 Bond Coat Mixing: Components of the bonding coat mix shall be weigh batched and mixed in specified proportions in a clear container free from harmful residue or foreign particles. The components shall be thoroughly blended with a mechanical mixer to a uniform and homogeneous mixture. Small batches (upto 1 litre) may however be allowed by manual mixing using spatulas, palette, knives etc.

Step-9 Bond coat application for jacket concrete/ shotcrete/ Mortar placement: The specified adhesive shall be applied to concrete surface at atmospheric temperatures below 40°C for epoxy adhesive and below 30°C for polymer modified cement or cement-sand slurry adhesive. Bonding coat shall be applied by spray equipment or stiff nylon bristle brush as approved by Engineer-in-Charge. The bonding material shall be worked well into the surface of the parent body ensuring that no pinholes are visible.

Polymer modified bonding cement slurry shall be applied to a thickness not in excess of 2 mm.

If necessary, a second coat shall be applied at right angles to the first to ensure complete coverage and absence of pin holes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[78]	25.09.2014

All concrete surface shall be well protected beyond limits of surface receiving adhesive against spillage.

Step-10 Repair Material Application: Fresh plastic concrete/ shotcrete/ mortar shall be applied while adhesive is still tacky and well within the pot-life/ setting period. If adhesive cures to the extent of losing its tack or has set before plastic concrete/shotcrete/mortar is placed, the same shall be removed or slightly abraded and second coat of adhesive applied. Freshly placed plastic concrete shall be thoroughly consolidated to ensure full bonding of new concrete with the substrate.

d) Bond of repair with parent concrete:

Evaluate bonding of fresh concrete/ shotcrete/ mortar to existing concrete after the fresh material has cured for not less than 7 days by sounding and tapping fresh concrete with a blunt metal instrument to the satisfaction of Engineer-in-charge. Suspect inadequate bonding, if a hollow sound is detected in any area. In case of conflicted location contractor shall extract one core from the repaired surface area at the end of 28 days.

Conduct one core test at random for checking the bond, for every 100 square metre or part thereof. The contractor shall core each area after 28 days of application of concreting/ shotcreting/ repair mortar application for determination of bonding adequacy.

Core drilling shall be done through applied repair material and into the existing concrete. Core diameter shall be not less than three times the nominal size of the coarse aggregate used in repair material or as required by the Engineer-in-Charge. Length of cylindrical cores shall preferably be twice the core diameter or twice the thickness of applied repair material or as instructed by Engineer-in-Charge but in any case not less than the dia of the core.

Cores shall be visually inspected by Engineer-in-Charge for evidence of poor workmanship.

Cores shall be tested in tension to evaluate the quality of bond between new concrete/shotcrete/mortar and the parent concrete. If the failure is in the parent concrete the bond of new repair material shall be deemed to be satisfactory.

Failure at the bond line or in the repair material shall be concluded as lack of proper bond or inadequate strength of repair mortar

Dismantle such areas of work failed in bond or repair material and re-prepare the surface after chipping off new concrete/mortar work and abrading the epoxy/ polymer/cement slurry interface. Nothing for testing concrete for bond between old and new concrete shall be paid separately.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[79]	25.09.2014

7.12. Curing of RCC Surfaces etc

a) Purpose

To ensure satisfactory hydration of cement by retaining or replenishing the mixing water lost due to natural drying and evaporation process for a specified period through exposed cementitious surfaces of the freshly placed cement mortar/ concrete.

b) General

Importance of wet curing to all items of work involving use of cement can not be over emphasised. Any surface experiencing discontinuity of dampness of surface with any patch having dried out during the specified period of curing, it shall be prominently marked with lime or other suitable prominent colour.

c) Materials and T&P:

Curing compound, brush or hand operated spraying gun and all other related accessories for application on Concrete/Plastered Surface.

d) Procedure:

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Full quantity of specified manufactured material shall be received at site in factory sealed containers with labels legible and intact provided that the shelf life so permits. Otherwise substantial quantity as could be consumed within the shelf life shall be received as per quantity approved by Engineer-in-Charge. Full quantity shall be worked out theoretically for consumption in the whole work.

Step-3

• Moist Curing:

Cover all exposed surface of concrete, when the concrete begins to harden i.e. two to three hours after compaction with moist gunny bags or any other material approved by the Owner.

Keep the exposed surfaces continuously damp after its final setting (i.e. after a maximum of 8 hours of concreting) by ponding with a sheet of water or by covering with a layer of sacks, canvass, hessian or similar water absorbent materials constantly kept wet by water sprinkling for at least 7 days, where ordinary portland cement is used and 10 days, where portland pozzolana cement is used from the date of placing of concrete. For concrete work with other types of cement, curing period shall be as per manufacturer's recommendations or as directed by the Owner.

• Using Curing compound:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[80]	25.09.2014

Testing of Materials:

It must be ensured that curing compound should neither affect the strength nor the surface of concrete. It shall not leave any undesirable stains on surface to affect the bond of plaster or other finishes to be applied later. It should be soluble in water, so that it can be removed by splashing or washing with water without scrubbing the surface.

Test for Efficacy:

The testing of curing compounds shall be done from each lot of curing compound received at site by casting two sets of 15 cm cubes with each set having 6 cubes. One set shall be moist cured by covering with damp gunny bags and subsequently by immersing under water and the other set by applying curing compound on top after 2 to 3 hours of casting and subsequently on de-moulding apply on the remaining faces all around. The cubes shall be kept in an environment similar to which the actual structure is exposed for a period of 7 days after its casting. Three concrete cubes each from both sets shall be tested after 7 days for their crushing strength as per standard test procedure. The average crushing strength of cubes cured with curing compound shall be not less than 95% of the crushing strength of cubes cured under damp or immersion curing.

Test for Staining:

The set of three sample cubes applied with curing compound, remaining after 7-day cube crushing strength test, shall be washed with water with soft brush scrubbing with nylon bristles and allowed to dry for a period of seven days in an atmosphere with relative humidity not exceeding 40% at ambient temperature. The other set of three cubes cured for seven days under damp or immersion conditions shall also be kept for another seven days under identical humidity and temperature conditions. The surface of the two sets of such cubes shall be compared by closely observing for any visible stain and texture that may detrimentally affect its bond with subsequently applied plain plaster or aesthetic appearance. Such observations shall be recorded in three categories as no effect, slight effect and moderate effect. The curing compound shall be considered as acceptable in the 'no effect' category and unacceptable in the 'moderate' category. The decision of Engineer-in-Charge, which shall be final and binding, based on the likely use of finished surface of concrete/plaster shall determine the acceptability of the 'slight effect' category.

Concrete curing compounds, after testing satisfactorily for efficacy, may be used in lieu of moist curing with the permission of the Engineer-in-Charge. Such compounds shall be applied to all exposed surfaces of the concrete by spraying or brushing within two to three hours of casting and well within an hour of removal of formwork.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[81]	25.09.2014

7.13. Engineered Steel Tubular double Scaffolding System

a) Purpose

To provide a scaffolding system with adjustable working platforms on the exterior of the building for the workmen to work upon any part of the area to be accessed safely and with ease for surface preparation, application of repairs and construction activity.

b) Materials

The standard proprietary tubular double scaffolding system of repute with all accessories, working platforms etc.

c) Design

It shall be designed for all the incidental dead, live and wind loads as per IS: 875 in steel tubular sections as per general design considerations governed by IS:800. The design of the scaffolding system shall cater to the safety features for the workmen.

d) Fabrication and Erection

Fabrication and erection shall be done as per the design brief and installation instructions of the proprietary firm. It shall be maintained in functional condition for the work duration.

7.14. Temporary barricading using angle iron verticals and sheet panels

a) Purpose

To provide a barricading on ground to physically define the boundaries of the site of construction/repair activity for restricted entry of only those involved with the construction work.

b) Materials

Available Corrugated G.I. Sheet minimum 24 G thick; Framing structural material at least MS Angle iron of size [40x40x5mm] or equivalent.

c) Fabrication & Erection

Size of framing panel shall be decided depending upon site conditions and these could be approximately 2.0 metres long with height as 1.8 metre.

It shall be made up at least of two verticals, each with additional length of about 600 mm for fixing in to ground firmly and two horizontals equal to the length of panel.

It shall be made up by cutting the structural sections to size, shear punching holes in verticals and horizontals for nuts and bolts or making other suitable provision for receiving CGI sheet or other specified panelling material and connection of panel with adjoining panels.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[82]	25.09.2014

Fabrication of frame of an individual panel shall be by welding at corners, welding MS plate at base of verticals or any other acceptable practice approved by Engineer-in-charge.

G. I sheet or other specified panelling material shall be suitably fixed. It shall preferably be done by means of nuts and bolts at its ends spaced at about 300 mm c/c transversely and at about 600 c/c longitudinally along corrugations. The corrugations of CGI sheet shall run along the shorter span of the panel.

In case of newly fabricated panels, these shall be painted with red oxide zinc chromate primer on steel work and approved primer on other material and at least one coat of paint of approved shade. In case of used panels, one coat of paint of approved shade shall be applied over the existing paint. The portion of verticals to be embedded in ground shall be suitably protected against rusting by painting it with bitumen or other suitable paint.

The fabricated panels shall be suitably fixed vertically and firmly in to the ground to the satisfaction of Engineer-in charge by maintaining a uniform height of about 1.8 metres above GL and connecting each panel with the adjoining panels with nut and bolts or other suitable means.

Suitable provision of frame/posts in the openings provided in barricading shall be made for receiving door shutter at locations as approved by Engineer-in-Charge.

7.15. Temporary protective fabric screens

a) Purpose

To protect passersby from falling debris and also to protect the workmen and structure being repaired against direct exposure to sun.

b) Materials:

For screening purpose jute cloth, woven PVC cloth, geo-textile or wire-mesh as specified and approved by Engineer-in-Charge shall be used, which shall conform to their relevant BIS Code. Screen materials shall be fixed by suitable means comprising of M.S.Flats/ J-bolts /nails/clamps, etc with washer or any other suitable means on frames of existing scaffolding etc.

c) Procedure

Scaffolding, if required, comprising of verticals, horizontals and diagonal bracings of steel tubes shall be fixed over ground which is payable separately.

One end of the screening material, brought to site in looms/rolls, shall be properly fixed over top horizontal member with suitable means and suspended so as to cover the required area.

The vertical fall of screen shall be suitably fixed/firmed up at intermediate levels so as to keep it in position during the work duration.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[83]	25.09.2014

Next strip of the screening material shall be fixed with its sides stitched or suitably jointed or lapped with the previous ones as approved by Engineer-in-charge.

Spacing of frame member of scaffolding shall be so selected that the sagging of screen shall not hinder the repair process.

The contractor shall maintain the protective screens in acceptable conditions for the entire work duration as required by the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[84]	25.09.2014

8. CONCRETE RETROFITTING METHODS

In selecting the retrofitting method, the current status of the existing concrete structure as determined through inspection, the performance of the structure, the performance required of the structure after retrofitting, the conditions for retrofitting construction work, the ease of maintenance, economy and other factors shall be considered.

At the stage of selecting the retrofitting method, the current status of the existing structure and its performance shall be obtained, and the performance required for the structure after retrofitting and the conditions for retrofitting work shall be determined. Factors that should be considered in selecting the method include the effectiveness of the various retrofitting methods with respect to the required performance improvements, the viability of execution of the retrofitting work, the impact of the retrofitting work on the surrounding environment, the ease of maintenance after retrofitting, economy and other factors.

Various retrofitting methods listed below shall be used for retrofitting objective:

8.1 Retrofitting of concrete members

a) Continuous fiber reinforced plate bonding construction method:

Bonding continuous fiber reinforced plates to the surface of the existing structure to restore or improve load-carrying capacity

b) Continuous fiber reinforced plate jacketing construction method:

Jacketing with continuous fiber reinforced plates around the periphery of the existing structure to restore or improve load-carrying capacity and deformation characteristics

c) Prestressed concrete jacketing construction method:

Placing pre-stressing wires and pre-stressing stranded steel wires in place of lateral ties around the periphery of existing member sections and using mortar and concrete to bond them in order to reinforce the structure. To increase the restraining effect of the inner concrete, the pre-stressing steel is generally stressed during placement.

d) Pre-stressing introduction (internal cable) construction method:

Using internal cables for the existing concrete members to provide pre-stressing and restore or improve the load-carrying capacity of the members.

e) Repaving method:

Replacing some or all of the existing concrete members with new members through the use of precast members or concreting on site to restore or improve load-carrying capacity.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[85]	25.09.2014

8.2 Retrofitting as a structural body

a) Beam (girder) addition method:

Adding beams between the main girders of the existing reinforced concrete deck to reduce the deck span and restore or improve the load-carrying capacity of the reinforced concrete deck.

b) Seismic wall addition method:

Placing new reinforced concrete walls between existing reinforced concrete rigid-frame bridge piers and bonding them to form a continuous unit in order to restore or improve the load-carrying capacity as a structural body.

c) Support point addition method:

Supporting the intermediate sections of the beams and other existing concrete members with new members to reduce the span of the members in order to restore or improve the load-carrying capacity as a structure.

d) Seismic isolation method:

Using seismic isolation bearings and the like to reduce the seismic energy applied to the structure in order to improve its various performance values during an earthquake.

8.3 Foundation retrofitting

a) Underground wall (beam) addition method:

Connecting the foundations with cast-in-site diaphragm walls and underground connecting beams to distribute stress and ensure the stability of the entire system.

b) Pile/footing addition construction method:

When pile foundations are damaged or there is residual displacement, adding piles or footings to increase the load-carrying capacity of the foundation.

c) Foundation improvement method:

Improving the ground around the foundation with cement improvement materials to improve the ground bearing capacity and horizontal foundation resistance. Also prevents excessive pore water pressure and liquefaction.

d) Steel sheet-pile coffering construction method:

Placing sheet-piles around the periphery of the footings and bonding them to the footings to improve bearing capacity and horizontal resistance.

e) Foundation compacting method:

When insufficient foundation bearing capacity is a concern due to scouring or the like, using concrete or the like to compact the ground around the foundation in order to restore bearing capacity.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[86]	25.09.2014

8.4 Repair of cracks and missing sections

a) **Cracks fill method:**

Forcing low viscosity resin and ultra-fine cement into the cracks in existing concrete members to seal the cracks.

b) **Fill method:**

Filling cracks, rock pockets, cavities, peeling and other small-scale missing sections in existing concrete members with resin and mortar to repair sections.

c) **Section repair method:**

Removing deteriorated or damaged portions of existing concrete members and then restoring these members to their original sectional status using materials with excellent bonding to existing concrete.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[87]	25.09.2014

9. Shoring and Underpinning

9.1 Material and Equipment

- a) The contractor shall furnish all materials, tools, equipment, facilities and services as required for providing the necessary shoring and underpinning work and facilities. Jack and jacking equipment shall be more than adequate for the imposed loads and shall be provided with calibrated gauges.
- b) Shoring and bracing materials
Provide heavy timber posts, beams, planks, boards, pipe struts, pin piles, and accessories as required.
- c) Lagging and sheeting material
Provide heavy timber boards, planking or sheeting as required. Lagging board shall be secured in place by steel H-piles, with boards inserted between the H-flanges.
- d) Underpinning Pier
An excavation pit, provided generally by manual excavation, which is carried to a pre-selected bearing surface and then filled with concrete to provide supplementary foundation support for the underpinning structure.
- e) Concrete
Refer clause 4 of this specification for concrete requirements.
- f) Grout
Refer to Clause 5 of this specification for Non-Shrink Grout requirements.
- g) Structural Steel
Refer to Clause 9 of this specification for Structural steel requirements

9.2 Execution

- a) Detection of Movement
 - For each existing structure that may be affected by the work, install settlement markers on each footing, building corners, wall or surrounding improvements to be monitored. Settlement markers shall be capable of being read to an accuracy of 1.52mm.
 - Take and record readings not less than once per week during performance of the work until the permanent structures is complete to the ground level.
 - Stop work; notify the Engineer, and take immediate remedial action if movement of the existing structure occurs during performance of the work.
 - Upon completion of the work, take weekly readings of the measurement points for a period of 4 weeks or longer if movement persists, and report the results to the Engineer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[88]	25.09.2014

- The detection of movement shall be performed by a qualified licensed land surveyor or civil engineer.

9.3 Shoring and Underpinning

- Existing footings, foundations, pile caps, grade beams, retaining walls, or pavement which may be affected by excavation operations shall be shored or underpinned adequately or otherwise protected against settlement and shall be protected against lateral movement.
- Provide soldier piling, lagging and sheeting, tie-backs, slurry diaphragm wall, and cementitious grouting, as required, to hold back earth at excavations and as required to prevent cave-ins and earth sloughs.
- Footings, foundations, pile caps, grade beams, retaining walls, or pavements which have been undermined by earthwork and pile-driving operations shall be filled and supported with concrete extended to undisturbed bearing earth or bedrock.
- Concrete may be placed as a stiff mix of minimum slump (dry pack), or concrete may be pneumatically placed (shotcrete), or concrete may be placed by conventional methods with concrete formed to hold it in proper position.

9.4 Concrete Piers, Walls and Pile caps

- Install concrete underpinning piers, walls, and pile caps as indicated, with the bottom at the indicated or bearing elevation and the top approximately three inches below the structure to be underpinned. Dry pack the space within three days after concrete placement is completed.
- Where earth forms are indicated, install waterproof building paper or board between the earth and concrete to prevent water loss from the fresh concrete.
- Do not remove support of existing structure until concrete piers, walls, or pile caps have attained design strength.

9.5 Piles and Caissons

- Install pipe pile shells or drilled shafts at locations indicated, and extend from underside of existing footings to indicated elevations, plus additional penetration if required to develop the design working load of the pile or caisson.
- Distribute jacking reactions over the existing structure in a manner that will not overstress or deflect the existing structure.
- Weld splices where indicated. Provide watertight welds capable of developing the full strength of the pile or caisson. Align splices to ensure the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[89]	25.09.2014

straightness of the pile from top to tip. Use outside sleeves and backup rings as necessary.

- Where the pile tip is below the ground-water table, maintain the elevation of the water inside the shell at approximately the elevation of the ground-water table during installation of the shell.
- After installation of the shell, apply the full design-working load to the empty pile shell and maintain until there is no measurable settlement over a one hour period.
- Maintain the excavation within the pile shell approximately 12 inches above the tip during driving, and dewater pile shells prior to filling with concrete in a manner which will prevent loss of earth or soil at the tip. An earth plug may be left in the pile tip or a concrete plug may be placed and cured prior to dewatering pile shells.
- After load testing to the design load, dewatering, and inspection of the shell by the Engineer, fill accepted pile shells with concrete in the presence of the Engineer. Keep an accurate record of the volume of concrete deposited in each pile. Deficiencies revealed by comparing the volume of the inside of the pile with the volume of placed concrete will be cause for rejection of the pile or correction of the deficiency.
- Securely wedge in place with steel wedges those piles that have satisfied the load-testing requirements. Weld and encase in concrete all wedges, plates, wedging struts and piles, as indicated or required.
- Following completion of load transfer of underpinned structures, fill the underpinning pits with concrete as indicated. Provide reinforcement, shear keys, dowels, and water stops as indicated or required. Place concrete to within 3 inches of the underside of the existing foundation. After three days, dry pack the space between the foundation and concrete.

9.6 Load testing of piles and acceptance criteria

- After the concrete within the pile or shaft has set for at least 24 hours, test each pile or pier by jacking to a load equal to 150 percent of the design-working load of the pile. Maintain the load until there is no measurable settlement of the pile over a one-hour period.
- Load-test piles in sequences and groupings that will minimize or eliminate eccentric loadings on the existing foundation and piles.
- Piles will be rejected and shall be retested if, in the opinion of the Engineer, there is a danger of unequal loading.
- Should the existing structure fail to furnish sufficient reaction to installed underpinning piles to the test loads specified, provide additional reaction to prevent damage to, and movement of, the structure during installation of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[90]	25.09.2014

piles, and to obtain specified underpinning test loads. The additional reaction shall not detrimentally affect the structure.

- Maximum out-of-plumb tolerance for installed piles: two percent.
- Maximum offset of top of pile from the design center: 3 inches.

9.7 Fill and backfill

Provide engineered fill and backfill in accordance with Clause 3 of this specification, after acceptance of the underpinning by the Owner.

9.8 Temporary Supports

Install temporary supports where necessary to support structures to be underpinned and those that will be affected by underpinning and restoration work.

9.9 Restoration

Restore existing structures to conditions equivalent to those existing prior to the start of shoring and underpinning work, including repair of any settlement-related damage.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[91]	25.09.2014

10. STRUCTURAL STEEL WORK

Design of structural steel work shall include generally but not be limited to the steel constructions listed below:

- Steel building structure and open structures including beams, columns, bracings, supporting structures for floors, roof slabs, cladding etc.
- Hoist & monorail supporting beams etc.
- Platforms and walkways
- Ladders, staircases, handrails, etc.

10.1 Design

(a) General

Concrete floors shall be considered to provide continuous lateral support to the top (compression) flange of the support beams. However where large cut outs are to be provided in the floor slabs horizontal floor bracing shall be provided. Grating / Chequered plate floor shall neither be considered to provide lateral support to the top flange of supporting beams nor to provide a shear diaphragm. Adequate lateral support and horizontal bracing shall be provided as required in such cases.

Floors for vibrating machines of all kind together with supporting framework shall be adequately braced in both horizontal and vertical planes. Floors or structure supporting mechanical equipment shall be designed to minimize vibration, avoid resonance and maintain alignment and level.

(b) Design of structure

The Design of steel structures shall be done by Working stress or Limit state method, in accordance with the provisions of IS: 800 and other relevant IS codes as applicable to specific structures. Basic consideration for structural framing shall be stability, rigidity, building usage, ease of fabrication / erection and overall economy. Additional bracings / moment connections shall be used to assure stability of structures. Structure shall be designed such that the surfaces of all parts shall be accessible for inspection, cleaning, painting and maintenance. Most of steel superstructure shall be designed as simple space frame structures. Simple space frame design utilizes single-span beam systems, vertical diagonal bracing at main column lines and horizontal bracing at the roof and major floor levels.

Large span built-up girders shall be single web plate girders of welded construction with bearing and intermediate stiffeners. For lifting / monorails beams ISMB sections shall be preferred and the bottom flange of all beams shall be checked separately for distortion and reinforced suitably if required.

Columns shall be designed to support the load combination which results in maximum interaction ratio. Exterior columns shall be designed to resist moments

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[92]	25.09.2014

due to wind & seismic. Columns shall also be designed to resist moments caused by discontinuous vertical bracing or non-concentric bracing work points. Column base can be fixed or pinned. Lateral forces shall be resisted by rigid jointed moment connections in rigid frame design. For design which requires the use of the minimum column load (such as, uplift on anchor bolts, column axial tension, etc.) use 90 % of the column dead load and no live load. Uplift forces from vertical bracing and Wind uplift on the roof shall be included where applicable.

Permissible stresses for different members shall not be allowed to exceed by 33.33 % under wind and seismic conditions. However, members who shall be designed primarily to resist wind load such as bracing members, no increase in permissible stresses will be permitted. However, permissible stresses in bolts and welds shall be allowed to exceed up to 25 % only.

Base plates shall be placed on foundation pedestal with grouting. For large base plates necessary grout holes shall be provided. All anchor bolts for fastening steel columns on foundation shall be embedded in foundation during concreting itself. No anchor pockets in foundation shall be allowed. Design of base plates shall be based on design pressure on foundation which shall not exceed the following:

Pedestal in concrete grade M30 7.50 N/mm²

The total horizontal shear force at the base of column is transferred to the column pedestals through friction between the base plate and the grout. A coefficient of friction of 0.30 shall be used in conjunction with the minimum column load. If the horizontal shear force exceeds the frictional resistance force or if the column is subjected to a net uplift load, the total force shall then be transmitted through shear bars / shear keys welded to the base plate. Anchor bolts are not assumed to resist any horizontal shear force. Necessary recesses shall be kept in the foundation concrete for shear lugs.

Static analysis of overhead conveyor galleries upto a span of 24 m is allowed. However dynamic analysis shall be carried out for overhead conveyor galleries exceeding 24 m span.

For equipments, the bolt shall be either embedded or placed inside the pedestal and grouted with non-shrink grout.

The following criteria shall be followed for posting loads on the design drawings. For vertical beam reactions, the load shall be posted whenever the value exceeds the maximum allowable uniform distributed load. For axial loads in floor beams, the actual horizontal load which the beam end connection must resist shall be posted for each end of the beam. Note that this value may be different for opposite end of the same beam. For truss members, only one member force shall be noted for each member.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[93]	25.09.2014

(c) Permissible deflections

The permissible deflections of various steel members under normal loading conditions shall be as specified below. For calculation of deflections in structures and individual members dynamic effects shall not be considered, unless specified otherwise. Also, no increase in deflection limits shall be allowed when wind or seismic loads are acting concurrent with normal loading conditions.

• Vertical deflection

a) For beams supporting dynamic equipment	Span / 500
b) For beams supporting floors / masonry	Span / 325
c) For beams supporting pipes (pipe racks)	Span / 400
d) For roofing and cladding components	Span / 250
e) For gratings and chequered plates	Span / 200 subject to a maximum of 6 mm

For crane gantries or any member subjected to working loads, the maximum deflection under dead load and live load excluding impact shall not exceed the following values:

For manually operated cranes and monorails : Span / 500

For electric overhead cranes

- i) Up to 50 t capacity : Span / 750
- ii) Over 50 t capacity : Span / 1000

• Horizontal deflections

The permissible horizontal deflections shall be as per following unless specified otherwise:

a)	Single storey building (without crane load)	Height / 325
b)	Multistoried building (without crane load)	Height / 500
c)	Pipe rack columns	Height / 200
d)	Open Structures	Height / 200
e)	Crane gantry girder due to surge	Span / 2000 limited to maximum of 15 mm
f)	Building main columns at crane rail due to action of crane surge load only	Height / 2500 limited to level maximum of 10 mm
g)	Open gantry columns at crane rail level due to action of crane surge load only	Height / 4000 limited to maximum of 10 mm

Provisions of IS: 800 and relevant latest IS Codes shall be followed for limiting deflections of structural elements not listed above.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[94]	25.09.2014

(d) Minimum thickness and size of steel elements

• **Minimum Thickness**

The minimum thickness of various components of a structure and hot rolled sections shall be as follows. The minimum thickness of rolled shapes shall mean flange thickness regardless of web thickness. Structural steel members exposed to significantly corrosive environment shall be increased suitably in thickness or suitably protected otherwise as per good practice and sound engineering judgement in each instance.

Trusses, purlins, girts and bracing	6 mm
Columns and beams	8 mm
Gussets	8 mm
Stiffeners	8 mm
Base plate	10 mm
Chequered plates	6 mm o/p
Grating flats	5 mm

Minimum thickness of structural members other than gratings and chequered plate directly exposed to weather and inaccessible for painting and maintenance shall be 8 mm.

Chequered plate shall conform to IS: 3502 (latest) and minimum thickness of chequered plate for floorings, covers etc shall be 6 mm.

• **Minimum Sizes**

The flange width of purlins supporting light weight concrete slab shall not be less than 65 mm and for those supporting roof sheeting and wall cladding it shall not be less than 50 mm. Width of steel rolled section connected to other member shall be at least 50 mm. The depth of beams for platform of all structures shall not be less than 125 mm.

(e) Slenderness and depth ratios

The slenderness ratio of main members in tension, compression or bending shall be in accordance with IS: 800.

The following limiting ratios of depth to span shall be considered as a general guide.

Truss	1 / 10
Rolled beams and girders for Ordinary floors and rafters	1 / 24
Supporting floor beams for vibrating Machines / equipments	1 / 15
Roof purlins and girts	1 / 45
Gable columns	1 / 30

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[95]	25.09.2014

(f) Design of Connections

Welding will be done in accordance with the recommendations of IS: 816 and IS: 9595.

Shear connections will be designed for 75 % of section strength for rolled sections and 80 % of section strength for built up section or rolled section with cover plates. Designed shear force shall be more than actual shear. Moment connections between beam and column will be designed for 100 % of moment capacity of the beam section.

All butt welds will be full penetration butt welds.

Size of fillet weld for flange to web connection for built up section will be as follows:

- i) Able to take full shear capacity or actual shear whichever is more for box section
- ii) Able to take 80 % of full shear capacity or actual shear (if indicated in drawings) or shall be 0.5 times of the web thickness whichever is more. For I-section Weld will be double fillet
- iii) All welds will be continuous. The minimum size of the fillet weld will be 6 mm as per relevant IS code

Connection of vertical bracings with connecting members will be designed for full tensile capacity of the bracings. The connection between top flange & web of built-up girder will be full penetration butt weld & for bottom flange, connection may be fillet weld.

Connection of base plate & gusset members with the columns will be done considering that total load gets transferred through weld.

Splicing

All splicing work will be full strength. Field splicing will be done with web / flange cover plates. For, exceptional cases the field splicing will be designed for 50 % of load carried by the cover plates and remaining 50 % load through full penetration butt weld. Shop splicing for all sections other than rolled will be carried out by full penetration butt welds with no cover plates. Splicing for all rolled sections will be carried out using web and flange cover plate. For design efficiency of site weld shall be considered as 80 %.

Insert plates

Insert plates shall be designed / checked for shear and bending moment. All lugs shall be checked for tension. Bond strength of concrete shall also be checked. Lugs using steel bars shall preferably be fillet welded to the plate to transfer full strength of the lug.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[96]	25.09.2014

10.2 Fabrication

(a) General

Fabrication drawings shall be prepared according to the provision of IS: 800, IS: 813, IS: 816, IS: 9595, IS: 1367 and IS: 9178.

The work to be provided by the Bidder, unless otherwise specified elsewhere in the contract, shall include, but not be limited to the following:

- i) Preparation of complete detailed fabrication drawings and erection marking drawings required for all the structures covered under the scope of the contract based on design drawings submitted by the Bidder and approved by the Owner/Consultant.
- ii) To submit revised design with calculations and detailed fabrication (drawings in case any substitution of the designed sections are to be made.
- iii) To submit design calculations for joints and connections developed by the Bidder along with detailed fabrication drawings.
- iv) Furnish all materials, labour, tools and plant and all consumables required for fabrication and supply, all necessary bolts, nuts, washers, tie rods and welding \ electrodes for field connections. The field connection materials supplied by the Bidder shall be to the extent of actual requirement plus 10 % (ten percent).
- v) Furnish shop painting of all fabricated steelwork as per requirements of this Specification.
- vi) Suitably mark, bundle and pack for transport all fabricated materials.
- vii) Prepare and furnish detailed Bill of Materials, Drawing Office Dispatch lists, Bolt List and any other list of bought out items required in connection with the fabrication and erection of the structural steelwork.

(b) Conformity with Design

Except where the standard connection details are furnished, the Bidder shall design all connections, supply and fabricate all steelwork and furnish all connection materials, Shear connectors / shear lugs on the beams in accordance with the approved drawings and / or as instructed by the Owner/Consultant Keeping in view the maximum utilization of the available sizes and sections of steel materials. The methods of painting, marking, packing and delivery of all fabricated materials shall be in accordance with the provisions of the contract and / or as approved by the Owner/Consultant. Provision of all relevant Indian Standard Specifications and Codes of Practice shall be followed unless otherwise specified in the contract.

(c) Quality control

The Bidder shall establish and maintain quality control procedures for different items of work and materials to the extent he deems necessary to ensure that all

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[97]	25.09.2014

work shall be performed in accordance with this specification. In addition to the Bidder's quality control procedures, materials and workmanship at all times shall be subjected to inspection by the Owner/Consultant. As far as possible, all inspection by the Owner/Consultant shall be made at the Bidder's fabrication shop whether located at Site or elsewhere. The Bidder shall co-operate with the Owner/Consultant in permitting access for inspection to all places where work shall be done and in providing free of cost all necessary help in respect of tools and plants, instrument, labour and materials required to carry out the inspection. The inspection shall be so scheduled as to provide the minimum interruption to the work of the Bidder.

Materials or workmanship not in reasonable conformance with the provisions of this Specification may be rejected at any time during the progress of the work.

The quality control procedure shall cover but not be limited to the following items of work

- a) Steel Quality, manufacturer's test certificates, test reports of representative samples of materials from unidentified stocks if permitted to be used.
- b) Bolts, Nuts Manufacturer's certificate, dimension & Washers checks, material testing.
- c) Electrodes Manufacturer's certificate, thickness and quality of flux coating.
- d) Welders .Qualifying Tests
- e) Welding sets Performance Tests
- f) Welds Inspection, X-ray, Ultrasonic tests
- g) Paints Manufacturer's certificate, physical Inspection reports
- h) Galvanizing Tests in accordance with IS: 2633 and IS: 4759.

(d) Materials

If desired by the Owner/Consultant, Test Certificates of materials supplied by the Bidder in respect of each consignment shall be submitted in triplicate. Whenever the materials are required to be used from unidentified stocks, if permitted by the Owner/Consultant, a random sample shall be tested at an approved laboratory from each lot of 50 tonnes or less of any particular section.

Materials for main and secondary members shall be selected in line with good engineering practice and shall be arranged within any structure with due regard for maintenance of the structure and Plant and Equipment supported or sheltered by the Structure and also with regard to corrosion.

All steel materials shall be free from all imperfections, mill scales, slag intrusions, laminations, pitting, rusts, etc. that may impair their strength, durability and appearance.

All rolled steel shall conform to the requirements of the Indian Standards.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[98]	25.09.2014

- i) Structural Steel will conform to IS: 2062 Grade-A for rolled steel members or plates up to 20 mm thickness.
- ii) For plates above 20 mm thickness and welded construction, steel conforming to IS: 2062 Grade-B will be used.

(e) Workmanship

All workmanship shall be equal to the best practice in modern structural shops, and shall conform to the provisions of IS: 800 and other relevant Indian Standards or equivalent.

Straightening Material

Rollled materials before being laid off or worked, must be clean, free from sharp kinks, bends or twists and straight within the tolerances allowed as per IS:1852. If straightening is necessary, it may be done by mechanical means or by the application of a limited amount of localized heat. The temperature of heated areas, as measured by approved methods, shall not exceed 600°C.

Cutting

Cutting shall be affected by shearing, cropping or sawing. Use of a mechanically controlled gas cutting torch may be permitted for mild steel only. Gas cutting of high tensile steel may also be permitted provided special care is taken to leave sufficient metal to be removed by machining, so that all metal that has been hardened by flame is removed. Gas cutting without a mechanically controlled torch may be permitted if special care is taken and done under expert hand, subject to the approval of the Owner/Consultant.

To determine the effective size of members cut by gas, 3 mm shall be deducted from each cut edge. Gas cut edges, which will be subjected to substantial stress or which are to have weld metal deposited on them, shall be reasonably free from gouges. Occasional notches or gauges not more than 4 mm deep will be permitted. Gouges greater than 4 mm that remain from cutting shall be removed by grinding. All re-entrant corners shall be shaped notch-free to a radius of at least 12 mm. Shearing, cropping and gas cutting shall be clean, reasonably square and free from any distortion.

Planning of Edges

Planning or finishing of sheared or cropped edges of plates or shapes or of edges gas-cut with a mechanically controlled torch shall not be required, unless specifically required by design and called for on the drawings, included in a stipulation for edge preparation for welding or as may be required after the inspection of the cut surface. Surface cut with hand-flame shall generally be ground, unless specifically instructed otherwise by the Owner/Consultant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[99]	25.09.2014

Clearances

The erection clearance for cleated ends of members connecting steel to steel shall preferably be not greater than 2 mm at each end. The erection clearance at ends of beams without web cleats shall be not more than 3 mm at each end, but where, for practical reasons, greater clearance is necessary, suitably designed cleatings shall be provided.

Bolted construction

All bolts and nuts shall conform to the requirements of IS: 1367.

Field connections shall preferably be bolted connections unless specified otherwise. Weld connections at site shall be avoided.

High strength friction grip bolts shall be of property class 8.8 and shall conform to IS: 3757 and shall not be less than 20 mm in diameter unless designated otherwise. High strength bolts shall be installed as bearing type joint except where loads are reversible. Bearing Type connection (H.T. bolts Grade 8.8) shall be used for all removable type connections. Bolts will be tightened to develop the required pre-tension during their installation.

All erection bolts shall be of minimum 16 mm diameter of property class 4.6 conforming to IS: 1367 unless specified otherwise.

Holes for bolts shall not be more than 1.5 mm for bolt of diameter equal or lesser than 25 mm and shall not be more than 2 mm for bolt of diameter greater than 25 mm.

Holes through more than one thickness of material for members, such as compound stanchions and girder flanges, shall be drilled after the members are assembled and tightly clamped or bolted together. Punching may be permitted before assembly, if the thickness of the material is not greater than the nominal diameter of bolt plus 3 mm subject to a maximum thickness of 16 mm provided that the holes are punched 3 mm less in diameter than the required size and reamed after assembly to the full diameter.

Holes for turned and fitted bolts shall be drilled to a diameter equal to the nominal diameter of the shank or barrel subject to a tolerance grade of H8 as specified in IS: 919. Parts to be connected shall be firmly held together by tacking welds or clamps and the holes drilled through all the thicknesses in one operation and subsequently reamed to size. Holes not drilled through all thickness in one operation shall be drilled to a smaller size and reamed out after assembly.

Holes for bolts shall not be formed by gas cutting process.

Assembly

Drifting to enlarge un-matching holes shall not generally be permitted. In case drifting is permitted to a slight extent during assembly, it shall not distort the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[100]	25.09.2014

metal or enlarge the holes. Holes that must be enlarged to admit the bolts shall be reamed. Poor matching of holes shall be cause for rejection. The component parts shall be so assembled that they are neither twisted nor damaged and shall be so prepared that the specified cambers, if any, are maintained.

Bolted construction shall be permitted only in case of field connections if called for on the Drawings and is subjected to the limitation of particular connections as may be specified. In special cases, however, shop bolt connections may be allowed if directed by the Owner/Consultant.

Washers shall be tapered or otherwise suitably shaped, where necessary, to give the heads and nuts of bolts a satisfactory bearing. The threaded portion of each bolt shall project out through the nut at least one thread. In all cases the bolt shall be provided with a washer of sufficient thickness under the nut to avoid any threaded portion of the bolt being within the thickness of the parts bolted together. In addition to the normal washer, one spring washer or locknut shall be provided for each bolt for connections subjected to vibrating forces or otherwise as may be specified on the Drawings.

Welded Construction

Welding shall be in accordance with relevant Indian Standards. Welding shall be done by experienced and good welders who have been qualified by tests in accordance with IS: 817. All shop connections shall be welded type.

Preparation of Material

Surface to be welded shall be free from loose scale, slag, rust, grease, paint and any other foreign material except that mill scale which withstands vigorous wire brushing may remain. Joint surfaces shall be free from fins and tears, Preparation of edges by gas-cutting shall, wherever practicable, be done by a mechanically guided torch.

Parts to be fillet welded shall be brought in as close contact as practicable and in no event shall be separated by more than 4 mm. If the separation is 1.5 mm or greater, the size of the fillet welds shall be increased by the amount of the separation. The fit of joints at contact surfaces which are not completely sealed by welds, shall be close enough to exclude water after painting. Abutting parts to be butt-welded shall be carefully aligned. Misalignments greater than 3 mm shall be corrected and in making the correction the parts shall not be drawn into a sharper slope than 20C.

The work shall be positioned for flat welding whenever practicable.

In assembling and joining parts of a structure or of built-up members, the procedure and sequence of welding shall be such as will avoid needless distortion and minimize shrinkage stresses. Where it is impossible to avoid high residual stresses in the closing welds of a rigid assembly, such closing welds shall be made in compression elements.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[101]	25.09.2014

In the fabrication of cover-plated beams and built-up members, all shop splices in each component part shall be made before such component part is welded to other parts of the member. Long girders or girder sections may be made by shop splicing not more than three sub-sections, each made in accordance with this paragraph.

When required by the Owner/Consultant, welded assemblies shall be stress relieved by heat treating in accordance with the provisions of the relevant Indian Standard or any other Standard approved by the Owner/Consultant.

All complete penetration groove welds made by manual welding, except when produced with the aid of backing material not more than 8 mm thick with root opening not less than one-half the thickness of the thinner part joined, shall have the root of the initial layer gouged out on the back side before welding shall be started from that side, and shall be so welded as to secure sound metal and complete fusion throughout the entire cross-section. Groove welds made with the use of the backing of the same material as the base metal shall have the weld metal thoroughly fused with the backing material. Backing strips need not be removed. If required, they may be removed by gouging or gas cutting after welding is completed, provided no injury is done to the base metal and weld metal and the weld metal surface is left flush or slightly convex with full throat thickness.

Groove welds shall be terminated at the ends of a joint in a manner that will ensure their soundness. Where possible, this should be done by use of extension bars or run-off plates. Extension bars or run-off plates need not be removed upon completion of the weld unless otherwise specified elsewhere in the Contract.

To get the best and consistent quality of welding, automatic submerged arc process shall be preferred. The technique of welding employed, the appearance and quality of welds made, and the methods of correcting defective work shall all conform to the relevant Indian Standards.

No welding shall normally be done on parent material at a temperature below (-) 50C. However, if welding is to be undertaken at low temperature, adequate precautions as recommended in relevant Indian Standard shall be taken. When the parent material is less than 40 mm thick and the temperature is between (-) 50C and 00C, the surface around the joint to a distance of 100 mm or 4 times the thickness of the material, whichever is greater, shall be preheated till it is hand warm. When the parent material is more than 40 mm thick, the temperature of the area mentioned above shall be in no case be less than 200C. All requirements regarding preheating of the parent material shall be in accordance with the relevant Indian Standard.

Submerged arc welding process shall be used for welding longitudinal fillet welds (connecting flanges with web) and longitudinal / transverse butt joints for fabrication of columns, framing beams and all other built up members unless manual arc welding is specifically required. All electrodes, flux, bare wire etc will

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[102]	25.09.2014

be procured from approved manufacturers. All butt welds in beams, girders & columns will be of full penetration. All butt welds will be radio-graphically or ultrasonically tested as per relevant IS codes and standard practice. The base wire electrodes for submerged arc welding will conform to IS: 7280. The combination of wire and flux will satisfy requirements of IS: 3613.

Peening

Where required, intermediate layers of multiple-layer welds may be peened with light blows from a power hammer, using a round-nose tool. Peening shall be done after the weld has cooled to a temperature warm to the hand. Care shall be exercised to prevent scaling or flaking of weld and base metal from over peening.

Equipment

These shall be capable of producing proper current so that the operator may produce satisfactory welds. The welding machine shall be of a type and capacity as recommended by the manufacturers of electrodes or as may be approved by the Owner/Consultant.

Finish

Column splices and butt joints of compression members depending on contact for stress transmission shall be accurately machined and close-buttressed over the whole section with a clearance not exceeding 0.2 mm locally at any place. In column caps and bases, the ends of shafts together with the attached gussets, angles, channels etc., after welding together, should be accurately machined so that the parts connected butt over the entire surfaces of contact. Care should be taken that those connecting angles or channels are fixed with such accuracy that they are not reduced in thickness by machining by more than 2 mm.

Slab bases and caps

Bases and caps fabricated out of steel slabs, except when cut from material with true surface, shall be accurately machined over the bearing surface and shall be in effective contact with the end of the stanchion. A bearing face which is to be grouted direct to a foundation need not be machined if such face is true and parallel to the upper face.

Miscellaneous

- Lacing bars

The ends of lacing bars shall be neat and free from burrs.

- Separators

Rolled section or built-up steel separators or diaphragms shall be required for all double beams except where encased in concrete, in which case, pipe separators shall be used.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[103]	25.09.2014

- **Bearing Plates**

Provision shall be made for all necessary steel bearing plates to take up reaction of beams and columns and the required stiffeners and gussets whether or not specified in Drawings.

- **Architectural Clearances**

Bearing plates and stiffener connections shall not be permitted to encroach on the designed architectural clearances.

- **Shop Connections**

- All shop connections shall be welded as specified on the Drawings.
- Certain connections, specified to be shop connections, may be changed to field connections if desired by the Owner/Consultant for convenience of erection and the Bidder will have to make the desired changes at no extra cost to the Owner.

- **Shop Erection**

The steelwork shall be temporarily shop-erected complete or as directed by the Owner/Consultant so that accuracy of fit may be checked before despatch. The parts shall be shop-erected with a sufficient number of parallel drifts to bring and keep the parts in place. In case of parts drilled or punched using steel jigs to make all similar parts interchangeable, the steelwork shall be shop erected in such a way as will facilitate the check of interchange ability.

(f) Shop Painting

All fabricated steel material, except those galvanized or to be embedded in concrete, shall receive paint coatings as specified below. All paints shall be of approved brand and shade as per the Owner's requirement.

Steel surface, which is to paint, shall thoroughly be cleaned of all loose mill scale, rust, grease, dirt and other foreign matter by wire brush & if required by sand blasting prior to actual surface preparation. The surface shall be cleaned to grade ST-2.5 as per SIS05-5900 or as per IS: 1477 (Part -I).

All steel structures shall receive two primer coats and two finish coats of painting. After fabrication the first coat of primer shall be immediately given over the prepared steel surface. The second coat of primer shall be applied over the dried first primer coat. Two finish coats shall be applied over the primer coats before dispatch of structure at site.

Primer paint shall be red oxide zinc chromate conforming to IS: 2074. Dry film thickness of each coat shall be 50 microns. Adequate care should be taken such that the surface does not possess a slick finish to which paint may not adhere properly. Top coat shall consist of two coats of HB Synthetic enamel of approved shade and colour with glossy finish and DFT as 75 microns (total). Thus the total DFT of painting including that of primer coats shall not be less than 175 microns.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[104]	25.09.2014

Following care shall be taken while painting:

- i) Joints to be site welded shall have no paint applied within 100 mm of welding zone. Similarly where friction grip fasteners are to be used no painting shall be provided. On completion of the joint the surfaces shall receive the paint as specified.
- ii) Surfaces inaccessible after assembly shall receive two coats of primer prior to assembling.
- iii) Surfaces inaccessible after erection, including top surfaces of floor beams supporting gratings or chequered plate, shall receive one additional coat of finish paint over and above number of coats specified above before erection.
- iv) Portion of steel member embedded / to be encased in concrete shall not be painted.
- v) Areas / Surfaces subjected to chemical attacks shall be painted with acid resistant paint.
- vi) Machine finished surfaces shall be protected against corrosion by a rust inhibiting coating that can be easily removed prior to erection or which has characteristics that make removal unnecessary prior to erection.

(g) Inspection, testing and acceptance criteria

Unless specified otherwise, inspection to all work shall be made by the Owner/Consultant at the place of manufacture prior to delivery. The Owner / Consultant shall have free access at all reasonable times to those parts of the manufacturer's works which are concerned with the fabrication of the steelwork under this Contract and he shall be afforded all reasonable facilities for satisfying himself that the fabrication is being done in accordance with the provisions of this Specification. The Bidder shall provide free of charge, such labour, materials, electricity, fuel, water, stores, tools and plant, apparatus and instruments as may be required by the Owner/Consultant to carry out inspection and / or tests in accordance with the Contract.

The Bidder shall guarantee compliance with the provisions of this Specification.

The Bidder shall carry out sampling and testing in accordance with the relevant Indian Standards and as supplemented herein for the following items at his own cost, unless otherwise specified in the Contract. The Bidder shall get the specimens tested in a laboratory approved by the Owner/Consultant and submit to the Owner/Consultant the test results in triplicate within 3 (three) days after completion of the test.

Steel

All steel supplied by the Bidder shall conform to the relevant Indian Standards, except otherwise mentioned in the Contract, only tested quality steel having mill test reports shall be used. In case unidentified steel materials are permitted to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[105]	25.09.2014

be used by the Owner/Consultant, random samples of materials will be taken from each unidentified lot of 50 ton or less of any particular section for tests to conform to relevant Indian Standards. Cost of all tests shall be borne by the Bidder.

All material shall be free from all imperfections like mill scales, slag intrusions, laminations, pittings, rusts etc. that may impair their strength, durability and appearance.

All raw steel plate of thickness more than 20 mm supplied by the Bidder shall be checked against lamination before procurement & prior to commencement of fabrication work in the following ways as directed by the Owner/Consultant:

- i) Ultrasonic testing along the edge of specified points of the plates shall be carried out to delete lamination in the plates, if any.
- ii) If the results of the tests in (i) are not satisfactory, the whole area of the plates shall be checked by ultrasonic testing at specified nodal points formed at equidistant grid locations. The spacing of the grids shall be determined from tests in (i) or as directed by the Owner/Consultant.

If the results of the above tests are not satisfactory, the plates shall not be taken up for fabrication work. Even after fabrication at shop, if the Owner/Consultant requires any ultrasonic testing to detect lamination of plates, the same shall be carried out by the Bidder. If the plates in the fabricated item are found to be laminated, the component will be rejected.

Welding

All electrodes shall be procured from reliable manufacturers with test certificates. The correct grade and size of electrode which has not deteriorated in storage shall be used. The inspection and testing of welding shall be performed in accordance with the provisions of the relevant Indian Standards or other equivalents. For every 50 tonnes of welded fabrication, the Owner may ask for at least one test-destructive or non-destructive including X-ray, ultrasonic test or similar, the cost of which shall be borne by the Bidder. In the event of further tests as may be desired by the Owner. The cost of such test shall be borne by the Bidder if the results are found to be unsatisfactory; and if the test shows no defect, the cost shall be borne by the Owner. In cases of the test results showing deficiency, the Owner / Consultant shall have option to reject or instruct any remedial measures to be taken free of charge to the Owner.

Bolts, nuts and washers

All bolts, nuts and washers shall be procured from reputed manufacturer approved by the Owner/Consultant and shall conform to the relevant Indian Standards. If desired by the Owner/Consultant, representative samples of these materials may have

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[106]	25.09.2014

- i) Name of the Bidder
- ii) Number and date of the Contract
- iii) Name of the office placing the contract
- iv) Nomenclature of stores
- v) A schedule of parts or pieces, giving the parts or piece number with
- vi) Tolerance

The tolerance on the dimension of the individual rolled steel components shall be as specified in IS: 1852. The tolerances on straightness, length etc. of various fabricated components (such as beams, girders, columns, etc) of the steel structures (other than steel railway and road bridges structure) subjected to dynamic loading (like wind, seismic etc.) and thin walled constructions (like box girders) shall be as specified in IS: 7215.

10.3 Erection

(a) General

The work to be provided for by the Bidder, unless otherwise specified in the Bid, shall include but not be limited to the following:

- i) The Bidder shall provide all transport equipment, lifting equipment, tools, tackle, consumables, materials, labour and supervision required for the erection of the structural steelwork.
- ii) Receiving, unloading, checking and moving to storage yard at Site including prompt attendance to all insurance matters as necessary for all fabricated steel materials arriving at Site. The Bidder shall pay all demurrage and / or wharfage charges etc. on account of default on his part.
- iii) Transportation of all fabricated structural steel materials from Site storage yard, handling, rigging, assembling, bolting, welding and satisfactory installation of all fabricated structural steel materials in proper location according to approved erection drawings and / or as directed by the Owner/Consultant. If necessary, suitable temporary approach roads to be built for transportation of fabricated steel structures.
- iv) Checking centre lines, levels of all foundation blocks including checking line, level, position and plumb of all bolts and pockets. Any defect observed in the foundation shall be brought to the notice of the Owner/Consultant. The Bidder shall fully satisfy himself regarding the correctness of the foundations before installing the fabricated steel structures on the foundation blocks.
- v) Aligning, plumbing, levelling, bolting, welding and securely fixing the fabricated steel structures in accordance with the Drawings or as directed by the Owner/Consultant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[107]	25.09.2014

- vi) Touch up paintings, making good any damaged shop painting and completing any unfinished portion of the shop coat shall be carried out by the Bidder free of cost to the Owner.
- vii) All minor modifications of the fabricated steel structures as directed by the Owner/Consultant including but not limited to the following:
 - Removal of bends, kinks, twists etc. for parts damaged during transport and handling.
 - Cutting, chipping, filling, grinding etc. if required for preparation and finishing of site connections.
 - Reaming of holes for use of higher size bolt if required.
 - Welding of connections in place of bolting for which holes are either not drilled at all or wrongly drilled during fabrication. Welding in place of bolting will be permitted only at the discretion of the Owner/Consultant.
 - Re-fabrication of parts damaged beyond repair during transport and handling or re-fabrication of parts which are incorrectly fabricated.
 - Fabrication of parts omitted during fabrication by error, or subsequently found necessary.
 - Drilling of holes which are either not drilled at all or are drilled in incorrect location during fabrication.
 - Carry out tests in accordance with this Specification if directed.

(b) Conformity with design

The Bidder will erect the entire fabricated steel structure, align all the members, complete all field connections and grout the foundations all as per the provisions of this specification and the design criteria detailed in the approved erection drawings and / or other stated document. All work shall conform to the provisions of the relevant Indian Standard Specifications and / or the instructions of the Owner/Consultant. The testing and acceptance of the erected structures shall be in accordance with the provisions of this Specification and / or the instructions of the Owner/Consultant.

(c) Storage of materials

All material shall be so stored as to prevent deterioration and to ensure the preservation of their quality and fitness for use in the works. Any material which has been deteriorated or damaged beyond repairs and has become unfit for use shall be removed immediately from the site.

(d) Yard

The Bidder will have to establish a suitable yard in an approved location at site for storing the fabricated steel structures and other materials which will be delivered to him by the Owner according to the Contract. The yard shall have

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[108]	25.09.2014

proper facilities like, drainage, lighting, suitable access, trailers and other heavy equipments. The yard shall be fenced all round with security / arrangement and shall be of sufficiently large area to permit systematic storage of the fabricated steel structures without overcrowding and with suitable access, trailers and other equipment for use in erection work in proper sequence in accordance with the approved programme of work.

The Bidder should visit the site prior to submission of his Tender to acquaint himself with the availability of land and the development necessary by way of filling, drainage, access roads, fences, sheds etc. All of which shall be carried out by the Bidder at his own cost as directed by the Owner.

(e) Covered Store

All field connection materials, paints, etc. shall be stored on well designed racks and platforms off the ground in a properly covered store building to be built at the cost of the Bidder.

(f) Workmanship

Erection Plant and equipment

The suitability and adequacy of all erection tools and plant and equipment proposed to be used shall be efficient, dependable, in good working condition and shall have the approval of the Owner/Consultant.

Method and sequence of erection

The method and sequence of erection shall have the prior approval of the Owner/Consultant. The Erection shall arrange for most economical method and sequence available to him consistent with the Drawings and Specifications and such information as may be furnished to him prior to the execution of the Contract.

Temporary bracing

Unless adequate bracing is included as a part of the permanent framing, the erector during erection shall install, free of cost to the Owner, temporary guys and bracings where needed to secure the framing against loads such as wind or seismic forces comparable in intensity to that for which the structure has been designed, acting upon exposed framing as well as loads due to erection equipment and erection operations.

If additional temporary guys are required to resist wind or seismic forces acting upon components of the finished structure Installed by others during the course of the erection of the steel framing, arrangement for their installation by the erector shall be made free of cost to the Owner.

The responsibility of the Bidder in respect of temporary bracings and guys shall cease when the structural steel is once located plumbed levelled, aligned and grouted within the tolerances permitted under the specification and guyed and braced to the satisfaction of the Owner/Consultant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[109]	25.09.2014

The temporary guys, braces, false work and cribbing shall be removed immediately upon completion of the steel erection and shall return to the Owner's store in good condition if the materials are supplied by the Owner otherwise permission shall be given to Bidder to take out the materials from the project site. The Owner may remove and return the materials in good condition to the Bidder without any charge if they have been left in place under other agreed arrangement.

Temporary floors for buildings

It shall be the responsibility of the Bidder to provide free of cost planking and to cover such floors during the work in progress as may be required by any Act of Parliament and / or by-laws of state, Municipal or other local authorities.

Setting out

Positioning and levelling of all steelwork, plumbing of stanchions and placing of every part of the structure with accuracy shall be in accordance with the approved Drawings and to the satisfaction of the Owner/Consultant. Concrete foundations, where required, shall be made by other agencies. Anchor bolts and other anchor steel shall be embedded by other agencies. The Bidder shall check the positions and levels of the anchor bolts, etc. before concreting and get them properly secured against disturbance during pouring operations.

He shall remain responsible for correct positioning. For heavy columns, etc. the Bidder shall set proper screed bars if desired by the Owner/Consultant, to maintain proper level. No extra payment shall be made for this.

Each tier of column shall be plumbed and maintained in a true vertical position subject to the limits of tolerance allowable under this Specification.

No permanent field connections by bolting or welding shall be carried out until proper alignment and plumbing has been attained.

Field bolting

All relevant portions in respect of bolted construction of the Specification for Fabrication of Structural Steelwork applicable to the Project shall also be applicable for field bolting in addition to the following:

Bolts shall be inserted in such a way so that they may remain in position under gravity even before fixing the nut. Bolted parts shall fit solidly together when assembled and shall not be separated by gaskets or any other interposed compressible materials. When assembled, all joint surfaces, including those adjacent to the washers shall be free of scales except tight mill scales. They shall be free of dirt, loose scales, burns, and other defects that would prevent solid seating of the parts. Contact surfaces within friction-type joints shall be free of oil, paint, lacquer, or galvanizing.

Drifting

Correction of minor misfits of bolts will be considered as permissible. For this, light drifting may be used to draw holes together and drills shall be used to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[110]	25.09.2014

enlarge holes as necessary to make connections. Reaming, that weakens the member or makes it impossible to fill the holes properly or to adjust accurately after reaming shall not be allowed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[111]	25.09.2014

11. ARCHITECTURAL WORKS

The architectural design concept of buildings shall be evolved considering the functional, technical and other requirements for efficient operation, ensuring comfortable working environment for personnel, satisfying the aesthetic requirements. Special care shall be taken to provide elegance and aesthetics, with effective use of appropriate treatment, materials, fittings and finishes. To achieve above objective Bidder shall employ a qualified architect / architectural firm to carry out all designs and hold all other architectural responsibilities for the project.

The Bidder shall obtain and be conversant with all laws, by-laws and regulations of local and Statutory Bodies as applicable to the project. The architectural concept evolved should also take care of these requirements. The Bidder shall provide the drawings and documents for such statutory approvals.

11.1 General

The architectural services shall cover finishing work of new buildings and modernised existing buildings/structures, included under the specification starting from masonry work, partition walls, cladding walls, roof protection, finishing of walls, floors and ceilings, false ceiling as required potable water system, sanitation etc.

During execution of the contract, the Bidder shall take approval from the Owner, for all building materials and finish items (e.g. floor tiles, doors, and windows, paints etc.) to be used for the contract by submitting samples and/or product literature as appropriate.

Finishing works including material used for renovation/modernisation work shall be matched with the finishing of existing structures to make similarity in architectural view of new and existing structures.

11.2 Finishes

All exposed surfaces shall be clean and smooth and members shall be sized to give a pleasing appearance. The Finishes for all Structures and Buildings shall meet the functional requirements and shall be as per the approved Finishing Schedule. However, the finishing schedule shall be pre-approved by the Owner/Consultant.

11.3 Design Requirements

(a) Architectural Concepts

- All buildings and structures shall be architecturally treated in such a way so as to be in complete harmony with the surrounding structures and environment. Local architectural characters may be judiciously imbibed. The building shall be designed initiating an architectural control common to all

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[112]	25.09.2014

buildings. The architectural control shall be clearly spelt out in terms of scale, man & form.

- Overall colour scheme of the plant and other buildings shall be designed judiciously and in a comprehensive manner taking into account the mass and void of buildings, its facade, equipments, exposed structural elements, piping, trestles, bus ducts and other service elements.
- Overall emphasis shall be on developing an eco-friendly architecture, merging with the nature with its own sustainable energy management systems.
- The scheme shall be conceptually finalized in totality including that of equipments so that the proper co-ordination with other agencies can be taken up at appropriate time.

(b) Architectural Design

- Natural light shall be used to the maximum extent. For adequate light and ventilation, National Building Code recommendation shall be followed.
- Entrance canopies, chajjas (projections, recesses) over openable windows and door openings on exterior facades shall be provided.
- All the buildings shall be architecturally designed to meet the National Building Code.
- Architectural design and detailing aspects of all the buildings shall be rendered through professional services of an Architect Statutory requirement and any clearances from local authority may be required to be met with, wherever essential. The Architect Consultant shall be of national - International repute having experience in similar kind of works. The consultant shall evolve the design philosophy and shall present it in the form of presentation drawings, prospective views, 3-D Models & detail drawings.
- A comprehensive interior design scheme shall be conceived with the intention of projecting a definite theme and aesthetic appearance to inside working environment. It shall take into account the multidisciplinary engineering activities involving plant technology and architectural & civil engineering for a smooth control hierarchy and man machine interface.

The Bidder shall develop the architectural layout of all the buildings listed in this document as per the final approved equipment disposition and other layout considerations indicated elsewhere in this specification. These drawings shall need the approval of the Owner/Consultant before construction. The Bidder shall also have to submit perspective views if so desired by the Owner/Consultant at no expenditure to the Owner. Approval from statutory authorities, e.g. Factories Inspector, Explosives Inspector, Loss Prevention Association of India / Tariff

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[113]	25.09.2014

Advisory Committee etc. shall be the responsibility of the Bidder without any obligation of the Owner.

The entire complex shall have an architectural character and style of its own and shall be visually and functionally integrated with the existing landscape. The Bidder must visit the site and have a feel of the overall environment, so that a harmonious as well as integrated architectural concept of the proposed phase of development is achieved. Special care must be taken to enhance the visual and technological quality of development by adopting updated technology, materials, finish etc.

11.4 Guideline for Architectural Works

11.4.1 Roof Insulation and Ventilation

Wherever required the roof of buildings shall be insulated with foam concrete. For ventilation requirements relevant section of the specification shall be referred.

11.4.2 Roof Waterproofing

All roofs of buildings shall be provided with 3 layers, first being elastomeric membrane water proofing treatment, secondly screed concrete shall be laid and finally the wearing course. Elastomeric membrane shall be laid as per manufacturer's specifications which shall adhere to specifications as given in IS 2645. Run off gradient shall be given a minimum of 1 in 100. Gradient shall comprise screed concrete 1:2:4 using 12.5 mm or below coarse aggregate. Over the screed concrete waterproofing treatment shall be provided as below:

A wearing course shall consist of pressed clay tiles of size 230x230x18 mm laid in water proofing compound mixed cement mortar (1:3) and sealing of joints using sealing compound.

11.4.3 Brick/stone masonry and parapet wall

All masonry works shall be designed in accordance with IS: 1597, IS: 1905, IS: 2212, IS: 4326 and other relevant IS codes as applicable. Structural design of load bearing and non-load bearing walls constructed with solid or perforated burnt clay bricks or concrete blocks shall be in accordance with criteria specified by National Building Code of India.

All walls shall be non-load bearing infill panel walls. External walls of all buildings shall be at least one brick thick. All internal walls shall be at least one brick thick except for internal partition walls for office area, canteen, change rooms, first aid rooms and toilets, which may be half brick thick.

Minimum 50 kg/sq.cm compressive strength brick shall be used for non-load bearing super structure brickwork. Cement sand mortar 1:6 for one brick thick wall and 1:4 for half brick thick wall shall be used. For half brick walls, RCC transoms and mullions shall be provided to reinforce the wall where required.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[114]	25.09.2014

All brickwork shall be plastered as per specification.

Even where metal cladding is specified, for initial [3 m] height from the ground level, minimum one brick thick masonry wall shall be provided.

All up stands and parapet walls on roof shall be of RCC construction, minimum height of parapet walls shall be [1050 mm] and a minimum thickness of [125 mm].

11.4.4 Cement based polymer modified mortar

a) Purpose

To carry out structural repairs to prepared patches of spalled concrete with an alkaline impervious repair material comprised of polymer admixed cement-sand mortar.

b) Materials and T&P

Polymers in emulsion or powder forms as may be specified conforming to ASTM C1059, Ordinary Portland Cement of 43 grade conforming to relevant BIS code, Sand conforming to Zone-II or Zone-III grade of IS: 383, Mixing water conforming to IS: 456-2000, mortar mixer with mechanical water dozer, spatulas, trowels, etc.

c) Procedure:

Step-1: Follow the guidelines for Safety, Quality Assurance, Environmental Protection, Product delivery, Personnel, Supervision, Storage and Handling, etc.

Step-2: Full quantity of specified polymers shall be received at site in factory sealed containers with labels legible and intact provided that the shelf life so permits. Otherwise substantial quantity as could be consumed within the shelf life shall be received as per quantity approved by Engineer-in-Charge. Full quantity shall be worked out as theoretically required for consumption in the whole work.

Step-3 Testing of Material: The requisite number of test specimens of mortar shall be cast from each batch of manufactured or supplied materials received (whichever is less). These are to be tested for conformance to the specified requirements before use on the work. Polymer modified cement mortar with cement: sand proportion by weight as (1:3) shall have the following properties

Minimum compressive strength -20N/sq.mm after 28 days at 27oC

Step-4: Identify and mark the area for Polymer modified mortar repair.

Step-5 Surface Preparation: The appropriate propping/supporting, surface preparation and crack sealing as per site requirements shall be completed, which may sequentially cover one or more of the following items of work:

Prop & support the structural member to relieve it of stress and strains.

Removal of existing surface plaster/treatment shall be done.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[115]	25.09.2014

Chipping unsound/weak concrete material shall be done.

Removing concrete all around embedded rusted reinforcement shall be done.

Removing and cleaning reinforcement of rust from its surface to give it a shining bright metal shall be done.

Sealing the cracked or honeycombed concrete with injection grouting shall be done.

Providing and inserting mild steel shear key bars shall be done with minimum 3 nos per square meter of surface area of substrate, which may also be used as depth measuring gauge.

Additional fresh reinforcement, if required, shall be tied with required overlaps or welded.

The rust, if any, persisting over the existing exposed reinforcement or the new reinforcement shall be removed mechanically or chemically.

Cleaning of lightly sticking materials and foreign matter from the exposed concrete surface and steel reinforcement by suitable means shall be done.

Step-6: Clean the dust and saturate the prepared surface of concrete and reinforcement with a clean oil free air blast and water fit for construction.

Step-7: Inspection of concrete surface prior to adhesive application shall be thoroughly inspected and got approved by the Engineer-in-Charge. Surfaces shall be ensured to be free from any deleterious materials such as oil, dust, dirt etc. using oil free air blast.

Step-8: Alignment & thickness Control- Ground wires shall be fixed at reference points to measure and control the thickness of overlay. Shear keys fixed earlier could also function as depth gauges. Adequate ground wires shall be installed to establish thickness and surface planes of the overlay build up. Ground wires shall be tight and true to line and placed in such a manner that they may be further tightened.

Step-9: Apply Passivating & bonding coat over the cleaned existing and new reinforcement.

Step-10: Apply bond coat on the cleaned concrete substrate.

Step-11: Mix and Prepare Polymer Modified Mortar to have a uniform consistency and texture by adding cement sand and polymer as weigh batched ingredients of the design mix, a specified proportion of water through water dozer.

Use of prepacked ready to use components supplied by manufacturers in containers may be allowed subject to approval of Owner. In case where prepacked ready to use materials are to be used, the contractor shall submit the manufacturer's certificate verifying conformance to material specification as specified, manufacturer's mixing and application procedure for approval by Engineer-in-charge.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[116]	25.09.2014

Plastering with cement based polymer modified mortar shall be done immediately after applying the bonding slurry to the prepared surfaces, preferably in coats of approximately 10mm thickness as greater thickness may lead to delamination/collapse. However, coats shall be applied in fairly rapid successions within 15 to 30 minutes. After applications of mortar the surface shall be finished using a wooden float.

Step-12: Moist cure the polymer modified mortar surface for 1-3 days followed by air curing at ambient temperature or as per manufacturer's specification, if specified otherwise. Use of flowing water or ponding of water shall not be done for curing. Steam curing shall not be permitted.

Step-13: Test the Surface of 7-day cured concrete overlay for soundness by tapping or sounding with hard blunt surface.

d) Inspection & Quality control

The mortar application work shall be continuously inspected by a qualified supervisor who shall check materials, application of mortar, curing stoppage of work during low temperatures (minimum working temperature being 8°C in most of the polymer modified mortar or as per manufacturer direction) and high winds etc. Each completed work of mortar shall be systematically sounded with a hammer to check for drummy areas after hardening.

In suspect areas or whenever directed by Engineer-in-Charge, the contractor shall drill the cores from the finished work and in to the host concrete after 28 days of mortar application. The cores shall be examined for evidence of poor workmanship by the Owner, and if he is satisfied that either the bonding work or the subsequent layer of mortar are not of the required workmanship, the contractor at the instruction of Engineer-in-Charge shall dismantle such areas of work as required by the Owner and re-do the same after re-preparing the surface by chipping off mortar work and abrading the bonding slurry interface.

11.4.5 Partition Wall

All intermediate walls shall be full brick thick wall in 1:6 cement sand mortar. Half brick thick wall in 1:4 cement: sand mortar with [2 nos. 6 mm] diameter rod in every fourth layer shall be provided. For long walls intermediate RCC pillars and RCC horizontal tie shall be provided. Full glazed partition in anodized aluminium frame shall be provided for operator's cubicles for clear view of the operating equipment and in Control room area.

11.4.6 Metal cladding

a) Permanent colour coated sandwiched insulated metal cladding system

Trough zinc-aluminium alloy coated (both sides) M.S. sheet having 0.6 mm minimum thickness (or high tensile steel sheet of 0.5 mm minimum thickness) shall be used on external face (outer face) of cladding system. Weight of coating shall not be less than 180 gm / sq.m. The outer side (exposed face) shall be permanently colour coated with Polyfluro Vinyl Coating (PVF2) of Dry Film

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[117]	25.09.2014

Thickness (DFT) 20 microns (minimum) over primer. Inner side of external sheet shall be provided with suitable pre-coating of minimum 7 microns.

Galvanised M.S. sheets of minimum 0.6 mm thickness shall be used as inner liner (internal face) of cladding system. The exposed face shall be permanently colour coated with silicon modified polyester paint of DFT 20 microns (minimum) over primer. Inner face of external sheet shall be provided with suitable pre-coating of minimum 7 microns. The rate of galvanising shall not be less than 180 gm / sq. m.

The permanent colour coated sheet shall meet the general requirements of IS: 14246 and shall conform to class 3 for the durability.

Inner sheet shall fixed directly to side runners and Z spacers made of at least 2 mm thick galvanised steel sheet of grade 375 as per IS: 277. Inner sheet shall be fixed at the rate not more than 0.75 m centre to centre to hold the insulation and external sheeting.

The insulation shall be of bonded mineral wool of minimum thickness 50 mm conforming to IS: 8183, having a density of 32 kg / cu. m for glass wool & 48 kg / cu. m for rock wool.

b) Permanent colour coated (non-insulated) metal cladding system

Trough zinc-aluminium alloy coated not less than 180 gm/sq.m M.S. sheets having 0.6 mm minimum thickness (or High tensile steel sheet of 0.5 mm minimum thickness) shall be used for the cladding system. The outer side (exposed face) shall be permanently colour coated with PVF2 paint of minimum DFT 20 microns over primer and the inner side (internal face) shall be coated with same paint of minimum DFT 12 microns over primer. These shall be fixed directly to runners. The sheets shall meet the general requirement of IS: 14246 and shall conform to class 3 for the durability.

c) Flashings, Cap, Trim Closures etc.

All flashings, trim closures, caps etc. required for the metal cladding system shall be made out of plain sheets having same material and coating specification as mentioned above for the outer face of the sandwiched metal cladding.

11.4.7 Plastering

On the exterior wall & rough side of interior brick wall [18 mm] thick minimum with cement-sand mortar in two layers shall be applied. Where external finish will require rich plastering for special finish plaster shall be of 1:4/1:3.

Interior wall: [12 mm] thick with 1:4 cement-sand mortars

Ceiling: [6 mm] thick with 1:3 cement-sand mortar shall be provided to all exposed ceilings.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[118]	25.09.2014

11.4.8 Removal of plaster manually from masonry or concrete surface using chisel and hammer and disposal of debris etc

a) Purpose

For removal of all type of loose /delaminated /damaged/weak cement plaster from surface of masonry or concrete.

a) Procedure

Step-1: Safety shall be ensured in accordance with contract conditions and specifications.

Step-2: Provide double scaffolding, protective screens etc.

Step-3: Existing plaster to be to be identified for removal by tapping all areas and its boundary shall be marked with a colour marking (in an optimal rectangular shape), which shall be approved by Engineer-in-Charge.

Step-4: Make a cut normal to the surface all along the boundaries with power driven cutters. The depth of cut shall not exceed the thickness of plaster.

Step-5: Remove the plaster manually with the help of chisel and hammers to completely expose the parent masonry or concrete surface, so as not to have any traces of such plaster left behind.

11.4.9 False ceiling and under deck insulation

All air conditioned areas shall be provided with the suspended false ceiling system. Under deck insulation system shall be provided on the under side of the roof / floor slab of the air-conditioned areas based on the functional requirement. Aluminium false ceiling system shall comprise of [84 mm] wide [12.5 mm] deep closed type plain panels of approved colour, roll formed out of [0.5 mm] thick corrosion resistant aluminium alloy AA 5050 fixed on roll formed carriers. Additional hangers and height adjustment clips shall be provided for return air grills, supply air diffusers, light fixtures, AC ducts etc. Suitable M.S channel (minimum ISMC100) grid shall be provided above false ceiling for movement of personnel to facilitate maintenance of lighting fixtures, AC ducts etc.

Bidder shall prepare a layout of the false ceiling system incorporating light fixtures, supply air diffuser, return air grills, fire detectors, fire protection sprinklers etc. such that the ceiling looks aesthetically pleasing. Work shall commence only after the Owner approves the layout. Under deck insulation shall comprise of [50 mm] thick resin bonded mineral wool insulation mat conforming to IS:8183. This mat shall be backed with [0.05 mm] thick aluminium foil and [24 Gx25 mm] wire mesh netting. These shall be fixed to ceiling or wall as the case may be with [100x50x6 mm] slotted mild steel plate welded to M.S. plate inserts embedded at the soffit of the slab at [600 mm c/c and 14 G] steel wire drawn through slots and fixed to wire netting.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[119]	25.09.2014

11.4.10 Doors

- Generally hollow metal (steel) flush doors with pressed steel frame shall be provided for plant and utility areas.
- Solid core factory made wooden flush doors in hard wood frame shall be used in interior office areas. Aluminium doors shall be provided in at entrances and important areas.
- Special areas like control rooms and other special area shall be provided with minimum 15 micron pre-coated Le. colour anodised aluminium glazed partitions with air lock facilities having two sets of doors.
- Fire rated doors with panic bar shall be provided in cable spreader rooms and other areas having fire hazard and also to all fire exists as per TAC requirement.
- Doors shall be provided at appropriate location to prevent dust ingress from outside.
- FRP Doors with FRP Frames shall be provided for all the toilet doors.
- Weather stripping shall be provided to all outside doors as well as air-conditioned areas and all other doors where dust-free environment is required.

11.4.11 Rolling shutters

Rolling steel shutters conforming to IS: 6248 will be used for large openings where frequent use is not envisaged. Unless noted otherwise, main entry doors of width and height to suit the requirements. Rolling shutters with area up to 8 m2 shall be pull and push type hand operated, while above 8 m2 shall be pull and push type with ball bearings (Electrically operated) as per IS specification.

11.4.12 Windows & Ventilators

In all buildings, full glazed windows and ventilators in minimum [15 micron] colour anodized aluminium window frame shall be provided with [4 to 6 mm] thick (depending on the size of panel) clear float glass and [6 mm] thick clear wired/laminated glass where required from safety point of view. Structural glazing may be considered as an important facade element.

The window area shall be so decided as to allow adequate natural ventilation and light.

Note: Glass thickness and member sizes of Aluminium Glazed doors and windows shall be designed by the manufacturer and to be submitted for approval by the Bidder before execution.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[120]	25.09.2014

11.4.13 Plywood Covering Panels to Cover Windows etc. During repairs

a) Purpose

To protect the finished items against their spoiling/damage to finishes during the process of carrying out repairs in a building. The items could include finished windows, doors, glass curtain wall or other such items.

b) Materials:

Wooden Battens of size 50mm X 50mm (approximately) or as approved by Engineer-in-charge, free from warping, cracks etc. made from locally available timber.

Plywood of suitable thickness, preferably 6 mm thick, as approved by Engineer-in-Charge.

Nails, screws etc. as per requirement.

c) Fabrication:

Size of covering panels shall be more than the size of windows etc. to be shielded/ protected, enough to be fixed to the walls without damaging the windows etc.

Wooden battens shall be cut approximately to the size of panels of windows etc. to be protected. The joints of the wooden framework shall be lap joint or as approved by Engineer-in-Charge.

Where the panel size is more than 2 square metres or as specified by the Engineer-in-Charge, the stiffening shall be done with batten backing to impart stiffness enough to provide rigidity against undue deflection due to impact of falling debris, self load, etc.

Plywood shall be fixed with nails/screws over the batten frames. The spacing of nails/screws shall be about 300mm c/c or as may be required at site.

d) Fixing:

The plywood covering panel shall be suitably fixed without damaging the windows etc. being protected by such panels with nails/screws fixed in walls strong enough to resist the forces likely to be imparted during repair work. It shall be done in such a manner that it can be removed with ease without damaging the covered windows etc. after completion of repairs.

e) Removal:

After completion of work, the covering panels shall be removed carefully, so as not to cause any damage to windows etc. covered. The damages, if any, shall be made good.

11.4.14 Facilities in Buildings

Adequate toilet and drinking water facilities shall be provided for personnel working in each building. Each building shall have toilet facilities both for Gents

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[121]	25.09.2014

and Ladies. Number of toilet fixtures shall be adequate for the occupancy as per National Building Code.

However minimum 1 Water Closet, 1 washbasin, 1 urinal shall be provided in each toilet.

Each floor shall have drinking water facility connected through water purification system like Aquaguard or similar approved make.

11.4.15 Glazing & Glazed Partition

- Glazing in Control room between AC. and non-AC. areas shall be insulating glass consisting of [two 6 mm] thick toughened float glass sheet hermetically sealed and separated by [12 mm] gap for thermal insulation. Clear glass shall be provided where clear view is required. In other areas tinted glass may be provided.
- [4 mm] thick ground glass shall be provided for toilets.
- Glazing between two AC. areas shall be with 6 mm thick clear float glass.
- All glazing shall be in aluminium frame.
- [6mm] thick Wired / laminated glass shall be used for windows / ventilators at higher level for safety.
- [24mm] thick insulated double glazing having 6mm thick tinted heat-reflecting type float glass on outer side and 6mm thick clear float glass on inner side with [12mm] air gap & hermetically sealed shall be mounted on [15 micron] coloured anodised aluminium frame suitable for structural glazing system.

11.4.16 Sealant

Silicon sealant or polyurethane sealant shall be used in all expansion joints exposed to weather. All joints around exterior doors, windows, and expansion joints, etc. shall be sealed for proper water-lightness.

11.4.17 Damp Proof Course

[40 mm thick 1:1.5:3] concrete with waterproofing admixture. Water proofing compound shall be of Zydex, SIKa, or similar approved.

11.4.18 Plinth Protection

Minimum [1000 mm] wide and minimum [100 mm] thick M 15-grade concrete plinth protection along building periphery shall be provided with surface drain of required size and slope, to suit storm water quantity, shall be provided. The plinth protection shall be laid over prepared sub-grade and base formed with locally available broken laterite stone to thickness of [150 mm].

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[122]	25.09.2014

11.4.19 Painting

- Exterior Masonry Surface : Buildings shall be finished with [Acrylic Emulsion pain] as per IS specification with approved colour and scheme.
- Exterior Steel Work : Anti-corrosive synthetic enamel paint over [anti corrosive primer].
- All Woodwork: [Synthetic paint over a coat of primer].
- All Internal Steel Work : [Synthetic enamel over a coat of primer].
- Interior Office Spaces Rooms, All AC Areas : Acrylic emulsion paint over [2 mm] control thick plaster of paris punning.
- Balance areas: As indicated in finish schedule in this document.
- Fire Door: Post Office red shade shall be provided.

11.4.20 Flooring

Unless and otherwise specified, the nominal total thickness of floor finish shall be [50 mm] including under bed and topping. The flooring shall be laid on already matured concrete base. The under bed for floors shall consist of minimum grade of M 15 with stone chips [12.5 mm] downgraded as coarse aggregates. The under bed shall be provided appropriate slope towards catch pit for floor drainage.

- **False Flooring System**

Removable type false flooring system shall be provided wherever required (computer rooms etc.). RCC floor slab will be sunk to a depth [800 mm], which shall be height of the false floor system. The flooring shall consist of fire resistant phenol formaldehyde bonded particle board panels [600x600x35 mm] size, mounted on steel pedestals of adjustable height and supporting steel grid system to provide under floor space. [2 mm] thick flexible anti-static PVC topping on top and PVC strip edging on sides of each panel shall be provided.

- **PVC Floor Finish**

Two mm thick PVC as per IS: 3462 and laid as per IS: 5318 over concrete under bed of [48 mm] shall be provided in electronic cubicle rooms, conference room, etc. PVC tiles shall ensure anti static surface.

- **Vitrified ceramic Tiles**

Heavy duty vitrified ceramic tiles of appropriate thickness and of minimum size [600 mm x 600 mm] of approved shade & colour shall be provided for control room as per relevant code and manufacturer's specification over concrete bedding to result in an overall thickness of [50 mm].

- **IPS Flooring**

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[123]	25.09.2014

IPS (cement concrete flooring) with metallic floor hardener topping [12 mm] thick with a total thickness of [50 mm] shall be provided in maintenance and unloading area, ground floors, floor of pump house, permanent stores and other plant building areas where heavy duty flooring is required.

IPS flooring with non-metallic floor hardener shall be provided in all MCC and switchgear rooms, which are not air-conditioned.

IPS flooring shall also be provided in areas, which are not provided with any special finish. Areas which are likely to be subjected to oil spillage shall be provided with two coats of oil resistant painting over IPS floor finish. If required, Bidder has to use floor hardeners at appropriate locations.

- **Heavy Duty Ceramic Tiles**

Heavy duty vitrified ceramic tiles with suitable finish shall be used in toilets, pantry, dining hall of canteen, locker rooms etc. The tiles shall be minimum of [300 x 300 x 7 mm] of approved shade, brand and colour.

- **Acid / Alkali Resisting Tiles**

Battery rooms and other areas coming into contact with acid / alkali vapours or fumes shall be given acid / alkali resistant tiles [25 mm] thick, jointed with acid / alkali resistant cement slurry. Bedding shall comprise of potassium silicate mortar conforming to IS: 4832 (Part-I) and resin based mortar like epoxy for jointing. Total thickness of flooring shall be [50 mm].

- **Integral Floor Finish**

For cable vaults floor finish integral to the concrete base shall be provided as per IS: 2571.

11.4.21 Miscellaneous

PVC nosing shall be provided for edge protection of R.C.C. stair treads.

Angles [50x50x6 mm] (minimum) with lugs shall be provided for edge protection of cutouts / openings in floor slabs, edge of drains covering gratings, edge of R.C.C cable / pipe trenches of any other place where breakage of edges / corners is expected.

Floors of switchgear rooms shall have embedded steel channel suitable for easy movement of breaker panel.

11.4.22 Skirting/DADO

- [150 mm] skirting matching with floor finish shall be provided in all areas unless specified otherwise elsewhere.
- Toilets and locker rooms shall be provided with dado of [2100 mm] high with glazed tiles of minimum 5 mm thickness generally as per IS: 777.
- For battery room and other areas coming in contact with acid / alkali spillage / fume, dado of acid / alkali resistant tiling as per IS: 4457 shall be provided

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[124]	25.09.2014

to a height of [2100 mm] set in potassium silicate mortar and joints pointed with resin bonded mortar

- Staircase wall shall be given dado of vitrified tiles of approved colour and shade to a height of [2100 mm] or as per approved drawings.

11.4.23 Roof access

All roofs shall be provided with access thorough a staircase / cage ladder. Minimum [1000 mm] wide access path shall be provided with suitable tiles to approach equipment on roof.

11.4.24 Roof Drains

Roof drains design criteria

Minimum diameter of the pipe shall be [150 mm]. The roof drains shall be sized for the roof area runoff for a maximum rainfall per hour at site.

Detailed specification is mentioned elsewhere in this specification.

Roof Drainage and Water Proofing

All roofs of buildings shall be provided with 3 layers, first being elastomeric membrane water proofing treatment, secondly screed concrete shall be laid and finally the wearing course. Elastomeric membrane shall be laid as per manufacturer's specifications which shall adhere to specifications as given in IS 2645. Run off gradient shall be given a minimum of 1 in 100. Gradient shall comprise screed concrete 1:2:4 using 12.5 mm or below coarse aggregate. Over the screed concrete waterproofing treatment shall be provided as below:

A wearing course shall consist of pressed clay tiles of size [230x230x18 mm] laid in water proofing compound mixed cement mortar (1:3) and sealing of joints using sealing compound.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[125]	25.09.2014

12. GENERAL REQUIREMENTS

12.1 Roof

All the buildings having R.C.C slabs over structural steel framing are provided with troughed metal sheet decking which acts as permanent shuttering. These sheets shall meet the general requirements of IS: 14246 and shall conform to class 3 for durability. The sheeting shall be permanently colour coated galvanised M.S. troughed metal sheet decking of approved profile with minimum base metal thickness of 0.8 mm and minimum trough depth of 38 mm. Silicon modified polyester painting shall be used for permanent coating over galvanised surface with minimum rate of galvanising of 180 gm of zinc per sq. m. Dry film thickness of colour coating shall be at least 20 micron.

Roof of all buildings having R.C.C. framework shall have cast in-situ R.C.C. slab with conventional shuttering.

Structural steel roofing wherever required shall be of permanently colour coated galvanised M.S troughed metal sheet of approved profile. Minimum base metal thickness shall be 0.8 mm. The rate of zinc consumption for galvanising shall be 275 gm/sq. m. The external face shall have permanent colour coating of PVF 2 paint of minimum DFT of 20 microns and inner surface shall be coated with silicon modified polyester paint with DFT of 20 microns

12.2 Waterproofing of underground structures

All underground structures like basements, pump houses, water retaining structures etc. shall have plasticiser cum waterproofing cement additives conforming to IS: 9103. In addition, limits on permeability as given in IS: 6494 shall also be met with. The concrete surface of these structures in contact with soil shall be provided with minimum two coats of bituminous painting of grade 85/25 conforming to IS: 702 @ 1.7 kg/sq.m (minimum) for water/ damp proofing. Also provision shall be made on the inner surface of walls and base slab, so that waterproofing grouting can be injected later in case of leakage.

12.3 Anti-termite treatment/Anti-weed treatment

Pre-constructional anti termite treatment shall be given to all buildings as per IS: 6313 and other relevant Indian Standards.

Reservoirs shall be given an anti-weed treatment of approved quality and quantity as per the manufacturer's specification. Anti weed treatment shall be carried out before carrying out the lining work.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[126]	25.09.2014

13. GENERAL CIVIL WORKS AND CONSTRUCTION TOLERANCES

13.1 Basic requirements for all civil works

Design requirements

The design of all structures under this contract shall be such that differential and total settlements or other movements shall not exceed acceptable limits and full provision shall be made for all expansion and other joints. The design shall be to the approval of the Owner/Consultant.

- Structural members subjected to flexure shall be designed to have adequate stiffness to limit deflections or any deformations that affect strength or serviceability of a structure adversely. The maximum allowable deflections of structural members shall be in accordance with the relevant design standards and/or the limits prescribed by the machinery manufacturers (whichever is less).
- The superstructures and foundations subjected to vibrations (the primary source of these vibrations being the unbalanced forces generated by rotating or reciprocating equipment) shall be designed such that vibrations will be neither intolerable nor troublesome to personnel and will not cause damage to the machine or structure.
- The natural frequency of the whole of the superstructures and foundations or parts thereof and all structures adjacent thereto shall not coincide with the operating frequency of the vibrating plant.
- The differences between frequencies and the dynamic analysis of the superstructures and foundations shall be in accordance with the relevant design standard.
- The dimensions of all the buildings shall be such as to provide adequate space for the safe installation and proper operation, maintenance and repair of all plant and equipment.
- Throughout the works all floor slabs above rooms containing electrical equipment shall be watertight. No drainpipes or water pipes are permitted to pass through these rooms.
- All materials used in the works shall be of the best quality of their respective kinds as specified herein, obtained from sources and suppliers approved by the Owner/Consultant and shall comply strictly with the tests prescribed hereinafter or, where tests are not laid down in this specification, with the requirements of the latest issue of the relevant Indian, American, British, German Standards or other Standards approved by the Owner/Consultant.
- Samples of all materials proposed to be used in the works may be called for at any time by the Owner/Consultant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[127]	25.09.2014

- The work shall be carried out by competent personnel skilled in their various trades.
- Before commencing the works, the Bidder shall ascertain the locations and nature of all existing underground services and shall take every possible precaution against any damage occurring to them or interference therewith, during the execution of the works.
- Suitable access to the roofs of the buildings by means of steel stairs shall be provided for maintenance and repair of any installation.
- All rooms with fire hazard shall be provided with suitable emergency exists.
- Proper access roads with footpaths shall be provided to bring in all the equipment and to take it out in case of maintenance. These access roads shall be suitable for the vehicles, which will be used (cars, forklifts, trucks/trailers etc) to reach up to the point of unloading of the equipment.
- Safe, convenient and straight forward accesses and means are to be provided to take equipment in and out of all rooms, at all levels using suitable stair wells and suitable electric hoists. The dimensions of rooms, stairwells, doors, etc shall be designed to suit the a.m. transport concept.
- Before starting of design works, the Bidder shall submit to the Owner/Consultant for approval the project design manual containing the design data and the detailed design criteria for all civil works. Design works shall commence only after approval of the project design manual by the Owner/Consultant.
- Before starting of design works, the Bidder shall submit to the Owner/Consultant for approval the project design manual containing the design data and the detailed design criteria for all civil works. Design works shall commence only after approval of the project design manual by the Owner/Consultant.

13.2 Basic requirements during construction

Basic Cleaning

Basic cleaning includes all floors, walls, ceilings, built-in fittings and equipment, including the furnishings. The basic cleaning operation must result in a degree of cleanness, which permits the fully equipped buildings and rooms and associated outdoor installations and secured surfaces to be taken over without complaint.

Advertising boards and stickers, temporary protective coatings and claddings, remains and splashes of paint, must be removed with water or suitable solvents. Dust and other dirt must be completely removed from all wall and floor surfaces, as well as from all furniture.

Windows and mirrors must be cleaned so that they are completely clear and without streaks.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[128]	25.09.2014

Perlator gauges, showerheads, odour traps and floor drains of the sanitary installations must be cleaned and the fittings and bright pipe work must be spotlessly polished.

Petrol and oil separators must be emptied, cleaned and refilled if necessary during basic cleaning.

Lamps, including dishes, lighting units and tubes, switches and sockets as well as bases and skirting boards, doors with frames and glazing, windows, window seats and other furniture and fittings must be included in the basic cleaning operation.

Initial Equipment

The specification is drawn up on the assumption that the scope of the initial equipment and consumption materials is to be provided complete in every respect; everything required for the use and care of the installations must be supplied, even if this is not expressly specified in the documentation.

Bidder shall ensure that during excavation ground water level shall be lowered by at least 0.50 m below the founding level adopting appropriate method of dewatering. Lean concrete below foundation shall be laid soon after excavation with minimum loss of time.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-II, Section-II, Part-D	[129]	25.09.2014

14. STANDARDS, CODES AND REFERENCES

14.1 General

The Design of the Steel Structural Works shall be prepared and presented in accordance with IS codes. In absence of guidelines of specific items in the IS codes, International codes viz., American, BS, DIN or Australian code shall be used. All the Indian Standards referred to shall be the latest revision (including all amendments issued thereto) on the date of opening of the price bid. The Standards adopted shall be clearly stated in the calculations.

The Design shall comply with the current Local Authority Building Regulations (National Building Code) where appropriate. Subject to the agreement of the Owner, other International / Foreign National Standards, and, International / Foreign National Standard Codes of Practice, may be used.

To the extent that the Design shall include materials, methods or workmanship to be incorporated into the works, they shall be selected and incorporated into the design in accordance with the recommendations and requirements of the following (as appropriate in order of precedence but not mutually exclusive):

Statutory requirements

The Contract provisions

Bureau of Indian Standard Codes of Practice

International / Foreign National Standards

Agreement Certification for Materials

Manufacturer's recommendations for materials

Competent Trade Association recommendation

Engineering judgment

In case of any deviation / conflict between provisions of IS codes and the design criteria, the provisions that are more stringent shall be followed unless specifically directed otherwise.

Reference to only some of the codes in this document and various clauses of design criteria shall not limit or restrict the scope or applicability of other relevant codes. It shall be ensured that all other codes relevant to a specific job, in addition to those already mentioned, are followed wherever applicable.

Where British / American / DIN or other codes and standards are referred to in this document, equivalent Indian Standards may be substituted if available.

Materials supplied from India shall follow the Indian Standard Specifications.

Field and laboratory testing procedures for materials follow Indian Standard Specifications.

3. Technical Schedules-I&C

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[iv]	25.09.2014

MODEL TENDER DOCUMENT FOR SELECTION OF R&M CONTRACTORS

TURBO GENERATOR & AUXILIARIES (PACKAGE NUMBER: R&M-SP-02)

VOLUME-III, PART-B TECHNICAL SCHEDULES-ELECTRICAL (TO BE FILLED BY BIDDER)

RENOVATION & MODERNISATION OF FOSSIL FUEL BASED POWER PLANTS IN INDIA

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[v]	25.09.2014

TABLE OF CONTENT

1.0 GENERATOR & ACCESSORIES	1
2.0 GENERATOR PROTECTION PANEL & METERING PANEL	35
3.0 ISOLATED PHASE BUS DUCT	39
4.0 MOTOR	46
5.0 MOTOR ACTUATORS	55
6.0 LT TRANSFORMER (OIL TYPE/DRY TYPE)	56
7.0 LT PCC/MCC/DISTRIBUTION BOARD	60
8.0 415V NON SEGREGATED PHASE BUS DUCT	66
9.0 220V DC System	68
10.0 HV CABLES	76
11.0 LT POWER & CONTROL CABLES	80
12.0 ILLUMINATION System	84
13.0 CABLE CARRIER SYSTEM	88
14.0 EARTHING & LIGHTNING PROTECTION SYSTEM	89
15.0 6.6kV Switchgear	90
16.0 VARIABLE FREQUENCY DRIVE	95
17.0 6.6kV Segregated phase busduct	97

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[vi]	25.09.2014

Technical Specification For R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
---	-------------------

{Only the Applicable portion of the Data Sheet based on the scope of work as firmed up in Section-I, Volume-II should be retained and the remaining portion should be deleted. The scope of work in Section-I, Volume-II is based on Residual Life Assessment (RLA) / Condition Assessment (CA) and Energy Audit (EA) Report.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[vii]	25.09.2014

1.0 GENERATOR & ACCESSORIES

SL No.	DESCRIPTION	UNIT	DATA
1	Manufacturer's Name		
2	Maximum continuous output	KVA	
a)	*at rated Hydrogen pr.		
b)	(At MCR)	MW	
c)	condition		
3	Rated terminal voltage	KV	
4	Rated stator current	Amps	
5	Rated frequency	Hertz	
6	Rated power factor		
7	Rotor current at MCR	Amps	
8	Rotor voltage at MCR	Volts	
9	Maximum continuous permissible variation range in :		
a)	Rated terminal voltage %		
b)	Rated frequency %		
c)	Combined permissible % variation of frequency and voltage		
10	Number of		
a)	Phases		
b)	Number of parallel paths/phase		
c)	Line terminals brought out		
d)	Neutral terminals brought out		
	Space provided between generator leads to mount bushing current transformers (Yes/No)		
11	Compliance with IEC standard No		
12	Generator efficiency at:		
	a) 100% load		
	b) 80% load		
	c) 80% load		
	d) 40% load		
	e) 25% load		
13	Performance data for short circuit ratio corresponding to maximum capability		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[1]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
14	Permissible tolerance in SCR		
15	Regulation at :		
	a) Unity power factor		
	b) 0.85 lag power factor		
16	Rated Hydrogen pressure:	Kg/cm ² (gauge)	
17	Rated cooling water pressure	Kg/cm ² (gauge)	
18	Cooling water flow at normal load	m ³ /hr	
19	Basic impulse insulation withstand voltage of stator winding with respect to earth (for standard wave shape of 1.2/50 micro sec.)	KV (peak)	
20	Symmetrical run short circuit current with generator isolated initial saturated value and sustained value		
	a) 3 phase	KA	
	b) Single phase to neutral	KA	
21	3 phase short circuit withstand time for	Secs	
22	Saturation factor		
23	Waveform factor		
24	Permissible unbalanced loading subject to rated current not being exceeded in any phase		
	a) Maximum continuous negative phase sequence current I ₂	amps	
	b) Minimum value of I ₂ ² t for transient operation under system fault conditions (where t in seconds)		
25	Maximum permissible capacitive loading at full load	MVAR	
26	Maximum capacitive loading for stability at rated voltage and zero power factor	MVAR	
27	Generator reactance, per unit at rated KV and MVA		
28	Direct axis synchronous reactance X _d		
29	Quadrature synchronous reactance X _q		
30	Direct axis transient reactance X' _d		
31	Quadrature axis transient X' _q		
32	Direct axis sub-transient reactance X'' _d		
33	Quadrature axis sub-transient reactance, X'' _q		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[2]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
34	Negative phase sequence reactance, X2		
35	Zero phase sequence reactance X ₀		
36	Potier reactance X _p		
37	Leakage reactance X _L		
	a) Combined		
	b) stator		
	c) Damper		
38	Permissible tolerance in all %(+) guaranteed reactance values		
39	Effective winding capacitance to earth		
40	Permissible tolerance in all %(+) guaranteed reactance values		
41	Effective winding capacitance to earth		
	a) Per Phase Micro farad		
	b) All phases connected together Micro farad		
42	Effective surge impedance to neutral per phase	Ohms	
43	Synchronous impedance	Ohms	
	a) Harmonics voltage generated by the generator at 100%, 75%, 50%, 25% and no load		
	b) X/R ratio from fundamental to 20th harmonic		
	c) Harmonic impedance at each harmonic upto 20 th harmonic		
	d) Permissible current at each harmonic other than fundamental.		
44	Armature resistance per phase at:		
	a) 25 deg. C	Ohms	
	b) 75 deg. C	Ohms	
45	Field resistance per phase at :		
	a) 25 deg. C	Ohms	
	b) 75 deg. C	Ohms	
46	Effective negative sequence resistance		
47	Time constants		
48	Direct axis open circuit TIME CONSTANT T' _{do}	Sec.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[3]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
49	Direct axis 3 phase transient short circuit time constant T'd3	Sec.	
50	Direct axis 2 phase transient short circuit time constant T'd2	Sec.	
51	Direct axis 1 phase transient short circuit time constant T'd1	Sec.	
52	Direct axis sub-transient short circuit time constant d"	Sec.	
53	A-periodic 3 phase short circuit time constant Ta3	Sec.	
54	A-periodic 2 phase short circuit time constant Ta2	Sec.	
55	A-periodic 1 phase short circuit time constant Ta1	Sec.	
56	Armature winding short circuit time constant Ta	Sec.	
57	Quadrature axis transient open circuit time constant T'qo	Sec.	
58	Direct axis transient short circuit time constant T'd	Sec.	
59	Direct axis sub-transient open circuit time constant T"do	Sec.	
60	Quadrature axis sub-transient open circuit time constant T"q0	Sec.	
61	Quadrature axis sub-transient short circuit time constant T"q	Sec.	
62	Direct axis open circuit excitation winding time constant Tfd0	Sec.	
63	Direct axis open circuit equivalent damper circuit time constant Tkdo	Sec.	
64	Direct axis short circuit excitation winding time constant Tfd	Sec.	
65	Direct axis short circuit equivalent damper winding time constant Tkd	Sec.	
66	Acceleration time Tj	Sec.	
67	Stored energy constant H	KW sec/KVA	
68	Maximum temperature with the secondary cooling water inlet temperature as 34 deg C		
69	Maximum absolute temperatures when generator delivers 660 MW at 0.85 p.f. at its terminals.		
	a) Stator windings	Deg. C	
	b) Stator core		
	i) In contact with insulated winding	Deg. C	
	ii) Not in contact with insulated winding	Deg. C	
70	Stator teeth temperature	Deg. C	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[4]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
71	Rotor windings	Deg. C	
72	Mechanical parts in contact with or adjacent to insulation	Deg. C	
73	Damper winding	Deg. C	
74	Rotor surface	Deg. C	
75	Other miscellaneous parts	Deg. C	
76	Cooled gas	Deg. C	
77	Hot gas in the stator and rotor	Deg. C	
78	Water to inlet of gas/air cooler	Deg. C	
79	Water at outlet of gas/air cooler	Deg. C	
80	Maximum absolute temperatures when generator delivers maximum capability of the turbine (with VWO, HP heaters out, over-pressure conditions etc.) at 0.85 p.f. at its terminals		
81	Generator losses, also indicate where one loss components is included in the another one. Give curves for various losses Vs. load as above at different hydrogen pressure.		
82	No load loss		
	a) Iron loss	KW	
	b) Rotor copper loss	KW	
83	Full load loss		
	a) Iron loss	KW	
	b) Stator copper loss	KW	
	c) Stray load loss	KW	
	d) Rotor copper loss	KW	
	e) Friction and windage loss	KW	
	f) Mechanical losses including bearing losses	KW	
	g) Exciter and exciter rheostat losses	KW	
	h) Collector brush contact losses	KW	
	i) Rotary rectifier losses	KW	
	j) Fan loss	KW	
	k) Shaft seal loss	KW	
	l) Eddy current loss	KW	
	m) Total loss at full load	KW	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[5]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	n) Any other loss (indicate)	KW	
	Dissipation losses in		
	a) Hydrogen/Air cooler		
	b) Seal oil cooler		
	c) Exciter air cooler		
	d) Excitation system panels		
84	ADDITIONAL DATA:		
	Permissible overload and duration		
	"Rapid defluxing" time and the technique used.		
	Surge capacitor requirement for the generator must be stated with reasons.		
	What provisions are made for automatic generator runback (turbine control point set back) and loss of cooling?		
	To what power level is runback required and what time is allowed for runback		
	Furnish permissible volts/HZ vs time characteristic of the generator		
	Describe your standard practice in coordinating connection of isolated phase bus duct to generator main leads		
	Have you furnished any generator of this rating with Brushless excitation system		
	Furnish the no-load saturation and zero Power-factor saturation curve for AC exciter used for brushless excitation system, if proposed. Details of Generator rotor winding temperature monitoring system and rotor winding earth fault detection system		
	Furnish detailed literature for the excitation system proposed for the generator including		
	a) Performance (transient and steady state) characteristics		
	b) Initial high response characteristics		
	c) Initial high response characteristics		
	d) Exciter ratings (where applicable)		
	e) Performance record as per relevant clause of specs.		
	f) List of instruments provided		
	Describe the performance characteristics of voltage		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[6]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	regulator, proposed for this generator.		
	Provide dimensioned general arrangement drawings for the following equipment:		
	a) Seal oil tank		
	b) Hydrogen Coolers		
	Details of generator neutral grounding system		
	Furnish the schematic diagram of excitation system, giving its controls & interface with automatic voltage regulation.		
	Type of Cooling		
	a) Stator winding		
	b) Stator Core		
	c) Rotor		
	Rated Output	MW	
	Transient rise of voltage on sudden rejection of full load at rated power factor		
	a) With AVR	P.U.	
	b) Without AVR	P.U.	
	Zero sequence Resistance		
	Inertia constant H	KW-Sec/KVA	
	a) Generator & Exciter		
	b) Complete turbine generator unit		
	Short circuit current	P.U.	
	Sub transient current		
	a) On 3 phase short circuit		
	b) on 2 phase short circuit		
	c) on 1 phase short circuit		
	Transient current		
	a) On 3 phase short circuit		
	b) on 2 phase short circuit		
	c) On 1 phase short circuit		
	Steady state current		
	a) On 3 phase short circuit		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[7]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	b) on 2 phase short circuit		
	c) On 1 phase short circuit		
	Whether specified earth fault current and duration as per specification (Yes/No)		
	Indicate values of earth current and duration		
	Voltage regulation under conditions of rated speed voltage & output (%)		
	a) at 0.8 power factor lag		
	b) at unity power factor		
	c) at 0.90 power factor load		
	Maximum continuous kva capacity of generator		
	- With one cooler out of operation		
	Maximum inductive capacity	KVAR	
	Excitation requirements at		
	a) Rated load		
	b) No load		
	c) At maximum capacitive load (at Zero active power		
	d) Under field forcing condition		
	Short circuit torque as a ratio of full load torque		
	Fly wheel moment (GD ²) of generator + exciter	Kg m2	
	Capacity of space heaters at 415 V where applicable	KW	
	Number, type and rating of CT's and PT's used exclusively for EHG and generator excitation system		
	Design and construction features		
	Stator Core		
	a) Type of spring mounting		
	b) Grade of sheet steel (Thickness & loss figure)		
	Stator Windings		
	a) Type and Class of insulation		
	b) Resistance per phase at 20 deg. C	Ohm	
	c) Capacitance per phase (i)		
	d) Dielectric Test Voltage Value	KV	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[8]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	e) Impulse voltage strength peak	KV	
	f) Is the winding transposed in the ends?		
	Terminals		
	a) No. of terminals brought out		
	b) Type of cooling of terminals and connectors		
	c) Type of terminal bushings		
	d) Number of distributed multi ratio bushing CT's & relaying accuracy class that is accommodated in the bushing furnished		
	e) Dielectric Test Voltage-KV		
	f) Impulse Voltage strength-KV		
	Rotor		
	a) Material of rotor forging		
	b) Material of retaining ring forging		
	c) Material of rotor wedge		
	d) Type of retaining ring mounting		
	e) material of Damper winding		
	f) Over speed Test Value and duration		
	Rotor Winding		
	a) Class & Type of insulation		
	b) Turns per pole		
	c) Resistance at 20 °C (ohms)		
	d) Dielectric Test Voltage value	KV	
	Bearing		
	a) Type of bearing (Pedestal/End Shield)		
	b) Oil quantity per bearing (m3/hr)		
	c) Oil pressure	(kg/cm2)	
	d) Grade of Oil		
	Shaft Seal		
	a) Type of seal		
	b) Pressure of Seal oil	(kg/cm2)	
	c) Grade of oil		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[9]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	d) Quantity of oil per seal	(m3/hr)	
	Gas/Air Coolers		
	a) Number of Coolers		
	b) Material of:		
	i) Tubes		
	ii) Fins		
	c) Material of tube plate		
	d) Quantity of cooling water required/ cooler	m3/hr	
	e) material of water boxes		
	f) Pressure drop across cooler on water side (m.w.c)		
	AUTOMATIC VOLTAGE REGULATORS		
	a) Manufacturer		
	b) Type		
	c) Power supply to the regulator (Volts)		
	d) Range of generator voltage adjustment(%)		
	i) in auto position		
	ii) in manual position		
	e) Frequency range of operation	Hz	
	f) temperature range of operation	Deg.C	
	g) Accuracy (%)		
	h) Dead band		
	i) Excitation system response time with AVR (The time for the generator field voltage to attain 95% of the difference between field forcing voltage and rated field voltage with 5% drop in generator terminal voltage and generator at rated MVA)		
	j) Time required for generator terminal voltage to get restored to within 2% of the nominal preset value when subject to sudden loss of rated output.		
	BRUSHLESS EXCITATION SYSTEM		
	Pilot exciter		
	a) Manufacturer		
	b) Type		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[10]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	c) Type of drive		
	d) Normal Speed	Rpm	
	e) Rated Voltage	Volts	
	f) Rate frequency	Amp	
	g) Rated current	Amp	
	h) Type of insulation		
	Rectifier for pilot exciter		
	a) Manufacturer		
	b) Type		
	c) Rated rectifier voltage	Volts	
	d) Rated rectifier current	Amp	
	e) Ceiling rectifier current	Amp	
	f) Ceiling rectified current	Amp	
	g) Total number of rectifier cells per parallel path of a bridge		
	h) Number of parallel paths per bridge arm		
	i) No. of bridge arms		
	j) Maximum peak inverse voltage rating of a cell	Volts	
	k) Method of over voltage protection		
	l) Maximum number of bridges/rectifier cells without which the rectifier can give output corresponding to generator MCR		
	Main Exciter		
	a) Manufacturer		
	b) Type		
	c) Type of drive		
	d) Normal Speed	rpm	
	e) Rated rectifier voltage	Volts	
	f) Rated rectified current	Amp	
	g) Ceiling rectified voltage	Volts	
	h) Ceiling rectified current	Amp	
	i) Exciter field voltage with manual control (rectified)		
	i) Maximum	Volts	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[11]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	ii) Minimum	Volts	
	j) Field current at generator MCR and rated power factor lagging	Amp	
	k) nominal exciter response ratio		
	l) Class of insulation		
	m) Insulation material on rotor winding		
	n) insulation material on field winding		
	o) Type of end winding support		
	p) Maximum temperature with secondary cooling water temperature of 31 deg. C		
	i) Exciter stator winding in contact with insulation		
	ii) Exciter stator winding not in contact with insulation		
	iii) Rotor winding		
	Exciter rectifier assembly		
	a) Manufacturer		
	b) Type of rectifier		
	c) Total number of rectifier cells per ring		
	d) Number of parallel paths per bridge arm		
	e) Number of bridge arms		
	f) Maximum number of rectifier cells/bridge without which the rectifier can give output corresponding to generator MCR		
	g) Maximum peak inverse voltage rating of cell	Volts	
	h) Number of rectifier cells in series in each bridge arms		
	i) Method of overvoltage protection		
	j) Overload rating of the rectifier cell		
	k) Ceiling output voltage of rectifier assembly	Volts	
	l) Ceiling output current of rectifier assembly	amp	
	m) Maximum junction temperature of rectifier cells		
	n) Method of mounting cells to cooling fins		
	o) Make and type of cooling fins		
	p) Type of visual indication provided for faulty rectifier cells		
	Air/Water Coolers (For Exciter)		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[12]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	a) Number of Coolers		
	b) Material of		
	i) Tubes		
	ii) Fins		
	c) Material of tube plates		
	d) Material of water boxes		
	e) Quantity of circulating water required per cooler	m ³ /hr	
	f) Maximum allowable water temperature	deg.C	
	g) Pressure drop across the cooler on water side	mwc	
	GAS SYSTEM		
	a) Volume of Hydrogen space in generator	m ³	
	b) Cooling gas flow	m ³ /min	
	c) Volume of CO ₂ at NTP required for displacing air	m ³	
	d) Volume of CO ₂ at NTP required for displacing hydrogen	m ³	
	e) Volume of H ₂ at NTP required for displacing carbon-di-oxide and to bring the casing to the rated pressure	m ³	
	f) Purity of H ₂ required	%	
	i) Normal		
	ii) Minimum allowable		
	g) Leakage of H ₂ by volume at NTP per day at rated H ₂ pressure in the generator		
	h) Is Nitrogen required to displace CO ₂ in the generator		
	i) Volume of air at NTP required to displace CO ₂	m ³	
	j) Requirement of compressed air for gas tightness test		
	k) No. of cylinders proposed to be furnished		
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if required)		
	l) Standards to which the cylinders conform		
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if required)		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[13]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	m) Internal volume of the cylinder		
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if system require)		
	SEAL OIL SYSTEM		
	Seal Oil Pump Motor Set		
	a) Type		
	b) Numbers		
	c) Capacity	m3/hr	
	d) Discharge pressure (gauge)	kg/cm2	
	e) Shut-off Head	mwc	
	f) Size of motor	KW	
	Vapour extraction unit		
	(in seal oil drain) on air side stream		
	a) Type		
	b) Capacity	m3/hr	
	c) Size of motor	KW	
	Vapour extractor motor set		
	a) Type		
	b) Numbers		
	c) Capacity		
	d) Discharge pressure		
	e) Shut-off head		
	f) Seal oil flow and pressure required for normal operation		
	MAIN WEIGHTS :		
	a) Heaviest lift of generator stator with trunnions etc.		
	b) Weight of complete generator stator	Tonnes	
	c) Weight of complete rotor	Tonnes	
	d) Weight of complete generator	Tonnes	
	e) Weight of lifting beam assembly	Tonnes	
	Critical speeds for Generator + exciter (if any)	rpm	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[14]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	a) First		
	b) Second		
	c) Third		
	Motors (rated above 50 kW) (attach separate data sheet for separate motors)		
	Equipment driven by motor		
	Rated output for 50 °C ambient air/31 °C cooling water temperature	kw	
	Temperature rise at rated output conditions as in item 2.40.02 above	deg.C	
	Class and type of insulation		
	Rated voltage	Volts	
	Efficiency at rated output	%	
	Power factor at rated output		
	Rated current	amp.	
	Locked Rotor kVA (Indicate the Rated output kW upper limit)		
	Upper limit of locked rotor current	amp.	
	Whether motor is capable of two successive hot starts with the driven equipment coupled	Yes/No	
	Rated speed	rpm	
	Rated torque		
	Starting torque		
	Pull out torque		
	Applicable standard to which motor generally conforms		
	Manufacturer		
	Type of enclosure, degree of protection and method of cooling		
	Type of terminal box for stator leads		
	Bearing type		
	Rotor Earth fault protection		
	Whether for single earth fault or for both single and double earth fault		
	Make

LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[17]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
85	Manufacturer's Name		
86	Maximum continuous output	KVA	
a)	*at rated Hydrogen pr.		
b)	(At MCR)	MW	
c)	condition		
87	Rated terminal voltage	KV	
88	Rated stator current	Amps	
89	Rated frequency	Hertz	
90	Rated power factor		
91	Rotor current at MCR	Amps	
92	Rotor voltage at MCR	Volts	
93	Maximum continuous permissible variation range in :		
a)	Rated terminal voltage %		
b)	Rated frequency %		
c)	Combined permissible % variation of frequency and voltage		
94	Number of		
e)	Phases		
f)	Number of parallel paths/phase		
g)	Line terminals brought out		
h)	Neutral terminals brought out		
	Space provided between generator leads to mount bushing current transformers (Yes/No)		
95	Compliance with IEC standard No		
96	Generator efficiency at:		
	a) 100% load		
	b) 80% load		
	c) 80% load		
	d) 40% load		
	e) 25% load		
97	Performance data for short circuit ratio corresponding to maximum capability		
98	Permissible tolerance in SCR		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[18]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
99	Regulation at :		
	a) Unity power factor		
	b) 0.85 lag power factor		
100	Rated Hydrogen pressure:	Kg/cm ² (gauge)	
101	Rated cooling water pressure	Kg/cm ² (gauge)	
102	Cooling water flow at normal load	m ³ /hr	
103	Basic impulse insulation withstand voltage of stator winding with respect to earth (for standard wave shape of 1.2/50 micro sec.)	KV (peak)	
104	Symmetrical run short circuit current with generator isolated initial saturated value and sustained value		
	a) 3 phase	KA	
	b) Single phase to neutral	KA	
105	3 phase short circuit withstand time for	Secs	
106	Saturation factor		
107	Waveform factor		
108	Permissible unbalanced loading subject to rated current not being exceeded in any phase		
	a) Maximum continuous negative phase sequence current I ₂	amps	
	b) Minimum value of I ₂ ² t for transient operation under system fault conditions (where t in seconds)		
109	Maximum permissible capacitive loading at full load	MVAR	
110	Maximum capacitive loading for stability at rated voltage and zero power factor	MVAR	
111	Generator reactance, per unit at rated KV and MVA		
112	Direct axis synchronous reactance X _d		
113	Quadrature synchronous reactance X _q		
114	Direct axis transient reactance X' _d		
115	Quadrature axis transient X' _q		
116	Direct axis sub-transient reactance X'' _d		
117	Quadrature axis sub-transient reactance, X'' _q		
118	Negative phase sequence reactance, X ₂		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[19]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
119	Zero phase sequence reactance X_0		
120	Potier reactance X_p		
121	Leakage reactance X_L		
	a) Combined		
	b) stator		
	c) Damper		
122	Permissible tolerance in all $\%(+)$ guaranteed reactance values		
123	Effective winding capacitance to earth		
124	Permissible tolerance in all $\%(+)$ guaranteed reactance values		
125	Effective winding capacitance to earth		
	a) Per Phase Micro farad		
	b) All phases connected together Micro farad		
126	Effective surge impedance to neutral per phase	Ohms	
127	Synchronous impedance	Ohms	
	a) Harmonics voltage generated by the generator at 100%, 75%, 50%, 25% and no load		
	b) X/R ratio from fundamental to 20th harmonic		
	c) Harmonic impedance at each harmonic upto 20 th harmonic		
	d) Permissible current at each harmonic other than fundamental.		
128	Armature resistance per phase at:		
	a) 25 deg. C	Ohms	
	b) 75 deg. C	Ohms	
129	Field resistance per phase at :		
	a) 25 deg. C	Ohms	
	b) 75 deg. C	Ohms	
130	Effective negative sequence resistance		
131	Time constants		
132	Direct axis open circuit TIME CONSTANT T'_{do}	Sec.	
133	Direct axis 3 phase transient short circuit time constant T'_{d3}	Sec.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[20]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
134	Direct axis 2 phase transient short circuit time constant $T'd_2$	Sec.	
135	Direct axis 1 phase transient short circuit time constant $T'd_1$	Sec.	
136	Direct axis sub-transient short circuit time constant d''	Sec.	
137	A-periodic 3 phase short circuit time constant Ta_3	Sec.	
138	A-periodic 2 phase short circuit time constant Ta_2	Sec.	
139	A-periodic 1 phase short circuit time constant Ta_1	Sec.	
140	Armature winding short circuit time constant Ta	Sec.	
141	Quadrature axis transient open circuit time constant $T'q_0$	Sec.	
142	Direct axis transient short circuit time constant $T'd$	Sec.	
143	Direct axis sub-transient open circuit time constant $T''d_0$	Sec.	
144	Quadrature axis sub-transient open circuit time constant $T''q_0$	Sec.	
145	Quadrature axis sub-transient short circuit time constant $T''q$	Sec.	
146	Direct axis open circuit excitation winding time constant T_{fdo}	Sec.	
147	Direct axis open circuit equivalent damper circuit time constant T_{kdo}	Sec.	
148	Direct axis short circuit excitation winding time constant T_{fd}	Sec.	
149	Direct axis short circuit equivalent damper winding time constant T_{kd}	Sec.	
150	Acceleration time T_j	Sec.	
151	Stored energy constant H	KW sec/KVA	
152	Maximum temperature with the secondary cooling water inlet temperature as 34 deg C		
153	Maximum absolute temperatures when generator delivers 660 MW at 0.85 p.f. at its terminals.		
	a) Stator windings	Deg. C	
	b) Stator core		
	i) In contact with insulated winding	Deg. C	
	ii) Not in contact with insulated winding	Deg. C	
154	Stator teeth temperature	Deg. C	
155	Rotor windings	Deg. C	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[21]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
156	Mechanical parts in contact with or adjacent to insulation	Deg. C	
157	Damper winding	Deg. C	
158	Rotor surface	Deg. C	
159	Other miscellaneous parts	Deg. C	
160	Cooled gas	Deg. C	
161	Hot gas in the stator and rotor	Deg. C	
162	Water to inlet of gas/air cooler	Deg. C	
163	Water at outlet of gas/air cooler	Deg. C	
164	Maximum absolute temperatures when generator delivers maximum capability of the turbine (with VWO, HP heaters out, over-pressure conditions etc.) at 0.85 p.f. at its terminals		
165	Generator losses, also indicate where one loss components is included in the another one. Give curves for various losses Vs. load as above at different hydrogen pressure.		
166	No load loss		
	a) Iron loss	KW	
	b) Rotor copper loss	KW	
167	Full load loss		
	a) Iron loss	KW	
	b) Stator copper loss	KW	
	c) Stray load loss	KW	
	d) Rotor copper loss	KW	
	e) Friction and windage loss	KW	
	f) Mechanical losses including bearing losses	KW	
	g) Exciter and exciter rheostat losses	KW	
	h) Collector brush contact losses	KW	
	i) Rotary rectifier losses	KW	
	j) Fan loss	KW	
	k) Shaft seal loss	KW	
	l) Eddy current loss	KW	
	m) Total loss at full load	KW	
	n) Any other loss (indicate)	KW	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[22]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	Dissipation losses in		
	a) Hydrogen/Air cooler		
	b) Seal oil cooler		
	c) Exciter air cooler		
	d) Excitation system panels		
168	ADDITIONAL DATA:		
	Permissible overload and duration		
	"Rapid defluxing" time and the technique used.		
	Surge capacitor requirement for the generator must be stated with reasons.		
	What provisions are made for automatic generator runback (turbine control point set back) and loss of cooling?		
	To what power level is runback required and what time is allowed for runback		
	Furnish permissible volts/HZ vs time characteristic of the generator		
	Describe your standard practice in coordinating connection of isolated phase bus duct to generator main leads		
	Have you furnished any generator of this rating with Brushless excitation system		
	Furnish the no-load saturation and zero Power-factor saturation curve for AC exciter used for brushless excitation system, if proposed. Details of Generator rotor winding temperature monitoring system and rotor winding earth fault detection system		
	Furnish detailed literature for the excitation system proposed for the generator including		
	a) Performance (transient and steady state) characteristics		
	b) Initial high response characteristics		
	c) Initial high response characteristics		
	d) Exciter ratings (where applicable)		
	e) Performance record as per relevant clause of specs.		
	f) List of instruments provided		
	Describe the performance characteristics of voltage regulator, proposed for this generator.		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[23]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	Provide dimensioned general arrangement drawings for the following equipment:		
	a) Seal oil tank		
	b) Hydrogen Coolers		
	Details of generator neutral grounding system		
	Furnish the schematic diagram of excitation system, giving its controls & interface with automatic voltage regulation.		
	Type of Cooling		
	a) Stator winding		
	b) Stator Core		
	c) Rotor		
	Rated Output	MW	
	Transient rise of voltage on sudden rejection of full load at rated power factor		
	a) With AVR	P.U.	
	b) Without AVR	P.U.	
	Zero sequence Resistance		
	Inertia constant H	KW-Sec/KVA	
	a) Generator & Exciter		
	b) Complete turbine generator unit		
	Short circuit current	P.U.	
	Sub transient current		
	a) On 3 phase short circuit		
	b) on 2 phase short circuit		
	c) on 1 phase short circuit		
	Transient current		
	a) On 3 phase short circuit		
	b) on 2 phase short circuit		
	c) On 1 phase short circuit		
	Steady state current		
	a) On 3 phase short circuit		
	b) on 2 phase short circuit		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[24]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	c) On 1 phase short circuit		
	Whether specified earth fault current and duration as per specification (Yes/No)		
	Indicate values of earth current and duration		
	Voltage regulation under conditions of rated speed voltage & output (%)		
	a) at 0.8 power factor lag		
	b) at unity power factor		
	c) at 0.90 power factor load		
	Maximum continuous kva capacity of generator		
	- With one cooler out of operation		
	Maximum inductive capacity	KVAR	
	Excitation requirements at		
	a) Rated load		
	b) No load		
	c) At maximum capacitive load (at Zero active power		
	d) Under field forcing condition		
	Short circuit torque as a ratio of full load torque		
	Fly wheel moment (GD ²) of generator + exciter	Kg m2	
	Capacity of space heaters at 415 V where applicable	KW	
	Number, type and rating of CT's and PT's used exclusively for EHG and generator excitation system		
	Design and construction features		
	Stator Core		
	a) Type of spring mounting		
	b) Grade of sheet steel (Thickness & loss figure)		
	Stator Windings		
	a) Type and Class of insulation		
	b) Resistance per phase at 20 deg. C	Ohm	
	c) Capacitance per phase (i)		
	d) Dielectric Test Voltage Value	KV	
	e) Impulse voltage strength peak	KV	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[25]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	f) Is the winding transposed in the ends?		
	Terminals		
	a) No. of terminals brought out		
	b) Type of cooling of terminals and connectors		
	c) Type of terminal bushings		
	d) Number of distributed multi ratio bushing CT's & relaying accuracy class that is accommodated in the bushing furnished		
	e) Dielectric Test Voltage-KV		
	f) Impulse Voltage strength-KV		
	Rotor		
	a) Material of rotor forging		
	b) Material of retaining ring forging		
	c)Material of rotor wedge		
	d) Type of retaining ring mounting		
	e) material of Damper winding		
	f) Over speed Test Value and duration		
	Rotor Winding		
	a) Class & Type of insulation		
	b) Turns per pole		
	c) Resistance at 20 °C (ohms)		
	d) Dielectric Test Voltage value	KV	
	Bearing		
	a) Type of bearing (Pedestal/End Shield)		
	b) Oil quantity per bearing (m3/hr)		
	c) Oil pressure	(kg/cm2)	
	d) Grade of Oil		
	Shaft Seal		
	a) Type of seal		
	b) Pressure of Seal oil	(kg/cm2)	
	c) Grade of oil		
	d) Quantity of oil per seal	(m3/hr)	

Document Number	Rev No.	Description	Page No.	Date of Issue

SL No.	DESCRIPTION	UNIT	DATA
	Gas/Air Coolers		
	a) Number of Coolers		
	b) Material of:		
	i) Tubes		
	ii) Fins		
	c) Material of tube plate		
	d) Quantity of cooling water required/ cooler	m3/hr	
	e) material of water boxes		
	f) Pressure drop across cooler on water side (m.w.c)		
	AUTOMATIC VOLTAGE REGULATORS		
	a) Manufacturer		
	b) Type		
	c) Power supply to the regulator (Volts)		
	d) Range of generator voltage adjustment(%)		
	i) in auto position		
	ii) in manual position		
	e) Frequency range of operation	Hz	
	f) temperature range of operation	Deg.C	
	g) Accuracy (%)		
	h) Dead band		
	i) Excitation system response time with AVR (The time for the generator field voltage to attain 95% of the difference between field forcing voltage and rated field voltage with 5% drop in generator terminal voltage and generator at rated MVA)		
	j) Time required for generator terminal voltage to get restored to within 2% of the nominal preset value when subject to sudden loss of rated output.		
	BRUSHLESS EXCITATION SYSTEM		
	Pilot exciter		
	a) Manufacturer		
	b) Type		
	c) Type of drive		

Document Number	Rev No.	Description	Page No.	Date of Issue

SL No.	DESCRIPTION	UNIT	DATA
	d) Normal Speed	Rpm	
	e) Rated Voltage	Volts	
	f) Rate frequency	Amp	
	g) Rated current	Amp	
	h) Type of insulation		
	Rectifier for pilot exciter		
	a) Manufacturer		
	b) Type		
	c) Rated rectifier voltage	Volts	
	d) Rated rectifier current	Amp	
	e) Ceiling rectifier current	Amp	
	f) Ceiling rectified current	Amp	
	g) Total number of rectifier cells per parallel path of a bridge		
	h) Number of parallel paths per bridge arm		
	i) No. of bridge arms		
	j) Maximum peak inverse voltage rating of a cell	Volts	
	k) Method of over voltage protection		
	l) Maximum number of bridges/rectifier cells without which the rectifier can give output corresponding to generator MCR		
	Main Exciter		
	a) Manufacturer		
	b) Type		
	c) Type of drive		
	d) Normal Speed	rpm	
	e) Rated rectifier voltage	Volts	
	f) Rated rectified current	Amp	
	g) Ceiling rectified voltage	Volts	
	h) Ceiling rectified current	Amp	
	i) Exciter field voltage with manual control (rectified)		
	i) Maximum	Volts	
	ii) Minimum	Volts	

Document Number	Rev No.	Description	Page No.	Date of Issue

SL No.	DESCRIPTION	UNIT	DATA
	j) Field current at generator MCR and rated power factor lagging	Amp	
	k) nominal exciter response ratio		
	l) Class of insulation		
	m) Insulation material on rotor winding		
	n) insulation material on field winding		
	o) Type of end winding support		
	p) Maximum temperature with secondary cooling water temperature of 31 deg. C		
	i) Exciter stator winding in contact with insulation		
	ii) Exciter stator winding not in contact with insulation		
	iii) Rotor winding		
	Exciter rectifier assembly		
	a) Manufacturer		
	b) Type of rectifier		
	c) Total number of rectifier cells per ring		
	d) Number of parallel paths per bridge arm		
	e) Number of bridge arms		
	f) Maximum number of rectifier cells/bridge without which the rectifier can give output corresponding to generator MCR		
	g) Maximum peak inverse voltage rating of cell	Volts	
	h) Number of rectifier cells in series in each bridge arms		
	i) Method of overvoltage protection		
	j) Overload rating of the rectifier cell		
	k) Ceiling output voltage of rectifier assembly	Volts	
	l) Ceiling output current of rectifier assembly	amp	
	m) Maximum junction temperature of rectifier cells		
	n) Method of mounting cells to cooling fins		
	o) Make and type of cooling fins		
	p) Type of visual indication provided for faulty rectifier cells		
	Air/Water Coolers (For Exciter)		
	a) Number of Coolers		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[29]	25.09.2014

SL No.	DESCRIPTION	UNIT	DATA
	b) Material of		
	i) Tubes		
	ii) Fins		
	c) Material of tube plates		
	d) Material of water boxes		
	e) Quantity of circulating water required per cooler	m ³ /hr	
	f) Maximum allowable water temperature	deg.C	
	g) Pressure drop across the cooler on water side	mwc	
	GAS SYSTEM		
	a) Volume of Hydrogen space in generator	m ³	
	b) Cooling gas flow	m ³ /min	
	c) Volume of CO ₂ at NTP required for displacing air	m ³	
	d) Volume of CO ₂ at NTP required for displacing hydrogen	m ³	
	e) Volume of H ₂ at NTP required for displacing carbon-di-oxide and to bring the casing to the rated pressure	m ³	
	f) Purity of H ₂ required	%	
	i) Normal		
	ii) Minimum allowable		
	g) Leakage of H ₂ by volume at NTP per day at rated H ₂ pressure in the generator		
	h) Is Nitrogen required to displace CO ₂ in the generator		
	i) Volume of air at NTP required to displace CO ₂	m ³	
	j) Requirement of compressed air for gas tightness test		
	k) No. of cylinders proposed to be furnished		
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if required)		
	l) Standards to which the cylinders conform		
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if required)		
	m) Internal volume of the cylinder

SL No.	DESCRIPTION	UNIT	DATA
	i) Hydrogen		
	ii) Carbon dioxide		
	iii) Nitrogen (if system require)		
	SEAL OIL SYSTEM		
	Seal Oil Pump Motor Set		
	a) Type		
	b) Numbers		
	c) Capacity	m3/hr	
	d) Discharge pressure (gauge)	kg/cm2	
	e) Shut-off Head	mwc	
	f) Size of motor	KW	
	Vapour extraction unit		
	(in seal oil drain) on air side stream		
	a) Type		
	b) Capacity	m3/hr	
	c) Size of motor	KW	
	Vapour extractor motor set		
	a) Type		
	b) Numbers		
	c) Capacity		
	d) Discharge pressure		
	e) Shut-off head		
	f) Seal oil flow and pressure required for normal operation		
	MAIN WEIGHTS :		
	a) Heaviest lift of generator stator with trunnions etc.		
	b) Weight of complete generator stator	Tonnes	
	c) Weight of complete rotor	Tonnes	
	d) Weight of complete generator	Tonnes	
	e) Weight of lifting beam assembly	Tonnes	
	Critical speeds for Generator + exciter (if any)	rpm	
	a) First

10.0 HV CABLES

S. No.	DESCRIPTION	UNIT	DATA
1.1.	Name of Manufacturer		
1.2	Place & Country of manufacture		
1.3	Specifications and Standards		
1.4	Design ambient temperature	°C	
1.5	System Particulars (Fill separate columns for the following particulars for each type and size of cables)		
1.6	ISI registration and validity date		
1.7	Cable type		
1.8	Whether cable shall carry ISI mark		
1.9	Voltage grade		
1.10	No. of cores and size	in sq.mm	
1.11	Suitable for earthed/unearthed system		
1.12	Permissible voltage and frequency variation for satisfactory operation		
a	Voltage		
b	Frequency		
c	Voltage and Frequency combined Continuous current carrying capacity		
1.13	For standard conditions as per IS		
a	In air	A	
b	In ground	A	
c	In duct	A	
d	In trench	A	
1.14	For site conditions :		
a)	In air	A	
b)	In ground	A	
c)	In duct	A	
d)	In trench	A	
1.15	De-rating factors for various conditions of laying are not worse than the ones specified in applicable IS Yes/No		
1.16	Conductor		
a)	Material reference standard for conductor		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-B	[76]	25.09.2014

S. No.	DESCRIPTION	UNIT	DATA
b)	Grad and Shape of conductor		
c)	Nominal cross section area	mm ²	
d)	Number of wires		
e)	Diameter of wire	mm	
f)	Diameter/size of conductor	mm	
1.17	Screening/Shielding / heat barrier tape (as applicable)		
a)	Material		
b)	Type/applicable std.		
c)	Thickness		
1.18	Insulation		
a)	Material composition and confirming standard and type		
b)	Thickness of insulation		
	i. Between cores	mm	
	ii. Between cores and inner sheath	mm	
c)	Tolerance on thickness of insulation	%	
d)	Diameter of core over insulation	mm	
e)	Specific insulation resistance at 90 degrees centigrade	ohm-cm	
1.19	Screening/Shielding / barrier tape(as applicable)		
a)	Material		
b)	Type/applicable std.		
c)	Thickness		
1.20	Inner sheath		
a)	Material, confirming standard / type		
b)	Extruded	Yes/No	
c)	Calculated diameter over laid up cores		
d)	Thickness (min)	mm	
e)	Diameter of cable over inner sheath	mm	
f)	Whether inner sheath shall be of FRLS material and meet special Tests as per specification for FRLS cables	Yes/No	
g)	Filler Material details		
1.21	Armouring		
a)	Material		
b)	Type of armouring

1 DISTRIBUTED CONTROL SYSTEM

Table 1.1
Data Sheet for DCS

S.N	Feature	To be Filled by Bidder
1	Type of the system offered and Model No.	
2	Make	
3	Year of launching of the system	
4	Is the system offered, the latest system available/ being marketed in the international market by the vendor	
5	Place of Manufacturing	
6	Is the offered system confirms to the Specification provided in the tender document with regard to Spare Capacity, Expandability, Redundancy,	
6	Is the System offered is with open system architecture to enable integration of third party hardware/ software applications	
7	Support direct connectivity to Ethernet based LAN	
8	Deterministic and secure architecture	
9	On-line removal/replacement of I/O modules/ drive control modules possible without switching off power supply to the corresponding rack & without affecting controller operation	
10	Total I/O handling capacity of Controller	
11	No. of Tags handling capacity of Controller	
12	Total Power requirement for the offered system	
13	Total Heat Load of all cabinets	
14	Scanning rate for:	
a	Analog Signal	
b	T/C Signal	
c	RTD Signal	
d	Binary Signal	

Document Number	Rev No.	Description	Page No.	Date of Issue

S.N	Feature	To be Filled by Bidder
15	Loop Execution Time for:	
a	Interlocks	
b	Close loops	
16	Auto switchover to backup redundancy Level:	
a	Controller Level	
b	Power supply Level	
c	Communication Level	
17	Output Status on Controller Failure	
18	Battery back-up duration for control processor	
19	Non-volatile memory capacity to store programs, standard software to perform control, DAS & Diagnostic functions	
20	Maximum no. of Channels for:	
a	Analog Input module	
b	T/C Input module	
c	RTD Input module	
d	Analog Output module	
e	Binary Input Module	
f	Binary Output module	
21	Optical Isolation for Binary Input/Output provided.	
22	Galvanic isolation for Analog Input/Output provided	
23	Can the analog and binary controls be implemented at different execution speeds, in the multi-function controllers.	
24	Simulation of Analog/Digital Input/Output possible.	
25	Data Transmission speed for:	
a	Ethernet LAN	
b	Data Highway	
c	I/O Bus

9 PROGRAMMABLE LOGIC CONTROLLER (PLC)

Table 9.1

Data Sheet for PLC

S.N	Feature	To be Filled by Bidder
1	Type of the system offered and Model No.	
2	Make	
3	Year of launching of the system	
4	Is the system offered, the latest system available/ being marketed in the international market by the vendor	
5	Place of Manufacturing	
6	Is the offered system confirms to the Specification provided in the tender document with regard to Spare Capacity, Expandability, Redundancy,	
7	Is the System offered is with open system architecture to enable integration of third party hardware/ software applications	
8	Support direct connectivity to Ethernet based LAN	
9	Deterministic and secure architecture	
10	On-line removal/replacement of I/O modules/ drive control modules possible without switching off power supply to the corresponding rack & without affecting controller operation	
11	Total I/O handling capacity of Controller	
12	No. of Tags handling capacity of Controller	
13	Total Power requirement for the offered system	
14	Total Heat Load of all cabinets	
15	Scanning rate for	
a	Analog Signal	
b	T/C Signal	
c	RTD Signal	
d	Binary Signal	
16	Loop Execution Time for	
a	Interlocks	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-002	01	Tender Document for Selection of R&M Contractors – Turbo Generator & Auxiliaries Volume-III, Part-C	[31]	25.09.2014

S.N	Feature	To be Filled by Bidder
b	Close loops	
17	Auto switchover to backup redundancy Level	
a	Controller Level	
b	Power supply Level	
c	Communication Level	
18	Output Status on Controller Failure	
19	Battery back-up duration for control processor	
20	Non-volatile memory capacity to store programs, standard software to perform control, DAS & Diagnostic functions	
21	Maximum no. of Channels for	
a	Analog Input module	
b	T/C Input module	
c	RTD Input module	
d	Analog Output module	
e	Binary Input Module	
f	Binary Output module	
22	Optical Isolation for Binary Input/Output provided.	
23	Galvanic isolation for Analog Input/Output provided	
24	Can the analog and binary controls be implemented at different execution speeds, in the multi-function controllers.	
25	Simulation of Analog/Digital Input/Output possible.	
26	Data Transmission speed for	
a	Ethernet LAN	
b	Data Highway	
c	I/O Bus

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

1.0 INVITATION FOR BID

Tender No : [-----]

1.1 Introduction

[Give brief introduction about the name, ownership, business & Power Projects of the utility inviting tender for R & M work]

[XXX is undertaking renovation & modernization of Balance of Plant of package of XXX MW Unit no.-XX ----- of the Power Plant]

1.2 Invitation

[Name of The Utility], hereinafter referred to as “Employer / Owner / Purchaser”, invites sealed Tenders in English language from Prequalified Bidders for the Renovation & Modernization of Balance of Plant package of Unit No. [XXX] of the [XXX] Power Plant on Domestic Competitive Bidding (DCB) basis as per the scope of work given Technical Specification Volume-II.

1.3 Brief Scope of Work

The scope of work under this R&M package involves disassembly of existing equipment / systems, replacement of specified equipments / systems by supplying new equipments/ systems including supply of assembly materials, inspection & testing at suppliers works, supply of mandatory spares, packing and forwarding, transportation & insurance, receipt at site, unloading, handling & storage at site, pre-assembly, fabrication, repair, servicing/ overhauling, erection, all associated civil works including supply of cement, steel etc., testing & commissioning, successful completion of trial operation and guarantee tests for [Balance of Plant] package of Unit no. [XXX] of [XXX] Power Plant. The detailed scope of work is given in Technical Specification Vol. II.

The brief scope of work is given below: -

[-----]
[-----]
[-----]
]

For detailed Scope of Work & Services, refer Section-I of Volume-II of this Specification.

1.4 Tender Details

(a)	Cost of Tender Documents	:	INR [---]
(b)	Bid Guarantee Amount	:	INR [-----]
(c)	Date of issuance of Tender Document	:	[-----]
(d)	Date & Time of pre-Bid Conference	:	[-----]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-1-	25.09.2014

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

(e)	Last Date & Time of Receipt of Bid (Both Part I & Part II)	:	[-----]
(f)	Date & Time of Opening of Unpriced Techno-Commercial Bid (Part-I)	:	[-----]

1.5 Time Schedule

The time schedule for completion of facilities and performance guarantee test shall be as per SCC.

1.6 Bid Submission

- (a) The Tender Documents are issued to bidders already qualified in a pre-qualification process. The Tender documents are not transferable.
- (b) The Bid proposals are to be submitted in two parts in separate sealed covers as follows:
 - Part I** : Bid Guarantee and Technical & Commercial Proposal without prices
 - Part II** : Price Schedule and Schedule of Functional Guarantee parameters with values.
- (c) All other terms and conditions along with the Technical Specifications, General Conditions of Contract, Special Conditions of Contract, Time Schedule, Bid Guarantee details, Validity of Bid and Instructions to Bidders, etc. are contained in the Tender Documents.
- (d) Bidder shall submit the bid on or before the scheduled date and time as specified. Any offer received after the expiry of the time specified for receiving the completed bids are liable for rejection. The bid shall be submitted to:
[Designation, Address and Contact details.....]
.....]
- (e) Issuance of Tender Documents to a Bidder shall not be construed to mean that such Bidder would be automatically considered.
- (f) The Bid may be made in Indian Rupees as well as in Foreign Currencies (maximum three foreign currencies) and all payments for the entire scope will be made in Indian Rupees as well as in the respective quoted Foreign Currencies.
- (g) Bids submitted by E-mail, Fax, E-tender etc. will not be accepted.
- (h) The Tender Documents are meant for the exclusive purpose of bidding against the subject package and shall not be transferred, reproduced or otherwise used for purposes other than for which these are specifically issued.

2 INSTRUCTIONS TO BIDDERS

2.1 Introduction

[Name of Utility], the Owner, intends to carry out the Renovation & Modernization of Balance of Plant Package of [Unit no.-XX ----- of the XXXX Power Plant].

Under the subject Tender, [Utility] invites bid for Renovation & Modernization of Balance of Plant package of the said Renovation & Modernization work to be carried out as per the accompanying Technical Specifications. The Bidder shall submit the offer for complete scope of work indicated in the Technical Specification.

2.2 Address and Contact Details of Owner

[Designation, Address and Contact details

-----]

2.3 General Project Information

General information about the plant and R&M project is indicated in section 3.0 on General Project Information.

2.4 Owner's Consultant

[-----], hereinafter referred to as "Consultant" is the Consulting Engineer for the project, appointed by the Owner, [-----], to provide project consultancy services.

2.5 Sources of Fund

[Utility] intends to finance the subject Package of the said renovation & modernization work, through Internal and other sources & External/ Domestic Commercial/ Borrowing from international development funding agencies. [Utility] has tied up the required fund for this package.

2.6 Cost of Bidding

The Bidder shall bear all costs associated with the preparation and submission of its bid, and the Owner will in no case be responsible or liable for these costs, regardless of the conduct or outcome of the bidding process.

2.7 Non-Transferability of Bid document

Transfer of Bid documents issued to one intending bidder to another is not permissible.

2.8 Scope of Work & Single Bidder Responsibility

The scope of the work shall be on the basis of single Bidder responsibility, covering the complete scope of work specified under these specifications and documents. It shall include the following:

- Disassembly of existing equipment/ systems as required.
- Detailed design of the systems/equipment covering all Mechanical, Electrical, Control & Instrumentation, Civil and Structural works.
- Complete manufacture, including shop inspection and testing.
- Providing engineering drawings, data, operational & maintenance manuals, etc., for the Owner's review/ approval.

LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-3-	25.09.2014

- (e) Packing, forwarding and transportation including insurance from the manufacturer's works to plant site and transportation from storage yard to erection site.
- (f) Receipt, storage, preservation and conservation of system/equipment at site including construction of storage facility viz. covered, semi-covered, air-conditioned, open yard at the space allocated at site by Owner including storage-cum-erection and all other specified & statutorily required insurance.
- (g) Pre-assembly, if any, erection, testing, commissioning, completion of plant and equipment/ system, conducting trial operation, performance guarantee test and handing over of all the plant and equipment/ system covered under this specification.
- (h) Carrying out all related civil and structural works at site including construction of foundations, buildings, structures etc. Including supply of cement and steel and all other required materials.
- (i) Supply of mandatory spares and tools & tackles.
- (j) Training of Owner's personnel.

Detailed scope is provided in Volume-II of the Technical Specifications.

Bids not covering the entire scope mentioned hereinabove may be treated as incomplete and hence are liable for rejection.

2.9 Time Schedule

The completion Time Schedule for Completion of R&M work and Performance Guarantee Tests shall be as given in the SCC.

2.10 Tender Documents

The scope of contract, technical specification, bidding procedures and contract terms are prescribed in the Tender Documents. The Tender Documents comprise, inter alia, the following volumes:

Volume – I	:	Commercial
Volume – I Chapter-1	:	Invitation for Bid
Volume – I Chapter-2	:	Instructions To Bidders
Volume – I Chapter-3	:	General Project Information
Volume – I Chapter-4	:	General Condition of Contract (GCC)
Volume – I Chapter-5	:	Special Condition of Contract (SCC)
Volume – I Chapter-6	:	Forms & Schedules
Volume – II	:	Technical Specifications
Volume – II Section-I	:	Project Technical Specification
Volume – II	:	Detailed Technical Specification-Mechanical

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-4-	25.09.2014

Section-II, Part-A		
Volume – II Section-II, Part-B	:	Detailed Technical Specification-Electrical
Volume – II Section-II, Part-C	:	Detailed Technical Specification-I&C
Volume – II Section-II, Part-D	:	Detailed Technical Specification-Civil
Volume – III	:	Technical Schedules
Volume – III, Part-A	:	Technical Schedule-Mechanical
Volume – III, Part-B	:	Technical Schedule-Electrical
Volume – III, Part-C	:	Technical Schedule-I&C

The Bidder is expected to examine all instructions, forms, terms and specifications in the Tender Documents including clarifications/corrigendum/amendments for completeness and obtain clarifications, if any, from the Owner.

The Bidder is expected to examine all instructions, forms, terms, conditions, specifications and other information in the bidding documents. Failure to furnish all information required as per the bidding documents or submission of a bid not substantially responsive to the bidding documents in every respect will be at the Bidder's risk and may result in rejection of its bid.

A prospective Bidder requiring any clarification to the Tender Documents may notify the Owner in writing by post or by e-mail followed by postal confirmation at the Owner's address indicated in ITB. The Owner will respond in writing by post or by e-mail followed by post confirmation to any request for clarification or modification of the bidding documents that it receives not later than twenty-one (21) days prior to the deadline for submission of bids prescribed by the Owner. Owner's response will be sent to all prospective Bidders that have been issued the Bidding Documents.

The Bidder is advised to visit the plant and obtain on its own responsibility all information that may be necessary for preparing the bid. The Owner will facilitate the bidder to collect such information about the plant in the manner that does not interface with plant operation and does not in any way adversely impact the interest of the Owner. The costs of visiting the site including engaging any third party consultant by Bidder, if required as per the assessment of Bidder, shall be borne by the bidder fully.

The Bidder, its personnel and agents will release and indemnify the Owner and its personnel and agents from and against all liability during such information collection and will be responsible for death or personal injury, loss of or damage to property and any other loss, damage, costs and expenses incurred as a result of the inspection.

At any time prior to the deadline for submission of bids, the Owner may, for any reason, whether at its own initiative, or in response to a clarification requested by a prospective Bidder, amend the bidding documents.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-5-	25.09.2014

The amendment will be notified in writing by post or by e-mail followed by post confirmation to all prospective Bidders that have received the bidding documents and will be binding on them.

At any time prior to the deadline for submission of bids, the Owner, at its discretion may extend the deadline for submission of the bids.

2.11 Preparation of Bids

2.11.1 Language of Bid

The bid prepared by the Bidder and all correspondence and documents related to the bid shall be in English language, provided that any printed literature furnished by the Bidder may be written in another language, as long as such literature is accompanied by a translation of its pertinent passages in English language in which case, for purposes of interpretation of the bid, the translation shall govern.

2.11.2 Bidding Procedure

Single Stage Two Part Bidding Procedure will be followed for this package.

The bidders are required to submit, the bids for the Renovation and Modernization work in two parts. Both the parts are to be submitted together before the indicated Bid submission Time & Dates.

The Part-I Bid comprises the techno-commercial bid without prices. The main components of the Techno-Commercial Bid are Bid Guarantee, Scope of Work & Terminal Points, Technical descriptions/details, Technical Data Sheets, List of Tools & Tackles, Deviations to Technical and Commercial Specifications/Conditions, Overall Completion Time Period & L-1 Network Schedule, Resource Deployment Schedule, Detail of Sub-Contractors/Sub-Suppliers/Sub-Vendors, Spares list, Quality Assurance Programme, Details of the present commitments & details of contracts in hand, Indices and Coefficients for Price Variation etc. Part-II Bid will comprise Quoted Price and Quoted Performance Guarantee Parameters. Initially, only the Part-I Bid will be opened and Part-II Bid is kept in safe custody.

After evaluation of the Techno-Commercial (Part-I) Bids, each Bidder who has submitted a broadly responsive Part-I Bid, will be invited for Techno-Commercial Discussion, during which, all the required amendments, additions, deletions and other adjustments are noted and recorded in a memorandum. Part-II Bid (Price Bid) of only those Bidders will be opened, whose Part-I Bid is found to be responsive to Tender Specifications and Conditions. The date & time for opening of Price Bid will be intimated separately.

Techno-Commercial Bid should not contain any price data.

Price Bid should not contain any matter in respect of Technical and / or Commercial aspects other than the details specifically sought by the Owner.

2.11.3 Bid Submission

- (1). Bid proposals shall be accepted from only those eligible bidders who are found qualified during the pre-qualification process & are issued Tender Documents. Unsolicited bids shall not be taken into cognizance.
- (2). All Bid proposals shall be prepared and submitted in two parts, part-wise in separate sealed covers, with all pages serially numbered. All bids shall be prepared in the English language only, by typing or printing.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-6-	25.09.2014

- (3). [One original and 9 (nine) identical] copies of the original with all enclosures shall be submitted by each Bidder for Part-I and Part-II, clearly indicating the original and the number of the copy (i.e., "Original", "Copy No. 1", "Copy No. 2" etc.).
- (4). All these covers shall be individually sealed and put in an outer cover which also shall be sealed and super scribed as in other covers.
- (5). The covers should be pasted properly before applying the wax seal. Failure to do so may result in rejection of such bids.
- (6). The Bidder's Bid and the documents attached thereto shall be considered as forming part of the Contract documents.
- (7). In the event of discrepancy between "Original" and any copy of the bids, the hard copy of Original shall prevail.
- (8). The Bid shall be submitted to [-----]. Bid submitted to any other office of Owner is liable for rejection. Bids submitted by Telefax or e-mail will be rejected
- (9). Owner will receive Bids in respect of all the equipment/systems and scope of work as set forth in the accompanying Technical Specifications. All bids shall be prepared and submitted in accordance with the Tender Documents.
- (10). Failure to furnish all information required in the Tender Documents or submission of a Bid not substantially responsive to the Tender Conditions and Technical Specifications in every respect or bids received in incomplete shape shall be liable for rejection. A bid shall be determined as substantially responsive in every respect, if it conforms to all the terms, conditions and specifications specified in Tender Documents without material deviations, objections, conditionality or reservations.
- (11). A material deviation, objection, conditionality or reservation is one:
 - (i). That affects in any substantial way the scope, quality or performance of the contract;
 - (ii). That limits in any substantial way, inconsistent with the Tender Documents, the Owner's rights or the successful Bidder's obligations under the contract.
- (12). Deviation(s) to vital clauses listed under the Tender Documents shall be considered to be material deviation(s).
- (13). Notwithstanding any information and data, which may be contained in these Tender Documents, the Bidder has to make independent inquiries and generally obtain his own information on all matters that may in any way affect prices, risks and obligations of the Contractor under the Contract.
- (14). Either the agent or the Principal manufacturer directly could bid in a tender, but not both. In case both submit the tenders, the tender of the manufacture will alone be considered.
- (15). An agent representing one manufacturer in a tender will not be allowed to quote on behalf of another manufacturer along with previous manufacturer in a subsequent / parallel tender for the same item.

2.11.4 Bid Guarantee

- (1). The Bid shall be accompanied by Bid Guarantee either in the form of Bank Guarantee valid for [---] days from the scheduled date of opening of the Bids (Part-I) or Demand Draft of equivalent amount drawn in favour of "[-----]" payable at "[-----]".

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-7-	25.09.2014

- (2). The Bank Guarantee shall be from any scheduled commercial Bank in India authorized by Reserve Bank of India,, to issue such Bank Guarantee on a non-judicial stamp paper of value not less than Rs. [---]/-.The stamp paper shall be purchased in the name of the Bank.
- (3). Unless otherwise expressly stated,
 - a) The Bid Guarantee shall be executed only on behalf of the Bidder in whose name the Tender Documents have been issued.
 - b) The Bid and other documents shall be submitted only by the Bidder in whose name the Tender Documents have been issued.
 - c) The Bid Guarantee shall be executed only as per the format prescribed by Owner at ([-----]). In the event of any deviation in this regard, the decision of Owner as to whether the same could be accepted or not, will be final and binding on the Bidder.
- (4). The Bidder shall arrange for extension of validity of Bid and that of the Bid Guarantee upon request from the Owner.
- (5). No interest shall be paid on Bid Guarantee amount. The offer without Bid Guarantee or with short Bid Guarantee or Bid Guarantee in the form other than that specified herein above or from banks not specified hereinabove will be liable for rejection.
- (6). Any Bid not accompanied by the Bid Guarantee shall be rejected and the Bidder shall not be permitted to participate in the tender.
- (7). The Bid Guarantee shall be forfeited if the Bidder withdraws / modifies / changes / impairs / derogates the bid proposal on its own after the Bids are opened or submits forged/bogus certificates or fails to accept the Letter of Award issued by Owner or fails to submit Contract Performance Guarantee.
- (8). The Bid Guarantee of all unsuccessful Bidders shall be returned after price cover opening and price evaluation. The Bid Guarantee of the successful Bidder shall be returned after furnishing of the Contract Performance Bank Guarantee to the Owner and acceptance thereof.

2.11.5 Bid Opening

1. This is a single stage two part tender. On the specified date and time of opening, Part– I Bid containing Bid Guarantee and Technical and Commercial Proposal without Prices will be opened. At the time of opening of Part–I of the bids, the names of the bidders who submitted their bids shall be read out and other such details as Owner, at its discretion, may consider appropriate, shall be read out. The Part – II (Price Bid) will be lodged and opening date of the same will be intimated separately to those Bidders whose Part-I Bid will be determined to be substantially responsive to Tender Conditions and Technical specifications in all respects.
2. If the Bidder desires to be present at the time of opening of Part-I of bids, it shall depute its representatives (not more than two persons) in time with due authorization for participating in the Bid opening.
3. Owner takes no responsibility for delays, loss or non-receipt of Bid documents or any letters sent by post/courier either way and also reserve the right to reject any Bid in part or full without assigning any reasons thereof.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-8-	25.09.2014

2.12 Composition of Techno Commercial Bid (Part-1 Bid)

This part shall, inter alia, include the following in the same order as listed below. One original and 9 (nine) identical copies shall be submitted.

- (i). Duly filled in "Form of Bid" (As per Annexure-B of this Volume).
- (ii). Power of Attorney/Authorization with the seal of the company in favour of the person signing the Bid.
- (iii). Letter of consent: To be furnished by the Bidder and Consortium Partners- as per Annexure—D of this Volume
- (iv). Bid Guarantee- as per Annexure A.
- (v). Schedule of Prices as per Schedule – F1 (Table 1 to Table-7) with the word "Quoted" in lieu of Price data and all other details except price data.
- (vi). Mandatory spares as per Technical Specifications (with the word "Quoted" in lieu of Price data)
- (vii). Recommended spares (with the word "Quoted" in lieu of Price data)
- (viii). Tools & Tackles as per Technical Specifications (with the word "Quoted" in lieu of Price data)
- (ix). Schedule of Performance Guarantees- as per Schedule – F1 (Table-8) with the word "Quoted" in lieu of Performance Guarantee parameters
- (x). Signed copy of all the corrigendum's/amendments/clarifications, if any issued for the tender
- (xi). Overall Time Schedule as per Schedule – F2 and Bar chart/PERT Network schedule to achieve the time schedule
- (xii). Deviations to the Commercial specification, if any, as per Schedule – F3.
- (xiii). Deviations to Technical Specifications, if any, as per Schedule – F4.
- (xiv). Requirements of the Contractor at site, as per Schedule – F5.
- (xv). Resource deployment schedule as per Schedule – F6
- (xvi). Details of the present commitments of the Bidder, details of contracts in hand
- (xvii). Details of Sub-Contractors/Sub-Suppliers/Sub-Vendors, if any
- (xviii). Quality Assurance Programme
- (xix). Technical Details to be furnished with the Bid as called for in the Technical Specification Vol-II and Technical Bid Data Sheet Vol-III.
- (xx). Schedule of weights and dimensions
- (xxi). Coefficients and indices for price variation formula

The Part-I Bid shall not contain any Price data.

2.13 Composition of Price Bid (Part-II Bid)

The Bidders are requested to quote the Prices and the Performance Guarantee parameters only in the specified format. Price given in Part-II should cover the entire scope of work as given in Part-I of the offer including list of mandatory spares and Tools & tackles with itemized price and should be as per Schedule of Price enclosed. **[One original and 9 (Nine) identical]** copies shall be submitted.

1. The Price Bid shall contain the following :

- (i). Duly filled in Form of bid as per Annexure-C
- (ii). Completely filled in Schedule of Prices Schedule – F1 (Table 1 to Table-7)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-9-	25.09.2014

- (iii). Completely filled in Schedule of Performance Guarantees Schedule – F1 (Table-8).
2. The Bidder shall quote his price against each item of the schedules as indicated in the enclosed formats. The Bidder shall quote the prices only once after considering all the pros and cons, risks and contingencies. Rebate percentage etc., if any, should be spelt out by the Bidder in the first Bid itself.
 3. The amount shall be quoted both in figures and words clearly and legibly. No overwriting is allowed. All scoring and cancellations should be countersigned by the Bidder. In case of illegibility, the interpretation of the Owner shall be final. All entries shall be in English language only.
 4. The Bid may be made in Indian Rupees as well as in Foreign Currencies (maximum three foreign currencies) and all payments for the entire scope will be made in Indian Rupees as well as in the quoted Foreign Currencies.
 5. Prices in Indian supply shall be quoted on Ex-works supply of plant & equipment basis including Packing & forwarding. Inland transportation, Insurance charges, etc. shall be indicated separately.
 6. Excise Duty, Central sales tax (CST), service tax, Value Added Tax (VAT), VAT on Works Contract, other applicable taxes, duties and Cess shall be clearly indicated by the bidder in the price schedules and these taxes shall be considered for bid evaluation.

2.14 Bid Prices

Bidders shall quote for the entire scope of work on single responsibility basis & the total bid price covers all the Contractor's obligations mentioned in tender document specification or to be reasonably inferred from the tender documents/ specification in respect of the disassembly/ dismantling of existing equipment facility as specified, design, manufacture, including procurement and subcontracting (if any), delivery, construction, installation, commissioning, completion of the facilities and conductance of Performance Guarantee tests for the facilities including supply of mandatory spares, recommended spare & tools/ tackles (if any). This includes all requirements under the Contractor's responsibilities for testing, pre-commissioning and commissioning of the facilities, conducting Guarantee tests and, where so required by the tender documents, the acquisition of all permits, approvals and licenses, etc.; the operation, maintenance and training services and such other items and services as may be specified in the tender documents, all in accordance with the requirements of the Conditions of Contract and Technical Specifications.

Bidders are required to quote the price for the commercial, contractual and technical obligations outlined in the tender documents.

Prices quoted by the Bidder shall be subject to adjustment during performance of the Contract to reflect changes in the cost of labour, material, etc. A bid submitted with a fixed price quotation will not be rejected, but the price adjustment will be treated as zero. The price adjustment provision will not be taken into consideration in bid evaluation.

2.15 Signature of Bids

Each page of the Bid must be signed and stamped by the Bidder with his usual signature. The names of all persons signing should also be typed or printed below the signature. Satisfactory evidences of authority of a person signing on behalf of the Bidder shall be furnished with the Bid. Erasures or corrections in the Bid documents if any shall be signed by the person signing the Bid. Printed literature, it enclosed need

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-10-	25.09.2014

not be signed. Bids not conforming to the above requirements are liable to be treated as non-responsive.

2.16 Clarifications/Corrigendum/ Amendment of Tender Specifications

1. At any time prior to the deadline for submission of Bids, the Owner may, for any reason, whether at his own initiative or in response to clarification(s) requested by a prospective Bidder, modify the Tender Specifications by amendment.
2. Clarifications/Corrigendum/Amendment shall be construed to be an integral part of the Tender Specifications, which will be notified. Amendments will be hosted in Owner's website. Bidders are requested to visit Owner's website and note amendments, if any, before submission of bid. Owner shall not be responsible if any bidder fails to notice any amendment.
3. Amendment shall be numbered serially. Signed copies of amendments & clarifications shall be enclosed in Part-I of bid by bidder.

2.17 Modification of Bids

The Bidder is not permitted to modify his Bid suo-moto after the Bid submission.

2.18 Information to be Furnished with the Bid

1. The Bid (Part-I) must clearly indicate the name of the manufacturer, the type or model of each principal item of equipment proposed to be supplied and erected. The Bid should also contain drawings and descriptive materials indicating general dimensions, material from which the parts are manufactured, principles of operation and the extent of pre-assembly involved, major erection equipment required to be deployed, method of erection and the proposed erection Organization structure.
2. The above information shall be provided by the Bidder in the form of separate sheets, drawings, catalogues, etc.
3. Any Bid not containing sufficient descriptive material to describe accurately the system / equipment proposed may be treated as incomplete and hence rejected. Such descriptive materials and drawings submitted by the Bidder will be retained by the Owner. Any major departure from these 'drawings and descriptive material submitted will not be permitted during the execution of the Contract' without specific written permission of the Owner.
4. Oral statements made by the Bidder at any time regarding quality, quantity or arrangement of the equipment or any other matter will not be considered.
5. Standard catalogue pages and other documents of the Bidder may be used in the Bid to provide additional information and data as deemed necessary by the Bidder.
6. In addition to the hard copy of Part-I Bid, the Bidder shall submit soft copy of all data sheets, Schedule, List of Mandatory spares, tools & tackles and Bar Chart/PERT as well as deviation tables in a compact disk (CD). However, hard copy alone will be considered as authentic for evaluation. Bidder shall submit all the filled in datasheet also in soft copy. Bidder shall also furnish soft copies and hard copies of Data Sheet with filled in details wherever details are required to be indicated by the Bidder.

2.19 Policy of Bids under Consideration

Bids shall be deemed to be under consideration immediately after they are opened. While the Bids are under consideration, Bidder's and/or their representatives or other

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-11-	25.09.2014

interested parties are advised to refrain from contacting by any means, the Owner and/or his employees/ representatives on matters related to the Bids under consideration. The Owner, if necessary will obtain clarifications on the Bids by requesting for such information from any or all the Bidders, in writing as may be necessary.

2.20 Validity of Bid

1. The Bid shall be kept valid for acceptance for **[180 days]** from the schedule date of opening of the Part-I Bid.
2. The Bidder will not be permitted to change the substance of the Bid suo-moto, after Bid has been opened.
3. Unilateral revision or withdrawal of offer by the Bidder within the subsistence of the validity period of offer shall not be permitted. Violation of this condition shall result in rejection of the Bid without notice, besides forfeiture of Bid Guarantee. The Bidder shall also be debarred either permanently or for a fixed period, at the discretion of Owner from participating in any of the Owner's tenders.

2.21 Understanding & Clarification on Documents & Specifications

1. The Bidder is required to carefully examine the specifications and documents and fully informs himself as to all the conditions and matters which may in any way affect the 'Renovation and Modernization work to be carried out or the cost thereof. Bidders are required to visit the plant to get familiarized with local conditions. However, the Bidders' visit to site shall be at their cost and risk, without any liability on part of the Owner.
2. Bidders may seek clarifications to the prescribed clauses and / or different part of the Tender Specifications. Such a request for clarifications, if any, should reach the Owner at least **[7 (seven) days]** before the date stipulated for pre-bid meeting. The Owner then will issue interpretations and clarifications as it may think fit in during the pre-bid meeting. After pre-Bid meeting, Bidder may seek further clarification till **[21 days]** prior to schedule opening date of Part-I Bid. After receipt of such clarifications, the Bidder may submit its Bid but within the time and date as specified in the Invitation for Bid or as amended by the Owner. All such clarifications and the relevant exchange of correspondence between the parties shall be construed to form part of the tender specifications.
3. Pre-Bid Conference will be organized and outcome of the pre-bid conference is binding on all the Bidders. Outcome of the Pre-Bid Conference will be intimated by the Owner to all the Bidders.
4. A copy of such clarifications duly signed and stamped shall be enclosed with the Bid (Part-I). In case any queries remain un-replied, it shall be construed that in respect of those queries, the respective stipulations of the Tender Specifications/Conditions shall continue to apply and/or no new stipulations are made with respect to those queries.
5. No extension of time for submission of Bid will be granted on account of Bidders' request for interpretation/clarifications.

2.22 Latest Hour for Receipt of Bids

Bids must reach the designated Office of Owner not later than **[-----]** Hrs, Indian Standard Time (IST) on the date fixed for receipt of the Bid as indicated in the Invitation for Bid. Bids delivered / received after the time and date fixed for the receipt of the bids shall be liable for rejection.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-12-	25.09.2014

2.23 Single Bidder Responsibility

1. The scope of supply and services shall be under single Bidder responsibility.
2. The successful Bidder should not sub contract the entire work on back to back basis or otherwise.

2.24 No Claim for Compensation for Submission of Bid

1. The submission of any Bid connected with these documents and specifications shall constitute an agreement that the Bidder shall have no cause of action or claim against the Owner for rejection of his Bid.
2. Regardless of the conduct or outcome of the bidding process, Bidder shall not be entitled to claim any costs, charges and expenses incidental to or incurred by him through or in connection with his submission of Bid or its consideration by the Owner, even though the Owner may elect to modify/withdraw the Invitation for Bid or does not accept the Bid(s).

2.25 Deputation of Representatives for Discussion

After opening of the Bid, if the Owner desires to have techno-commercial discussion on the Bid, the Bidder shall be in a position to depute his competent representatives of various disciplines at short notice with full authority for finalising technical parameters as well as Commercial Terms and Conditions of the Tender.

2.26 Evaluation of Bid

1. For evaluation and comparison of price bid, the prices indicated at [-----] summary of Prices as per Schedule [-----] will be considered. The Bids received will be evaluated by the Owner to ascertain the lowest evaluated substantially responsive Bid vis-à-vis the Tender Specifications. The Bidder has to satisfy himself that full information is furnished as required in the specifications. Lack of particulars or incomplete information furnished will run the risk of rejection of the bid. The following major procedures would be followed for evaluation of bids.
2. All the Bidders would be brought on par with reference to Technical Specification, Commercial Condition, Instructions to Bidders and subsequent techno-commercial discussions/ clarifications.
3. After the evaluation of Part-I bids (techno-commercial bids) and before opening of Part-II bids (Price Bids), in case the bidders are asked to make changes to their techno commercial offer that may have price implications, Owner may give the bidders opportunity to submit addendum to price bid covering the price implication only against such changes before the opening of Part-II bids (Price Bids). All the bidders will be notified, at least 15 days before the Price Bid opening date, about such changes against which they can submit addendum to Price Bid.
4. Commercial loading would be done for non-compliance of commercial terms and conditions of the Tender Specifications other than the vital clauses, as the case may be.
5. To facilitate evaluation and comparison, the Owner will convert all bid prices expressed in foreign currencies into Indian Rupee at State Bank of India Bills Selling exchange rates prevailing on the date of opening of the price bid.
6. The Bidder is eligible for a price variation as per Tender Condition. However Price variation shall not be considered for Bid evaluation.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-13-	25.09.2014

7. Technical loading will be done for omission of price data in respect of equipment/facilities, spares, tools & tackles, etc. The highest quoted corresponding price will be loaded against such omission. If no quoted price is available, the loading will be done as per the corresponding price as estimated by the Owner.
8. The Bidder has to meet the minimum functional performance levels indicated in Volume-II Technical Specification for all categories of Guarantees. If one or more of Functional Performance Parameters offered by the Bidder is inferior to the minimum functional performance level (i.e. higher or lower than maximum or minimum value specified in Technical Specification), then such bid will be considered non-responsive and rejected.
9. The quoted values for Performance Guaranteed Parameters given in Table below would be evaluated using evaluation factors specified. The evaluation factors shall be applicable to the differential values calculated from among the Bidders of corresponding item with appropriate highest or lowest value (i.e., the best quoted value) as the base. The evaluation will be based on the guarantee parameters inclusive of all tolerance furnished at the Guaranteed Condition. Bidders to note that the values indicated in the Schedule of Performance Guarantees shall be inclusive of all tolerances including measurement uncertainty.

Table-Bid Evaluation Factors

Sl. No.	Functional Performance Parameter	Evaluation Factor Rate
1.	Auxiliary Power	[-----]INR per kW
2.	HCl Consumption in DM Plant	[-----]INR per kg
3.	NaOH Consumption in DM Plant	[-----]INR per kg
4.	[Pre-treatment Plant Chemical Consumption]	[-----]INR per kg
5.	[NaCl Consumption in Softening Plant]	[-----]INR per kg
6.	{Any Other Chemical, as applicable}	[-----]

The evaluation factors rate shall be prorated for any fractions of the specified value.

The basis on which Bidders to quote Functional Performance Parameters shall be as per Volume-II Technical specification.

- (1). Arithmetical errors will be rectified on the following basis:
 - If there is any discrepancy between the unit price and the total price that is obtained by multiplying the unit price and the quantity, the unit price shall prevail and the total price will be corrected.
 - If there is a discrepancy between the total Bid Price and the sum of total prices, the sum of the total prices shall prevail and the total Bid Price will be corrected.
 - If there is discrepancy between the rates in figures and in words, the rates expressed in words shall only prevail and shall be adopted.
- (2). All the Sl. Nos. and columns in the 'Schedules of Prices' shall be quoted. If no prices are envisaged for any of the entries, 'Nil' shall be mentioned. In this context "Nil" mentioned against any item shall construe that the Bidder

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-14-	25.09.2014

shall not charge any amount separately for that item from the Owner. If the terms, such as 'not applicable' "-----" or blank are mentioned against any Sl. Nos./columns, the highest amount quoted for the concerned entry among all Bidders will be loaded for purposes of evaluating the Price Bids.

2.27 Local Conditions

1. The Bidder shall inspect the site and shall satisfy himself of the site conditions and shall apprise himself of the procedure for engagement of agencies/labour and shall collect any other information, which may be required before submitting the Bid.
2. Wages not less than Minimum wages for Contract labour shall be paid as applicable in this region from time to time. Claims and objections due to ignorance of site conditions will not be considered after submission of Bid.
 - (i). The Bidder is required to carefully examine the Technical & General Specification, commercial Terms and Conditions, drawings and other details relating to work given in the Tender Specification and get fully acquainted as to all conditions and matters which may in any way affect the work or the cost thereof.
 - (ii). The Bidder shall be deemed to have exhaustively examined the Tender Specifications including the Form of Contract, to have obtained all information and clarifications on all matters whatsoever that might affect the carrying out of the work and to have satisfied himself as to the adequacy of his Bid. He is deemed to have known the scope, nature and magnitude of the work and the requirements of materials and labour involved etc. and as to all work he has to complete in accordance with the Contract for the adequacy of his Bid.
 - (iii). The Bidder shall be deemed to have visited and carefully examined the plant/ site and surroundings, to have satisfied himself about the nature and details of all existing structures, if any, and also as to the nature and conditions of the railways, roads, bridges and culverts, means of transport and communications, whether by land, water or air and as to possible interruptions thereto and the access to and from the site, to have made independent enquiries, examined and satisfied himself as to the sources for obtaining earth, gravel, sand, stones, bricks and all other construction materials, the site for disposal of surplus earth and debris, the available accommodation, underground existing services, sub-soil water conditions, storms, prevailing winds, climatic conditions and all other similar matters which may affect the work.
 - (iv). The Bidder shall be deemed to have acquainted himself with the Indian Income tax Act, 1961, Indian Companies Act, 1956, Indian Customs Act, 1962, Indian Central Excise Act, Value Added Tax, Indian Sales Tax Act, Indian Electricity Act, Central Electricity Authority Regulations, Indian Boiler Regulations, Factories Act, Pollution Control Regulations and other related Acts & Laws prevalent in the State of [-----] and in India and as amended from time to time. The Owner shall not entertain any request for clarifications from the Bidders regarding such local conditions.
 - (v). Any neglect or omission or failure on the part of the bidder in obtaining necessary and reliable information as stated above or on any other matter affecting the Bidder shall not relieve him from any risk or liabilities or the entire responsibility for completion of the work in accordance with the

Document Number	Rev No.	Description	Page No.	Date of Issue

Tender Specifications.

2.28 Deviations

1. Normally, deviations are not permitted in commercial terms & conditions and technical specification. Nevertheless, if the Bidder takes any deviation, it shall be clearly indicated in the deviation schedule (Schedule – [-----] and Schedule- [-----] with a soft copy in MS-Word format in compact disc, with “Original” of Part-I of the Bid). Deviation listed elsewhere in the Bid shall be summarily rejected and ignored. Separate printed standard terms and conditions of the Bidder shall not be taken into cognizance and shall be totally rejected.
2. No alterations or disfigurement, other than filling in particulars wherever called for in the formats of the Tender Specifications shall be made in the Bid. Any changes/modifications made by the Bidder in Bid documents itself shall not be taken into consideration.
3. If at any later date, it is found that documents, information, averments and data submitted by the bidder in the Bid, based on which the Bidder has been considered eligible or successful or has been awarded the Contract is incorrect or false to the extent that had the correct or true information been made available to the Owner at time of tender evaluation, the Bid would have been declared ineligible or unsuccessful, the Bidder shall be forthwith disqualified or, as the case may be, the Contract awarded based on such incorrect or false information shall be cancelled and the Bid Guarantee / contract performance Guarantees deposited shall be appropriated by the Owner towards Owner's cost, loss and damage to Owner.

2.29 Blacklisting/Debarring

In case, certificates submitted by the Bidders are found to be a forged/untrue, the Bidder will not only be disqualified for this tender but also would be black listed/debarred by the Owner.

2.30 Award of Contract

1. Award Criteria
 - The Owner will award the contract to the successful Bidder whose Techno-commercial bid has been determined to be substantially responsive and Price Bid to be the lowest evaluated bid, provided that the Bidder is determined to be qualified to perform the contract satisfactorily.
 - The Owner reserves the right to vary the quantity of any of the Items / Spares and / or delete any Item / Spares altogether at the time of Award of Contract.
2. Owner's Right to Accept Any Bid and to Reject Any or All Bids

The Owner reserves the right to accept or reject any bid, for any reasons including National defense and security consideration and to annul the bidding process and to reject all bids at any time prior to award of contract, without thereby incurring any liability to the affected Bidder or bidders or any obligation to inform the affected Bidder or bidders of the grounds for the Owner's action.
3. Notification of Award

Prior to the expiration of the period of bid validity, the Owner will notify the successful Bidder in writing by registered letter (Letter of Award or LOA) or by

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-16-	25.09.2014

email to be confirmed in writing by registered letter, that its bid has been accepted. The notification of award will constitute the formation of the contract.

Upon the successful Bidder's furnishing of the performance securities the Owner will promptly notify each unsuccessful Bidder and will discharge its bid security.

4. Signing the Contract Agreement

At the same time as the Owner notifies the successful Bidder that its bid has been accepted, the Owner will send to the Bidder the Contract Agreement provided in the bidding documents, incorporating all agreements between the parties.

Within *[twenty-eight (28)]* days of receipt of the Contract Agreement, the successful Bidder shall sign and date the Contract Agreement and return it to the Owner.

5. Corrupt or Fraudulent Practices

The Owner requires that Bidders, Contractors and Suppliers observe the highest standard of ethics during the procurement and execution of the contracts. In pursuance of this policy, [Name of Utility] requires that Bidders, Contractors and Suppliers observe the highest standard of ethics during the procurement and execution of the contracts. The Owner may reject a Bid Proposal of a successful Bidder if it emerges that the Bidder recommended for award has engaged in Corrupt or Fraudulent practices in competing for the subject contract. The Owner may declare a Bidding firm ineligible for participation in future tenders of the Owner, either indefinitely or for a stated period of time, if it at any time it emerges that the firm has engaged in Corrupt or Fraudulent practices in competing for or in executing a contract of the Owner. Corrupt Practice means the offering, giving, receiving or soliciting of anything of value to influence the procurement process or contract execution. Fraudulent practice means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Owner and includes collusive practice among Bidders designed to establish bid prices at artificial non-competitive levels and to deprive the Owner of the benefits of free and open competition.

2.31 Agency Commission

No Agency commission shall be payable under the Contract.

2.32 Contract Performance Bank Guarantee (CPBG)

As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Bank Guarantee (CPBG) in the Format attached as Annexure- G, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in these documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus Ninety (90) days grace period. If the contract price is in more than one currency, CPG shall be 10% of respective currency.

If the bidder is a Consortium of two or more firms, in addition to the Contract Performance Bank Guarantee (CPG) of 10% of Contract Price furnished by the Consortium Leader, each of the other consortium member will furnish Additional Contract Performance Bank Guarantee equal to 1% of Contract Price

2.33 Contract Quality Assurance

1. The Bidder shall include in his Bid a detailed Quality Assurance Programme containing the overall quality, management and procedures which he proposes to follow in the performance of the 'Works' during various phases.
2. After Letter of Award (LOA) the detailed Quality Assurance Programme to be followed for the execution of the 'Contract' will be mutually discussed and agreed to and such agreed Programme shall form a part of the 'Contract'.

2.34 Codes & Standards

Specifications give reference to Indian or internationally accepted Standards. However, equipment or materials meeting other recognized National or International Standards, which ensure an equal or superior quality than Standards specified, will also be accepted. For details of codes and standards refer Technical specification, Volume-II.

2.35 Vital Clauses

The following clauses in the Tender Specification & Draft Contract are vital. Bidder is advised not to take deviations to these clauses. If deviations are taken from the stipulations of these clauses, such Bids would be liable for rejection:

- Scope of Work
- Time Schedule
- Price Basis
- Contract Performance Guarantee
- Warranty
- Liquidated Damages
- Force Majeure
- Arbitration
- Taxes & Duties
- Bid Guarantee
- Patents, Indemnity
- Validity of Bids

4 GENERAL CONDITIONS OF CONTRACT (GCC)

4.1 Definitions

- i. **"Applicable Laws"** means the laws of any national, state, local or municipal legislature in India, or of any other Competent Authority, including all laws, acts, judgments, statutes, rules, regulations, ordinances, orders, decrees, injunctions, governmental authorizations, requirements of Applicable Permits and any agreements, decisions, acts, instructions, requirements, directions and notifications of any competent or other Competent Authority or court or tribunal or arbitrator having jurisdiction over the matter in question, including those related to taxes, assessments, expropriation and duties, or authoritative interpretation, as amended, modified, enacted, reinterpreted or revised from time to time hereafter.
- ii. **"Applicable Permits"** means all permits, licenses, authorizations, consents, decrees, waivers, privileges, acknowledgements, concessions, approvals, rulings, decisions and visas from, filings with or applications submitted to, any Competent Authority or court or tribunal of competent jurisdiction necessary from time to time for or in relation to the performance of the Works, including as detailed in this GCC.
- iii. **"Agreement"** means the Contract Agreement (entitled "Contract Agreement") executed by the parties to which these Conditions are annexed and also includes supplements & amendments to the Contract.
- iv. **"Contract"** means the Agreement entered into between Owner and Contractor as per the 'Contract Agreement' signed by the parties, including contract documents, all attachments and appendices thereto and all documents incorporated by reference therein.
- v. **"Contract Documents"** means the complete documents, which are the basis of finalization of the contract, including correspondence exchanged from issue of tender till date of signing the contract. All such documents shall be listed in the Contract Agreement.
- vi. **"Contractor's Equipment"** means all plant, facilities, equipment, machinery, tools, apparatus, appliances or things of every kind required in or for installation, completion and maintenance of Facilities that are to be provided by the Contractor, but does not include Plant and Equipment, or other things intended to form or forming part of the Facilities.
- vii. **"Contractor"** means the person(s), Firm or a Company whose bid to perform the Contract has been accepted by the Owner and shall be named as such in the Contract Agreement, and includes the legal successors or permitted assigns of the Contractor.
- viii. **"Contract Price"** means any sum or sums finally accepted by the Owner for the execution of this contract, subject to such additions and adjustments thereto or deductions there from, as may be made pursuant to the Contract.
- ix. **"Contractor's Representative"** means any person nominated by the Contractor & approved by the Owner hereof to perform the duties delegated by the Contractor.
- x. **"Consulting Engineer"** means Owner's Engineer appointed by the Owner. Also refers to any other firm(s) or person(s) as may be appointed by the Owner from time to time.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-20-	25.09.2014

- xi. **“Commissioning”** means the construction of plant and equipment for operation of the Facility at rated capacity are complete and the plant and equipment achieves the designated full load/full capacity, at designated fuel/input.
- xii. **“Completion”** means that the Facilities (or a specific part thereof where specific parts are agreed) have been completed operationally and structurally and put in a tight and clean condition, and that all work in respect of pre-commissioning of the Facilities or such specific part thereof has been completed and commissioning has been attained as per Technical Specifications.
- xiii. **“Competent Authority”** means any agency, authority, department, inspectorate, ministry or statutory person (whether autonomous or not) of GOI, [Name of the State], Ministry of Environment and Forests (MoEF) any other State of the Republic of India or any local authority.
- xiv. **“Day”** means calendar day of the Gregorian calendar.
- xv. **“Defect Liability Period”** means the period of validity of the warranties given by the Contractor, commencing at completion of the Facilities or a part thereof, during which the Contractor is responsible for defects with respect to the Facilities.
- xvi. **“Effective Date”** means the date from which the Time for Completion of the facilities and other milestones for execution of the Renovation & Modernization work as per the scope of work under this tender by the Contractor shall be determined.
- xvii. **“Erection Services”** means those entire services ancillary to the supply of the plant and equipment for the Facilities, to be provided by the Contractor under the Contract. e.g. transportation and provision of marine or other similar insurance, inspection, expediting, site preparation works (including the provision and use of Contractor’s Equipment and the supply of all construction materials required), installation, testing, Pre-commissioning, commissioning, operations, maintenance, the provision of operations and maintenance manuals, training of Owner’s Personnel etc.
- xviii. **“Facilities”** means the plant and equipment to be supplied and installed, as well as all the Erection Services to be carried out by the Contractor under the Contract.
- xix. **“Force Majeure”** means mean any event beyond the reasonable control of the Owner or of the Contractor, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected.
- xx. **“GCC”** means the General Conditions of Contract hereof.
- xxi. **“Good Industry Practice”** means the exercise of that degree of skill, diligence and prudence which would reasonably and ordinarily be expected from a skilled and experienced Contractor, equipment manufacturer or operator applying the standards generally adopted by global Contractors, global equipment manufacturers and operators in the construction or operation of power generation facilities or the manufacture of equipment therefore, except in so far as inconsistent with any applicable Indian law or directive.
- xxii. **“Guarantee Test(s)”** means the test(s) specified in the Technical Specifications to be carried out to ascertain whether the Facilities or a

LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-21-	25.09.2014

- specified part thereof is able to attain the Functional/Performance Guarantees specified in the Technical.
- xxiii. **"Incoterms"** means International rules for interpreting trade terms published by the International Chamber of Commerce (latest edition), Paris (France). Unless inconsistent with any provisions of the contract, the meaning of any trade term and the rights and obligations of the parties there under shall be as prescribed by Incoterms.
 - xxiv. **"Inspector/Inspecting Engineer"** means the Owner or any person nominated by the Owner from time to time, to inspect the equipment of works under the contract and/or the duly authorized representative of the Owner.
 - xxv. **"Latent Defect"** means the defects inherent in the material or arising out of design deficiency which does not manifest itself during the Warranty Period/Defect Liability Period, as described in this GCC.
 - xxvi. **"Letter of Intent (LOI)/Letter of Award (LOA)"** means the official letter issued by the Owner notifying the Contractor that its Bid Proposal has been accepted.
 - xxvii. **"Month"** means calendar month of the Gregorian calendar.
 - xxviii. **"Manufacturer's Works" or "Contractor's Works"** means the place used by the Contractor, its manufacturer, supplier, collaborators or sub-contractors/vendors/sub-vendors for the performance of the works.
 - xxix. **"Operational Acceptance"** means the acceptance by the Owner of the Facilities (or any part of the Facilities where the Contract provides for acceptance of the Facilities in parts), which certifies the Contractor's fulfillment of the Contract in respect of performance guarantees of the Facilities.
 - xxx. **"Owner" or "Purchaser"** shall mean the [Name of the Utility], and includes its legal successors or permitted assignees.
 - xxxi. **"Person"** means any natural person, firm, corporation, company, voluntary association, partnership, joint venture, trust, and incorporated organization, unincorporated organization, Competent Authority or other entity.
 - xxxii. **"Pre-commissioning"** means the testing, checking and other requirements specified in the Technical specifications that are to be carried out by the Contractor in preparation for commissioning.
 - xxxiii. **"Project"** means the Owner's [-----] in respect of which the Contract has been signed.
 - xxxiv. **"Project Consultant" or "Owner's Consultant"** means the engineering firm or person(s) appointed by the Owner to render engineering project consultancy services for the project.
 - xxxv. **"Project Manager"** means the person appointed by the Owner thereof and named as such, to perform the duties delegated by the Owner.
 - xxxvi. **"Plant and Equipment"** means permanent plant, equipment, systems, machinery, apparatus, articles and things of all kinds to be provided and incorporated in the Facilities by the Contractor under the Contract (including the spare parts to be supplied by the Contractor under the Contract Agreement), but does not include Contractor's Equipment.
 - xxxvii. **"SCC"** means the Special Conditions of Contract hereof.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-22-	25.09.2014

- xxxviii. **“Site”** means the land and other places upon which the Facilities are to be installed, and such other lands or places as may be specified in the Contract as forming part of the Site.
- xxxix. **“Sub Contractor”, including “Vendors/Sub-Vendors”**, means any firm or person to whom execution of any part of the Facilities, including preparation of any design or supply of any plant and equipment is subcontracted directly or indirectly by the Contractor, and includes its legal successors or permitted assignees.
- xl. **“Technical Specification / “Tender Documents”** means the document, setting out a description and specification of the Works and statement of the technical and other standards to which the Works are to be performed including any modifications thereto made in accordance with the Conditions. This includes the technical & commercial specifications and other Tender Documents forming a part of the Contract and such other Schedules and drawings as may be mutually agreed upon.
- xli. **“Tenderer”/“Bidder”** means the Person(s), Firm/Company who has submitted its Bid Proposal in response to the bid invitation by the Owner, for the Project.
- xl.ii. **“Time for Completion”** means the time within which completion of the Facilities as a whole (or of a part of the Facilities where a separate time for completion of such part has been specified) is to be attained in accordance with the stipulations and provisions of the Contract.
- xl.iii. **“Warranty Period” or “Defect Liability Period”** means the period during which the Contractor shall remain liable for repair or replacement of any defective part of the works performed under the contract, free of cost.
- xl.iv. **“Work(s)”** means and includes the tasks of furnishing of equipment, labour & services, transport, handling, unloading and storage at site, civil construction and complete erection, testing, commissioning putting into satisfactory operation and completion of successful performance tests, reliability tests and any other guaranteed parameters as defined in the Contract, replacement, modification, repair of defective parts or equipment during warranty period and rectification of latent defects during latent defect period.
- xl.v. **“Writing” or “Written”** shall include any manuscript, type-written or printed statement, under or over signature and/or seal as the case may be.

When the words "Approved", "Subject to Approval", "Satisfactory", "Equal to", "Proper", "Requested", "As Directed", "Where Directed", "When Directed", "Determined by", "Accepted", "Permitted", or words and phrases of similar importance are used, the approval, judgment, direction, etc., is understood to be a function of the Owner. Words implying persons or the gender neutral pronoun 'it', shall include firms, companies, corporation, associations or body of individuals whether incorporated or not. Words implying masculine gender or singular number shall also include the feminine gender and plural number and vice-versa where the context so requires or permits.

Terms and expressions not herein defined shall have the same meaning as are assigned to them in the Indian Sale of Goods Act (1930), failing that in the Indian Contract Act (1872) and failing that in the General Clauses Act (1897) including amendments thereof, if any.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-23-	25.09.2014

4.2 Contract Documents

- a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.
- b) The Contract will be signed in three originals and the Contractor shall be provided with one signed original and the rest will be retained by the Owner.

4.3 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Notification of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender Drawing.
- vi. The bid & schedules/ attachment submitted by the contractor

4.4 Interpretation

All Contract Documents, all correspondence and communications to be given, and all other documentation to be prepared and supplied under the Contract shall be written in English, and the Contract shall be construed and interpreted in accordance with English language.

The singular shall include the plural and the plural the singular, except where the context requires otherwise.

Unless inconsistent with any provision of the Contract, the meaning of any trade term and the rights and obligations of parties there under shall be as prescribed by Incoterms. Incoterms means latest edition of International Rules for Interpreting Trade Terms published by the International Chamber of Commerce Paris, France.

4.5 Construction of the Contract

The Contracts to be entered between the Owner and the Contractor shall be as under:

First Contract: For Ex-Works Supply of all Plant & Equipment including Mandatory Spares and technological and miscellaneous structures with all accessories.

Second Contract: For providing all services i.e. Inland Transportation for Delivery at Site, Inland Transit Insurance, Unloading, Storage, Handling at Site, Erection, Insurance Covers other than inland transit insurance, Testing, Commissioning and Conducting Guarantee Tests in respect of all the Equipment supplied under the First Contract, Civil works including supplies such as cement & reinforcement steel and all other services as specified in the Contract Documents.

The above two Contracts will contain a cross-fall breach clause specifying that breach of one Contract will constitute breach of the other Contracts which will confer a right on the Owner to terminate the other Contract also at the risk and the cost of the Contractor.

The award of the separate Contracts shall not in any way dilute the responsibility of the Contractor for the successful completion of the Facilities as per Contract Documents and a breach in one Contract shall automatically be construed as a breach of the other Contract which will confer a right on the Owner to terminate the other Contract also at the risk and the cost of the Contractor.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-24-	25.09.2014

4.6 Independent Contractor

The Contractor shall be an independent contractor performing the Contract. The Contract does not create any agency, partnership, joint venture or other joint relationship between the parties hereto.

Subject to the provisions of the Contract, the Contractor shall be solely responsible for the manner in which the Contract is performed. All employees, representatives or Subcontractors engaged by the Contractor in connection with the performance of the Contract shall be under the complete control of the Contractor and shall not be deemed to be employees of the Owner, and nothing contained in the Contract or in any subcontract awarded by the Contractor shall be construed to create any contractual relationship between any such employees, representatives or Subcontractors and the Owner.

4.7 Consortium

If the Bidder/Contractor is a joint venture or consortium of two or more firms, all such firms shall be jointly and severally bound to the Owner for the fulfillment of the provisions of the Contract and the Bidder shall submit a letter of consent to this effect (with Part-I Bid) signed by all consortium members. For Consortiums, the consortium partners shall designate one of such firms to act as a leader with authority to bind the consortium. The composition or the constitution of the joint venture or consortium shall not be altered without the prior consent of the Owner.

4.8 Non-Waiver

No relaxation, forbearance, delay or indulgence by either party in enforcing any of the terms and conditions of the Contract or the granting of time by either party to the other shall prejudice, affect or restrict the rights of that party under the Contract, nor shall any waiver by either party of any breach of Contract operate as waiver of any subsequent or continuing breach of Contract. Any waiver of a party's rights, powers or remedies under the Contract must be in writing, must be dated and signed by an authorized representative of the party granting such waiver, and must specify the right and the extent to which it is being waived.

4.9 Severability

If any provision or condition of the Contract is prohibited or rendered invalid or unenforceable, such prohibition, invalidity or unenforceability shall not affect the validity or enforceability of any other provisions and conditions of the Contract.

4.10 Origin

"Origin" means the place where the materials, equipments and other supplies for the Facilities are mined, grown, produced or manufactured, and from which the services are provided.

4.11 Notices

All notices to be given under the Contract shall be in writing, and shall be sent by personal delivery, or post, or special courier, or telefax, or E-mail to the address of the relevant party indicated in the Contract.

Either party may change its postal address, telefax number, or E-mail ID or addressee for receipt of such notices by ten (10) days' notice to the other party in writing

Notices shall be deemed to include any approvals, consents, instructions, orders and certificates to be given under the Contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-25-	25.09.2014

4.12 Governing Laws

The Contract shall be governed by and interpreted in accordance with laws in force in India. The Courts of [.....] shall have exclusive jurisdiction in all matters arising under the Contract.

4.13 Settlement of Disputes

a) Mutual Consultation

If any differences/ dispute arises between the Owner and the Contractor in connection with or arising out of the Contract, before or after the termination, abandonment or breach of the Contract—the Owner & Contractor shall seek to resolve any such dispute or difference by mutual consultation. If the parties fail to resolve such a dispute or difference by mutual consultation, then the dispute shall be referred in writing by either party to the Arbitrator, with a copy to the other party.

b) Arbitration

Either Owner or the Contractor may, of its intention to commence arbitration, as to the matter in dispute, and no arbitration may be commenced unless such notice is given.

Any dispute, in respect of which a notice of intention to commence arbitration has been given, as above shall be finally settled by arbitration. Arbitration may be commenced prior to or after completion of the Facilities

Any dispute submitted by a party to arbitration shall be heard by an arbitration panel composed of three arbitrators, in accordance with the provisions set forth below.

The Owner and the Contractor shall each appoint one arbitrator, and these two arbitrators shall jointly appoint a third arbitrator, who shall chair the arbitration panel. If the two arbitrators do not succeed in appointing a third arbitrator within *[twenty eight (28)]* days after the latter of the two arbitrators has been appointed, the third arbitrator shall, at the request of either party, be appointed by the Appointing Authority for arbitrator is given below.

Appointing Authority for Arbitrator:

- President, Institution of Engineers in case of an Indian Contractor.

If one party fails to appoint its arbitrator within *[forty-two (42)]* days after the other party has named its arbitrator, the party which has named an arbitrator may request the Appointing Authority to appoint the second arbitrator.

If for any reason an arbitrator is unable to perform its function, the mandate of the Arbitrator shall terminate in accordance with the provisions of applicable laws and a substitute shall be appointed in the same manner as the original arbitrator.

Arbitration proceedings as follows:-

- In case of an Indian Contractor Adjudication/Arbitration proceedings shall be conducted in accordance with Indian Arbitration and Conciliation Act 1996.

The Place for Arbitration shall be: *[New Delhi]*, India.

The language of arbitration shall be English.

The decision of a majority of the arbitrators (or of the third arbitrator chairing the arbitration, if there is no such majority) shall be final and binding and shall be enforceable in any court of competent jurisdiction as decree of the court. The

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors—Balance of Plant Volume-I	-26-	25.09.2014

parties thereby waive any objections to or claims of immunity from such enforcement.

Notwithstanding any reference to the arbitration,

- the parties shall continue to perform their respective obligations under the Contract unless they otherwise agree
- The Owner shall pay the Contractor consideration due to the Contractor.

4.14 Scope of Facilities

- Unless otherwise expressly limited in the Technical Specifications, Facilities the Contractor's obligations cover the provision of all Plant and Equipments including spares and the performance of all Services required for design, manufacture (including procurement, quality assurance, construction, installation, associated civil works, Structural and others construction works, precommissioning and delivery) of the Plant and Equipment and the installation, commissioning, completion of facilities and performance testing of the Facilities in accordance with the plans, procedures, specifications, drawings, codes and any other documents as specified in the Technical Specifications. Such specifications include, but are not limited to, the provision of supervision and engineering services; the supply of labour, materials, equipment, spare parts and accessories; Contractor's Equipments; construction utilities and supplies; temporary materials, structures and facilities; transportation loading & unloading.
- The Contractor shall, unless specifically excluded in the Contract, perform all such work and/or supply all such items and materials not specifically mentioned in the Contract but that can be reasonably inferred from the Contract as being required for attaining Completion of the Facilities.

4.15 Time for Commencement and Completion

- The Contractor shall commence work on the scope of work under this Tender from the date of Letter of Award. Contractor shall thereafter proceed with the Facilities in accordance with the time schedule specified in SCC & detailed network schedule agreed & appended to the contract.
- The Contractor shall attain Completion of the Facilities (or of a part where a separate time for Completion of such part is specified in the Contract) within the time stated in the SCC subject to time extensions, the contractor is entitled under the contract conditions or time extension expressly grouted by the Owner.

4.16 Spare Parts

In addition to the supply of Mandatory Spare Parts included in the Contract, the Contractor agrees to supply other spare parts (recommended spares) required for the operation and maintenance of the Facilities for 3 years. However, the identity, specifications and quantities of such spare parts and the terms and conditions relating to the supply thereof are to be agreed between the Owner and the Contractor, and the price of such spare parts shall be that given in Price Schedule for recommended spares. The price of such spare parts shall include the purchase price thereof and other costs and expenses (including the Contractor's fees) relating to the supply of spare parts. The prices of recommended spares covered in price schedule shall be valid for a period of six months after the date of Notification of Award of Main Equipment and Mandatory Spares.

- The Contractor shall supply the recommended spares at the same terms and conditions as are otherwise applicable to this Contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-27-	25.09.2014

- All the spares for the equipment under the Contract will strictly conform to the Specification and other relevant documents and will be identical to the corresponding main equipment/components supplied under the Contract and shall be fully interchangeable.
- All the Mandatory Spares covered under the Contract shall be manufactured along with the main equipments as a continuous operation and the delivery of the spares will be affected along with the main equipments in a phased manner and the delivery would be completed by the respective dates for the various categories of equipment as per the agreed schedule. If order for the Recommended Spares has been placed with the Contractor prior to commencement of manufacture of the main equipment this shall be applicable for manufacturer of recommended spares as well.
- The Contractor will provide the Owner with the manufacturing drawings, catalogues, assembly drawings and any other document required by the for the recommended spares. Such details will be furnished to the Owner as soon as they are prepared but in any case not later than six months prior to commencement of manufacture of the corresponding main equipment.
- In addition to the spares recommended by the Contractor, if the Owner further identifies certain particular items of spares, the Contractor will submit the prices and delivery quotation for such spares within [30] days of receipt of such request with a validity period of 6 months for consideration by the Owner and placement of order for additional spares, if the Owner so desires.
- The quality plan and the inspection requirement finalised for the main equipment will also be applicable to the corresponding spares.
- The Contractor will provide the Owner with all the addresses and particulars of his sub-suppliers while placing the order on vendors for items/components/ equipment covered under the Contract and will further ensure with his vendors that the Owner, if so desires, will have the right to place order for spares directly on them on mutually agreed terms based on offers of such vendors.
- The Contractor shall guarantee the long term availability of spares to the Owner for the full life of the equipment covered under the Contract. The same provision will also be applicable to spares supplied by Sub-contractors.
- For the first 6 years from the schedule date of completion of facilities the prices will be derived from the corresponding Ex-Works Price at which the order for such spares have been placed by Owner as a part of Mandatory Spares or Recommended Spares, or from the rates of Mandatory Spares or Recommended Spares as quoted by/negotiated with the Contractor. Ex-Works order price of future spares shall be computed in accordance with the price adjustment provisions covered under the main Contract excepting that the base indices will be counted from the scheduled date of Commissioning of the last equipment under the main project. The Contractor will indicate in advance the delivery period of the items of spares, which the Owner may procure in accordance with this clause. In case of emergent requirements of spares, the Contractor would make every effort to expedite the manufacture and delivery of such spares on the basis of mutually agreed time schedule.
- In case the Contractor fails to supply the mandatory or recommended spares in the terms stipulated above, the Owner shall be entitled to purchase the same from the alternate sources at the risk and the cost of the Contractor and recover from the Contractor, the excess amount paid by the Owner over the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-28-	25.09.2014

rates worked on the above basis. In the event of such risk purchase by the Owner, the purchases will be as per the Works and Procurement Policy of the Owner prevalent at the time of such purchases and the Owner at his option may include a representative from the Contractor in finalising the purchases.

- It is expressly understood that the final settlement between the parties in terms of relevant clauses of the Contract Documents shall not relieve the Contractor of any of his obligations under the provision of long term availability of spares and such provisions shall continue to be enforced till the expiry of 6 years period reckoned from the scheduled date of Commissioning of the Plant and Equipment unless otherwise discharged expressly in writing by the Owner.
- The Contractor shall warrant that all spares supplied will be new and in accordance with the Contract Documents and will be free from defects in design, material and workmanship. The defects liability period for spares shall be 12 months from the date it is put to use. In case of failure of any spare part due to fault in design material or workmanship the same part will be replaced by the contractor without any extra cost of the Owner.

In case of any failure in the original component/equipments due to faulty designs, materials and workmanship, the corresponding spare parts, if any, supplied will be replaced without any extra cost to the Owner unless a joint examination and analysis by the Owner and the Contractor of such spare parts prove that the defect found in the original part that failed, can safely be assumed not to be present in spare parts. Any replaced spare parts will have the Defects Liability period of 12 months from the date it is put in use. The discarded spare parts will become the property of the Contractor as soon as they have been replaced by the Contractor. In any case the defect liability of spares will expire at the end of 48 months from the date of their receipt at site

The Defects Liability of spares that are not used within 18 months from the respective date of the delivery at Site will, be subject to condition that all such spares are stored in accordance with Contractor's standard recommended practice, if any, and the same has been furnished to the Owner.

4.17 Contractor's Responsibilities

- a) The Contractor shall design, manufacture (including associated purchases and/or subcontracting), disassemble/dismantle wherever required, install, commission and complete the Facilities and carryout the Guarantee tests with due care and diligence in accordance with the Contract.
- b) Before entering into this contract the Contractor is responsible to have examined the data relating to the Facilities provided by the Owner, and on the basis of information that the Contractor could have obtained from a visual inspection of the Site and of other data readily available to it relating to the Facilities as at one month days prior to bid submission. Any failure to acquaint itself with all such data and information shall not relieve contractor of its responsibility for properly estimating the difficulty or cost of successfully performing its scope of work under this contract.
- c) The Contractor shall acquire in its name all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings in the country where the Site is located that are necessary for the performance of the Contract, including, without limitation, visas for the Contractor's and Subcontractor's personnel and entry permits for all imported Contractor's Equipment.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-29-	25.09.2014

- d) The Contractor shall comply with all laws in force in India and the place where the facility is located out. The laws will include all national, provincial, municipal or other laws that affect the performance of the Contract and bind upon the Contractor. The Contractor shall indemnify and hold harmless the Owner from and against any and all liabilities, damages, claims, fines, penalties and expenses of whatever nature arising or resulting from the violation of such laws by the Contractor.

4.18 Owner's Responsibilities

- a) The Owner shall be responsible for acquiring and providing legal and physical possession of the Site and access thereto, and for providing possession of and access to all other areas reasonably required for the proper execution of the Contract, including all requisite rights of way.
- b) The Owner shall acquire and pay for all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings, which such authorities or undertakings require the Owner to obtain them in the Owner's name, are necessary for the execution of the Contract.
- c) If requested by the Contractor, the Owner shall use its best endeavours to assist the Contractor in obtaining in a timely and expeditious manner all permits, approvals and/or licenses necessary for the execution of the Contract from all local, state or national government authorities or public service undertakings that such authorities or undertakings require the Contractor or Subcontractors or the personnel of the Contractor or Subcontractors, as the case may be, to obtain.
- d) The Owner shall be responsible for the continued operation of the Facilities after Completion.

4.19 Taxes & Duties

- a) Excise Duty, Central sales tax (CST), service tax, Value Added Tax (VAT), VAT on Works Contract, other applicable taxes, duties and Cess shall be clearly indicated by the bidder in the price schedules and these taxes shall be considered for bid evaluation. The reimbursement of these taxes shall be on actual subject to the quoted value of these taxes as ceiling corresponding to the base price. Additional liability of taxes and duties arising out of price variation shall be reimbursed against documentary evidence over and above the ceiling (quoted value). Statutory variation in Indian taxes and duties will be dealt with as per the relevant stipulations of the specification.
- b) Except as otherwise specifically provided in the Contract, the Contractor shall bear and pay all Taxes, Duties, Levies and Charges including Entry Tax, Service Tax, if applicable in connection with the Facilities in India and outside India. All taxes, duties & levies on works contract, if any, shall be to the Contractor's account and no separate claim in this regard will be entertained by the Owner.
- c) All taxes, duties and levies including entry tax/octroi (if any) in respect of all components, equipments and material to be dispatched directly from the sub-vendor's works to site shall be to the Contractor's account and no separate claim in this regard will be entertained by the Owner.
- d) In case there is introduction of GST or any other tax in lieu of existing Excise Duty/Service Tax and VAT/ Sales Tax, the contract price will be adjusted for the impact of any differential tax liability subject to documentary evidence. This will be restricted to direct transaction between the owner and contractor, and bought out items directly dispatched from sub-vendor's works to project site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-30-	25.09.2014

- e) Further all taxes, duties and levies including sales tax on works contract, Entry Tax, if any, in respect of civil construction works, erection & commissioning if any and custom duty/sales tax as applicable on the materials used for such construction works shall be to the contractor's account and no separate claim in this regard will be entertained by the Owner. Incidence of Service Tax & cess on any component of the Bid Price shall be to the Contractor's account and bidders shall include Service Tax as applicable at the date seven (7) days prior to the date of bid submission in the bid price. The Contract Price will be adjusted for impact of any change in the rate of service tax or cess on service tax subsequent to this date for direct transactions between the Owner and the Contractor.
- f) If any tax exemptions, reductions, allowances or privileges may be available to the Contractor, the Owner shall use its best endeavours to enable the Contractor to benefit from any such tax savings to the maximum allowable extent.

4.20 Intellectual Property

The copyright in all drawings, documents and other materials containing data and information furnished to the Owner by the Contractor herein shall remain vested in the Contractor or, if they are furnished to the Owner directly or through the Contractor by any third party, including suppliers of materials, the copyright in such materials shall remain vested in such third party. The Owner shall however be free to reproduce all drawings, documents and other material furnished to the Owner for the purpose of the contract including, if required, for operation and maintenance.

4.21 Confidential Information

- a) The Owner and the Contractor shall keep confidential and shall not, without the written consent of the other party hereto, divulge to any third party any documents, data or other information furnished directly or indirectly by the other party hereto in connection with the Contract, whether such information has been furnished prior to, during or following termination of the Contract. Notwithstanding the above, the Contractor may furnish to its Subcontractor(s) such documents, data and other information it receives from the Owner to the extent required for the Subcontractor(s) to perform its work under the Contract, in which event the Contractor shall obtain from such Subcontractor(s) an undertaking of confidentiality similar to that imposed on the Contractor.
- b) The Owner shall not use such documents, data and other information received from the Contractor for any purpose other than the operation and maintenance of the Facilities. Similarly, the Contractor shall not use such documents, data and other information received from the Owner for any purpose other than the design, procurement of Plant and Equipments, construction or such other work and services as are required for the performance of the Contract.
- c) The obligation of a party, shall not apply to that information which
 - now or hereafter enters the public domain through no fault of that party
 - can be proven to have been possessed by that party at the time of disclosure and which was not previously obtained, directly or indirectly, from the other party hereto
 - Otherwise lawfully becomes available to that party from a third party that has no obligation of confidentiality.

4.22 Representatives

- a) Project Manager

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-31-	25.09.2014

If the Project Manager is not named in the Contract, then within fourteen (14) days of the Effective Date, the Owner shall appoint and notify the Contractor in writing of the name of the Project Manager. The Owner may from time to time appoint some other person as the Project Manager in place of the person previously so appointed, and shall give a notice of the name of such other person to the Contractor without delay. The Owner shall take reasonable care to see that no such appointment is made at such a time or in such a manner as to impede the progress of work on the Facilities. The Project Manager shall represent and act for the Owner at all times during the currency of the Contract. All notices, instructions, orders, certificates, approvals and all other communications under the Contract shall be given by the Project Manager, except as herein otherwise provided.

All notices, instructions, information and other communications given by the Contractor to the Owner under the Contract shall be given to the Project Manager, except as herein otherwise provided.

b) Contractor's Representative & Construction Manager

- If the Contractor's Representative is not named in the Contract, then within *[fourteen (14) days]* of the Effective Date, the Contractor shall appoint the Contractor's Representative and shall request the Owner in writing to approve the person so appointed. If the Owner makes no objection to the appointment within *[fourteen (14)]* days, the Contractor's Representative shall be deemed to have been approved. If the Owner objects to the appointment within *[fourteen (14)]* days giving the reason there for, then the Contractor shall appoint a replacement within *[fourteen (14) days]* of such objection.
- The Contractor's Representative shall represent and act for the Contractor at all times during the currency of the Contract and shall give to the Project Manager all the Contractor's notices, instructions, information and all other communications under the Contract. All notices, instructions, information and all other communications given by the Owner or the Project Manager to the Contractor under the Contract shall be given to the Contractor's Representative or, in its absence, its deputy, except as herein otherwise provided. The Contractor shall not revoke the appointment of the Contractor's Representative without the Owner's prior written consent, which shall not be unreasonably withheld. If the Owner consents thereto, the Contractor shall appoint some other person as the Contractor's Representative.
- The Contractor's Representative may, subject to the approval of the Owner (which shall not be unreasonably withheld), at any time delegate to any person any of the powers, functions and authorities vested in him or her. Any such delegation may be revoked at any time. Any such delegation or revocation shall be subject to a prior notice signed by the Contractor's Representative, and shall specify the powers, functions and authorities thereby delegated or revoked. No such delegation or revocation shall take effect unless and until a copy thereof has been delivered to the Owner and the Project Manager.
- From the commencement of installation of the Facilities at the Site until Operational Acceptance, the Contractor's Representative shall appoint a suitable person as the construction manager (hereinafter referred to as "the Construction Manager"). The Construction Manager shall supervise all work done at the Site by the Contractor and shall be present at the Site throughout normal working hours except when on leave, sick or absent for reasons connected with the proper performance of the Contract. Whenever the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-32-	25.09.2014

Construction Manager is absent from the Site, a suitable person shall be appointed to act as his or her deputy.

- The Owner may by notice to the Contractor object to any representative or person employed by the Contractor in the execution of the Contract who, in the reasonable opinion of the Owner, may behave inappropriately, may be incompetent or negligent, or may commit a serious breach of the Site regulations.
- If any representative or person employed by the Contractor is removed.

4.23 Work Program

a) Contractor's Organization

The Contractor shall supply to the Owner and the Project Manager a chart showing the proposed organization to be established by the Contractor for carrying out work on the Facilities. The chart shall include the identities of the key personnel together with the curricula vitae of such key personnel to be employed within *[twenty one (21)]* days of the Effective Date. The Contractor shall promptly inform the Owner and the Project Manager in writing of any revision or alteration of such an organization chart.

b) Program of Performance

Within *[twenty-eight (28)]* days after the date of Notification of Award of Contract, the Contractor shall prepare and submit to the Project Manager a detailed Program of Performance of the Contract, made in the form specified in the SCC and showing the sequence in which it proposes to design, supply, transport, assemble, install and precommissioning the Facilities, as well as the date by which the Contractor reasonably requires that the Owner shall have fulfilled its obligations under the Contract so as to enable the Contractor to execute the Contract in accordance with the program and to achieve Completion and Acceptance of the Facilities in accordance with the Contract. The program so submitted by the Contractor shall accord with the Time Schedule included in Contract Schedule 3 (Time Schedule) to the Form of Contract Agreement and any other dates and periods specified in the Contract. The Contractor shall update and revise the program as and when appropriate or when required by the Project Manager, but without modification in the Times for Completion.

c) Progress Report

The Progress Report shall be in a form acceptable to the Project Manager and shall indicate: (a) percentage completion achieved compared with the planned percentage completion for each activity; and (b) where any activity is behind the program, giving comments and likely consequences and stating the corrective action being taken.

d) Progress of Performance

If at any time the Contractor's actual progress falls behind the program, or it becomes apparent that it will so fall behind, the Contractor shall, at the request of the Owner or the Project Manager, prepare and submit to the Project Manager a revised program, taking into account the prevailing circumstances, and shall notify the Project Manager of the steps being taken to expedite progress so as to attain Completion of the Facilities within the Time for Completion.

e) Work Procedures

The Contract shall be executed in accordance with the Contract Documents and the procedures given in the section on Forms and Procedures of the Contract Documents.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-33-	25.09.2014

If agreed between the Owner and the Contractor, the Contractor may execute the Contract in accordance with its own standard project execution plans and procedures to the extent that they do not conflict with the provisions contained in the Contract.

4.24 Subcontractors and Subvendors

- a) The Contract Agreement specifies major items of supply or services and a list of approved Subcontractors against each item, including vendors. Insofar as no Subcontractors are listed against any such item, the Contractor shall prepare a list of Subcontractors for such item for inclusion in such list. The Contractor may from time to time propose any addition to or deletion from any such list. The Contractor shall submit any such list or any modification thereto to the Owner for its approval in sufficient time so as not to impede the progress of work on the Facilities. Such approval by the Owner for any of the Subcontractors shall not relieve the Contractor from any of its obligations, duties or responsibilities under the Contract.
- b) The Contractor shall select and employ its Subcontractors/Subvendors for such major items from those listed.

4.25 Design and Engineering

- a) Specifications and Drawings

The Contractor shall execute the basic and detailed design and the engineering work in compliance with the provisions of the Contract, or where not so specified, in accordance with good engineering practice. The Contractor shall be responsible for any discrepancies, errors or omissions in the specifications, drawings and other technical documents that it has prepared, whether such specifications, drawings and other documents have been approved by the Project Manager or not, provided that such discrepancies, errors or omissions are not because of inaccurate information furnished in writing to the Contractor by or on behalf of the Owner.

- b) Codes and Standards

Wherever references are made in the Contract to codes and standards in accordance with which the Contract shall be executed, the edition or the revised version of such codes and standards current at the date *[twenty eight (28)]* days prior to date of bid submission shall apply unless otherwise specified. During Contract execution, any changes in such codes and standards shall be applied after approval by the Owner.

- c) Approval/Review of Technical Documents by Project Manager

The Contractor shall prepare (or cause its Subcontractors to prepare) and furnish to the Project Manager the documents for its approval Any part of the Facilities covered by or related to the documents to be approved by the Project Manager shall be executed only after the Project Manager's approval thereof.

Project Manager shall either return one copy thereof to the Contractor with its approval endorsed thereon or shall notify the Contractor in writing of its disapproval thereof and the reasons there for and the modifications that the Project Manager proposes. The Project Manager shall not disapprove any document, except on the grounds that the document does not comply with some specified provision of the Contract or that it is contrary to good engineering practice. The procedure for submission of the documents by the Contractor and their approval by the Project Manager shall be discussed and finalised with the Contractor.

If any dispute or difference occurs between the Owner and the Contractor in connection with or arising out of the disapproval by the Project Manager of any document and/or any modification(s) thereto that cannot be settled between the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-34-	25.09.2014

parties within a reasonable period, then such dispute or difference may be referred to an Adjudicator. If such dispute or difference is referred to an Adjudicator, the Project Manager shall give instructions as to whether and if so, how, performance of the Contract is to proceed. The Contractor shall proceed with the Contract in accordance with the Project Manager's instructions, provided that if the Adjudicator upholds the Contractor's view on the dispute, then the Contractor shall be reimbursed by the Owner for any additional costs incurred by reason of such instructions and shall be relieved of such responsibility or liability in connection with the dispute and the execution of the instructions as the Adjudicator shall decide, and the Time for Completion shall be extended accordingly.

The Project Manager's approval, with or without modification of the document furnished by the Contractor, shall not relieve the Contractor of any responsibility or liability imposed upon it by any provisions of the Contract except to the extent that any subsequent failure results from modifications required by the Project Manager.

4.26 Procurement

a) Plant and Equipment

The Contractor shall manufacture or procure and transport all the Plant and Equipments in an expeditious and orderly manner to the Site.

b) Transportation

The Contractor shall at its own risk and expense transport all the Plant and Equipments and the Contractor's Equipments to the Site by the mode of transport that the Contractor judges most suitable under all the circumstances. Unless otherwise provided in the Contract, the Contractor shall be entitled to select any safe mode of transport operated by any person to carry the Plant and Equipments and the Contractor's Equipment. Upon dispatch of each shipment of the Plant and Equipments and the Contractor's Equipments, the Contractor shall notify the Owner by telex, cable, telefax, facsimile or Electronic Data Interchange (EDI) of the description of the Plant and Equipments and of the Contractor's Equipments, the point and means of dispatch, and the estimated time and point of arrival in the country where the Site is located, if applicable, and at the Site. The Contractor shall furnish the Owner with relevant shipping documents to be agreed upon between the parties.

The Contractor shall be responsible for obtaining, if necessary, approvals from the authorities for transportation of the Plant and Equipments and the Contractor's Equipments to the Site. The Owner shall use its best endeavours in a timely and expeditious manner to assist the Contractor in obtaining such approvals, if requested by the Contractor. The Contractor shall indemnify and hold harmless the Owner from and against any claim for damage to roads, bridges or any other traffic facilities that may be caused by the transport of the Plant and Equipments and the Contractor's Equipments to the Site.

4.27 Installation

a) Setting Out/Supervision/Labour

Bench Mark: The Contractor shall be responsible for the true and proper setting-out of the Facilities in relation to bench marks, reference marks and lines provided to it in writing by or on behalf of the Owner.

If, at any time during the progress of installation of the Facilities, any error shall appear in the position, level or alignment of the Facilities, the Contractor shall forthwith notify the Project Manager of such error and, at its own expense,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-35-	25.09.2014

immediately rectify such error to the reasonable satisfaction of the Project Manager. If such error is based on incorrect data provided in writing by or on behalf of the Owner, the expense of rectifying the same shall be borne by the Owner.

Contractor's Supervision: The Contractor shall give or provide all necessary superintendence during the installation of the Facilities, and the Construction Manager or its deputy shall be constantly on the Site to provide full time superintendence of the installation. The Contractor shall provide and employ only technical personnel who are skilled and experienced in their respective callings and supervisory staff who are competent to adequately supervise the work at hand.

The Contractor shall provide and employ on the Site in the installation of the Facilities such skilled, semi-skilled and unskilled labour as is necessary for the proper and timely execution of the Contract. The Contractor is encouraged to use local labour that has the necessary skills. Unless otherwise provided in the Contract, the Contractor shall be responsible for the recruitment, transportation, accommodation and catering of all labour, local or expatriate, required for the execution of the Contract and for all payments in connection therewith.

The Contractor shall at its own expense provide the means of repatriation to all of its and its Subcontractor's personnel employed on the Contract at the Site to their various home countries. It shall also provide suitable temporary maintenance of all such persons from the cessation of their employment on the Contract to the date programmed for their departure. In the event that the Contractor defaults in providing such means of transportation and temporary maintenance, the Owner may provide the same to such personnel and recover the cost of doing so from the Contractor.

The Contractor shall, in all dealings with its labour and the labour of its Subcontractors currently employed on or connected with the Contract, pay due regard to all recognized festivals, official holidays, religious or other customs and all local laws and regulations pertaining to the employment of labour.

b) Contractor's Equipments

All Contractors' Equipments brought by the Contractor onto the Site shall be deemed to be intended to be used exclusively for the execution of the Contract. The Contractor shall not remove the same from the Site without the Project Manager's consent that such Contractor's Equipments are no longer required for the execution of the Contract. Unless otherwise specified in the Contract, upon completion of the Facilities, the Contractor shall remove from the Site all Equipments brought by the Contractor onto the Site and any surplus materials remaining thereon.

The Owner will, if requested, use its best endeavours to assist the Contractor in obtaining any local, state or national government permission required by the Contractor for the export of the Contractor's Equipments imported by the Contractor for use in the execution of the Contract that is no longer required for the execution of the Contract.

c) Site Regulations and Safety

The Owner and the Contractor shall establish Site regulations setting out the rules to be observed in the execution of the Contract at the Site and shall comply therewith. The Contractor shall prepare and submit to the Owner, with a copy to the Project Manager, proposed Site regulations for the Owner's approval, which approval shall not be unreasonably withheld.

Such Site regulations shall include, but shall not be limited to, rules in respect of security, safety of the Facilities, gate control, sanitation, medical care, and fire prevention.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-36-	25.09.2014

d) Opportunities for Other Contractors

The Contractor shall, upon written request from the Owner or the Project Manager, give all reasonable opportunities for carrying out the work to any other contractors employed by the Owner on or near the Site. If the Contractor, upon written request from the Owner or the Project Manager, makes available to other contractors any roads or ways the maintenance for which the Contractor is responsible, permits the use by such other contractors of the Contractor's Equipments, or provides any other service of whatsoever nature for such other contractors, the Owner shall fully compensate the Contractor for any loss or damage caused or occasioned by such other contractors in respect of any such use or service, and shall pay to the Contractor reasonable remuneration for the use of such equipments or the provision of such services.

The Contractor shall also so arrange to perform its work as to minimize, to the extent possible, interference with the work of other contractors. The Project Manager shall determine the resolution of any difference or conflict that may arise between the Contractor and other contractors and the workers of the Owner in regard to their work.

The Contractor shall notify the Project Manager promptly of any defects in the other Contractors' work that come to its notice, and that could affect the Contractor's work. The Project Manager shall determine the corrective measures, if any, required to rectify the situation after inspection of the Facilities. Decisions made by the Project Manager shall be binding on the Contractor.

e) Emergency Work

If, by reason of an emergency arising in connection with and during the execution of the Contract, any protective or remedial work is necessary as a matter of urgency to prevent damage to the Facilities, the Contractor shall immediately carry out such work.

If the Contractor is unable or unwilling to do such work immediately, the Owner may do or cause such work to be done as the Owner may determine is necessary in order to prevent damage to the Facilities. In such event the Owner shall, as soon as practicable after the occurrence of any such emergency, notify the Contractor in writing of such emergency, the work done and the reasons there for. If the work done or caused to be done by the Owner is work that the Contractor was liable to do at its own expense under the Contract, the reasonable costs incurred by the Owner in connection therewith shall be paid by the Contractor to the Owner. Otherwise, the cost of such remedial work shall be borne by the Owner.

f) Site Clearance

Site Clearance in Course of Performance: In the course of carrying out the Contract, the Contractor shall keep the Site reasonably free from all unnecessary obstruction, store or remove any surplus materials, clear away any wreckage, rubbish or temporary works from the Site, and remove any Contractor's Equipments no longer required for execution of the Contract. **Clearance of Site after Completion:** After Completion of all parts of the Facilities, the Contractor shall clear away and remove all wreckage, rubbish and debris of any kind from the Site, and shall leave the Site and Facilities clean and safe.

g) Watching and Lighting

The Contractor shall provide and maintain at its own expense all lighting, fencing, and watching when and where necessary for the proper execution and the protection

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-37-	25.09.2014

of the Facilities, or for the safety of the owners and occupiers of adjacent property and for the safety of the public as per specification.

4.28 Testing & Inspections

- a) The Contractor shall at its own expense carry out at the place of manufacture and/or on the Site all such tests and/or inspections of the Plant and Equipments and any part of the Facilities as are specified in the Contract.
- b) The Owner and the Project Manager or their designated representatives shall be entitled to attend the aforesaid test and/ or inspection, provided that the Owner shall bear all costs and expenses incurred in connection with such attendance including, but not limited to, all travelling and board and lodging expenses.
- c) Whenever the Contractor is ready to carry out any such test and/or inspection, the Contractor shall give a reasonable advance notice of such test and/or inspection and of the place and time thereof to the Project Manager. The Contractor shall obtain from any relevant third party or manufacturer any necessary permission or consent to enable the Owner and the Project Manager (or their designated representatives) to attend the test and/or inspection.
- d) The Contractor shall provide the Project Manager with a certified report of the results of any such test and/or inspection. If the Owner or Project Manager (or their designated representatives) fails to attend the test and/or inspection, or if it is agreed between the parties that such persons shall not do so, then the Contractor may proceed with the test and/or inspection in the absence of such persons, and may provide the Project Manager with a certified report of the results thereof.
- e) The Project Manager may require the Contractor to carry out any test and/or inspection not required by the Contract, provided that the Contractor's reasonable costs and expenses incurred in the carrying out of such test and/or inspection shall be added to the Contract Price. Further, if such test and/or inspection impede the progress of work on the Facilities and/or the Contractor's performance of its other obligations under the Contract, due allowance will be made in respect of the Time for Completion and the other obligations so affected.
- f) If any Plant and Equipment or any part of the Facilities fails to pass any test and/or inspection, the Contractor shall either rectify or replace such Plant and Equipment or part of the Facilities and shall repeat the test and/or inspection upon giving a notice.
- g) If any dispute or difference of opinion shall arise between the parties in connection with or arising out of the test and/or inspection of the Plant and Equipments or part of the Facilities that cannot be settled between the parties within a reasonable period of time, it may be referred to the Adjudicator.
- h) The Contractor shall afford the Owner and the Project Manager, at the Owner's expense, access at any reasonable time to any place where the Plant and Equipments are being manufactured or the Facilities are being installed, in order to inspect the progress and the manner of manufacture or installation, provided that the Project Manager shall give the Contractor a reasonable prior notice.
- i) The Contractor agrees that neither the execution of a test and/ or inspection of Plant and Equipments or any part of the Facilities, nor the witnessing of any test by the Owner, nor the issuance of any test certificate shall relieve the Contractor of any obligation under this Contract.
- j) No part of the Facilities or foundations shall be covered up on the Site without the Contractor carrying out any test and/or inspection required under the Contract. The Contractor shall give a reasonable notice to the Project Manager whenever any such part of the Facilities or foundations is ready or about to be ready for test and/or

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-38-	25.09.2014

inspection; such test and/or inspection and notice thereof shall be subject to the requirements of the Contract.

- k) The Contractor shall uncover any part of the Facilities or foundations, or shall make openings in or through the same as the Project Manager may from time to time require at the Site, and shall reinstate and make good such part or parts.

4.29 Completion of the Facilities

- a) As soon as the Facilities or any part thereof has, in the opinion of the Contractor, been completed operationally and structurally and put in a tight and clean condition as specified in the Technical Specifications, excluding minor items not materially affecting the operation or safety of the Facilities, the Contractor shall so notify the Owner in writing.
- b) The Owner shall supply the operating and maintenance personnel as specified in the Form of Contract Agreement for Pre-commissioning of the Facilities or any part thereof.
- c) As soon as all works in respect of Pre-commissioning are completed and, in the opinion of the Contractor, the Facilities or any part thereof is ready for Commissioning, the Contractor shall commence Commissioning as per procedures stipulated in Technical Specifications, and as soon as Commissioning is satisfactorily completed, the Contractor shall so notify the Project Manager in writing.
- d) If the Project Manager notifies the Contractor of any defects and/ or deficiencies, the Contractor shall then correct such defects and/or deficiencies.

If the Project Manager is satisfied that the Facilities or that part thereof have reached Completion, the Project Manager shall, within **[seven (7)]** days after receipt of the Contractor's notice, issue a Completion Certificate stating that the Facilities or that part thereof have reached Completion as at the date of the Contractor's notice.

If the Project Manager is not so satisfied, then it shall notify the Contractor in writing of any defects and/or deficiencies within **[seven (7)]** days after receipt of the Contractor's repeated notice, and the above procedure shall be repeated.

- e) If the Project Manager fails to issue the Completion Certificate and fails to inform the Contractor of any defects and/or deficiencies within **[seven (7)]** days after receipt of the Contractor's notice, or if the Owner makes use of the Facilities or part thereof, then the Facilities or that part thereof shall be deemed to have reached Completion as of the date of the Contractor's notice, or as of the Owner's use of the Facilities, as the case may be.
- f) As soon as possible after Completion, the Contractor shall complete all outstanding minor items so that the Facilities are fully in accordance with the requirements of the Contract, failing which the Owner will undertake such completion and deduct the costs thereof from any monies owing to the Contractor.
- g) Upon Completion, the Owner shall be responsible for the care and custody of the Facilities or the relevant part thereof, together with the risk of loss or damage thereto, and shall thereafter take over the Facilities or the relevant part thereof.

4.30 Commissioning & Operation Acceptance

- a) Commissioning

Commissioning of the Facilities or any part thereof Acceptance shall be completed by the Contractor as per procedures detailed in the Technical Specifications. The Contractor shall, unless otherwise specified in Contract/ Tender Specifications, supply utilities, lubricants, chemicals, catalysts, facilities, services and other matters required for Commissioning.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-39-	25.09.2014

b) Guarantee Test

The Guarantee Tests (and repeats thereof) shall be conducted by the Contractor after Commissioning of the Facilities or the relevant part thereof to ascertain whether the Facilities or the relevant part can attain the Functional Guarantees specified in the Contract Documents. The Contractor's and Project Manager's advisory personnel shall attend the Guarantee Test. The Owner shall promptly provide the Contractor with such information as the Contractor may reasonably require in relation to the conduct and results of the Guarantee Tests (and any repeats thereof). If for reasons not attributable to the Contractor, the Guarantee Tests of the Facilities or the relevant part thereof cannot be successfully completed within the period from the date of Completion, specified in the SCC or any other period agreed upon by the Owner and the Contractor, the Contractor shall be deemed to have fulfilled its obligations with respect to the Functional Guarantees.

c) Operational Acceptance

Operational Acceptance shall occur in respect of the Facilities or any part thereof when

- the Guarantee Tests have been successfully completed and the Functional Guarantees are met; or
- The Guarantee Tests have not been successfully completed or has not been carried out for reasons not attributable to the Contractor within the period from the date of Completion specified in the SCC or any other agreed upon period as specified in GCC.
- The Contractor may give a notice to the Project Manager requesting the issue of an Operational Acceptance Certificate in respect of the Facilities or the part thereof specified in such notice as at the date of such notice.
- The Project Manager shall, after consultation with the Owner, and within forty five (45) days after receipt of the Contractor's notice, issue an Operational Acceptance Certificate. If within *[forty five (45)]* days after receipt of the Contractor's notice, the Project Manager fails to issue the Operational Acceptance Certificate or fails to inform the Contractor in writing of the justifiable reasons why the Project Manager has not issued the Operational Acceptance Certificate, the Facilities or the relevant part thereof shall be deemed to have been accepted as at the date of the Contractor's said notice.

d) Partial Acceptance

If the Contract specifies that Completion, Commissioning and Guarantee Tests shall be carried out in respect of parts of the Facilities, the provisions relating to Completion and Commissioning including the Guarantee Tests shall apply to each such part of the Facilities individually, and the Operational Acceptance Certificate shall be issued accordingly for each such part of the Facilities. If a part of the Facilities comprises facilities such as buildings, for which no Commissioning or Guarantee Tests are required, then the Project Manager shall issue the Operational Acceptance Certificate for such facility when it attains Completion, provided that the Contractor shall thereafter complete any outstanding minor items that are listed in the Operational Acceptance Certificate.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-40-	25.09.2014

4.31 Completion Time and Liquidated Damage

- a) Completion Time Period
The Contractor guarantees that it shall attain Completion of the Facilities (or a part for which a separate time for completion is specified in the SCC) within the Time for Completion specified in the SCC.
- b) If the Contractor fails to attain Completion of the Facilities or any part thereof within the Time for Completion, the Contractor shall pay to the Owner liquidated damages in the amount computed at the rates specified in the SCC. The aggregate amount of such liquidated damages shall in no event exceed the amount specified as "Maximum" in the SCC.
However, the payment of liquidated damages shall not in any way relieve the Contractor from any of its obligations to complete the Facilities or from any other obligations and liabilities of the Contractor under the Contract.
- c) No bonus will be given for earlier completion of the facilities or part thereof.

4.32 Defects Liability

- a) The Contractor warrants that the Facilities or any part thereof shall be free from defects in the design, engineering, materials and workmanship of the Plant and Equipments supplied and of the work executed.
- b) The Defects Liability Period shall be *[eighteen (18)]* months from the date of Completion of the Facilities (or any part thereof) or *[twelve (12)]* months from the date of Operational Acceptance of the Facilities (or any part thereof).
If during the Defects Liability Period any defect should be found in the design, engineering, materials and workmanship of the Plant and Equipments supplied or of the work executed by the Contractor, the Contractor shall promptly, in consultation and agreement with the Owner regarding appropriate remedying of the defects, and at its cost, repair, replace or otherwise make good (as the Contractor shall, at its discretion, determine) such defect as well as any damage to the Facilities caused by such defect. The Contractor shall not be responsible for the repair, replacement or making good of any defect or of any damage to the Facilities arising out of or resulting from any of the following causes:
 - improper operation or maintenance of the Facilities by the Owner
 - operation of the Facilities outside specifications provided in the Contract
 - Normal wear and tear.
- c) The Owner shall give the Contractor a notice stating the nature of any such defect together with all available evidence thereof, promptly following the discovery thereof. The Owner shall afford all reasonable opportunity for the Contractor to inspect any such defect.
- d) The Owner shall afford the Contractor all necessary access to the Facilities and the Site to enable the Contractor to perform its obligations.
- e) If the repair, replacement or making good is of such a character that it may affect the efficiency of the Facilities or any part thereof, the Owner may give to the Contractor a notice requiring that tests of the defective part of the Facilities shall be made by the Contractor immediately upon completion of such remedial work, whereupon the Contractor shall carry out such tests.
- f) If the Contractor fails to commence the work necessary to remedy such defect or any damage to the Facilities caused by such defect within a reasonable time (which shall in no event be considered to be less than fifteen (15) days), the Owner may,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-41-	25.09.2014

following notice to the Contractor, proceed to do such work, and the reasonable costs incurred by the Owner in connection therewith shall be paid to the Owner by the Contractor or may be deducted by the Owner from any monies due to the Contractor or claimed under the Performance Security.

- g) If the Facilities or any part thereof cannot be used by reason of such defect and/or making good of such defect, the Defects Liability Period of the Facilities or such part, as the case may be, shall be extended by a period equal to the period during which the Facilities or such part cannot be used by the Owner because of any of the aforesaid reasons. Upon correction of the defects in the Facilities or any part thereof by repair/replacement, such repair/replacement shall have the Defects Liability Period extended by a period of *[twelve (12) month]* from the time such replacement/repair of the Facilities or any part thereof.

4.33 Functional Guarantees

The Contractor guarantees that during the Guarantee Tests, the Facilities and all parts thereof shall attain the Functional Guarantees as per the Contract. If, for reasons attributable to the Contractor, Functional Guarantees are not met either in whole or in part, the Contractor shall, within a mutually agreed time, at its cost and expense make such changes, modifications and/or additions to the Plant or any part thereof as may be necessary to meet such Guarantees. The Contractor shall notify the Owner upon completion of the necessary changes, modifications and/or additions, and shall seek the Owner's consent to repeat the Guarantee Test. If the specified Functional Guarantees are not established even during the repeat of the Guarantee Tests, the Owner may at its option, either reject the plant and equipment and recover from the Contractor payments already made or Accept the equipment/system/plant after levying Liquidated Damages as specified.

4.34 Patents Indemnity

The Contractor shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, which the Owner may suffer as a result of any infringement or alleged infringement of any patent, utility model, registered design, trademark, copyright or other intellectual property right registered or otherwise existing at the date of the Contract by reason of: (a) the installation of the Facilities by the Contractor or the use of the such Facilities.

4.35 Limitation of liability

Except in cases of criminal negligence or wilful misconduct by the Contractor, the aggregate liability of the Contractor to the Owner, whether under the Contract, in tort or otherwise, shall not exceed the total Contract Price, provided that this limitation shall not apply to any obligation of the Contractor to indemnify the Owner with respect to patent infringement.

Except in cases of criminal negligence or wilful misconduct by the Contractor, the Contractor shall not be liable to the Owner, whether in contract, tort, or otherwise, for any indirect or consequential loss or damage, loss of use, loss of production, or loss of profits or interest costs, provided that this exclusion shall not apply to any obligation of the Contractor to pay liquidated damages to the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-42-	25.09.2014

4.36 Transfer of Ownership

Ownership of the Plant and Equipments (including spare parts) to be imported into India shall be transferred to the Owner upon loading on to the mode of transport to be used to convey the Plant and Equipments from the country of origin to that country.

Ownership of the Plant and Equipments (including spare parts) procured from within India shall be transferred to the Owner when the Plant and Equipments including spares are loaded on to the mode of transport to be used to convey the Plant and Equipments including spares from the works to the site and upon endorsement of the despatch documents in favour of the Owner. Ownership of the Contractor's Equipments used by the Contractor and its Subcontractors in connection with the Contract shall remain with the Contractor or its Subcontractors. Ownership of any Plant and Equipments in excess of the requirements for the Facilities shall revert to the Contractor upon Completion of the Facilities or at such earlier time when the Owner and the Contractor agree that the Plant and Equipments in question are no longer required for the Facilities, provided quantity of any Plant and Equipments specifically stipulated in the Contract shall be the property of the Owner whether or not incorporated in the Facilities. Notwithstanding the transfer of ownership of the Plant and Equipments, the responsibility for care and custody thereof together with the risk of loss or damage shall remain with the Contractor until Completion of the Facilities.

4.37 Care of Facilities

The Contractor shall be responsible for the care and custody of the Facilities or any part thereof until the date of Completion of the Facilities, where the Contract provides for Completion of the Facilities in parts, until the date of Completion of the relevant part, and shall make good at its own cost any loss or damage that may occur to the Facilities or the relevant part thereof from any cause whatsoever during such period. The Contractor shall also be responsible for any loss or damage to the Facilities caused by the Contractor or its Subcontractors in the course of any work carried out.

4.38 Loss of or Damage to Property; Accident or Injury; Indemnification

The Contractor shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, in respect of the death or injury of any person or loss of or damage to any property (other than the Facilities whether accepted or not), arising in connection with the supply and installation of the Facilities and by reason of the negligence of the Contractor or its Subcontractors, or their employees, officers or agents, except any injury, death or property damage caused by the negligence of the Owner, its contractors, employees, officers or agents.

4.39 Insurance

- a) The Contractor shall at its expense take out and maintain in effect, or cause to be taken out and maintained in effect, during the performance of the Contract, the insurances set forth below in the sums and with the deductibles and other conditions as specified. The identity of the insurers and the form of the policies shall be subject to the approval of the Owner, who should not unreasonably withhold such approval.
 - Cargo Insurance during Transport:-Covering loss or damage occurring while in transit from the Contractor's or Subcontractor's works or stores until arrival at the Site, to the Plant and Equipments (including spare parts thereof) and to the Contractor's Equipments.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors-Balance of Plant Volume-I	-43-	25.09.2014

- Installation All Risks Insurance:-Covering physical loss or damage to the Facilities at the Site, occurring prior to Completion of the Facilities, with an extended maintenance coverage for the Contractor's liability in respect of any loss or damage occurring during the Defects Liability Period while the Contractor is on the Site for the purpose of performing its obligations during the Defects Liability Period.
 - Third Party Liability Insurance: - Covering bodily injury or death suffered by third parties (including the Owner's personnel) and loss of or damage to property occurring in connection with the supply and installation of the Facilities.
 - Automobile Liability Insurance:-Covering use of all vehicles used by the Contractor or its Subcontractors (whether or not owned by them) in connection with the execution of the Contract.
 - Workers' Compensation:-In accordance with the statutory requirements applicable in any country where the Contract or any part thereof is executed.
 - Other Insurances Such other insurances as may be specifically agreed upon by the parties.
- b) The Owner shall be named as co-insured under all insurance policies taken out by the Contractor pursuant except for the Third Party Liability, Workers' Compensation and Owner's Liability Insurances, and the Contractor's Subcontractors shall be named as co-insured's under all insurance policies taken out by the Contractor except for the Cargo Insurance During Transport, Workers' Compensation and Owner's Liability Insurances. All insurers' rights of subrogation against such co-insured's for losses or claims arising out of the performance of the Contract shall be waived under such policies.
- c) The Form of Contract Agreement, deliver to the Owner certificates of insurance (or copies of the insurance policies) as evidence that the required policies are in full force and effect. The certificates shall provide that no less than twenty one (21) days' notice shall be given to the Owner by insurers prior to cancellation or material modification of a policy.
- d) The Contractor shall ensure that, where applicable, its Subcontractor(s) shall take out and maintain in effect adequate insurance policies for their personnel and vehicles and for work executed by them under the Contract, unless such Subcontractors are covered by the policies taken out by the Contractor.
- e) The Owner shall at its expense take out and maintain in effect during the performance of the Contract those insurances specified.
- f) the Owner may take out and maintain in effect any such insurances and may from time to time deduct from any amount due the Contractor under the Contract any premium that the Owner shall have paid to the insurer, or may otherwise recover such amount as a debt due from the Contractor. If the Owner fails to take out and/or maintain in effect the insurances the Contractor may take out and maintain in effect any such insurances and may from time to time deduct from any amount due the Owner under the Contract any premium that the Contractor shall have paid to the insurer, or may otherwise recover such amount as a debt due from the Owner. If the Contractor fails to or is unable to take out and maintain in effect any such insurances, the Contractor shall nevertheless have no liability or responsibility towards the Owner, and the Contractor shall have full recourse against the Owner for any and all liabilities of the Owner herein.
- g) The Owner shall give to the Contractor all such reasonable assistance as may be required by the Contractor. With respect to insurance claims in which the Owner's interest is involved, the Contractor shall not give any release or make any

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-44-	25.09.2014

compromise with the insurer without the prior written consent of the Owner. With respect to insurance claims in which the Contractor's interest is involved, the Owner shall not give any release or make any compromise with the insurer without the prior written consent of the Contractor.

- h) Wherever total damages/loss of equipments/materials, would occur, the Contractor will be entitled to payment of all payments received from the underwriters except the following amounts:
- The amount paid to the Contractor under the Contract in respect of equipments/materials damaged/lost (excluding the pro-rata initial advance) but including the entire amount of escalation, if any, already paid to the Contractor.
 - Custom Duties and taxes which have already been paid by the Owner.
 - In case of damage to any equipments/materials during any stage, the Contractor upon rectification of the damaged equipment to the satisfaction of the Owner shall be paid to the extent of full claims settled by the underwriters.
- i) All the Plants & Equipment being supplied by the Owner free of cost for installation of the equipment, cabling, earthing and lightning protection etc. by the Contractor, covered by this specification shall be kept insured by the Contractor against loss, damage, theft, pilferage, fire etc. from the point of unloading at Site up to the time of taking over by the Owner including handling, in plant transportation, storage, installation, testing and commissioning, etc. and the Contractor shall be fully responsible for making good of any loss or damage at his own cost within a reasonable time as mutually agreed upon by the Owner and the Contractor. Any loss/damage shall be brought to the Owner's notice immediately. The premium paid by the Contractor to the Insurance Company for such insurance shall be reimbursed by the Owner to the Contractor at actual against documentary proof to be furnished by the Contractor. The Contractor shall obtain competitive quotation for such insurance and shall take prior approval from the Owner before taking the insurance. The insurable value of the equipment being procured by the Owner will be intimated to the Contractor for the purpose of insurance.
- It will be the responsibility of the Contractor to lodge, pursue and settle all claims with the Insurance Company in case of any damage, loss, theft, pilferage, fire, etc. and the Owner shall be kept informed about it. The losses, if any, will have to be borne by the Contractor, if the claims are not lodged and pursued properly or in the time or if the same are not settled by the Insurance Company.

4.40 Change in Laws & Regulation

- a) If, after the date **[seven (7)]** days prior to the date of Bid submission, in India, any law, regulation, ordinance, order or by-law having the force of law is enacted, promulgated, abrogated or changed (which shall be deemed to include any change in interpretation or application by the competent authorities) that subsequently affects the costs and expenses of the Contractor and/or the Time for Completion, the Contract Price shall be correspondingly increased or decreased, and/or the Time for Completion shall be reasonably adjusted to the extent that the Contractor has thereby been affected in the performance of any of its obligations under the Contract. However, these adjustments would be restricted to direct transactions between the Owner and the Contractor and not on procurement of raw materials, intermediary components etc. by the Contractor. Notwithstanding the foregoing, such additional or reduced costs shall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-45-	25.09.2014

not be separately paid or credited if the same has already been accounted for in the price adjustment provisions wherever applicable.

4.41 Force Majeure

- (a) Force Majeure" shall mean any event beyond the reasonable control of the Owner or of the Contractor, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected. Force Majeure events include Acts of God, Acts of Government, war, sabotage, riots, civil commotion, revolution, flood, earthquake, cyclone, fire, epidemic etc.
- (b) If either party is prevented, hindered or delayed from or in performing any of its obligations under the Contract by an event of Force Majeure, then it shall notify the other in writing of the occurrence of such event and the circumstances thereof within *[fourteen (14)]* days after the occurrence of such event.
- (c) The party who has given such notice shall be excused from the performance or punctual performance of its obligations under the Contract for so long as the relevant event of Force Majeure continues and to the extent that such party's performance is prevented, hindered or delayed.
- (d) The party or parties affected by the event of Force Majeure shall use reasonable efforts to mitigate the effect thereof upon its or their performance of the Contract and to fulfil its or their obligations under the Contract, but without prejudice to either party's right.
- (e) No delay or non-performance by either party hereto caused by the occurrence of any event of Force Majeure shall
 - constitute a default or breach of the Contract
 - to any claim for damages or additional cost or expense occasioned thereby
 if and to the extent that such delay or non-performance is caused by the occurrence of an event of Force Majeure.
- (f) If the performance of the Contract is substantially prevented, hindered or delayed for a single period of more than *[sixty (60)]* days or an aggregate period of more than one hundred and *[twenty (120)]* days on account of one or more events of Force Majeure during the currency of the Contract, the parties will attempt to develop a mutually satisfactory solution.
- (g) Force Majeure shall not apply to any obligation of the Owner to make payments to the Contractor herein.

4.42 Change in the Facilities

(a) Introducing a Change

- The Owner shall have the right to propose, and subsequently require, the Contractor during the performance of the Contract to make any change, modification, addition or deletion to, in or from the Facilities (hereinafter called "Change"), provided that such Change falls within the general scope of the Facilities and does not constitute unrelated work and that it is technically practicable, taking into account both the state of advancement of the Facilities and the technical compatibility of the Change envisaged with the nature of the Facilities as specified in the Contract.
- The Contractor may from time to time during its performance of the Contract propose to the Owner (with a copy to the Project Manager) any Change that the Contractor considers necessary or desirable to improve the quality, efficiency or safety of the Facilities. This includes any additional scope of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-46-	25.09.2014

work that the contractor thinks is essential for achieving the minimum performance level specified in the SCC or the Contract. The Owner may at its discretion approve or reject any Change proposed by the Contractor.

- No change made necessary because of any default of the Contractor in the performance of its obligations under the Contract shall be deemed to be a Change, and such change shall not result in any adjustment of the Contract Price or the Time for Completion.

(b) Changes Originating from Owner

- If the Owner proposes a Change, it shall send to the Contractor a “Request for Change Proposal,” requiring the Contractor to prepare and furnish to the Project Manager as soon as reasonably practicable a “Change Proposal,” which shall include the following:
 - ✓ brief description of the Change
 - ✓ effect on the Time for Completion
 - ✓ estimated Cost of the Change
 - ✓ effect on Functional Guarantees (if any)
 - ✓ effect on any other provisions of the Contract.
- The pricing of any Change shall, as far as practicable, be calculated in accordance with the rates and prices included in the Contract. If the rates and prices of any change are not available in the Contract, the parties thereto shall agree on specific rates for the valuation of the Change.
- If before or during the preparation of the Change Proposal it becomes apparent that the aggregate effect of compliance therewith and with all other Change Orders that have already become binding upon the Contractor to increase or decrease the Contract Price as originally set forth in the Contract Agreement by more than fifteen (15) percent, the Contractor may give a written notice of objection thereto prior to furnishing the Change Proposal as aforesaid. If the Owner accepts the Contractor’s objection, the Owner and the Contractor shall agree on specific rates for valuation of the change.
- Upon receipt of the Change Proposal, the Owner and the Contractor shall mutually agree upon all matters therein contained including agreement on rates if such rates are not available in the Contract or if the limit of 15% set forth has been exceeded. Within *fourteen (14)* days after such agreement, the Owner shall, if it intends to proceed with the Change, issue the Contractor with a Change Order.
- If the Owner is unable to reach a decision within *fourteen (14)* days, it shall notify the Contractor with details of when the Contractor can expect a decision.
- If the Owner decides not to proceed with the Change for whatever reason, it shall, within the said period of *fourteen (14)* days, notify the Contractor accordingly.
- If the Owner and the Contractor cannot reach agreement on the price for the Change, an equitable adjustment to the Time for Completion, or any other matters identified in the Change Proposal, the Owner may nevertheless instruct the Contractor to proceed with the Change by issue of a “Pending Agreement Change Order.”

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-47-	25.09.2014

Upon receipt of a Pending Agreement Change Order, the Contractor shall immediately proceed with effecting the Changes covered by such Order. The parties shall thereafter attempt to reach agreement on the outstanding issues under the Change Proposal.

(c) Changes Originating from Contractor

- The Contractor shall submit to the Project Manager a written "Application for Change Proposal," giving reasons for the proposed Change and including the information. Upon receipt of the Application for Change Proposal, the parties shall follow the procedures indicated above for "Request for Change Proposal."

4.43 Extension of Time for Completion

- (a) The Time(s) for Completion specified in the SCC shall be extended if the Contractor is delayed or impeded in the performance of any of its obligations under the Contract by reason of any of the following:
- Any Change in the Facilities or
 - any occurrence of Force Majeure or
 - any suspension order given by the Owner or reduction in the rate of progress or
 - any changes in laws and regulations or
 - any default or breach of the Contract by the Owner, or any activity, act or omission of any other contractors employed by the Owner or
 - any other matter specifically mentioned in the Contract;
- By such period as shall be fair and reasonable in all the circumstances and as shall fairly reflect the delay or impediment sustained by the Contractor.
- (b) Except where otherwise specifically provided in the Contract, the Contractor shall submit to the Project Manager a notice of a claim for an extension of the Time for Completion, together with particulars of the event or circumstance justifying such extension as soon as reasonably practicable after the commencement of such event or circumstance. As soon as reasonably practicable after receipt of such notice and supporting particulars of the claim, the Owner and the Contractor shall agree upon the period of such extension.
- (c) The Contractor shall at all times use its reasonable efforts to minimize any delay in the performance of its obligations under the Contract.

4.44 Suspension

- (a) The Owner/ Project Manager may, by notice to the Contractor, order the Contractor to suspend performance of any or all of its obligations under the Contract. Such notice shall specify the obligation of which performance is to be suspended, the effective date of the suspension and the reasons thereof. The Contractor shall thereupon suspend performance of such obligation (except those obligations necessary for the care or preservation of the Facilities) until ordered in writing to resume such performance by the Project Manager/ Owner.

If, by virtue of a suspension order given by the Project Manager/ Owner, other than by reason of the Contractor's default or breach of the Contract, the Contractor's performance of any of its obligations is suspended for an aggregate period of more than *[ninety (90)]* days, then at any time thereafter and provided that at that time such performance is still suspended, the Contractor may give a

LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-48-	25.09.2014

notice to the Project Manager requiring that the Owner shall, within *[twenty eight (28)]* days of receipt of the notice, order the resumption of such performance or request and subsequently order a change, excluding the performance of the suspended obligations from the Contract.

- (b) If the Contractor is unable to carry out any of its obligations under the Contract for any reason attributable to the Owner, including but not limited to the Owner's failure to provide possession of or access to the Site or other areas;

Then the Contractor may by *[fourteen (14)]* days' notice to the Owner suspend performance of all or any of its obligations under the Contract, or reduce the rate of progress. If the Contractor's performance of its obligations is suspended or the rate of progress is reduced, then the Time for Completion shall be extended, and any and all additional costs or expenses incurred by the Contractor as a result of such suspension or reduction shall be paid by the Owner to the Contractor in addition to the Contract Price, except in the case of suspension order or reduction in the rate of progress by reason of the Contractor's default or breach of the Contract.

- (c) During the period of suspension, the Contractor shall not remove from the Site any Plant and Equipment, any part of the Facilities or any Contractor's Equipment, without the prior written consent of the Owner.

4.45 Termination

(a) Termination for Owner's Convenience

The Owner may at any time terminate the Contract for any reason by giving the Contractor a notice of termination. Upon receipt of the notice of termination, the Contractor shall either immediately or upon the date specified in the notice of termination

- (i) cease all further work, except for such work as the Owner may specify in the notice of termination for the sole purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition.
- (ii) terminate all subcontracts, except those to be assigned
- (iii) remove all Contractor's Equipments from the Site, repatriate the Contractor's and its Subcontractors' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition
- (iv) The Contractor, subject to the payment, shall

- ✓ deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination
- ✓ to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Facilities and to the Plant and Equipments as at the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
- ✓ Deliver to the Owner all non-proprietary drawings, specifications and other documents prepared by the Contractor or its Subcontractors as at the date of termination in connection with the Facilities.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-49-	25.09.2014

In the event of termination of the Contract for Owner's convenience, the Owner shall pay to the Contractor the following amounts

- ✓ the Contract Price, attributable to the parts of the Facilities executed by the Contractor as on the date of termination
- ✓ the costs reasonably incurred by the Contractor in the removal of the Contractor's Equipment from the Site and in the repatriation of the Contractor's and its Subcontractors' personnel
- ✓ any amounts to be paid by the Contractor to its Subcontractors in connection with the termination of any subcontracts, including any cancellation charges
- ✓ costs incurred by the Contractor in protecting the Facilities and leaving the Site in a clean and safe condition
- ✓ the additional cost of satisfying other obligations, commitments and claims that the Contractor may in good faith have undertaken with third parties in connection with the Contract.

(b) Termination for Contractor's Default

- (i) The Owner, without prejudice to any other rights or remedies it may possess, may terminate the Contract forthwith in the following circumstances by giving a notice of termination and its reasons thereof to the Contractor:

If the Contractor becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, if the Contractor is a corporation, a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Contractor takes or suffers any other analogous action in consequence of debt

If the Contractor assigns or transfers the Contract or any right or interest therein in violation of the provision.

If the Contractor, in the judgement of the Owner has engaged in corrupt or fraudulent practices in competing for or in executing the Contract.

For the purpose of this Sub Clause:

"corrupt practice" means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution.

"fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Owner and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Owner of the benefits of free and open competition.

- (ii) If the Contractor
- has abandoned or repudiated the Contract
 - has without valid reason failed to commence work on the Facilities promptly the progress of Contract performance for more than *twenty*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-50-	25.09.2014

eight (28)] days after receiving a written instruction from the Owner to proceed

- persistently fails to execute the Contract in accordance with the Contract or persistently neglects to carry out its obligations under the Contract without just cause
- refuses or is unable to provide sufficient materials, services or labor to execute and complete the Facilities in the manner specified in the program at rates of progress that give reasonable assurance to the Owner that the Contractor can attain Completion of the Facilities by the Time for Completion as extended

then the Owner may, without prejudice to any other rights it may possess under the Contract, give a notice to the Contractor stating the nature of the default and requiring the Contractor to remedy the same. If the Contractor fails to remedy or to take steps to remedy the same within *fourteen (14)]* days of its receipt of such notice, then the Owner may terminate the Contract forthwith by giving a notice of termination to the Contractor.

(iii) The Contractor shall, either immediately or upon such date as is specified in the notice of termination,

- cease all further work, except for such work as the Owner may specify in the notice of termination for the sole purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
- terminate all subcontracts, except those to be assigned to the Owner pursuant to paragraph (d) below
- deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination
- to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Works and to the Plant and Equipment as at the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
- Deliver to the Owner all drawings, specifications and other documents prepared by the Contractor or its Subcontractors as at the date of termination in connection with the Facilities.

(iv) The Owner may enter upon the Site, expel the Contractor, and complete the Facilities itself or by employing any third party. The Owner may, to the exclusion of any right of the Contractor over the same, take over and use with the payment of a fair rental rate to the Contractor, with all the maintenance costs to the account of the Owner and with an indemnification by the Owner for all liability including damage or injury to persons arising out of the Owner's use of such equipment, any Contractor's Equipments owned by the Contractor and on the Site in connection with the Facilities for such reasonable period as the Owner considers expedient for the supply and installation of the Facilities.

Upon completion of the Facilities or at such earlier date as the Owner thinks appropriate, the Owner shall give notice to the Contractor that such Contractor's Equipment will be returned to the Contractor at or near the Site and shall return such Contractor's Equipments to the Contractor in

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-51-	25.09.2014

accordance with such notice. The Contractor shall thereafter without delay and at its cost remove or arrange removal of the same from the Site.

- (v) The Contractor shall be entitled to be paid the Contract Price attributable to the Facilities executed as at the date of termination, the value of any unused or partially used Plant and Equipments on the Site, and the costs, if any, incurred in protecting the Facilities and in leaving the Site in a clean and safe condition. Any sums due to the Owner from the Contractor accruing prior to the date of termination shall be deducted from the amount to be paid to the Contractor under this Contract.
- (vi) If the Owner completes the Facilities, the cost of completing the Facilities by the Owner shall be determined.

If the sum that the Contractor is entitled to be paid, plus the reasonable costs incurred by the Owner in completing the Facilities, exceeds the Contract Price, the Contractor shall be liable for such excess.

The Owner and the Contractor shall agree, in writing, on the computation described above and the manner in which any sums shall be paid.

(c) Termination by Contractor

- i. If
 - the Owner has failed to pay the Contractor any sum due under the Contract within the specified period, has failed to approve any invoice or supporting documents without just cause pursuant to [-----] (Terms and Procedures of Payment) of the Form of Contract Agreement, or commits a substantial breach of the Contract, the Contractor may give a notice to the Owner that requires payment of such sum, requires approval of such invoice or supporting documents, or specifies the breach and requires the Owner to remedy the same, as the case may be. If the Owner fails to pay such sum, fails to approve such invoice or supporting documents or give its reasons for withholding such approval, fails to remedy the breach or take steps to remedy the breach within *[fourteen (14) days]* after receipt of the Contractor's notice, or
 - the Contractor is unable to carry out any of its obligations under the Contract for any reason attributable to the Owner, including but not limited to the Owner's failure to provide possession of or access to the Site or other areas or failure to obtain any governmental permit necessary for the execution and/or completion of the Facilities which the Owner is required to obtain as per provision of the Contract or as per relevant applicable laws of the country,

then the Contractor may give a notice to the Owner thereof, and if the Owner has failed to pay the outstanding sum, to approve the invoice or supporting documents, to give its reasons for withholding such approval, or to remedy the breach within *[twenty eight (28) days]* of such notice, or if the Contractor is still unable to carry out any of its obligations under the Contract for any reason attributable to the Owner within twenty eight (28) days of the said notice, then the Contractor may terminate the Contract forthwith by giving a notice of termination to the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-52-	25.09.2014

- ii. If the Owner becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, being a corporation, if a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Owner takes or suffers any other analogous action in consequence of debt, then the Contractor may terminate the Contract forthwith by giving a notice of termination to the Owner.
- iii. If the Contract is terminated, then the Contractor shall immediately
 - cease all further work, except for such work as may be necessary for the purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
 - terminate all subcontracts, except those to be assigned to the Owner pursuant to paragraph (d)(ii)
 - remove all Contractor's Equipment from the Site and repatriate the Contractor's and its Subcontractor's personnel from the Site
 - In addition, the Contractor, subject to the payment, shall
 - ✓ deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination
 - ✓ to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Facilities and to the Plant and Equipments as of the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
 - ✓ Deliver to the Owner all drawings, specifications and other documents prepared by the Contractor or its Subcontractors as of the date of termination in connection with the Facilities.
- iv. If the Contract is terminated, the Owner shall pay to the Contractor all payments, and reasonable compensation for all loss or damage sustained by the Contractor arising out of, in connection with or in consequence of such termination.
- (d) The expression "Facilities executed" shall include all work executed, Erection Services provided, any all Plant and Equipments acquired (or subject to a legally binding obligation to purchase) by the Contractor and used or intended to be used for the purpose of the Facilities, up to and including the date of termination.
- (e) In calculating any payment due from the Owner to the Contractor, account shall be taken of any sum previously paid by the Owner to the Contractor under the Contract, including any advance payment paid.

4.46 Assignment

The Contractor shall not, without the express prior written consent of the Owner, assign to any third party the Contract or any part thereof, or any right, benefit, obligation or interest therein or there under, except that the Contractor shall be entitled to assign either absolutely or by way of charge any monies due and payable to it or that may become due and payable to it under the Contract

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-53-	25.09.2014

5 SPECIAL CONDITIONS OF CONTRACT (SCC)

5.1 Contract Details

- **Name of Contract:** Renovation & Modernization of Balance of Plant BOP) Package for [-----]
- **Bid Document No. :** [-----]
- **The Owner is:**
 - Name of Owner: [-----]
 - Address of Owner: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]
- **The Project Manager is:**
 - Name of Project Manager: [-----]
 - Address of Project Manager: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]

5.2 Effective Date

The Owner shall inform the successful Bidder of its acceptance of the Tender by a formal Letter of Acceptance. This Letter of Acceptance will be the Effective Date for determining the Time for Completion of the facilities and other milestones for execution of the Renovation & Modernization work as per the scope of work under this tender by the Contractor.

The following three activities will be completed within [two (2)] months from the date of Letter of Acceptance:

- (a) The contract agreement will be executed by the Owner and the Contractor. (b) The Contractor will submit to the Owner the Contract Performance Bank Guarantee, any Additional Contract Performance Bank Guarantee by Consortium Partners if applicable, and the Advance Payment Bank Guarantee.
- (c) The Owner will pay the Contractor the Advance Payment as per the Terms of Payment.

The Owner will make the advance payment promptly once Contractor has fulfilled the necessary conditions specified in Terms of Payment. If payment of Advance is delayed beyond two months from the date of Letter of acceptance for reasons attributable to the Owner, the date of payment of advance shall be the effective date for determining the time for completion of facilities. However, failure of the contractor to provide all the required Bonds/Guarantees within the prescribed period will cause the Bid Security to be forfeited.

5.3 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this tender and commencement of unit shut down by Owner shall be as follows:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-54-	25.09.2014

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

1.	Time for completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	By [.....] months from Effective Date
2.	Time for Commencement (by Owner) of Unit Shut Down. (Note: In case Contractor fails to complete the engineering, supply and mobilization activities as at serial no.1, Owner may, at its discretion, reschedule commencement of unit shut down	By [.....] months from Effective Date
3.	Time for Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	By [.....] days from start of unit shut down
4.	Performance Guarantee Test (By Contractor)	By [.....] months from the completion of trial operation after completion of R&M activities

5.4 Liquidated Damage for Delay

5.5 Rate of Liquidated Damage for Delay

If the Contractor fails to successfully achieve completion of R&M activities and commissioning of the retrofitted facilities as per the scope of work within the time period specified in SCC, the Contractor shall pay to the Owner amount calculated as per the rates given in the following table as Liquidated Damage and not as penalty.

1.	Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	Liquidated Damage payable at the rate Rs.[.....] for each week of delay
2.	Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	Liquidated Damage payable at the rate Rs [.....] for each day of delay

The Liquidated Damage for Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network and Liquidated Damage for Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender are independent and shall be applied separately.

5.6 Liquidated Damage for Non-fulfilment of Functional Guarantees

If the Contractor fails to successfully achieve the Functional Guarantees during Performance Guarantee Test as per the Tender Specification, the Contractor shall pay

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-55-	25.09.2014

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

to the Owner amount calculated as per the rates given in the following table as Liquidated Damage and not as penalty.

Sl. No.	Functional Guarantee Parameter	Rate of Liquidated Damage
1	Auxiliary Power	[-----]INR per kW increase
2	Cooling Tower Cold water Temp	[-----]INR per 0.25 ^o C increase
3	HCl Consumption in DM Plant	[-----]INR per kg increase
4	NaOH Consumption in DM Plant	[-----]INR per kg increase
5	[Pre-treatment Plant Chemical Consumption]	[-----]INR per kg increase
6	[NaCl Consumption in Softening Plant]	[-----]INR per kg increase
7	{Any Other Chemical, as applicable}	[.....]

The reference condition for Performance Guarantee Parameters shall be as per Volume-II Technical Specification.

The Liquidated Damage for non-fulfillment of the different Functional Guarantee Parameters are independent of one another and shall be applied separately.

{Note: The rate of LD for any functional guarantee parameter shall be at least 1.5 times the corresponding Bid Evaluation Factor, if applicable}

5.7 Maximum Leivable Liquidated Damages

The amount of Liquidated Damage for delay shall be limited to a maximum of 10 % of the total contracts price (i.e. sum of Ist, IInd and IIIrd)contracts, as applicable) price including price variation as per the provisions of the contract and excluding price of Mandatory Spares. This limit is applicable for the Liquidated Damage for Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network and Liquidated Damage for Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender taken together.

The aggregate amount **of Liquidated Damage for non-fulfilment of functional guarantee shall be limited to** a maximum of 10 % of the total contracts price (i.e. sum of Ist and IInd component contract prices) including price variation as per the provisions of the contract and excluding price of Mandatory Spares.

The limit on maximum leivable Liquidated Damage for Delay and maximum leivable Liquidated Damage for non-fulfillment of functional guarantee are independent of each other and shall apply separately.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-56-	25.09.2014

5.8 Payment of Liquidated Damages

Contractor shall pay to the owner any Liquidated Damages that are payable as per the provisions of the Contract within thirty (30) days of receipt of Owner's invoice setting forth amount of Liquidated Damages that are then due and payable. If Contractor delays payment of Liquidated Damages that are payable under the provisions of the Contract beyond thirty (30) days, Owner, at its discretion, shall be entitled to recover such amounts by either setting off the relevant unpaid amount against any payment(s) due to the Contractor or by making a demand under Contract Performance Bank Guarantee.

5.9 Contract Price

- a) The Contract Price shall be as (Contract Price and Terms of Payment) of the Form of Contract Agreement.
- b) The Contractor shall be deemed to have satisfied itself as to the correctness and sufficiency of the Contract Price, which shall, except as otherwise provided for in the Contract, cover all its obligations under the Contract.

5.10 Terms of Payment

- a) The Contract Price shall be paid as Terms and Procedures of Payment to the Form of Contract Agreement. The procedures to be followed in making application.
- b) No payment made by the Owner herein shall be deemed to constitute acceptance by the Owner of the Facilities or any part(s) thereof.
- c) The currency or currencies in which payments are made to the Contractor under this Contract to the Form of Contract Agreement, subject to the general principle that payments will be made in the currency or currencies in which the Contract Price has been stated in the Contractor's bid.

5.11 Contract Securities (Bank Guarantees)

- a) The Contractor shall provide the securities (Bank Guarantees) specified below in favour of the Owner at the times, and in the amount, manner and form specified below.
- b) Advance Payment Bank Guarantee
 - The Contractor shall, within *[thirty (30)]* days of the Notification of Contract Award, provide a security for an amount equal to the advance payment, and in the same currency or currencies, with a initial validity of up to *[ninety (90)]* days beyond the date of Completion of Facilities.
 - The security shall be in the form of an Unconditional Bank Guarantee. The Advance Payment Bank Guarantee shall be reduced prorata every three (3) months after First Running Account Bill/Stage Payment under the Contract based on the value of equipment/facilities received. The cumulative amount of reduction at any point of time shall not exceed ninety percent (90%) of the advance corresponding to cumulative value of the Facilities supplied and received as per a certificate issued by the Project Manager and the balance of 10% shall be released on Completion of those Facilities. It should be clearly understood that reduction in the value of security for advance shall not in any way dilute the Contractor's responsibility and liabilities under the Contract including in respect of the Facilities for which the reduction in the value of security is allowed.
- c) Performance Security (Performance Bank Guarantee)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-I	-57-	25.09.2014

- The Contractor shall, within [thirty (30)] days of the notification of award, provide a Bank Guarantee for the due performance of the Contract for ten percent (10%) of the Contract Price with an initial validity upto [ninety (90)] days beyond the Defects Liability Period. If the bidder is a Consortium of two or more firms, in addition to the Contract Performance Bank Guarantee (CPBG) of 10% of Contract price furnished by the Consortium Leader, each of the other consortium member will furnish Additional Contract Performance Bank Guarantee equal to 1% of Contract Price within [thirty (30)] days of the Notification of Award.
- The Bank Guarantee shall be denominated in the currency or currencies of the Contract, or in a freely convertible currency acceptable to the Owner.

5.12 Sequential Supply

The Contractor is required to supply the material and equipment under the Contract in a sequential manner as per the requirement at site for erection. If Contractor supplies any material/equipment ahead of the requirement as per the agreed Detailed Time Schedule, the Owner, at its discretion, may withhold progressive payment for such material/equipment till the time it is due for supply as per the agreed Detailed Time Schedule.

Dear Sirs

Having carefully examined and understood the Tender Specification including the amendments/Corrigendum/Clarifications issued till the date of Bid Opening, if any:

1. We hereby agreed to carry out the entire works as described in the specifications in conformity with the specifications and Tender Specifications, as per prices quoted by us in the Schedule of Prices and Schedule of Performance Guarantees [Schedule] enclosed herewith
2. In the event of our proposal being accepted, we agree to furnish a Bank Guarantee for Contract Performance as per the proforma prescribed by Ownerr [Name of Utility] and for the sum equal to 10% of the "Contract Price". The Bid Guarantee shall be released only after the Contract Performance Guarantee issued in favour of Owner is received and accepted by the Owner.

- ii. Letter of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender Drawing.
- vi. The bid & its schedules/ attachment submitted by the contractor.

a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.

b) The Contract will be signed in three originals and the Contractor shall be provided with one signed original and the rest will be retained by the Employer.

1.2 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Letter of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender.
- vi. The bid & schedules/ attachment Drawing submitted by the contractor.

1.3 Definitions

The Definitions of terms and expressions shall be as per GCC clause 4.1. Terms and expressions not defined in GCC shall have the same meaning as are assigned to them in the Indian Sale of Goods Act (1930), failing that in the Indian Contract Act (1872) and failing that in the General Clauses Act (1897) including amendments thereof, if any.

1.4 Contract Price

The Employer hereby agrees to pay to the Contractor the Contract Price in consideration of the performance by the Contractor of its obligations hereunder:
The Contract Price shall be the aggregate of: [amount of foreign currency in words], [amount in figures], and [amount of local currency in words], [amount in figures], or such other sums as may be determined in accordance with the terms and conditions of the Contract.

1.5 Term of Payment

The terms and procedures of payment according to which the Employer will reimburse the Contractor are given in Contract Schedule 1 (Terms and Procedures of Payment) hereto.

1.6 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this tender and commencement of unit shut down by Employer shall be as follows:

1.	Time for completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	By [.....] months from Effective Date
2.	Time for Commencement (by Employer) of Unit Shut Down. (Note: In case Contractor fails to complete the engineering, supply and mobilization activities as at serial no.1, Employer may, at its discretion, reschedule commencement of unit shut down	By [.....] months from Effective Date
3.	Time for Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	By [.....] days from start of unit shut down
4.	Performance Guarantee Test (By Contractor)	By [.....] months from the completion of trial operation after completion of R&M activities

The detailed Time Schedule shall be as per Contract Schedule 2.

Contract Schedules

The Contract Schedules listed in the attached list of Contract Schedules shall be deemed to form an integral part of this Contract Agreement.

Contract Schedule-1

Terms of Payment

The Employer shall pay the Contractor in the following manner and at the following times, on the basis of the Price Break down given in the Section on Price Schedules. Payments will be made in the currencies quoted by the Bidder unless otherwise agreed between the parties. Application for payment in respect of part deliveries may be made by the Contractor as work proceeds.

I. Terms of Payment for Supply of Plant and Equipment (excluding Mandatory Spares and Recommended Spares):

1	10% of the total Ex-Works price	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	50% of Ex-Works price for each identified equipment as progressive payment	Upon dispatch of the identified equipment after dispatch clearance by employer on raising of Invoice by the Contractor and submission of evidence of shipment
3	15% of Ex-Works price for each identified equipment	On receipt of equipment at site and physical verification and certification by the Employer
4	20% of the total Ex-Works price	On Completion of Facilities
5	5% of the total Ex-Works price	Successful completion of Performance Guarantee Test

II. Terms of Payment for Supply of Mandatory Spares and Recommended Spares

1	70% of the Ex-Works Price of each Spare	Upon dispatch of the identified Spare after dispatch clearance by employer on raising of invoice by the Contractor and submission of evidence of shipment
2	30% of the Ex-Works Price of each Spare from within India	On receipt of Spare at site and physical verification and certification by the Employer

III. Terms of Payment for Local Transportation, Inland Transit Insurance

For Plant & Equipment except Spares		
1	100% of Local Transportation, Inland Transit Insurance pro-rata to value of the equipment	On receipt of Equipment at site and upon raising of Invoice by the Contractor
For Spares		
2	100% of Local Transportation, Inland	On receipt of Spare at site and upon

--	--------------------------

	Transit Insurance pro-rata to value of Spare	raising of Invoice by the Contractor
--	--	--------------------------------------

IV. Terms of Payment for Erection of Plant & Equipment

1	10% of Total Price for Erection of Plant & Equipment	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	75% of Price for Erection of Plant & Equipment as progressive payment pro-rata to value of plant & equipment erected	On certification by Employer of successful erection of plant & equipment and successfully passing of quality checks
3	10% of Total Price for Erection of Plant & Equipment	On Completion of Facilities
4	5% of Total Price for Erection of Plant & Equipment	Successful completion of Performance Guarantee Test

V. Terms of Payment for Civil Works

1	10% of Total Price for Civil Works	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	75% of Price for Civil Works as progressive payment	On certification by Employer regarding value of work completed & successfully passing of quality checks
3	10% of Total Price for Civil Works	On Completion of Facilities
4	5% of Total Price for Civil Works	Successful completion of Performance Guarantee Test

VI. Terms of Payment for Price Adjustment Amount

Any increase in the Price of any component Contract shall be paid as per the Terms of Payment for base price. The initial 10% advance payment pertaining to increase in price shall be paid along with progressive payment of that equipment. Reduction to the Contract Price, if any, due to price adjustment provisions, shall be effected by recovering 100% of the reduction amount (including advance) from any of the Contractor's bills falling immediately due for payment.

VII. Terms of Payment for Taxes & Duties

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-I, Annexure & Schedules	[6]	25.09.2014

Any Tax or Duty payable by Employer as per the Terms & Conditions of Contract and is directly payable to Statutory Authorities/Government as per law shall be directly paid to the concerned authority or Government by the Employer. Any other Tax or Duty payable by Employer as per the Terms & Conditions of Contract shall be reimbursed to the Contractor/Assignee upon receipt of corresponding Plant & Equipment or Spare at site and submission of evidence by the Contractor/Assignee to the Employer as to the Contractor/Assignee having paid such Taxes & Duties.

VIII.

Terms of Payment for Statutory Variation in Taxes & Duties

Any amount towards statutory variation in Taxes & Duties payable by Employer as per the Terms & Conditions of Contract shall be reimbursed to the Contractor/Assignee upon submission of evidence by the Contractor/Assignee to the Employer as to the Contractor/Assignee having paid such variation.

Contract Schedule-2

PRICE ADJUSTMENT

- (i) The Contract Price shall be subject to price adjustment during performance of the Contract to reflect changes in the cost of labour and material in accordance with the provisions described below.
- (ii) Only following components of the Contract Price will be subject to Price adjustment :
 - (a) Ex-Works (India) price of plant and equipment excluding Mandatory Spares. The price adjustment amounts towards these price components shall be without any ceiling.
 - (b) Erection Services component of the Contract Price. The price adjustment amounts towards this price component shall be without any ceiling.
 - (c) Civil Works component of the Contract Price. The price adjustment amounts towards this price component shall be without any ceiling.
- (iii) Price adjustment amounts towards aforesaid components of Contract Price shall be paid in the respective currencies of Contract.
- (iv) The indices for price adjustment shall necessarily be of India and shall be well established and nationally recognized in India. Preferably Government indices shall be used.
- (v) The price adjustment formula for the components of the Contract Price above shall be as stipulated hereinafter.
- (vi) **Ex-Works price component of Plant and Equipment excluding mandatory spares**

The price component of the equipment for any shipment/ dispatch comprises of a fixed portion (designated as 'F' and the value of which is specified hereunder) and a variable portion linked with the indices for various materials and labour.

The amount of price adjustment towards variable portion payable/recoverable on each shipment/dispatch shall be computed as under :

$$ES = ES_1 - ES_0$$

ES₁ will be computed as follows:

$$ES_1 = ES_0 \left\{ F + a \times \frac{A_1}{A_0} + b \times \frac{B_1}{B_0} + c \times \frac{C_1}{C_0} + Lb \times \frac{L_1}{L_0} \right\}$$

Where

ES = Adjustment to Ex-Works component expressed in the currency of the Contract payable to the contractor for each shipment/dispatch

ES₁ = Adjusted amount of Ex-works price component expressed in the currency of the Contract payable to the Contractor for each shipment/dispatch

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-I, Annexure & Schedules	[8]	25.09.2014

- ES₀ = Ex-works for the plant and equipment in the currency of the Contract, shipment/dispatch wise.
- The fixed portion of the ex-works component of the Contract Price (F) shall be 0.15.
 - a, b,c etc. shall be co-efficient of major materials/items involved in the ex-works component of the Contract Price. The sum of these co-efficient shall be between 0.50 to 0.60.
 - A, B, C etc. shall be published price indices of corresponding major materials/items. Such indices shall necessarily be of India.
 - 'Lb" shall be co-efficient for labour component in the ex-works of the Contract Price which shall be between 0.25 to 0.35.
 - 'L' shall be labour index.
 - Sum of all the material co-efficient and the labour co-efficient shall be 0.85.

For the indices(A, B, C etc.), subscript 'o' refers to indices as on 30 days prior to original scheduled date for opening of Part-I Bid.

Subscript '1' refers to indices/exchange rates as of:

(a) three months prior to the date of shipment/dispatch for labour, and

(b) six months prior to the date of shipment/dispatch for material.

In case of shipments/dispatches which are delayed beyond the schedule date of shipment/dispatch for reasons attributable to the Contractor, the price adjustment provision shall not be applicable for the period of time between the schedule date of shipment/dispatch and the actual date of shipment/dispatch.

(vii) Erection Services Component

The price component for erection services comprises of a fixed portion and a variable portion linked with the index of labour.

$$ER = ER_1 - ER_0$$

ER₁ will be computed as follows:

$$ER_1 = ER_0 (0.15 + 0.85 \frac{FL_1}{FL_0})$$

Where:

ER	=	Adjustment to erection services component of contract price payable to the contractor for each billing.
----	---	---

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-I, Annexure & Schedules	[9]	25.09.2014

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

ER ₁	=	Adjusted amount of erection services component of Contract Price payable to the Contractor.
ER ₀	=	Value of the Erection work done in the billing period (month)
FL	=	Indian field labour index namely, All India Consumer Price Index for Industrial Workers (All India Monthly Average) as published by Labour Bureau, Simla, Government of India.

For the indices, subscript 'o' refers to indices as on 30 days prior to date set for opening of Part-I bids. .

For the indices, subscript '1' refers to the indices as applicable for the month of execution of the erection work. For the exchange rates, subscript '1' refers to the exchange rates as applicable on the last day of the month of execution of the erection work.

In case of erection activities which are delayed beyond the schedule date for reasons attributable to the contractor, the price adjustment provision shall not be applicable for the period of time between the schedule date of completion and actual date of completion of the respective erection activity.

(viii) The following components of the contract price shall not be subject to price adjustment and shall remain firm during the execution of the contract :

- (1) Ocean Freight and Marine Insurance for Plant and Equipment, mandatory spares and recommended spares.
- (2) Price for Mandatory spares & Recommended Spares.
- (3) Inland Transportation charges (including Inland Transit Insurance, port clearance, port handling & port charges) for plant & equipment and Spare Parts.

(ix) Civil Works Component

The Price of Civil Works for any month comprises a fixed part designated as 'F' and variable parts linked to indices for labour, steel, cement, other commodities and Fuel & Power. The monthly price adjustment amount for the civil works component of the Contract Price will be computed as per the formula given below:

$$EC = EC_1 - EC_0$$

EC₁ will be computed as follows:

$$EC_1 = EC_0 \left\{ F + a \times \frac{MI_1}{MI_0} + b \times \frac{LI_1}{LI_0} + c \times \frac{FI_1}{FI_0} + d \times \frac{SI_1}{SI_0} + e \times \frac{CI_1}{CI_0} \right\}$$

Where

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-I, Annexure & Schedules	[10]	25.09.2014

- EC = Adjustment to Civil Works price component expressed in the currency of the Contract payable to the contractor for each month
- EC₁ = Adjusted amount of Civil Works price component expressed in the currency of the Contract payable to the Contractor for each month
- EC₀ = Value of Civil Works done expressed in the currency of the Contract for the billing period (month).
- The fixed portion (F) of the Civil Works component of the Contract Price shall be 0.15.
 - 'a' is the coefficient for material cost other than cement and steel involved in the Civil Works component of the Contract Price and it shall be 0.15.
'b' is the coefficient for labour cost involved in the Civil Works component of the Contract Price and it shall be 0.3.
'c' is the coefficient for Fuel & Power cost involved in the Civil Works component of the Contract Price and it shall be 0.05.
'd' is the coefficient for steel cost involved in the Civil Works component of the Contract Price and it shall be 0.25.
'e' is the coefficient for cement cost involved in the Civil Works component of the Contract Price and it shall be 0.10.
 - MI shall be All India Whole Sale Price Index for all commodities as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry.
LI shall be All India Consumer Price Index for industrial labour as published by Labour Bureau, Government of India
FI shall Index Number of Wholesale Price for group Fuel & Power as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry
SI shall Index Number of Wholesale Price for Steel as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry
CI shall Index Number of Wholesale Price for Cement as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry

For the indices(MI, LI,FI, SI and CI), subscript 'o' refers to indices as on 30 days prior to original scheduled date for opening of Part-I Bid. Subscript '1' refers to indices as of one prior to the month for which Civil Works is being billed.

such demand made by the OWNER on the Bank shall be conclusive and binding, absolute and unequivocal notwithstanding any difference between the OWNER and CONTRACTOR or any dispute or disputes raised/ pending before any Court, Tribunal, Arbitrator or any other authority. The Bank agrees that the guarantee herein contained shall continue to be enforceable till this sum due to the OWNER is fully paid and claims satisfied or till the OWNER discharges this Guarantee.

- 3 The Bank further irrevocably guarantees and undertakes to pay any amount due and payable by the CONTRACTOR by reasons of non-fulfilment of any of the following obligations of the Contractor:
 - (a) Successful and satisfactory operation of the plant & equipment supplied and erected under the said Contract as per the Technical Specifications and other Tender/Contract documents.
 - (b) That the equipment installed under the said Contract shall be new and in accordance with Contract Documents and be free from all defects in design, engineering, material workmanship and performance for a period of 12 calendar months after final takeover of the equipment by the OWNER and that upon written notice from the OWNER, the CONTRACTOR shall remedy free of any expense to the OWNER, such defects as noticed and developed under the normal use of the said plant & equipment, within the said guarantee period.
- 4 The OWNER shall have the fullest liberty without affecting in any way the liability of the Bank under this guarantee, from time to time, to extend the time of Performance by the CONTRACTOR. The Bank shall not be released from its liabilities under these presents by any exercise of the OWNER of the liberty with reference to the matter aforesaid.
- 5 The OWNER shall have the fullest liberty, without affecting this guarantee to postpone from time to time the exercise of any powers vested in them or of any right which they might have against the CONTRACTOR and to exercise the same at any time in any manner, and either to enforce or to forbear to enforce any covenants, contained or implied in the CONTRACT between OWNER and the CONTRACTOR or any other course or remedy or security available to the OWNER and the Bank shall not be released of its obligations/liabilities under these presents by any exercise by the OWNER of his liberty with reference to the matters aforesaid or any of them or by reasons of any other act or forbearance or other acts of omission or commission on the part of the OWNER or any other indulgence shown by the OWNER or by any other matter or thing whatsoever which under law would, but for this provision, have the effect of relieving the Bank Guarantee. The Bank further undertakes not to revoke this guarantee during its currency without the previous consent of the OWNER.
- 6 The Bank further agrees that the decision of the OWNER as to the failure on the part of the CONTRACTOR to fulfill their obligations as aforesaid and/or as to the amount payable by the Bank to the OWNER hereunder shall be final, conclusive and binding on the Bank.
- 7 The OWNER shall have the fullest liberty to lodge their claim for encashment of the guaranteed sum either in full or part, in the manner suitable to them. However, payment made for a sum lesser than the guaranteed amount shall not relieve or discharge the bank from their obligations guaranteed under the bank guarantee, till the contractual obligations are fully performed by the Contractor or the Bank Guarantee is discharged by the OWNER, as the case may be and the Bank Guarantee shall continue to be in force till such time.
- 8 The Bank also agrees that the OWNER shall be entitled at his option to enforce this guarantee against the Bank as a Principal Debtor, in the first instance notwithstanding any other security or guarantee that it may have in relation to the CONTRACTOR's liabilities.

ABBREVIATIONS TO BE USED

{The utilities are advised to use the following standard abbreviations while preparing Model Tender Document for their power plant.}

AAQ	Ambient Air Quality
ACB	Air Circuit Breaker
ACF	Activated Carbon Filter
ACG	Automatic Control Gear
AHP	Ash Handling Plant
AHU	Air Handling Unit
ASME	American Society of Mechanical Engineers
AVR	Automatic Voltage Regulator
BOP	Balance of Plant
CAVT	Cold Air Velocity Air Flow Test
CBD	Continuous Blow Down
CCTV	Closed Circuit Television
CEA	Central Electricity Authority
CERC	Central Electricity Regulatory Commission
CHP	Coal Handling Plant
CLCS	Closed Loop Control System
COC	Cycle of Concentration
CT	Cooling Tower
CV	Control Valve
CW	Cooling Water

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[ix]	25.09.2015

DBT	Dry Bulb Temperature
DCDB	Direct Current Distribution Board
DDCMIS	Digital Distributed Control Monitoring Information System
DGA	Dissolved Gas Analyser
DM	Demineralization
DMCW	Demineralized Cooling Water
DP	Differential Pressure
ELCID	Electromagnetic Core Imperfection Detection
EOT	Electrically Operated Traveling Crane
ETP	Effluent Treatment Plant
EWS	Engineer's Work Station
FO	Fuel Oil
GCV	Gross Calorific Value
HP	High Pressure
HT	High Tension
HVAC	Heating, Ventilation and Air Conditioning
HVWS	High Velocity Water Spray System
IBD	Intermittent Blow Down
I/O	Input / Output
IPR	Inter Posing Relay
ISMB	Indian Standard Medium Beam
LDO	Light Diesel Oil
LE	Life Extension

1 INTENT OF SPECIFICATION

- 1.1 The intent of this specification is to Renovate and Modernize various equipment & systems of Mechanical Balance of Plant (BOP) including but not limited to *[Plant Water System consisting of Raw Water Intake System, Raw Water Pump House, Pre-Treatment Plant, DM Plant, CW system including Cooling Towers, ACW System, CW Treatment System, Service Water System, Chlorination Plant, Chemical Laboratory, Effluent Treatment Plant and other BOP Systems like Compressed Air System, Fuel Oil Systems, Fire Fighting System, HVAC System, Continuous Stack Emission Monitoring System, Miscellaneous mechanical System, all associated Electrical system, Control & Instrumentation systems and Civil & Structural work]*. The renovated Mechanical Balance of Plant shall be capable of operating with the parameters as detailed in various clauses of this specification and will be compatible with the Main Plant System of the Plant consisting of *[2 (Two) Units]*, each is intended to give the output of *[210/215/220/250] MW*.
- 1.2 The Bidder shall carry out the required replacement / refurbishment / retrofitting of the various equipment/systems of BOP package as per the requirements of his design so as to make the same capable of operating for an extended life of *[20/25]* years and producing the specified output parameters mentioned in the subsequent clauses at this specification in order to be compatible with the requirement of Main Plant package. The scope of replacement / refurbishment / retrofitting shall include but shall not be limited to the scope of work mentioned in clause 4.6 which is based on the recommendation of RLA/CA and EA studies conducted during *[.....]*. However, any other items/systems which have not been specifically mentioned but are considered necessary by the Bidder for giving the intended performance of various equipment/systems of BOP package, shall also be included in the scope of Bidder and shall be separately highlighted by the Bidder in his proposal.
- 1.3 Bidders are required to quote the performance guarantee values for Auxiliary power consumption, Chemical Consumption and Cooling Tower Cold Water Temperature in response to the minimum/maximum performance parameters specified in the Table 1.1 below.

Table: 1.1

S. No.	Parameter	Performance Guarantee Values
1	Maximum Auxiliary Power Consumption (kW)	<i>[.....]</i>
2	Maximum HCL Consumption	<i>[.....]</i>
3	Maximum NaOH Consumption	<i>[.....]</i>

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[1]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

4	Maximum NaCl Consumption, if applicable	[....]
5	Maximum Cooling Tower Cold Water Temperature (deg C)	[....]

- 1.4 Bidders to note that in case performance guarantee values quoted for Cooling Water Temperature is inferior to the specified values, the bids will be considered as non responsive. In case of Auxiliary power consumption, Chemical Consumption, NaCl Consumption, the best quoted value shall be considered as base parameter and other bids shall be cost loaded as per difference between base parameter and respective quoted guaranteed parameter multiplied by evaluation factors specified in the Commercial Volume (Volume-I). The modified/replaced/retrofitted equipment will conform to the requirement of the specification provided in Section-II of Volume-II. The relevant technical details like OEM's Specifications and Drawings for the existing equipment required to be modified / replaced / retrofitted have also been provided in Volume-II, Section-II for the reference of the Bidders.
- 1.5 Bidders are required to carry out necessary modifications / replacement in the existing mechanical / electrical equipment or systems including related civil/structural works as per specification requirement and also based on their own assessment.
- 1.6 The scope of work for R&M shall include designing / re-designing, basic and detailed engineering, re-engineering, refurbishing / retrofitting, supply, inspection and testing at supplier's works, packing, forwarding to site, forwarding from site to Bidder's facilities, unloading and storage at site, pre-assembly, machining if required, site fabrication, erection, replacing of various equipment and systems, application of paints and thermal insulation, carrying out all pre-commissioning checks/ tests and any other work required to complete the system, commissioning and trial operation, performance tests of various equipment and systems covered under this Specification. Bidder's scope shall also include dismantling of the existing equipment/ facilities, including unloading & transportation to designated storage / disposal yard, wherever required as a result of augmentation of existing mechanical, electrical, I&C and civil/structural/ architectural works. The Bidder shall restore the equipment/ facilities, whenever applicable, after carrying out necessary renovations/modifications under the scope of R&M works.
- All the tools & tackles, labour and other facilities required for dismantling and restoration shall also be in the scope of the Bidder.
- Bidder shall also put back into service all the systems/equipment of the units after completion of R&M works, whether any modification is carried out on the same or not. All necessary tools, tackles, labour, instruments, spares, consumables etc. required for putting back into operation shall also be provided by the Bidder.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[2]	25.09.2015

- 1.7 It is not the intent to specify completely herein all aspects of services and equipment to be provided by the Bidder who in any case shall be responsible for fulfillment of the intent of Specification. Irrespective of whether specifically mentioned or not, the services, equipment and systems to be provided in accordance with this Specification shall also form a part of the scope of work and shall conform in all respects to the highest standard of engineering, design, quality and workmanship so that after completion of R&M work by the Bidder, the plant shall be capable of performing completely in a safe, reliable and sustained manner as acceptable to the Owner.
- 1.8 Unless otherwise specifically clarified by the Owner, interpretation by the Owner in respect of scope of supplies & services and the meaning of the Specifications, drawings, requirements of operation, maintenance, redundancy etc., shall be final and binding on the Bidder. Owner shall have the right to reject or accept any work or material which in his assessment is not technically complete and proven to meet the requirements of this Specifications and/or applicable National and International Codes & Standards mentioned elsewhere in this Specification.
- 1.9 The requirements, conditions, appendices etc, given in various parts/ sections of technical Specifications shall form integral part of this Specification. Bidder is required to carefully examine and understand the Specifications and seek clarifications, if required, to ensure that he has understood the Specifications as intended by the Owner. In the absence of any specific clarifications made to the Owner during Bidding stage, the interpretation of Owner shall be final. The Bidder's offer should not carry any sections like clarifications, interpretations and/or assumptions. All such points are required to be clarified & resolved during Bidding stage.
- 1.10 Any deviation or variation from the scope of supply and services or the intent of the Specification shall be clearly brought out under the schedule of Technical / Commercial deviations, irrespective of the fact that such deviation / variation may be standard practice or possible interpretation of the Specifications by the Bidder. In case, no clear and specific deviation is taken by the Bidder in the relevant schedule of Bid Proposal Sheet while making his Bid proposal, it will be construed that the Bidder shall comply with the stipulations of the Specification fully with regard to scope of services and supplies to be provided by him to achieve the objective of R&M. Further, unless otherwise specifically clarified by the Owner, the interpretation by the Owner in respect of scope of supplies and services to be performed by the Bidder shall be final and binding.
- 1.11 If the Bidder feels that, in his opinion certain features brought out in his offer are superior to what has been specified, these may be highlighted separately in the Bid. The Bidder at his own discretion may also make Alternate offers, which in his opinion

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[3]	25.09.2015

are of superior technology, material etc. to the specified requirements leading to better performance like efficiency / output etc. of the units after renovation. In such case, the Bidder shall carry out a comprehensive study and clearly identify the scope of offer in his alternate proposal. The Bidder shall furnish that detailed study to Owner along with the Bid where the Bidder shall bring out in detail the scope of modifications required to be carried out by him in the various systems and equipment including but not limited to *[Plant Water System consisting of Raw Water Intake System, Pre-Treatment Plant, DM Plant, CW system including Cooling Towers, ACW System, Effluent Treatment Plant and other BOP Systems like Compressed Air System, Fuel Oil Systems, Fire Fighting System, HVAC System, Continuous Stack emission Monitoring System, Miscellaneous mechanical System, all associated Electrical system, Control & Instrumentation systems and Civil & Structural work]*.

Such Alternate proposals shall be supplemented with sufficient amount of information like specified design standards and performance requirements, Bidder's experience, operating feedback, provenness, etc. for justifying such proposals. Implications of such Alternate offers on the performance, output, efficiency, auxiliary power consumption, etc. shall be clearly brought out in the Bid to enable the Owner to determine the advantages, superiority and acceptability of the proposals.

However the Bidder's Base offer shall necessarily be in line with the Specification requirements. Under no circumstances the equipment and services as specified shall be brought out as an Alternate offer.

The Base offers will be evaluated as per procedure outlined in the Bid documents and the Alternate Offers of the lowest evaluated Bidder will only be considered for acceptance or otherwise. Owner may reject alternative proposals submitted by the Bidder at his sole discretion, without assigning any reason what so ever.

- 1.12 In the event of conflict between requirements of any two clauses of the Specification documents or requirements of different Codes/ Standards specified, the more stringent requirement as per the interpretation of the Owner shall apply, unless confirmed otherwise by the Owner in writing.
- 1.13 The General technical conditions pursuant to the Contract, placed separately in this Specification, shall form an integral part of the Specification. These conditions shall supplement all the detailed technical Specification and requirement identified in this Specification.
- 1.14 Out of complete unit comprising of mechanical, electrical, C&I systems and equipment, some components/systems are envisaged to be replaced with new ones having better design features while some of the other components are to be refurbished / upgraded by the Bidder under present R&M Work. It shall be the responsibility of the Bidder to ensure that components/ equipment/ systems being supplied new OR components/

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[4]	25.09.2015

equipment/ systems being refurbished / upgraded by him are fully compatible and integrated with the existing equipment / systems so as to give safe, reliable and sustained operation of the complete unit. Modifications needed on the assembled equipment to ensure complete integration are to be brought out by the Bidder in the Bid and such modifications, if any, after Owner's approval shall be carried out by the Bidder to the satisfaction of the Owner.

- 1.15 The systems shall operate without any restriction over the entire range of operating conditions as envisaged in the subsequent section of the Specification. The Bidder shall ensure that after R&M there are no restrictions/ alterations in modes of operations of the system, as per the original/existing operation philosophy.
- 1.16 As the various equipment/ systems/ components are to be fitted in the existing plant, Bidder is advised to visit the plant site to get fully conversant with the job, site conditions, and constraints, and collect all the information as required and as available before quoting against this Specification.
- 1.17 A brief extract of the existing plant, the original design details/ performance parameters along with plant details, operating history and known problem areas; wherever possible are brought out in the successive section of this Specification. Relevant plant layout drawings and certain key schematic drawings, as available, have also been provided in Annexure-I of this section of the specification for the purpose of familiarization & guidance only. The successful Bidder shall prepare and provide the additional drawings and documents describing the design and engineering details and the manuals for carrying out erection, commissioning and operation of the renovated unit.

2.4 Fuel

At present the power station is sourcing coal from [.....] coal mines. The coal is being transported to the project site by [Indian Railways/ MGR system/ cross country conveyor]. Proximity of Railway line to site from [.....] Railway Station is about [.....] km. The railway link shall also be used for transportation of heavy equipment to site during construction phase and to bring main and secondary fuel to the power plant during operation of plant. Fuel Oil is being transported to the project site by [Indian Railways/ Road Tankers].

2.4.1 Secondary Liquid Fuels

[Analysis of Heavy Fuel Oil (HFO/HPS/LSHS as applicable) & Light Diesel Oil (LDO)]:

{Analysis of Heavy fuel oil (HFO/HPS/LSHS as applicable) and Light diesel oil (LDO) which is being used in the existing Boiler for start-up, coal flame stabilization and low load operation shall be specified in the table given below:}

Table: 2.4

SL. No.	Particulars	Range/ value

LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[13]	25.09.2015

3 EXISTING PLANT DETAILS

The Power Plant, is of the configuration of [...x...MW]. The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator, respectively. The boiler for the unit is of [PF/CFBC] design. The boiler is provided with [front & rear/ corner/down shot] firing system. LP stage of Turbine is designed with [Bauman] exhaust. Condenser cooling system of the unit is designed on [once through / re-circulation system]. The Original Equipment supplier of respective Balance of Plant equipment are provided in the respective equipment's section at Clause No. 3.2 of this section of the specification. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [...] Substation.] The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [...]& [...] coal mines. The consumptive water for the power plant is being sourced from [...river /...sea].

3.1 Operational Background

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. Various Equipments of Balance of Plant system has under gone degradation in its original design parameters with respect to its name plate design parameters and also in terms of parameters like Capacity, efficiency and number of outages etc. over the years of its life. The deterioration experienced over the years in Plant's Equipment performance parameters and its current operating parameters are given below.

3.1.1 BOP Equipment's Average Performance Parameters over the Life

Table: 3.1
Equipment's Average Performance Parameters over the Life

3.1.4

Stack Emissions, Ambient Air Quality and Process Effluents

The Project has been regularly monitoring the environmental parameters such as stack emission, ambient air quality (AAQ), noise pollution and liquid waste pollution in accordance with applicable norms by employing [M/s....., which is an agency approved by State Pollution Control Board].

The existing environmental data and the limits specified for different pollutants, the locations of their measurements and the frequency of monitoring are given in the table below.

Table 3.4
Status of Stack Emissions, Ambient Air Quality and Process Effluents

3.2 Salient Technical Feature of Power Plant

{Describe in this sub-section, the Design Parameters and Salient Features of all the important Equipment and Systems of BOP Systems as mentioned below}

3.2.1 Raw Water System

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. Traveling water screens have been installed at the entry of intake water pump house to remove the floating debris and other foreign materials. The intake water pump house is installed with [...] intake pumps of capacity [...] m³/hr, out of which [...] pumps are normally working and the remaining [...] pumps are standby. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days. From in-plant raw water reservoir, raw water is pumped to the Pretreatment Plant by means of Raw Water Pumps located in raw water Pump House. The details of the system are mentioned in the table below:]

3.2.2

Water Pre-Treatment Plant

[Water Pre-Treatment Plant is a common facility for all the units of the power plant. Pre-treatment plant supplies clarified water to DM plant, Cooling Tower Make-up, cooling water to the auxiliaries of BOP system, coal handling plant dust suppression, Service Water and to the Drinking Water System. There are two numbers of clarifiers of [...].m³/hr capacity to meet all the clarified water requirements of the whole plant, except DM plant. The clarified water requirement for DM plant is met by a separate clarifier of capacity [...] m³/hr. The details of the plant are mentioned in the table below:]

3.2.3

CW / ACW System and Cooling Towers

[CW system for the power plant is working on once through principle. The water is being sourced from [name of the river/canal]. The cooling water from the above source is being drawn through a channel which is connected to the forebay of the CW pump house. From CW pump house the water is being pumped by CW pumps to the Condenser. From the Condenser outlet, hot water discharges through the seal pit from where the hot water is carried through the discharge duct/channel, which terminates at the downstream of the intake point of the [river/canal].

OR

CW system for the power plant works on once through type cooling system/ re-circulating system with natural draft / induced draft cooling towers. The CW system uses raw/clarified quality of water and is working on [...] cycles of concentration. CW pump house is a common facility for all the units of the power plant. There are two CW pumps of capacity [...] m3/hr provided for each unit. In addition, there are two standby

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[46]	25.09.2015

CW pumps common to all the units. Dedicated ACW pump which is located at CW pump house supplies the required ACW to PHE / The requirement of ACW system is being tapped from the cold CW header feeding the condenser. The hot return ACW water after cooling the auxiliaries of boiler and turbine joins the hot CW header and is sent to the cooling towers for cooling. The cold water from the cooling water flows to the fore bay of CW Pump House for recirculation into the system. One natural draft (NDCT) / induced draft cooling tower (IDCT) has been provided for each unit. The cooling tower cools the water from [...] deg C to [...] deg C. The cooling tower has been designed for an inlet wet bulb temperature of [...] deg C.

CW chemical dosing system consists of acid dosing system, dosing of anti-sealant/ dispersant/ anti-corrosive/ equivalent chemicals, including addition of these chemicals to make up for the losses from the system and maintain the required concentration of chemicals in the cooling water to prevent scale deposition/ corrosion of equipment / coolers' internal surfaces. CW side stream filtration system is provided to remove suspended solid, precipitated TDS resulting due to increase in concentration of dissolved solids from the circulating system due to evaporation losses in cooling tower. The details of the system are mentioned in the table below:].

3.2.5 Air-Conditioning and Ventilation System

[The central control room, switchyard control room, ESP controls room and selected areas of service building have been provided with centralized air-conditioning system. The central air-conditioning system of chilled water type has been provided for various control rooms and DX type of plant has been provided for ESP control room, switchyard control room and other areas in the service building. Packaged type of air-conditioners has been provided for water treatment plant control room. Evaporative ventilation system has been provided for TG building along with roof extractors. Other areas are ventilated by a combination of exhaust and supply air fan. The details of the system are mentioned in the table below:].

Fire Fighting System

[Fire fighting system is a common facility provided for all the units. This consists of pressured hydrant system for all the auxiliary buildings, pump houses and administrative building. Automatic high velocity sprinklers system has been provided for power transformers, turbine oil tanks and lube oil system equipments. Medium velocity sprinkler system has been provided for cable galleries and coal conveyor galleries. Portable types of fire extinguishers have been provided throughout the plant for fighting small and localized fires. The details of the system are mentioned in the table below:]

3.2.11 Effluent Treatment Plant

[The effluent treatment plant has been designed to collect and treat the waste water effluent from all the sources in the power plant to enable it to be reused in the power plant to achieve zero discharge. The main sources of plant effluent are, blow downs from the Boiler and CW System, effluent from neutralizing pit of Water Treatment Plant, coal pile area run off , clarified recycled water from ash pond, effluent from plant drains and oily wastes from transformer yard , fuel oil unloading area & tank farm area. Coal pile area run off is first led to a settling tank where coal particles settle down and the clear water is pumped to the Central Monitoring Basin (CMB). Oily wastes are first treated in oil /water separator, from where; the clear water is led to CMB. The combined design flow rate to CMB is [...]] m3/h. The CMB has been designed for a

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[97]	25.09.2015

holding capacity of two hours. Chemical dosing is done at CMB to achieve pH correction. The treated water from CMB is partly utilized for horticultural & service water applications while rest of the water is further treated at a Lamella Clarifier, Pressure Filter, Ultra Filters, Micro Filters and RO plant. The permeate from RO Plant is recycled to the CW pump house Fore- bay and the reject from the RO Plant is utilized for meeting the requirement of coal dust suppression and wetting of fly ash. The system details are given below]

Description	Units	Design Parameters
Influents to ETP		
Blow down from CW System	m ³ /h	[....]
Blow down from the Boiler	m ³ /h	[....]
Flow from Neutralizing Pit of DM Plant	m ³ /day	[....]

3.2.12 Electrical System

i. Service Transformer

[The Service transformer of Oil/Dry type is designed to cater 100% of Power plant auxiliary load of respective system like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation etc, or Combination of different system with 2 x100% configuration is followed. The design parameters of the Service Transformer are furnished below:]

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Type		[Oil/Dry.....]
Transformer application		[..Service
Installation		[...Indoor/Outdoor.]
Rating of transformer	MVA	[.....]
No load voltage ratio at principal tap HV/LV	kV	[.....]
Rated frequency	Hz	[.....]

Guaranteed load loss	kW	[.....]
Guaranteed efficiency at a) Full load b) 75% load	%	[.....]

ii. LV Switchgear (PMCC/MCC)

[The LV Switchgear is provided with two incomers and bus coupler or single bus with one incomer with outgoing feeders intend for specific Auxiliary services system like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation etc,. The design parameters of the LV Switchgear /MCC are furnished below:

iv. Non Segregated Phase Bus Duct (NSPBD)

[The Non Segregated Phase Bus Duct (NSPBD) connects Service Transformer to LV Switchgear. The design parameters of the NSPBD are furnished below]:

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Type of bus duct		[.....]
Rated voltage and No. of phase	V	[.....]
Material of Busbar and Enclosure		[.....]
Rated Current	A	[.....]
Designation (From and To)		[.....]
Type of cooling (NSPBD)		[.....]
Maximum temperature rise of conductor over 50°C ambient	°C	[.....]
Maximum temperature rise of enclosure over 50°C ambient	°C	[.....]
One minute power frequency voltage withstand	KV (RMS)	[.....]
Continuous current rating at 50°C design ambient air temperature	A	[.....]
One second short circuit withstand rating	KA (RMS)	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[103]	25.09.2015

Description	Units	Design Parameters
Momentary short circuit withstand current	KA (Peak)	[.....]

v. MV Cables

[The MV cables of 6.6kV UE Voltage grade is used for feeding MV motors as well as service transformers. The design parameters of the MV Cables are furnished below:]

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Voltage Grade		[.....]
Nominal Power System Voltage	kV	[.....]
Maximum System Voltage	kV	[.....]
System Neutral Earthing		[.....]
No. of Cores		[.....]
Conductor Material		[.....]
Conductor (stranded/solid)		[.....]
Conductor Screen		[.....]
Insulation		[.....]
Insulation Screen		[.....]
Inner Sheath		[.....]
Outer Sheath		[.....]
Armoured/Unarmoured		[.....]

Description	Units	Design Parameters
Type of End Sealing		[.....]

vii. Control (Core) Cables

[The Control cables of 1.1kV Voltage grade are used for Protection, CT, VT connection and feedback/interlock signals. The design parameters of the Control Cables are furnished below:

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Voltage Grade		[.....]
Nominal Power System Voltage	kV	[.....]
Maximum System Voltage	kV	[.....]
System Neutral Earthing		[.....]
No. of Cores		[.....]
Conductor Material		[.....]
Conductor (stranded/solid)		[.....]
Conductor Screen		[.....]
Insulation		[.....]
Insulation Screen		[.....]

x. Illumination System

[The illumination system is categorized mainly as Normal, Emergency and DC lighting. The illumination system of indoor area/Building (Other than Boiler area, TG Building, Ash Handling Plant and Coal Handling Plant, switchyard and transformer yard), Outdoor area and Road lighting for Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, Chimney, AC and ventilation etc. are covered in this package. Aviation lighting for cooling tower and chimney also covered in this package. Lighting Distribution Board (LDB) is normally getting supply from 415V PMCC. Each LDB is provided with lighting transformer for isolation of lighting circuit from power circuit and also for limiting short time current rating. Outgoing circuits of LDB will feed Lighting panels which is placed local to fixtures. It is envisaged that separate LDB for indoor as well as for outdoor area. Emergency Lighting system is same as normal system however it will get supply from Emergency 41V PMCC backed up with DG set. The Design parameters of Illumination System and its major components comprising of LDB with transformer, Lighting Panel, Lighting Fixtures, Lighting wires and Lighting Poles are furnished below]:

Description	Units	Design Parameters
Lighting System:		
Voltage		[.....]
a)AC system		[.....]
Rated Voltage	V	[.....]
Maximum Voltage	V	[.....]

xi. Cable Carrier System

[The Cable Carrier system is described as below: Indoor Buildings are provided with Cable cellar/Trench and outdoor areas are provided with Pipe cum cable rack/Duct bank/Trench. Separate Tray is envisaged for MV cables. LV cables, Control cables and Instrumentation cables in the order that MV cables Tray at the top followed by LV, Control and Instrumentation Tray. Ladder type tray is used for MV, LV and Control cables, however Perforated Tray to be used for Instrumentation cables. The Cable carrier system of indoor area/Building (Other than Boiler area, TG Building, Ash Handling Plant and Coal Handling Plant, switchyard and transformer yard), Outdoor area and interplant cable carrier system for like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation etc are covered in this package. However complete interplant cable carrier system if required is the

xii. Earthing and Lightning System

[Above ground earthing system for mechanical BOP like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation etc are covered in this package. System Neutrals are earthed through Treated Earth Pit. All areas of power plant are interconnected to form a integrated single earthing system. Lightning system for mechanical BOP system like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation etc. are covered under this package. The Design parameters of Earthing and Lightning System are furnished below]:

3.2.13

Control & Instrumentation

[The existing control and instrumentation system of balance of plant systems generally consist of an old control system such as local control panels, relay based hardwired control systems and few signals exchange through hardwired means with existing Plant DCS and requires large scale replacement of field instruments, devices, transmitters, switches, cables, valves and actuators, junction box and local control cabinets etc owing to obsolescence of the existing equipments of various packages of balance of plants. Integrated microprocessor based open loop control, sequential control and data acquisition system for balance of plant Systems such as Pre-Treatment System, DM Plant, Fuel Oil System, Compressed Air System, CW System, ACW/CCW system and Miscellaneous Systems in hierarchical levels with integrated unit monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.2.14 Civil Works

Bidder shall go through the details of the existing Buildings / Structures / Foundations / Facilities mentioned hereunder (but not limited to) for thorough understanding of conditions of the same. In order to assess the quantum of Civil / Structural / Architectural R&M work within the package, Bidder shall also carry out a brief or detailed survey (as required) of the site to acknowledge and obtain any other information/data about present conditions at site and identification of modification requirements in any other structure or foundation not included here. Conditional details of important buildings / structures / foundations / facilities which require major modifications have been described below:

{Details of the existing buildings / structures and their foundations in the Balance of Plant area like Raw Water Intake Pump House & Pipe Line, Cooling Water Channels, Forebay, CW Pump House, D. M. Plant Building, Neutralizing Pit and Laboratory Building, Chemical Building, Clarified Water Pump House, Electro-chlorination/Gas Chlorination Building, Effluent Treatment Plant Building, Guard Pond, Cooling Tower, Fire Water Pump House & Reservoir, Fuel Oil Unloading Area & Pump House etc. shall be indicated in this section. Also the available GA/Construction Drawing including Load Data shall also be provided.}

4 SCOPE OF SUPPLY & SERVICES

4.1 The scope of supply and services to be provided by the Bidder shall include all such activities as required to meet the target and intent of this specification. The scope shall generally cover, but will not be limited to the following:

- (i) Replacement of some of the existing components with new components of improved and better design.
- (ii) Incorporation of new systems / components wherever required in line with the Specification.
- (iii) Refurbishing / Retrofitting of some of the components in the existing equipment/system.
- (iv) All types of civil/structural works like modification and strengthening of foundation of existing and upgraded equipment, making new structures or foundations (if applicable), dismantling, restoration, supply and erection of any temporary supports or any other construction work required for implementation of renovation work.

All structural modifications/strengthening of existing structures or buildings of *[Raw Water System, Circulating Water System, Water Treatment Plant and Effluent Treatment Plant, Cooling Tower, Fire Protection System, Fuel Oil Handling System etc.]*, including supply, fabrication and erection of any new structure and provision of any additional platform if required for access to new equipment or existing equipment as specified.

Supply of all materials, equipments, machinery and manpower required for civil/structural R&M works.

Site enabling works as per the requirements to support civil/structural R&M works.

- (v) Design, engineering, submission of design calculations for review and approval, manufacturing, inspection and testing at suppliers' works, packing, forwarding to site, unloading, erection, supervision, pre-commissioning, testing and commissioning and performance testing of the equipment / systems and works indicated in clause No. 4.6 of this technical Specification.
- (vi) Mandatory spares, start-up and commissioning spares. The general requirements in respect of various types of spares are given in Clause 9 of this section of Technical Specification.
- (vii) Packing, transportation and transit insurance of all materials required for renovation / replacement work as per this Specification from the supplier's/sub supplier's works to *[Name of the Plant]*, unloading, preservation and storage at site. Packing, transportation, transit insurance, clearance from all concerned agencies etc. of all components/materials required to be forwarded from *[Name of the Plant]* to Bidder's facilities and back to *[Name of the Plant]*.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[116]	25.09.2015

- (viii) Dismantling of the systems, reassembly and re-erection / reinstallation along with associated inspection, testing, commissioning and trial run of equipment individually as well integrated with the overall plant trial operation.
- (ix) Dismantling of the systems, handling and storage of dismantled equipment, reassembly and re-erection / reinstallation along with associated inspection, testing, commissioning and trial run of equipment individually as well integrated with the overall plant trial operation.
- (x) Materials which are removed from the existing machines but are not re-used during the re-assembly of the machines as well as those components which are found to be beyond refurbishment shall be the property of Owner and shall be deposited at Owner's designated stores. Bidder shall prepare a record of all such dismantled material and hand it over to the Owner.
- (xi) Loading, transportation, unloading and disposal of scrap to the designated storage/disposal yard.
- (xii) Erection of all material supplied new for renovation (including erection of components, replacing old components). Re-erection of any component / equipment removed for modification so as to make complete unit consisting of BOP systems including electrical & control and instrumentation equipment /system ready for commissioning.
- (xiii) All gas cutting / dismantling, edge preparation, welding, bolting etc. and conductance of all NDTs like radiography, ultrasonic testing, MPI, die penetration testing etc. Any new matching pieces, piping, hangers & supports etc. required for assembly of equipment/ systems, as per system requirements shall also be included in the scope of the Bidder.
- (xiv) All Pre-commissioning activities as may be required such as hydraulic testing, air & gas tightness test, steam blowing for steam piping under fuel oil system, floating of safety valves, oil flushing etc. including erection and dismantling of all temporary systems like piping / tanks etc. and Conductance of all demonstration tests including performance test.
- (xv) Assisting and coordinating with Owner in tuning various control loops finalizing protection and control requirements of all Systems under BOP package.
- (xvi) Insurance for all items / activities in line with the provisions of General Condition of Contract of Volume-I.
- (xvii) Installation, Interconnection laying and termination of all Bidder supplied cables, testing and commissioning of all equipment/systems furnished by the Bidder.
- (xviii) Civil / Mechanical work (such as grouting, cutting, welding etc.) related to mounting of New Cabinets, CRT / Keyboards, laying & termination of associated Cables.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[117]	25.09.2015

- (xix) Supply of all necessary tools, tackles, commissioning spares, test instruments and deputing of experienced personnel for completion of the above erection, testing and commissioning work.
- (xx) Dismantling of existing C&I cabinets along with associated cabling, for various systems under BOP package for retrofitting the new C&I systems, based on requirement as described in clause No. 4.6.
- (xxi) Providing all site execution and supervision by qualified and experienced engineering personnel during execution of all works under the scope of Bidder. Also providing all facilities and qualified personnel for implementing the approved quality assurance programme.
- (xxii) Dismantling of the existing Instrumentation and Control cables and relaying of new cables as may be required.
- (xxiii) The Bidder shall conduct all shop and site tests as per the requirements of this Specification and Owner approved "Quality Assurance Program" to be finalized before the award of this Contract. Facilitating inspection, witness of shop and site tests by the representatives of Owner shall be in the scope of the Bidder.
- (xxiv) Performance Guarantee tests after successful completion of initial operation.
- (xxv) Electrical

The scope of electrical system of package for Balance of Plant will include all electrical equipment listed below (if applicable).

[Note: Scope of work of auxiliary system for BOP shall be suitably modified with respect to specific project and accordingly list of attachments shall be enclosed]

a) [All 415 V MCCs for BOP package as required and ACDBs/PDBs and DCDBs for drives and equipment covered in BOP package.

For technical details and requirement, bidder shall refer Attachment E4 "415 V Switchgear, MCC and DBs"

b) 6.6 / 0.433 kV transformers, 415 V non segregated phase bus ducts.

For technical details and requirement, bidder shall refer Attachment E3 "LV MCC and DBs" and Attachment E5 "415 V Non segregated phase bus duct".

c) Welding sockets in BOP area with necessary Welding DBs.

d) Control stations / Local Push Button stations.

e) HV/LV A.C. motors and motorized actuators for all the drives in the scope of BOP package and DC Motors and DC starters as required in BOP area. For technical details and requirement of motors, bidder shall refer Attachment E1 "Motors" and Attachment E2 "Motorized Actuators"

f) HV/LV power and control cables with termination kits for all auxiliaries in BOP area. For technical details and requirement of HV and LV cables, bidder shall refer Attachment E7 "HV cables" and Attachment E8 "LV cables".

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[118]	25.09.2015

- g) 220V DC System with all auxiliaries. For technical details and requirement refer Attachment E6"220V DC System"*
- h) Illumination System including Lighting Transformers, MLDBs, Lighting DBs/ Lighting Panels for the BOP area.
For technical details and requirements of Illumination system, bidder shall refer Attachment E9"Illumination system".*
- i) Grounding system for the BOP area and grounding connection to all equipment in BOP area.*
- j) Lightning Protection system for BOP buildings and other equipment/buildings covered in BOP area. For technical details and requirements, bidder shall refer Attachment E11"Earthing and Lightning protection system".*
- k) Complete cable racks with necessary supporting structures and foundations within BOP area, cable trays with support system, cable trenches and accessories in BOP area. For technical details and requirements, bidder shall refer Attachment E10"Cable Carrier System".*
- l) Variable frequency drives for HV and LV system of BOP package, if any.
For technical details and requirements, bidder shall refer Attachment E13"Variable Frequency Drives".*
- m) Emergency Diesel Generator
For technical details and requirements, bidder shall refer Attachment E15"Emergency Diesel Generator".*

(xxvi) Construction Water

[Construction water shall be made available to Bidder at a single point in a suitable location. The Bidder shall arrange at his own cost the required pumps, distribution pipe line network for further distribution as required to carry out construction work.]

(xxvii) Construction Power

[Construction power shall be made available to bidder at single point at [...] kV level. Further distribution as required to carry out the construction work shall be carried out by Bidder at his own cost.]

- (xxviii)** Providing all other services necessary for meeting the intent and requirement of this Specification. This shall include but not limited to system engineering, furnishing drawings, data, and information for Owner's review, participation in meeting & reviews, System warranty, revision of O&M Manuals etc.

4.2 Tools & Tackles

One (1) set of special tools and tackles required for the maintenance of equipment/systems have to be supplied by the Bidder. These tools and tackles shall be separately packed and brought to site. These shall not be used for

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[119]	25.09.2015

erection/commissioning purposes and shall be in an unused and new condition, when they are handed over to the Owner. A list of all such special tools and tackles shall be submitted along with the offer.

For C&I system, Bidder shall supply one set of special non standard tools, module testing kit, cables, and any other equipment required for erection commissioning, testing, trouble shooting, calibration, maintenance and inspection of all systems / equipment provided. Any tools required to make changes (DIP shunt cutter, soldering irons, tips, wire wrap guns and bit unwrapping tools, strippers, terminal guard, connector repair tool, dies etc.) shall also be supplied.

Bidder's scope shall also include supply of all Cranes, welding sets and NDT testing equipment, scaffolding, special tools and tackles, jigs and fixtures as may be required during modification / erection and commissioning. Those items specifically brought to site solely for erection / modification purpose and if no more needed for regular maintenance of the equipment, can however, be taken back by the Bidder after completion of the work at site, subject to the approval of Owner.

4.3 Safety

The design of the equipment shall incorporate every reasonable precaution and provision for the safety of all personnel and for the safety and security of all persons and property. The design shall comply with all appropriate statutory regulations relating to safety.

Newly constructed structures and equipment shall be designed and constructed to withstand every foreseeable static and dynamic loading condition, including loading under earthquake conditions, with an adequate margin of safety.

Ready and safe access with clear head room shall be provided to all the newly supplied parts of the plant for operation, inspection, cleaning and maintenance.

- 4.3.1 While carrying out the R&M work as per this Specification, the Bidder may have to modify the existing equipment foundations, or do the excavation work and make new foundations. The Bidder may also have to make new supporting arrangements with / without modified loads for the items/ equipment supplied by him. Under all such conditions Bidder shall be solely responsible for ensuring the safety of the adjacent equipment / foundations and of the existing supporting structures. The R&M work by the Bidder shall be carried out in such a manner that no damage is caused to existing equipment / foundations / structure and all precautions, including strengthening of existing structures, as may be necessary, shall be taken by the Bidder to ensure safety of existing plant / equipment / foundation / structures.

--	--------------------------

4.4 Training Requirements

Bidder shall include in his offer the training programme for Owner's Operation & Maintenance staff in view of introduction of new systems/ equipment. This training shall be organized before handing over the unit.

4.5 In case there is any difference in scope of work and services as described in this section of the Specifications and individual Specification volumes, then more stringent of the Scope of work and services shall prevail.

4.6 Detail Scope of Work:

4.6.1 Balance of Plant (BOP) System

{Describe in this chapter, all the equipment/components which need to be replaced/refurbished/retrofitted as finalized in the DPR on the basis of RLA/CA and EA report. Scope with regard to Civil, Structural and architectural work as required for the Power Plant due to incorporation of new equipment/components shall also be incorporated in this chapter.}

The Bidder shall include in his scope the following works for the R&M of the Unit, which are based on RLA/CA and EA studies. The overall scope of work shall include but shall not be limited to the scope of work mentioned below. Any other items not specifically mentioned but considered necessary by the Bidder for carrying out the R&M work, shall also be included in his scope so as to meet the intended performance of various equipment & systems.

4.6.2 Miscellaneous

- a. In addition to the above listed works, scope of civil / structural / architectural works and supplies shall be as detailed below:

Bidder shall be provided with the existing drawings and documents as listed in Annexure-I by the Owner to facilitate the civil / structural / architectural, refurbishment and replacement works.

Bidder shall carry out a brief or detailed survey (as required) of the site to acknowledge and obtain any other information/data about present conditions of the buildings, structures, foundations & facilities mentioned in this specification and identification of modification requirements in any other structure or foundation not included here.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[156]	25.09.2015

Subsequently Bidder shall prepare and submit for approval by Owner, a detailed scheme including methods techniques, requirements etc. for carrying out civil/structural/architectural R&M works to be executed in the plant.

b. The scope of Civil / Structural / Architectural works to be carried out by the Bidder under this package shall generally cover the following:

- Inspection and checking the design adequacy of the foundations of existing structure like [Raw Water Intake Pump House, CW Pump House, DM Plant Building, Laboratory Building, Chemical Building, Clarified Water Pump House, Electro-chlorination Building, Effluent Treatment Plant Building, Cooling Tower, Fuel Oil Pump House, Fire Water Pump House etc.] for all the applicable loads and construction of new foundations / modification of existing, wherever required.
- Inspection and checking the design adequacy of existing structures [such as Raw Water Intake Pump House & Pipe Line, Cooling Water Channels, Forebay, CW Pump House, D. M. Plant Building, Neutralizing Pit and Laboratory Building, Chemical Building, Clarified Water Pump House, Electro-chlorination Building, Effluent Treatment Plant Building, Guard Pond, Cooling Tower, Fuel Oil Pump House, Fire Water Pump House, pipe & cable racks etc.] for any corrosion/damage and rectification / strengthening of the same.
- Construction of any new foundation / building / structure, if any, as per the requirement of the scope under R&M work.
- Carrying out all interior / exterior architectural repair and replacement works [such as flooring, painting, plastering, door/windows, roof finishing, water proofing, sheet cladding, roof sheeting, new false ceiling, glass partitions, lighting works replacement or modification of AC duct where ever applicable] is also included in contractors scope. etc.
- Any other civil related work required in buildings / structures of the package from aesthetics ambience & ease of operation point of view.

In addition to this any other modification/alteration to existing nearby foundation/structural steel/concrete/underground pipes work if required for satisfactory execution of intended work covered under this specification shall be carried out by the Bidder. Supply of all material required for the above work is included in Bidder's scope

c. Supplies for Civil/Structural Work

The Bidder shall supply all material needed for completion of all civil, structural and architectural works as per this specification. The Bidder's scope of supply generally includes but is not limited to the following:

- Supply of cement, steel (for reinforcement as well as for any other use), grout, admixture for RCC work, sand and all other construction/ architectural / building materials as may be required for any repair/modification of existing civil works / foundation or for construction of new foundation / civil works.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[157]	25.09.2015

- Supply of structural steel for all structural erection / modification / strengthening.
- Supply of all foundation bolts, and nuts base plates, embedments with lugs, miscellaneous steel where ever needed
- Supply of steel helical springs and viscous dampers for new equipment (if any).

d. Construction Enabling Works

[The owner shall provide the following facilities to the by Bidder to carry out the construction work.

- *Temporary Stores to store construction material.*
- *Fabrication Yard]*

e. Quality Control Laboratory

[To conduct acceptance test on all construction material, weldments, concrete cubes etc laboratory facilities if available in the existing unit shall be used. In case the laboratory facility is not available within the unit, Bidder shall get the testing at his own cost from a reputed test laboratory approved by the Owner.]

- f. Construction Tools & Materials Supplied By the Bidder. The Bidder shall arrange adequate number and type of machinery and equipment for proper setting out and timely completion of the various works covered under the scope of the work. All arrangements for transporting the equipment to and from the site shall be done by the Bidder at his own expense.

The Bidder shall provide all fuels and lubricants required for the operation and maintenance of construction machinery and equipment as well as his transport vehicles at his own cost.

- g. The Bidder shall furnish manufacturer's test certificate for all the manufactured items supplied by him. Representative specimens of the material shall also be submitted to the Owner and shall be tested at a recognised testing laboratory at the Bidder's cost in case Owner so desire.

h. Work Execution and Supervision:

The Bidder shall have at the site accredited and qualified engineers and foremen / supervisors with adequate number of years of experience in execution of similar works and also operators of machinery and equipment, for satisfactory progress and timely completion of the works.

- i. The Bidder shall be fully responsible for the correctness and accuracy of the tests performed, results obtained / tabulated, interpretation of test results and recommendations made. The work shall be executed in a professional manner with full understanding of the importance of work for a R&M project of this magnitude.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[158]	25.09.2015

- j. In the event of occurrence of any accidents at / near the site of the work or in connection with execution of the work, a report shall be made immediately to the Owner, giving full details of the accident. He shall also report such accidents to all the competent authorities wherever such reports are required by those authorities.
- k. Owner reserves the right to order in writing, from time to time, during the progress of the work, removal and re-execution of any work which in the opinion of the Owner is not in accordance with the specification / bid document.
- l. During inclement weather, rains etc., the Bidder shall suspend all works for such time as the Owner may direct and shall protect from damage all works already in progress or completed just then. All such temporary protective measures shall be at the Bidder's cost and any damage to works shall be made good by the Bidder at his own expense.
- m. **Safety of Adjacent Plant/Equipment and Civil Structure**
While carrying out the R&M work as per this specification, the Bidder may have to modify the existing equipment foundations, or do the excavation work and make new foundations. The Bidder may also have to make new supporting arrangements with / without modified loads for the items / equipments supplied by him. Under all such conditions Bidder shall be solely responsible for ensuring the safety of the adjacent equipments / foundations and of the existing supporting structures. The R&M work by the Bidder shall be carried out in such a manner that no damage is caused to existing equipments / foundations / structures and all precautions, including strengthening of existing structures, as may be necessary, shall be taken by the Bidder to ensure safety of existing plant / equipment / foundation / structures.

4.6.3 Spares

All spares as specified in Annexure-II of this Specification in accordance with Clause No. 9.

4.6.4 Consumable, Oil & Lubricants

All the first fill and consumables such as greases, oil, lubricants, servo fluids/control fluids, gases and essential chemicals etc. as required up to the complete commissioning of the BOP systems, are covered in the scope of Bidder. Suitable standard lubricants as available in India are preferable. Efforts should be made to limit the variety of lubricants to minimum.

4.6.5 Embedded Parts & Fixture

All fixtures, embedded parts, steel embedment including fixing lugs and welding between them, foundation plates, grouting, nuts, bolts etc. for fixing all the equipment, piping on civil works shall be included in scope work of this package. All structures which would be required by the Bidder for supporting the piping shall also be included in scope of work of this package.

LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[159]	25.09.2015

4.6.6 Other Services

The scope of Erection, Commissioning and Testing shall include the following:

- a) Complete pre-commissioning work including tests of facilities such as line flushing, hydraulic testing, chemical cleaning of pressure parts etc and all other tests as mutually agreed in the Bidder's quality assurance programme as well as those identified in the Specification.
- b) Supply of all consumables (except coal and fuel oil for firing) like chemicals for chemical cleaning, passivation, inhibition etc., oil for line flushing, any other consumable as required for above pre-commissioning/ commissioning activities.
- c) Necessary arrangement as requires for the start up of various equipment & systems of BOP package.
- d) Supply of all temporary equipment such as tanks, piping, including supports, valves, pumps and all necessary instrumentation for successful conductance of pre-commissioning and commissioning activities. All temporary equipment and instruments shall be clearly listed out in the Bid.
- e) Providing safety barricades and signage during dismantling, erection and testing etc.
- f) Supply of all labour, skilled/semi skilled supervisors, engineers and any other manpower.
- g) All the erection materials and consumables like shims, welding rods, soldering and brazing alloys, industrial gases, insulating tapes, compounds, chemicals etc. required for the erection and commissioning works.

Note: The temporary equipment specifically brought by the Bidder solely for the pre-commissioning and commissioning work shall, on completion of these activities, remain the property of the Bidder.

The selection of material of all the temporary equipment/instruments shall be compatible with the service conditions expected during pre-commissioning/ commissioning activities.

5 TERMINAL POINTS & EXCLUSIONS

5.1 Terminal Points

For all terminal points, scope of this contract shall include supply of matching flanges, gaskets, bolts, nuts etc including any isolation valve. Terminal Points mean Engineering, Procurement and Erection in entirety. The terminal points of the complete package to be supplied shall be as follows.

(a) **[Raw water Intake System]**

No Terminal Point. Entire system as specified under scope of work shall be under the scope of Bidder.]

(b) **[CW, ACW, DM Water & other Auxiliary Water Systems]**

[Condenser Cooling Water System (CW system)

Bidder shall terminate the CW piping at the following terminal points

CW Inlet Header near A row of TG Building at : [.... □N, □E]

CW Outlet Header near A row of TG Building at : [.... □N, □E]

Exact elevation of the pipe shall be furnished during detail engineering of battery limit.]

(c) **[DM water make up to CSTs]**

[Bidder shall terminate the DM water lines at the inlet to the flow meter(s) to the Condensate Storage Tanks (CSTs). at □N, □E]

(d) **[Service Water]**

[One no. Stub connection with isolation valve shall be provided by the bidder on service water supply header near Bunker bay first column at 4m elevation for Boiler at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near C row at 4m elevation for TG Building at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near CHP control room at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near Ash Water Pump House at □N, □E].

Bidder has to provide service water lines and valves for all the areas covered under this package.]

(e) **[Drinking Water]**

[One no. Stub connection with isolation valve shall be provided by the bidder on service water supply header [near Bunker bay first column at 4m elevation for Boiler at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near [C row at 4m elevation for TG Building at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near CHP control room at □N, □E].

[One no. Stub connection with isolation valve shall be provided on service water supply header Near Ash Water Pump House at □N, □E].

[Bidder has to provide drinking water lines and valves for all the areas covered under this package.]

LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[161]	25.09.2015

- (f) **[Compressed (Service & Instrument air System) Air System]**
 Service Air Header near A row of TG Building at : [.... □N, □E]
 Instrument Air Header near A row of TG Building at : [.... □N, □E]
 Service Air Header near CHP Control Room at : [.... □N, □E]
 Instrument Air Header near CHP Control Room at : [.... □N, □E]
- (g) **[Fire Water supply for fire protection system of air pre heaters]**
 [From the plant fire hydrant network, Bidder shall provide one stub with an isolation valve at a terminal pressure of about 6 kg/cm² from the ring main near boiler at about [4 m above local grade level at □N, □E] to meet the fire water requirement of RAPH.]
- (h) **Electrical**
- i. **[6.6 kV Power Supply for LT Transformers and MV Motors:** At the terminal of 6.6 kV station/unit switchgear of TG package. All Power and control cables from the terminals of 6.6 kV station/unit switchgears and termination are included in the scope of this package.]
 - ii. **[415 V Emergency Power Supply for BOP package areas:** Power supply at 415V level at the outgoing terminals of 415 V Emergency Switchboard of TG package. All cables from the terminal point are included in the scope of BOP package.]
 - iii. **[Grounding & Lightning:** Above ground earthing and lightning protection for the mechanical BOP packages like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation area etc are covered in this package. Terminal point will be nearest earth riser available to the respective area. Complete plant underground grid is in eBOP package scope of work.]
 - iv. **[Cable Carrier system:** Cable carrier system for Mechanical BOP like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation, fire fighting system etc are covered in this package. Inter package cable carrier system between these packages is also covered in this package. Cable carrier system for all the cable covered for this package shall be in scope of this package.]
- (i) **Control & Instrumentation**
- i. **[I&C Terminal point for Instrument & Control Cabling:** Interface cable from Microprocessor / PLC panel to DCS shall be supplied by others
 Up to terminal blocks of Raw Water Intake System, Continuous Stack Emission Monitoring System, Pre-Treatment Control, DM Water Control, CW & Cooling Tower Control, Compressed Air System Control, ACW/CCW Control, Fuel Oil System Control, Fire Fighting Control, CPU Control, COLTS Control, Self Cleaning Control, Hydrogen Generation Control, HVAC Control, ESP Control, Mill Reject Handling Control panel for plant BOP systems.]
 - ii. **[I&C terminal point for 230V AC supply:** 230 V AC UPS power supply feeder in ACDB shall be made available to bidder at a single point Upto terminal block of Raw Water Intake System, Continuous Stack Emission Monitoring System, Pre-

6 GENERAL TECHNICAL REQUIREMENTS

6.1 Codes & Standards

6.1.1 Apart from some specific application, the proposed R&M equipment shall comply with the appropriate Indian Standard / DIN or equivalent international Standard. Specification as listed below in this section and mentioned in detailed Specifications, each incorporating the latest revisions at the time of tendering.

6.1.2 Wherever specified or required the Plant & Equipment shall conform to various statutory regulations such as Indian Electricity Rules/Act, Indian Boiler Regulations, Factories Act, etc.

6.1.3 In the event of any conflict between the codes and standards referred above, and the requirements of this Specification, the requirements, which are more stringent, shall govern.

6.1.4 In case of any change of code, standards and regulations between the date of purchase order and the date, the Bidder proceeds with manufacturing, the Owner shall have the option to incorporate the changed requirements.

6.1.5 List of Reference Codes/Standard

- a)** American Society of Mechanical Engineers (ASME).
- b)** American National Standards Institute (ANSI).
- c)** American Society for Testing and Materials (ASTM).
- d)** American Institute of Steel Construction (AISC).
- e)** American Welding Society (AWS).
- f)** Architecture Institute of Japan (AIJ).
- g)** Bureau of Indian Standards Institution (BIS).
- h)** British Standards (BS)
- i)** Central Board of Irrigation and Power (CBIP) Publications.
- j)** Deutsches Institut für Normung (DIN).
- k)** Electric Power Research Institute (EPRI).
- l)** Emission regulation of Central Pollution Control Board (CPCB)
- m)** Federal Occupational Safety and Health Regulations (OSHA)
- n)** Heat Exchanger Institute (HEI).
- o)** Hydraulic Institute (HIS).
- p)** Indian Electricity Rules.
- q)** Indian Boiler Regulations (IBR).

LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[164]	25.09.2015

- r) Indian Explosives Act.
- s) Indian Factories Act.
- t) Institute of Electrical and Electronics Engineers (IEEE).
- u) International Electro-Technical Commission Publications.
- v) Instrument Society of America (ISA).
- w) International Organization for Standardization (ISO).
- x) International Electro-technical Commission (IEC).
- y) Japanese Standards (JIS).
- z) Japanese Electro-technical Committee (JEC).
- aa) National Fire Protection Association (NFPA).
- bb) National Electrical Manufacturer's Association (NEMA).
- cc) National Electric Code (NEC).
- dd) Power Test Code for Steam Turbines (PTC).
- ee) Ministry of Environment & Forest (MoEF), Govt. of India
- ff) Standards of Manufacturer's Standardization Society (MSS).
- gg) Tariff Advisory Committee (TAC) rules.
- hh) Tubular Exchanger Manufacturer's Association (TEMA)
- ii) CEA regulations
- jj) Cooling Technology Institute (CTI) Codes
- kk) State Pollution Control Board (SPCB) Regulations/Norms

6.2 Name Plates

- 6.2.1 Instruction plates, nameplates or labels shall be permanently attached to each main and auxiliary item of plant in a conspicuous position. These plates shall be engraved with the identifying name, type and manufacturers serial number, together with the loading conditions under which the item of plant has been designed to operate.
- 6.2.2 Items such as valves, which are subject to hand operation, shall be provided with nameplates so constructed as to remain clearly legible throughout the life of the plant giving due consideration to the difficult climatic conditions to be encountered. Nameplates shall be securely mounted where they will not be obscured in service by insulation, cladding, actuators or other equipment. Direction of flow is also to be engraved.
- 6.2.3 All trade nameplates and labels shall be in Bilingual language. All measurements shall be in M.K.S. Units.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[165]	25.09.2015

6.2.4 The size and location of nameplates shall be subject to Approval of the Owner.

6.3 Guards and Fences

6.3.1 Effective guards and fences must be provided to prevent injury to operators.

6.3.2 Mesh guards which allow visual inspection of equipment with the guard in place are generally preferable. The guards shall be constructed of mesh attached to a rigid framework of mild steel rod, tube, or angle and the whole galvanized to prevent loss of strength by rusting or corrosion. The guards shall be designed to facilitate removal and replacement during maintenance.

6.3.3 Guards for couplings and rotating shafts shall be in accordance with BS 5304-1975 or similar approved standard. All rotating shafts and parts of shafts must be covered.

6.4 Operation, Maintenance & Availability

6.4.1 Equipment/works offered shall be designed for high availability, high reliability, low maintenance and ease of operation & maintenance. The Bidder shall specifically state the design features incorporated to achieve high degree of reliability, availability, operability and ease of maintenance. He shall also furnish details of availability records in plants stated in his experience list.

6.4.2 Wherever required platforms and walkways with access ladders having hand rails shall be provided to facilitate operation and maintenance.

6.5 Materials

6.5.1 In selecting materials of construction of equipment, the Bidder shall pay particular attention to the atmospheric conditions existing at the Site and the nature of material/fluid handled. Wherever deviations are taken in respect of materials specified, the reasons shall be spelt out clearly in the proposal.

All materials shall be new, and shall be of the quality most suited to the proposed application.

6.5.2 As far as possible; materials shall be in accordance with Indian or international standard Specifications. Where such standards are not available, sufficient information shall be provided to allow the Owner to assess the suitability of the material for the particular application.

All materials used shall have performed lengthy satisfactory service in similar or more arduous conditions to those proposed by the Bidder.

6.5.3 All parts which could deteriorate or corrode under the influence of the atmospheric, meteorological or soil conditions at the Site, or under the influence of the working conditions shall be suitably and effectively protected so that such deterioration or corrosion is a minimum over the life of the plant.

6.6 Lubricants, Chemical and Control Fluids

6.6.1 Provision shall be made for suitable efficient lubrication where necessary to ensure smooth operation free from undue wear.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[166]	25.09.2015

- 6.6.2 Non ferrous capillary tubing shall be used throughout.
- 6.6.3 Oil baths shall be provided with filling and drain plugs, both of adequate size. An approved means of oil indication including level switches and temperature indication shall be provided.
- 6.6.4 Lubrication points shall be conveniently situated for maintenance purposes. It must be possible to carry out lubrication from a gangway or landing and without the removal of guarding or having to insert the hand into it. Where accessibility to a bearing for oiling purposes would be difficult a method of remote lubrication shall be fitted.
- 6.6.5 The Bidder shall provide a detailed and comprehensive Specification for all lubricating oils, greases and control fluids required for the entire plant. A sufficient supply of these shall be provided by the Bidder for initial commissioning, first fill and till handing over of the unit.
- 6.6.6 The Bidder shall supply a detailed schedule giving the lubricant testing, cleaning and replacement procedures. All equipment and facilities necessary for the testing, cleaning and changing of lubricants and control fluids shall be provided. The Bidder shall endeavour to reduce the varieties and grades of required lubricants, chemicals and control fluids to a minimum, matching them where possible to those already in use in the generating station in order to simplify procurement and minimize storage requirements. All lubricants, chemicals and control fluids shall be of internationally recognized standards and shall be easily obtainable from a large number of Indian suppliers. Bidder shall also indicate the equivalent Indian Standard for the above for easy procurement in future.
- 6.6.7 No lubricant or control fluid shall have toxic or other harmful effects on personnel or on the environment.

6.7 Plant Life and Mode of Operation

- 6.7.1 On completion of the R&M project, the plant/equipment and systems individually and collectively shall be possible to operate continuously with routine maintenance and overhauls for an economic service life of not less than [20/25 years] under the prevailing site conditions and for the type of duty intended.
- 6.7.2 After R&M of BOP System and associated auxiliaries, the unit shall be able to operate to its rated capacity continuously and there shall be no restriction of the operation of the supplied system.

6.8 Packaging & Marking

All the equipment shall be suitably protected, coated, covered or boxed and crated to prevent damage or deterioration during transit, handling and storage at site till the time of erection. While packing all the materials, the limitations from the point of view of availability of railway wagon sizes in India should be taken account of. The details of various wagons normally available with Indian Railways for transportation of heavy equipment shall be considered by the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[167]	25.09.2015

Bidder. The Bidder shall be responsible for all loss or damage during transportation, handling and storage due to improper packing.

The identification marking indicating the name and address of the consignee shall be clearly marked in indelible ink on two opposite sides and top of each of the packages. In addition the Bidder shall include in the marking gross and net weight, outer dimension and cubic measurement. Each package shall be accompanied by a packing note (in weather proof paper) quoting specifically the name of the Bidder, the number and date of Contract and names of the office placing the Contract, nomenclature of contents and Bill of Material.

6.9 Protection

Equipment having antifriction or sleeve bearings shall be protected by weather-tight enclosures. Coated surfaces shall be protected against impact, abrasion, discoloration and other damages. Surfaces that are damaged shall be repainted.

Electrical and C&I equipment shall be protected against moisture and water damages. All external gasket surfaces and flange faces, couplings, rotating equipment shafts, bearings and like items shall be thoroughly cleaned and coated with rust preventive compound as specified above and protected with suitable wood, metal or other substantial type covering to ensure their full protection. All exposed threaded parts shall be greased and protected with metallic or other substantial type protectors.

All piping, tubing and conduit connections on equipment and other equipment openings shall be closed with rough usage covers or plugs. Male threaded openings shall be closed with rough usage covers or plugs. Female threaded openings shall be closed with forged steel plugs. The closures shall be taped to seal the interior of the equipment. Open ends of piping, tubing and conduit shall be sealed and taped.

Returnable containers and special shipping devices shall be returned by the manufacturer's field representative at the Bidder's expense.

6.10 Painting

6.10.1 General

All exposed metallic surfaces subject to corrosion shall be protected by shop application of suitable coatings. Surfaces not easily accessible after shop assembly shall be treated before-hand and protected for life of the equipment. Surfaces to be finish painted after installation shall be shop painted with at least two (2) coats of primer. Steel surfaces, which are not to be painted, shall be coated with suitable rust preventive compound subject to the approval of the Owner.

All paints shall be used in accordance with the manufacturer's instructions. No thinners or other substance shall be added to the coating material without the approval of the Owner. The quality and vendor of the paints shall require approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[168]	25.09.2015

All paints, when applied in a normal full coat, shall be free from runs, sags, wrinkles, patchiness, brush marks or other defects.

All primers shall be well marked into the surface, particularly in areas where pitting is evident, and the first priming coat shall be applied as soon as possible after cleaning, within four hours maximum. If the drying interval between successive coats, which should not exceed one week, has been so long as to endanger the adhesion of the following coat, the paint already applied shall be lightly rubbed down with fine abrasive paper before putting on the next coat.

Paint spraying on large surfaces shall not normally be done indoors, except with the approval of the Owner. Spray guns shall not be used outdoors in windy weather or near unprotected surfaces of a contrasting colour and under no circumstances shall spray guns be used where spray may be carried into or onto exposed electrical equipment.

Paint containers shall not be opened until required and the paint shall be mechanically mixed thoroughly before use, and agitated occasionally during use.

Electrical equipment shall be shop finished with one or more coats of primer and two coats of high-grade oil resistant enamel. The interior of all panels' cabinets and enclosures shall be finished with gloss white enamel.

The Bidder shall furnish sufficient touch up paint for one complete finish coat on all exterior factory surfaces of each item of equipment. The touch up paint shall be of the same type and colour as the factory applied paint and shall be carefully packed to avoid damage during shipment. Complete painting instructions shall be furnished.

Shop primer for steel and iron surfaces which will have a continuous operating temperature below 35 deg C shall be selected by the Bidder, in accordance to the relevant standard. Special high temperature primer shall be used on surface exposed to operating temperature above 35 deg C.

The colour scheme shall be submitted during execution of Contract for approval by the Owner.

6.10.2 Preparation

Oil and grease shall be removed from the surface by washing with a suitable detergent, rinsing with clean water, and drying.

Surfaces to be shot blasted shall be cleaned to Swedish Standard SA 2.5 or equivalent, and all dust remaining after cleaning shall be removed.

The priming coat shall be applied without delay.

6.10.3 Damaged Paintwork

Any damaged paintwork shall be corrected / modified as follows:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[169]	25.09.2015

- a) The damaged area, together with an area extending 25 mm around its boundary, shall be cleaned down to bare metal.
- b) A priming coat shall be immediately applied, followed by a full paint finish equal to that originally applied and extending 50mm around the perimeter of the original damage.
- c) The repainted surface shall present a smooth surface. This shall be obtained by carefully chamfering the paint edges before and after priming.

6.10.4 Painting Systems

The requirements for the dry film thickness (DFT) of paint and the materials to be used shall be as stated below, unless otherwise specified elsewhere in this Specification.

a) Surfaces Subject to Weathering

All surfaces shall have a minimum of four coats of paint made up as follows:

Primer coat	:	35 micron DFT
Tie coat	:	35 micron DFT
Finishing coat (2 Nos.)	:	35 micron DFT per coat

The total minimum DFT shall be 140 micron.

b) Surfaces Inside Buildings

All surfaces shall have a minimum of four coats of paint made up as follows:

Primer coat	:	35 micron DFT
Tie coat	:	35 micron DFT
Finishing coat (2 Nos.)	:	25 micron DFT per coat

The total minimum DFT shall be 120 micron.

The type and colour of primer & finish coat shall be selected by the Bidder after approval by the Owner.

6.11 Environment Protection

6.11.1 Environment Protection

The plant & equipment under this R&M project shall be designed for installation and operation in harmony with the surrounding environment and all measures of pollution control shall be ensured by the Bidder to restrict pollution from the liquid effluent and RPM emission within the limits as given below with due consideration of Environment (Protection) Rules.

6.11.2 For Liquid Effluent

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[170]	25.09.2015

During construction activities, Bidder shall maintain the statutory compliance of State Pollution Control Board and MoEF in respect of pollution control and environmental protection within and around plant boundary. Any specific requirement of State Pollution Authorities over and above shall be maintained.

6.11.3 Noise Level Requirement

The plant & equipment under this R&M project will be designed, constructed and provided with suitable acoustic measures to ensure the noise level criteria as per the following stipulations of MoEF & State Pollution Control Board.

- a) Maximum noise level shall not exceed 85 dB (A) when measured at 1.0 m away from the noise emission source.
- b) Maximum noise level from its source within the premises shall not exceed 70 dB (A) as per Environment (Protection) Rules 1986, Schedule-III, 'Ambient Air Quality Standards' in respect of noise.
- c) Any statutory changes in stipulations regarding noise limitation that may occur in future according to State Pollution Control Board or Central pollution Control Board or Ministry of Environment & Forest regulation during tenure of the Contract, the Bidder shall comply with the updated/amended requirement.

An exception will be made for the plant at startup operations of other big pressure reducing devices operating during emergency periods and for the safety valves.

6.12 Inspection and Testing

6.12.1 Inspection and Tests during Manufacture

- 6.12.1.1 The method and techniques to be used by the Bidder for the control of quality during manufacture of all plant and equipment shall be agreed with the Owner prior to the Award of Contract.
- 6.12.1.2 The Owner's general requirements on quality control and shop tests as mentioned in Section II of Volume-II.
- 6.12.1.3 Owner shall be informed for witnessing the shop tests of any item of the plant or equipment for checking the compliance with the Specification requirement and or related standards prior to leave place of manufacturing.
- 6.12.1.4 Advance notice shall be given to the Owner as agreed in the Contract, prior to the stage of manufacture being reached, and the piece of plant must be held at this stage until the Owner has inspected the piece, or has advised in writing that inspection is waived. If having consulted the Owner and given reasonable notice in writing of the date on which the piece of plant will be available for inspection, the Owner does not attend, the Bidder may proceed with manufacture having forwarded to the Owner duly certified copies of his own inspection and test results.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[171]	25.09.2015

- 6.12.1.5 The Bidder shall forthwith forward to the Owner the Test Certificates in [...] copies for approval.
- 6.12.1.6 Under no circumstances any repair or welding of castings be carried out without the consent of the Owner. Proof of the effectiveness of each repair by radiographic and/or other non destructive testing technique, shall be provided to the Owner.
- 6.12.1.7 All the individual and assembled rotating parts shall be statically and dynamically balanced in the works.
- 6.12.1.8 Where accurate alignment is necessary for component parts of machinery normally assembled on site, the Bidder shall allow for trial assembly prior to dispatch from place of manufacture.
- 6.12.1.9 All materials used for the manufacture of equipment covered under this Specification shall be of tested quality. Relevant test certificates shall be made available to the Owner. The certificates shall include tests for mechanical properties and chemical analysis of representative material.
- 6.12.1.10 All pressure parts connected to pumping main shall be subjected to hydraulic testing at a pressure of 150% of design pressure. The duration of the pressure tests shall be sufficient, as approved by the Owner, to show any leakage paths and to permit a thorough examination of the component whilst under pressure.
- 6.12.1.11 All necessary non destructive examinations shall be performed to meet the applicable code requirements.
- 6.12.1.12 Radiography, magnetic particle examination and ultrasonic testing shall be employed wherever necessary/ recommended by the applicable code. At least 10% of all major butt welding joints shall be radio graphed.
- 6.12.1.13 The Bidder shall furnish the quality procedures to be adopted for assuring quality from the receipt of material at site, during storage, erection, pre-commissioning to tests on completion and commissioning of the complete system/equipment.
- 6.12.2 Performance Tests at Site**
- 6.12.2.1 The full requirements for testing the system shall be agreed between the Owner and the Bidder prior to Award of Contract. The completely erected System shall be tested by the Bidder on site under normal operating conditions. The Bidder shall also ensure the correct performance of the System under abnormal conditions, i.e. the correct working of the various emergency and safety devices, interlocks, etc.
- 6.12.2.2 The Bidder shall provide complete details of his normal procedures for testing, for the quality of erection and for the performance of the erected plant. These tests shall include site pressure test on all erected pipe work to demonstrate the quality of the piping and the adequacy of joints made at site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[172]	25.09.2015

7 LAYOUT CONSIDERATION

{Effort should be made to keep the Layout of the newly equipped system / packages under the R&M project unchanged to the extent possible with respect to existing layout to avoid disturbance to the existing equipment & facilities for which any modification/changes are not envisaged based on RLA/LA and EA assessment. However general guidelines, which need to be followed, as required, are given below :}

- 7.1 Trestles to be provided for routing of cables, pipes etc. shall have a clear height of 8.0m at road crossings so as to clear the road spaces, approach to maintenance bays of different equipment. A walkway with hand rails and toe guards of 750mm (minimum) width shall be provided all along length of the trestle for maintenance of cables and pipes. Ladders for approach to these platforms shall be provided near roads, passage ways.
- 7.2 Floor drains shall be provided at all floors and drain discharge pipes shall be properly sized taking into account the fire water sprinkler system wherever provided.
- 7.3 Valves shall be located in accessible positions. All piping shall be routed at a clear height of minimum 2.5 m from the nearest access level for clear man movement. Best engineering practices shall be adopted for keeping the minimum clear working space around equipment and clear headroom within main structures and cable trays etc.
- 7.4 Fire water pipes in main plant area may be routed in trenches filled with sand and covered with pre-cast RCC covers.
- 7.5 The safety requirements as per the Factories Act, Indian Electricity Rules and other applicable codes/standards etc. shall be observed while developing the layout.
- 7.6 The available existing layout details of the plant are indicated in the enclosed drawings as Annexure-I. However, Bidder to suggest his own modified layout arrangement which shall be subject to approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[173]	25.09.2015

8 PERFORMANCE GUARANTEES

The term "Performance Guarantees" wherever appears in this Section shall have the same meaning and shall be synonymous to "Functional Guarantees".

Similarly the term "Performance Tests" wherever appears in this Section shall have the same meaning and shall be synonymous to "Guarantee Test(s)".

8.1 General Requirements

- 8.1.1 The Bidder shall guarantee that the equipment offered shall meet the ratings and performance requirements stipulated for various equipment covered in this technical Specifications.
- 8.1.2 The guaranteed performance parameters furnished by the Bidder in the Bid proposal, shall be without any tolerance values and all margins required for instrument inaccuracies and other uncertainties shall be deemed to have been included in the guaranteed figures.
- 8.1.3 The Bidder shall demonstrate all the guarantees covered herein under Category I, II & III during functional guarantee / acceptance test. The various tests which are to be carried out during performance guarantee/acceptance test are listed elsewhere in this Section. The guarantee tests shall be conducted by the Bidder at site in presence of Owner.
- 8.1.4 All costs associated with the tests including the cost associated with the supply, calibration, installation and removal of test instrumentation shall be included in the price offered by Bidder.
- 8.1.5 At all times during the Performance Tests the emissions as applicable and effluents from the Plant shall not exceed the Guaranteed Emission and Effluent Limits.
- 8.1.6 It shall be the responsibility of the Bidder to make the plant ready for the performance guarantee tests.
- 8.1.7 All instruments required for performance testing shall be of the type and accuracy required by the code and prior to the test, the Bidder shall get these instruments calibrated in an independent test institute approved by the Owner. All test instrumentation required for performance tests shall be supplied by the Bidder and shall be retained by him upon satisfactory completion of all such tests at site. All calibration procedures and standards shall be subjected to the approval of the Owner. The protecting tubes, pressure connections and other test connections required for conducting guarantee test shall conform to the relevant codes.
- 8.1.8 Tools and tackles, thermowells (both screwed and welded) instruments/devices including flow devices, matching flanges, impulse piping & valves etc. and any special equipment, required for the successful completion of the tests, shall be provided by the Bidder free of cost.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[174]	25.09.2015

- 8.1.9 The Performance/ Acceptance test shall be carried out as per the agreed procedure. The PG test procedure including demonstration tests shall be submitted within *[90 days]* of the date of Notification of Award and finalization of the PG test procedure shall be done within *[180 days]* from the date of Notification of Award. After the conductance of Performance test, the Bidder shall submit the test evaluation report of Performance test results to Owner promptly but not later than one month from the date of conductance of Performance test. However, preliminary test reports shall be submitted to the Owner after completing each test run.
- 8.1.10 The PG test procedures shall be submitted for equipment/ system & subsystem under Bidder's scope for all Guarantees under category I, II & III as mentioned below, as per latest Indian and International codes & standard including correction curves, meeting the Specification requirements along with sample calculations & detailed activity plan of preparation (including test instrumentation), conductance and evaluation of Guarantees.
- 8.1.11 The Bidder shall submit for Owner's approval the detailed Performance Test procedure containing the following:
- Objective of the test.
 - Various guaranteed parameters & tests as per Contract.
 - Method of conductance of test and test code.
 - Duration of test, frequency of readings & number of test runs.
 - Method of calculation.
 - Correction curves, as applicable to various system/equipment.
 - Instrument list consisting of range, accuracy, least count, and location of instruments.
 - Scheme showing measurement points.
 - Sample calculation.
 - Acceptance criteria.
 - Any other information required for conducting the test.
- 8.1.12 In case, during performance guarantee tests, it is found that the equipment/systems has failed to meet the guarantees, the Bidder shall carry out all necessary modifications and/or replacements to make the equipment/system comply with the guaranteed requirements at no extra cost to the Owner. However, if the Bidder is not able to demonstrate the guarantees, even after the above modifications/replacements within *[ninety (90) days]* or a reasonable period allowed by the Owner after the initial performance guarantee tests have been completed, the Owner will have the right to impose the stipulated clauses under Guarantee Category I, II & III as specified in this Specification:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[175]	25.09.2015

8.1.13 For Category-I Guarantees

Reject the equipment/system/plant and recover from the Contractor payments already made

(OR)

Accept the equipment/system/plant after levying Liquidated Damages (LD) as specified in Clause No. 5.6 of Volume I. The LDs shall be prorated for the fractional parts of the deficiencies.

8.1.14 For Category-II Guarantees

Reject the equipment/plant/system and recover, from the Contractor, the payments already made. Conformance to the performance requirements under Category-II is mandatory.

8.1.15 For Category-III Guarantees

Reject the equipment/system/plant & recover, from the Contractor, the payments already made.

(OR)

Accept the equipment/system after assessing the deficiency in respect of the various ratings, performance parameters and capabilities and recover from the Contract price an amount equivalent to the damages as determined by the Owner. Such damages shall however be limited to the cost of replacement of the equipment/systems replacement of which shall remove the deficiency so as to achieve the guaranteed performance.

8.2 Performance Guarantees under Category-I

The performance guarantees which will attract liquidated damages shall be as follows:

- (i) **Total Auxiliary Power Consumption** – The auxiliary power consumption shall be calculated using the following relationship.

$$P_{au} = \sum P_u$$

P_{au} = Guaranteed Unit Auxiliary Power Consumption.

P_u = Power consumed by each of the continuously running equipment of Balance of Plant System under the scope of Bidder.

While guaranteeing the auxiliary power consumption the Bidder shall necessarily include all continuously operating equipment of BOP package. The auxiliaries to be considered shall include but not be limited to the following:

- b) Raw Water Intake Pump
- c) CW Pump
- d) Raw Water Supply Pump located at in plant reservoir

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[176]	25.09.2015

- e) ACW Pump, if applicable
- f) IDCT, if applicable
- g) Cooling Water make-up Pump
- h) Equipment under Water Pretreatment Plant
- i) Equipment under Effluent Treatment plant
- j) Softening Plant Supply pumps, if applicable.
- k) DM Plant supply pumps
- l) Service water pumps
- m) Degassed Water pumps
- n) Degasser Blower
- o) DM Water Transfer pumps
- p) Chlorination Plant, as applicable
- q) Electrolyser Rectifyer units, as applicable
- r) Equipment of Compressed air system
- s) Equipment under fuel oil unloading and forwarding system
- t) Equipment under HVAC system
- u) Any other continuously running equipment under BOP Package

Note: The Bidder shall furnish a list of equipment to be covered under auxiliary power consumption, which shall be subject to Owner's approval.

- (ii) **Total Chemical consumption:** Chemical consumption of all the Chemicals indicated under Water treatment package. Bidder to indicate the guaranteed chemical consumption with the Bid.

Table: 8.1

Name of the chemical	Guaranteed Chemical consumption, kg
Cation & Anion Exchangers	
HCl Consumption	[...]
NaOH Consumption	[...]
For Mixed Bed	
HCl Consumption	[...]
NaOH Consumption	[...]
For Softening Plant, if applicable.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[177]	25.09.2015

Name of the chemical	Guaranteed Chemical consumption, kg
NaCl Consumption	...
{Any Other Chemical, as applicable}	

- (iii) **Cooling Tower Cold Water Temperature:** LD will be levied for increase in cold water temperature up to [1 deg C] from the guaranteed value with every increment of [0.25 deg C] by a predetermined amount as specified in Volume-I. If increase in temperature is more than [1 deg C] from guaranteed value same shall be treated as per performance guarantee condition defined under category-III.

8.3 Guarantees under Category-II

The Performance Guarantees, conformance to which is mandatory are as follows:

Liquid Effluent: [Liquid Effluent discharge to an outside body from the plant battery limit shall meet statutory requirements State Pollution Control Board.]

8.4 Guarantees under Category-III

The parameters/capabilities to be demonstrated for various systems/ equipment shall include but not be limited to the following:

8.4.1 Noise

All the plant, equipment and systems covered under this Specification shall perform continuously without exceeding the noise level over the entire range of output and operating frequency specified.

Noise level measurement shall be carried out using applicable and internationally acceptable standards. The measurement shall be carried out with a calibrated integrating sound level meter meeting the requirement of IEC 651 or BS 5969 or IS 9779.

Equivalent "A" weighted Sound pressure shall be measured all around the equipment at a distance of 1.0 m from the Noise emitting source.

A minimum of 6 points around each equipment shall be covered for measurement. Additional measurement points shall be considered based on the applicable standards and the size of the equipment. The measurement shall be done with slow response on the A - weighting scale. The average of A-weighted sound pressure level measurements expressed in decibels to a reference of 0.0002 micro bar shall not exceed the guaranteed value. Corrections for background noise shall be considered in line with the applicable standards. All the necessary data for determining these corrections, in line with the applicable standards, shall be collected during the tests.

If the noise level recorded is beyond the limits specified above, the Bidder should provide suitable acoustic enclosure to mitigate the noise level to within allowable limits.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[178]	25.09.2015

- 8.4.2 Raw Water Intake Pump, CW & ACW Pump
- The specified flow rate of the pump at the specified head and operation in accordance with the certified pump characteristic curve shall be demonstrated. No negative tolerance on design parameter for flow and head is permissible.
 - The pumps shall operate satisfactorily without cavitation, pitting, excessive vibration or noise when the pump is operating in isolation, in parallel and when starting or shutting down a pump with all other pumps in operation.
- 8.4.3 Rated Output of PT Plant: *[..... m³/h]*
- 8.4.4 Suspended Solids and Turbidity at the outlet of Clarifier: *[≤ 20 ppm on Silica scale]*
- 8.4.5 The Quality of treated water from Activated Carbon Filter: *[Residual chlorine and Organics should be below detectable level.]*
- 8.4.6 The Quality of treated water from pressure sand filter: *[Suspended solids and turbidity ≤ 2 NTU on silica Scale]*
- 8.4.7 SAC unit Sodium: *[≤1 ppm as CaCO₃]*
- 8.4.8 Degasser unit – Carbon-di-oxide at the outlet: *[≤5 ppm as CO₂]*
- 8.4.9 SBA unit:
- [Silica at the outlet ≤0.1 ppm as SiO₂]*
 - [CO₂ at the outlet=Nil]*
 - [Conductivity ≤ 6 μmho/cm @ 25 deg C]*
- 8.4.10 MB unit:
- [Rated output between two regeneration.....]*
 - [Conductivity at the outlet ≤ Not greater than 0.1 μmho/cm @ 25 deg C]*
 - [PH within 6.8 – 7.2]*
 - [Total Silica ≤ 0.01 ppm as SiO₂]*
 - [Scale inhibition efficiency should always be 100% for the CW system at the Bidder's specified dosage rate.]*
- 8.4.11 Free oil (in the treated water) at the outlet of oil water separator: *[≤ 10 ppm]*
- 8.4.12 The quality of combined effluents collected in the ETP guard pond will meet the norms stipulated by *[.....State Pollution Control Board]*
- 8.4.13 Total hardness at the outlet of softening plant: *[< 50 ppm]*
- 8.4.14 NDCT
- Increase of temperature more than 1deg C (i.e.deg C) from the guaranteed value of 34 °C.*
- 8.4.15 Fire Protection System
- Capacity, Pumping head, Vibration Level of Fire water and Fire water booster pumps (Hydrant and Spray) of both electrical driven and diesel engine driven and Jockey pumps.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[179]	25.09.2015

- 8.4.16 Compressed Air System:
FAD and pressure at the outlet of compressor.
- 8.4.17 Fuel Oil System
Capacity, Pumping head of Fuel Oil Unloading & Forwarding Pump
- 8.4.18 Air Conditioning & Ventilation System
- a) Air-Conditioning:
- Manned Area
- i. Temperature : $[24 \pm 1^{\circ}\text{C}]$
 - ii. Relative humidity : $[50 \pm 5 \ %]$
 - iii. Filtration : $[90\% \text{ down to } 10 \text{ microns}]$
- Unmanned Area
- i. Temperature : $[22 \pm 1^{\circ}\text{C}]$
 - ii. Relative humidity : $[50 \pm 5 \ %]$
 - iii. Filtration : $[90\% \text{ down to } 10 \text{ microns}]$
- b) Pressurized Ventilation:
- i. Temperature: Inside temperature $[\text{not to exceed } 3^{\circ}\text{C}]$ over and above the prevailing ambient temperature.
 - ii. Pressure : A positive pressure of $[\text{minimum } 3 \text{ mm WC}]$ shall be maintained inside the premises.
- c) Exhaust Ventilation:
- Temperature : $[\text{Not more than } 3^{\circ}\text{C rise}]$ above ambient temperature shall be maintained.
- 8.4.19 Cranes, Hoists
- The crane/hoist shall be tested for each motion in each direction under the following conditions as per IS:3177:
- i. With no load.
 - ii. With safe working load.
 - iii. With 25 % over-load in excess of safe working load.

Document Number	Rev No.	Description	Page No.	Date of Issue

9 SPARE PARTS

The Bidder shall include in his scope of supply all the necessary mandatory spares, start up and commissioning spares and recommended spares and indicate these in the relevant schedules. The general requirements pertaining to the supply of these spares is given below:

9.1 Mandatory Spares

The list of mandatory spares considered essential by the Owner is enclosed in Annexure-II of this Specification. The Bidder shall indicate the prices for each and every item (except for items not applicable to the Bidders design) in the 'Schedule of mandatory spares' whether or not he considers it necessary for the Owner to have such spares. If the Bidder fails to comply with the above, the cost of such spares shall be deemed to be included in the Contract price. The Bidder shall furnish the population per unit of each item in the relevant Schedules. Whenever the quantity is mentioned in "sets" the Bidder has to give the item details and prices of each item.

Whenever the quantity is indicated as a percentage, it shall mean percentage of total population of that item in the R&M Contract unless specified otherwise, and the fraction will be rounded off to the next higher whole number. Wherever the requirement has been specified a 'set' it will include the total requirement of the item for a unit, module or the R&M Contract scope or as specified. Where it is not specified a 'set' would mean the requirement for the single equipment/system as the case may be. Also the 'set' would include all components required to replace the item; for example, a set of bearings shall include all hardware normally required while replacing the bearings.

All mandatory spares shall be delivered at site at least two months before scheduled date of initial operation of the first unit. However, spares shall not be dispatched before dispatch of corresponding main equipment.

Wherever quantity is specified both as a percentage and a value, the Bidder has to supply the higher quantity until and unless specified otherwise. Price of mandatory spare parts will also be evaluated.

9.2 Recommended Spares

In addition to the mandatory spare parts mentioned above, the Bidder shall also provide a list of recommended spares for [five (5)] years of normal operation of the plant and indicate the list and total prices in relevant schedule. The list shall take into consideration the mandatory spares specified and should be independent of the list of the mandatory spares. The Owner reserves the right to buy any or all of the recommended spares. The recommended spares shall be delivered at project site at least two months before the scheduled date of initial operation of first unit. However, the spares shall not be dispatched before the dispatch of the main equipment.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[181]	25.09.2014

Prices of recommended spares will not be used for evaluation of the Bids. The price of these spares will remain valid up to execution of the Contract. However, the Bidder shall be liable to provide necessary justification for the quoted prices for these spares as desired by the Owner.

9.3 Start-up & Commissioning Spares

Start up and commissioning spares are those spares which may be required during the start-up and commissioning of the equipment/system till the handing over of the Plant. The Bidder shall provide all such start up and commissioning spares and keep an adequate stock of the same to be brought by him to the site for the plant erection and commissioning. These must be available at site before the equipment are energized. The unused spares, if any, should be removed from there, only after handing over of the plant. All start up spares which remain unused at the time shall remain the property of the Bidder.

9.4 General Requirements

The Bidder shall indicate the service expectancy period for the spares parts (both mandatory and recommended) under normal operating conditions before replacement is necessary.

All spares supplied under this Contract shall be strictly inter-changeable with the parts for which they are intended for replacements. The spares shall be treated and packed for long storage under the climatic conditions prevailing at the site e.g. small items shall be packed in sealed transparent plastic with desiccators packs as necessary.

All the spares (both mandatory and recommended) shall be manufactured along with the main equipment components as a continuous operation as per same Specification and quality plan.

The Bidder will provide Owner with cross-sectional drawings, catalogues, assembly drawings and other relevant documents so as to enable the Owner to identify and finalize order for recommended spares.

Each spare part shall be clearly marked or labeled on the outside of the packing with its description. When more than one spare part is packed in a single case, a general description of the content shall be shown on the outside of such case and a detailed list enclosed. All cases, containers and other packages must be suitably marked and numbered for the purposes of identification.

All cases, containers or other packages are to be opened for such examination as may be considered necessary by the Owner.

The Bidder will provide the Owner with all the addresses and particulars of his sub-suppliers while placing the order on Vendors for items/ components/ equipment covered under Contract and will further ensure with his Vendors that the Owner, if so desires, will have the right to place order for spares directly on them on mutually agreed terms based on offers of such Vendors.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-I	[182]	25.09.2014

The Bidder shall warrant that all spares supplied will be new and in accordance with the Contract documents and will be free from defects in design, material and workmanship.

In addition to the recommended spares listed by the Bidder, if the Owner further identifies certain particular items of spares, the Bidder shall submit the prices and delivery quotation for such spares within **[30 days]** of receipt of such request for consideration by the Owner and placement of order for additional spares if the Owner so desires.

The Bidder shall guarantee the long term availability of spares to the Owner for the full life of the equipment covered in the Contract. The Bidder shall guarantee that before going out of production of spare parts of the equipment covered under the Contract, he shall give the Owner **[at least 2 years]** advance notice so that the latter may order his bulk requirement of spares, if he so desires. The same provision will also be applicable to Sub-Bidders. Further, in case of discontinuance of manufacture of any spares by the Bidder and/or his sub-Bidders, Bidder will provide the Owner, two years in advance, with full manufacturing drawings, material Specifications and technical information including information on alternative equipment makes required by the Owner for the purpose of manufacture/procurement of such items.

The prices of all future requirements of spares beyond **[five (5)]** years shall be derived from the corresponding Ex-works price at which the order for such spares have been placed by the Owner as a part of the mandatory spares or recommended spares. Ex-works order price of future spares shall be computed in accordance with the price escalation formula to be furnished by Bidder indicating base price reference variation indices for material, labour etc. Based on the formula and considering escalation indices prevailing at the time of order of spares, order price shall be worked out. The base indices will be counted from the scheduled date of successful completion of trial operation of the last plant/equipment under the project. The above option for procuring future recommended spares by the Owner shall remain valid for the period of fifteen **[fifteen (15)]** years from the date of successful completion of trial operation of the last plant/equipment. In case the spare parts from the same sub-Vendor are not available due to obsolescence or any other reason, the Bidder shall supply the spares for a period of **[fifteen (15)]** years from an alternative source.

10 ANNEXURE

10.1 Annexure-I (List of Existing Drawing)

{Available as Built/RFC drawing of the Existing Unit shall be provided to the Bidder as per the list mentioned in Annexure-I for their information & familiarization of the existing Unit}

10.2 Annexure-II (Mandatory Spares)

{Applicable Mandatory Spares for the equipment system to be replaced / refurbished / retrofitted under the scope of this R&M Tender shall be provided as detailed in Annexure-II}

10.3 Annexure-III (List of Sub-Vendor)

{List of Sub-vendor for the equipment system to be replaced / refurbished / retrofitted under the scope of this R&M Tender shall be provided as per the format given in Annexure-III}

10.4 RLA/CA Study Report

{Not attached with this document. This is to be provided by Utilities}

10.5 EA Study Report

{Not attached with this document. This is to be provided by Utilities}

10.6 Baseline Study Report

{Not attached with this document. This is to be provided by Utilities}

10.7 Geotechnical Investigation Report

{Not attached with this document. This is to be provided by Utilities}

ANNEXURES-II

Mandatory Spares

{Applicable Mandatory Spares for the equipment system to be replaced / refurbished / retrofitted under the scope of this R&M Tender shall be provided as detailed in Annexure-II. Available Mandatory spares of the existing Unit, which can be used after completion of R&M work, shall also be verified before finalization of the below mentioned Spare List.}

A. MECHANICAL

1. Raw Water Intake System

S.No	Description	Quantity	Remarks
1.0	Pumps		
1.1	Impeller	1 no.	
1.2	Impeller wear ring (if applicable) with fixing screws	1 no	
1.3	Impeller nut with washer	2 sets	
1.4	Casing wearing ring (if applicable) with fixing screws	1 set	
1.5	Line shaft bearings	1 set	
1.6	Line shaft bearing spider	1 set	
1.7	Bowl bearing (if applicable)	1 no	
1.8	Thrust Pad assembly for Pump	1 set	
1.9	Line shafts with fasteners (as applicable)	1 set	
1.10	Shaft sleeves	1 set	
1.11	Gaskets for all column pipes	1 set	
1.12	Gland packings	3 sets	
1.13	"O" rings as applicable	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[1]	25.09.2015

S.No	Description	Quantity	Remarks
1.14	Column pipe fasteners	1 set	
1.15	Line shaft coupling with bolts, nuts and washers	1 set	
1.16	Pump and motor coupling with fasteners	1 set	
1.17	Top shaft with sleeve	1 set	
1.18	Impeller shaft	1 no	
1.19	Stuffing box	1 set	
2.0	Butter fly valve (Quantity indicated is for each size)		
2.1	Valve disc	1 no for each size	
2.2	Disc seal ring.	1 set for each size	
2.3	Gland packing	1 set for each size	
2.4	Shaft	1 no for each size	
2.5	Bearing	1 set for each size	
2.6	Seals, seal clamping bolts.	1 set for each size	
2.7	O-rings & gaskets,	1 set for each size	
2.8	Gear box internals with shaft (if applicable)	1 set for each size	
2.9	Bearings & O-ring for gear box unit (if applicable)	1 set for each size	
3.0	Under slung Crane for Raw water Intake pump house		
3.1	Bearings of each type and size used in gear assemblies, lifting hooks, trolley wheels, etc.	1 set	
3.2	Break drum	1 no.	
3.3	Break lining for LT, CT & Hoisting	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[2]	25.09.2015

S.No	Description	Quantity	Remarks
3.4	Oil seal used in all gear boxes	1 set	
3.5	Input pinion for LT gear box	1 no	
3.6	Input pinion for CT gear box	1 no	
3.7	Input pinion for hoist gear box	1 no	
4.0	Electric hoist (To be repeated for each capacity)		
4.1	Bearings of each type and size used in gear assemblies, lifting hook, trolley wheels .	2 sets	
4.2	Hoist brake liner with rivets for each brake	4 sets	
4.3	Brake shoe with lining for each brake	2sets	
4.4	Brake springs for each size of the brakes	2 nos.	
4.5	Oil seals for all gear boxes in each hoist	2 sets	
5.0	Ventilation Systems		
5.1	Tube Axial Fans		
5.1.1	Fan bearings	1 set for each type	
5.1.2	Fan belt	1 set for each type	

2. Circulating Water System

S.No	ITEM	Quantity	Remarks
1	CW PUMP		
1.1	Impeller	1 no.	
1.2	Impeller wear ring (if applicable) (for each size/type)	1 no.	

Document Number	Rev No.	Description	Page No.	Date of Issue

S.No	ITEM	Quantity	Remarks
1.3	Impeller nut (for each size/type)	1 set	
1.4	Casing wearing ring (if applicable) (for each size/type)	2 sets	
1.5	Cover ring	1 set	
1.6	Impeller nose / cap (for each size/type)	2 nos.	
1.7	Bearing of Pumps, Motors and Drives (all bearings including thrust bearing as applicable) each type	1 set	
1.8	Thrust Pad assembly for Pump	1 set	
1.9	Impeller shafts with fasteners (as applicable)	1 set	
1.10	Intermediate shafts with fasteners (as applicable)	1 set	
1.11	Knuckle joint (as applicable)	1 set	
1.12	Shaft sleeves	1 set	
1.13	Gaskets	1 set	
1.14	Gland packings	3 sets	
1.15	"O" rings	1 set	
1.16	Bolts and Nuts	1 set	
1.17	Deflectors	2 sets	
1.18	Press reducing bush	1 sets	
1.19	Rubber bearing	1 sets	
2	Drainage pumps		
2.1	Impeller with nut	1 no.	
2.2	Shaft	1 set

S.No	ITEM	Quantity	Remarks
2.3	Shaft Sleeves	2 sets	
2.4	All gaskets	1 sets	
2.5	Wearing rings-Impeller (if applicable)	1 set	
2.6	Wearing rings-Casing (if applicable)	1 set	
2.7	Bearings for pump	1 sets	
2.8	Shaft Coupling with fasteners	1 set	
2.9	Pin and bushes for all couplings	1 set	
2.10	Gland packing	1 set	
3	Butter fly valve (Quantity indicated is for each type/size/rating in CW System)		
3.1	Valve disc (each type & size)	1 no.	
3.2	Disc seal ring (each type & size)	1 set	
3.3	Gland packing (each type & size)	1 set	
3.4	Shaft (each type & size)	1 set	
3.5	Bearing (each type & size)	1 set	
3.6	Seals, seal clamping bolts (each type & size)	1 set	
3.7	O-rings & gaskets (each type & size)	1 set	
3.8	Gear box internals with shaft (each type & size) (if applicable)	1 set	
3.9	Bearings & O-ring for gear box unit (each type & size) (if applicable)	1 set	
4	Electro-hydraulic actuators		
4.1	Complete actuator excluding the oil tank, accumulator cylinders, counter weight	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue

S.No	Description	Quantity	
1.2	V-belts/chain and other drives for each type of flocculator	2 sets	
1.3	All Bearings for gear box for each type of clarifier	1 set	
1.4	Oil seals for gear box for each type of clarifier	2 sets	
2	Not Used		
3	Vertical Sump Pumps		
	(These shall be supplied separately for sludge thickener feed pumps,		
3.1	Impeller	1 no.	
3.2	Shaft	1 set	
3.3	Pump bearings	1 set	
3.4	Shaft sleeve	1 set	
3.5	Impeller wearing ring	1 set	
3.6	Casing wearing ring	1 set	
3.7	All fasteners	1 set	
4.0	Dual Media Filter For one vessel		
4.1	Filter sand	10 set	
4.2	Laterals	1 set	
4.3	Strainers	10 nos.	
5	Activated carbon filter (For one vessel)		
5.1	Activated Carbon	10 set	
5.2	Laterals	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue

S.No	Description	Quantity	
5.3	Strainers	10 nos.	
6	Cation and Anion exchange units (Applicable for SAC/ SBA) (For one vessel)		
6.1	Resins for each unit	10	
6.2	Strainers for each unit	10 set	
6.3	Laterals for each unit	1 set	
6.4	Grommets for each unit	10 set	
7	Degasser Air Blower		
7.1	Shaft with keys	1 set	
7.2	Bearings for air blower	1 set	
7.3	Gaskets and oil seals	1 set	
8	Degasser Tower (For one tower)		
8.1	Fill	10 sets	
8.2	Fill support materials	10 sets	
8.3	Water seals fittings	2 sets	
9	Mixed bed Unit (For one vessel)		
9.1	Resins	10	
9.2	Strainers	10 sets	
9.3	Laterals	10 sets	
9.4	Grommets	10 sets	
10	Mixed Bed Air Blower		
10.1	Lobes	1	
10.2	Shaft	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[9]	25.09.2015

S.No	Description	Quantity	
10.3	Bearings for motor and air blower	1 set	
10.4	Gaskets and oil seals	1 set	
11	Motorised agitators		
11.1	Impeller / Propeller including shaft for each type of agitator	1 set	
12	Pumps for Neutralising Pit		
12.1	Impeller	1 no.	
12.2	Shaft	1 set	
12.3	Pump bearings	1 set	
12.4	Shaft sleeve	1 set	
12.5	Impeller wearing ring	1 set	
12.6	Casing wearing ring	1 set	
12.7	All fasteners	1 set	
13	Horizontal Centrifugal Pumps		
	(These shall be supplied separately for DM plant supply pumps, service water pumps, DM transfer pumps, Degasser water pumps, Plant potable water pumps, acid and alkali unloading pump, softening plant supply pumps, brine recirculation pumps, electro chlorination booster pump, and other centrifugal pumps provided)		
13.1	Impeller	1 no.	
13.2	Shaft with keys	1 set	
13.3	Pump and motor bearings	1 set	
13.4	Shaft sleeves	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[10]	25.09.2015

S.No	Description	Quantity	
13.5	Impeller wearing ring	1 set	
13.6	Casing wearing ring	1 set	
13.7	All fasteners	1 set	
13.8	Pump Motor coupling	1 no.	
13.9	Bearing lock nut with washer	1 set	
13.10	Impeller lock nut	1 set	
13.11	O rings, 'V' Rings, 'U' Rings used in pumps as applicable	1 set	
13.12	Oil seals	1 set	
13.13	Constant level oiler	1 set	
14	Complete set of chemical dosing ejectors for each size/duty used	1	
15	Clarifier		
15.1	All Bearings for each type	2 set	
15.2	V-belts/chain and other drives for each type of flocculator	2 sets	
15.3	All Bearings for gear box for each type of clarifier	1 set	
15.4	Oil seals for gear box for each type of clarifier	2 sets	
16	Chemical dosing pumps (for each type of chemical)		
16.1	Plunger / Diaphragm	1 set	
16.2	Pump bearing	1 set	
16.3	'O' Rings / 'U' Rings / 'V' Rings / Gland packing (as applicable)	2 set	

Document Number	Rev No.	Description	Page No.	Date of Issue

S.No	Description	Quantity	
16.4	Ball valves	2 set	
16.5	Relief valves	2 set	
16.6	Oil and grease seals	2 set	
<i>Effluent Treatment Plant</i>			
17	Oil water separator		
17.1	Bearings	1 set	
18	Effluent disposal pumps	1 no.	
18.1	Impeller	1 no.	
18.2	Shaft	1 set	
18.3	Pump bearing	1 set	
18.4	Shaft sleeve	1 set	
18.5	Impeller wearing ring	1 set	
18.6	Cashing wearing ring	1 set	
18.7	All fasteners	1 set	
19.	Treated Water Pump for Oil Water Separator.		
19.1	Impeller	1 no.	
19.2	Shaft	1 set	
19.3	Pump bearing	1 set	
19.4	Shaft sleeve	1 set	
19.5	Impeller wearing ring	1 set	
19.6	Cashing wearing ring	1 set	
19.7	All fasteners	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

4. Spares for CW Chemical Treatment System and Electrochlorination System

S.No	Description	Quantity	Remarks
1	<i>Chemical dosing pumps (For each kind of chemical dosed)</i>		
1.1	<i>Plunger / Diaphragm</i>	<i>1 set</i>	
1.2	<i>Pump Bearing</i>	<i>1 set</i>	
1.3	<i>'O' Rings / 'V' Rings / 'U' Rings/ Gland packing (as applicable)</i>	<i>2 set</i>	
1.4	<i>Ball valves</i>	<i>2 nos.</i>	
1.5	<i>Relief valves</i>	<i>2 nos.</i>	
1.6	<i>Oil and grease seals</i>	<i>2 set</i>	
2	<i>Electrolyser Units</i>		
2.1	<i>Cell house clamp</i>	<i>1 set</i>	
2.2	<i>Cell end plate gasket</i>	<i>1 set</i>	
2.3	<i>Hardware</i>	<i>1 set</i>	
2.4	<i>Electrode Plates</i>	<i>1 set</i>	
2.5	<i>Asbestos Diaphragm</i>	<i>1 set</i>	
2.6	<i>Insulating Material used in cell</i>	<i>1 set</i>	
2.7	<i>Cell Connectors & Fasteners of each type</i>	<i>1 set</i>	

5. Spares for Electric Hoist & Fans

ITEM	DESCRIPTION	Quantity	Remarks
1	<i>Electric Hoist (to be Repeated for Each Type, Rating, Make)</i>		
1.1	<i>All Bearings of each type and size used in all Gear Assemblies,</i>	<i>2 Sets</i>	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[13]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

ITEM	DESCRIPTION	Quantity	Remarks
1.2	Hoist brake liners with rivets for each size of brake	4 Pair of each size	
1.3	Brake shoes with lining for each size of brake	2 Pair of each size	
1.4	Brake springs for each size of the brake	2 sets	
1.5	All oil seals for all gear boxes in each hoist	2 Sets	
2.0	CENTRIFUGAL FANS (TO BE REPEATED FOR EACH TYPE, RATING, MAKE)-IF APPLICABLE		
2.1	All Gaskets in one fan	1 Set	
2.2	All Fan Bearings in one fan	1 Set	
2.3	V- Belts in one fan	1 Set	
2.4	Fan Shaft	1 No.	
3.0	AXIAL FANS (TO BE REPEATED FOR EACH TYPE, RATING, MAKE)		
3.1	All Fan Bearings in one fan	1 Set	
3.2	Fan Impeller	1 No.	
4.0	BIFURCATED AXIAL FLOW FANS (TO BE REPEATED FOR EACH TYPE, RATING, MAKE)		
4.1	All Fan Bearings	1 Set	
4.2	Fan Impeller	1 No.	
5.0	TUBE AXIAL FANS (TO BE REPEATED FOR EACH TYPE, RATING, MAKE)		
5.1	All Fan Bearings	1 Set	
5.2	Fan Impeller	1 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors-Balance of Plant Volume-II, Section-I, Annexure-II	[14]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

6. Spares for Valves and Specialties

S.No	Description	Quantity	Remarks
1	VALVES AND SPECIALITIES		
1.1	For service air and instrument air system including drains		
1.1.1	For all valves of size below 65mm (for each type, rating & size)		
	Complete valves	5%	
1.1.2	For all valves of size 65mm and above (for each make, type, rating & size)		
1.1.2.1	Complete valves	1 No.	If the quantity is less than 10
		2 No.	If the quantity is equal to or more than 10
1.2	For CW Chemical dosing system, Pre treatment plant, DM plant, Chlorination system, Effluent treatment plant, Service Water System and Potable Water System including all drains and vents.		
1.2.1	For all valves of size below 65mm (for each make type, rating & size)		
	Complete valves	5%	
1.2.2	For all valves of size 65mm and above (for each make, type, rating & size)		
1.2.2.1	Complete valves	1 No.	If the quantity is less than 10
		2 No.	If the quantity is equal to or more than 10
1.3	Butterfly valves		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[15]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Description	Quantity	Remarks
1.3.1	Complete valves for each size and rating	1 No.	

7. Chemicals

S.No	Chemical Name	Quantity	Remarks
1.	Alum	235 Tons	
2.	Polyelectrolyte	5.0 Tons	
3.	33% Hcl	155 Tons	
4.	48% NaOH	80 Tons	
5.	DWPE	10 Tons	
6.	CW chemical dosing	10 Tons	
7.	Salt	300 Tons	
8.	SMBS	5 Tons	

8. Cooling Tower

S.No	Description	Quantity	Remarks
1.	Spray nozzles	5%	
2.	Hot water distribution line (UPVC)	10% of each size	
3.	Fill mattress	5%	
4.	Distribution pipe end cap	5%	
5.	Drift eliminator	5%	
CT Fan spares in case of IDCT, as applicable			
6.	All Gaskets & sealing rings in each type & rating	1 Set	
7.	All Bearings in each type & rating	1 Set	
8.	Gear Box	1 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[16]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

9.	<i>Fan Blades</i>	<i>1 Set</i>	
----	-------------------	--------------	--

9. Fire Protection System

9.1 Hydrant System

S.No	Item Description	Quantity	Remarks
1)	<i>63 mm hydrant valves</i>	<i>10 No.</i>	
2)	<i>Hoses For External Hydrants (15m long with coupling)</i>	<i>10 No.</i>	
3)	<i>Hoses For Internal Hydrants (7.5m long with coupling)</i>	<i>10 No.</i>	
4)	<i>Branch pipes with nozzles</i>	<i>10 No.</i>	

9.2 Fire Water Pumps (for each type and size of pump)

S.No	Item Description	Quantity	Remarks
1.	<i>Impeller</i>	<i>1 no.</i>	
2.	<i>Impeller shaft and keys</i>	<i>1 no.</i>	
3.	<i>Bearings for pump</i>	<i>1 sets</i>	
4.	<i>Shaft sleeves</i>	<i>1 no.</i>	
5.	<i>Casing & Impeller wearing rings</i>	<i>1 set</i>	
6.	<i>Impeller Lock nut with lock washers</i>	<i>2 set</i>	
7.	<i>Pump and motor coupling</i>	<i>1 no.</i>	
8.	<i>Coupling pads/bushes</i>	<i>1 set</i>	
9.	<i>Gasket</i>	<i>1 set</i>	
10.	<i>`O' ring/ 'V' ring/'U' ring (as applicable)</i>	<i>1 set</i>	
11.	<i>Impeller sealing ring</i>	<i>2 nos.</i>	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[17]	25.09.2015

9.3 Water Spray System (HVWS & MVWS)

S.No	Item Description	Quantity	Remarks
1	<i>Automatic deluge valve Assembly complete with necessary trims, motor gong and accessories.</i>		
1.1	<i>Size 150 mm NB</i>	<i>2 No.</i>	
1.2	<i>Size 100 mm NB</i>	<i>2 No.</i>	
1.3	<i>Size 80 mm NB</i>	<i>2 No.</i>	
2	<i>Butterfly Valves</i>		
2.1	<i>Size 150 mm NB</i>	<i>2 No.</i>	
2.2	<i>Size 100 mm NB</i>	<i>2 No.</i>	
2.3	<i>Size 80 mm NB</i>	<i>2 No.</i>	
3	<i>Basket Strainer</i>		
	<i>Size 300 mm NB</i>	<i>2 No.</i>	
	<i>Size 250 mm NB</i>	<i>2 No.</i>	
	<i>Size 150 mm NB</i>	<i>2 No.</i>	
	<i>Size 100 mm NB</i>	<i>2 No.</i>	
4	<i>Y Type Strainer</i>		
	<i>Size 150 mm NB</i>	<i>2 No.</i>	
	<i>Size 100 mm NB</i>	<i>2 No.</i>	
	<i>Size 80 mm NB</i>	<i>2 No.</i>	
5	<i>HVW Spray Nozzles</i>	<i>5%</i>	
6	<i>MVW Spray Nozzles</i>	<i>5%</i>	
7	<i>Water motor gong bell</i>	<i>1 No.</i>	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[18]	25.09.2015

9.4 Inert gas Flooding system

S.No	Item Description	Quantity	Remarks
1	Clean agent nozzles	2 No.	
2	Automatic and manual release system	1 No.	
3	Cylinder valve with safety pressure relief device	1 No.	
4	Clean agent cylinders	5 No.	
5	Inhibitor	10% or minimum 1 if the quantity is less than 10	
6	Flexible hose	10% or minimum 1 if the quantity is less than 10	

9.5 Fire Water Booster Pumps

S.No	Item Description	Quantity	Remarks
1.	Impeller	1 no.	
2.	Impeller shaft and keys	1 no.	
3.	Bearings for pump	1 sets	
4.	Shaft sleeves	1 no.	
5.	Casing & Impeller wearing rings	1 set	
6.	Impeller Lock nut with lock washers	2 set	
7.	Pump and motor coupling	1 no.	
8.	Coupling pads/bushes	1 set	
9.	Impeller lock nuts	2 nos	
10.	Gasket	1 set	
11.	`O' ring	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[19]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
12.	Impeller sealing ring	2 nos.	

9.6 Diesel Engine for Main Fire Water Pumps

S.No	Item Description	Quantity	Remarks
1.	Fuel filters- elements & seals	2 Sets	
2.	Lubricating Oil filter - do -	2 Sets	
3.	Belt (where used)	2 Sets	
4.	Engine joints, Gaskets & hoses	2 Sets	
5.	Inlet & exhaust valves	1 Set	
6.	Injection Nozzles	1 Set	
7.	Tool kit	1 Set	

9.7 Diesel Engine for Fire Water Booster Pumps

S.No	Item Description	Quantity	Remarks
1.	Fuel filters- elements & seals	2 Sets	
2.	Lubricating Oil filter - do -	2 Sets	
3.	Belt (where used)	2 Sets	
4.	Engine joints, Gaskets & hoses	2 Sets	
5.	Inlet & exhaust valves	1 Set	
6.	Injection Nozzles	1 Set	
7.	Tool kit	1 Set	

9.8 Fixed Foam System

S.No	Item Description	Quantity	Remarks
1.	Spray Nozzles each type	10 No.	
2.	Flexible glass seal for foam chamber assembly of capacity each type & size	2 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[20]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

9.9 Valves

S.No	Item Description	Quantity	Remarks
1	All valves of each Type, Size and Make	10% or minimum 1 No. whichever is higher. Fraction to be rounded to next higher number	

10. Centrifugal Fan

S.No	Item Description	Quantity	Remarks
1.	All Gaskets & sealing rings in each type & rating	1 Set	
2.	All Bearings in each type & rating	1 Set	
3.	V- Belts (if V – Belt driven) in each type & rating	1 Set	

11. Under Slung Crane

S.No	Item Description	Quantity	Remarks
1.	All Bearings of each type and size used in all Gear Assemblies, lifting hook, trolley wheels etc	2 Sets	
2.	Brake shoes with lining for each size of brake	2 Sets	
3.	Brake springs for each size of the brake	2 Sets	

12. Spares for Workshop EOT Crane

S.No	Item Description	Quantity	Remarks
1.	Bearings of each type and size used in gear assemblies, lifting hooks, trolley wheels, CT wheels etc.	1 set	
2.	Brake drum of Each type.	1 set	
3.	Oil seal used in all gear boxes.	1 set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[21]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]

[Logo of Utility]

S.No	Item Description	Quantity	Remarks
4.	<i>All Brake lining</i>	<i>1 set</i>	
5.	<i>Input pinion for Hoist Gearbox</i>	<i>1 set</i>	
6.	<i>Input pinion for CT Gear box</i>	<i>1 set</i>	
7.	<i>Input pinion for LT Gear box</i>	<i>1 set</i>	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[22]	25.09.2015

B. ELECTRICAL

1. Raw Water Intake System and Circulating Water System

S No	Description	Quantity	Remarks
1.	SPARES FOR RAW WATER INTAKE PUMPS		
1.1	Motor bearings	1 Set	
1.2	Motor for lake water pump	1 No.	
1.3	Space heaters	1 Set	
2.	SPARES FOR VALVES AND SPECIALITIES		
2.1	Motor for motor operated valves of each rating	1 No.	
2.2	Limit switches & Torque switches of each rating and type	2 Sets	
3.	CW Pump Motors		
3.1	Motor bearings (set consists of all the bearings used in one motor)	1 No.	
3.2	Winding RTD	1 No.	
3.3	Bearing thermocouple	1 No.	
	Motors & Actuators		
4.	LT MOTORS(OTHER THAN EOT CRANE & HOISTS)		
4.1	Motor of each type and rating	1 No.	
4.2	Bearing (set consists of all the bearings used in one motor)	1 Set	
4.3	Electrical Valve Actuator of each type & rating	1 Set	
4.4	Torque/ Limit switches of each type & rating	1 Set	

2. Pre Treatment, DM Water and Effluent Treatment Plant

a) Spares for Pre Treatment Plant

S No	DESCRIPTION	Quantity	Remarks
1.	Clarifier Equipment	2 Sets	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[23]	25.09.2015

1.1	Flash mixer Agitator motor bearings		
1.2	Motor of each type and rating	1 No.	
2.	Chemical dosing pumps (For each type of chemical)		
2.1	Motor Bearing	1 Set	
2.2	Agitator motor bearings	2 No.	
2.3	Motor of each type and rating	1 Set	
3.	Thickener Feed pumps		
3.1	Motor bearings	1 Set	
3.2	Motor of each type and rating	1 No.	
4.	Centrifuge feed pumps		
4.1	Motor bearings	1 Set	
4.2	Motor of each type and rating	1 No.	

b) Spares for DM Plant

S No	DESCRIPTION	Quantity	Remarks
1.	Degasser Air Blower	1 Set	
1.1	Bearings for motor and air blower of each type and size		
1.2	Motors of each type and rating	1 No.	
2.	Mixed Bed Air Blower		
2.1	Bearings for motor and air blower of each type and size	1 Set	
2.2	Motors of each type and rating	1 No.	
3.	Motorized agitators		
3.1	Motor of each type and rating	1 No.	
4.	Neutralizing pump		
4.1	Motor bearings of each type and size	1 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[24]	25.09.2015

S No	DESCRIPTION	Quantity	Remarks
4.2	Motor of each type and rating	1 No.	
5.	Horizontal Centrifugal Pumps		
	(These shall be supplied separately for DM plant supply pumps, service water pumps, DM transfer pumps, Degasser water pumps, Plant potable water pumps, acid and alkali unloading pump, softening plant supply pumps, brine recirculation pumps, electro chlorination booster pump and other centrifugal pumps provided)		
5.1	Motor bearings of each type and size	1 Set	
5.2	Motor of each type and rating	1 No.	

c) Spares for Effluent Treatment Plant

S No	DESCRIPTION	Quantity	Remarks
1.	Flash Mixer		
1.1	Flash mixer Agitator motor bearings	2 Sets	
1.2	Motor of each type and rating	1 No.	
2.	Chemical dosing pumps (For each type of chemical)	1 Set	
2.1	Motor Bearing		
2.2	Agitator motor bearings	2 No.	
2.3	Motor of each type and rating	1 No.	
3.	Effluent disposal pumps		
3.1	Motor bearing	1 Set	
3.2	Motor of each type and rating	1 No.	
4.	Treated Water Pump for Oil Water Separator		
4.1	Motor bearing	1 Set	
4.2	Motor of each type and rating	1 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[25]	25.09.2015

d) Spares for Softening Plant

S No	Description	Quantity	Remarks
5.	<i>Horizontal Centrifugal Pumps (For each type of pump)</i>		
5.1	<i>Motor bearings of each type and rating</i>	<i>1 Set</i>	
5.2	<i>Motor of each type and rating</i>	<i>1 No.</i>	
6.	<i>Brine Transfer pumps and salt regeneration pump</i>		
6.1	<i>Motor bearings of each type and rating</i>	<i>1 Set</i>	
6.2	<i>Motor of each type and rating</i>	<i>1 No.</i>	

e) Spares for CW Chemical Treatment System and Electro Chlorination System

S No	Description	Quantity	Remarks
1.	<i>Chemical dosing pumps (For each kind of chemical dosed)</i>		
1.1	<i>Motor Bearings of each type</i>	<i>1 Set</i>	
1.2	<i>Agitator motor bearings</i>	<i>2 No.</i>	
1.3	<i>Motor of each type and rating</i>	<i>1 No.</i>	
2.	<i>Spares for Rectifier Transformer</i>		
2.1	<i>Rectifier Unit</i>	<i>1 No.</i>	
2.2	<i>Dry type Rectifier Transformer</i>	<i>1 No.</i>	
2.3	<i>DC bus bar support insulator</i>	<i>10 No.</i>	
3.	<i>Control Panel</i>		
3.1	<i>Indication lamps (LED)</i>	<i>10 No.</i>	
3.2	<i>Control fuses of each type and rating</i>	<i>6 No.</i>	
3.3	<i>Switches of each type and rating</i>	<i>1 No.</i>	
3.4	<i>Selector switch of each type and rating</i>	<i>1 No.</i>	
3.5	<i>Push button</i>	<i>2 No.</i>	
3.6	<i>Auxiliary relay of each type and rating</i>	<i>1 No.</i>	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[26]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

3.7	Timer of each range	1 No.	
3.8	Annunciation window lamps	10 No.	
3.9	Meters of each type and rating	1 No.	
3.10	Annunciation cards	5 No.	

3. Fire Protection System

a) FDA System

S.No	FDA System	Quantity	Remarks
1	Fire detectors of each type/ rating.	5 No.	
2	Electronic Card for AP&MFAP of each type	5 No.	
3	Module Unit for LHS system of each type	5 No.	
4	IR Detector of each type	5 No.	
5	Hooters of each type	5 No.	
6	Manual call points of each type	5 No.	
7	Monitoring units	5 No.	

b) Fire Water Pumps

S.No	Item Description	Quantity	Remarks
1	Motor bearings of each type and rating		1 No.

4. Electric Hoist, Crane, HVAC System

S.No	Item Description	Quantity	Remarks
a.	ELECTRIC HOIST (To be repeated for each Hoist)		
	(For the following items each type & rating to be repeated)		
1	Solenoid for electromagnet brake	1 No.	
2	Coil for electromagnet brake	2 No.	
3	Overload relay	1 No.	
4	Power Contactors	2 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[27]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
5	Control Contactor	2 No.	
6	Coils for Contactors	2 No.	
7	Main contacts for contactors	2 No.	
8	Auxiliaries contacts for contactors	2 No.	
9	Motor	1 No.	
10	Bearing for motors	2 Set	
11	Limit Switch	2 No.	
12	VVVF module	1 No.	
b.	UNDER SLUNG CRANE (To be repeated for each crane)		
	(For the following items each type & rating to be repeated)		
1	Power contactors	1 No.	
2	Control Contactors	1 No.	
3	Coils for Power contactors	1 Set	
4	Coils for Control Contactors	1 Set	
5	Overload relay	1 No.	
6	Timer	1 No.	
7	Limit switches	1 Set	
8	MCCB / SFU	1 No.	
9	LED	3 No.	
10	Push button with contact element	1 No.	
11	D.C. rectifier	1 No.	
12	Brake	1 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[28]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
c.	EOT CRANE (To be repeated for each Crane)		
	(For the following items each type & rating to be repeated)		
1	Motor	1 No.	
2	Bearings for motor	1 Set	
3	Power Contactors	1 No.	
4	Control Contactors	1 No.	
5	Overload relay	1 No.	
6	Push buttons with contact element	1 Set	
7	Control Transformer	1 No.	
8	MCB	1 No.	
9	Coil for electromagnetic brakes	1 Set	
10	Main current collector assembly for runway conductors	1 No.	
11	Insulator for runway conductor support	3 No.	
12	Electronic card	2 No.	
13	VVVF Module	1 No.	
14	Tacho generator	1 No.	
15	Auxiliary contact assembly for Master Controller	1 No.	
16	MCCB/SFU	1 Set	
17	Diode bridge	1 No.	
18	Limit switch	1 Set	
d.	GANTRY CRANE		
	(For the following items each type & rating to be repeated)		
1	Solenoid for electromagnet brake	1 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[29]	25.09.2015

S.No	Item Description	Quantity	Remarks
2	Coil for electromagnet brake	1 Set	
3	Overload relay	1 Set	
4	Power Contactors	1 Set	
5	Coil for contactors	1 Set	
6	Main contacts for contactors	1 Set	
7	Auxiliary contacts for each type and rating of contactors	1 Set	
8	Motor	1 No.	
9	Bearings for motor of each rating (set consists of all bearings used in one motor)	1 Set	
10	Limit Switch of each type	1 Set	
e.	AC & VENTILATION (To be repeated for each service area)		
1	CENTRIFUGAL FANS		
	(For the following items each type & rating to be repeated)		
1.1	Motor	1 No.	
1.2	Motor Bearing	1 Set	
2	AXIAL FANS		
	(For the following items each type & rating to be repeated)		
2.1	Motors	1 No.	
2.2	Motor Bearings	1 Set	
3	BIFURCATED AXIAL FANS		
	(For the following items each type & rating to be repeated)		
3.1	Motors	1 No.	
3.2	Motor Bearings	1 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[30]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
4	AC & VENTILATION CONTROL PANEL		
	(For the following items each type & rating to be repeated)		
4.1	Switches	5 No.	
4.2	Relays	2 No.	
4.3	Temperature controller	2 No.	
4.4	Temperature sensor	2 No.	
4.5	Solenoid valves	2 No.	
4.6	Push buttons	20 No.	
4.7	Indicating lamps	10 No.	
4.8	Meters	1 No.	
5	WINDOW/SPLIT AIR CONDITIONERS		
	(For the following items each type & rating to be repeated)		
5.1	Motor	1 No.	
5.2	Motor bearings	1 Set	
5.3	Relays/ contactors	1 No.	
5.4	Micro processor panel	1 No.	

5. Other Electrical items spares

S.No	Item Description	Quantity	Remarks
a.	LV TRANSFORMER (oil/dry type)		
	LV TRANSFORMERS -6.6/0.433KV (To be repeated for each service area)		
	(For the following items each type & rating to be repeated)		
1.	HV Bushing	1 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[31]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
2.	LV Bushing	1 Set	
3.	Neutral Bushing	1 Set	
4.	Winding temperature indicator(WTI) with all accessories	2 Nos.	
5.	Dial type Oil temperature indicator(OTI) (for oil type)	2 Nos.	
6.	Tap Changer Contact	1 Set	
7.	Buchholz relay	2 Nos.	
8.	Pressure relief device	2 Nos.	
9.	Set of gaskets (other than that with bushing)	1 No.	
10.	RTD	3 No	
11.	Complete Winding Temperature scanner	1 No	
12.	Current Transformer	2 No.	
13.	Support Insulator	5 Set	
b.	415 V LV SWITCHGEAR/PMCC/MCC		
	(For the following items each type & rating to be repeated)		
1.	Breaker complete with operating mechanism	1 No.	
2.	Closing coil	2 No.	
3.	Tripping coil	2 No.	
4.	Operating mechanism rod	3 No.	
5.	Fixed and moving contact assembly	2 Set.	
6.	Spring charging motor	2 No.	
7.	Breaker Protection Module	1 No	
8.	Gasket	5 Set	
9.	Aux. switch assembly	3 Set	
10.	Limit Position Switch	3 No	
11.	Busbar support insulators of different sizes	3 Set	
12.	Switches	3 No.	
13.	Selector switches of each type and rating	2 No.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[32]	25.09.2015

S.No	Item Description	Quantity	Remarks
14.	Numerical Relay	3 No.	
15.	Auxiliary relay	2 No.	
16.	Interposing relay of each type for DDCMIS	2 No.	
17.	Clustered type LED	5 No.	
18.	Current Transformer	6 No.	
19.	Voltage Transformer	6 No.	
20.	Meters	2 No.	
21.	Power Fuse	5 No.	
22.	Control Fuse	5 No.	
23.	Timer	2 No.	
24.	Check synchronizing relay	1 No.	
25.	Disconnecting type Terminal block for CT wiring	5 No.	
26.	Non-disconnecting type Terminal Block	5 No.	
27.	Electronic overload relays	2 No.	
28.	Single phase control transformer 415V/110V	5 No.	
29.	Intelligent Controller Module	5 No.	
30.	Contactors of each type and rating	1 No	
31.	MPCB	1 No	
32.	MCB	1 No	
33.	MCCB/SFU of each type and rating	1 No	
34.	Push button with contact assembly	3 No.	
c.	6.6 KV SWITCHGEAR (TO BE REPEATED FOR EACH MAKE OF 6.6 kV SWITCHGEAR)		
	SPARES FOR VACUUM CIRCUIT BREAKER		
	(Spares for each rating of Breaker)		
1.	Closing & tripping coils each	10 Nos.	
2.	Spring charging motors	5 Nos.	
3.	Aux. switch assembly, limit position switches	5 Nos. each	
4.	Operating mechanism rods	5 Nos.	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[33]	25.09.2015

S.No	Item Description	Quantity	Remarks
5.	Surge suppressor units	5 Nos.	
6.	Vacuum bottles	5 Nos.	
7.	Multi pin plug and socket for control	5 Sets	
8.	Selector Switches of each type and rating	2 Nos.	
9.	Busbar support insulators of each type	20 Nos.	
10.	Switches of each type	5 Nos.	
11.	Moving and Fixed contact Assembly of each rating and type	1 set	
12.	Numerical Relays of each type	1 No.	
13.	Auxiliary relays of each type	1 No.	
14.	Interposing relay for DCS each type	1 No.	
15.	Clustered type LED of each type/color	2 Nos.	
16.	CTs of each ratio , type and rating	3 Nos.	
17.	VTs of each ratio , type and rating	3 Nos.	
18.	Timer each type	1 No.	
19.	Check synchronizing relay	1 No.	
20.	Meters of each type	1 No.	
21.	Contactors of each rating and type.	1 Nos.	
22.	Disconnecting type Terminal block for CT wiring	5 Nos.	
23.	Non-disconnecting type Terminal Block	5 Nos.	
24.	Shrouds each type	5 Nos.	
25.	MCB of each type and rating	5 Nos.	
26.	Shutter mechanism complete of each type	5 Nos.	
27.	Indicating lamps of each type and rating	5 Nos.	
28.	Complete assembled Auxiliary Contactor of each rating	5 Nos.	
29.	Bi-metal thermal overload relays with single phase preventers of each rating	5 Nos.	
30.	Single phase control transformer 415V/110V of each rating	5 Nos.	
31.	Fuses of each type and rating:		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[34]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item Description	Quantity	Remarks
	<i>I. Power</i>	<i>10 Nos.</i>	
	<i>II. Control</i>	<i>10 Nos.</i>	
32.	<i>Fuse puller for each type of fuse</i>	<i>5 Nos.</i>	
33.	<i>MCCB of each rating & type</i>	<i>2 Nos.</i>	
d.	ACDB/PDB PANEL (To be repeated for each board)		
	(For the following items each type & rating to be repeated)		
1.	<i>Power Fuse</i>	<i>2 No.</i>	
2.	<i>Control Fuse</i>	<i>5 No.</i>	
3.	<i>Push button with contact element</i>	<i>2 No.</i>	
4.	<i>Ammeter</i>	<i>2 No.</i>	
5.	<i>Voltmeter</i>	<i>2 No.</i>	
6.	<i>Terminal Blocks</i>	<i>2 No.</i>	
7.	<i>MCB</i>	<i>2 No.</i>	
8.	<i>SFU/MCCB</i>	<i>2 No.</i>	
e.	220 V DC System		
	BATTERY CHARGER & DCDB (To be repeated for each service area)		
	(For the following items each type & rating to be repeated)		
1.	<i>Thyristor / SCR</i>	<i>6 No.</i>	
2.	<i>Diode</i>	<i>6 No.</i>	
3.	<i>Contactor</i>	<i>2 No.</i>	
4.	<i>Relay</i>	<i>1 No.</i>	
5.	<i>Selector switch</i>	<i>2 No.</i>	
6.	<i>Control switch</i>	<i>2 No.</i>	
7.	<i>Meter</i>	<i>2 No.</i>	
8.	<i>PCB</i>	<i>2 Set.</i>

LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[35]	25.09.2015

S.No	Item Description	Quantity	Remarks
9.	Push Button with contact element	2 No.	
10.	Control Transformer	2 No.	
11.	LED indication lamp	5 No.	
12.	Switch Fuse Unit / MCCB	2 No.	
13.	Power Fuse	3 No.	
14.	Control Fuse	3 No.	
15.	Semi conducting Fuse	6 No.	
16.	MCB	2 No.	
f.	415 V NON-SEGREGATED PHASE BUS DUCTS (LT) (To be repeated for each Bus duct Unit)		
	(For the following items each type & rating to be repeated)		
1.	Busbar support insulators of different sizes	2 Set	
2.	Set of seal-off bushings of each type and rating	3 Nos.	
3.	Drain plug with cap	3 Nos.	
4.	Gaskets of each type and ratings	3 sets	
5.	Belleville washers	5 Nos.	
6.	Densal or equivalent	1 kg.	
7.	Space heater set	1 set	
8.	Flexible Connectors (for equipment connection) (Complete set for all types and ratings)	2 Set	
9.	Expansion joints (for conductor for all the phases)	2 Set	
10.	Silica gel breather	2 No	
g.	MOTORS AND MOTORIZED ACTUATORS (TO BE REPEATED FOR EACH SERVICE AREA)		
	(For the following items each type & rating to be repeated)		
1.	Motor bearings	1 Set	
2.	Torque/Limit switch	5 Set	
3.	End Limit switch	5 Set	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[36]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]

S.No	Item Description	Quantity	Remarks
4.	Position transmitter for inching type	2 No	
h.	ILLUMINATION SYSTEM		
	MLDB/LDB Panel (To be repeated for each board)		
	(For the following items each type & rating to be repeated)		
1.	Temperature surveillance unit for Lighting Transformer	1 No.	
2.	RTD element for Lighting Transformer	1 Set	
3.	Busbar support insulators of different sizes	2 Set	
4.	Power Fuse	2 No.	
5.	Control Fuse	2 No.	
6.	Push Buttons with contact element	5 No.	
7.	Ammeter	1 No.	
8.	Voltmeter	1 No	
9.	Power Terminal Block	2 No	
10.	MCB	2 No.	
11.	MCCB/SFU	2 No.	
	ALDB/LDB PANEL		
	(For the following items each type & rating to be repeated)		
1.	Busbar support insulators of different sizes	2 Set	
2.	Power Fuse	20 No.	
3.	Control Fuse	20 No.	
4.	Push button with contact element	5 No.	
5.	Ammeter	2 No.	
6.	Voltmeter	2 No	
7.	Electronic energy meter	2 No.	
8.	Terminal Blocks	5 No	
9.	MCB	5 No.	
10.	SFU/MCCB	5 No.

C. CONTROL & INSTRUMENTATION

S.No	Item	Quantity/Unit	Remarks
1	Programmable Logic controller (PLC) for Raw Water Treatment & DM Water Plant, Compressed Air System, Fuel Oil System (Common for MBOP package)		
a	Power Supply Unit/Module for PLC and I/O	10% of each type & Model, minimum 1 no whichever is higher	
b	Input/ Output modules	10% of each type & Model, minimum 1 no whichever is higher	
c	Central Processor Unit Module	1 no. of each type & Model	
d	Communication Module	1 no. of each type & Model	
e	Interface Module	1 no. of each type & Model	
f	PLC Backplane I/O Bus without modules	1 no. of each type & Model	
g	Network adapters/converter, LIU,OLM, Network/ Ethernet Switch and other network hardware used	1 no. of each type & Model	
h	Display Units (LCD/LED/TFT)	1 no. of each type & Model	
i	Installation Software (for OWS, EWS, Controllers, Firewall Security and any supporting softwares)	1 no. copy of CD/DVD of each requirement	
j	Interconnecting Cables with connectors (within panels)	1 no. of each type	
k	Batteries for RAM battery back-up	1 set for each type and model no. of CPU	
l	Printer Paper	5000 sheets of each type	
m	Printer Cartridge / Toner/ Ribbon	5 Nos. of each type	
2	Programmable Logic controller (PLC) for Fire water pump house (Common for BOP package)		
a	Power Supply Unit/Module for PLC and I/O	5% of each type & Model, minimum 1 no whichever is higher	
b	Input/ Output modules	5% of each type & Model, minimum 1 no whichever is higher	
c	Central Processor Unit	1 no. of each type & Model	
d	Communication module	1 no. of each type & Model	
e	Interface Module	1 no. of each type & Model	
f	PLC Backplane I/O Bus without modules	1 no. of each type & Model	
g	Network adapters/converter, LIU,OLM, Network/ Ethernet Switch and other network hardware used	1 no. of each type & Model	
h	Interconnecting Cables with connectors (within panels)	1 no. of each type	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[38]	25.09.2015

Tender Document for R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

S.No	Item	Quantity/Unit	Remarks
i	Batteries for RAM battery back-up	1 set for each type and model no. of CPU	
3	Programmable Logic controller (PLC) Miscellaneous System: Hydrogen Genration Plant, Condensate Polishing Unit, Condenser Tube Cleaning System, ESP Control System, Mill Reject handling System.		
a	Power Supply Unit/Module for PLC and I/O	10% of each type & Model, minimum 1 no whichever is higher	
b	Input/ Output modules	10% of each type & Model, minimum 1 no whichever is higher	
c	Central Processor Unit Module	1 no. of each type & Model	
d	Communication module	1 no. of each type & Model	
e	Interface Module	1 no. of each type & Model	
f	PLC Backplane I/O Bus without modules	1 no. of each type & Model	
g	Network adapters/converter, LIU,OLM, Network/ Ethernet Switch and other network hardware used	1 no. of each type & Model	
h	Interconnecting Cables with connectors (within panels)	1 no. of each type	
i	Batteries for RAM battery back-up	1 set for each type and model no. of CPU	
4	UPS (Common for MBOP Package)		
a	Silicon Controlled Thyristors, Diodes & Power Transistors	100%	
b	Capacitors	1 set	
c	CT's, CVT's, VT's, Chokes, AC/DC isolators, Contactors, Timers, Relays	10% of each type and rating	
d	Fuses of Each Type & Ratings	100%	
e	Fuse Free Circuit Breakers	5%	
f	Electronic Modules	10%	
g	Lamp Holders With Series Resistors	10%	
h	Cooling Fans	1 nos of each type	
i	Digital/Analog panel meters/indicators	1 nos of each type	
j	Relays of all types including overload relays	10%	
5	Field Instruments for for Water Treatment Plant, Compressed Air System, Fuel Oil Handling System (Common for MBOP package)		
a	Pressure Transmitter	10% of each type & Range	
b	Diff. Pressure Transmitter (for DP, Flow, Level)	1 no. in each type and range	
c	Temperature transmitter	10% of each type & Range	

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[39]	25.09.2015

S.No	Item	Quantity/Unit	Remarks
d	RTD (single/Duplex type), Thermocouple	10% of each type & Range	
e	Temp. Switches	10% of each type & Range	
f	Pressure Gauge, DP Gauge	10% of each type & Range	
g	Temperature Gauge	10% of each type & Range	
h	Level Gauge	10% of each type & Range	
i	Pressure Switch	10% of each type & Range	
j	Differential Pressure Switch	10% of each type & Range	
k	Level Switch (Capacitance/RF Type/Float/Displacer etc)	10% of each type & Range	
l	Level transmitter (Ultrasonic, Radar type)	1 no. in each type and range	
m	Flow switches, Flow Transmitter (Electromagnetic, Ultrasonic type)	10% of each type & Range	
n	Flow Meter / Flow Indicator / Flow Transmitter / Rotameter	1 no. in each type and range	
o	Flow Elements: orifice/Anubar/Venturi/Nozzle	1 No. of each type & Range	
p	Control Valves	1 No. of each type & Range	
q	Pneumatic power Cylinder	1 No. of each type & Range	
r	Solenoid Valve with coil	1 No. of each type & Range	
s	Dew point Meter	2 No. of each type & Range	
t	Vibration sensors	2 nos. in each type and range	
u	Accessories for Transmitters & Gauges(valve manifold, snubber, isolation valve, drain valve etc.,)	2 nos. in each type and range	
v	Pneumatic Valve Actuator spare kit(including diaphragm, piston, gaskets, O-rings etc.,)	2 sets for each type and size of actuator	
w	Position Limit Switch	10% of each type & Range	
x	Solenoid Valve with coil	10% of each type & Range	
y	Pneumatic Valve Actuator spare kit (including diaphragm, piston, gaskets, O-rings etc.,)	2 sets for each type and size of actuator	
z	Smart Valve Positioner	10% of each type & model	
aa	Air Filter Regulator	10% of each type & range	
ab	All Analysers, Hydrogen leak detector, Dew point Analyser	1 No. sensor / detector of each type, 1 No. spare kit for each analyser	
8	Process connection Piping (Common for complete BOP package including all auxiliary plants)		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	02	Tender Document for Selection of R&M Contractors–Balance of Plant Volume-II, Section-I, Annexure-II	[40]	25.09.2015

S.No	Item	Quantity/Unit	Remarks
a	2 way, 3 way valves for instruments	10% of each type, size, rating, class, material & model	
b	Fittings	10 Nos. of each type, rating, material & size	
c	Valve manifolds (2way, 3 way & 5way)	10 % of each type, rating & model	
d	Air Filter Regulator	10 % of each type, model & range	
e	Impulse piping & tubing	5 nos. of standard Length of each size, rating & material	
9	Instrumentation cables & Accessories (Common for complete MBOP package including all auxiliary plants)		
a	All Instrumentation Field Cables from Instrument to JB and JB to DCS/PLC (including compensating cable)	5% of total installed Length (In running meter) if total installed length < 1000 metres or 1 no. of 1000 metre. Drum if total installed length > 1000 metres, of each type, pair & size	
b	Fiber optic cable	1000 metres of each type and size	
c.	Communication cable from PLC to RIO	1000 meters in each type and size	
d	Communication cable from PLC to OWS/EWS	500 meters in each type and size	
10	Cabinets, Panels & Junction Box (Common for complete MBOP package including all auxiliary plants)		
a	Terminal Blocks	5% of each type & rating (for types of total quantity > 100 nos.)	
b	MCB	10% of each type & rating	
c	Fuse	50% of each type & rating	
d	Junction box	1 no. of each size & material	
e	LED Indicator	10% of each type, Colour & voltage rating	
f	Panel/Cabinet cooling fan	5% of each type & model	
g	Panel/Cabinet door switch	5% of each type & model	
h	Panel/Cabinet CFL	5% of each type & model	
11	Analyzers for Water Treatment Plant (Common for MBOP package)		
a	Conductivity Analyzer	1 probe unit complete with cell, sensor, temperature sensor, 1 transmitter	
b	pH Analyzer	1 probe unit complete with cell, sensor, temperature sensor, 1 transmitter	
c	Standard solution, Reagents	1 Standard size Bottle of each type, concentration	
d	Silica Analyzer	1 probe unit complete with cell, sensor, temperature sensor, 1 transmitter	
e	Turbidity Analyzer	1 probe unit complete with cell, sensor, temperature sensor, 1 transmitter

1 RAW WATER INTAKE SYSTEM

1.1 General

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days.]

1.2 Brief System Description

- i) The Raw Water intake system is required for pumping [river/sea] water to [the in-plant raw water reservoir] as a make up to the thermal power plant. The [river/sea] water analysis is indicated in the Section-I of this volume.
- ii) [River/Sea] water after passing through de-silting chamber is received into the intake chamber through bar screen (to remove any floating debris) is further inducted into the intake sump of the pump house through Coarse Screen/ Travelling Water Screen. Provision of guide channels for Stop Log Gate and coarse screen shall be provided in each pump chamber. Stop log gates shall be provided to isolate the pump pit during maintenance of RW intake pumps. A Sluice gate shall be provided at the lake water entry to Intake chamber. Provision of de-silting arrangement shall be provided.
- iii) From the intake pumps the water shall be pumped through [buried HDPE] pipe line to the raw water reservoir located inside the plant from where water shall be pumped by Raw Water Supply Pump to clarifier provided in the raw water treatment plant.
- iv) The water after processing in the water treatment system is stored in the [Clarified water storage tank / Storage tank of softening plant]. From the [clarified water storage tank/soft water storage tank], the water is taken for the CW makeup, DM Plant and for various other services of the plant.

1.3 Codes & Standards

S.No	Code	Description
1	HIS	Hydraulic Institute Standards, USA
2	IS 1710	Vertical wet pit turbine pumps for clear and fresh water
3	IS 5120	Technical Requirement of Roto dynamic Special Purpose Pumps
4	ISO 2548	Acceptance tests for centrifugal, mixed flow and axial pumps.
5	JIS B 8301	Testing methods for centrifugal pumps, mixed flow pumps and axial flow pumps
6	JIS B 8302	Measurement methods of pump capacity
7	JIS B 8327	Pump performance testing method using model
8	BS-3435	Measurement of electrical power and energy in acceptance testing.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[1]	15.01.2016

1.4 Design and Construction Requirements

a) Design Criteria of Raw Water Intake and Raw Water Supply Pumps

- i. The pumps shall be vertical, constant speed and wet pit and non pull out type suitable for continuous heavy duty.
- ii. Type of Pump/construction and type of discharge arrangement and impeller shall be as specified in Design data sheets furnished at the end of this section.
- iii. The pumps shall be designed to meet the duty conditions specified in Design data sheets furnished at the end of this section. The pumps shall be suitable for handling [river] water whose analysis is given in the Section-I of Volume-II.
- iv. The pump shall be directly driven by a constant speed squirrel cage induction motor.
- v. The pump shall have a flanged discharge connection.
- vi. Suitable arrangement shall be provided to take care of the discharge hydraulic thrust. This may be achieved either by sizing pump discharge head and base plate adequately to take care of the discharge hydraulic thrust or by providing a thrust block assembly to restrain the discharge hydraulic thrust.
- vii. The design, construction and speed of the pumps shall be such as to minimize cavitation and ensure a long and trouble free service.
- viii. Pump speed shall not exceed that indicated in the enclosed Pump data sheet furnished at the end of this section. "Net Positive Suction Head (NPSH) required" shall be at least 1 m less than "NPSH available" during all operating conditions including run out condition.
- ix. The pumps shall have stable head capacity characteristic continuously rising towards shut off conditions.
- x. The design shall ensure equal load sharing among the pumps operating in parallel. All these pumps shall be identical to one another, shall have identical characteristic curves and shall be capable of running in parallel continuously without any restrictions.
- xi. The pump shall operate satisfactorily in isolation and in parallel with the other working pump without cavitation, any deleterious effects, undue vibrations and noise at all water levels, from minimum to maximum. The impeller shall be of non-over-loading type to restrict motor overloading during single pump operation.
- xii. The pump shall also be designed to withstand the seismic loads as given in Project Information.
- xiii. The shaft shall be designed such that the complete pump and motor assembly satisfies the following:
- xiv. The operating speed shall not be too close to the first critical speed, i.e. N should be less than 0.8 NC1 or N should be more than 1.3 NC1 where N is the Operating Speed and NC1 First Critical speed.
- xv. Also, critical speed of pump-motor assembly shall be more than the maximum reverse run away speed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[2]	15.01.2016

- xvi. The length of shaft and column sections shall not exceed 3.0 m.
- xvii. The impeller shall be fastened to the shaft such that the connections withstand maximum torque and thrust that may occur under all operating conditions including maximum reverse rotation. The line shaft bearings shall be spaced so as to ensure smooth operation and to contain the vibration within permissible limits. The bearings shall be amply proportioned to give long and satisfactory life.
- xviii. Self water lubrication shall be used for the line shaft bearings only if the water to be pumped is clear water. In case forced water lubrication is provided, spare capacity of lubricating water pumps shall be provided.
- xix. The maximum efficiency of the pump and motor at design point shall be limited to the value indicated in design data sheet. No credit will be given during evaluation for pump and motor efficiency beyond specified efficiency.
- xx. Design life (minimum) of equipment supplied by contractor shall be [20/25] years.

1.5 Construction Features

- a) Material and construction of the pump shall be such as to resist corrosion and erosion and give a long and satisfactory life. The materials used in construction of the various components shall not be inferior to those given below.

S. No	Description	Technical Requirement
1)	Impeller	Austenitic stainless steel ASTM A743/CF8M Grade
2)	Suction bell	Cast Iron IS: 210 Grade FG 260; S-0.1% max. P-0.15% max.
3)	Casing	Stainless steel
4)	Wearing rings or Equivalent part [(Indicate the name of the Part)]	Stainless steel of suitable grade as per manufacturer's proven practice
5)	Pump shaft	Hardened stainless steel conforming to ASTM A 276 Gr. 410.
6)	Line shaft	Hardened stainless steel conforming to ASTM A 276 Gr. 410
7)	Shaft coupling	Stainless steel type 410, ASTM 276, Heat treated and hardened.
8)	Shaft sleeve	Stainless steel type 410, ASTM 276, Heat treated and hardened.
9)	Line shaft bearing	Cutless rubber with bronze retainer /Thordon type bearing
10)	Column pipe	Fabricated steel as per IS: 2062 with 2

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[3]	15.01.2016

S. No	Description	Technical Requirement
		coats of epoxy coating.
11)	Shaft enclosing tube	Fabricated steel as per IS: 2062.
12)	Discharge elbow	Fabricated steel as per IS: 2062
13)	Matching flanges	Fabricated steel as per IS: 2062
14)	Thrust pads	Mitchel / Kingsberry or equivalent
15)	Bolts, nuts and lock washers	Stainless steel AISI type 304 for those coming in contact with water and for others, material shall be high-tension carbon steel.
16)	Base plate and Soleplate	Fabricated steel as per IS: 2062
17)	Gaskets	Wire reinforced rubber gasket / Neoprene rubber / Compressed asbestos fibre (CAF).
18)	Gland packing	Impregnated Teflon
19)	Ladder, platform and related accessories.	Fabricated steel as per IS : 2062

- b) A ladder and platform arrangement shall be provided for each pump and motor for inspection and maintenance of the thrust bearing and for approach to any other part of the pump / motor requiring frequent inspection.
- c) The line shaft bearing shall be spaced so as to ensure smooth operation. The bearing shall be amply proportioned to give long and satisfactory life.
- d) Bearing lubrication:
The type of lubrication shall be as given bellow. All interconnected piping, valves, instruments and fittings for bearing lubrication shall be in contractor's scope of supply/work.
- i) Pump design shall be such that line shaft bearings are below minimum water level. However, in case, pump design does not permit the same, the Bidder shall use "Thordon type bearing" which are above minimum water level.
- ii) Water required for cooling of pump-motor guide and thrust bearing shall be taken from main pump discharge through a filter. Necessary piping valves, instrumentation etc. shall be included in Bidder's scope of supply/work
- e) Thrust Bearing:
- i) Pump design with single thrust bearing at motor top or separate thrust bearings at pump and motor (as per bidder's standard practice) is acceptable.
- ii) The thrust bearing shall be rated for continuous operation. Thrust bearing shall be of oil-lubricated, centrally pivoted tilting pad type (Mitchell or Kingsbury) capable of absorbing axial thrust in both directions of rotation. For removing heat from pump thrust bearing oil bath, cooling coil made out of cupro nickel alloys or

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[4]	15.01.2016

stainless steel shall be provided. Water required for cooling of thrust bearing shall be taken from main pump discharge. Necessary filters, piping, valves, accessories, specialties as required for such cooling purpose is in the scope of supply of the bidder. The hot water outlet from the cooling coil shall be led to the sump. However the pump shall be suitable for starting without cooling water for thrust bearing.

- f) Impeller and Rotating Assembly
 - i) Each pump set rotating assembly shall be dynamically balanced. Each half coupling shall be statically balanced on its shaft
 - ii) The design, construction and speed of the pumps shall be such as to minimize cavitation and ensure a long and trouble free service.
 - iii) The impeller shall be fastened to the shaft such that the connections withstand maximum torque and thrust that may occur under all operating conditions.
- g) Pump Shaft
 - i) The shaft shall be designed to transmit the maximum rated power at the pump operating speed and shall be of ample stiffness to minimize deflection of the shaft during closed valve starting conditions.
 - ii) The shaft shall preferably have all components key driven including impeller, thrust and journal collar and coupling.
 - iii) The line shaft coupling shall be of muff type or approved equivalent.
- h) Column pipe :

The pump column pipe shall be provided with flanged joints to permit easy disassembly. Column pipes shall be provided with seating/lifting lugs.
- i) Shaft Sleeves:

Shaft sleeves shall be provided to protect the shaft from wear. Suitable locking arrangement shall be provided for all bolted connections.
- j) Stuffing Box:

The stuffing boxes shall be of sufficient depth to permit ample packing. The space between the motor and the stuffing box shall be sufficient to permit removal of the gland packing and insertion of new gland packing without dismantling the pump.
- k) Wearing Rings :

Replaceable wearing rings/casing liners shall be provided in the impeller and in the casing as per manufacturer's standard practice.
- l) Coupling :

The pump shall be connected to the motor shaft by a suitable coupling. Coupling bolt and nuts shall be provided with locking devices to prevent the nut

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[5]	15.01.2016

from becoming loose. Suitable arrangement shall be provided to adjust the vertical clearance of impeller.

m) **Base Plate :**

Each pump shall be provided with a heavy structural steel base plate. Separate heavy steel sole plates shall be provided for grouting and shall be designed to permit removal of entire pump along with discharge elbow head and base plate without disturbing the sole plate or grout.

n) **Vibration limits:**

The vibration limits of the pump set when measured at motor end shall not exceed the value as per the stipulation of HIS.

o) **Pump Motor Rating:**

Continuous motor rating (at 50 deg C ambient) for pump shall be at least ten percent (10%) above the maximum load demand of the driven equipment in the complete operating range (including shut off condition, in case pumps are envisaged to be started with the discharge valve closed) to take care of the system frequency variation or 115% of the load demand when the pump is operated at the rated head & capacity.

1.6 **Operation Philosophy**

- a) The Pumps shall be operated and controlled from the Operator interface screen of PLCs provided by the bidder in the Pump house. The pumps shall also be operated from the Unit control room. The start/stop commands of all associated auxiliaries / drives including all the motor operated discharge butterfly valves shall be through PLC where all interlocks and permissive shall be implemented and start/stop signals shall be issued to MCC/Switchgear.
- b) A local push button switch shall be used for emergency tripping of the drive motor.
- c) The pump can be started either with pump discharge valve partially open (10% open condition) or in closed position depending upon bidder's standard practice.
- d) In case of high pressure at pump discharge due to accidental closure of any of the butterfly valves in the system, an alarm shall be generated.
- e) In case of normal stopping, when a pump control switch is turned 'OFF', the butterfly valve at its discharge first closes (25-30)% before the respective pump motor is de- energized.
- f) On tripping of motor due to any reason, the butterfly valve at the discharge shall close fully automatically.
- g) If water level in pump sump is low, an alarm shall be initiated. Pump shall trip in case of very low level of water in the intake sumps and very high discharge header pressure.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[6]	15.01.2016

- h) The Bidder shall provide duplex temperature elements for bearing and simplex elements for winding temperature monitoring points. Pump shall trip in case of attaining very high winding temperature of motor and very high temperature of bearings. Alarm shall be provided for high motor winding temperature and high motor/ pump thrust bearing temperature.
- i) The operation philosophy as detailed above is suggestive only and in case the bidder deviates from the above, the Bidder shall furnish the complete control and interlock scheme for system / equipment proposed by him along-with the bid. The control and interlock scheme to be adopted will be finalised in consultation with the successful Bidder after award of contract and shall be subject to Owner's approval.

1.7 Raw water intake piping:

The diameter of MS pipe shall be [.....] NB for individual pump discharge line and [.....] mm ID (internal diameter) for the pipe line from common discharge header with pressure rating of [.....]. The material grade for HDPE pipes shall be PE 100 as per ISO: 4427 Part-2 (Table-2) and for the MS pipe shall be IS 3589/AWWA C200. Raw water piping from the flange connection with steel piping portion in the common header of RW intake Pumps shall be routed buried up to the flange connection of over ground MS pipe.

1.7.1 Make up Water Piping from [Clarified Water/Soft Water] Tank:

The internal diameter of [HDPE/MS] pipe shall be [.....] NB with pressure rating of [.....], HDPE Pipe of Material grade PE 100 as per ISO: 4427 Part-2 (Table-2) shall be provided for the piping from the [clarified / soft water] tank routed buried up to the steel pipe connection portion. From there MS pipes of grade IS 3589/AWWA-C200 with flow meter and Butterfly valves shall be provided to form the makeup valve station before the water is let into the fore bay.

1.7.2 Air Release Valve

A suitably sized automatic air-release cum vacuum breaker valve with isolation valve shall be provided on the discharge pipe of each pump.

In the pipe header, air release valve and isolation valve shall be provided by the bidder based on the transient analysis. Air release valves shall be of kinetic air valve type as per IS: 14845. Material of construction for air release valve shall be Austenitic Ductile iron to ASTM-A-439 Gr-D2 and spindle material shall be stainless steel (SS 316). Wherever air release valves are to be provided the pipe line shall be taken above ground and the air release valve and its isolation valve shall be properly supported.

1.7.3 Manhole

Each pump shall be provided with minimum 500 mm dia man hole in the discharge piping. These man holes shall be designed with flanged sealing covers to maintain leak tightness. Suitable access provision (Rung ladder) shall be made inside the manhole above flow path area.

1.8 Design Data Sheet:

Raw water intake pump

S.No	Description	Design Parameters
1.	Total Number of Pumps	[3x50%]
2.	Number of operating pumps	[2 (Two)]
3.	Number of stand by pump	[1(one)]
4.	Rated Discharge, each	[.....] cu.m/hr
5.	Total Head at rated flow(system head)	[....] m
6.	Operating Speed (Max)	Not to exceed 1000 RPM
7.	Type of pump	Pull out/ Non Pull out type
8.	Type of Discharge	Above Floor
9.	Type of Impeller	Semi-open/enclosed impeller
10.	Type of lubrication	Self Water / Forced Water
11.	Local Control panel location	As given in the existing drawing of "Intake pump house plan and section"

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[8]	15.01.2016

2 CIRCULATING WATER & AUXILIARY COOLING WATER SYSTEM

2.1 General

The Circulating Water (CW) system shall be complete in all respects with mechanical, electrical, control & instrumentation systems and related civil work as applicable for safe, efficient and trouble free operation of the system.

[The Bidder shall carry out the physical model study for the CW sump and pump model study and the reports shall be submitted to owner for approval. Transient studies for CW piping system shall be conducted to ensure that the pipe thickness is adequate for water hammer and pressure rise problems due to sudden trip of CW pumps considering all the possible conditions of operation. Further pressure balancing shall be provided for proper flow of CW water, when hot ACW water enters hot CW return pipe.]

Tentative parameters of CW pumps each have been elaborated elsewhere in this section. CW System is designed to *[operate unit wise]*. The circulating water to the condenser of each unit is delivered by *[2 x 50%]* capacity vertical turbine type with *[1 no common standby for both the units]*. The cooling water shall be conveyed to the condenser through cooling water piping. *[The auxiliary cooling water (ACW) to the PHE for each unit shall be supplied from [1x100%] ACW pump with a common standby for both the unit located, which is located at the CW pump house]*. CW & ACW pumps shall be installed in individual chambers connected to a common CW forebay. Each pump chamber shall have provision for installing coarse screens and stop log gates. Hot water from the condenser and the auxiliary cooling water heat exchangers shall return to the cooling tower through a common return cooling water piping. The cooled circulating water from the cooling tower basin shall flow by gravity through individual cold water channel up to the common CW forebay and then to common CW sump. CW pumps shall be installed in a CW pump house built over CW sump. The blow down from the CW system shall be tapped off from condenser outlet line for maintaining the required COC of *[....]* in the CW system.

2.2 Codes & Standards

The design, manufacture, inspection and testing shall comply with all currently applicable standards. In particular, the equipment shall conform to the latest edition of the following standards:

S.No	Code	Description
1	HIS	Hydraulic Institute Standards, USA
2	IS 1710	Vertical wet pit turbine pumps for clear and fresh water

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[9]	15.01.2016

S.No	Code	Description
3	IS 5120	Technical Requirement of Roto dynamic Special Purpose Pumps
4	ISO 2548	Acceptance tests for centrifugal, mixed flow and axial pumps.
5	JIS B 8301	Testing methods for centrifugal pumps, mixed flow pumps and axial flow pumps
6	JIS B 8302	Measurement methods of pump capacity
7	JIS B 8327	Pump performance testing method using model
8	BS-3435	Measurement of electrical power and energy in acceptance testing.

2.3 System Description

The Circulating Water (CW) System proposed for the plant is *[Once-through type system / closed re-circulating type with Natural Draft Cooling Towers (NDCT) / Induced Draft Cooling Tower]*. The CW pumps shall deliver the cooling water to condenser for its cooling and the Auxiliary cooling water(ACW) required for Plate Heat Exchanger(PHE) provided for cooling the primary side of cooling water of Turbine Generator (TG) and Steam Generator (SG) and other auxiliaries. / *{Alternate Arrangement may be decided based on existing arrangement: Dedicated ACW pump which is located at CW pump house supplies the required ACW to PHE provided for cooling the primary side of cooling water of Turbine Generator (TG) and Steam Generator (SG) and other auxiliaries.}*. The hot circulating water shall be cooled in the Cooling Tower. The COC in the CW system shall be maintained to *[.....]* by allowing blow down taken from the hot water return headers. The makeup water to the CW system shall be supplied from Clarified Water Storage tank *[by gravity / by make-up water pump]*. The CW pump house and CW fore bay shall be common for the *[two (2) units]*.

2.4 Design Criteria

a) Design Criteria

- The CW pumps shall be vertical, constant speed, wet pit, mixed flow design, with single stage impeller, suitable for continuous heavy duty operation and shall be directly driven by a constant speed squirrel cage induction motor.
- Type of Pump/construction type of discharge arrangement *[(above floor/below floor)]* and impeller *[(open / semi open / closed)]* shall be as per existing plant design as briefed in Section-I of Volume-II.
- The pumps shall be designed to meet the duty conditions specified in Design data sheets.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[10]	15.01.2016

- iv) The pumps shall be suitable for handling water having chemical analysis and turbidity as given in Water Analysis at Section-I of Volume-II. Design density of water shall be taken as 1gm/cc. The pump shall have a flanged discharge connection.
- v) Suitable arrangement shall be provided to take care of the discharge hydraulic thrust due to an untied expansion joint. This may be achieved by sizing pump discharge head and base plate adequately to take care of the discharge hydraulic thrust. No thrust block assembly is acceptable.
- vi) The design, construction and speed of the pumps shall be such as to minimize cavitations and ensure a long and trouble free service. The suction specific speed required (i.e. specific speed calculated with NPSH required) of the pump shall not exceed 12,000 (US Units). Net positive suction head required shall be less than Net positive suction head available with a minimum margin of 1.0 m during all operating conditions including run out condition. The suction specific speed available (i.e. specific speed calculated with NPSH available) shall not be greater than 8500 US units at minimum water level. Bidder shall note that the design suction specific speed available shall be based on actual operating experience of the Bidder and the detailed experience list shall be enclosed justifying the selected suction specific speed available. Pump speed shall be based on the above suction specific speed available.
- vii) The pump shall have stable head capacity characteristics continuously rising towards shut off conditions. The Bidder shall indicate characteristics of the maximum and minimum diameter impellers, which may be fitted to the pump casing.
- viii) The design shall ensure equal load sharing among the pumps operating in parallel. All the pumps shall be identical to one another and shall have identical characteristic curves and shall be capable of running in parallel continuously without any restrictions.
- ix) The maximum efficiency of the pump at design point and motor efficiency (including thrust bearing loss if applicable) shall be limited to 88 % and 96% respectively for furnishing Guaranteed Auxiliary power consumption and for selection of motor rating. No credit shall be given during evaluation for pump/motor efficiencies beyond specified limit.
- x) The pump shall operate satisfactorily in isolation and in parallel with all other working pumps without cavitations, any deleterious effects, undue vibrations and noise at all water levels, from minimum to maximum. The impeller shall be of non-over-loading type to restrict motor overloading during single pump operation. Pumps shall be able to operate satisfactorily and continuously at run out capacity conditions as determined with the help of system resistance curves.
- xi) Various levels to be considered in system shall be same as applicable for the existing pumps given above.
- xii) The pump and motor (complete assembly) should be designed for withstanding the runaway speed attained with reverse rotation caused by reverse flow continuously even when all the remaining pumps are in operation. Necessary

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[11]	15.01.2016

speed switches to detect reverse rotation shall be provided to prevent motor switching on while rotating in reverse direction. The indication on local control panel shall also be provided.

- xiii) The system resistance curves shall be drawn for the pump by the Bidder. Bidder shall check the pump performance for single pump operation and confirm that the NPSH and submergence requirements are satisfied with various water levels.
- xiv) The pump shall also be designed to withstand the seismic loads as given in Project Information.
- xv) The shaft shall be designed such that the complete pump and motor assembly satisfies the following: The operating speed shall not be too close to the first critical speed, i.e. N should be less than $0.8 NC1$ or N should be more than $1.3 NC1$ Where N is the Operating Speed and $NC1$ First Critical speed.
- xvi) Also, critical speed of pump-motor assembly shall be more than the maximum reverse run away speed.
- xvii) Design life (minimum) of equipment supplied by Bidder shall be [20/25] years.
- xviii) Recirculation arrangement for the CW pumps shall be provided from the common header such that the recirculation can be operated for any pump. The capacity of the recirculation should be 50% of individual pump.

b) Reverse rotation

The pump motor assembly shall be designed to take care of the following transient conditions -

- Reverse rotation of the assembly due to system back flow under power failure condition.
- Reverse rotation of the assembly due to back flow when running pump trips and its discharge valve fails to close fully and also parallel pump operating at its rated capacity.
- Prevention of starting of pump motor under reverse rotation condition.
- Starting of pump with its discharge valve fully closed (if motor rating requirement is within 115% of duty point rating) or discharge valve crack open condition without reverse rotation of pump assembly.

c) Manhole

Each pump shall be provided with minimum 800 mm dia man hole in the discharge piping. These man holes shall be designed with flanged sealing covers to maintain leak tightness. Suitable access provision (Rung ladder) shall be made inside the manhole above flow path area.

d) Air Release Valve

A suitably sized automatic air-release-cum-vacuum breaker valve(s) shall be provided on the discharge pipe of each pump. Further Air release valves shall be provided on the CW duct based on transient analysis study. The number and size of air release valves shall be based on the transient analysis study.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[12]	15.01.2016

In the pump discharge as well as in the CW duct, isolation valve shall be provided by the Bidder below the Air release valves to isolate the Air release valves. Air release valves shall be of automatic type as per IS: 14845.

The air release valves shall be double air valve/kinetic air valve with two orifices and two floats. The float shall not close the valve at higher air velocities. The Orifice contact joint with the float shall be leak tight joint.

The valve shall efficiently discharge the displaced air automatically from ducts/pipes while filling them and admit air automatically into the duct/ pipes while they are being emptied. The valve shall also automatically release trapped air from ducts/ pipes during normal working at the normal working pressure.

e) Operation Philosophy

The Pumps shall be operated/controlled from PLC based control system. Each pump control module shall consist of hand switches, indicating lamps, audio and visual alarm windows, process parameter indicators like pressure, temperature, flow, pump speed, lube oil temperature, motor cooling water temperature (if applicable) pump and motor vibration, motor supply voltage, motor current etc.

Pump can be started only when either at least one of the flow circuits through the respective condenser to the discharge duct and cooling tower is established or re- circulation line to pump sump is open.

The pump can be started either with pump discharge valve partially open or in closed position depending upon Bidder's standard practice. A local push button switch shall be used for emergency tripping of the motor. In case of high pressure at pump discharge for prolonged period (bidder to indicate the time limit), due to accidental closure of any of the butterfly valves in the CW system, the pump shall trip. In case of normal stopping, when a pump control switch is turned 'OFF', the butterfly valve at its discharge shall first close (25-30) % before the respective pump motor is de-energized.

On tripping of motor due to any reason, the butterfly valve at the discharge shall close fully automatically. Low flow of either pump or motor bearing cooling water when the pump is running shall give alarm(s) and trip the pump with alarm in case of sustained low value over a preset time. If water level in pump sump is low as well as for high level, an alarm shall be initiated. Pump shall trip in case of very low level of water in the intake sumps and very high discharge header pressure. Also, in the case of low water level in the pump sump, the makeup water valve should automatically open and let the water into the leading channel of the forebay. The makeup water valve shall automatically close when the level reaches high in the pump sump. The operation philosophy as detailed above is suggestive only and Bidder shall furnish the complete control and interlock scheme for the system/equipment proposed by him along-with the bid. The control and interlock scheme to be adopted shall be finalised in consultation with the successful Bidder after award of contract and shall be subject to Owner's approval.

2.5 Constructional Features

i) Materials of Construction

Material & construction of the pump shall be such as to resist corrosion & erosion and give a long and satisfactory life to the plant. The materials used in construction of the various components shall not be inferior to those given below. Cathodic protection shall be provided for CW pumps in case of Sea Water application.

S.No	Description	Technical requirement	Material for Sea Water
1)	Suction Bell & Casing	2% Nickel Cast Iron, IS: 210 Grade FG 260; S-0.1% max. P-0.15% max.	ASTM A276 TP316L / ASTM A439 Type D2
2)	Casing Liner	----	----
3)	Impeller	Stainless steel-316	ASTM A890 Gr. 1B
4)	Wearing rings	Stainless steel of suitable grade as per manufacturer's proven practice.	As per manufacturer standard practice
5)	Pump shaft	Hardened stainless steel conforming to ASTM A 276 Gr. 410	A351 Gr. CG6MMN
6)	Line shaft	Hardened stainless steel conforming to ASTM A 276 Gr. 410	A351 Gr. CG6MMN
7)	Shaft coupling	Stainless steel type 410, ASTM A 276, Heat treated and hardened.	Monel
8)	Shaft sleeve	Stainless steel type 410, ASTM A 276, Heat treated and hardened.	A351 Gr. CG6MMN
9)	Line shaft bearing	Cutless rubber with bronze retainer / Thordon type bearing.	Cutless rubber with bronze retainer / Thordon type bearing.
10)	Bearing guide spider.	Fabricated steel	
11)	Column pipe	Fabricated steel as per IS: 210 Gr FG 260 with 2 coats of epoxy coating.	ASTM A276 TP316L
12)	Shaft enclosing tube (if applicable)	Fabricated steel as per IS:2062	ASTM A276 TP316L
13)	Discharge elbow	Fabricated steel as per IS:2062	ASTM A276 TP316L
14)	Distance piece	Fabricated steel as per IS:2062	ASTM A276 TP316L

LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[14]	15.01.2016

S.No	Description	Technical requirement	Material for Sea Water
15)	Matching flanges	Fabricated steel as per IS:2062	To match pipe material
16)	Thrust pads	Carbon steel with white metal lining.	Carbon steel with white metal lining.
17)	Bolts, nuts and lock washers	Stainless steel AISI type 304 for those coming in contact with water and for others, material shall be high-tension carbon steel.	AISI 316L
18)	Base plate and	Fabricated steel as per IS:2062	Fabricated steel as per IS:2062
19)	Soleplate	IS: 2062	IS: 2062
20)	Gaskets	Wire reinforced rubber gasket / Neoprene rubber / asbestos free	Wire reinforced rubber gasket / Neoprene rubber / asbestos free
21)	Gland packing	Impregnated Teflon	Impregnated Teflon
22)	Ladder, platform and related accessories.	Fabricated steel as per IS:2062	Fabricated steel as per IS:2062

A ladder and platform arrangement shall be provided for each CW & ACW pump and motor for inspection and maintenance of the thrust bearing.

The line shaft bearing shall be spaced so as to ensure smooth operation. The bearing shall be amply proportioned to give long and satisfactory life.

- Bearing lubrication: The type of lubrication *[(self water or forced water as the case may be)]* shall be as specified in data sheet. All interconnected piping, valves; instruments and fittings for bearing lubrication shall be in Bidder's scope
- Water required for cooling of thrust bearing shall be taken from main pump discharge through filter. Necessary piping valves, instrumentation etc. shall be included in Bidder's scope.
- CW system is a recirculating type with cooling towers, thereby there is a possibility of dust ingress in cooling towers. The lubricating system shall be suitably designed to prevent such dust ingress into pump bearings.

ii) Journal & Thrust Bearings

The main pump guide bearing shall be babbitt lined bronze bearing sleeve located as close to the impeller as possible. Guide bearings shall be oil lubricated. The guide bearing & thrust bearing shall be protected against water splashes and in particular against gland packing leaks.

The guide bearing shall be of journal bearing type. It shall be out of water, cooled & lubricated by self circulated oil. The bush bearings (if provided) shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[15]	15.01.2016

lubricated with filtered pump fluid. The guide bearing shall be lubricated by an automatic oil circulating system. The guide bearing housing shall be of axially split design so as to facilitate ease of maintenance.

- Bearings shall be suitable for reverse rotation up to the maximum speed of 125% of rated speed and shall be suitable for continuous operation at all duties from closed-valve to maximum run out.
- All bearings shall be out of water and should be easily accessible for maintenance purpose. Adequate access shall be provided for maintenance of bearings.
- The design of the lubricating system shall be such that the bearing performance is not affected by small changes in oil levels. Maximum and minimum operating oil levels shall be distinguished by a generous quantity of oil between the defined oil levels.
- The bearing lubricating system shall be designed to permit easy filling and drainage of lubricating oil. Easy access shall be provided for the addition of lubricating oil with the pumps in service. All associated pipe work shall be of stainless steel.
- For removing heat from pump thrust bearing oil bath, cooling coil made out of cupro-nickel alloys suitable for clarified water shall be provided. Hot water outlet from this bearing shall be led to the sump.
- The bearing bracket shall be designed to ensure maximum rigidity of the bearing support. (The bearing support shall be centered on & bolted to the casing cover).
- Pump design with single thrust bearing at motor top or separate thrust bearings for pump and motor (as per Bidder's standard practice) is acceptable. In case the thrust bearing is located in the pump it shall be located just above the guide bearing and the coupling shall be flexible type in such a case.
- Thrust bearing shall be of oil-lubricated, centrally pivoted tilting pad type (Mitchel or Kingsbury) capable of absorbing axial thrust in both directions of rotation continuously. Water required for cooling of thrust bearing shall be taken from main pump discharge. Necessary, filters, piping, valves, accessories, specialties as required for such cooling purpose is in the scope of Bidder. However pump design shall be suitable for starting without cooling water for thrust bearing.
- The thrust bearings shall be rated for continuous operation with thrust as developed when impeller clearance is worn out up to four times the clearance when pump is new and working under shut off condition.

iii) Pump Shaft

- The shaft shall be designed to transmit the maximum rated power at the pump operating speed and shall be of ample stiffness to minimize deflection of the shaft during closed valve starting conditions.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[16]	15.01.2016

- The shaft shall preferably have all components key driven including impeller, thrust and journal collar and coupling.
- Since the pump floor and motor floor are at different elevations, pump shaft and motor shaft shall be connected by an intermediate shaft as per the standard design of the manufacturer.
- Intermediate shaft should be designed to take care of misalignment of pump and motor shafts. Intermediate shaft motor end and pump end couplings should be designed for easy assembly and dismantling. They should also provide rigidity for transmitting full torque of the motor with minimum transmission losses.
 - **Shaft Sleeves**
Shaft sleeves shall be provided below the bearings to protect the shaft from wear. Suitable locking arrangement shall be provided for all bolted connections.
 - **Stuffing Box**
Gland packing shall be provided at the top of the line shaft. Shaft sleeves shall be provided at the stuffing box. The stuffing boxes shall be of sufficient depth to permit ample packing. The packing glands shall be split type to facilitate repacking of the stuffing boxes. The space between the motor and the stuffing box shall be sufficient to permit removal of the gland packing and insertion of new gland packing without dismantling the pump.
 - **Wearing Rings**
Replaceable wearing rings/casing liners shall be provided in impeller and casing. Design of wearing rings / casing liners may be as per manufacturer's standard practice.

iv) Gland sealing

- Pump shaft when it comes out of the volute casing shall be sealed with gland packing type stuffing box. A seal flushing system shall be provided which shall supply the glands with flushing water both during pump start-up / shutdown and also while the pump is running.
- Special design provision (i.e. inflatable seal) to be made in the stuffing box housing for replacing gland packing without dewatering of draft tube and volute casing under HHWL condition.
- The Bidder shall make necessary arrangement for proper draining of gland sealing water from casing cover.

v) Coupling

The pump shall be connected to the motor shaft by a suitable coupling. Coupling bolt and nuts shall be provided with locking devices to prevent the nut from becoming loose at normal and reverse rotation. Suitable arrangement shall be provided to adjust the vertical clearance of impeller. Bidder shall give necessary details of a proven arrangement in the offer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[17]	15.01.2016

vi) Base Plate

Each pump shall be provided with a heavy structural steel base plate. Separate heavy steel sole plates (or curb rings) shall be provided for grouting and shall be designed to permit removal of entire pump along with discharge elbow head and base plate without disturbing the sole plate or grout. The sole plates shall be blasted clean to a near white finish. Further, the design and material of foundation bolts and base plate shall be such that it can take care of all shearing forces/ stresses developed due to sudden closure of butterfly valves. The Bidder shall furnish the calculations for shearing forces and moments on foundation bolts.

vii) Vibration limits

The vibration limits of the pump set shall be within the limits specified by HIS. Bidder should clearly bring out the location and type of vibration pickups recommended and provided by him for monitoring purposes along with the values of High/High - High vibration for alarm / trip etc.

viii) Pump Motor Rating

Drive motor sizing criteria shall be the highest of the followings:

- 10% margin over the pump shaft input power at the rated working condition.
- 5% margin over the maximum pump shaft input power required within its operating range including the shut off point.
- Pump shaft input power required considering overloading of the pump assuming single pump operation in the event of tripping of the other pump(s) operating in parallel. Refer Volume-II, Part-B for further details of motors.

ix) Hydraulic Transient Analysis

For the complete CW system, Bidder shall carry out a detailed hydraulic transient analysis by method of characteristics using an industry approved computer programme. Bidder shall decide the following based on the hydraulic transient analysis for entire CW System respectively:

Pump discharge valve closing sequence and rate of closure for pump stopping and pump tripping conditions which shall be incorporated in overall control system in unit control room.

Size, location and quantity of air release valves in the discharge pipe and CW duct.

Pump discharge valve opening sequence and rate of opening during pump start-up condition.

Further, study should also consider stopping/ tripping of a working pump and starting as an event for analysis of the system.

The transient study shall also include power failure condition i.e. all the running pumps trip but the discharge valves remain open.

The report for transient analysis should consist of methodology adopted, characteristic curves/ data for various boundary conditions, complete input data used for execution of software for various events and the complete data and shall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[18]	15.01.2016

be submitted to the Owner for approval. Based on the recommendations of such a study, Bidder shall take corrective measures and provide suitable surge suppression devices in CW System/intake system.

x) Model Test of CW Pump

- For the offered pump, Bidder should carry out the model test after the completion of the detail engineering. The model test should be conducted as per Japanese standard JIS-B-8327 (latest version) and specific speed of the model tested should lie within $\pm 5\%$ of the specific speed of the pump offered
- Bidder shall conduct the test as per the procedure given below at no extra cost to the Owner.
- A homologous model of the CW pump shall be tested at manufacturer's works in the presence of Owner's representative to predict the performance of the prototype. Model test shall include the cavitation test & Net Positive Suction Head Required (NPSHR) test. In general these tests shall be conducted as per Japanese standard JIS-B8327 (latest version).
- It is preferable to have the model pump head same as the head of the prototype pump, and should be run at such a speed that the specific speed is the same as that of the prototype.
- The model ratio and the procedure to be followed for model test shall be mutually discussed and agreed before conducting the test.
- Bidder shall submit a procedure for ensuring & demonstrating the similarity of the impeller vane profile/volute profile for the model pump & the prototype.
- All the relevant dimensions of the diffuser and impeller including clearances and profile shall be measured for model pump and prototype pump and control should be exercised to ensure repeatability of these parameters on all subsequent pumps.

2.6

Sump Model Study

{This section shall be incorporated, if, the sump modification is envisaged.}

a) Purpose

- (i) The physical sump model study shall be carried out as per guidelines of Hydraulic Institute Standards to finalize the prototype sump and fore bay dimensions. The sump model study shall cover in particular the following aspects:
- Study of swirl in each sump.
 - Check the formation of different types of vortices in forebay and pump chambers.
 - Study the flow pattern in approach channel, forebay and pump chamber and draft tube for turbulence, formation of hydraulic jump, back flow etc.
 - Study velocity distribution in approach channel, forebay area, pump bays,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[19]	15.01.2016

draft tube etc.

- Check the adequacy of dimensions of the pump house and distances between the screens.
- (ii) The model shall be based on Froude's law of similitude and shall be tested for following two more flow conditions, viz.
- At twice the prototype maximum Froude number, i.e., the Froude number of the model is two times that of the prototype.
 - At equal velocity criterion, i.e., the velocity is same both in the model and prototype.

The successful bidder shall give details of any other studies to be done by the pump vendor, the methodology and place of study, the agency involved in the study and the layout enclosed based on the pump offered.

- (iii) Model study shall be conducted either by the successful bidder at their premises or in the premises of a reputed institution. Successful bidder shall submit a list of projects for which model studies have been conducted by them or a list of institutions wherein the model study can be conducted which shall be approved by the Owner.

b) Construction of Model

- i) Model shall be constructed from carbon steel, transparent elastomeric material or any other material found to be suitable for the purpose.
- ii) The scale used shall be 1:10. Model shall be built such that it includes low water level and highest water level in the sump.
- iii) Model shall be constructed for complete pump house, forebay and intake channel. Model shall be flexible so that the effect of changes in sump design can be conveniently studied by trying various configurations.
- iv) The Model shall be built above the ground with bottom and side walls of transparent material near pump chambers.
- v) In the model, provision of current meters to collect velocity profile in horizontal plane and vertical plane in each pump chamber entrance, coarse screen inlet and exit and Pump Inlet shall be made.

c) Operating Conditions/Requirements

- i) Contractor shall submit a write-up on the sump model study to be carried out which shall cover the different aspects such as model scale, test velocities, flow rates, water levels and pump operation combinations that shall be studied regarding the sump behavior and also the evaluation criteria. After approval of the same, model study shall be carried out.
- ii) The operating conditions for the CW pumps shall be as specified in the data sheet for CW pumps.
- iii) The Model shall be tested for various combinations at low water level and high water level covering all conditions. The combinations shall be selected to cover

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[20]	15.01.2016

wide range of pumps operating conditions. The Owner shall witness the tests.

d) Acceptance Criteria

- i) The acceptance criteria shall be as per the HIS.
- ii) Velocities through screens shall be less than 0.7 m/s.
- iii) Detailed report on the sump model test containing the objective, description of test conducted, observations, modifications suggested in the prototype sump (if any), final drawing of the prototype sump (incorporating modifications if any) and drawing for the test set-up, photographs and a video CD shall be submitted by the Contractor to the Owner.
- iv) The Bidder shall note that all engineering activities related to the sump/ pump house shall be taken up only after the approval of sump model study report.
- v) The prototype sump, fore bay, leading and approach channel dimensions shall be based on the model study including all the modifications and corrections carried out in the model.

2.7 Performance Tests

Performance tests shall be carried out at works and at site.

a) General

- i) The following shop tests will be conducted as applicable on the various components. All such tests will be documented and forwarded to Owner:
- ii) Radiography test for Impeller
- iii) DP test on machined surface of impeller
- iv) Visual examination and dimensional check
- v) Chemical composition test for complying with the material specification
- vi) DP test for wearing ring
- vii) DP and Ultrasonic test for pump shaft and coupling
- viii) After the assembly of the various components of the pump, the static and dynamic balancing tests for rotating assembly will be conducted.

b) Performance Guarantee Tests at Works

The following tests shall be conducted at works:

After installation of the pumps at shop, each CW pump, shall be subjected to performance test and performance shall be verified. The test shall include establishing the pump performance curves (Head - Capacity, Power - Capacity, Efficiency - Capacity) and verifying the guaranteed parameters in the presence of Owner's representative and pump manufacturer. The test results of each pump will be evaluated individually and corrections, if any, for the deficiency in guaranteed parameters shall be carried out by the bidder. The following procedure shall be followed for conducting the tests at works:

- i) Bidder shall make all the arrangements for carrying out tests at shop and all costs associated with the above test arrangement shall be borne by the Bidder.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[21]	15.01.2016

- ii) Performance guarantee test shall be carried out as per requirements of Hydraulic Institute standard (HIS) of USA and approved test procedure. Performance test at design duty point shall be done keeping minimum submergence of the pump identical to that specified for the site conditions.
- iii) Bidder shall submit details of the proposed testing arrangement, methodology of flow measurement etc for Owner's approval. The details shall be enclosed with the bid.
- iv) It may be noted that during the performance tests, no negative tolerance will be permitted on head, capacity and the pump efficiency.
- v) The test shall also include measurement of vibration, noise level and bearing temperature rise.
- vi) Calibration of instruments to be used in the test shall be carried out by an independent agency. Calibration of instruments should be carried out prior to the test. The calibration certificate of the instruments should be valid for the period of test. The following laboratories are acceptable for calibration of various instruments:
 - Flow Control Research Institute (FCRI)
 - Indian Institute of Technology
 - Institute for design of electrical measuring instruments (IDEMI)
 - Electronic Research & Testing laboratory (ERTL)
 - National Physical Laboratory (NPL)
 - National Test House (NTH)
 - Any other equivalent Government Institute / laboratory to be approved by Owner
- vii) The test result shall be evaluated at actual speed achieved and speed correction shall be made only if there is a supply frequency variation with respect to 50 Hz.

c) Performance Guarantee Tests at Site

The following tests shall be conducted at site.

- i) Flow measurement at site shall be carried out using re-circulation line. If additional temporary pipelines / RCC chamber are required to be provided for testing the pump for the complete measurement range, the same shall be provided by the Bidder.
- ii) All interlocks and protections relating to the pumps, motors and motorized valves shall be demonstrated /tested as per control logic.
- iii) Parallel operation of the pumps shall be demonstrated / tested. There should be equal load sharing between pumps running in parallel with no abnormal vibrations, sound or hunting of head and flow. Load sharing between any pumps running in parallel should be within 10%.
- iv) Opening and closing time of discharge butterfly valve shall be checked and it should be as per the approved data sheet. The capacity of the accumulator shall be checked by opening and closing of valve after switching off the electric supply

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[22]	15.01.2016

to the oil pump. It should be able to open and close the valve as per the specification requirement.

2.8

Stop log Gates, Sluice Gate, Coarse Screens and Trash Rack

S. No	Item	CW & ACW system	RW intake system
1	Stop log gate	[.. Nos.]	[.. Nos.] for intake sumps
2	Sluice gate	-	[.. No.] no for intake channel
3	Coarse screen	[.. Nos.] (1 no for each pump chamber)	[.. Nos.] (1 no for each pump chamber)
4	Trash rack	-	1 no. for intake channel
5	Lifting beam For stop log gate / coarse screen	[.. Nos.] No.	[.. Nos.] No
6	Storage rack for stop log gate	[.. No.] for each stop log gate	[.. No.] for each stop log gate

a) General

- i) Stop log gate assembly [comprising identical and interchangeable of adequate size to suit the pump chambers (height x width)] properly matched to withstand the water pressure and to have no leakage between connection joints, complete with seals and hooks for hoisting and lowering the unit etc.
- ii) Each chamber shall be provided with coarse screen assembly. Coarse screen assemblies [comprising identical and interchangeable of adequate size to suit the pump chambers (height x width)] properly matched complete with hooks for hoisting and lowering the unit etc be installed in circulating water sump. Screen shall be suitably strengthened so that even with 50% chocking, there is no distortion of the frame.
- iii) Lifting beam complete with automatic engaging and disengaging type hooks and counter-weights; guides & guide shoes to be operated in unison with stop log gates/coarse screens as described above for handling the units with correct engagement.
- iv) One (1) set of guide bar and sills for gates and screens for guiding them to operate in the center of the slot and the arrangement shall be common for all.
- v) Sets of Track-cum-side seals for the stop log gates/coarse screens for Circulating water sump shall be supplied and erected to enable smooth movement of bearing pads and seals. Proper number of pads & seals shall be provided so as to provide very smooth operation for a prolonged period.
- vi) Portable Dewatering submersible pumps shall be provided in order to drain pump sump during maintenance.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[23]	15.01.2016

b) Stop Log Gates & Sluice gate

Stop log Gate

- i) The Stop log gates shall be designed in accordance with the provisions of IS: 5620, in general and in accordance with the specification indicated herein. The Stop log assembly shall be made in identical interchangeable units. The gates shall be designed corresponding to the maximum water level and wave effect with full hydrostatic pressure with the downstream completely empty.
- ii) Permissible stresses in various components shall not exceed those specified under Appendix-B of IS: 5620 for wet conditions (accessible) column and those mentioned in these specifications.
- iii) The stop log gates shall be normally kept stored in storage area near fore-bay/pump sump and as required these shall be moved and lowered in the balance condition for attending to any maintenance or repair jobs of the water bays or the associated civil structure. All the stop log assembly units shall be identical and interchangeable for each size except the bottom unit.
- iv) All the units shall have music note type side seals and bottom seal. Suitable arrangement shall be made at the top of the units for sealing the bottom seal of the unit to be placed above it. The skin plate and bottom seal clamp plate shall be suitably chamfered to prevent damage to bottom seal.
- v) Suitable drain holes shall be provided on all the horizontal girder webs and horizontal stiffeners. Each stop log unit shall be provided with three (3) guide shoes, one (1) near the top and one in middle and the other near the bottom at each end. Lifting points should be suitable for the automatic engaging and disengaging hooks provided on the lifting beam. Two (2) suitable guide rods equidistant shall also be provided on the units at the webs of the top horizontal girders to match the guide bush (pipe) provided at the bottom of the lifting beam to facilitate lowering of lifting beam correctly to engage the stop log.
- vi) The stop log assembly units are required to be lifted / lowered under balance conditions of load. The lifting operation shall be done only after the water level on both sides has equalized for which suitable filling valve shall be provided in the stop log units only under each lifting lug so that before the lifting beam lifts the stop log, water fills the dewatered portion through the filling valves and balances the water pressure on both the sides.
- vii) In closed position, the stop log assembly units shall be completely water tight with the design water head.
- viii) The stop log assembly and its accessories shall be so designed that the stresses in the different members due to dynamic loads during closing and opening operations and static loads in the closed position do not exceed the permissible stresses specified hereunder. The frames and anchors shall be designed as per IS: 5620. The bearing plates shall be of mild steel and surface shall be machined. This shall slide on the machined structural steel track plates provided on the embedded parts.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[24]	15.01.2016

Sluice Gate

The manual sluice gate shall conform to the applicable IS/AWWA standards for the size of the gate.

Sluice gates shall be cast iron, fully bronze mounted and will have side wedges, top wedges and bottom wedges or a flush bottom seal. Flush bottom type seal shall have a neoprene bottom seal and standard bottom shall have bottom bronze wedges.

Disc or Slide

The disc shall be cast iron, one-piece construction, rectangular with integrally cast vertical and horizontal ribs

Frame

Gate frame and guides shall be cast in one piece and shall be flat back or flange back as designated in the gate schedule. The back of the frame shall be machined to a plane.

The guides shall be cast as an integral part of the frame and shall be sufficiently long to retain at least one-half of the vertical height of the disc when in the fully opened position. Guides shall be capable of safely withstanding the full thrust due to water pressure and wedging action. Guide grooves shall be accurately machined to provide free movement of the disc tongues and to insure proper engagement of the wedging devices.

Wedges

The wedges shall be solid cast bronze and keyed to the cast iron pads to maintain adjustment by preventing undesirable rotation or lateral motion. They will be attached to the disc with 304 or 316 stainless steel studs, nuts, washers and adjusting screws with locking nuts. Silicon bronze studs, nuts and adjusting screws with locking nuts shall be used when specified

Seat Facings

All seat facings shall be malleable extruded bronze of a composition, which will resist dezincification and will increase in wearing ability with cold working.

Flush bottom Seal

Gates so designated in the gate schedule shall be provided with a flush bottom seal. All gate parts shall be identical to those defined in other paragraphs of this specification except for the bottom of the slide and the seal assembly along the invert of the waterway opening. The dovetail facing along the bottom edge of the disc and frame shall be omitted. A neoprene seal shall replace the bottom dovetail and wedging devices. The neoprene seal shall be epoxied into the stainless steel bottom cross member (sill).

The top surface of the seal shall be flush with the invert of the gate opening. The full length of the bottom edge of the disc shall be accurately machined to make

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[25]	15.01.2016

contact with the seal when the disc is closed. The seal shall be replaceable without removal of the gate disc

Stem

Operating stem shall be of Type 304(L) or 316(L) stainless steel minimum 1-1/4 inches diameter and attached to the disc by stem mounting clips or thrust nut and pocket. Stem shall be designed to transmit in compression at least 2-1/2 times the rated output of the operating mechanism with a 40-pound effort on the crank or hand wheel. Stems shall be provided with adjustable stop collars to prevent over travel on manually operated gates.

Stem Guides

Stem guides shall be bronze bushed ASTM A126 class B cast iron.

Seals

Neoprene "J" seal can be bolted to the cast frame for additional sealing capabilities on the unseating side. Hardware shall be Type 304 or 316 stainless steel.

c) Lifting Beam for Stop log Gate/Coarse Screen

- i) The lifting beam shall be made from rolled structural steel I- beam/ channel sections or fabricated from angle iron frames. The depth of lifting beam/frame should be sufficient to prevent bending of lifting beam in between the side guides. It shall have suitable guide shoes at both ends. Two (2) guide bushes corresponding to guide stems on stop log/coarse screen units shall be provided for correct engagement with the stop log unit.
- ii) Two (2) automatic engaging and disengaging type hooks with counter-weights etc shall be provided corresponding to lifting lugs on the units, for grappling and un-grappling of stop log/coarse screen, assembly units under water.
- iii) It should be assembled in shop and its operation specially that of automatic engaging and disengaging hook shall be checked for its correct operation.
- iv) The lifting beam shall be designed to cater for the following requirements:
 - Double point lifting shall be envisaged in the design of lifting frame.
 - The depth of beam/frame shall be normally 0.6 of its length. However, this may be reduced with suitable end arrangement preventing bending of frame in the guides.
- v) Counter-weights shall be provided for automatic grappling and un-grappling.
- vi) The hook made out of plate shall be checked for automatic grappling and un-grappling and shall be suitably designed for the load of heaviest stop log/coarse screen unit with adequate margin of impact, sticking of stop log units etc. The pin of hook shall be suitably designed for load for which hook is being designed.
- vii) The top pin of the lifting frame/beam shall be designed for the load of lifting frame, load of stop log/coarse screen unit with adequate margin of impact, sticking of stop log unit etc.
- viii) Two (2) guides on either side with their bottom chamfered shall be provided for

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[26]	15.01.2016

guiding the lifting frame into the slot and clearances of guide and guide shoes shall be kept the same as adopted in the stop log units.

- ix) The pilot shall be provided at the bottom of lifting frame to prevent rotation of stop log/coarse screen units during handling.
- x) The lifting frame shall be checked for its verticality and for satisfactory operation of grappling and un-grappling of its hook.

d) Coarse Screens

Coarse screens of conventional design shall be installed at each bay of the Circulating Water sump to stop objectionable debris and floating matter from entering the CW Pumps.

Design Considerations & Operating Requirements

- i) The coarse screen shall be designed for 50 percent choking condition and the structural supporting members shall be designed for a differential head of 2m.
- ii) The design shall be checked for additional force due to horizontal and vertical seismic coefficient. An increase of 33 percent over the normal allowable stresses may be allowed for the structural members and 25 percent for bolts and nuts etc. for earthquake condition.
- iii) The screens shall always remain in position, under water, to stop objectionable large debris and floating matter.
- iv) Screens shall be lowered and lifted only under balanced conditions of head. The lifting operation shall be only for maintenance/painting requirements or for cleaning of screen in case of excessive choking.
- v) The screens and its components shall be so designed that the stresses in different members due to dynamic loading during closing and opening operations and static loading in the closed position do not exceed the permissible stresses.

Arrangement of Screens Parts

- i) Each unit of coarse screen to be provided shall consist of vertical and horizontal frame. The screen shall be 12 gauge AISI-304 stainless steel crimped wire bolted on rolled structural steel frame with flat all round pitch of Clear opening of the screen shall be 10 mm x 10 mm.
- ii) As the screen units shall always remain submerged under water, a lifting beam/frame with automatic engaging and disengaging hooks shall be used for lifting and lowering purposes. The lifting frame shall also be guided in the embedded track-cum-guide.
- iii) The screen shall mainly comprise of following components:
 - Load bearing horizontal members.
 - End frame members
 - Screen
 - Lifting points
 - Pilot Rods/pipe

3	Mechanical fasteners	Electro galvanized high tensile steel	IS: 3167

e) Design and Manufacturing requirements of Trash rack

- Trash rack screens shall be provided at the beginning of the intake chamber. The grooves in the chamber for the stop log gate in the upstream of the trash rack shall be so designed that it shall accommodate the trash rack or the stop log gate. The racks shall be designed by the Bidder to suit the system requirements.
- Trash rack shall be of Type-3 of IS: 11388 designed for 2M differential water head and as per the data sheet furnished in Chapter 19.
- The rack shall be installed in such a way that the projected bar screen surface will be facing the flow direction.
- Ragged edges, welds, protruding bolts or other fasteners, which might cause injury to personnel, shall be removed or otherwise protected.
- The racks shall be delivered to site ready for installation.

HIS	Hydraulic Institute Standards, USA

2.9 Butterfly Valves

a) General

- The butterfly valves to be provided in the intake pumps discharge pipes, CW & ACW pump discharge pipes, Recirculation lines and in the makeup water valve station of CW system shall be of flanged construction and shall be complete with

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[28]	15.01.2016

electric motor actuators, matching counter flanging, bolts, nuts, gaskets, lifting lugs, sole plate for supporting feet in the valve body etc.

- ii) The valves shall be suitable for installation in any position (horizontal / vertical etc.)
- iii) The valves and all accessories shall be designed so as to guarantee an easy disassembling and maintenance.

b) Design & Construction Requirements

- i. Butterfly valves shall be of flanged construction and shall be complete with actuating mechanism, matching counter flange, bolts, nuts, gaskets, lifting lugs, sole plate for supporting feet in the valve body etc.
- ii. The valves shall be designed for water quality as per service requirement for the design pressure / temperature as specified and in accordance with BS 5155/AWWA-C-504. For sizes not covered in AWWA-C-504, the dimensions given in AWWA-C-504 shall be extrapolated to arrive at final values.
- iii. The valves shall be bi-directional bubble tight shut-off, high performance type.
- iv. The valves shall be preferably triple eccentric or minimum double-eccentric valves with low torque requirement.
- v. The valves shall have externally retained, blow out proof stem design feature to arrest stem coming out from disc. Stem shall not come in contact with flowing fluid.
- vi. The valves shall be suitable for installation in any position (horizontal / vertical etc.).
- vii. The shaft shall be connected to the disk through keys or taper pins or screws of stainless steel. The connections shall be designed so as to avoid looseness during the operation; moreover, they shall be provided with suitable disassembling systems.
- viii. Sealing seat material shall be either on body or on disc and its shape shall be hollow musical note type or superior giving reliable leak-tightness. Seat shall be in-situ replaceable type.
- ix. Integrally cast adjustable travel stop is to be provided on the valve body.
- x. Actuator torque shall be minimum 1.25 times the required maximum valve torque. Maximum valve torque requirement shall be worked out considering bi-directional sealing, disc differential pressure equivalent to valve rating pressure and hydraulic forces on disc due to change of direction of flow within one diameter length upstream and downstream.
- xi. High strength stub shaft shall be provided with minimum 1.5 times diameter penetration into disc hubs with close tolerance fit and secured with adequate number and capacity lock pins.
- xii. The valve shall be provided with one or two thrust bearings to hold the valve disc securely in the centre of the valve. The material of bearing shall be self-lubricated type with low coefficient of friction. Bearing shall be provided beyond the shaft seal. The housing for this bearing shall be rigidly attached to the valve body.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[29]	15.01.2016

- xiii. The disc shall rotate from the full open to the tight shut position. The disc shall be contoured to ensure the least possible resistance to flow and shall be suitable for throttling operation. While the disc is in the throttled position, valve shall not create any noise or vibration.

All butterfly valves shall have permanent arrow inscription indicating the flow direction on the valve body.

- xiv. All valves shall be complete with:-

- Graduated position indicator (located in a visible place for the operation);
- Adjustable mechanical stop limiting devices to prevent over travel of valve disk in open and closed position.

- xv. Material of Construction:

The material of construction of the butterfly valve shall be suitable for the circulating water quality. The materials for normal condenser cooling water / PHE cooling water are given below.

S. No.	Valve Component	Materials Specification
1	Body	2% Ni-CI or IS-2062, IS-210Gr260
2	Disc	2% Ni-CI or IS-2062
3	Spindle/Shaft	ASTM A276 Type316
4	Seal	PTFE
5	Retaining Ring	ASTM A276 Type316
6	Key	AISI 1018
7	Packing	NBR/EPDM

c) Electro Hydraulic Actuators For Butterfly Valve in the CW pumps discharge piping :

- i. Each electro-hydraulic actuator shall be provided with its own power pack. Each actuator shall consist of a double acting cylinder, control cabinet and accessories to cater for the following operational requirements:
- ii. In the closed position the valve shall be held closed by a substantial counter weight or by any other mechanical device.
- iii. Start-up sequence of pump shall initiate powered opening of butterfly valve hydraulic actuator. The actuator shall be adequately sized to open or close the valve against an unbalanced pressure equal to pump shut-off pressure in either direction within the time period as specified. The necessary limit switches shall be provided on the valves so that at a pre-determined position, the pump circuit

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[30]	15.01.2016

- breaker shall be closed to start the pump.
- iv. Valve shall remain open during normal running of the pump. No disc flutter shall take place in the position nor shall there be any creep in this fully open position.
 - v. A limit switch shall be provided (set at about 3 deg from open position) to sense the creeping. Switch shall start the oil pump and return the valve to the fully open position.
 - vi. When the valve is fully open and electric supply to the valve control system fails the butterfly valve shall remain open while the CW pump continues to deliver water.
 - vii. This operator shall provide 90% closure of the valve in the 5 to 20 seconds variable time duration and balance 10% closure in 20 to 60 seconds variable time duration. Final setting shall be carried out based on the surge analysis.
 - viii. In the hydraulic pack, each valve operation like crack open, fully open, partial close, fully close and emergency close shall be controlled by independent solenoid valve.
 - ix. In case of any fault causing pump motor trip, the corresponding butterfly valve shall start closing at a fast rate initially and thereafter at a slow rate. The emergency closing facilities shall be duplicated each with its own solenoid valve in the hydraulic circuit.
 - x. Provision for local manual operation shall also be made.
 - xi. The lower part of the cylinder shall have a fixed orifice especially designed to achieve a minimum valve closing time in case of failure of oil pipeline.
 - xii. A locking device shall be provided so that the valve can be maintained in open/shut position during maintenance and inspection.
 - xiii. The hydraulic controls for each valve shall be housed in an independent cabinet located in the operating floor near the valve. This shall consist of 2 nos. (1 working + 1 no. standby) pumping unit, oil tank, and accumulator of adequate capacity to hold the valve disc at any position and to prevent any surge including disc flutter during valve travel and to fully open position. Accumulator shall also have enough capacity for one cycle (open & close operation) of operation without external electric AC power. The hydraulic power pack shall consist of necessary pressure switches, pressure gauges, flow regulators, solenoid valves; transformers, rectifiers etc. DC power supply for solenoid valves, contactors, relays, fuses, indicating lamps, push buttons etc. for control of solenoid valves and pumping units; throttle valve, filters, non-return valves etc. shall be arranged in a logical circuit to meet the operation requirement.
 - xiv. The electrical controls for the valve such as relays, contactors and fuses shall be housed in the common control panel (local) for CW pumps or in a separate panel.
 - xv. Each butterfly valve shall have four limit switches, each capable of being set at any point between full open to full close position to meet desired functions. In addition, one more extra limit switch to be set at an intermediate position shall be provided. Each limit switch shall have 2 NO. and 2 NC contacts. Limit switch

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[31]	15.01.2016

enclosure shall conform to NEMA 4 x standard.

- xvi. Each butterfly valve shall have two nos. non-contact type 24 V DC 4-20 mA output position transmitters.

d) Inspection and Testing for Butterfly Valves

Shop Test

Physical and chemical tests on materials shall be done to ensure the quality of the material offered. Test procedures and sampling shall be guided by the applicable test Codes and Standards. Components for which material test has been done and approved shall be stamped for identification. Mill certificates for the materials for valve casings, support plates, flanges etc. shall be submitted to the Owner.

Visual examination and dimensional check

Hydrostatic test

- i) Body – At twice the pressure rating
- ii) Seat & disc test, Bi-directional – At rated pressure
- iii) Air leak test – 6 kg/sq.cm
- iv) Disc strength test as a design proof test - At twice the pressure rating
- v) Cycle test as design proof – As per AWWA C-504 - 00

Hydraulic actuator

- i) Hydraulic cylinder pressure test – At twice the pressure rating
- ii) Hydraulic cylinder piston seals – At 1.1 times operating pressure
- iii) Hydraulic pumps pressure test – At twice the pressure rating
- iv) Hydraulic pump and motor assembly performance test – Flow Vs Head & Efficiency
- v) Solenoid valve – Pressure test & operational test
- vi) Valve & actuator assembly performance check – 10 cycle operation check (all valve assemblies).

2.10

Rubber Expansion Joint

- i) The design, manufacture and performance of rubber expansion joints shall be in accordance with applicable statutes, regulations and safety codes in locality where the equipment shall be installed. The equipment shall also conform to the latest editions of Fluid Sealing Association.
- ii) For operating conditions and design requirements refer to design data sheet enclosed.
- iii) Features of Construction

• **General**

- All parts of expansion joints shall be amply proportioned for all stresses

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[32]	15.01.2016

that may occur during continuous operation and for any additional stresses that may occur during installation and also during transient conditions.

- The expansion joints shall be single bellow rubber expansion joints. The arches of the expansion joints shall be filled with soft rubber. The design shall be suitable for the pressure and type of fluid as specified in the Design data sheet enclosed.
- The tube (i.e. inner cover) and the cover (outer) shall be made of natural or synthetic rubber of adequate hardness. The shore hardness shall not be less than 60 deg A for outer and 50 deg A for inner cover.
- The carcass between the tube and the cover shall be made of high quality cotton duck, preferably, square woven to provide equal strength in both directions of the wave. The fabric plies shall be impregnated with age resistant rubber or synthetic compound and laminated into a unit. Reinforcement, consisting of solid metal rings embedded in carcass, shall be provided.
- The split retaining rings shall be of 10 mm thick ASTM A36 or equivalent tested quality stainless steel. Steel washers shall be provided at the bolt holes where retaining rings are split. For de mineralized water service, the retaining rings shall be rubber lined.
- Expansion joints shall be complete with stretcher bolt assembly. The expansion joints shall be suitable to absorb piping movements and accommodate mismatch between pipelines.

- **Main Body**

The expansion joints shall be of heavy-duty construction made of high grade abrasion resistant natural or synthetic rubber compound. The basic fabric for the 'duck' shall be either a superior quality braided cotton or synthetic fiber having maximum flexibility and non-set characteristic.

- **Reinforcement**

The expansion joints shall be adequately reinforced, with solid steel rings, to meet the service conditions under which they are to operate.

- **Retaining Rings**

All expansion joints shall be provided with stainless steel retaining rings for use on the inner face of the rubber flanges, to prevent any possibility of damage to the rubber when the bolts are tightened. These rings shall be of split and beveled type for easy installation and replacement. The rings shall be drilled to match the drilling on the end rubber flanges and shall be in two or more pieces.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[33]	15.01.2016

- **End Flanges**

The expansion joints shall have integral fabric reinforced full-face rubber flanges. The bolt hole on one flange shall have no eccentricity in relation to the corresponding bolt hole on the flange on the other face. The end rubber flanges shall be drilled to suit the companion pipe flanges as per data sheet.

- **Outer Cover**

All exposed surfaces of the expansion joint shall be given a 3mm thick coating of neoprene. This surface shall be reasonably uniform and free from any blisters, porosity and other surface defects.

- **Control units**

Each control unit shall consist of two (2) numbers of triangular stretcher bolt plates, a stretcher bolt with washers, nuts and lock nuts. Each plate shall be drilled with three holes, two for fixing the plate on to the companion steel flange and the third for fixing the stretcher bolt.

2.11 CW system piping, recirculation piping & makeup water piping (steel portion)

a) Design And Manufacturing/Requirements for CW piping

- Pipe stubs as required shall be "Set on Stubs" having welded end connection with suitable reinforcement and with flanged and blind flanged fittings.
- The pipes shall be either spiral welded as per the relevant IS or it shall be either rolled and welded as per IS: 3587 out of MS plates.
- Piping laid over-ground shall be supported on concrete pedestals, to be designed and constructed/erected by the Contractor.
- Piping system shall be provided with vacuum rings, if required, to safeguard the system should there be an accidental event of occurrence of vacuum inside the piping. Design criteria for such shall be full vacuum condition.
- Pipes shall be provided with vents and drains at all high and low points respectively.
- The velocity of water in the pipes shall not exceed 2.2 m/s.

b) Construction Requirements

- The bidder shall prepare all the necessary drawings like GA drawings, isometric drawings for construction and get Owner's approval. Welding shall be used throughout for joining pipe, except where flanged, screwed or other type joints are specified. All piping shall be erected true to lines and elevations as per the approved drawings.
- Wherever measuring instruments are located on piping, necessary pipe stub shall be erected by the bidder. In the general routing and layout drawings, irrespective of whether the stubs for measuring instruments are shown therein or not, necessary number of such stubs as per the system requirement shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[34]	15.01.2016

erected by the successful bidder during execution of contract.

- iii. The Bidder shall properly set-up necessary level plates for erection of piping. The R.L. of any one of these reference plates shall be determined by Owner and intimated to the bidder. Any further transfer of level from that reference plate for erection of piping shall be Contractor's responsibility.
- iv. While erecting the field run of pipes, the bidder shall check the accessibility of valves, instrument-tapping points and maintain minimum headroom requirement and other necessary clearances from the adjoining work areas.
- v. All pipes lines shall be given proper slope towards the drain point. All drips and drain lines for piping whether shown in the drawings or not shall terminate on the ground floor at suitable point near to the surface drain unless otherwise noted.
- vi. Adequate number of flanged manholes shall be provided in 800 NB and above pipes for internal inspection. Fabricated pipes shall be gradually lowered into the excavated trenches with the help of suitable hoists, A-frame, cranes etc. Pipes shall not be rolled down into the trenches.
- vii. Facilities for draining CW pipes including drain pit, submersible drain pump shall be provided.
- viii. Double air release cum vacuum breaker valves with isolation valve of suitable size shall be provided for each of the discharge pipes.

c) Fabrication and installation

Welding

Following welding methods are permissible in the shop or field for general welding, with butt welds being of multi pass construction using filler metal:

- i) Manual Shielded Metal Arc (SMAW)
- ii) Submerged Arc (SAW)
- iii) Gas Tungsten Arc (GTAW)
- iv) Gas Metal Arc (GMAW)
- v) Filler metal for all piping welds shall be of such composition that the deposited metal shall conform to the minimum specification for the base metal.
- vi) Welding shall not be carried out when the surfaces of the parts to be welded are wet from any cause and during periods of rain and high winds unless the welder and work are properly shielded.
- vii) All welds shall be of continuous single V with finished head of size equal to thickness of plate. Pipe circumferential weld shall be done in such a way that the longitudinal welds become staggered in any two consecutive sections. No backing ring shall be used for circumferential butt welds.
- viii) Pipe sections in straight lengths delivered at erection site shall be of largest practicable dimensions/shapes in order to minimize the number of field joints.
- ix) All temporary welded attachments used for erection purposes shall be removed by mechanical cutting or air-arc burning up to a distance of at least 3.2 mm from the base metal to preclude damage. The remainder of the attachment shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[35]	15.01.2016

ground flush with the base metal surface. Under no condition temporary attachments are to be removed by hammer blows.

- x) All fillet welds shall not be less than the nominal thickness of the thinner member and not greater than 15 mm.

d) Installation/erection

- i. CW piping outside the CW pump house shall be laid below ground with a minimum earth cover of 1.50 m.
- ii. CW piping inside the CW pump house shall be installed on supports/pedestals.
- iii. For details of excavation, back filling and disposal of soil refer Part-D, Section-II of Volume-II.

e) Inspection And Testing

Inspection of all welds shall be carried out in accordance with IS:822- 'Code of Practice for Inspection of Welds'.

Welded joints shall be subjected to following non-destructive examinations:

- (i) Root Pass - 100% DP as per IS:3658/1991
- (II) Final Pass - 10% Radiography at random
- (iii) Acceptance standard shall be ASME /ANSI B 31.1.

f) Wrapping And Coating

i) General

This part of the specification covers the supply of material, application, inspection, testing etc. of external protection for CW piping.

ii) Codes and Standards

- | | | |
|---------------|---|---|
| AWWA C-203-97 | : | AWWA standard for coal tar protective coatings linings for steel water pipe lines- Enamel and Tape-Hot applied. |
| IS 10221 | : | Code of practice for coating and wrapping of underground mild steel pipelines |

iii) Coating System & Thickness

The wrapping and coating system shall consist of surface preparation, applying primer on the cleaned surface, followed by the application of wraps and coats spirally or circumferentially on the surface keeping proper tension and maintaining good adhesion with an overlap of about 12 mm.

The number and thickness of coating shall be conforming to IS 10221 based on prevailing soil resistivity at site Sacrificial anode type cathodic protection shall be provided as per IS: 8062 (Part II) or any equivalent international standard as applicable based on the soil resistivity prevailing at site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[36]	15.01.2016

Surface Preparation

i. General

Before the pipe is blasted, all oil, grease or other contaminants shall be removed by flushing with a suitable solvent and wiping with clean rags. The use of dirty or oily rags or dirty solvent shall not be permitted.

Prior to cleaning operation, the pipes shall be visually examined to ensure that all defects have been repaired or removed.

The abrasive blast material shall be free of impurities such as clay, dirt, debris, oil, grease, salts or other contamination.

All metal surfaces shall be cleaned by blasting. Blasting operations shall remove all rust, scale and other impurities from the steel surface. The surface shall be blast cleaned to near white metal finish as per SSPC SP10. Shot blast operation, if adopted, shall be done using automatic abrasive blasting equipment.

The cleaned and blasted pipe shall be protected from and shall be maintained free of oil, grease and dirt that might fall on the pipe.

ii. Primer

The primer shall be cold applied immediately after the pipes have been blasted and cleaned.

Application of the primer shall be by hand brushing, spraying or other suitable means and shall be in accordance with the instruction for application. It shall be applied at a rate recommended by the manufacturer, in a uniformly thick film free from runs, drips, bubbles, sags, dust, grease or foreign matter.

Primer shall completely cover the circumference of the pipe and all surfaces which are to be coated. Any excess of primer shall be brushed out immediately before the primer sets. The priming coat shall not be applied when the pipe is wet or moist.

During periods of cold weather, when the temperature of the steel is below 7 °C or at any time when moisture collects on the steel, the steel shall be warmed to temperature of approximately 30-38 °C, which shall be maintained long enough to dry the pipe surface prior to application of primer.

All missed spots or areas covered with insufficient primer shall be touched up immediately by hand brushing. Primer which has been applied too heavily such as the base of the welds shall be brushed out before the primer sets.

During or after drying of the primer coat, the pipe shall be handled with care. All reasonable precautions shall be taken to prevent excessive dust deposition on primer pipe.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[37]	15.01.2016

Pipes on which the primer after being applied becomes contaminated by dust before it is dry shall be reprimed, or shall be re-cleaned and re-primed. In no case shall third application of primer be made without having removed all the previous coats. The cost of re-cleaning and re-priming shall be borne by the Bidder.

g) Requirements of Coal Tar Enamel Preparation

- i) The solid coal tar enamel, prior to being cut, shall have its surface freed from all contamination of whatever nature and shall then be cut into pieces.
- ii) Enamel shall be delivered to the heating kettles entirely free of all contaminants including pieces of metal, wood, grass, leaves, sand or gravel.

Heating

- i) The coal tar enamel shall be heated in the kettles provided in sufficient number to maintain a continuous supply of hot enamel. Kettles shall be of the mechanically agitated type.
- ii) The kettles or patch pots shall be equipped with fuel oil, kerosene or gas burners.
- iii) Each kettle shall be equipped with an accurate easily readable thermometer.
- iv) While heating, flames from the burners shall be kept low until the enamel on the bottom of the kettle has melted and then agitators shall be started. The flames shall be increased gradually until about one half of the charge has been melted. Full heat shall then be applied until the optimum application temperature has been reached as per instructions of the manufacturer of the enamel. The burners shall then be adjusted to maintain the optimum application temperature of enamel.
- v) Enamel in patch-pots shall be heated with the same care as described above.
- vi) All enamel conveying lines shall be insulated or heated if required using suitable means to maintain the application temperature of coal tar enamel.
- vii) The maximum temperature to which the enamel can be heated and the maximum time the enamel may be held in the kettles at application temperature shall be in accordance with the enamel manufacturer's recommendations.
- viii) Coal tar enamel preparation and supply shall be as per AWWA-C-203-97.
- ix) In the event of an interruption or short shut-down due to weather conditions or other unavoidable causes, the burner flames shall be decreased immediately. The temperature of the charge shall be reduced to approximately 40 °C less than the application temperature until operation starts-up again. The kettle lids shall be kept tightly closed during the shut-down period and the mechanical agitators kept in continuous operation. The enamel shall be drained into suitable clean containers.
- x) Care shall be exercised to ensure that the enamel in the mechanically agitated

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[38]	15.01.2016

kettles is brought back to the optimum temperature before application is resumed. Enamel which has been previously heated to application temperature then drawn from the kettle or patch-pot may be reheated provided it has been kept clean.

Coating of Straight Sections of Pipes (Coal tar Enamel, Inner Wraps and Outer wrap)

- i) Enamel shall be applied by pouring on the revolving pipe and spreading to the specified thickness. Enamel shall be applied so that each spiral resulting from the spreading operation shall overlap the preceding spiral producing a continuous unbroken layer free from defects, skips or holidays. Operators shall be required to make all necessary adjustments to ensure a continuous layer of enamel without undue loss of temperature at the point of application.
- ii) Defects such as bubbling or foaming shall be a cause for shutting down operations until air pockets have been removed from pumps and supply lines and required adjustment have been completed.
- iii) The first coat of coal tar enamel, glass-fibre mat shall be applied in a continuous end-feed machine, or in a lathe-type machine or by other suitable wrap-application equipment. The roll of glass-fibre mat shall be under tension sufficient to embed the mat in the enamel before the latter sets or cools. The second coat of hot coal-tar enamel shall then be applied simultaneously with the second layer of glass-fibre mat in a manner similar to the one described above. The impregnated outer wrap shall then be applied immediately behind the glass fibre reinforcement in a tight uniform spiral. Similarly the third coat of enamel and glass fibre material shall be applied.
- iv) The overlap at the edges of all wrappings shall be at least 12 mm. The wrapper shall be applied neatly and smoothly with bleed out between laps and shall be free of wrinkles and buckles.
- v) The coating shall be continuous for the full length of the pipe, however cut- back of maximum length of 225 + 25 mm on each end of the line pipe shall be provided.
- vi) When the protrusion of weld seam interferes with this thickness, the thickness of the coating above weld seam shall meet the requirements specified in AWWA-C-203-91.

Coating & Wrapping of Field Joints, Bends & Fittings

- i) In general the procedure to be followed for surface preparation, priming and Coating & Wrapping shall be the same as that specified for straight sections of the pipe except that the application of the coal tar enamel and inner and outer wraps may be manual. However the total thickness of coating & wrapping of the field joints, bends& fittings shall not be less than that of the straight section of the pipe.
- ii) At all the field erected joints, the overlap between the two pipe pieces or bends shall not be less than 50 mm.

White Wash

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[39]	15.01.2016

The final white wash coat over the outer wrap shall be applied immediately following final inspection and acceptance of the coating and wrapping on each pipe.

h) Materials

- Primer - The primer shall be fast drying synthetic primer for cold application certified to meet AWWA-C-203.
- Coal Tar Enamel - The coal tar enamel shall compose of a specially processed coal tar pitch combined with an inert mineral filler. The coal tar enamel shall conform to AWWA-C-203. The enamel shall contain no asphalt of either petroleum or natural base.
- Inner Wraps - The inner wrap glass fibre reinforcement material shall have a nominal thickness of 0.5 mm (0.020 inch) and shall conform to AWWA C-203. The glass fibre reinforcement material shall be reinforced in the longitudinal direction.
- Outer Wrap - The outer wrap material shall be a coal tar impregnated asbestos felt or glass fibre felt. The material shall conform to the requirements of AWWAC-203-91 Section-2.4.

Samples of the proposed fibre glass reinforcement and impregnated outer wrap along with test certificates as per AWWA C-203 shall be submitted to the Owner for approval prior to the start of the coating operations.

The white wash used as a final coat shall be manufactured in accordance with the "White Wash Formula" as specified in AWWA C-203, Section 2.6.

Requirement of Pre-Fabricated Tape (Alternative to coal tar wrapping and coating)

The pre-fabricated tape shall conform to the following specification:

- Compound : Plasticised coal tar base
- Reinforcement : Synthetic substrate (FRP tissue reinforced with glass fibres).
- Separator : Plastic
- Thickness : Minimum 4.0 mm without any negative tolerance.
- Min. Weight : 1.25 kg/sq.m/mm thickness
- Adhesion Test : It should pass as per AWWA-C-203-97 Section-4.6.8 or IS-10221-1982.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[40]	15.01.2016

Holiday Test Voltage : It should pass @ 15 kV (Max.) for 4mm thickness.

Direct Impact Test : It should pass as per BIS.DOC.SMDC and AWWA-C-203 and IS-10221 Insoluble content in Petrol as per (%by weight) IS-2796:1996: 95% minimum

Application of Pre-fabricated tape as an alternative to coal tar wrapping

The tape shall be hot applied.

The primer shall be applied on the cleaned surface of the pipe with a brush in such a manner that it covers the pipe surface well. When the primed pipe surface gets tacky but not DRY, the tape shall be applied spirally on the surface keeping proper tension and maintaining good adhesion with an overlap of about 12 mm.

The tape while being unrolled shall be warmed up by a blowlamp or a gas flame, the surface to be applied on the pipe being heated. The heating shall be done just to soften the compound when a film shall appear on the surface; Excessive heating is to be avoided.

The total thickness of the tape after application shall not be less than 4 mm Sufficient time (at least 48 hours) is to be allowed before undertaking adhesion test.

i) Inspection General

The Owner / Consultant's representative shall test the coating and any repair subsequently made to it. The testing shall be carried out prior to laying of pipes in the trench. Final acceptance of all coating and wrapping work shall be determined by Owner representative. pipes which have been cleaned and primed or coated and wrapped without having been inspected and approved by the Owner inspector shall be rejected.

Holiday Detection

All coated and wrapped pipes shall be subjected to a test with an electric holiday detector as specified in AWWA-C-203-97.

The holiday detector shall be supplied, correctly operated and always maintained in good working condition along with adequate supply of spare parts. Any delay caused by the incorrect functioning of the holiday detector shall not be entertained.

The operating voltage of the holiday detector shall be determined as per IS: 10221.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[41]	15.01.2016

Any pipe having three (3) or more holidays shall be rejected. Similarly any pipe having any one holiday bigger than 0.1 m² shall be rejected. All defective places shall be plainly marked with chalk immediately after they are detected visually or by the holiday detector.

For pipe with pre-fabricated tape, the test voltage which the pipe should pass with holiday detector kit is 15 kV for 4 mm thickness coating.

Measuring Coating Thickness

- i) All pipe coatings shall be tested for thickness as per AWWA-C-203-97.
- ii) The thickness shall be measured by pushing the point of an approved pit depth gauge or micro tester through the coating and wrapping.
- iii) The specified minimum thickness shall be present throughout the piping.
- iv) Testing the adhesion of the coating
- v) At least two tests a day shall be carried out on finished coating after 72 hours from completion of coating. The test shall be carried out as per AWWA-C-203-97/IS 10221.
- vi) The areas where the coating has been removed for testing by the inspector shall be repaired by the Contractor at his own expense.

3 WATER TREATMENT AND EFFLUENT TREATMENT PLANT

3.1 General

All the equipment, system and/or components offered by the Bidder shall be of proven type / design with adequate margin (typically 10% on both capacity and head) for operational plant life of [20/25] years.

All valves shall be arranged in the front of the vessel like exchangers and at a height suitable for easy manual operation. In case the height of any hand wheel/lever of a valve is more than 1200 mm above the floor, pedestal for operation shall be provided. However, the Bidder shall provide the hand wheels within 1200 mm to avoid pedestals.

All equipment supplied shall allow access by means of staircase and platforms with hand rails to facilitate connecting up, inspection, maintenance and repair and shall operate satisfactorily under such variations of load, pressure and climatic conditions as may occur in working.

Platform shall be provided at suitable height for easy operation & maintenance of PSF, ACF, SAC, SBA and MB.

Supports for all equipments and platforms, walkways, stairways for access to all equipment, valves etc. shall be provided, as required.

A platform of 1000 mm width interlinking all vessels with staircase shall be provided. The staircase and platform shall have handrails for safe climbing and access.

All platforms and stairways shall have minimum clear width of 1,000 mm. All platforms, stairways, landings etc. shall have railings and guards. Extruded FRP Platforms shall be provided.

Bidder to note that all the values, capacities specified in the design data sheets at the end of this specification are to be considered as final. Any discrepancy in the prevailing sections shall be ignored.

3.2 Codes & Standards

The Design, manufacture, shop testing, erection, testing and commissioning of piping and valves shall conform to the latest revisions of the following codes and Indian Standards or equivalent international codes, in addition to other standards mentioned in the tender documents subject to any modification and requirement as specified hereinafter.

IS : 1520	Horizontal Centrifugal Pumps for clear cold fresh water.
IS : 5120	Technical requirements of roto dynamic special purpose pumps.
API : 610	Centrifugal pumps for general refinery service.
IS : 5639	Pumps Handling Chemicals & corrosion liquids.
IS : 5659	Pumps for process water.

3.3 Pre-Treatment System

3.3.1 Pretreatment plant would be complete with *[(1x100%)]* Conventional Clariflocculator /Solid Contact Clariflocculator with associated chemical storage handling and dosing system, sludge handling system, RCC clarified water storage tank, all piping, valves and instruments.

3.3.2 *[Layout for pre-treatment plant shall be designed by Bidder in such a way that all units (e.g. stilling chamber, flash mixer, clarifier, inlet channel, operating floor etc.) shall be interconnected by at least 1 M wide walkway at appropriate elevations with hand-railing on both sides and stair case at ground level.*

The clarifiers shall be designed to take care of an over loading of 20% over the design flow/capacity.]

3.3.3 Pre-treatment plant shall be designed such that anyone/ all clarifiers can be bypassed if required.

3.3.4 Pre-treatment Plant should be designed to run continuously.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[49]	15.01.2016

3.3.5 Only metric codes shall be followed.

3.3.6 Stilling Chamber

The Stilling chamber for the clarifier shall be designed to minimize the turbulence of incoming water by reducing its velocity. Intake water shall be let into the stilling chamber at the bottom end and flow shall be from bottom to top. The velocity of water rise through the stilling chamber shall be $[0.05 \text{ m}^3/\text{m}^2/\text{h}]$ to avoid any turbulence of the incoming water and volume of stilling chamber shall have a retention time of $[1 \text{ minute}]$. Number of stilling chamber, design capacity and material of construction shall be as described in "Technical Data Sheets".

- i) Each of the unit shall be a combination of flash mixer, a flocculation chamber all in a single unit. Design adopting separate flash mixer, flocculation chamber and Settlers/Clarifiers are also acceptable.
- ii) Number of Flash mixers, flocculation chambers, and settlers - design capacity of these items and material of construction shall be as described in "Data Sheets".
- iii) These units shall consist of multiple compartments/zones, viz. flash mixers, flocculation, pre-settling cum clarifier compartment and underflow compartment/zone. The water dosed with coagulant is led into the clarifier's flash mixer compartment, where a turbine type rapid mixer shall be provided to facilitate complete and effective mixing of coagulant in the incoming water. The well-mixed water is led into the flocculation chamber.
- iv) The fine floc particles formed in the flash mixing stage area gently contacted with each other in order to agglomerate them so that large and more rapidly settling particles are produced. A specially designed flocculating mixer shall be provided in the flocculation chamber to enhance flocculation of the feed solids by slow mixing. A portion of the suspended solids shall be separated directly in the pre-settling zone and the remaining flocculated particles are removed in the inclined plate settler. The overflow clarified water is collected in the clarified water storage tank is then filtered in the next stage.
- v) The underflow chamber shall receive the sludge-laden water. Sludge gets settled and is collected in a sludge hopper from which it can be easily discharged. The sludge from the bottom of the clarifier is discharged to the location as described elsewhere.

3.3.7 Flash Mixing Tank

- i) The mixing tank of each clarifier shall consist of one or more compartments each with a vertical shaft rapid mixer. The mixers shall be sized to provide effective rapid mixing for the designed volume. Flash mixer shall be provided with minimum retention time of $[1 \text{ minute}]$ at the design capacity.
- ii) The impeller assembly shall consist of three or four blades bolted to a shaft assembly. The mixer shall be of high shear mixer to accomplish rapid dispersion of the coagulant.
- iii) Rapid mixer to be a single speed mixer comprised of vertical shafted mixer with at least 75% length of the mix chamber height, gear reducer and motor. The mixer shall have an intermediate guide support. All seals and bearings shall be above the water surface.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[50]	15.01.2016

- iv) The mixer shaft shall be designed for the maximum power output of the drive unit. The mixer shaft and its bearing shall be capable of withstanding the entire static and dynamic thrust load and radial load with a factor of safety of 2.0.
- v) The mixers drive gear shall be combination of helical and spiral bevel gear reducers constructed to AGMA 420 class II 24 hour service.
- vi) Coagulant shall be dosed in the channel leading to the flash mixer through a distributor.
- vii) A platform shall be provided for the inspection of the flash mixing compartment. Platform floor grating shall be coated for corrosion resistance and access to the platform shall be provided by ladder. A cage shall be included if the ladder exceeds 20 feet. The platform shall have a handrail to protect personnel.
- viii) Suitable sampling connections shall be provided for performance monitoring.

3.3.8

Flocculation Tank

- i) The flocculation tank of the clarifier shall consist of a turbine/propeller type mixer to enable a gentle mixing action. Flocculation Chamber shall be provided with minimum retention time of [15 minutes] at the design capacity.
- ii) Flocculate shall comprise of mixer paddles, variable gear reducer and motor. The mixer paddle shall be designed with a maximum peripheral speed not exceeding 0.6 m/sec.
- iii) The mixer shaft and its bearing shall be capable of withstanding the entire static and dynamic thrust load and radial load with a factor of safety of 2.0. The gear drive must be built in accordance AGMA 420 class II 24 hour service.
- iv) The mixer shaft shall have a rigidly mounted intermediate support/s. All seals and bearings shall be above the water surface.
- v) Flocculation mixing tank shall have a chemical injection pipe connection for injection of polyelectrolyte directly below tank.
- vi) A platform shall be provided for the inspection of the flash mixing compartment. Platform floor grating shall be coated for corrosion resistance and Access to the platform shall be provided by stair case. The platform shall have a handrail to protect personnel.
- vii) Suitable sampling connections shall be provided for performance monitoring

3.3.9

Clarified Water Storage Tank and Pump House

The water from the main clarifier would be stored in a Clarified Water Tank.

One no. clarified water storage tank shall be provided along with clarified water pump house. Clarified water pump house shall accommodate CT make-up pump, DM plant supply pumps, Chlorination water pumps, service water pumps, APH wash pumps, fire fighting pumps etc. The clarified water storage tank shall be provided with access rungs and dewatering pits.

3.3.10

PT Plant Clarifier Sludge Disposal System

- i) One number sludge pit shall be provided to collect the sludge from all the clarifiers.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[51]	15.01.2016

- ii) [2 x 100%] thickener feed pumps will pump the sludge to [1 x 100%] capacity sludge thickener. [2 x 100%] centrifuge feed pumps will supply the sludge from sludge thickener to the centrifuge. Clear water from the thickener and centrifuge will be led back to the guard pond. The centrifuge shall be located at a suitable height to enable truck disposal. [1 x 100%] centrifuge with transfer chute will be envisaged for disposing the sludge into the trucks.
- iii) Each section of the sludge pit shall be provided with agitation by recirculation (jetting nozzles) system and air agitation system.

3.3.11 Filter Backwash Water Disposal System

Filter backwash water shall be led to the sludge pit. The bidder shall supply all necessary pumps, piping, valves and other accessories as required to transfer this water back to the sludge pit.

3.3.12 DM Plant Supply Pumps

[Three Nos. (3x 50%)] with minimum capacity of [100 cum/hr] shall be provided to supply clarified water from DM clarified water tank to DM Plant.

The total dynamic head (TDH) of the pumps shall be obtained by conducting detailed system resistance calculations. A minimum of ten (10) percent margin shall be provided on the calculated frictional losses.

3.3.13 Softening Plant [if Applicable]

- i) The softening plant will consist of three streams with each stream consisting of [four (4) softeners (3 working and one stand by)]. Hence in total the softening plant will consist of [twelve (12) softeners (9 working and 3 standby)]. The regeneration time is [8 hours].
- ii) Sodium Sulphite dosing system will be provided to dechlorinate the clarified water before inlet of the softeners.
- iii) [Four (4) (3W + 1S)] softening plant supply pumps will supply clarified water to the softeners. These pumps will take suction from the clarified water storage tank and supply clarified water to the softeners.
- iv) Sodium Chloride will be used for regeneration of the softeners. The regeneration system will consist of salt storage facilities, salt saturators, brine solution preparation cum measuring tanks, salt transfer pumps, salt regeneration pumps and spent brine recirculation system.
- v) Salt will be unloaded from trucks and stored in a salt saturator. [The salt saturator will be divided into four compartments with each compartment to store one week's salt solution requirement of one stream of softeners (4 Nos.)]. Each compartment will be provided with water jet piping all around the compartment. The water will be tapped from service water pump discharge so as to impinge the jet of water on the salt in order to prepare the salt solution at a concentration of 26%. Water jet nozzles will be mounted suitably so as to dissolve the complete salt unloaded into the compartments. From the salt saturator, the salt solution will be led into a common inlet channel from where the salt solution will flow to salt filters by gravity. The filters will be of gravity type. Filter backwashing will be tapped off from the softener supply pump. After filtration, salt solution will be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[52]	15.01.2016

stored in an underground fresh brine sump. From the fresh brine sump, salt solution will be pumped using fresh brine transfer pumps to brine measuring tanks in the softening plant.

- vi) Spent brine recirculation system consisting of spent brine storage sump and spent brine recirculation pumps and piping will be provided to reduce the fresh brine consumption.
- vii) Soft water will be stored in a soft water storage tank. From this tank, make up to CW forebay will be fed by gravity through HDPE piping. A tapping shall be provided in the tank.
- viii) 1 no. Flow meter in one of the makeup water lines
- ix) Salt regeneration waste from the softeners will be led through drains to the plant effluent guard pond.
- x) Sulphite Dosing System
Sodium Sulphite dosing system will essentially include but not limited to the following
Two nos. Sodium Sulphite solution preparation cum measuring tanks with the tank capacity each to store one day's requirement of the total softening plant capacity with motorised agitators and dissolving basket, drains, overflow arrangement, level switch, level gauge etc.
[Two (2) (2 x 100% cap.)] Sodium Sulphite dosing pumps with drive motors.
Three Nos. resin transfer units, one for each stream.
- xi) Four salt (three compartments normally working and one stand by) saturator compartments, with each compartment to store one week's brine solution requirement of one stream of softeners. Each compartment will store brine solution at a concentration of 26%.
- xii) [Four (4) Nos.] brine filters of gravity type (three normally working and one stand by) for filtering salt solution. Each filter will have a capacity of [100 m³/h] of salt solution.
- xiii) [2 x 100%] capacity filter air blowers for brine filters. In addition to this a connection from service air line with an isolation valve shall also be provided.
- xiv) Fresh brine storage sump of capacity one day's regeneration requirement of all softeners.
- xv) [3 x 50%] fresh brine transfer pumps to transfer brine solution from fresh brine storage sump to brine measuring tanks. The capacity of the pump will be sized to transfer brine required for two softener regenerations in [30 minutes].
- xvi) [Three (3) nos]. brine preparation cum measuring tanks with each tank to store two softener regenerations. Two tanks will normally be in operation and one will be a stand by.
- xvii) [3 x 50%] fresh brine regeneration pumps with each pump to cater to two softeners.
- xviii) Mixing tees and accessories.
- xix) Spent brine recirculation arrangement (at a ratio of 70:30 for optimizing on the salt consumption) consisting of a spent brine recirculation tank of capacity to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[53]	15.01.2016

store spent brine from one stream regeneration. 3 x 50% capacity spent brine recirculation pumps to cater to one stream regeneration.

- xx) Soft water storage tank (RCC) shall be two compartments of effective capacity [5000 m³].

3.3.14 Performance Guarantee Parameters for Pre-Treatment Plant

Bidder to guarantee the following parameters for Pre-Treatment Plant:

Clarified Water Output : [....] m³/h

Turbidity at the outlet of Clariflocculator. : ≤ [....] ppm

Turbidity at the outlet of Filter : ≤ [....] ppm

3.3.15 Test to be conducted at Site

All the sub-systems covered under Pre-Treatment Plant shall be checked for the performance guarantees in a manner acceptable to the Owner. The PG test shall be conducted after successful commissioning of the unit. The bidder shall demonstrate pre-determined gross output and effluent analysis during PG Test. If any of these is not achieved, the bidder shall rectify the plant at his own cost within specified days of notification and test the plant again for performance guarantee. All needed standard calibrated instruments and devices shall be arranged by the Bidder as required.

3.4 Demineralization (DM) Plant

- a) Clarified water shall be pumped to Pressure Sand Filters (PSF), Activated Carbon Filter (ACF), weak acid cation exchanger (if applicable), Strong Acid Cation Exchanger and Degasser. One portion of Filtered Water from ACF is stored in filtered water Tank for Potable Water use. After Degasser, water is collected in the degassed storage tank. Degassed water pumps will feed water to the Weak Base Anion (if applicable), SBA and Mixed Bed. Final DM water is collected in the DM storage tank.
- b) Backwashing of Pressure Filters shall be done using filtered water from the filtered water tank located above the DM plant building. Backwash waste water shall be disposed to the sludge sump of PT plant.

Potable water System

- c) [2 x 100%] duty potable water supply pumps shall draw water from Filtered Water storage tank and shall supply water to the various consumers up to the terminal points indicated by providing necessary pipelines, valves etc. Adequate chlorine shall be dosed in the tank before pumping.

Potable water lines with valves shall be provided for the different users of this package.

d) General Requirement

- i. All the vessel internals of ion – exchanges units and Degasser units such as inlet distributor, regenerant distributor, under drain system etc. shall have proven design.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[54]	15.01.2016

- ii. In case strainer-on-plate design is used for under drain system, an additional manhole in addition to as specified in the Technical data sheet shall be provided to give access below the bed plate for all units of filters, ion exchange units etc.
- iii. All valves used with vessels shall be suitably arranged in the front in accessible position, for manual operation in case of emergency.
- iv. The valves under automatic operation of Water treatment and Effluent Treatment Plant shall be operated pneumatically by diaphragm actuator. Valves shall be spring to close or spring to open or double acting type as may be required by process consideration. The valves on effluent outlet as well as regenerant inlet of filters and ion-exchangers shall be of spring to close (Air to open) type only. Limit switches shall be provided for all the valves.
- v. Rotary type actuators for butterfly valves are also acceptable.
- vi. All streams shall be designed to run continuously at its rated capacity and simultaneously under parallel operation.
- vii. Suitable permanent flushing connections shall be provided for all pipelines carrying acid and alkali.
- viii. All the tanks shall be provided with vent, overflow, drain and sample connections. Effective capacity for chemical tanks & water retaining structures/tanks/sumps means the capacity between the bottoms of the overflow nozzle to the top of the outlet nozzle. Outlet nozzle centre line shall be kept at least 200 mm from the Invert Level of the chemical tanks / water retaining structures / tanks/sumps. A minimum free board of 300 mm shall be provided in all the water retaining structures of PT Plant (such as stilling chamber, all the channels, Clarifiers, Clarified water storage tank, filtered water reservoir, filtered water sump, sludge sump, backwash water collection sump, etc) above the maximum water level / overflow level as the case may be excluding the thickness of the slab / beam thickness if any.
- ix. For all pumps, while calculating the pump head, 10% margin shall be considered on friction losses.
- e) **Pressure Sand Filters (PSF)**
 - i. PSF shall be designed for surface flow rate not more than 15 m³/ m²/h.
 - ii. The inlet distribution and under drain collecting system shall be so designed as to give uniform distribution and flow without channeling and obstruction. The under drain system may either be of header lateral or manufacturer's standard design to be approved by the Owner.
 - iii. Number of filters to be backwashed at a time and Service cycle (duration of operation of filters between two successive backwashing of filters) shall be as specified in Technical Data Sheet. Requirement of backwashing shall be identified from differential pressure drop across filters or based on totalized filtered water treated by respective filters.
 - iv. Air blower shall be used for air scouring of filter bed. Specified airflow rate shall be checked and air blower of adequate sizes accordingly shall be provided for the type of sand being used as filter media.
 - v. The bed depth, excluding support material, shall be minimum 1200 mm and at least 75 % free board shall be provided over the bed depth.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[55]	15.01.2016

- vi. Back washing of the filters should be done once in [20 hrs] using filtered water.
- vii. The design backwash water quantity shall not exceed 2% of the treated water flow over service cycle of each filter.
- f) **Activated Carbon Filters**
 - i. ACF shall be designed for surface flow rate not more than 15 m³/hr/ m².
 - ii. The bed depth, excluding support material, shall be minimum 1200 mm and at least 75 % free board shall be provided over the bed depth.
 - iii. The inlet distribution system shall be header lateral type. The vessel shall be lined internally with rubber lining back washing of activated carbon filters should be done once in [20 hrs] using filtered water.
- g) **Ion Exchange Units**
 - i. The inlet distribution, under drain collecting systems and regenerant inlet distribution system / middle collector shall be so designed as to give uniform distribution and flow without channeling and obstruction. The inlet distribution system shall preferably be header lateral type. Material of construction shall be mild steel with rubber lining (MSRL)
 - ii. Under drainage system shall be header lateral or strainer-on-plate type. In case of header lateral system, header shall be mild steel "rubber lined inside" (MSRL) and lateral of polypropylene.
 - iii. For Mixed-Bed Exchanger, separate distributor shall be provided for influent and regenerant entry. The influent and alkali regenerant distributor and acid regenerant distributor shall be as per design data sheet.
 - iv. The interface collector & distributor shall be of suitable acid / alkali resistant material. The under drain collector system shall be header lateral or strainer-on-plate type and shall be adequately designed to ensure uniform distribution of flow.
 - v. The regenerant distributor and middle collector shall be as per design data sheet. All internal studs / nuts / washers shall be of AISI 304 L for alkali service and Hastelloy-B for acid service.
 - vi. At least 100% free board shall be provided over resin bed below the backwash outlet nozzle and in straight portion of vessel to allow for expansion during backwashing and for addition of extra resin, if required.
 - vii. Suitable sample connection shall be provided for all the units.
 - viii. All the Ion Exchangers shall be provided with two additional nozzles for hydraulic transfer of resin as and when necessity arises. The nozzle shall be provided with manual valves of 100 mm NB.
 - ix. Each exchanger unit shall be provided with resin traps on treated water outlet line. Resin traps shall also be provided both on the backwash and regenerant outlet lines. The resin trap in these backwash and regenerant lines shall be flanged at one end and will be connected at end of the respective pipeline. The other end shall be open to the drain so that the flow can be seen to check the chocking of the trap.
 - x. Surface Flow Rate for Ion exchangers shall be as indicated in Technical data sheets.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[56]	15.01.2016

h) **Regeneration System**

- i. The period between regeneration shall be 20 hours for WAC, SAC, WBA, SBA. The period between regenerations for MB shall be 7 days.
- ii. The ion exchange resin shall be regenerated by employing optimum regeneration level to prevent leakage of ions. Cation resins shall be regenerated by hydrochloric acid (30-33% w/v technical grade IS: 265) and anion resins by sodium hydroxide (48% w/v rayon grade in flakes or lye form as per IS: 252). The strength of acid regenerant and alkali regenerant at the cation and anion bed inlet shall be selected accordingly.
- iii. The process calculation shall be furnished by the bidder in the bid indicating the various steps of regeneration, regeneration level employed, total and used exchange capacity of resins, resin quantity provided etc. The bidder shall also furnish relevant resin literature & curves indicating various parameters and exchange capacity & regeneration levels selected along with the process calculations in the bid.
- iv. Further the bidder during detailed engineering is required to furnish process calculation along with the operating exchange capacity and regeneration levels vetted by resin manufacturer and the resin performance curves applicable for this plant.
- v. Regeneration facilities offered shall be complete with acid/alkali measuring tanks, ejectors for dosing of chemicals as specified. Acid or alkali from the measuring tank shall be injected to exchangers by means of hydraulically operated ejector at suitable strength as specified in Technical Data sheets.
- vi. Automatic block and bleed valves shall be provided at the regenerant inlet line(s) to each exchanger of Mixed (MB) Bed.
- vii. Suitable sampling connection shall be provided for acid/ alkali storage, preparation & handling equipments.

i) **Exchange Resin**

- i. Cation and anion resin shall be of reputed make and must have been in use capable of producing water of quality as specified or better.
- ii. Cation and anion resin charge shall consist of material properly selected washed, processed and graded to provide the guaranteed capacity and life and shall have adequate abrasion resistance during its guaranteed life.
- iii. The cation exchanger resin used in the mixed bed exchanger shall be strongly acidic, high capacity polystyrene resin in the bead form.
- iv. The anion exchanger resin used mixed bed shall be strongly basic, high capacity resin (Type-I) in bead form. The anion resin shall be able to withstand a temperature of 60 °C (minimum) continuously.

j) **Degasser System**

- i. Degasser tower shall be designed to reduce dissolved CO₂ in treated water to the level as indicated in the guarantees. Blowers shall be provided to remove CO₂ from water.
- ii. A storage tank to store degassed water shall be provided for the two degasser towers.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[57]	15.01.2016

- iii. Degassed water pump shall be provided to supply water to the downstream exchangers in the chain.

k) **Drain Neutralization System**

The neutralization pit shall be of RCC construction in twin compartment. Minimum effective storage volume of each pit shall be sufficient to store all waste water from one cation, anion and mixed bed unit with 50 % margin. However the minimum effective capacity of [.... m³] shall be provided. Provision of baffles shall be made to mix the wastes by recirculation and acid/alkali dosing. A pipe network with holes of required diameter, connected to MB Blowers shall be laid at the bottom of neutralization pit for mixing the effluent before discharge.

- i. The capacity of waste recirculation and disposal pumps shall be selected as per the requirement of emptying one neutralizing pit in maximum three hours.
- ii. The capacity of each acid/alkali measuring tank shall be sufficient to hold acid/alkali for one neutralization with 30% margin.

l) **Performance Guarantees of DM Plant**

Bidder to guarantee the following parameters for DM plant:

DM Water Quality

Conductivity : 0.1µs/cm maximum

Total Silica : 0.01ml/l as SiO₂

pH : 6.8-7.2

Period between regeneration : 20 hrs

Output between regeneration : [.....] m³ net/stream

100% Acid Consumption : [.....] liter/regeneration/stream

100% NaOH Consumption : [.....] liter/regeneration/stream

m) **Tests to be conducted at Site**

All the sub systems covered under DM Plant shall be checked for the performance guarantees in a manner acceptable to the Owner. The PG test shall be conducted after successful commissioning of the unit. The bidder shall demonstrate pre-determined net output and effluent analysis during PG Test. If any of these is not achieved, the bidder shall rectify the plant at his own cost within specified days of notification and test the plant again for performance guarantee. All needed standard calibrated instruments and devices shall be arranged by the Bidder as required.

n) **DM Water storage tanks**

Two Nos. each of [1500 m³] capacity shall be provided. These shall be vertical, cylindrical, shell type atmospheric tanks with flat bottom. These tanks shall be complete with 500 mm dia manholes, overflow, air vent, drain, sample connections, CO₂ absorber, float type level indicator, staircase, platform, interconnecting both tanks with platform, handrails rungs inside the tank etc. Additional outlet connections shall be for connecting additional DM water pumps. Calculations for tank thickness shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[58]	15.01.2016

submitted for approval. Tank level control shall be provided for dry running protection of DM water pumps.

3.5 Service Water System

a) System Description

The general service water system shall be designed to distribute service water to the various users throughout the plant. The service water pumps will take suction from clarified water tanks. The discharge pipe and its branch-offs will form the distribution bus to cater requirements at various location.

[Three (3) nos. service water pumps (2 working + 1 standby)] shall be provided to meet the makeup water requirement for CHP, HVAC makeup and other service water requirement of the. A recirculation line between the service water pumps outlet and clarified water tank shall be provided. Service water pipelines are to be provided in the terminal points indicated for various users in the relevant section. Service water pipelines are also to be distributed among the different users of this package.

b) Design Criteria

Service water system shall operate on continuous basis. Accordingly, the bidder shall make provision of recirculation from pumps discharge line with suitable regulating valve.

The pumps and their drives shall also meet the requirements specified elsewhere in the specification for water System Pumps.

3.6 Effluent Treatment Plant

a) General

The Wastewater System [common for all the units] shall provide collection, treatment and utilization of treated water as per the process mentioned under Clause 3.6 c). The treated water (permeate of RO System) shall be recycled to CW system / raw water reservoir. The reject of RO System shall be used for dust suppression, ash slurry conveying, gardening and other purposes.

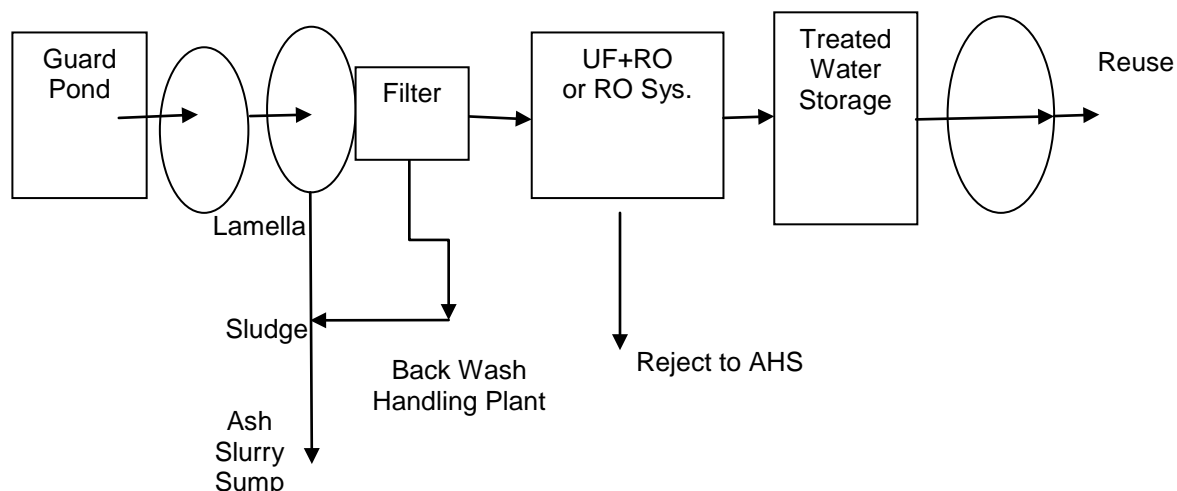

The source of the plant wastewater (Effluent) includes the following:-

- i) Clear water from Oily Water Separator.
- ii) Excess Cooling Tower Blow Down
- iii) DM plant regeneration waste from Neutralization pit.
- iv) Waste water from softening brine filters.
- v) The steam condensate drains of blow down tanks shall be terminated at Guard pond by others.
- vi) Clear water from CHP.
- vii) Miscellaneous equipment and chemical drains.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[59]	15.01.2016

- viii) Effluent disposal pumps [(2 x 100%) (capacity each ... m³/h, head of ... mwc)] shall be provided in a structural roof shed for pumping the Guard pond water to further gardening and other purposes.
 - ix) Treated effluent pumps [(2 x 100%) (Capacity each m³/h), head of ... mwc] shall be provided in a structural roof shed for pumping the clear water from oil water separator to Guard pond.
 - x) pH correction system consisting of acid dilution cum measuring tank and alkali dilution cum measuring tank with [2 x 100%] acid dosing pumps and [2 x 100%] alkali dosing pumps with all relevant discharge valves and interconnecting piping up to the guard pond.
 - xi) One number hand pump will be provided for filling up of chemicals from jerry cans (packaged container) to the dosing tanks will be provided. This pump will be separately provided for acid and alkali.
 - xii) The Guard Pond shall be a ground level reservoir of RCC construction, open at top, with 2.5 to 3.0 m water depth with necessary counter forts etc., and crack free design with MS hand rail all around. The internal surface shall be treated with solvent free epoxy coating. The guard pond shall be of [3000 m³] capacity with two compartments. Minimum free board of 300 mm shall be provided.
- b) Storage, Handling and Dosing Facilities
- Dosing system shall be provided as per the details indicated in the design data sheets.
- All the dosing equipment will be housed [in the PT Chemical house (Two storied)]. This building will be adequately sized to store all the Chemicals at least for seven days operation. Suitable handling provision, adequate ventilation, illumination and disposal/ drainage arrangements shall also be considered in this building for these chemicals.
- c) Process of Treatment of Effluent
- The surplus process effluent water collected in the guard pond is to be treated and reused for zero liquid discharge (ZLD) plants. To achieve this treatment system, comprising of following (as minimum) shall be provided.
- The Capacity of the treatment system shall not be less than the design quantity of surplus effluent as per the plant water effluent.
- i) Lamella Clarifier Feed Pumps (1Working+1Standby)
 - ii) Lamella Clarifier with its dosing system
 - iii) Pressure/Gravity Filter (One Standby)
 - iv) Reverse Osmosis (RO) System (2x50% streams or (UF+RO) System (2x50% streams) each with their dosing, cleaning and flashing system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[60]	15.01.2016

- v) Minimum recovery from UF & RO streams shall be [90%] and [80%] respectively.
- vi) Maximum TDS at the outlet of RO shall not exceed [7 ppm].
- d) Performance Guarantee Parameters for Effluent Treatment Plant
The major effluent limits at the outlet of RO system of ETP shall be as under:
 - Total dissolved solids- < [...] ppm
 - pH-[...]
- e) Test to be conducted at site
All the sub systems covered under ETP shall be checked for the performance guarantees in a manner acceptable to the Owner. The PG test shall be conducted after successful commissioning of unit. The bidder shall demonstrate effluent analysis during PG Test. If any of the performance guarantees is not achieved, the bidder shall rectify the plant at his own cost within specified days (elsewhere) of notification and test the plant again for performance guarantees. All needed standard calibrated instruments and devices shall be arranged by the Bidder as required.

3.7 Common Equipments

3.7.1 Water System Pumps

Water system pumps shall be either vertical or horizontal type centrifugal pumps with directly coupled drive motor. Unless otherwise specified in the respective clause, the water system pumps shall meet the following requirements:

a) Design and Construction

Pumps shall be of vertical shaft, submerged suction, mixed flow / radial flow design complete with bowl, column and head assembly and drive assembly or pumps shall be of horizontal, centrifugal type. Replaceable shaft sleeves shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[61]	15.01.2016

furnished. The shaft sleeve shall be securely locked to shaft to prevent loosening while in operation. Replaceable type wearing rings shall be provided for both casing and the impeller. The pumps shall be equipped with vacuum tight mechanical seals.

Water for motor cooling and thrust bearing cooling, if required, shall be tapped from the pump discharge. The pump suction bell diameter shall be such as to limit the flow velocity at the maximum flow to within 1.5 m/sec.

Drive motor shall be directly coupled to the line shaft of the pump. The pump shall be provided with an approved mechanical device to prevent reverse rotation on loss of drive motor power and failure of discharge valve to close, except where specified otherwise.

All continuous running centrifugal pumps shall be provided with Pneumatic operated valves for both suction and discharge.

The Water System pumps shall conform to the following requirements:

Type	Centrifugal, Horizontal	Centrifugal, Vertical
Casing	Axially split type	Volute
Impeller type	Closed	Axial / mixed flow
Drive transmission	Direct coupled	Directly mounted on top
Seal	Mechanical seal/ Self water/ gland	Mechanical seal/ Self water/ gland
Lubrication	Oil/Grease/Self liquid	Oil/Grease/Self liquid
Coupling	Spacer type	Spacer type
Operating range	40% to 120% of rated flow	40% to 120% of rated flow
Pump characteristic	Non overloading type & stable	Non overloading type & stable
Shut off head	About 15% more than rated head	About 15% more than rated head

b) **Materials of Construction**

The materials furnished below are indicative only. Bidder shall select the specific material for particular service to suit the quality of water to be handled, unless otherwise specified in the respective section.

Type	Horizontal, Centrifugal
Impeller	SS 304
Casing	CI to IS 210 Gr. 260
Shaft & Shaft Seals	SS 304
Shaft sleeve	SS 410
Impeller & Casing Rings	SS 304
Bolts	Cadmium plated high tensile steel
Nuts	Cadmium plated high tensile steel

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[62]	15.01.2016

Type	Horizontal, Centrifugal
Base plate	Fabricated steel to IS 2062

3.7.2**Piping, Valves & Fittings**

All the piping systems shall be designed to operate without replacement and with normal maintenance for an estimated plant service life of [20/25] years and shall withstand the cyclic fluctuations in the operating parameters which can be normally expected during the service life.

Please refer relevant section for further details.

This section of specification covers all low pressure piping handling fluids like raw water, clarified water, potable water, cooling water, DM water, LDO, Compressed air etc.

a) Design Basis

Pipe lines carrying water, chemicals, air etc. shall be sized generally for the following range of velocities.

Service	Below 50 mm	50-150 mm	200 mm & above
Pump suction	-	1.2 - 1.5	1.2 - 1.5
Pump discharge	0.8 - 1.0	1.2 – 1.8	1.5 - 2.5
Header	-	1.2 – 1.8	1.5 - 2.5
Compressed air below 2 Kg/cm ² (g)	10 – 15	10 – 20	10 – 25
Compressed air 2 Kg/cm ² (g) & above	10 – 20	10 – 25	15 – 25

Pipe line under gravity flow shall be restricted to a flow velocity of 1 m/sec generally. Channels under gravity flow shall be sized for a maximum flow velocity of 0.6 m/sec.

For calculating the pump head, at least 10% margin shall be provided over the pipe friction losses.

b) Piping Materials and Sizes

All piping system shall be capable of withstanding the maximum pressure and temperature in the corresponding line. The pressure rating of individual piping system component such as valves, flanges etc shall however be not less than that specified.

c) Fittings

Fittings to be used for all types of piping shall conform to relevant IS/BS ANSI Standards and in conformity with the parent pipe standard.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[63]	15.01.2016

Inside surface of all the fittings used for the rubber lined application shall be made suitable for rubber lining.

Galvanised pipe application- fittings shall be galvanised as per IS: 4736.

d) **Following items shall be included for piping under this package:**

- i) Pipes, bends, elbows, tees, branches laterals, crosses, reducing unions, couplings, cap, expansion joints, flanges, blank flanges, saddles, shoes, sampling connections etc. necessary for making a reliable piping system.
- ii) Valve, gates, dampers, etc.
- iii) Strainers and filters.
- iv) Instrument tapping connection, stubs and thermo-wells, root valves.
- v) Matching flanges, pipe spools and matching pipes to connect to equipment, instruments, etc. as necessary.
- vi) Gaskets, ring joint, bracing rings, jointing material etc. as required.
- vii) Bolts, nuts, fasteners as required for interconnecting piping, valves and fitting as well as for terminal points.
- viii) Pipe supports like pedestals, Anchor blocks (for buried / over ground piping), brackets, hangers, clamps, trestles, etc.
- ix) Secondary steel for pipe supports and embedded steel. Also pipe supports and necessary embedment required to be embedded in concrete for underground/above ground pipes.
- x) Painting, anti-corrosive coatings, wrapping and coating, thermal insulation, etc. inside and outside of pipes as necessary.

e) **End Connections**

Unless otherwise specified, following types of end connections shall be used:

- i) Pipes 50 NB and smaller shall have socket welded joints for chlorine line. For water, air and other services where steel pipes are used, joints of this size range shall be Socket welded/screwed/flanged type (for rubber lined pipes).
- ii) All unlined steel pipes, 65 NB and above (other than CI pipes and air service pipes) shall be jointed by butt welding. All rubber lined pipes shall have flanged joints.
- iii) Butt welding edge preparation shall be done as per ANSI B 16.25. The Bidder shall furnish all welding electrodes and welding rods including special ones, if any.
- iv) Steel pipe flanges shall be generally slip on flat face type. Weld neck flanges shall be used when flange follows immediately after a butt welding or where it is required with respect to service conditions. When weld neck or socket weld flanges are used, their bore must be made the same as that of the pipe being welded to. Socket welded or threaded flanges may be used, with the appropriate piping system for connection of pipe to the flanged equipment.
- v) All the piping flanges and counter flanges shall conform to ANSI B 16.5 Cl. 150 (minimum).
- vi) For easy handling & removal of equipment, valves etc. and for maintenance purposes, break up flanges for 65 NB and above sizes and suitable type of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[64]	15.01.2016

compression flexible coupling for flanged joints of 50 NB and below size shall be provided. The over ground piping wherever routed inside building, shall have a clear head room of minimum 2.0 metre from operating floor.

f) **Piping Layout**

- i) Pipes shall be generally routed above ground but where specifically indicated/specified, the pipe may be laid in trenches or buried. Buried piping shall be generally installed so that the top of pipe is 1.0 metre below the ground level unless otherwise specifically mentioned. At the road crossings, the underground pipes shall be laid minimum 1.5 metre below the ground level. Full length of buried piping shall be provided with 100 mm thick sand bed.
 - ii) Except raw & circulating water pipes no other buried pipes are acceptable.
 - iii) Complete supporting system for the pipe line shall be designed, fabricated and supplied by the Bidder. Inside the building, the overhead portion of the pipe line may be supported from the building structures. No support shall be taken from the brick wall. Outdoor, pipes other than buried pipes shall run on steel trestles. Crossing of the road shall be on a pipe bridge with a clear height of at least 6.5 metres (minimum) over the road surface. All the steel structure for the pipe bridge, and the supporting posts/trestles along with all necessary hangers, clamps, connecting steel, fixing bolts, nuts etc. shall be supplied and erected by the Bidder. All pipe racks shall be provided with 750 mm (Minimum) clear width walkways.
 - iv) Hangers and supports shall be capable of carrying the sum of all concurrently acting loads. They shall be designed to provide the required supporting strength and allow pipe line movements as necessary. All guides, anchors, braces, dampener, expansion joint and structural steel to be attached to the building/structure, trenches etc. shall be provided.
 - v) Mitre bends shall not be accepted for steel pipes of 250 NB and below. For sizes 300 NB and above, the mitre bends shall conform to BS: 534.
 - vi) For rubber lined pipes of acid service, lining should be applied in two (2) layers, giving a total thickness not less than 3 mm.
 - vii) Pipe coming under purview of IBR should meet its requirements and getting the IBR approval shall be under bidder's scope.
 - viii) A commercial grade of 'E' type glass fibre should be used conforming to IS: 11320-1985 IS: 11273-1985 IS: 11551-1986, IS-12709, 1994 for Glass Fibre Reinforced Plastic Pipes (GRP pipe). No glass fibre reinforcement shall penetrate the interior surface of pipe line. Each pipe length shall have sufficient strength to withstand Class AA type vehicular loading in addition to the overburden of backfill load. The pipeline shall be designed for 2500 N/M2 stiffness class (min.).
- g) **Valves**
- i) All valves shall be suitable for service conditions i.e. flow, temperature and pressure under which they are required to operate. The valves shall be of standard pressure rating as per the relevant code/ standard.
 - ii) Either Butterfly type or sluice/gate valves shall be used for isolation purposes in raw water, Clarified & Filtered water application. Butterfly valves shall be of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[65]	15.01.2016

double flanged or lugged water type of low leakage rate confirming to AWWA-C-504 class 150 or EN-593 Class 150.

- iii) Manually operated valves shall be provided with reduction gear unit for valves of size 250 NB and above. Valve provided with motorised or pneumatic actuator shall be provided with a hand wheel for manual operation.
- iv) All the valves shall be equipped with adjustable mechanical stop-limiting devices to prevent over travel of the valve disc in the open and closed positions. The valve operators (Hand wheel or Gear reduction unit or Motor actuator etc.) shall be designed as per relevant International Standard.
- v) Ball valves or Globe Valves may also be provided for the application of Raw/ Clarified / Filtered water services for sizes 50 NB and below.
- vi) Butterfly valves or proven patented diaphragm valves shall be used for the services of demineralised water application for isolation purposes.
- vii) Plug valves shall be used for the application of lime slurry /lime solutions.
- viii) Sluice valve/knife edge type slide valves shall be used in the sludge and drain pipe line.
- ix) For air services, globe valves or ball valves may be used for sizes 50 NB and below. For sizes higher than 50 NB, either Butterfly valve or Ball valves shall be used.
- x) Check valves for Raw / Clarified / Filtered water may be offered in Gun metal construction and with threaded ends for sizes 50 NB and below conforming to IS: 778 or Equivalent.
- xi) For Chlorinated water application check valve of Lift Ball type may be used in PVC construction (in case of PVC pipes). In case of rubber lined pipes, the check valves of swing check type shall be of lined construction.
- xii) The safety valves / relief valves at the downstream of positive displacement type metering pumps shall be of the standard type manufactured by the pump manufacturer and the material of construction shall suit the fluid handled.

3.8

Design Data Sheet

Water Pre-treatment, Clarified Water Distribution System

i)

Stilling Chamber

Items	Specification
Number	[One (1) per clarifier]
Purpose	To dampen out any turbulence of the incoming water and for prechlorination.
Material	R.C.C.
Capacity	Shall be suitable to provide minimum [five (5) minutes] retention time to react with chlorine.
Specialties	Suitable draining arrangement shall be provided for the stilling chamber and drain lines shall be extended up to the sludge pocket for final disposal to the common sludge sump. Pre-chlorination of raw water shall be carried out at stilling chamber.

Bidder shall provide suitable nos. of diffusers at stilling chamber.

ii)

Flash Mixer

Items	Specification
Number	[Two (2) nos., one for each clariflocculator]
Type	Rectangular with vertical baffles
Material of Construction	R.C.C.
Agitator	
Type	Motor driven through reduction gear
Number	One for each flash mixer

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[70]	15.01.2016

Items	Specification
Isolation gates along with hand wheels	At the Inlet and Outlet as well as in between the flash mixers to isolate any one of them and for change over and/or maintenance.
Capacity, each	Suitable to provide minimum [one (1) minute] retention time
Draining	Suitable sludge draining arrangement shall be provided for each flash mixers upto nearest sludge man hole for final disposal to common sludge pit/pits.

iii) **Solid Contact Type Clarifier**

Items	Specification
Material of inlet from flash mixer to Flocculation tank	Hume pipe as per IS:458, P1Class
Number required	[Two (2)] Each shall be capable of handling maximum designed flow rate and reducing turbidity to the specified limit.
Type	[Solid Contact Type]
Material of Construction	R.C.C.
Rated net output capacity	[....m ³ /hr]
Guaranteed output	Oil free, Turbidity < 20 NTU (at rated capacity)
Retention time (minimum)	[50 minutes]

iv) **Softening Plant [(if applicable)]**

Items	Description
System Designation	Softening Plant for CW System
Number of Streams	[Three]
Number of Units per stream	[4 (3W+1S)]
Total number of Softeners	[12]
Tag Numbers	[.....]
Location	inside RCC building
Materials of Construction	
Shell and Dished Ends	IS 2062 Gr,B/IS 2002 Gr.2 with 4.5 mm thick rubber 3x1.5mm thick lining with 65±5 scale-A

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[71]	15.01.2016

Items	Description
External Painting	As per painting section mentioned elsewhere.
Design Data	
Mode of operation	Auto
Design Net Capacity per unit	[... m ³ /hr]
Net output between regenerations	[... m ³]
Type of Regeneration	Co Flow
Type of Resin	Strongly Acidic (Sodium Form)
Regeneration Temperature	Ambient
Total Hardness in outlet water	< 50 mg/l as CaCO ₃
Shell and Dished Ends end thickness	As per IS 2825, 6 mm for shell and 8 mm for dish min/ASME Sec. VIII Div 1
Design Pressure	[...] kg/cm ² (g) and full vacuum
Test Pressure	[...] kg/cm ²
Pressure drop across unit including valves, specialties and instruments	[...] mwc (max)
Rotameter	One per unit or one per stream online or bypass rotameter required

v)

DM Clarifier (If Applicable)

Items	Specification
Material of inlet from flash mixer to Flocculation tank	Hume pipe as per IS:458, P1Class
Number required	[One (1)] and shall be capable of handling maximum designed flow rate and reducing turbidity to the specified limit.
Type	[Solid Contact type]
Material of Construction	R.C.C.
Rated net output capacity	[...] m ³ /hr

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[72]	15.01.2016

Items	Specification
Guaranteed output	Oil free, Turbidity < 20 NTU (at rated capacity)
Retention time (minimum)	30 minutes for flocculation zone and 150 minutes for clarification zone

vi)

Sludge thickener feed Pumps

Items	Specification
Number	[Two (2) nos., normally one (1) working and one (1) stand-by.]
Type	Vertical Sump Pump
Location	Indoor, at sludge sump-cum pump house.
Liquid to be pumped	Sludge water mixtures
Rated Capacity	[...] m ³ /hr
Duty	Intermittent, suitable for parallel operation
Range of operation	70% to 120% of rated capacity
Design standard	As per IS 5659 & IS 5120
Material of Construction	
Casing	Double Casing
Casing	CI 210 Gr. FG 260
Impeller	SS316
Shaft sleeve	SS316
Stuffing box	ASTM A-743 Gr.CF3m or equivalent standards
Impeller shaft	SS 410
Pump Motor Selection	While selecting the motor for Criteria pump, 15% (min.) margin over BKW of Pump at rated duty point shall be taken and standard motor with next higher kW rating available shall be selected. This shall in no way be less than maximum power required by pump.
Instrumentation	
Pressure Gauge	One (1) no. for each pump (with sealing diaphragm)
Interlock required for Pump operation	Yes

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[73]	15.01.2016

vii)

Sludge Thickener and Centrifuge

S.No	Items	Specification
1	Thickener	
	Quantity	[1 x 100%]
	Capacity	Bidder to provide as required based on the consistency. However the minimum capacity will be [... m ³ /h].
	Minimum Consistency at outlet	6%
2	Centrifuge Feed Pumps	
	a) Number	2 x 100%
	b) Type	Screw Type
	c) Materials	Stator: CI: IS 210 Gr. FG 260, Rotor: SS 304 and Shaft: SS 410
	d) Capacity	Bidder to provide based on the system requirement. However the minimum capacity will be [... m ³ /h].
	e) Head	By Bidder
	f) Fluid to be handled	Thickened Sludge
3.	Centrifuge	
	Type	Bowl
	Quantity	2 x 100%
	Capacity	Bidder to provide as required based on the consistency. However the minimum capacity will be [... m ³ /h].
	MOC of centrifuge	SS 304 wetted parts with tungsten carbide lining
	Minimum Consistency at outlet	20%

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[74]	15.01.2016

DM Plant

Items	Specification
No. of DM Streams	[Two]
No. of parallel streams	[Two (2)]
No. of working streams	[Two (2)]
No. of standby streams	[Nil]
Water source	Filtered Water
Installation	Indoor
Normal operation	Semi-automatic
Net permeate water output	[... m ³ /h] minimum from two streams

i)

Pressure Sand Filters

Items	Specification
No. of filters in the system	[Two (2)]
No. of filters working	[Two (2)]
Time between successive back washing	[20 hours]
Filtering material	Sand and Anthracite
Design code	IS 2825/ASME Sec. VIII Div.I
a. Feed Flow / module (Net output)	[... m ³ /h]
b. Design surface flow-rate at normal condition	15 m ³ /m ² /hr
c. Pressure indicator	
Location	Inlet and outlet of each unit
Number	Two (2) per unit
d. Flow indicator	
Location	Inlet of each unit
Number	One (1) for each unit
Type	Rotameter

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[77]	15.01.2016

Items	Specification
e. Backwash water source	Filtered water from filtered water storage tank
f. Inter connection of units	Outlet of filters shall be connected to a common header so that any one of filter can be used for any stream
Material of Construction	
Filter vessel	MS as per IS: 2062 Gr.B/2002 Gr.2
Rubber lining	4.5 mm (3 layers of 1.5 mm)
Hardness	65 ±5 Shore A to IS 4682 Part I
Frontal piping	MS as per IS: 2062

ii)

Activated Carbon Filters

Items	Specification
No. of filters in the system	[Two (2)]
No. of filters working	[Two (2)]
No. of standby filters	[Nil]
Time between successive back washing	[20 hours]
Filtering material	Activated Carbon
Design code	IS 2825/ASME Sec. VIII Div.I
Net Flow	By bidder
i) Design surface flow-rate at normal condition (Maximum)	15 m ³ /m ² /hr
ii) Pressure indicator	
Location	Inlet and outlet of each unit
Number	Two (2) per unit
i) Flow indicator	
Location	Inlet of each unit
Number	One (1) for each unit
Type	Rotameter
ii) Backwash water source	Bidder to indicate
iii) Inter connection of units	Outlet of filters shall be connected to a common header so that any one of filter can be used for any stream

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[78]	15.01.2016

Items	Specification
Material of Construction	
Filter body	MS as per IS: 2062 Gr.B/2002 Gr.2
Rubber lining	4.5 mm (3 layers of 1.5 mm)
Hardness	65 ±5 Shore A to IS 4682 Part I
Frontal piping	MS as per IS: 2062

iii)

Air Blowers

Item	Specification
Numbers	[Two (2)] for Pressure Sand Filter
Service	Air required for Pressure Sand Filter
Type	Centrifugal, oil free
Duty	Continuous
Capacity, each for Pressure Sand Filter	100% requirement
Head to be developed	By Bidder.
Material of construction	
Casing	CS
Lobes / impeller	CS to BS 970, EN9 Forged
Shaft	CS to BS 970 EN 9 forged
Safety valve	SS/Brass
Testing & inspection	
Material test required	Casing, Impeller / Lobe, shaft
Code for testing	IS 4894
Rotor balancing	Required.

iv)

Filtered Water tank (Potable)

Items	Specification
a) Service	Potable water
b) Number	One (1)
c) Effective capacity	[...] m ³
d) Type	Vertical, Cylindrical
e) Design Code	IS-803
f) Location	Above DM Plant Building
g) Free board, mm (minimum)	300 mm

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[79]	15.01.2016

Items	Specification
h) Bottom shape	Flat bottom
i) Material of construction	MS to IS 2062
j) Inside protection	Suitable epoxy paint to achieve a minimum 200 micron.
k) External painting	As per painting section indicated elsewhere.
l) Overflow, drain and sample connection	Required
m) Manhole (Davit type)	Required of size 500 mm
n) Special Fittings	
• Seal for overflow	Required
• Additional nozzle connections	Required
• Conservation vent valves	Required
• Air breather with KoH seal	Required
• Special feature	Required
o) Instrumentation	
• Level indicator	[Two (2)]
• Type	Dial
• Level switch	Three(3 nos – high, low & very low along with potential free contacts and connection to DAS of main plant
• Level integrator transmitter	One(1) no with signals for connection to DAS of main plant
p) Associated piping	Bidder to indicate

v)

Potable Water Supply Pumps

Item	Specification
Service	Filtered Water
Designation	Potable Water Supply Pump
Duty	Continuous
Location	Indoor
No. of Pumps required	[Two (2)]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[80]	15.01.2016

Item	Specification
No. of Pumps working	[One (1)]
No. of Pumps Standby	[One (1)]
No. of Pumps working parallel	-
Liquid handled	Filtered Water
Design Water Temperature	
Pump performance requirements :	
Performance Standard	IS -6595 Part I/equivalent
Min. Flow capacity, (Cu.M/Hr.)	8
Speed. RPM	By Bidder
Static head of pumping system (MLC)	Refer to Notes below
Pump shut off head (MLC)	Bidder to indicate
Range of operation	Preferably between 70% to 130% of rated capacity
Design and constructional features :	
Design standard	IS-6595 Part I
Pump type	Horizontal Centrifugal
Reverse flow through pump to be considered for pump design	Yes
Material of construction :	
Casing	BS3468 GR S2W or any other equivalent standards
Impeller	ASTM A-743 Gr.CF3m or any other equivalent standards
Stuffing box, glands, and lantern ring	ASTM A-743 Gr.CF3m or any other equivalent standards
Pump Shaft	SS 316
Performance test required for determining	H Vs. Q curve, P Vs. Q curve, N Vs. Q curve NPSH Vs. Q curve

vi) **DM Plant Ion Exchange Vessels**

Items	Specification		
Description	Strongly acidic cation exchanger (SAC)	Strongly basic anion exchanger (SBA)	Mixed bed exchanger (MB)
Pressure Vessels			

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[81]	15.01.2016

Items	Specification		
Description	Strongly acidic cation exchanger (SAC)	Strongly basic anion exchanger (SBA)	Mixed bed exchanger (MB)
Type	Vertical, welded, cylindrical shell type, dished ends		
Number required	[Two (2) nos. both working]	[Two (2) nos. both working]	[Two (2) nos. both working]
Net outflow/unit,	[... m ³ /h]	[... m ³ /h]	[... m ³ /h]
Vessel Details			
Design surface flow rate	30 m ³ /m ² /hr	30 m ³ /m ² /hr	40 m ³ /m ² /hr
External painting	As per painting specification - DFT 200 micron		
Material of Construction			
Shell material	Carbon steel as per IS-2062 (with 3 layers of 1.5 mm each (total 4.5 mm) rubber lining)		
Dished ends	Boiler quality steel as per IS-2002 Gr. 2A		
Code for design and fabrication of vessel	ASME Sec VIII Division I & IS 2825		
Design Pressure, kg/cm ² (g)	Shut-off head of DM plant Supply pump plus static suction head with 5%margin over the sum total of shut-off and static suction head	Shut-off head of Degassed water pump plus static suction head with 5%margin over the sum total of shut-off and static suction head	Shut-off head of Degassed water pump plus static suction head with 5%margin over the sum total of shut-off and static suction head
Hydrostatic test Pressure	1.5 times design pressure		
Design Temperature			
Influent Distributor material of construction	SS-316/MSRL	SS-316/MSRL	SS-316/MSRL
Interface Collector			
Material of construction	SS-316/MSRL	SS-316/MSRL	SS-316/MSRL
Location	150 mm below the top of total resin bed i.e. at the interface of inert and effective resin beds	150 mm below the top of total resin bed i.e. at the interface of inert and effective resin beds	At interface of cation & anion resin beds
Regenerant Distributor : material of	MSRL / Hastelloy-C	MSRL	For caustic : SS-316 For Acid : MSRL

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[82]	15.01.2016

Items	Specification		
Description	Strongly acidic cation exchanger (SAC)	Strongly basic anion exchanger (SBA)	Mixed bed exchanger (MB)
construction			
Under Drain System			
Type	Header Lateral or strainer on plate, designed to avoid any non-uniformity of flow		
Special Feature	For strainer on plate system, an additional manhole shall be provided to give access below the bed plate. For header lateral system, no sub fill shall be used which may come in contact with water		
Cleats for internal supports	SS-316		
Resin Traps	Two (2) nos. Carbon Traps required	Two for each vessel. One at backwash & rinse outlet and the other at service outlet	
Manhole	Two (2) in each vessel (minimum). Davit type. Size : minimum 500 mm		
Hand hole	One (1) in each vessel of minimum 150 mm size for taking out inside media		
Sight Windows	Two (2) nos minimum in each vessel (one at resin top level and the other in backwash space). Two (2) nos minimum in each vessel (one at resin top level and the other in backwash space).	Three (3) nos. minimum for each vessel, one at backwash space, one and other at interface of cation & anion resins.	
Fill material	Strongly acidic cation exchange resin	Strongly anion exchange resin	Strongly acidic cation exchange resin and strongly basic anion exchange resin.
Bed Depth			
Effective (Minimum), mm	1000	1000	Cation Resin: 500 Anion Resin: 500
Buffer, mm	100 (At the bottom of effective resin bed)	-	
Inert, mm	150 (At top of effective bed)	150 (At top of effective bed)	-
Supporting Medium, mm	-		
Percentage (of bed depth) Free board to be provided for	80%	100%	
Note: (Chemical consumption for inert and buffer layers shall not be included under the guaranteed chemical consumption figures)			
Regenerant	HCL	NaOH	HCL & NaOH
Regeneration Mode	Counter current	Counter current	Co-Current
Regenerant Injection			
System	By water jet ejector. Power	By water jet ejector.	By water jet ejector.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[83]	15.01.2016

Items	Specification		
Description	Strongly acidic cation exchanger (SAC)	Strongly basic anion exchanger (SBA)	Mixed bed exchanger (MB)
	water shall be taken from discharge header of Degassed water pumps	Power water shall be taken from outlet header of strongly basic anion exchangers	Power water shall be taken from outlet header of Mixed Bed.
Material of Construction	Hard ebonite lined.		
Dilution ratio	Suitably selected by the bidder to ensure desired concentration for dosing.		
Accessories	Each ejector shall be provided with flow indicator on power water supply line as well as flow indicator (with contacts for interlock) on discharge line. Temperature indicator on each discharge line shall be provided for caustic dosing line to anion exchangers.		
Regeneration level	By Bidder.		
Thickness of Shell and Dished End		6mm and 8mm	
Instrumentation			
Inlet flow rate indicator			
Type	Bypass rota meter		
Number	One / unit		
Flow indicator integrator, indicating recorder			
Location & type	At the outlet line of each unit. Integrator electronic type with digital display, 6 digits with counter manual reset type, indicator analogue type, recorder continuous analogue type.		
Numbers	One (1) / unit		
Whether panel mounted	Yes, with local flow rate indicator only		
Indication	At panel with interlock. The integrator alarm set point shall be independently manually adjustable.		
Differential pressure transmitter			
Location	Outlet of each unit		
number	One per unit		
Conductivity Indicator			
Sensing element	At service end and rinse outlet		
Number	Two / unit		
Alarm required	Yes, with necessary interlock		
Location	At panel, with digital indication		
Local indication	Required		
Conductivity Comparator			
Number	One / unit		
Location	At panel with digital display of conductivity value		
Alarm required	Yes, with interlock		
Conductivity measured	Across cation buffer layer		

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[84]	15.01.2016

Tender Document for R&M of Unit No.[..] of [Name of the Power Plant]	[Logo of Utility]
---	--------------------------

Items	Specification		
Description	Strongly acidic cation exchanger (SAC)	Strongly basic anion exchanger (SBA)	Mixed bed exchanger (MB)
Location indicator facility	Required for service water conductivity		
Conductivity monitor complete with cell			
Sampling	Outlet of unit and rinsing line for each unit		
Number	Two (2) per unit		
Indication, alarm and interlock	Required on panel, with LED digital display		
Recorders	Required for service line		
Local indication	Required for conductivity		
Silica analyzer recorder			
Sampling point			Outlet of each MB unit
Number			One analyser, with analyser output recorder and automatic stream selection facility
Whether panel mounted			Yes, analyser to be housed in a separate cubicle.
Alarm & indication			At panel with LED digital display facility and interlock.
pH recorder			
Sampling points			Outlet of MB units., common
Number			One with pen recorder along with panel pH indication facility
Alarm indication and recorder			At panel
Local indication			required
Sodium analyser			
Location	Outlet of units with changeover facility		
Number	One (1) for three (3) units		

vii) **Air Blowers for MB exchanger and Neutralization Pit**

Item		Specification		
Numbers		[Two (2)]		
Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[85]	15.01.2016

Item	Specification
Service	Air required for Mixed Bed
Type	Centrifugal, oil free
Duty	Continuous
Capacity of each blower for Mixed Bed	100% requirement
Head to be developed	By Bidder.
Material of construction	
Casing	CS
Lobes / impeller	CS to BS 970, EN9 Forged
Shaft	CS to BS 970 EN 9 forged
Safety valve	SS/Brass
Testing & inspection	
Material test required	Casing, Impeller / Lobe, shaft
Code for testing	IS 4894
Rotor balancing	Required.
Accessories required	
Common base plate (MS lubricated) Foundation bolts	Required
Suction filter suction and discharge silencers / dampers	Required
Vibration isolators, anti vibration pad	Required
Coupling guard, pulleys	Required
Safety and non return valve	Required
Oil seals, plugs, bearings, inspection door etc.	Required

viii) **Degasser Tower (DGT)**

Items	Specification
Number required	[2x50%] mounted on degassed water storage tank.
Type	Forced draft type, vertical, cylindrical packed column with counter current flow of water and air.
Normal flow rate per tower	As required
Maximum & minimum capacity	120% and 20% of normal capacity
Fill material	Polypropylene Packing rings

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[86]	15.01.2016

Items	Specification
CO ₂ content in	Not more than 5 ppm as CO ₂ effluent water
Design Code	IS-803
Location	Outdoor
Size (Diameter x height)	Suitable to ensure specified treated water quality. Adequate effective internal cross-sectional area shall be provided to handle the required flow at minimum velocity.
Distributors and Collectors	Non clogging, non-corrosive type. Designed to distribute water in uniform manner and water should cascade over the packing elements.
Manhole (Davit type)	Minimum one (1) no. 500 mm NB
Staircase, Platform and Hand Rails	Required. To be mounted on RCC platform over the degassed water storage tank.
Material of Construction (Shell, Distributors, collectors, Nozzles etc.)	CS to IS 2062 or SA 515 Gr. 70
External painting	Two (2) coats of epoxy based primer required followed by three (3) coats of epoxy finish paint. DFT 200 micron
Inside Protection	Rubber lining
a) Shell	Natural rubber - 4.5 mm thick in 3 layers
b) Distributors, Collectors	Rubber lined .
Degasser air discharge duct	Suitably extended to avoid acid water dripping on nearby buildings and vessels

ix)

Degassed Water Storage Tank (DGWT)

Items	Specification
Number required	One (1)
Design Code	ASME Section-VIII Div.1.
Location	Outdoor
Type	Horizontal Cylindrical shell type with dished ends.
Useful capacity	[...] m3
Free Board	Minimum 300 mm
Material	Carbon steel with rubber lining (natural rubber - 4.5 mm) in 3 layers.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[87]	15.01.2016

Items	Specification
External Painting	Epoxy finish paint (3 coats) after two (2) coats of epoxy primer DFT 200 microns
Inlet, outlet, Vent, overflow, drain	Required.
Manhole (Davit type)	Minimum two (2) nos. for the tank of 500 mm NB (minimum)
Staircase, platform and Handrails	Required
Instrumentation	
Level Indicator	Required, Minimum three/tank, gauge glass (Reflex type) with overlap.
High, low and very	Three with alarm and interlock low level switches per tank
Level Indicator-cum-Controller	
Type	Level indicator - cum - controller (Panel mounted) with analogue level display facility
Number	Two (2)
Transmitter	Two (2), D/P type
Auto-manual	Required facility
Control valve	Required with set point, measured value, deviation and valve position indication.
Number	Four (4) nos. globe type
Body	SS-316
Plug & Stem	SS-316
Seat	SS-316
Actuator	Pneumatic Diaphragm
Inching	Required on "Manual Mode" alongwith facility A/M station in control panel and % valve position indicators

x)

Degassed Water Pumps (DGP)

Item	Specification
Number	[Three (3) nos. (2W+1S)]
Type	Horizontal, centrifugal
Location	Indoor
Duty	Continuous

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[88]	15.01.2016

Item	Specification
Capacity	[... m ³ /h]
T.D.H.	To be decided by the Bidder
Material of Construction	
Casing	SS to AISI 316
Impeller	SS to AISI 316
Shaft & shaft sleeve	SS to AISI 316
Packing seal	Mechanical type
Common base plate	Required
Casing & Impeller Type	End suction, closed impeller type
Range of operation	From 30% to 120% of rated capacity
Design standard	IS 5659, IS 5120
Rated Speed	1500 RPM (Maximum)
Permissible Tolerance	As per IS-1520, IS-5120 in rated head and power
Noise level for pump	85 DB at a distance of 1.5 M from motor set motor

xi)

Air Blowers

Item	Specification
Numbers	[Two (2) per degasser tower (2 x 100 %)]
Service	Air required for Degasser tower
Type	Lobe type
Duty	Continuous
Capacity, each for Degasser tower	100% requirement
Head to be developed	By Bidder.
Material of construction	
Casing	CS
Lobes / impeller	CS to BS 970, EN9 Forged
Shaft	CS to BS 970 EN 9 forged
Safety valve	SS/Brass
Testing & inspection	
Material test required	Casing, Impeller / Lobe, shaft
Code for testing	IS 4894
Rotor balancing	Required.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[89]	15.01.2016

DM Water Transfer and Distribution Systemi) **DM Water Transfer Pumps**

Items	DM Water Transfer Pumps
Service	D.M. Water
Designation	Demineralized Water Transfer Pumps
Duty	Continuous
Location	Outdoor
No. of Pumps Required	[3]
No. of Pumps Working	[2]
No. of Pumps Stand-by	[1]
Suction Lift/Head Available (MLC)	Flooded Suction shall be ensured.
Pump Performance Requirements	
a) Flow Capacity	[... m ³ /h]
b) Total Dynamic Head as per IS-5120 at Rated Capacity (mlc)	[... mlc]
c) Rated Speed (rpm) (max.)	By Bidder
d) Range of Operation	Preferably 70% to 130% of Rated Capacity
e) Suction specific speed	Should be within 9000 US unit
Design standard	Hydraulic Institute Standard / IS-1520 / Equivalent Standard
a) Type of Gland Lubrication and Sealing	By Bidder
b) Bearing Cooling (if required)	By Bidder
Shaft Sealing Arrangement	Stuffing Box
Type of Pump-motor Connection	Direct
Type of Coupling	Flexible
Material of Construction	
a) Casing	ASTM-A-296 Gr. CF8M
b) Casing Liner	ASTM-A-296 Gr. CF8M
c) Diffuser	ASTM-A-296 Gr. CF8M
d) Impeller	ASTM-A-296 Gr. CF8M

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[90]	15.01.2016

Items	DM Water Transfer Pumps
e) Wearing Rings	ASTM-A-296 Gr.C 440
f) Shaft	AISI-410
g) Shaft Sleeve	ASTM-A-276 Type-316
h) Base Plate	Fabricated Steel as per IS-2062
l) Shaft bearings	Heavy duty sleeve/ Ball/Roller
j) Wetted Fastener	Stainless steel AISI 304

ii)

DM Water Storage Tank

Item	Specification
Number required	[Two (2)]
Design code	IS 803 and API 650
Location	Outdoor
Capacity of each tank	[... m ³]
Free Board (Minimum) mm	300
Type and pressure class	Vertical, Cylindrical, atmospheric, shell type with flat bottom, roof with rafters
Material of construction and Thickness	M.S. as per IS 2062 Min. 8 mm thick plate.
Internal Painting	Epoxy finish paint (3 coats) after two (2) coats of epoxy primer DFT 200 microns
External Painting	Aluminium paint (3 coats) after two (2) coats of epoxy primer DFT 240 microns
Overflow, drain	Required with air breather and over-sample connection flow seats
Manhole (Davit type)	Minimum two (2) nos. each of 500 mm NB
Staircase, platform, and Handrails	Required with interconnecting platform
Level Indicator	
Number	One for each tank

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[91]	15.01.2016

Item	Specification
Type	Dial type
Level Switch	
Number	Three (3) for each tank, 1(high, low and very low) for alarm and interlock
Centralized Panel	Required through diaphragm seal DP mounted level indication type level transmitter with local and recording indication for each tank
Special Fitting	
Seal for overflow	Required
Co2 absorber	Required
Additional Nozzle	Four (4) per tank and suitably connection blanked with blank flanges Two (2), (each of 200 mm NB) per tank near the tank bottom and two (2), (each of 100 mm NB) per tank at tank inlet nozzle level
Conservation vent	One on each tank valves.
Air breather with KOH	One on each tank seal

Chemical Storage & Dosing Systemi) **Coagulant Unloading Cum Transfer Pumps**

Item	Specification
Purpose	To pump Coagulant from Tankers to Bulk Coagulant Storage Tanks and as well as to transfer Coagulant from Bulk Coagulant Storage Tanks to Coagulant Preparation tanks
Chemical to be used	Ferric Chloride of 35 – 45 % concentration
Dosage Rate	
Type	Horizontal Centrifugal
Numbers required (Working +Standby)	<i>[Two (2) (1 W+ 1 S)]</i>
Duty	Intermittent

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[92]	15.01.2016

Item	Specification
Capacity of pump	To be suitable for dosing requirement
Head	As required
Maximum Pump Speed	1500 rpm
Material of Construction	
a) Casing	FRP/ PP / CPVC
b) Impeller	FRP/ PP / CPVC
c) Shaft	As per manufacturer's standard
d) Shaft Sleeve	As per manufacturer's standard
Type of Shaft Sealing	Mechanical Seal as per Mfr Std
Sets of Hoses with coupling & Diaphragm type Isolation Valves	
a) Number of Sets Required	Two (2)
b) Size of hose/ Valve	80 mm NB
c) Length of hoses	20 meters (minimum)
d) Material of hose	Chemical resistant, UV inhibited PVC
Accessories Required for Pump	Coupling guard, drain plugs, vent valves etc

ii)

Bulk Coagulant Storage & Preparation Tanks

Description	Bulk Tanks	Preparation Tanks	Preparation Tanks
Purpose and Capacity	To store one month requirement of Coagulant for both Main Clarifier and DM Clarifier (if applicable)	To prepare & store one day requirement of Coagulant for Main Clarifiers	To prepare & store one day requirement of Coagulant for DM Clarifier (if applicable)
Chemical to handled	Ferric Chloride of 35–45% concentration	Ferric Chloride of 5 % concentration	Ferric Chloride of 5 % concentration
Number of tanks	[Two (2)]	[Two (2)]	[Two (2)]
Design Dosage rate	Minimum 30 ppm		
Design Quantity of Water to be dosed	As per system requirement		
Capacity of each tank	To store 15 days	To hold 12 hours	To hold 12 hours

4 [ELECTRO CHLORINATION]

4.1 General

a) Mechanical

- i. [Three (3) nos. (3 x 50% capacity)] plant supply pumps of horizontal centrifugal type each complete with drive motor and other accessories. Clarified water shall be taken from soft water storage tank. Pumps shall be located in a RCC pump house
- ii. [Three (3) nos. (3 x 50% capacity)] auto backwash type strainers with mesh size of 0.5 mm.
- iii. [3 X 50 % electrolyser] modules factory assembled, pre-piped, pre-wired and mounted on the structure. The Hypo chlorite generators shall be of bipolar electrolytic type each of 15 Kg/hr capacity (minimum). Each electrolyser module shall have minimum number of units connected in series or parallel.
- iv. [3 Nos. transformer-rectifier] each matching the generating module and consisting of 1 No. transformer, dry type and 1 No. thyristor rectifier and 1 Set of DC current conductors (bus duct) between the rectifier cubicle and the electrolyser module.
- v. Hypo chlorite storage, degassification and distribution system consisting of [2 tanks] complete with all accessories and [two (2) centrifugal blowers] each complete with drive motor to supply dilution air for venting the hydrogen from the hypo chlorite storage tank.
- vi. Hypo chlorite solution injection pumps each complete with drive motor.
- vii. 1 No. electrolyzer acid cleaning system consisting of an acid circulation tank and [2 x 100 %] capacity centrifugal pumps complete with drive motors.
- viii. Hypo chlorite solution diffusers and mixing system.
- ix. Flow meters and throttling valves in the hypo chlorite dosing line.
- x. All integral and interconnecting piping, valves, all types of pipe support, including pipe racks, etc for the entire electro chlorination system.

b) Electrical

Required nos of drive motors suitable for operation on 415 V system complete with all standard accessories including motor terminal box and cable glands. For detailed Specifications refer Technical Specification for Medium Voltage Squirrel-Cage Induction Motors, Part-B, Section-II, Volume-II.

c) Instrumentation

- i. Pressure/ differential pressure and temperature gauges and switches, pressure transmitters, differential pressure transmitter with stubs, thermo wells, root valves, impulse lines, siphons, gauge cocks, drain lines, drain valves and other items for any equipment under this specification, other important sub-systems and auxiliaries that relate to system performance and safety of the equipment and for the purpose of monitoring critical parameters.
- ii. Motor operated valves, pilot solenoid operated on/off pneumatic control valves etc along with limit torque switches and other accessories as necessary for the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[102]	15.01.2016

proper function of the system or as mentioned in other sections of the specification.

- iii. Local control station with push buttons/ indicating lamps near each drive, motor operated valve, solenoid operated valve etc according to operating philosophy.
- iv. Operation and control of the electro-chlorination system shall be from the PLC.

4.2

Codes and Standards

The following specific standards apply to the supply under this specification. In case of conflict with standards, this specification shall prevail over listed standards.

- BS: 5156 - Specification for Diaphragm valves
- ASTM F 437 - Standard specification for threaded chlorinated poly vinyl chloride (CPVC) plastic pipe fittings, schedule 80
- ASTM F 441M - Standard Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe, Schedules 40 and 80
- ASTM D351 7 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pressure Pipe
- ASTM D4161 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe Joints Using Flexible Elastomeric Seals
- BS 5480 - British Standard Specification for Glass reinforced plastics (GRP) pipes, joints and fittings for use for water supply or sewerage.
- BS 4994 - Specification for design and construction of vessels and tanks in reinforced plastics.

4.3

Design and Manufacturing Requirements

4.3.1

System Description

The function of the electro chlorination system is to generate sodium hypochlorite that will be effective in preventing bio fouling.

[Clarified Water/Soft water] shall be strained to remove solid particles using strainers with automatic backwash facility for cleaning of filtering element. The generation of available chlorine from soft water in the form of diluted hypo chlorite solution shall be carried out in the hypo chlorite generator by partial electrolysis process. The direct current required for the electrolytic cells of hypo chlorite generators shall be provided by the transformer rectifiers.

Soft water containing the products of electrolysis which are essentially, sodium hypo chlorite solution and hydrogen gas shall be transferred from the generating module to degassifier cum hypo chlorite storage unit. The unit equipped with air blowers shall dilute the hydrogen to non-explosive concentrations. The hypo chlorite solution shall be dosed to the soft water by means of dosing pumps.

The deposits caused by the soft water hardness inside the generators shall be periodically removed by dissolving them in a diluted solution of hydrochloric acid circulated through generators by centrifugal pumps. At the end of cleaning cycle, the acid solution shall be recovered in a tank.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[103]	15.01.2016

4.3.2 Design Requirements**i. Hypo chlorite Generator Unit**

The following dosing regime shall be planned for the Circulating Water System:

- Continuous dosing at the rate of 2 ppm of chlorine into a flow of [..... cu m³/h].
- Shock dosing at a rate of 5 ppm of chlorine for 30 minutes in every shift of 8 hours.
- Necessary chlorination for the PT and Potable water.

ii. Rectifier and transformer

- DC Power supply unit shall be provided each matching the generating module.
- The transformer unit shall be of cast resin dry type.
- The rectifier unit shall be of solid state type, dry silicon controlled rectifiers and diodes.

iii. Degassifier

- Air Blowers shall be sized so as to dilute the hydrogen to non-explosive concentrations.
- Horizontal centrifugal type air blowers, each having capacity to meet the demand of all the pressure filter units shall be provided.
- Among these two, one will be in normal operation the other will remain as standby.
- Blowers shall be oil free type complete with drive motors, suction filters, silencers, discharge dampers and associated ducting works. Discharge pressure gauges shall be provided for each blower.
- Blowers along with drive motors shall be suitable for complete outdoor location. The motor shall have IP 55 protection.

iv. Horizontal Centrifugal Pumps

- The pump shall be capable of developing the required total head at rated flow under continuous operation. Also the pumps shall be capable of being operated to give satisfactory performance at any point on the H-Q characteristic curve over the operating range of at least 30% to 120% of rated flow.
- The pumps shall have a stable H-Q characteristic curve continuously rising towards the shut off and with a highest head at shut off condition.
- The pumps shall be designed for a water inlet temperature of at least [45 °C] and it shall be ensured that the pumps do not cavitate at this temperature.
- The material of construction of various components shall be as indicated in relevant equipment data sheets enclosed along with this specification. These are to be considered as minimum requirement and it is the responsibility of the Bidder to select and offer proper material of construction for the required service.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[104]	15.01.2016

- Assembly and dismantling of each pump with drive motor shall be possible without disturbing the grouted base plate or alignment.
- Continuous motor rating (at 50 °C ambient) shall be at least fifteen percent (15%) above the maximum load demand of the pump in the entire operating range including the run out condition to take care of the system frequency and voltage variation. Other design and construction features of the drive motor shall be as specified elsewhere, under standard electrical specifications.

v. **Storage Vessels**

- The storage tanks [(2 nos)] shall be sized so that it holds the total amount of solution required for the shock treatment operation for one shift. Minimum [40 m³] each.
- The tank shall be of vertical cylindrical design with bolted top flange cover. The tank shall be provided with overflow, inlet feed funnel, discharge/outlet pipe and level gauge.
- Design temperature of vessels shall be 10 °C higher than the maximum temperature that any part of the vessel is likely to attain in course of operation.
- The hypo chlorite and acid storage tanks shall be of FRP/GRP,
- Gaskets shall be full-face type.
- Nozzle wall thickness shall be as per relevant code for design to be followed for the vessel.
- Nozzle projection from tank wall/shell and roof shall be as per IS:803.
- Manholes shall be provided in all vessels for providing easy access into the same. The size shall be minimum 500 mm and it shall be provided with cover plate, nuts, bolts and gaskets to ensure leak tightness at the test pressure.
- All foundation bolts, inserts etc. will also be included
- All vessels shall be provided with lifting lugs, eye bolts etc. for effective handling during erection.
- Gauge glass or gauge type or float operated level indicator of specified design, shall be provided to indicate the level of content of the vessel.
- Suitable seal shall be provided with the vent line of atmospheric tanks containing fuming liquids and also to prevent contamination from atmospheric air.

vi. **Piping, Fittings and Valves**

- The pipes handling cooling water shall be of MS construction (IS: 1239, Heavy class or FRP. The pipes handling hypo chlorite solution and acid shall be of CPVC).
- Pipes & fittings shall be suitably painted and protected considering soft water service and saline environment.
- Gate, globe and check valves shall be used respectively for isolation,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[105]	15.01.2016

regulation and non-return services in general.

- For pressure rating, material of construction, design and testing code etc. of various valves, valves data sheet shall be referred to.

- Piping:**

Material of Construction for pipes carrying various fluids should be as below:

Sl. No.	Service	Material
1.	Soft water	FRP/GRP
2.	Hydrochloric acid	
	a) Strong (30%)	CPVC
	b) Dilute	CPVC
3.	Hypo chlorite solution	CPVC

- All piping system shall be capable of withstanding the maximum pressure in the corresponding line.
- Hangers and support shall be capable of carrying the sum of all concurrently acting loads. They shall be designed to provide the required supporting effects and allow pipeline movements as necessary. All guides, anchors, braces, damper, expansion joint and structural steel to be attached to the building/structure, trenches etc. shall be provided.

- Fittings:**

All the fittings in the electro chlorination plant shall be of CPVC/GRP. All fittings of blower air line will be made of PVC. All bolts, nuts and washers on the piping will be galvanized carbon steel, Gaskets shall be of EPDM,

- Valves:**

All manual and motor actuated valves in the electro chlorination plant shall be made up of CPVC. All valves shall be suitable for service conditions i.e. flow temperature and pressure under which they have to operate. All sampling valves and analysing instrument isolation valves shall be needle type.

- Dosing Pumps**

- The dilute Hydrochloric acid dosing pumps shall be horizontal centrifugal type and arranged to operate under flooded suction conditions.
- The rated capacity of hypo chlorite dosing pumps shall be selected based on continuous dosing and shock dosing regimes adopted.
- The pumps shall be capable of varying the discharge over the entire range of operation.
- The pumps shall be capable of operation either intermittently or continuously. Necessary relief valves and discharge pressure gauges shall be provided for each dosing pump.
- The rated capacity of dilute hydrochloric acid dosing pumps shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[106]	15.01.2016

suitable for the cleaning cycle.

- *The material of construction for casing and impeller shall be of Titanium.*
- *Minimum 15% margin over pump input shall be taken and standard motor with next higher kW as available shall be selected. This shall in no be less than the maximum power required by the pump.*
- *The pump and motor shafts shall be connected with an adequately sized flexible coupling of proven design with a spacer to facilitate dismantling of the pump without disturbing the motor, Necessary coupling guards shall also be provided.*
- *The material of construction of various components shall be as indicated in relevant, equipment data sheets enclosed along with this specification.*
- *The pumps shall generally be employed with mechanical seals, which shall be so arranged that replacement of seal should be possible with minimum downtime.*
- *A common base plate mounting both pump and the motor shall be provided. The base plate shall be of fabricated steel (minimum 6 mm thickness) and of rigid construction, suitably ribbed and reinforced.*

4.3.3 Operating Conditions

- i) *The control system will be designed for operator free fully automatic control. Fully automatic control shall mean that sending a start signal will initiate a start sequence within the control system to start soft water booster pumps, strainers, air blowers and hypo chlorite dosing pumps and energize the rectifier-cum-transformer units and the generator to produce hypo chlorite and deliver this to the injection points for continuous and intermittent chlorination.*
- ii) *The control system shall monitor safety interlocks for flow, level control etc. and allow the necessary time delay to establish system equilibrium before moving to the next step in the start sequence.*
- iii) *ON/OFF/TRIP status of all pumps, blowers, agitators and drive motors for other equipment under Bidder's scope of supply, ammeters for drive motors wherever required shall be displayed in control panel.*
- iv) *All drive motors shall be provided with arrangement of local starting and stopping. Local starting shall be possible through remote/local selector switch in control panel or in MCC. Tripping of drive motors locally shall be permissible irrespective of position of remote/local selector switch. Provision for locking the local stop push buttons after tripping the motor from local push button shall be there.*
- v) *Annunciation panel showing tripping of different motors, level alarms from level switches in Hypo chlorite dosing tank shall be located in the Instrument Control Panel.*
- vi) *Hypo chlorite generator room shall be properly ventilated by continuously running ventilation fans.*
- vii) *All plant status information shall be made available at local control panel.*

OR

4 [GAS CHLORINATION SYSTEM]

4.1 System Description

Chlorination system shall be provided for the following systems:

- i. Condenser cooling (CW) / Auxiliary cooling (ACW) water systems

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[112]	15.01.2016

ii. Raw water (RW) system (pre-treatment plant)

iii. Potable water system

Chlorination for CW / ACW system shall be provided to check the microbiological growth, which interferes with the heat transfer and performance of the cooling tower. The chlorination system for the CW / ACW systems shall be common. Chlorination shall be done in the CW pump house at inlet to the pump channels.

Chlorination for RW system shall be provided to neutralize the BOD which interferes with the performance of the clarifier and downstream water treatment. It also oxidizes the iron and manganese, if still not oxidized in aerator. Chlorination for the RW system shall be done in the stilling chamber of the clarifier.

Chlorination for potable water shall be provided to oxidize the microbiological organisms. Chlorination for the potable water shall be done in the potable water pump suction piping.

4.2

Statutory Requirements

All requirements of the latest statutory regulations in force, State Pollution Control Board; Central Pollution Control Board; Department of Environment, Govt. of India, Indian Explosives Act. Indian Factories Act, Indian Boiler Regulation etc. as applicable shall be strictly adhered to.

The Bidder shall be responsible for obtaining necessary approval and making whatever additions/modifications considered necessary by the respective Statutory Authorities to bring the installation conformity with the latest Statutory Regulations in force. All works related to approval from Directorate of Explosives/Nagpur for chlorination system is in Bidder's scope apart from other statutory authorities of State and Central.

4.3

Design and Construction

The chlorination system shall be designed for the following:

a. CW / ACW system:

- Continuous dosing @ 2 ppm
- Shock dosed @ 5.0 ppm (maximum) for a average period of about 30 minutes per shift of 8 hours. Shock dosing at inlet of all pumps of one unit shall be done simultaneously. Continuous dosing shall be discontinued for the period when the shock dosing is being done.

b. Raw water system

- Continuous dosing @ 8 ppm minimum. However this must be reviewed in line with the raw water analysis.

c. Potable water system

- Dosing @ 2-5 ppm so that the residual chlorine is 0.2 ppm.

Number of chlorine tonners shall be adequate to cater the chlorine consumption requirement for 15 days.

The chlorinators will be connected to evaporators which individually in turn will be connected with chlorine ton containers. The chlorination system will be complete

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[113]	15.01.2016

with chlorine ton containers, booster pumps, strainers, piping and diffuser systems up to dosing points and all other necessary accessories and auxiliaries.

The water to the booster pumps will be supplied from circulating water pump discharge header (for CW / ACW system), from service water (for RW system) and from potable water system (in case of dosing to the potable water system).

All the necessary equipments such as Chlorinators, Evaporators, Chlorine Ton Containers, etc. will be located in the Chlorination Building (for CW / ACW system), in the chemical house (for RW system) and in the nearest building in case of the potable water system. However there may be site specific changes in respect of the chlorination equipment locations.

Following redundancy will be provided:

Chlorinator: one number for each service.

Pumps : One number for each duty

4.4

Electricals

Required nos of drive motors suitable for operation on 415 V system complete with all standard accessories including motor terminal box and cable glands. For detailed Specifications refer Technical Specification for Medium Voltage Squirrel-Cage Induction Motors, Part-B, Section-II, Volume-II.

4.5

Control and Instrumentation

Pressure/ differential pressure and temperature gauges and switches, pressure transmitters, differential pressure transmitter with stubs, thermo wells, root valves, impulse lines, siphons, gauge cocks, drain lines, drain valves and other items for any equipment under this specification, other important sub-systems and auxiliaries that relate to system performance and safety of the equipment and for the purpose of monitoring critical parameters.

Motor operated valves, pilot solenoid operated on/off pneumatic control valves etc along with limit torque switches and other accessories as necessary for the proper function of the system or as mentioned in other sections of the specification.

Local control station with push buttons/ indicating lamps near each drive, motor operated valve, solenoid operated valve etc according to operating philosophy.

Operation and control of the electro-chlorination system shall be from the PLC.

4.6

Chlorine Ton Container / Cylinder

For each chlorine ton containers, two (2) nos. eductor pipes shall be provided, each terminating into an isolating valve of 25 mm (nominal) size. Valve shall be as per IS 3224 and BS 341 [Part 1]. One eductor tube will be used for chlorine gas withdrawal while the other shall deliver liquid chlorine.

Each chlorine ton container shall be placed on two (2) nos. metallic brackets, each provided with two (2) roller supports. These brackets will be mounted on civil foundation and all necessary anchor bolts, inserts, nuts etc. will also be furnished by the Bidder. However, the Chlorine Cylinder will be mounted on trolley with chain as holding material.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[114]	15.01.2016

Each chlorine ton container shall be provided with approved colour band for identification of its content.

4.7 Pipe Manifold with Accessories

Flexible connector with valved ends joining chlorine ton container to the pipe manifold shall be constructed of annealed copper tubing, cadmium plated.

Copper tubing with suitable expansion loop shall be provided with silver soldered copper nipples on each end.

Alternatively, flexible metal hose, constructed of corrugated metal with monel tire braid and monel nipples may be supplied. Tubing shall be hydraulically tested to 40 Kg/Sq.cm (g).

Piping for handling chlorine shall be as simple as possible, with minimum of screwed and flanged joints. Piping shall be well supported and adequately sloped to allow drainage. Low spots shall be avoided. Suitable allowances shall be provided for pipe expansion due to change in temperature.

PVC or similar materials, shall not be used in liquid chlorine and pressurised chlorine gas lines. However, PVC can be used in chlorine gas line operating under vacuum.

For chlorinated water service line, MSRL pipes shall be used.

Suggested steel pipe and fittings for dry chlorine service both liquid and gaseous under pressure shall be as follows :

Pipe : Carbon Steel ASTM A106 Gr. B Seamless Schedule 80

Fittings : Carbon Steel ASTM A105 Gr. 1 2000 rating

Flanges : Carbon Steel ASTM A181 Gr. 1 Class 300

Piping and fittings for conveying chlorine gas under vacuum including vent lines and fittings from all points of chlorine gas, vent, leak off and pressure relief to outside discharge which could be exposed to wet chlorine shall be schedule 80 PVC as per IS 4985.

Suggested copper and copper alloy tubing and fittings for dry chlorine service upto the manifold should be as follows :

Copper tube : Copper water tube type K, soft as per ASTM 88

Fittings : Wrought copper solder joint fittings (joints should be made with a brazing alloy containing no tin)

Valves for liquid and gas service on the chlorine supply side of the installation shall preferably be approved by the Chlorine Institute, USA. The specifications should be as follows:

Type	:	Ball/rising stem globe
Body	:	Steel/Bronze (silver plated)
Seat	:	Teflon/Monel
Ball	:	Monel
Stem	:	Monel
Disc.	:	Hastealloy/Monel
Gasket	:	Bonded asbests fibre

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[115]	15.01.2016

Packing : Oil free graphitized asbestos

Globe valves upto 40 mm NB size shall be 300 ASA (minimum), outside screw and yoke, with forged body and renewable seat. Valves 50 mm and larger shall be cast body. Valves handling chlorine under vacuum or chlorinated water shall be made of PVC or PVC lined body. Type may be ball or diaphragm.

Chlorine shut off valves shall be electrical/pneumatically operated, arranged to shut off on operating power/air failure.

Expansion chambers shall be provided in all pipelines carrying liquid chlorine which may become stagnant due to closure of isolating valves. The expansion chamber shall be sized for a minimum 20% of the piping volume in which it will be installed. Connection to the chamber shall be through a rupture disc. (set at 28 Kg/Sq.cm approx.). Expansion chamber shall be mounted between two shut off valves. Expansion chamber shall be provided at the highest level of the Piping. Suitable pressure switch shall be provided to initiate a high pressure alarm.

Socket welded joints shall be used in PVC service. Teflon tape/ Litharge/Glycerin cement shall be used in all screwed joints.

If chlorine line is run in a pipe rack, where it saves space, with other pipelines carrying flammable materials, the chlorine lines should be protected from fire, resulting from leak or break in one of the other lines as given in Chlorine Institute, USA.

All piping above the ground shall be suitably protected from the atmospheric corrosion by adequate painting system or adequate insulation system.

PVC line, in case of chlorine solution piping, if any, all joints shall be socket type with solvent welding. For these pipes, laid on the sand level, insulation shall be provided to prevent solar effect and mechanical damages on the pipe.

All fasteners for chemical area shall be of SS 316 material.

Chlorinator surrounding pipe, valve, panel should be of chlorine corrosion proof material.

Evaporators

Electrically heated constant temperature water bath type evaporator shall be provided to vaporise liquid chlorine into gas form for further feeding into the chlorinator. Each evaporator shall be sized with ample safety factor to allow for partial filling of the chlorine chamber with junk. Heating element shall be immersion type, 3 phase, 415V, 50 Hz.

Hot water bath shall be vented to atmosphere. It shall have provision for incorporating the electrical immersion heaters. Minimum water level shall be maintained automatically by a solenoid valve. Filtered water, after passing through strainer, will be used as make up. Drain plug shall be provided for maintenance. Water level indicator shall be provided.

Chlorine vaporiser body shall be constructed of seamless steel tubes as per ASTM A 106, Grade B. Minimum 3 mm corrosion allowance shall be provided in tube wall. Flanges shall be of IS:2002, Grade B plates. Welding shall be 100% radiographed and stress relieved. Vaporiser shall be hydraulically tested at 40

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[116]	15.01.2016

Kg/Sq. cm (g) for leak tightness. Fabrication shall conform to ASME code for Boilers and Pressure vessels (Section VIII, Div. I) or IS:2825.

One (1) no. control cubicle containing necessary contactors, fuses, push buttons, indicating lamps, ammeter, and other instruments for each evaporator shall be supplied and mounted integrally with the evaporator. Instrumentation shall include chlorine pressure gauge, dial thermometer, adjustable range control thermostat and relay in addition to the accessories mentioned.

Evaporator shall provide some degree of superheat to prevent mist in the downstream side.

An electrically interlocked motor operated shut off valve shall be provided in the gas discharge line from the evaporator to interrupt the flow of gas to the chlorinator when temperature of the evaporator drops below a preset value.

Evaporator shall be equipped with a suitable type of cathodic protection system that protects the water bath tank and outside of evaporator. A local ammeter shall be mounted on the evaporator as an indication of the degree of cathodic protection.

The outside of the water bath shall be properly insulated. The entire chlorine evaporator shall be constructed of materials completely resistant to the corrosive attack of liquid chlorine, wet or dry gas and chlorine area atmosphere.

Strainer

For each chlorinator two (2) no. 100% capacity strainers (one operating, one standby) shall be provided to trap any liquid chlorine "Mist" and solid impurities from reaching the chlorinator. The filter shall incorporate an "inertial" trap which will hold any liquid present. The filter part shall be of removable element design. Vent for chlorine strainers shall be provided and the same shall be terminated outside the room.

Pressure Regulating Valves

Spring loaded silver diaphragm type pressure regulating valve shall be mounted external to the chlorinator in the chlorine gas supply line from evaporator. Thus, chlorinators are subjected to less gas pressure during operation. The material of construction of the pressure regulating valve should generally conform to the requirements of the Specification specified elsewhere. All flange sealing should be done by lead gasket.

4.8

Chlorinator

The chlorinator shall be of vacuum solution feed type. Good control and metering of gas shall be the essence of the design.

The chlorinator system shall provide the following functions for accurate control safety of operation.

- a) *Inlet chlorine pressure reducing valves to reduce the pressure to a constant sub atmospheric pressure (automatic).*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[117]	15.01.2016

- b) Automatic pressure vacuum relief valve.
- c) Indicating meter (rotameter).
- d) Chlorine feed rate adjuster (manual).
- e) Chlorine metering orifice.
- f) Vacuum differential regulating valve (automatic).
- g) Automatic Drain Relief Valve/Spring loaded check valve.
- h) Injector vacuum gauge.
- i) Injector power water supply system.

Suitable automatic shut off arrangement should be provided to prevent air entry into the chlorine solution line. The chlorine injector shall be suitably designed to prevent "Water Suck Back" into the chlorinator.

Each chlorinator shall be provided with one (1) control panel containing necessary instrumentations for safe and trouble free operation of the chlorinator.

Material of construction for the major components should be as follows:

- a) Pressure/vacuum regulator
 - i) Body : PVC
 - ii) Diaphragm : Teflon
 - iii) Plug : Silver
- b) Feed rate adjuster
 - i) Plug : Silver
 - ii) Seat : Silver
- c) Injector
 - i) Body : Rubber lined mild steel
 - ii) Nozzle : Solid ebonite
- d) Chlorine gas pressure: Schedule 80. Seamless steel piping
- e) Chlorine gas vacuum : PVC piping
- f) Cabinet : Fiber glass moulded design, steel frame with epoxy paints.

The entire chlorinator shall be constructed of material completely resistant to the corrosive attack of wet or dry chlorine gas, chlorine solution, and chlorinator area atmosphere.

4.9 Chlorinated Water Diffuser and Mixing System

Chlorinated water should be led from the source to the point of application via pipelines of suitable material as specified elsewhere in this specification.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[118]	15.01.2016

Diffusers should be constructed of rubber lined perforated steel tubes/polypropylene. For MSRL diffusers, the perforations shall be rubber lined to protect the steel at the holes. The diffuser shall be designed so that each hole takes 4 to 7 Lpm flow at a 3 to 4 m/sec. velocity.

Diffusers should be located in strategic locations so that effective mixing of chlorine solution takes place with water to be treated. All diffusers should be located well below the lowest water level so that these are never exposed to atmosphere.

All fittings, brackets, etc. to locate the diffusers shall be of rubber lined steel construction.

Blow off vent line shall be provided at inlet of the diffuser to vent air or gas in this line.

Interconnecting Piping, Valves, Fittings and Accessories

Accessories

Bidder shall include in his scope of supply all pipe lines, valves, fitting. All piping and fittings, including special accessories shall be sized for operation of all the units.

The pipes handling cooling water shall be of MS construction (IS:1239, Heavy Duty). The pipes handling air shall be Schedule 40 or Standard galvanised steel A 53 Gr. A, screwed or flanged.

Safety & Supervisory Instrument

Two (2) sets of gas masks along with breathing apparatus with one hour air tank complete with full mask, full vision face pieces, air flow regulating valves and all accessories shall be provided. In addition, two (2) nos. cannister type breathing apparatus shall be provided in which the moisture content from the wearer exhaled air react with granular chemical in the breathing apparatus and liberates oxygen. The released oxygen enters a breathing bag from which the wearer can inhale. Full technical details of equipment furnished shall be indicated.

Four (4) sets of electronic type leak detector system shall be provided in Chlorination Building near fore bay for unit 1, 2 & 3, i.e. two (2) nos. for common Chlorine Ton Container Storage Room for CW / ACW. Chlorination and two (2) nos. for Chlorination Room of CW / ACW Chlorination.

Two (2) sets of orthotolidine impregnated paper type leak detector system shall be provided in the chlorine storage area to detect leakage of chlorine.

Four (4) nos. of ammonia bottles containing commercial grade ammonia solution (26 deg. Be) shall be provided.

Two (2) emergency kits shall be provided for attending leakage of chlorine. The emergency kit shall contain tools, e.g. gaskets, yokes, hoods, clamps, studs, tie tools, mild steel channels, spanners, screws to fit chlorine containers. The gaskets shall be designed to fit in controlling/stopping leakage from chlorine containers. valves and chlorine container fusible plugs. The accessories shall conform to the details specified by Alkali Manufacturer's Association/Chlorine Institute, U.S.A. Residual chlorine level testing facility shall be provided in the inlet channel to C.W. pumps.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[119]	15.01.2016

One (1) no. of Weather Cock shall be provided for monitoring the direction of air flow.

Necessary nos. of safety and supervisory instruments complete with gas masks and two (2) nos. of chlorine leak detectors, one (1) no. in Chlorine Ton Container Storage area and one (1) no. in Chlorination area for Raw Water Chlorination System. For technical details subsection as specified elsewhere may be referred to.

4.10

Chlorine Absorption System

During leakage of Chlorine in the Chlorination room (housing chlorinator and evaporator) and/or in the chlorine ton container storage room (where ton containers are kept) air from these rooms will be sucked by means of exhaust fans and will be passed on to the absorption tower through FRP Ducting where it will be counter currently scrubbed with 20% W/W (maximum) caustic soda solution before vented to atmosphere. Separate chlorine leak detector shall be provided in both chlorination room and chlorine container storage room, which will give indication/alarm at preset chlorine concentration in air during chlorine leakage.

Normal ventilation system shall be provided for chlorination room and chlorine container storage room. However, during emergency condition of chlorine leakage in these areas, the normal ventilation fans of chlorination room and chlorine container storage room will be stopped and exhaust system will be started automatically by means of suitable interlock arrangement with leak detector system.

The chlorine absorption system consists of exhaust fans, ducting work, absorption tower, caustic solution preparation/ recirculation tank and pumps, and other necessary accessories.

The absorber, to be provided shall be of FRP construction. The absorber shall have a packing material of polypropylene raschig/pall rings. Sucked air from chlorination/chlorine ton container storage room shall be introduced into the absorber from bottom and 20% W/V caustic solution (maximum concentration) will be sprayed from the absorber tower top. The absorber shall be provided with necessary arrangement to prevent rain water entry and shall have suitable baffle plate, along with fill material to keep entrainment loss less than 0.1% of circulating liquid flow. The outlet air from the absorber must not have free residual chlorine more than 0.1 ppm and this is to be guaranteed by the Bidder. The caustic solution flow rate through the absorber system shall be such that one completely leaked chlorine ton container content can be absorbed within one hour (max.) time. The absorber tower shall be designed to withstand a temperature of 80 deg. C.

Necessary exhaust fans along with ducting shall be provided for connecting to absorption tower. The capacity of the exhaust fans shall be adequate to meet the requirement of absorbing one completely leaked container within one hour as mentioned above. These exhaust fans shall preferably be of bifurcated type and shall be FRP lined. At least one standby exhaust fan shall be provided.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[120]	15.01.2016

The absorber shall be mounted on the caustic solution preparation recirculation tank. The caustic recirculation preparation tank shall be of MSRL construction fitted with motor driven agitator and dissolving basket. Material of construction of dissolving basket and agitator shall be of stainless steel (SS:316) conforming to ASTM Gr. A 351 CF 8M and MSRL respectively. Minimum capacity of the tank shall be suitable to absorb two (2) nos. completely leaked chlorine ton containers plus 20% margin. Caustic concentration in the tank shall not exceed 20% W/W. The tank shall be provided with caustic charging platform with handrails and staircases, level gauges, overflow, water filling connection, etc. The tank shall be designed to withstand temperature upto 80 deg. C.

For caustic solution preparation and recirculation through the absorber system, the system shall have two (2) nos. each of 100% capacity, horizontal centrifugal caustic recirculation pump. Capacity of each pump shall be based on guidelines as given in above Clause no. plus 20% margin.

Each pump shall have suction strainer along with flushing connection from service water supply system. The material of construction of the pump for the complete wetted parts shall be of CIRL construction. The pump shall have auto start facility from the signal or annunciation of chlorine leak detector system. In addition local and remote manual start stop facility shall also be provided. Complete piping and valving system of the caustic and chlorine solution system shall be MSRL and CIRL diaphragm type only. Pump shall trip at low level of respective caustic solution preparation recirculation tank. The pumps shall be designed to operate at maximum temperature, upto 80 deg. C.

A weather cock shall be supplied and located at the top of each Chlorination building for determining wind direction so that in case of leakage of chlorine the working personnel can move against wind direction.

4.11

Lifting & Handling Devices

Two (2) nos. each electric monorail hoist of three (3) tonne capacity shall be provided for chlorine ton container handling system in each Chlorination Building for CW / ACW Systems. One (1) no. electric monorail hoist of three (3) tonne capacity shall be provided for chlorine ton container handling system for Raw Water Chlorination System. This monorail hoist will be utilised to handle chlorine ton containers. For technical details subsection as specified elsewhere may be referred to.

Two (2) nos. lifting bar of suitable design shall be provided for each monorail to grab ton container (empty or full) during handling for CW / ACW. Systems and one (1) no. lifting bar of suitable design shall be provided for each monorail to grab ton container (empty or full) during handling for Raw Water Chlorination System. This shall be supplied complete with load indicator, which shall be suspension type with minimum capacity of 3000 Kgs. Scale shall have tare adjustment so that amount of chlorine in the ton container can be read directly. Scale shall also have a crane hook with 360 deg. C swivel.

Two (2) nos. Platform type weightier 0 to 3000 Kg. capacity shall also be provided in each Chlorination Building for CW / ACW. Systems and one (1) no.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[121]	15.01.2016

Platform type weightier 0 to 3000 Kg. capacity shall also be provided for Raw Water Chlorination System.

4.12

Plant Operation and Control

The operation of the Chlorination System shall be manual. However, the system will be such that the operation of plant can be monitored from the respective control panel, located suitably. The common control panels shall be Relay based and each common control panel should have separate independent modules for the following systems:

- a) Chlorination System
- b) Common Chlorine Absorption System for CW / ACW System

The operation of the pumps will be controlled through local control panel. ON/OFF/TRIP status of all pumps, blowers, agitators and drive motors for equipment under this package will be provided with lamp indication on the respective relay based local control panels in the Control Room. Provision shall also be given for local operation of pumps / drives from local control box. Emergency trip buttons shall be provided for all such devices which need immediate stopping due to any mal-functioning of equipment or due to health / operator hazard. Provision shall be made to operate the Booster pumps through selector switch.

One (1) no. Residual Chlorine Analyser shall be installed at each CW / ACW Sump for chlorine level monitoring. Residual chlorine of the potable water shall be monitored by grab sampling.

The operation of chlorine absorption system in case of chlorine leakage shall be automatic through suitable interlock arrangement with leak detector system.

Chlorinator room and ton container area will be properly ventilated by continuously running ventilation fans. When exhaust fans through scrubber would come into service by detection of sufficient level of chlorine leakage, the normal ventilation fans should stop and restart when exhaust fans stop. Annunciation panel showing tripping of different motors, level alarms from level switches in caustic solution preparation cum recirculation tank, shall be located in the Instrument Control Panel.

Window type audio-visual alarm annunciation facilities to alert the operator due to any abnormal conditions of the process shall also be provided in local control panel.

4.13

Inspection, Testing and Commissioning, Tests at Manufacturer's Works

Shop tests shall include all tests to be carried out at Contractor's works, works of his sub-contractor and at works where raw materials supplied for manufacture of equipment is manufactured. The tests to be carried out shall include but not be limited to the tests described under each specification and following:

- a) Composition of all material, castings, forgings etc.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[122]	15.01.2016

- b) Hydraulic test for pressure vessels, pipes, valves, specialties, pump casing etc.
- c) Test to check faults in rubber lining (as per IS:4628 (Part- I) 1968 or its equivalent) and painting.
- d) Static balancing test on agitators.
- e) Static and dynamic balancing test on all impellers.
- f) Performance test (Head, capacity, power) on pumps and blowers.
- g) Tests on motor as per IS : 325 & IS : 4029.
- h) Control panels are to be checked for dimensions, wiring continuity, insulation, tubing leakage etc.
- i) All panel mounted instruments, local instruments and accessories are to be checked for performance, over range protection etc. as per I.S.A. or other relevant standards.
- j) Control valve are to be tested for body/seat/diaphragm chamber leakage, lift characteristics, body, seat bonnet and material composition.
- k) Load test on monorail hoists and cranes.
- l) Calibration tests for weight/load indicator.
- m) Functional test of the control system.
- n) In addition to the tests specified above, tests to be performed for various electrical equipment, as delineated in respective sub-sections.

Tests before Trial Run (Tests at Sites)

Contractor shall carry out tests at site to prove to the Owner that the equipment of the plant complies with the requirements stipulated and is erected in accordance with requirements. Before the plant is put on trial run the Contractor will be required to conduct tests to demonstrate to the Owner that each item of the plant is capable of correctly performing the functions for which it was specified to. These tests may be conducted concurrently with those required under commissioning sequence. Tests required shall in general be as follows:

- a) All piping and valves after installation, will be tested hydraulically at a pressure, one and half times of the maximum attainable pressure in the system, to check against leak tightness.
- b) All valves (Manual/automatic/remotely operated) shall be operated throughout 100% of the travel and these should function without any trouble whatsoever.
- c) All pumps shall be run with the specified fluid from shut- off conditions to valve wide open condition. Head developed will be checked from the discharge pressure gauge reading. Capacity may be checked from flow indicators where applicable. If flow indicators are not available in the system, capacity can be checked from the volume of fluid handled (determined from level indicator reading of concerned tank) and duration of test.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[123]	15.01.2016

- d) During the test, the pumps & drive motors shall run smoothly without any undue vibration, leakage through gland, temperature rise in the bearing parts, noise, flow pulsation, etc.
- e) Pumps, blowers, etc. shall be tested at site to run smoothly without undue vibration, flow pulsation, temperature rise in bearing parts, noise etc.
- f) All the rubber lining are to be subjected to the following tests as per IS : 4682 (Part-I)
 - i) Adhesion test
 - ii) Resistance to bleeding
 - iii) Thickness measurement
 - iv) Shore hardness
 Epoxy painting shall be checked by dry type thickness gauge.
- g) Visual check on all structural components, welding, rubber lining, painting etc. and if doubt arises will be tested again.
- h) All testing and calibrating instruments and equipment shall be furnished by the contractor free of cost to the satisfaction of the Purchaser.
- i) All monorail hoists shall be subjected to full working load during all motions without showing any sign of defeat.
- j) All the rotating/moving components like agitators, pumps etc. shall be run at the rated speed with water/chemicals upto the normal water level for a period of twenty four (24) hours. During this period all the components shall function smoothly without any unbalance, vibration, overheating at bearing parts, etc.

Checks on electrical items as mentioned in the Specification for electrical items and works.

4.14 Performance Guarantee Tests requirement for Chlorination Systems

- Necessary pumps shall be started and flow shall be established through all the streams. Valves shall be adjusted so as to have equal and rated distribution of flow through all the streams.
 - Random samples will have to be collected from the downstream of chlorinator and it has to be observed whether the chlorine content of each sample shall be within $\pm 25\%$ of the average value of the samples.
 - Capacity of the chlorinator as indicated by the flow indicator shall be compared with the value determined from the flow rate of chlorinated water. The difference shall not exceed 5%.
 - Capacity of the chlorinator shall be tested both at the highest and lowest gas disposal rates.
 - All pumps shall be guaranteed for capacity, total dynamic head and power consumption.
 - All fans and blowers shall be guaranteed for head and power consumption.
- CW Chlorination System
- Each evaporator shall have a normal capacity not less than approved capacity.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[124]	15.01.2016

- Each chlorinator shall be of vacuum solution feed type with a normal approved capacity.
- Chlorine Absorption System for CW and ACW Systems
 - The outlet air from the absorber must not have free residual chlorine more than 0.1 ppm.
 - The caustic solution flow rate through the absorber system shall be such that one completely leaked chlorine ton-container content can be absorbed within one hour (maximum) time.

The capacity of exhaust fans shall be sufficient to suit the above requirement.

- Chlorine Absorption System for Raw Water Chlorination System
 - The outlet air from the absorber must not have free residual chlorine more than 0.1 ppm.
 - The caustic solution flow rate through the absorber system shall be such that one completely leaked chlorine ton-container content can be absorbed within one hour (maximum) time.

The capacity of exhaust fans shall be sufficient to suit the above requirement.

- Various instruments, equipment, chemicals etc. shall conform to the accuracy, ranges and specifications as indicated in specifications of this package.

4.15

Data sheet

Sl. No	Description	Units	CW/ACW system	RW system	Potable water system
1	System process water flow rate	m ³ /hr	As per plant water balance for normal operation		
2	Location of dosing	--	Inlet of pump channel	Stilling chamber	Potable water pump suction
3	Shock dosing rate	ppm	5	NA	NA
4	Shock dosing duration and interval	minutes	30 @ 8 hours	NA	NA
5	Continuous dosing rate	ppm	2	8	2-5
6	Residual chlorine	ppm	0.5	NA	0.2
7	Residual chlorine monitoring	--	Chlorine analyzer required	NA	Grab sampling
8	Requirement of absorption system	---	Yes	Normally no. Concurrence of local statutory body required.	
9	Standby chlorinator	--	Required

5 COOLING TOWER**[NATURAL DRAFT COOLING TOWER]****5.1 General**

The hot water from the condensers shall be cooled in one number [Natural Draught Cooling Tower (NDCT)] for each unit.

5.2 Codes and Standards

S.No	Code	Description
1	IS:456	Code of practice for plain and reinforced concrete.
2	IS:800	Code of practice for general construction in Steel
3	IS:875	Code of practice for design loads (other than earthquake) for buildings and structures
4	IS:1893	Criteria for earthquake resistant design of structures.
5	IS:2911	Code of practice for design and construction of pile foundation (All parts).
6	IS:2950 (Part-I)	Code of Practice for design and construction of raft foundations
7	IS:3370	Code of practice for concrete structures for the storage of liquids (All parts).
8	IS:10262	Recommended guidelines for concrete mix design.
9	SP:23	Handbook on concrete mixes.
10	IS:432(Part 1)	Mild steel and medium tensile steel bars and hard-drawn steel wire for concrete reinforcement.
11	IS:1786	High strength deformed steel bars and wires for concrete reinforcement.
12	BS-4485	Specification for water cooling towers
13	CTI	Cooling Tower Institute Standards
14	ACI-334	Reinforced Concrete cooling Tower Shells- practice & commentary

5.3 Design Criteria

The [NDCT] shall be capable of cooling the rated flow of water at following ambient conditions:

- Design ambient wet bulb temperature : [...] deg C
- Design ambient dry bulb temperature : [...] °C
- Cooling Range : [9/9.5/10] deg C

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[126]	15.01.2016

- Approach : [5] deg C
- Water flow rate : [...] Cu.m/h
- Basic wind speed : [47] m/sec
- Seismic zone : [Zone-...]
- Site elevation : [...] m above MSL
- Barometric Pressure : [1.013]
- Relative Humidity : [...] % (average)

The cooling tower shall be designed for continuous operation throughout the year. All the equipment coming in contact with water shall be designed for the maximum hot water temperature.

The [NDCT] shall be natural draught type and can be cross flow or counter flow type. Cooling tower shall have [PVC film type / splash type fill].

The turbidity level in the cooling water shall be maximum at [...] Cycle of Concentration (COC) as it will handle lake water.

The water distribution system, basin and cold water discharge channel shall be designed to handle 120% of rated water flow without any overflow in basin.

Structural design criteria shall be as per relevant civil specification. For the Technical Requirements of Aviation warning lighting, lightning protection system, earthing, lighting, and cabling, the Bidder is requested to refer relevant electrical specification.

The broad technical parameters of the cooling tower and technological equipment will be as follows:

S.No	Detail	Description
1.	Natural Draught Cooling Towers	[2 Nos. (Two)]
2.	Quantity of water to be cooled per tower	[...] m ³ /h
3.	Cooling Range	[9/9.5/10] deg C
4.	Cold water temperature	[...] deg C
5.	Hot water temperature	[...] deg C
6.	Terminal Temperature Difference	[...] deg C (minimum)
7.	Design wet bulb temperature	[...] deg C
8.	Design ambient relative humidity (average)	[...] %
9.	The max. residual pressure at the	[...] mwc

23.	Chain pulley blocks	[2 Nos. (One 3T CPB for stop log gate and one 1.5T CPB for coarse screen)] at outlet of C.W. channel per tower
24.	Submersible Drain Pumps	[2 Nos. (One per tower)]

5.4

Materials of Construction

The material of construction to be used for various components shall not be inferior to those specified below. Further, all materials shall be so selected to give enduring life considering the water quality in CW system. Wood/timber shall not be used as construction material in any part of the cooling tower.

S.No.	Component Description	Material
i)	Hot water inlet pipes	Mild steel to IS:2062 tested quality with anti corrosive paints
ii)	Hot water distribution system	HDPE / UPVC / FRP or
iii)	Cooling tower basin	R.C.C
iv)	Cooling tower shell structure	R.C.C
v)	Drift Eliminators	Virgin P.V.C. with additives for prolonged life of [20/25] years.
vi)	Louvers	R.C.C
vii)	Fill	Virgin P.V.C with additives for prolonged life of [20/25] years
viii)	Fill Supports	R.C.C.
ix)	Internal support structure for distribution basin	R.C.C
x)	Distribution trough	R.C.C
xi)	Water stops	Virgin P.V.C. with additives for prolonged life of [20/25] years
xii)	Stair case	R.C.C.
xiv)	Miscellaneous steel structure	Galvanized steel flat with painting of epoxy coal tar
xv)	Nozzles/splash cups/orifice	Virgin PVC or Polypropylene

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[129]	15.01.2016

5.5 Cooling Tower Basin and Shell Structure

Cold water from cooling tower basin shall flow by gravity to open approach channel wherefrom it shall be led to the intake of CW Pump House. The basin, CW fore bay and sump shall extend at least 300 mm above the local ground level. The various levels of the cooling tower basin, cooling tower outlet channels and the leading channel are indicated in the Existing Plant drawing No. [.....].

The basin shall be sloped from centre towards periphery, which in turn shall be sloped towards a collecting sump to be provided on the opposite side of outlet channel. From the collecting sump, the water will be drained by minimum 300 mm diameter GRP drain pipe, embedded below the basin floor, into a sludge sump outside the tower basin. Sludge sump shall be minimum [2.0 m wide x 2.5 m length] and of suitable depth. Drainage of cooling tower basin shall be carried out using portable sump pumps, receptacles and hose pipes. Overflow provision for CT basin shall be given in sludge sump.

Detailed specifications on Civil and structural aspects are given in the relevant sub-section/Part of civil section of the specification.

The water loss in the inlet air openings shall be prevented with provision of adequate number of louvers of proper slope, width and spacing or alternatively by over dimensioning the cold water basin. Louvers, if provided, must be properly designed to give uniform distribution of air with minimum pressure drop.

5.6 Fill and Fill Supports

The fill material shall be arranged in such a way to receive hot water uniformly and easy to maintain/replace. The fill material shall be highly resistant to deterioration and shall be non-combustible. Bidder shall furnish details of PVC fill packing with respect to the non-combustible properties, aging effect, vibration caused by water and wind effects. The properties and make of fill shall be subject to Owner's approval.

The type of fill shall be film type fill. In case of counter flow tower, the fill preferably shall not be extended into the air inlet area.

5.7 Water Distribution System

The hot water distribution to fill packs shall be divided in to minimum two independent segments such that maintenance can be carried-out by isolating relevant segment when rest of cooling tower is in operation. Necessary isolation valves in hot water pipes shall also be provided.

The arrangement of the distribution system shall permit a satisfactory distribution of water over the whole of the tower at all reasonable loads. The distribution of water shall be in troughs/pipes independently supported from the structure and easily removable. The water should be distributed across the plan area of the fill, so that no point varies more than 5% of the average water flow.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[130]	15.01.2016

Provision shall be made for easy flushing or cleaning of all troughs/pipes. Hot water pipes shall be properly embedded in the flume or shell, as the case may be, taking into account the forces coming on them.

The distribution troughs/pipes shall not be laid on top of walkways to avoid obstruction to movement to the walkways.

All section of the water distribution system shall have adequate flow capacity to meet the maximum requirements of the thermal design of the tower.

5.8 Drift Eliminators

The maximum drift loss shall be limited to 0.02% of total water in circulation in all ambient conditions. The air pressure drop across the eliminators shall be kept to a minimum by providing proper number of air flow direction changers across the eliminators. The water collected in the eliminators shall be returned to the tower basin and shall not mix with the discharge air system.

The function of drift eliminator is to remove as much drift as practical from the tower exhaust without adding a large airside pressure drop. Drift eliminators remove entrained water from the discharge air by causing it to make sudden changes in direction. The resulting centrifugal force separates the drops of water from the air, depositing them on the eliminator surface, from which the water flows back into the tower. Eliminators are generally classified by the number of directional changes the air has to make. Thus the drift eliminators must be as corrosion resistant as the fills.

5.9 Electricals, Civil and Control and Instrumentation

For Electrical, I&C and Civil part, refer relevant refer Part-B, Part-C and Part-D respectively of Volume-II of this specification.

5.10 Shop Tests

Quality plans for the various equipments/items shall be furnished for Owner's approval. All tests shall be carried out as per the approved Quality plan and test certificates shall be furnished to the Owner for review.

All the material for the various components/parts of the equipment's shall be tested for mechanical and chemical properties including hardness as per the requirements of relevant codes/standards mentioned in this specification.

Galvanised items shall be checked for thickness of coating, weight of zinc coating, adhesion test, visual exam and pierce test (uniformity of coating) as per the requirement of relevant IS codes.

The PVC material for fills shall be tested for the following properties as per the requirement of CTI Bulletin STD-136.

- Tensile strength, yield, elastic modules
- Impact Resistance before and after U.V. exposure of 500 hrs.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[131]	15.01.2016

- Heat distortion
- Flammability
- Ultraviolet light Resistance (500 hrs exposure)
- Density as per ASTM or DIN code
- Vicat Softening Temp. As per IS: 6307/DIN 53460

Above tests shall be carried out in a laboratory approved by Owner on representative test samples. The fills shall be checked for dimensions including minimum thickness, length, corrugation height, and load test after gluing.

5.11

Performance Guarantee Tests

Bidder shall guarantee that the equipment offered shall meet the ratings and performance requirements. The cold water temperature as indicated in technical data sheets shall be guaranteed for the design conditions of CW flow, range, ambient WBT & RH as specified in technical data sheet.

“Predicted cold water temperature” shall then be arrived at from the guaranteed cold water temperature by correcting the same for the test conditions of range, ambient conditions and corrected circulating water flow using the performance curves furnished by the bidder.

Bidder shall demonstrate by means of test as per relevant test codes that drift loss is limited to 0.02%. To ascertain the fulfillment of Guarantees, performance test shall be carried out on the tower at site. The procedure to be followed and other conditions shall be as given below:

Acceptance test procedure shall cover the determination of the thermal capability and verification of all the guarantees of the cooling tower. The following codes and standards shall be applicable for conducting test unless otherwise modified or supplemented by the enclosed procedure and mutually agreed to between the Owner and the Bidder.

- DIN 1947 – VDI / ATC-105 - Acceptance test code for water cooling towers (latest version)
- B S-4485-Specification for water cooling towers.
- BS-1042-Methods for the measurement of fluid flow in pipes.
- ASME 195-Supplements on instruments and apparatus.

5.12

Conduct of Tests

- The responsibility for conducting the test will be with the Bidder. PG test shall be carried out by the bidder *[within one year]* of successful completion of trial operation of the cooling tower and at a time when the atmosphere conditions are within limits of deviation from the design conditions as specified in this section preferably in the period from *[May to September]*.
- Two numbers of pressure gauges shall be provided in water ducts. Hot water header of the cooling tower shall be provided with pitot tubes along with

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[132]	15.01.2016

necessary isolating valves, stub connections for measurement of water flow. Pitot tube type elements equipped with traverse mechanism shall be provided to ensure higher accuracy of measurement. One number anemometer for measuring ambient wind velocity shall be furnished. One number mechanically aspirated psychrometer shall be furnished for measurement of wet bulb temperature.

- c) Performance test shall be carried out based on ambient WBT. The performance curves of the towers showing variation in performance with change in ambient wet bulb temperature, cooling range, dry bulb temperature, relative humidity, wind speed, water loading of the tower etc. required to ascertain the performance of the tower shall be furnished along with the bid. Performance curves applicable to 90%, 100% and 110% of the design water flow rate shall be furnished. Each set shall consist of three or more cooling range curves and at least four relative humidity curves, arranged to show the effects of wet bulb temperature, relative humidity and cooling range on outlet water temperature. The range curves shall be presented in uniform increments of 0.5 °C with sufficient scope to cover approximately 20% of design range. The relative humidity curves shall be presented for spaced increments to cover the extent of expected conditions such as 5%, 20%, 40%, 60% and 100% relative humidity. The design conditions shall be indicated on the set applicable to design water flow rate. The dry bulb temperature associated with the wet bulb on each fixed relative humidity graph shall be included. All performance curves shall be based on ambient wet bulb temperature.
- d) Every effort shall be made to run the test under design conditions, or as close to design conditions as possible.

6	IS:2950 (Part-I)	Code of Practice for design and construction of raft foundations
7	IS:3370	Code of practice for concrete structures for the storage of liquids (All parts).
8	IS:10262	Recommended guidelines for concrete mix design.
9	SP:23	Handbook on concrete mixes.
10	IS:432(Part 1)	Mild steel and medium tensile steel bars and hard-drawn steel wire for concrete reinforcement.
11	IS:1786	High strength deformed steel bars and wires for concrete reinforcement.
12	BS-4485	Specification for water cooling towers
13	CTI	Cooling Tower Institute Standards
14	ACI-334	Reinforced Concrete cooling Tower Shells- practice & commentary

5.3 Design Criteria

The [IDCT] shall be capable of cooling the rated flow of water at following ambient conditions:

- Design ambient wet bulb temperature : [...] deg C
- Cooling Range : [9/9.5/10] deg C
- Approach : [5] °C
- Water flow rate : [...] Cu.m/h

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[134]	15.01.2016

- Basic wind speed : [47] m/sec
- Seismic zone : [Zone-...]
- Site elevation : [...] m above MSL
- Barometric Pressure : [1.013]
- Relative Humidity : [...] % (average)

The cooling tower shall be designed for continuous operation throughout the year. All the equipment coming in contact with water shall be designed for the maximum hot water temperature.

The [IDCT] shall be cross flow or counter flow type. Cooling tower shall have [PVC film type / splash type fill].

The turbidity level in the cooling water shall be maximum at [...] Cycle of Concentration (COC) as it will handle lake water.

The water distribution system, basin and cold water discharge channel shall be designed to handle 120% of rated water flow without any overflow in basin.

Structural design criteria shall be as per relevant civil specification. For the Technical Requirements of Aviation warning lighting, lightning protection system, earthing, lighting, and cabling, the Bidder is requested to refer relevant electrical specification.

The broad technical parameters of the cooling tower and technological equipment will be as follows:

S.No	Detail	Description
1.	Induced Draught Cooling Towers	[2 Nos. (Two)]
2.	Quantity of water to be cooled per tower	[...] m ³ /h
3.	Cooling Range	[9/9.5/10] deg C
4.	Cold water temperature	[...] deg C
5.	Hot water temperature	[...] deg C
6.	Terminal Temperature Difference	[...] deg C (minimum)
7.	Design wet bulb temperature	[...] deg C
8.	Design ambient relative humidity (average)	[...] %
9.	Quality of makeup water	As per clarified water analysis given in Section-I of Volume-II
10.	Type of fill	[Film Type/Splash Type/Pre stressed RCC]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[135]	15.01.2016

S.No	Detail	Description
		<i>Splash fill</i>
11.	Design pressure for hot water distribution	[...] kg/cm ²
12.	Maximum drift loss allowable	[0.02 % (Max.)] of Rated Capacity.
13.	Type of Tower	<i>[Counter Flow/Cross Flow]</i> type
14.	Storage capacity of each basin at normal working level (approx.)	To suit the levels indicated in the existing drawing
15.	Tower Operation	Continuous

5.4 Constructional Feature

5.4.1 Material of Construction

The material to be used for various components shall be as follows. Wood/ timber shall not be used as construction material in any part of the cooling tower.

S.No.	Component Description	Material
i)	Hot water Header	Mild steel to IS:2062 tested quality with anti corrosive paints/GRP
ii)	Hot water distribution system	PVC (IS 4985 Class 3) / GRP / HDPE (IS 4984 PN6, Grade PE 80) / or RCC/pre-cast open trough.
iii)	Cooling tower basin	R.C.C
iv)	Cooling tower shell structure	R.C.C
v)	Drift Eliminators	Virgin P.V.C. with additives for prolonged life of [20/25] years.
vi)	Louvers	R.C.C
vii)	Fill	Virgin P.V.C with additives for prolonged life of [20/25] years
viii)	Fill Supports	SS:304 channel or RCC
ix)	Recovery Stack	R.C.C
x)	Stair case	R.C.C.
xi)	Miscellaneous steel structure	Galvanized steel flat with painting of epoxy

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[136]	15.01.2016

S.No.	Component Description	Material
		coal tar
xii)	Nozzles/splash cups/orifice	Virgin PVC or Polypropylene
xiii)	Fan blades	Fiber glass reinforced polyester (hollow cast)
xiv)	Fan Hub	Heavily Galvanized M.S.
xv)	Drive shaft and coupling	Stainless steel conforming to AISI 304 /Carbon fibre composite material with SS 304 couplings
xvi)	Base frame and base plate for gear box and motor	Heavily Galvanized MS

5.4.2 Cooling Tower Basin and Shell Structure

Material of cooling tower basin and super structure shall be as mentioned above. The basin shall be provided with free board of at least 0.3 m above maximum water level. Velocity of water at the outlet of cooling tower should not exceed 1 m/sec. If required, the basin may be suitably depressed to meet this requirement.

5.4.3 Cold Water Basin Drainage Arrangement

- Cold water from the basin shall flow by gravity to Cooling water channel through the outlet channel.
- Provision shall be made to completely drain the basin. For this purpose the basin floor shall slope towards the drain sump in the Cooling Tower.
- Water shall flow from the drain sump into an external sludge sump through a 300 mm NB CI pipe and a CI gate valve of size 300mm NB with extended spindle. Two sludge sumps shall be provided for each tower. One number sludge disposal pump of capacity [150 m³/h] and suitable head shall be supplied for each sludge sump.

5.4.3 Inlet Louvers

The water loss in the inlet air openings shall be prevented with provision of adequate number of louvers of proper slope, width and spacing or alternatively by over dimensioning the cold water basin by minimum 1.0 meter all-around.

5.4.3 Fill and Fill Supports

- Fill shall be of [splash type/film type] and easily installable.
- The fill material shall be highly resistant to deterioration and shall be fire retardant. PVC/PP fill, shall be of proven quality. The make and its properties

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[137]	15.01.2016

shall be subject to Owner's approval. Bidder shall furnish details of PVC/ PP fill regarding fire retarding properties, ageing effect, vibration caused by water and wind effects. PVC /PP fill shall be white/ cream/ light grey or lighter. Black fills are not acceptable. In case of PVC/ PP fill, the material should be ultra violet ray stabilized and only virgin PVC/ PP material should be used.

- (iii) The type of fill to be supplied for this package shall be of proven design. Necessary supporting data for this shall be enclosed along with the bid.
- (iv) Type Test of PVC/ PP Material: In addition to the routine tests specified elsewhere, ultra-violet exposure for 500 hours on the PVC/ PP material shall be carried out for this contract once as per ASTM-G155/ISO 4892/equivalent, Test Method 3 and Impact resistance test before and after UV exposure shall be conducted as per ASTM D-256.

The above type test shall be carried out by the Bidder at reputed third-party laboratory.

5.4.4 Inlet Water Distribution System

- (i) General Requirements

Hot water distribution system of the tower shall be designed to ensure uniform distribution to all operating cells and also to all areas in a cell. For cross flow type of towers a minimum free board of 50 mm shall be provided with the standby cell not in service. Each cell shall be able to operate independently. For counter flow towers sufficient head room shall be provided between the water distribution system and packing for inspection and maintenance

- (ii) Specific Requirements for cross flow towers

The hot water distribution basin shall be provided with a suitable cover to avoid direct sun rays falling on the distribution trough/ basin to minimize algae growth and to prevent choking of distribution nozzles. The covers provided shall be easily openable for inspection and maintenance of the distribution system.

5.4.5 Drift Eliminators

Drift eliminators shall be designed to keep the drift loss to a maximum of 0.02% of total water in circulation. The drift eliminators shall be of profile type and gluing is not allowed.

5.4.6 Recovery Stack

Recovery stack shall be of proper shape to improve the fan performance. The height of the stack shall be sufficient to recover the velocity and discharge the humid air to a sufficiently high level to minimize recirculation. The maximum efficiency of the stack for velocity recovery to be considered for calculation of fan power consumption shall be 75%. A minimum clearance between the stack and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[138]	15.01.2016

fan blades shall be maintained along the entire periphery of the stack to prevent the rubbing of fan blades while rotating.

5.4.7 Fan Deck

- (i) Fan deck shall act as an access platform for the mechanical equipment.
- (ii) Adequate access for roof deck, fan deck, distribution level, drift eliminators shall be provided. For counter flow towers there shall be provision for access to water distribution level of each cell from tower roof deck or through stair case provided at each cased face of the tower. Walkways with platforms and suitable hand and knee rails and toe guards shall be provided inside towers.
- (iii) Handrails shall be provided all around the periphery of the cooling tower fan deck with vertical pipe posts spaced at not more than one meter.

5.4.8 Gear Box

- (i) The fans shall be motor driven through suitable reduction gear. Flexible coupling shall be provided both at motor and reducer to minimize the effect of misalignment on account of any setting and/or warping. Flexible couplings should be pin and bush type. The support structure of the reduction gear shall be rigid. The reduction gear shall be heavy duty type suitable for installation in outdoor and humid environment. The gear drive shall be of spiral bevel or worm type and reduction may be done either in single stage or multi stages.
- (ii) Design rating of the gear box shall be arrived at after considering a service factor of minimum 3.0. In selecting the gear box design rating the thermal derating effects at 50 degree C shall also be considered. Detailed gear box sizing calculation shall be furnished for Owner's approval during detailed engineering. In no case the design thermal rating of the gear box shall be less than 125% of the name plate KW rating of the selected drive motor. Also, the mechanical rating shall be checked so that minimum 25% margin is available at Pull Out Torque of the motor.
- (iii) The piping for oil level gauge/ dipstick and thermometer shall be arranged in such a way that oil can be drained and refilled from outside the stack. This pipe shall have proper supports at frequent intervals and shall be insulated. Further, a breather connection shall be provided in the gear box. The breather provided shall be such that it prevents moisture from entering the gear box. The breather arrangement and details of oil seals shall be to Owner's approval.
- (iv) The gear box design should be such that the temperature of oil shall be within the manufacturer's recommended limits during all operating conditions.
- (v) The gear boxes shall utilize non-hygroscopic oil for lubrication so that its lubricating properties are not lost if contaminated with water vapour.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[139]	15.01.2016

- (vi) Each gear box shall be provided with a base plate. The vibration measurement sensors shall be mounted on the gear box.
- (vii) Bidder shall furnish the maximum temperature that the lube oil can withstand and shall guarantee the maximum lube oil temperature when the gear reducer is in operation.

5.4.9 Drive Shaft

The drive shaft shall be of tubular construction and shall be statically as well as dynamically balanced. The design of the shaft shall take into consideration a factor of safety of 2 (minimum) over the torque to be transmitted at design duty conditions. The fan shaft shall be designed in such a way that the first critical speed shall be at least 120% of the operating speed of the shaft. Shaft design requiring intermediate bearings are not acceptable. In case of Carbon fiber composite material, drive shaft shall have the following additional requirements.

- 1) Shaft flanges shall preferably of Carbon fiber composite material.
- 2) Bonding between shaft and shaft flange shall be done by a proven method.
- 3) The Carbon fiber composite material should be ultra violet ray stabilized.

5.4.10 Fans

- (i) Induced draught fans of suitable capacity shall be provided. Fans shall be axial/propeller type with blades which can be adjusted so that pitch can be altered +/- 5 deg. from the normal setting. For adjusting the fan blades, graduated stop marks with suitable locking arrangements shall be provided on the hub so that all the blades can be set to the same angle accurately. The fan blades shall be easily removable. These shall be of aero-foil section and shall provide uniform air velocity from hub to tip with low noise and vibration. Stack shall be provided to eliminate air turbulence in the throat area. Blades, shanks and hubs shall be suitably insulated to prevent electrolytic corrosion.
- (ii) The number of blades shall not exceed twelve (12) and the blade tip velocity shall not exceed 65 m/Sec. Each fan shall be driven by an electric motor.
- (iii) Fans to be supplied for this package shall be of proven design and make and shall be subject to approval of Owner.

5.4.11 Fan Motor

Each electric motor shall be provided with a base plate and a base frame. Fan motor shall have at least 10% margin over the actual power requirement of the gear box when the fan is working at rated duty point and at 50 degree C ambient temperature.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[140]	15.01.2016

5.5 Shop Tests

Quality plans for the various equipments/items shall be furnished for Owner's approval. All tests shall be carried out as per the approved Quality plan and test certificates shall be furnished to the Owner for review.

All the material for the various components/parts of the equipment's shall be tested for mechanical and chemical properties including hardness as per the requirements of relevant codes/standards mentioned in this specification.

Galvanised items shall be checked for thickness of coating, weight of zinc coating, adhesion test, visual exam and pierce test (uniformity of coating) as per the requirement of relevant IS codes.

The PVC material for fills shall be tested for the following properties as per the requirement of CTI Bulletin STD-136.

- Tensile strength, yield, elastic modules
- Impact Resistance before and after U.V. exposure of 500 hrs.
- Heat distortion
- Flammability
- Ultraviolet light Resistance (500 hrs exposure)
- Density as per ASTM or DIN code
- Vicat Softening Temp. As per IS: 6307/DIN 53460

Above tests shall be carried out in a laboratory approved by Owner on representative test samples. The fills shall be checked for dimensions including minimum thickness, length, corrugation height, and load test after gluing.

5.6 Performance Guarantee Tests

Bidder shall guarantee that the equipment offered shall meet the ratings and performance requirements. The cold water temperature as indicated in technical data sheets shall be guaranteed for the design conditions of CW flow, range, ambient WBT as specified in technical data sheet.

"Predicted cold water temperature" shall then be arrived at from the guaranteed cold water temperature by correcting the same for the test conditions of range, ambient conditions and corrected circulating water flow using the performance curves furnished by the bidder.

Bidder shall demonstrate by means of test as per relevant test codes that drift loss is limited to 0.02%. To ascertain the fulfillment of Guarantees, performance test shall be carried out on the tower at site. The procedure to be followed and other conditions shall be as given below:

Acceptance test procedure shall cover the determination of the thermal capability and verification of all the guarantees of the cooling tower. The following codes and standards shall be applicable for conducting test unless otherwise modified

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[141]	15.01.2016

or supplemented by the enclosed procedure and mutually agreed to between the Owner and the Bidder.

- DIN 1947 – VDI / ATC-105 - Acceptance test code for water cooling towers (latest version)
- B S-4485-Specification for water cooling towers.
- BS-1042-Methods for the measurement of fluid flow in pipes.
- ASME 195-Supplements on instruments and apparatus.

5.7

Conduct of Tests

- a. The responsibility for conducting the test will be with the Bidder. PG test shall be carried out by the bidder *[within one year]* of successful completion of trial operation of the cooling tower and at a time when the atmosphere conditions are within limits of deviation from the design conditions as specified in this section preferably in the period from *[May to September]*.
- b. Two numbers of pressure gauges shall be provided in water ducts. Hot water header of the cooling tower shall be provided with pitot tubes along with necessary isolating valves, stub connections for measurement of water flow. Pitot tube type elements equipped with traverse mechanism shall be provided to ensure higher accuracy of measurement. One number anemometer for measuring ambient wind velocity shall be furnished. One number mechanically aspirated psychrometer shall be furnished for measurement of wet bulb temperature.
- c. Performance test shall be carried out based on ambient WBT. The performance curves of the towers showing variation in performance with change in ambient wet bulb temperature, cooling range, wind speed, water loading of the tower etc. required to ascertain the performance of the tower shall be furnished along with the bid. Performance curves applicable to 90%, 100% and 110% of the design water flow rate shall be furnished. Each set shall consist of three or more cooling range curves, arranged to show the effects of wet bulb temperature, and cooling range on outlet water temperature. The range curves shall be presented in uniform increments of 0.5 deg C with sufficient scope to cover approximately 20% of design range. The design conditions shall be indicated on the set applicable to design water flow rate. All performance curves shall be based on ambient wet bulb temperature.
- d. Every effort shall be made to run the test under design conditions, or as close to design conditions as possible.

6 AIR CONDITIONING & VENTILATION SYSTEM

6.1 Codes and Standards

Apart from the specific equipment standards and specifications the following broad references/standards shall be considered while designing the system:

S.No	Code	Description
1	ASHRAE	American Society for Heating, Refrigeration and Air conditioning Engineers
2	ISHRAE	Indian Society for Heating, Refrigeration and Air conditioning Engineers
3	ARI	Air Conditioning and Refrigeration Institute
4	ECBC	Energy conservation Building Code 2007
5	NBC	National Building Code of India 2005
6	ARI 430	Central station Air Handling Units
7	ARI 410	Forced Circulation Air-Cooling and Air Heating coils
8	ARI 550	Water chilling package using the Vapor compression cycle
9	BIS 277	Galvanized Steel Sheets
10	BIS 325	Three phase induction motors
11	BIS 655	Metal Air ducts
12	BIS 7613	Method of testing panel type air filters for air-conditioning and Ventilation process
13	BIS 3588	Electric axial fans
14	BIS 4894	Centrifugal fans
15	UL 555	Fire dampers
16	BIS 7098 Part-1	Power cables
17	BIS 1554 Part-1	Control cables
18	BIS 4237	MCC
19	BIS	For Control panels as applicable

6.2 Schedule of Air Conditioning & Ventilation System

{Indicate in the table below, the desired type of Air Conditioning and Ventilation System with capacity and Quantity}

The quantity wherever indicated is the minimum requirement. Heat load calculation for the ventilation system shall be submitted by the Bidder to arrive at the capacity and quantity of the system and accordingly if it requires more than the quantity wherever indicated, the same shall be provided within the scope of the Bidder.

6.3 Design Criteria

6.3.1 Design Inputs

i. Outdoor Design Conditions:

The outdoor design conditions considered for the site as per ISHRAE Handbook are as follows

Season	Dry Bulb Temp. (°C)	Wet Bulb Temp. (°C)
Summer	[...]	[...]
Winter	[...]	[...]
Monsoon	[...]	[...]

ii. Indoor Design Conditions for Air Conditioned Areas:

The indoor design conditions are as follows:

Dry bulb temperature : 23°C ± 1°C

Relative humidity : 55 ± 5%.

iii. Indoor Design Conditions for mechanically ventilated areas

Inside dry bulb temperature shall be not exceeding ambient summer temperature or based on number of air changes/hr, whichever results in higher air flow rate shall be selected.

Air conditioning system shall be designed generally as per ASHRAE / ISHRAE

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[147]	15.01.2016

Methodology to provide specified environmental condition for equipment and/or personnel during all modes of plant operation and also as specified in this chapter. Filtering, cooling, heating, humidification/dehumidification of the supply air and its distribution as required shall be done to maintain the specified condition within the specified limits.

6.3.2 Assumptions

- i. Lighting load has been assumed to be minimum of 2 Watts / Sq. Ft
- ii. Computer load has been assumed as 150 watts per Computer.
- iii. Fresh air changes per hour is taken as 1.5 or 35 m³/h per person, whichever results in higher air flow would be considered for AC design systems.

6.3.3 Sizing Criteria

The design methodology is in line with ASHRAE / ISHRAE guidelines and norms. The following input data for lighting heat load, equipment heat load, occupancy as well as resulting capacity shall be considered for sizing the system.

The Ventilation air flow rate shall be estimated considering the following major loads as follows:

- i) Lighting load (kW)
- ii) Equipment heat load including steam piping as well as the dissipated heat, solar transmission through the building wall and glass, and any other sources of heat. (kW)
- iii) Human load (kW)
- iv) Air changes per hour (ACPH) as detailed in the subsequent clauses.
- v) For the summer ambient conditions as furnished to be considered.

6.3.4 Availability Requirement

- a) The equipment selected shall be new and best of its type available with respect to material and workmanship considering the continuous and reliable operation. The equipment shall be maintenance free as far as practicable.
- b) The spares shall be easily available.
- c) All materials used shall be free from surface defects, rust, cracks and deformations.
- d) The finish of the equipment and its components shall be of first class quality.
- e) The components and equipment shall be so selected that the system down time is kept minimum. System design shall be such that fast and easy replacement of components could be possible wherever necessary. To reduce down time, the standby arrangement shall be considered. To the extent possible models and sizes of equipment shall be identical to ensure minimum inventory and interchangeability of parts, equipment and systems.

6.3.5 Redundancy Requirement

- a) Control rooms air conditioned by split air conditioning units / window air conditioners shall have 100% standby provision.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[148]	15.01.2016

- b) Premises air conditioned by packaged air conditioners shall be provided with water cooled packaged air conditioners having capacity of 2x100% or 3x50%.
- c) Cooling towers and pumps shall be provided with 2x100% capacity.

6.4 Type and Rating of Equipment

6.4.1 Equipment Selection Criteria

a) Air Conditioning System

Control rooms shall be air conditioned by providing split air conditioning units / window air conditioners including all accessories with 100% standby provision. Window air conditioner may be used if the system capacity is up to 2TR.

The cooling capacity of air conditioning system shall be decided on the basis of heat dissipated in the premises, building heat radiation, illumination heat, occupancy heat, make up air heat etc. in the premises. Fresh air quantity will be based on 1.5 air changes / hour. The system shall have at least 10% margin on capacity.

b) Ventilation System

The capacity of ventilation systems shall be decided on the basis of total heat dissipated in the premises. However minimum 20 air changes per hour for fresh filtered air supply system and exhaust / general air exchange ventilation shall be maintained. The equipment will have at least 10% margin on capacity. Multiple units shall be provided.

Fresh filtered air supply system shall consist of fan & motor unit, dry panel type air filter, air intake louvers, ducting, supply air grills, dampers, electrics, instrumentation & controls and multi louver gravity dampers.

Centrifugal fan shall be used for fresh filtered air supply system. However, axial flow (tube axial) fan may be used for system capacity up to 5000 m³ /h.

Exhaust ventilation system shall consist of fan & motor unit, out let cowl with bird screen / back draft damper & ducting if any etc.

6.5 Design and Construction Details

The equipment will be normally as per general specification of the project. However, brief description of main equipment is given below:

6.5.1 Split Air Conditioner

The Split Air Conditioners shall be generally comprises of the following units:

- a) Hermetic compressor
- b) Air-cooled condenser
- c) Cooling coil & refrigerant circuits
- d) Blower unit with filters
- e) Hand held remote control unit
- i) Outdoor unit comprising compressor with cooling fan, condenser & indoor unit comprising of blower, filter & cooling coil shall be mounted in attractive, corrosion resistant enclosures.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[149]	15.01.2016

- ii) The refrigerant compressor shall be hermetically sealed reciprocating / scroll / rotary type operating on Low GHG / ODP refrigerant. It shall be capable of operating continuously in an industrial atmosphere. The Bidder shall indicate the safety measures provided for the compressor and motor.
- iii) The condenser shall be air-cooled copper coil with Aluminium fins type with ample condensing surface. Tubes shall be arranged in a staggering manner for better efficiency.
- iv) The cooling coil shall be of direct expansion type with copper tubes and mechanically bonded aluminum fins; it shall be sufficiently deep for effective cooling.
- v) The refrigerant circuit between outdoor unit and indoor unit shall be carried out as per site conditions. The circuit shall include thermostatic expansion valve, filter drier and liquid line shut off valve. It shall be protected by High - Low pressure start.
- vi) Fan shall be provided to handle the conditioned air. The fan shall be dynamically balanced and its operation shall be smooth and quiet. It shall be complete with direct drive motor. The bearings shall be self-lubricating type.
- vii) The air filter in the indoor unit shall be of dry type. It shall have large surface area and good dust holding capacity. The cleaning efficiency of the filter shall be more than 90% down to 10 microns. The filter shall be of easily replaceable and washable type. A selector switch with "RESET" position shall be provided for running the fan alone with cooling as required. Thermostat shall be provided for control of temperature as per the designed inside conditions.
- viii) The Split AC unit shall conform to IS 1391-1992. Part-II.
- ix) Voltage stabilizers shall be of suitable rating with transformer, high and low voltage cut-off, with built in timer, isolator etc.
- x) Necessary instrumentation and controls with remote control facilities for Split AC shall be provided for the systems.

6.5.2 Package Air Conditioners

Design and Engineering the complete Packaged Air-Conditioner units for the premises shall be in accordance with the stipulations of the specification below considering un-interrupted 24 hours operation in a day.

Under-deck insulation (minimum 25mm thick) with PUF shall be provided wherever roofs are exposed to Sun.

R22, R407C, or any Zero/Low ODP and GWP Refrigerants shall be considered with Scroll/Screw/Rotary type compressors.

Insulation material shall be either Cross Linked Polyethylene (XPE) with K-Value of min. 0.033 W/mk at 240C at density of 33Kg/m³ (minimum 12 mm thick) or resin bonded Fiberglass / Rockwool mattress with K-Value of min.0.033 W/mk at 240 C at density of 48Kg/m³ (minimum 50 mm thick).

Incidental civil works such as making openings in walls/ floors / ceilings for taking out cables / piping / supports etc. and making them good by providing and fixing

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[150]	15.01.2016

framework for the grills / diffusers etc.

The cooling capacity shall be decided on the basis of heat dissipated by equipment, building heat radiation, illumination heat, occupancy heat, make up air heat etc. in the premises.

System shall be suitable for un-interrupted continuous operation.

Noise level shall be within limit as specified in National Building Code-2005.

a) Water cooled package air-conditioning units.

Air Conditioning System shall comprise of the following:

- i) Water-cooled packaged air conditioner
- ii) Cooling towers
- iii) Pumps
- iv) Ducting
- v) Dampers
- vi) Grills
- vii) Associated water piping and fittings
- viii) Electrics, Instrumentation and controls

The Packaged Air conditioners shall be mounted on attractive, corrosion – resistant, thermally & acoustically insulated cabinets. The refrigerant circuit shall be completely piped at factory & transported with operating charges of refrigerant & oil. The circuit shall include thermostat, expansion valve, distributor, liquid strainer, dehydrator & liquid line shut-off valve. The circuit shall be protected by Hi-Lo pressure stat. The refrigerant used shall be eco-friendly.

Air filters shall be provided for the fresh air as well as total air. The air filter shall be dry panel type. The cleaning efficiency of the filter shall be more than 90 % down to 10 microns. The filter shall be easily replaceable type.

Cabinet of packaged unit shall be provided with suitable openings with flanges for fresh & re-circulated air ducts with hand operated control dampers. Thermostat, humidistat & strip heaters shall be provided for control of temperature & humidity as per the inside design conditions.

The noise level for the package AC unit at 1m distance will be limited to 65dB (A).

b) Humidity Control

The strip heater will be installed in the supply air duct at the discharge end of blower for dehumidification purpose and the strip heater will be interlocked with the blower unit to prevent independent control/ switching of heaters. Safety thermostat shall be installed in the duct line near strip heater for safety precaution.

c) Cooling Towers

Induced draft type, FRP cooling tower shall be provided for the cooling of condenser water.

Cooling tower shall be designed, manufactured and performance tested as per CTI codes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[151]	15.01.2016

The capacity of the cooling tower basin shall be adequate to take care of the entire cooling water required for the air conditioning systems. The makeup water shall be taken from the service water line.

The cold-water basin shall be of FRP construction. Cooling tower basin shall have accessories and connections for makeup, quick fill, drain and overflow. Ball and float valve is to be provided for makeup water line. The makeup water supply pipe shall be positioned at least 2 diameters above the maximum level in the basin.

The structural framework of the tower including all members and connections shall be designed for operating loads and prevailing wind pressure. Steel members shall be of hot dipped galvanized steel and of sufficient sizes to safely withstand all imposed loads. Framework, bolts, nuts and washers shall be non-corrosive type.

All the fasteners shall be of stainless steel. Rubber/neoprene gaskets must be used on all bolted joints as a seal against water leakage.

Motor of induced draft fan shall be of weather-proof construction.

Duct work for air conditioning systems

Air duct for air conditioning systems shall be fabricated as per latest revision of IS:655 /ASHRAE standards.

All longitudinal joints shall have double 'S' seam joint and circumferential joint will be lap joint. All joints are to be airtight. Ducting shall be fabricated at site from GI sheets.

Flanges of sheet metal duct will be of angle iron type riveted with G.I sheet rivet on duct perimeter. Flanged joints should be made air tight with use of felt gaskets. Spacing of duct flanges will be about 3 meters.

Overhead ductwork shall have ceiling suspended type duct hangers comprising rod suspenders threaded at either ends and angle iron horizontal support for duct. There will be no provision of insert plates. The Contractor is required to fix anchor fasteners in the slab to hook up the rod hangers. Spacing for duct supports should be about 2 to 3 meters.

Turning guide vanes are to be provided inside the duct wherever change of direction occurs, to minimise eddy formation.

Bends/ elbows, wherever used, in ductwork shall have radius not less than the depth of ductwork in change of direction.

Manually operated volume control damper is to be provided at each supply air diffuser outlet. Collar piece is to be provided to duct bottom to connect with throat of diffuser. The diffuser should flush with false ceiling.

Sheet metal duct shall be acoustically and thermally insulated.

The space between false ceiling and roof slab shall be used for return air. Return air grill should be provided in false ceiling.

Duct work shall be complete with flanges, stiffeners, fasteners & hangers.

The recommended air velocities in the plenum system are as given below:

Main ducts : 6 to 8 m/sec

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[152]	15.01.2016

Branch ducts : 4 to 5 m/sec

Branch risers : 4 m/sec

Motor operated fire dampers shall be provided in the air ducts at the supply end. Design of diffusers, grills etc. shall be made by the contractor matching the lighting fittings and interior decorator of the area to be conditioned.

Ducts shall be designed such that return air should come back to AHU without additional fan. In case such fan is unavoidable, tube axial type return air fan shall be envisaged.

d) Insulation

The following items are to be insulated:

- i) Inside surface of the air handling units.
- ii) Supply air duct and return air duct (as required). The insulation thickness to be indicated for duct.
- iii) Refrigerant piping from expansion valves and up to the evaporator and from the evaporator outlet to the compressor unit.
- iv) All drain lines connected with above insulated equipment and piping.

6.5.3 Pressurised Ventilation System

a) Centrifugal Fan

- i) The fan impeller shall be of backward curved blades.
- ii) The fan shall be of rugged steel construction and suitable for industrial duty condition.
- iii) Direct driven fan shall be preferred.
- iv) The fan unit shall be reasonably noise and vibration free Noise level for fan and motor assembly at 1.5 m distance shall be limited to 85 dB (A).
- v) The specification for fan i.e. capacity, total pressure working conditions etc. shall be for 20 deg. C. & 760 mm Hg.
- vi) The fan shall be single inlet single width (SISW) / DIDW type as per requirement.
- vii) The rotating assembly of the fan shall be statically and dynamically balanced.
- viii) Fan housing shall be of welded construction and provided with flanges at inlet and outlet sides for duct connections.
- ix) The fan casing and blade shall not be less than 2.5 mm thick MS sheet. The shaft shall be of EN 8.
- x) Variable inlet vane damper shall be provided at the centrifugal fan inlet.
- xi) Drain connection shall be provided at the lowest point of scroll.
- xii) Fan bearing shall be of self-aligning, heavy-duty type. Bearing shall be selected with ample safety factor for longer life.
- xiii) Sufficient number of suitable vibration isolators of acceptable make shall be provided to ensure isolation of vibration from the equipment to foundation/ adjoining structure.
- xiv) Fabricated steel bracket of M.S.angles, channels and chequered plates shall be provided to take static and dynamic load of the fan and motor assembly.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[153]	15.01.2016

- xv) Anchor bolts, nuts, foundation plates and inserts shall be supplied with the fan.
- xvi) The first critical speed of the rotating assembly shall be at least 25 % above the operating speed.
- xvii) The housing shall be provided with lifting eye for ease of handling and bolted type access door.
- xviii) The fresh air intake louvers shall consists of parallel metallic blades. The minimum projected width of blades in horizontal plane shall be 150mm with the blades inclined at minimum 35 degrees.

b) Tube Axial Fan

- i) Fan impeller shall be of aerofoil section. The speed of the TA fan shall be preferably within 1000 rpm and outlet velocity shall be within 12m/sec.
- ii) The impeller shall be directly mounted on the motor shaft and the assembly shall be mounted inside rigid tubular casing.
- iii) The TA fan with Pre-filter shall be provided with rain protection Cowl & Bird screen / wire mesh at the suction side of the TA fan for protection against physical & climatic encounters.
- iv) Terminal box shall also be provided outside the tubular casing for ease of electrical connections.
- v) The connecting flanges shall be provided at both ends of tube.
- vi) Fan to be installed in fire hazardous/acid area shall be spark proof construction and painted with acid resistant paint/anti corrosive lining.
- vii) The impeller shall be of cast aluminium alloy construction of high efficiency aerofoil section blades. The fan impellers shall be cast in one piece finished all over and carefully balanced both statically and dynamically as per AMCA Standard. Finally the assembled rotor shall be dynamically balanced.
- viii) Axial flow fan casings for wall mounted/roof mounted fans and their components shall be suitable for outdoor installation. The casing shall be minimum 2 mm thick. The casings shall be provided with flanges at inlet and outlet. All nuts & bolts associated with it shall be of zinc or cadmium plated. Easily removable inspection cover having galvanized fly nut shall be provided. The covers shall be located such that the grease nipple for all bearings and also motor terminals are easily accessible through the cover.

c) Relief Damper / Gravity Open Louver

Suitable number of Relief Dampers / Gravity open louvers shall be provided for exhausting the Supply air for maintaining a positive pressure of 3mmWc in the ventilated premises.

d) Pre-Filters

- i) Pre-filters shall be provided at the inlet of TA Fan / Centrifugal Fan.
- ii) Size of filters shall be of standard size 610x610x150/50 mm thick.
- iii) Velocity of air across the filter shall be in the range of 2 m/sec.
- iv) Filter panel shall be cleanable and washable type for reuse.
- v) Magnahelic gauge shall be provided for measuring pressure drop across the filter.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[154]	15.01.2016

- vi) Cleaning efficiency of the pre filter element shall be 90% down to 10 - micron size of dust particles.
- vii) Filter material shall be enclosed in a sheet metal framework. Filter frame shall be fabricated from 16G MS sheet in welded construction. All leakage areas shall be sealed with suitable sealing compound.
- viii) Proper sealing shall be ensured to prevent leakage of air between mounting frame and filter panels.

e) Volume Control Dampers (If Applicable)

- i) Volume control damper shall be provided to regulate the airflow to the desired capacity.
- ii) The volume control damper shall be multi leaf, opposed acting, aerofoil blade type with external operating link and operating mechanism.
- iii) Size of the volume control damper shall be as per the outlet size of TA Fan / Centrifugal Fan.
- iv) Volume control damper shall have flanges at both ends for its connection.

f) Fire Damper

The Fire damper shall be provided at out-let of the TA Fan / Centrifugal Fan to isolate the served premises in case of fire occurrence. These shall be electrically operated & interlocked with plant's fire protection system.

g) Ducting

The ducting for ventilation and air conditioning systems shall be fabricated from G.I. sheets. The ducting shall be properly reinforced to prevent sagging, buckling or vibration.

The interior of all ducts shall be smooth for free flow of air. Guide vanes shall be provided in all large duct bends for proper flow of air.

The material thickness of the ducting shall be as follows considering the industrial duty conditions

Large side of rectangular Duct/diameter of Circular duct (mm)	Thickness (mm)
0 - 800	1.0
801 - 1500	1.25
1501 and above	1.6

The joints & bracings for ventilation & air conditioning systems shall be as per IS: 655.

All flanged joints shall be provided with asbestos rope of dia. 5 mm for proper sealing of the joints.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[155]	15.01.2016

Flanges of sheet metal duct shall be of angle iron type riveted with GI sheet on duct perimeter. Flange joints shall be made air tight with use of felt gaskets. Spacing of duct flanges shall be about 3 meters.

Turning guide vanes shall be provided inside the duct wherever change of direction occurs, to minimize eddy formation. Bends / elbows wherever used in duct work shall have radius not less than the depth of duct work in change of direction.

Collar shall be provided to duct bottom to connect with throat of supply air diffuser.

Access eye / measuring hatch for measurement of air quantity shall be provided in ducting at convenient location.

Duct work shall be complete with flanges, stiffeners, fasteners, hangers, nuts, bolts, washer & gaskets etc.

h) Supply Air Grilles / Diffusers

G.I. sheets not less than duct thickness shall be used for the manufacture of grilles. All grilles / diffusers shall be true to shape and shall be checked with a level gauge before being secured in position.

No distortion or warping is permitted.

All duct-mounted grilles diffusers shall be complete with rubber gaskets and flanged holding frame of suitable design for the intended installation. They shall be mounted on collar extending from the duct. No part of grilles / diffusers shall project into the main duct. Wall / Roof type supply grilles / diffusers shall have one set of adjustable louvers. The front of louvers shall be of horizontal type to adjust vertical deflection.

Each supply grilles / diffusers shall be fitted with built in louver arrangement as per manufacturer's standard design. The grille / diffusers shall be operated with an easily accessible louver to direct and control (fully close position also) the air.

6.5.4

Water pump sets

Pump sets are required for the service of condenser water re-circulation.

Type of pump set is horizontal split casing, unless otherwise stated in the specifications. Flexible coupling should be used to connect pump shaft with motor. Pump motor assembly shall be mounted on a common base frame.

Pump head capacity characteristic shall be gradually rising from operating to shut-off point without any zone of instability. The pump BHP - flow characteristic shall preferably be non-overloading type beyond rated capacity point. Pumps shall be rated for continuous operation. Operating speed of the pumps should not be more than 1500 RPM.

Pump shall be provided with suitable bearings, sized adequately to take maximum imbalance.

Pump and drive motor shall be directly coupled through a flexible coupling. Suitable coupling guard shall be provided for each pump.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[156]	15.01.2016

Each pump shall be complete with pressure gauge at the suction and discharge complete with isolating valve. All integral piping required for sealing, cooling, etc. shall be supplied with the pump.

Condenser water pump set will handle water having temperature 35°C.

The pumps shall be designed, manufactured and performance tested as per IS: 9542 - 1980.

The impeller and shaft assembly should be statically and dynamically balanced. Dial type pressure and temperature gauges should be provided for suction and discharge side

Each pump set should be subjected to mechanical running for minimum 4 hours.

6.5.5 Water piping network

Heavy class piping is to be used as per IS: 1239 for interconnecting water piping network.

Copper alloy gate and globe valves are to be used up to pipe sizes 50mm and CI valves are to be used above these pipe sizes.

Pipe fittings like bends, elbows, flanges, sockets, nipples, etc shall be as per relevant IS/BS standards.

Drain piping network is to be included as required for chilled water system, condenser water system, plant room drain, AHU drain, and cooling tower drain with isolation valves at proper places.

Pipe supports shall be of steel, adjustable for height and coated with rust preventive primer and finish coated with Aluminium paint. When pipe and clamp are of dissimilar material, a gasket shall be provided in between.

Spacing of pipe supports shall not exceed the following:

Pipe dia (mm)	Spacing (m)
Up to 25	1.85
32 to 150	2.50
50 and above	3.00

All piping shall be tested to hydrostatic test pressure of at least one and half times the maximum of operating pressure but not less than 7 kg/sq.cm for a period of not less than 4 hours. System may be tested in sections and such section shall be securely capped.

No insulation shall be applied to piping until the completion of pressure testing to the satisfaction of the Owner.

The Bidder shall provide all materials, tools, equipment, instruments, services and labour required to perform the tests and to remove waste materials resulting from cleaning and/after testing.

6.5.6 Condensing unit

a) Cabinet

The condensing unit cabinet shall be of anodized aluminium or GI or Heavy gauge steel suitably treated with two coats of zinc chromate primer and three

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[157]	15.01.2016

coats of epoxy paint and shall be suitable for mounting in open space, i.e. on terrace.

Compressor

The compressor shall be hermetically sealed and shall be mounted on vibration absorbers. Necessary crank case heaters shall be provided.

Condenser

The air-cooled condenser shall be with copper tubes and aluminium fins with maximum 75dB (A) noise level of fans. Speed of axial fans shall not exceed 960 rpm for fans with impeller diameter above 450mm and 1440 rpm for fans with impeller diameter 450mm and less.

6.5.7 Evaporator unit

The evaporator unit cabinet shall be of GI or aluminium and thermally insulated, suitable drain connection shall be provided for removal of condensate collected in the drain pan. The drain piping shall be properly designed, insulated and routed up to ground level and discharged to the nearby drain. U-trap shall be provided in the drain line to avoid ingress of unwanted air into the system.

Air handling fan

The fan of GI / aluminium shall be centrifugal type with forward curved impeller. The impeller shall be statically and dynamically balanced.

Cooling coil and filter

The cooling coil shall be direct expansion type with copper tubes and aluminium fins. This shall be minimum three (3) rows deep and with minimum three fins per centimeter. The air before it enters the cooling coil shall be filtered by dry and cleanable type filter.

6.5.8 Refrigerant piping and fittings

The refrigeration piping shall be complete with externally equalized thermostatic expansion valve, liquid line strainer, dehydrator and liquid line shut off valve.

For refrigerants R-134a/R22, copper tubes to IS: 10773 shall be used. Fittings, flanges and pipe joints shall conform to the requirements of ANSI B31.5.

The piping shall be designed for an internal pressure representing the most severe condition of coincident pressure and temperature expected in normal operation.

Test pressure for piping shall be 1.1 times of the design pressure. The pressure shall be gradually increased until gauge pressure which is the lesser of one-half of the test pressure and 1.75 kg/cm² (g) is attained and preliminary leak checks shall be carried out. Thereafter, the pressure shall be gradually increased in steps until the test pressure is reached. The pressure shall then be reduced to the design pressure and leakage examination shall be made. The design pressure shall be maintained for 48 hours to 72 hours. A pressure relief valve / device shall be provided on test pressure line having a set pressure slightly above the test pressure. Nitrogen shall be used as a test medium. Oxygen or any combustible mixture of gases shall not be used within the piping for testing. Water or water solutions shall not be used as a test medium.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[158]	15.01.2016

Vacuum testing shall be done for medium vacuum of around 40mm of Hg absolute and held with vacuum pump in operation for at least 4 hours. Thereafter unit shall be sealed and vacuum held for at least 12 hours. Vacuum break shall be done using refrigerant and pressure raised to standing pressure in refrigerant cylinder.

The Bidder shall submit test certificate along with the supply of equipment.

6.5.9 Window Air Conditioner

Window type air conditioner shall comprise of hermetically sealed rotary compressor, air cooled condenser, refrigerant piping, fan, instruments and controls, supply air grills with direction deflectors etc. enclosed in an insulated steel cabinet. Provision shall be made in the front panel of the unit for controlling room ventilation and fresh air supply. Air filter installed shall be of HDPE easily cleanable type. The front panel shall be suiting to the interior décor of the room. Window air conditioner shall conform to IS: 1391-1992 Part I.

6.5.10 Return Air Grills

Return air grills shall be square / rectangular / circular in shape. The bottom of grills should flush / match with the false ceiling. Each grill shall be powder coated with appropriate colour to match with the colour of the false ceiling. The grills shall be true to shape and shall be checked with level gauge before being secured in position. No distortion or warping is permitted.

6.5.11 Centrifugal Fan

These are used for ventilation system. The fans shall be of limit load design. The fan shall be of rugged steel construction and suitable for industrial duty condition. Fan housing shall be of welded construction and provided with flanges at inlet and outlet sides for duct connections. The housing shall be provided with lifting eye for ease of handling and bolted type access door.

The fan unit shall be reasonably noise and vibration free in operation. The noise level for fan & motor assembly at a distance of 1 meter in any direction shall be limited to 85 dB (A) from source.

The fan shall be SISW type as per requirement. The fan shall be both statically and dynamically balanced.

The fan impeller shall be of die formed and backwardly curved.

Variable inlet vane (VIV) damper shall be provided at the fan inlet.

Drain connection shall be provided at the lowest point of scroll.

Fan bearing shall be of self aligning, heavy duty type. Bearing shall be selected with ample safety factor for longer life.

Sufficient number of suitable vibration isolators of approved make shall be provided to ensure isolation of vibration from the equipment to foundation.

Fabricated steel bracket of M.S. angles, channels and chequered plates with common base frame shall be provided to take static and dynamic load of the fan and motor assembly.

Anchor bolts, nuts, foundation plates and inserts shall be supplied with the fan and will be non corrosive material of superior quality. The fan shall be designed

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[159]	15.01.2016

to permit interchange ability of parts and ease of access during inspection, maintenance and repair.

Flexible connections shall be provided at inlet and out let of fan.

The first critical speed of the rotating assembly shall be at least 25% above the operating speed.

Drive motor shall be rated at least 15% higher than the power requirement at duty point or 10% higher than the maximum power requirement at selected speed whichever is higher. Starting torque requirement of fan shall also be considered while selecting the motor.

6.5.12 Dry Panel Filter

Dry panel type air filter shall be of high efficiency cleanable type, constructed out of HDPE (6 ply) supported by layers of GI wire gauge. It shall be corrugated to the depth of filter casing in order to increase the ratio of filtration area to frontal area. It shall be covered by strong GI/MS frame and have space to ensure uniform distribution of air. Filtering panel shall be of standard size which can be mounted on angle frame in multiple number as per capacity of the fan. Face velocity of air shall not exceed 2 m/sec. The resistance of air filter shall not exceed 10 mm wc when dirty. Efficiency of the filter shall not be less than 90% down to 10 microns. The whole filter and frame assembly shall be fixed in a sheet metal casing of not less than 3.15 mm thick M S sheet.

Connecting piece / transition piece / reducer shall connect the filter casing with fan inlet through flexible connection. It shall be fabricated with steel sheet of not less than 3.15 mm thick with drilled flanges at both ends.

6.5.13 Axial Flow (Tube Axial) Fan

These fans shall be of heavy duty type. Fan impeller blades shall be of aerofoil section of cast aluminium alloy. The impeller shall be directly mounted on the motor shaft and the assembly shall be mounted inside rigid tubular casing. Cable termination provision shall be made on tubular casing. The connecting flanges shall be provided at both ends of tube. Tube casing shall be of minimum 2.5 mm thick M S sheet.

The fan to be installed in the fire hazardous / acid area shall be of spark proof construction & motor of flame proof construction and painted with acid resistant paint / anti corrosive lining.

The fan unit shall be reasonably noise and vibration free in operation. The noise level for fan & motor assembly at a distance of 1 meter in any direction shall be limited to 85 dB (A) from source.

Drive motor shall be rated at least 15% higher than the power requirement at duty point or 10% higher than the maximum power requirement at selected speed whichever is higher. Starting torque requirement of fan shall also be considered while selecting the motor.

6.5.14 Axial Flow (Propeller) Fan

These are used for general ventilation of premises emitting heat / fumes. These shall be of heavy duty and wall mounted type. Fan impeller blade shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[160]	15.01.2016

aerofoil section and mounted directly on the motor shaft. Air entry shall be from motor side. Louver shutter shall be provided at the out let side of the fan to prevent back draft. Consequent loss in capacity shall be taken in to account while selecting the fan.

The fan to be installed in the fire hazardous / acid area shall be of spark proof construction & motor of flame proof construction and painted with acid resistant paint / anti corrosive lining.

The fan unit shall be reasonably noise and vibration free in operation. The noise level for fan & motor assembly at a distance of 1 meter in any direction shall be limited to 85 dB (A) from source.

Drive motor shall be rated at least 15% higher than the power requirement at duty point or 10% higher than the maximum power requirement at selected speed whichever is higher. Starting torque requirement of fan shall also be considered while selecting the motor.

6.5.15 Adjustable louver grills (Supply air Grills)

1.25mm MS sheet / 1mm GI sheet (not less than the duct thickness) shall be used for the manufacture of grills. All grills shall be true to shape and shall be checked with a level gauge before being secured in position. No distortion or warping is permitted.

All duct mounted grills shall be complete with rubber gaskets and flanged holding frames of suitable design for the intended installation. They shall be mounted on collar extending from the duct. No part of grilles shall project into the main duct. The adjustable louver grills shall be provided with volume control damper as well as double deflection flap / grill for direction control.

6.5.16 Self Acting Damper (Gravity Damper)

Self acting dampers are provided to maintain pressurisation inside the premises. The damper shall be of gravity type designed such as not to allow infiltration of air from outside. The damper shall be multi blade type made of aluminium flaps of not less than 24G thickness and MS frame. These shall be designed such that these shall operate when the pressure inside the premises exceeds 2-3 mmwc. It can operate in fully open or partial open positions.

6.5.17 Hangers & Supports for ducting

All duct work shall be provided with adequate supports - hanger type or cantilever type or bracket type - as required to ensure rigid support and to prevent vibration.

The fixing and supports interval shall not exceed 3 meters. Hanger rods having U-bend at one end and threading at other end shall be hanged ceiling by anchor/expansion bolts wherever required. Hangers shall be trapeze type constructed from angle iron (as per size of duct) and hung from steel rods of adequate size. Ducts supported on wall and building structures shall be suitably fixed with angle, rod and flat etc.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[161]	15.01.2016

6.5.18 Multi Louver Dampers

Multi louvers damper shall be provided in the supply air ducting. The damper blades / louvers shall be provided with external operating links for manual operation of the damper to control air flow. The damper shall be made of GI sheet with MS frame. The fully close / open / partial closing position of the damper shall be marked on the damper casing.

6.5.19 Thermometer

Wet bulb and dry bulb thermometer shall be provided and installed in the control rooms to measure the premises temperature.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[162]	15.01.2016

7 FIRE DETECTION & PROTECTION SYSTEM**7.1 General**

This section of specification covers specification, design basis of fire detection and protection system. A comprehensive fire detection and protection system shall be provided by the Bidder covering all the areas of the proposed power plant. The type of fire detection and protection systems and the areas to which the same are to be provided are described in this sub-section. Indicative numbers of hydrant valves, water monitors etc. are indicated in the tender drawings submitted along with this specification.

The portable and mobile fire extinguishers shall be supplied by the supplier/ Bidder for all the areas/ buildings of the proposed stage of power plant as per the TAC norms.

a) Fire water system

Fire water system shall be designed as per the requirements of TAC / NFPA and other statutory / regulatory bodies.

[Fire Water reservoir shall be provided as a part of Clarified water tank with storage capacity of [...] m3 for fire protection system and shall be designed to meet the requirements of TAC.]

The hydrant system will have dedicated main fire water pumps. Separate Dedicated pumps for Spray System with discharge header interconnected with Hydrant pipe network with a check valve such as water could flow from hydrant network to spray network but not vice versa shall be provided. Both Hydrant as well as Spray Pumps shall have 100% diesel driven standby. Number of Fire Pumps provided shall meet the norms of TAC. Jockey pumps are provided to maintain the leakage losses for the entire fire water network.

Tentative figures for the parameters of Fire Water Pumps has been indicated in this section, although Bidder(s) shall work out the complete details and submit along with the bid for owner's review.

b) *[Pump House:*

Fire water pump house shall install the following:

- i. Fire water pumps – Required number of Motor operated pumps of required rating as working and Diesel Engine driven pumps of similar capacity and head as Standby in line with TAC norms.*
- ii. Jockey pumps - 2 x 100%, motor operated pumps of required rating.*
- iii. Under slung crane of suitable capacity to lift the heaviest component with 10% margin. (Minimum 5 Tonnes).*
- iv. Interconnecting piping / valves as per the plant water system / as assessed by the bidder , LP piping specification and recommendation of TAC / NFPA*
- v. The main fire protection system shall consist of a fire water hydrant system serving the whole station includes*

- *Hydrant system*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[163]	15.01.2016

- Medium velocity water spray system
- High velocity water spray system
- Low expansion foam system
- Mobile & potable fire extinguishing system
- Fire alarm and detection system
- Inert Gas Protection System

In general all equipments/system components of complete fire protection & detection system shall have the approval from under writer's laboratories of USA or LPCB –UK or FM – USA or TAC – INDIA. However design and installation of complete system and requirements shall be approved by the agency specified elsewhere in the specification.

- vi. *For situations, which are not covered by the standards, system shall be supplied and installed to ensure effective protection.*
- vii. *The complete fire detection and protection systems shall be as per the guidelines/codes/standards/rules of the NFPA/IS: 3034/OISD etc and all the systems/equipments and installation shall be approved from tariff advisory committee (TAC)-INDIA/ LPA /TAC accredited professionals by the supplier/ Bidder to enable Owner to obtain maximum applicable rebate on insurance premium. The responsibility of getting approval from TAC / LPA /TAC accredited professionals rests exclusively on Bidder. Any other additional equipment not specifically mentioned in the technical specification but are found necessary to meet the requirements of TAC and also for safe and sound operation of the plant are to be included at no extra cost to Owner.*

c) *Fire water source*

The fire water tank shall be in two compartments, of [...] m3 total capacity. The hydrant system shall be fed from the discharge of Motor driven Hydrant pumps of required head and flow as well as diesel Engine driven standby pumps of similar capacity. The pressure in the system will be maintained by 2X100% nos. Jockey pumps.]

7.2 Codes & Standards

The system shall comply with the following regulations:

- a) Tariff Advisory Committee (TAC)
- b) National Fire Protection Association (NFPA) (For system not covered by TAC)
- c) BIS (For the approval of pumps and valves).

7.3 System Description

7.4.1 Fire Protection system

a) Hydrant System

System shall be pressurized continuously to normal working pressure. Hydrant system comprises of hydrant pumps *[(2 motor driven as working + 2 diesel driven as standby)]*, pressurization arrangement *[(2 nos. motor driven jockey pumps, 1w*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[164]	15.01.2016

+ 1s)], water mains network, hydrants (landing valves, internal hydrants, external hydrants, water monitors), hoses, hose cabinets, instantaneous couplings etc. Hydrants are located throughout the power station area. In case of fire, hose is coupled to the respective hydrant valves and jets of water are directed to the fire. Hydrant system is pressurized continuously to normal working pressure.

Water monitors are to be provided in the following areas

S.No	Area/Premises/Building
1	ESP
2	Switchyard Area
3	Coal stockyard
4	Fuel Oil Storage Area
5	Coal conveyors having elevation 15m or more.

The Bidder has to provide hydrants for the entire power plant. However, the major premises/areas are indicated.

S.No	Area/Premises/Building
1	TG Building
2	Boiler
3	Bunker Bay
4	Transformer Yard
5	Switch Yard
6	Switch Yard Control Room
7	DG House
8	Compressor House (Unit 1 & Unit 2)
9	Service Building
10	Central Control Room
11	Boiler Fill Pump House
12	Ash hopper Make-up water Pump House
13	Ash Slurry Pump House
14	Vacuum Pump House (Unit1 & Unit 2)

37	Ware House
38	Raw Water Pump House
39	Any other plant facilities

b) HVW and MVW spray system

System shall be pressurized continuously to normal working pressure up to the deluge valves. It shall consist of deluge valves, isolation valves, y-type strainers, spray nozzles/projectors, spray nozzles piping network, detection system, instrumentation, junction boxes, cables etc. The system shall be automatic and shall be activated by a dedicated detection system to be provided for each of the equipment/area. Medium Velocity Water Spray System shall be provided for the following area / equipments:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[166]	15.01.2016

S.No	Area/Premises/Building
1	Conveyor No. [.....]
2	Conveyor No. [.....]
3	Conveyor No. [.....]
4	Conveyor No. [.....]
5	Conveyor No. [.....]
6	Cable Galleries in Main Plant Building.
7	Cable Galleries in Coal handling Plant
8	Fuel Oil Tanks

High Velocity Water Spray System shall be provided for the following area / equipments

S.No	Area/Premises/Building
1	Generator Transformer
2	Unit Auxiliary Transformer
3	Station Transformer
4	Inter Connecting Transformer
5	Turbine main oil tank
6	Centralised Oil Purification System
7	Seal Oil System
8	Lube Oil Canal
9	Boiler Burner Front

c) Foam Protection System

The fixed foam system shall consist of foam concentrate tanks, pumps balancing line with automatic controlling valves, foam makers, discharge outlets, interconnection piping, valves, fittings instrumentation, panel and control. In addition semi-fixed system consisting of a separate foam solution ring main around the tank with foam hydrant valves at regular intervals shall also be provided in addition to the water hydrants.

The operation of the fixed foam system shall be automatic with the aid of dedicated fire detection system provided in the tank. The semi-fixed system shall be operated through the foam hydrants/ monitors, portable type foam water monitors (wheeled type with in-built foam maker), hoses and nozzles for extinguishing spill fire in and around the tank area.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[167]	15.01.2016

Foam monitors/Hydrants should be provided in the following areas:

S.No	Area/Premises/Building
1	Fuel Oil Storage Area

d) Portable and mobile fire extinguishers

Fire extinguishers shall be installed in all the buildings within the plant boundary as per TAC requirement. The Bidder shall supply the required quantities of fire extinguishers with proper calculations and install the same in every facility of plant as per TAC.

- i) Carbon dioxide of 4.5 kg capacity conforming to IS: 2878 .
- ii) Carbon dioxide of 9 kg capacity conforming to IS: 2878.
- iii) Mobile type carbon di-oxide of 22.5 kg. Capacity conforming to IS: 2878
- iv) Dry chemical powder type of 5 kg. Conforming to IS: 2171
- v) Mobile type dry chemical powder type of 50 kg capacity (as per IS: 10658)
- vi) Foam type of 9 lit. Capacity conforming to IS: 10204
- vii) Mobile foam type of 50 lit. Capacity conforming to IS: 13386

Distribution of these extinguishers in various locations shall be as per the guidelines of TAC-INDIA

7.4.2

Inert gas System

- a) Fire protection system for the unit control rooms and control equipment rooms shall be by means of inert gas extinguishing system.
- b) The system shall be automatic and shall be activated by a dedicated detection system to be provided for each hazard area.
- c) The system shall consist of an IG-541 or IG-55 (as per NFPA 2001) cylinders filled with the agent gas, cylinder mounting accessories, cylinder manifold, automatic discharge valves, discharge piping, nozzles, automatic operating devices, manual actuation devices/ abort switches, associated fire detection /alarm system, audio-visual safety warning devices, instrumentation associated control systems, panels etc.
- d) The Inert gas system shall be provided for the following premises/areas including false floor and false ceiling.

S.No	Area/Premises/Building
1	Central Control Room
2	Electrical Equipment Room
3	UPS Room
4	Computer Room

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[168]	15.01.2016

7.4.3 Fire Detection, Alarm and Control system

Fire detectors are provided in all areas and buildings of thermal power stations to detect the fire in its incipient stage, give alarm and actuate the fixed fire protection system provided to extinguish the fire. Type of fire detectors for various areas depends upon the fire risks. In addition to automatic fire detectors, manual call points are also provided throughout the power station for manually initiating alarm in case fire is noticed by some body.

- a) The fire detection and alarm system consists of the following components/equipments:
 - i) Main Fire alarm panel in Main control room.
 - ii) Area Panels as required.
 - iii) Repeater panel in Fire station.
 - iv) Various types of fire detectors such as Multi sensor detectors, Heat detectors, IR detectors, LHS cable
 - v) Hooters (Indoor and Outdoor type)
 - vi) Manual Call Points.
 - vii) Isolators.
 - viii) Siren.
 - ix) Response Indicators.
 - x) Ni-Cd Battery and Charger for the panels
 - xi) Control cabling
 - xii) Conduits, junction boxes, glands, earthing & accessories
- b) The fire detection and alarm system shall be microprocessor based analogue addressable type.
- c) In case of detection of fire, the fire signal (audio-visual) of particular area shall appear in the respective Area Panel and Main Fire Alarm Panel, Also it will be annunciated in the fire Station repeater panel.
- d) A central monitoring station shall be provided in central control room covering the complete plant area. A repeater panel shall be provided in fire station building.
- e) In addition, annunciation cum control panels shall be provided at firewater pump house.
- f) Selection of temperature rating of heat detector shall be based on maximum ambient temperature of about 50 °C for outdoor equipments (like transformers, boiler burner fronts, fuel oil tanks etc.) and about 40v °C for indoor equipments (like Coal conveyors, cable galleries, fuel oil pump house etc).
- g) Areas to be covered under fire detection and alarm system
- i) Multi sensor type smoke detection system along with manual call points shall cover all the areas like;
 - All the Electrical premises such as Switchgear/MCC rooms, Pump Houses, LT Transformer area, Cable Galleries etc including workshop and H₂ plant.
 - Main Plant area which includes TG Building, Service Building, ESP control

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[169]	15.01.2016

room and ESP area , Bunker Bay, DG House, Fuel Oil Pump House and Storage area.

- Administrative Building, Security Office and Parking Area.
- ii) Detectors with response indicators shall also be provided above the false ceiling for the areas having false ceiling.
- iii) Multi sensor Detectors in cable galleries protected by MVW spray system and return air ducts of AC system of main plant, control room / control equipment rooms, inside all cubicles/ panels of control room, control equipment rooms and UPS/Marshalling areas.
- iv) Linear heat sensing cable detection system shall be provided for ignite conveyors and cable galleries covered under MVW spray system.
- v) For fuel oil tanks, Generator seal oil area, Main Oil tank area, Centralized oil purification area, Lube oil canal etc shall be provided with probe type heat detectors. Type of detection system to be employed for fuel oil tanks / pump house shall be approved by chief controller of explosives apart from tariff advisory committee (TAC)-INDIA/LPA/TAC accredited professionals.
- vi) Quartzoid bulb heat detection system for Power Transformers protected by HVW spray system.
- vii) Electrical type heat detectors (rate of rise/fixed temperature) for all battery rooms and Transformer area.
- viii) Infra Red type heat detectors for moving Lignite fire on the Lignite Conveyors.
- ix) Addressable electronic hooters shall have a sound output not less than 80db. Hooter shall be connected in each zone internally as well as externally. External hooters may be clubbed together with respect to common entry/exit point view for cable areas.

7.4.4

Fire water pumps & *[pump house]*

- a) *[Fire water pump house should be provided as separate building close to clarified cum fire water storage tank.]*
- b) The fire water pumps (main hydrant, hydrant booster, jockey pumps, foam system pumps and spray water pumps) shall be of horizontal centrifugal type with positive suction.
- c) Maximum speed of main hydrant, booster pumps, foam system pumps and spray system pumps to be supplied for the fire protection system shall be 1500 rpm. The motor driven pump and the corresponding diesel engine driven pump shall be completely interchangeable in respect of speed, impeller, diameter etc.
- d) The capacities and head of hydrant and spray pumps will be as per the datasheet and recommendations of TAC.
- e) Hydrant ring main shall be fed by Separate pumps. The capacity and head of hydrant pumps shall take into account foam system requirement also. Further 100% standby hydrant pumps of identical capacity shall be provided so that in case any one of the pumps is not available, the total requirement can be met by the standby pump. As per TAC rules, dual power supply arrangement for the motor driven pumps to be provided by the Bidder by suitable means so that maximum discount on insurance premium is available to Owner. This shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[170]	15.01.2016

achieved by alternate power source such as diesel engines or by any other means. The power supply of electrical driven pumps shall be uninterruptable.

- f) The standby hydrant and spray system pumps shall be of diesel engine driven.
- g) The water pumping arrangement shall be provided with automatic pressurization system with jockey pumps. There shall be [2x100%] capacity jockey pumps.
- h) The operation of the pressurization system shall be automatic and required instrumentation and control shall be provided. Re-circulation line with required valves be provided at for each set of the pumps (one each for set of jockey pumps, set of hydrant pumps, set of booster pumps, set of spray pumps and set of foam pumps).
- i) Booster pumps shall be provided for maintaining required pressure at higher elevation. The capacity of these pumps shall be as per system requirements/ TAC rules. The pumps shall be motor driven and diesel engine driven pumps of identical capacity shall be kept as standby.
- j) Booster pumps shall be provided for maintaining required pressure in hydrant and spray network in lignite stockyard area. Bidder to provide proper calculations for the parameters of the booster pump, to be reviewed by Owner.
- k) The header at the pump discharge shall be provided with suitable number of isolation valves so that none of the ring mains are affected when any of the pumps is taken for repair/ maintenance. In the event of fire, pressure in the hydrant or spray system shall drop due to resulting flow. In this event, water loss in the system will be replenished by jockey pump, however if this is inadequate to meet the demand and results in drop in system pressure further, at preset low pressure set point, first electric driven pump of the respective system shall start automatically. In case of failure of starting of this pump or due to increased demand of flow, the system pressure shall reduce further and this shall enable starting of subsequent pumps of the respective system in a sequential manner through means of various pressure sensing devices such as pressure switches/transmitters. Failure to start a pump shall be indicated as an alarm.
- l) The diesel engine drive of the pump shall conform to the requirements of TAC. Each of the diesel engines shall be provided with batteries and battery chargers.
- m) Battery of the diesel engine shall be lead acid type as per is and shall be large enough to crank the engine twelve times successively, each for a duration of 10 seconds without any charging in between.
- n) The continuous engine brake horse power rating (after accounting for all auxiliary power consumption) and correction for temperature and altitude at the site conditions shall be at least 20% greater than the requirement at the duty point of pump at rated rpm and in no case, less than the maximum power requirement at any condition within the operating range of the pump.
- o) The pumps shall comply with the regulations of BIS/tariff advisory committee (TAC) and shall be approved by tariff advisory committee (TAC)-INDIA/ LPA /TAC or insurance accredited professionals.
- p) The feeding line of the spray system from the header shall be provided with 2x100% capacity basket type filters to avoid any particles in the spray system.
- q) The pumping systems shall be complete with required instrumentation, control,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[171]	15.01.2016

recirculation pipe line with valves, non return valves in discharge outlet etc.

- r) The fire water pump house layout shall have sufficient space for the maintenance of the pump and diesel engine. Further the main fire water pump house shall be provided with a electrically operated Under slung crane of capacity capable of lifting heaviest component and the foam pump house and booster pump houses shall be provided with a mono-rail electric hoist of adequate capacity.
- s) Pumps shall be designed for continuous operation at its best efficiency point to meet the specific requirements of the system for which it is to be employed.
- t) Pumps shall have continuously rising head characteristic from its operating point towards shut off without any zone of instability and power capacity characteristic shall be preferably non-overloading type. The main fire water pumps and booster pumps shall be capable of furnishing not less than 150% of flow at 65% of rated head. The jockey pumps shall be as per TAC requirements.
- u) Pumps of each category shall be suitable for parallel operation.
- v) Material of construction of fire water pumps shall be as follows:
 - i) For fresh water application
 - Casing, stuffing : cast-iron grade IS: 210 FG -260 with 2.5% Ni Box
 - Wearing rings : SS
 - Impeller : bronze, IS: 318 GR.-II
 - Shaft : SS-316
 - Shaft sleeve : SS-410
 - ii) Wetted parts of foam pumps shall be of stainless steel construction and foam pumps shall be provided with mechanical seal.

7.4.5

Other facilities

Following facilities/equipment shall be provided:

- a) One foam tender with supplementary agents - carbon dioxide and dry chemical powder conforming to IS: 10460 (latest)
- b) One water tender as per IS:950 (latest)
- c) Fire tenders confirming to IS: 950, class B with standard accessories shall be provided.

7.4.6

Sirens

A siren is provided on TG building unit control room roof capable of being clearly heard over a radius of 2 km all around it for at least 3 minutes continuously over a background noise of Power Station. A highly luminous colored lamp placed over siren shall glow when the siren is switched.

7.4

Design Criteria

7.4.1

General

All equipments/system components of complete fire protection & detection system should have the approval from one of the following:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[172]	15.01.2016

- a) BIS
- b) Underwriters Laboratories of USA
- c) VDS - Germany
- d) FM – USA
- e) LPCB – UK

The complete fire detection and protection systems shall be designed in conformity with TAC/NFPA/IS No. 3034/OISD. Fire protection system shall be designed as per the guidelines of Tariff Advisory Committee (TAC) established under Insurance Act 1938 and /or NFPA

7.4.2 Hydrant system

- a) Category of hazard and minimum terminal pressure shall be as per TAC norms.
- b) The Hydrant ring mains shall be interconnected with isolation valves. It shall be possible to enable to take up part of any of the ring mains for maintenance without any loss of system in the balance part.
- c) An isolation valve shall be provided in feeder & terminal pipes serving three hydrants or water monitors or incase the terminal length is 15 meters or more with a single/two hydrant valve.
- d) All the landings of boiler staircases, turbine buildings and other multi storied structures, transfer points in the lignite handling plant, etc shall be provided with hydrant landing valves.
- e) For ESP areas, fixed water monitors shall be provided. Further fixed water monitors shall also be provided for Lignite conveyors having elevation 20 m or more. Both ESP areas and Coal conveyor areas shall also be provided with ground hydrants and landing valves.
- f) For fuel oil storage tank/dykes and fuel oil unloading area, double headed or single headed hydrants and fixed water monitors shall be provided. Each fuel oil storage tank shall be served by at least two water monitors and a hydrant valve. The monitor provided in the fuel oil handling area shall be dual type suitable for foam injection also. Each of the dual water monitor shall be provided with required foam supply/ apparatus etc.
- g) Each of the landing valves and external hydrant valves shall be provided with a hose box. Each hose box shall contain required (two numbers of 7.5 long hose for internal and two numbers of 15 m long hose for external hydrants) hoses, branch (two numbers) pipes and couplings, nozzles (one number), spanners (one set) etc as per TAC guidelines.
- h) All hydrant mains/pipe lines shall be routed underground as per TAC. The underground pipelines shall be provided with coating and wrapping as per IS: 10221/IS: 15337. Road rail, cable trench, cable channels or pipe trench shall be through RCC hume pipes of appropriate pressure class.
- i) External ground level hydrant valves along the Lignite conveyors at specific intervals shall be provided. At locations where height of conveyors is more than 15m water monitors at required intervals shall be provided as per TAC.
- j) Risers with landing valves/ water monitors shall be provided for each of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[173]	15.01.2016

transfer points, bunker floors, crusher house and track hopper at each landings.

- k) Water for the protection of boiler air preheaters, and mills shall be tapped from the hydrant system as required.
- l) Fire hydrant specific data
- i) All hydrant valves should be of stainless steel construction conforming to IS: 5290 or equivalent.
- ii) Hoses shall be of non-percolating flexible type as per IS: 636 (type-A) and or equivalent.
- iii) Branch pipes (stainless steel) shall be universal type (as per IS: 2871 for transformer yard area) and straight jet type (IS: 903) depending on the location. Nozzles shall be of stainless steel

7.4.3

HVW and MVW Spray system

It consists of spray pumps [(2 motor driven + 1 diesel driven as standby)], pressurization arrangement, water mains network, wet detection system comprising QBD, deluge valves, isolation valves, Y-type strainers, spray nozzles/projectors, spray nozzles piping network, detection & control system, piping, valves, other accessories etc. The system is automatic and is activated by a dedicated detection system to be provided for each equipment/area. The system is pressurized continuously to normal working pressure upto the deluge valves.

- a) Minimum running water pressure at any projector/ spray nozzle shall be not less than 3.5kg/sqcm and not greater than 5.0 kg/sqcm for HVW spray system. For MVW spray system, minimum running water pressure at any projector/spray nozzles shall be as given under.

MVW SPRAY SYSTEM - WATER PARAMETERS

S.No	Area	Minimum water density	Minimum Pressure
1	Cable Galleries	12.2 LPM/m ²	2.8 kg/cm ²
2	Lignite Conveyors	10.2 LPM/m ²	1.4 kg/cm ²
3	Oil storage tank	10.2 LPM/m ²	1.4 - 3.5 kg/cm ²

- b) Design discharge density shall be as per the rules of water spray system of tariff advisory committee (TAC) and/or NFPA standards. In addition to these rules /standards, each of the bulk storage tanks of fuel oil shall be provided with cooling arrangement through a separate deluge valve & piping network with a design discharge of 1 LPM/sq.m. Whenever fire is detected in a fuel oil tank, apart from actuation of this MVW system on the detected tank, the cooling water spray at this specified rate of 1 LPM/sq.m shall be automatically operated on the balance tanks (i.e. spray over the unaffected tank). If design of spray system considers simultaneous spray on all the tanks (due to location in a common dyke or due to lesser distance between the tanks with respect to specified value in TAC rules), the additional cooling water spray as specified above is not required to be provided.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[174]	15.01.2016

- c) The spray system for the boiler burner front shall cover all the fuel oil and Lignite burner elevations, its adjacent piping structures, floors etc. At least 7 meters either side of burner elevations or as per NFPA recommendation whichever is stringent.
- d) Fuel oil tanks shall be protected by MVWS and Foam system
- e) In cable galleries, the water spray shall cover the exposed area of all the trays and racks. As far as possible, fire compartmentalization shall be done in case of cable galleries, cable spreader rooms, electrical equipment rooms etc.
- f) An isolation valve shall be provided at both upstream and downstream of each of the deluge valve. Bypass valve shall be provided for each deluge valve. The size of the valve shall be same as that of the deluge valve.
- g) The spray system for the Coal conveyor system shall cover the exposed area of both the forward and return conveyors and idlers. In transfer points, crusher house, track hopper, pent house etc., the water spray shall cover the drive equipments, pulleys, chutes, other equipments of the floor, complete floor area at various elevations.
- h) Water motor gong shall form part of accessories to be provided with deluge valve.
- i) A strainer ('y' type) shall be provided at upstream of deluge valve.
- j) Pressure gauges at both upstream and downstream of deluge valves, and in the detector pipe network shall be provided.
- k) Pressure switches shall be provided in spray and detector piping to exhibit "fire" and "spray on" annunciations and interlock for tripping of respective equipment wherever applicable.
- l) Wet type pipe detector network shall be provided for spray system using quartzoid bulb detectors. In case wet type pipe detection employed for Coal conveyers or any other equipment located above 20 meters elevation from deluge valve, additional pressure switch shall be provided to actuate the deluge valve.
- m) All spray pipe mains/ pipe lines shall be routed under-ground. Road, rail or pipe trench crossing be through RCC hume pipes of appropriate pressure class and the pipe lines shall be provided with coating and wrapping as per specification
- n) Facility for manual initiation of deluge valves, locally through a pushbutton or hand lever shall be provided
- o) Each outdoor deluge valve and its accessories shall be provided with housing with RCC roof.
- p) Deluge valve shall be of automatic resetting type.

7.4.4 Foam Protection System

Automatic fixed foam system is envisaged for main HFO and LDO storage tanks. In case of fire, the foam system for the respective tanks gets automatically activated on detection of fire by probe type heat detectors provided inside the fuel oil tanks resulting in pouring the foam water mixture on the oil surface inside the tank and foam blanketing the burning oil surface thereby cutting the oxygen supply and extinguishment of fire. The system consists of foam concentrate storage tanks, foam pumps, [(1w+1s)], balancing line with automatic controlling valves, foam makers, discharge outlets, interconnection piping, valves, fitting

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[175]	15.01.2016

instrumentation and control system. In addition, semi-fixed system consisting of a separate foam solution ring main area around the tank farm area with foam hydrant valves at regular intervals is also provided.

- a) Complete system shall be designed as per NFPA-11 and TAC.
- b) Water for the foam system may be tapped off from the hydrant system.
- c) The operation of foam system shall be automatic with the aid of fire detection system provided for the fuel oil tank with a provision for manual operation. Auto/manual selection switch shall be provided at the local panel.
- d) Foam concentrate shall be of 100% AFFF type and shall be provided in [2x100%] capacity foam concentrate tanks. It shall be discharged to the foam pumps inductors through [2x100%] capacity foam pumps (one of motor driven and another of diesel engine driven) pumps through balancing line, with control valves, flow controllers etc.
- e) The minimum effective capacity of each foam concentrate tank and foam pumps shall be designed for simultaneous protection of one fuel oil tank of each type or size and as well as operation of two foam monitors/ hydrants at its design capacity for a minimum duration of 60 minutes or as minimum capacity if specified elsewhere.
- f) A design margin of at least 10% shall be considered over the calculated foam concentrate capacity, tank capacity and discharge capacity of the foam discharge pumps.
- g) Foam concentrate storage tank shall be provided with discharge pipe manifolds, individual isolation valves, tank inlet, drain, overflow connection, level indicators, level switches, etc. All the foam concentrate tanks, pumps, the local panel and other shall be located indoor in a building to be provided by the supplier/ Bidder.
- h) One number (1) foam proportioner (of 100% capacity) is provided for each type or capacity of fuel oil tank with a common standby foam proportioner. Separate isolation valves (manually operated) are provided for each proportioner for maintenance.
- i) Automatic solenoid valve shall be provided in foam supply line to each of the fuel oil tank at the upstream of foam proportioner. In the event of detection of fire, the signal shall start the foam pump, operate the deluge valve of water inlet valve to the designated foam proportioners of the tank, and as well as open the foam solution inlet valve to foam proportioner and thereby foam is injected to the tank under fire foam makers discharge outlets.
- j) Apart from feeding the individual tank, each set of foam inductors shall deliver foam solution to foam hydrant piping ring around the tank dyke whenever foam injection system is initiated so that spill fires if any may be extinguished by means of foam hydrants, hoses & portable (wheeled type) foam generator/ monitor.
- k) The minimum foam application rate of 3% foam solution shall be 12 lpm/ sqm of seal areas of floating roof type tanks and 5 lpm/sq.m (complete surface area) for fixed roof type tanks.
- l) The system shall incorporate features such as non-return valves to avoid mixing water with foam concentrate pipelines, strainers in water inlet and in foam

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[176]	15.01.2016

concentrate lines, isolation valves of pumps/ flow control valves/ ratio proportioning devices etc.

- m) Manual operation facility shall be facilitated locally from the panel and operation of foam pump, opening of valves and injection of foam to any of the fuel oil tanks shall be achieved through selector switches, push button etc.

7.4.5 Inert Gas System

a) General

Total flooding system of Inert gas extinguishing system shall be provided for the following areas including false ceiling and false floor spaces as per NFPA 2001 (Latest Edition).

S.No	Details of Area to be Protected	Location	Approx. Sizes (m)		
			L	W	H
1.	[Electrical Equipment Room (EER) for unit .1]	[Main Control room at +17.00m level in TG building]	[...]	[...]	[...]
2.	[Electrical Equipment Room (EER) for unit .2]		[...]	[...]	[...]
3.	[Control room Including Computer room]		[...]	[...]	[...]
4.	[UPS room for unit .1(8.5 m level)]		[...]	[...]	[...]
5.	[UPS room for unit.2(8.5 m level)]		[...]	[...]	[...]

b) System Description

The Inergen gas total flooding system shall be an engineered system consisting of fixed nozzle and gas distributing network. The system shall be designed and installed in accordance with the NFPA 2001(Latest Edition).

The system shall consist of following major components:

- Bank of Clean agent cylinders with Gas each fixed with cylinder head valve and non-return valve
- Bank of standby cylinders with Gas fitted with - cylinder head valves and non return valves.
- Gas manifold and high-pressure hoses.
- Cylinder rack
- Pressure reducing devices.
- Pressure switches.
- Pilot cylinders if required
- Electric Actuator

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[177]	15.01.2016

- ix) Manual push buttons
- x) Inhibitors
- xi) Directional valves
- xii) Flexible Hoses
- xiii) Discharge Nozzles
- xiv) Safety relief valves
- xv) Pipe and Fittings
- xvi) Bracket Supports and Hangers
- xvii) Caution hooters
- xviii) Caution boards & evacuation alarm
- xix) On line weighing system with digital display signal of loss of gas in the cylinder. Weight to be available at MFAP
- xx) Fire detection and alarm system including Gas release panel/ local control panels and interface unit/ monitor control module etc.
- xxi) Cylinder bank room (brick construction with RCC roof)
- xxii) Trolley to transport 2 numbers of cylinders at a time.

The quantity of gas required for the system shall be based on the gas required to blanket the volume of area protected including leakages.

In order to optimize the requirement of gas and considering the space for cylinder banks, it may be planned to club together requirements of two or more adjacent premises. The Bidder shall ensure that the appropriate logic is followed for discharge of gas in respective premises.

Bidder shall include provision for automatic actuation of the system in integration of FDA system in the premises concerned. Annunciation signal related to for system operation shall be provided in MFAP as well as locally on panel. Provision for time delay and evacuation alarm shall also be provided.

Bidder shall note that release of gas shall be possible directly from FDA panel as well as local GRP/ local Panel to operate the system from FDA panel and obtain signal/ control. Bidder shall also include all interface units viz. control and monitor module.

Pipe network shall be designed to achieve the design concentration of gas required for extinguishing the fire in the premises.

The concentration level shall not exceed the NOAEL and LOAEL level as per NFPA guidelines.

Manual pushbutton of each area shall be located near entry/ exit.

Bidder to develop logic for above and submit working scheme along with the tender. Any interface devices required to hook up this system with the Main Fire Alarm Panel shall be included by the Bidder as part of the scope as a whole.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[178]	15.01.2016

One no. wall mounted annunciation panel/ gas release panel near cylinder bank shall be provided for (duplicate) annunciation as well as operation of gas release system.

Each of the premises will have false floor and false ceiling. The room volume, volume above false ceiling and the volume below false floor of each premises/room shall be considered for protection and detection and for calculation of Gas quantity and other components of the system.

Each zone shall be equipped with fire detection system. On receiving the fire signal from the detection system agent gas shall be released automatically after a set time delay and gas shall be discharged into the enclosed space.

The system shall comprise of the following mode of operation and actuation and cancellation facility etc. with necessary control panel.

System operation shall be possible by the following means:

- Automatically due to fire detection in the protected area from main fire alarm panel.
- Operation of manual release push button located adjacent to protected area.
- By operating manual lever provided on electrical / manual control head on cylinder.
- By push button actuation at Clean Agent control panel in manual mode.

The clean agent shall be discharged / actuated automatically after an adjustable time delay based on the detection signal received. Pre-discharge alarm (audio + visual) shall be initiated before discharge of gas in main fire alarm panel & local control panel.

Hooter shall follow the alarm once the gas is discharged.

The release of gas shall be preceded by an audio visual alarm in the affected area for alerting and evacuating the personal and for this purpose, during time delay of about 60 seconds (which is settable from the panel) between the initiation of release and actual release of gas. The exact time delay to be incorporated in the system shall be decided during detailed engineering.

To avoid an inadvertent mal operation and release of gas, on either of the mode of gas release operation (auto or manual), provision of manual interruption (i.e.) gas discharge inhibition facility through a suitable device on local control panel, main fire alarm panel as well as each protected premises shall be provided so that the agent release can be stopped within the time delay.

Multi sensor type detectors (addressable type) shall be provided below false ceiling, above false ceiling and false floor. Cross zoning of detectors shall be incorporated in such a way that the fire is detected by at least one detector of each type to activate automatic inert gas release system. However, audiovisual alarm shall be annunciated even if any one of the type of detector has detected the fire.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[179]	15.01.2016

Refer electrical chapter of this Technical specification for details of detection system

Necessary provision shall be made in the fire alarm panel for switching off the air-conditioning system automatically as soon as the fire is detected.

c) Design Criteria

- i) Complete design, software used and all the system components/equipment shall be approved and listed by UL / FMRC/LPC/VDS.
- ii) Design, manufacture and installation of inert gas fire extinguishing system shall be strictly as per NFPA 2001 (latest edition). In case the system is as per LPC/VDS, then, Design concentration of the gas shall be as per ISO norms specified by of LPC/VDS.
- iii) 150/ 200 bar clean agent extinguishing system shall be designed and installed for below false floor, main room and above false ceiling of various risk areas.
- iv) The Physical properties and its discharge characteristic of clean agent shall meet the requirements of NFPA-2001 (Latest edition).
- v) The design calculation shall be supported by UL/FMRC/LPC/VDS listed software.
- vi) The system shall be designed for total flooding based on the single largest risk area of the control room to be protected. However grouping of cylinders shall be made in such a way that discharge takes place corresponding to the volume of the risk under fire. However, Bidder shall check the suitability of common cylinder bank to cover all the rooms/areas as per norms.
- vii) The system shall have 100 % Clean Agent filled standby cylinders along with manifold and automatic change over for each risk area from the fire alarm panel itself.
- viii) The complete volume of the single largest room including the above false ceiling and below false floor shall be considered for estimation of quantity of gas and containers.
- ix) When determining the gas quantity, the leakage losses from the enclosure shall be taken into account by the supplier. The exact amount of gas to compensate for leakage compensation shall be designed by the bidder taking into consideration the type and features of enclosure, enclosable openings if any and other considerations so that design concentration is achieved after discharge
- x) The discharge time period shall be such that the design concentration can be achieved within 60 seconds. The flow calculations shall establish these criteria.
- xi) The quality of gas shall conform to relevant design standard such as NFPA - 2001 or as specified by listing authorities:

d) System Requirements

i) Clean Agent gas

The quantity of clean agent gas provided shall be sufficient to protect the single largest risk area with 100 % standby. The every individual risk shall have its own distributing pipe, nozzles, alarm and actuation system etc.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[180]	15.01.2016

Both the main and standby cylinders shall be permanently connected to the distribution piping through manifold and auto change over. The clean agent discharge shall be substantially completed in a normal 60 seconds.

ii) Flow Calculation

System flow calculations shall be performed using software listed or approved by UL/FMRC/LPC/VDS. The system designed shall be within the manufacturers listed limitations. Bidder shall provide the sufficient measure facilities in the risk areas to overcome the situation of over pressurization due to release of clean agent and also provide calculation in support of same for each protected area.

The Bidder shall submit the approval certificate/ listing document from UL/FMRC/LPC/VDS for the of software used for flow calculation.

e) Clean Agent Quantity

Minimum design concentration of Clean Agent gas shall be as per NFPA-2001 (Latest Edition) norms and specified by the approving authority. Quantity of Clean Agent Gas shall be calculated for the total volume of the largest room to be protected.

f) Clean Agent Storage Cylinders

- i) All the storage containers shall be kept in an enclosed room.
- ii) The 150/ 200 bar Clean Agent storage cylinders shall be considered to hold Clean Agent at ambient temperatures.
- iii) Maximum pressure of storage cylinder shall be 150/ 200 bars.
- iv) Cylinders shall also have approval from CCE, Nagpur
- v) The cylinders shall be charged to a fill density or super pressurization within the range specified in the manufacturers listed manual.
- vi) Bidder shall select the capacity of cylinder based on the total quantity of gas required, storage space available and for better replacement and inter changeability. Preferably 80 liter capacity cylinders may be used
- vii) The cylinder shall be seamless, brand new never retested with month & year of manufacture shall be marked on the cylinders.
- viii) Each cylinder shall have a permanent name plate, specifying the agent, tare and gross weight in addition to the pressurization level, nominal agent volume.
- ix) Cylinder shall bear the mark of manufacturer, serial number. single test certificate issued by manufacturer and shall be duly approved by UL/FMRC/LPC/VDS.
- x) Cylinder shall conform to the requirement of NFPA 2001 (Latest Edition) and shall be compatible with the engineered system.
- xi) Each cylinder shall have pressure relief valve to protect the cylinders against excess pressure conditions. Pressure gauges and pressure switches with isolation valves on manifold shall be provided.
- xii) Automatic means such as check valve shall be provided to prevent agent loss if the system is operated when any of the cylinders is removed for maintenance.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[181]	15.01.2016

- xiii) The cylinder storage racks shall be provided for main as well as for reserve cylinders.
- xiv) The manifold and cylinders shall be securely mounted on the floor and suitably supported in a rack with provision for convenient taking out individual cylinder for servicing, according to the manufacturers installation manual. Such servicing shall be possible without shutting down the system.
- xv) The Bidder shall indicate the space provision for room required for the storage of Gas Cylinder s and Manifold Piping along with technical offer.
- xvi) The gas cylinders shall be provided with Base Plate, foundation bolts & nuts etc. so that, the entire load is evenly spread out over the entire plan area. No concentrated load shall be resulted from the mounting arrangement of the cylinder/containers.
- xvii) All the pressure, gauges/switches, manifold connections etc shall be easily removable for servicing / maintenance without any loss of gas.

g) Discharge Nozzles

Discharge nozzles shall be UL/FMRC/LPC/VDS listed. The material of construction shall be of Brass. The selection of nozzle orifice shall be such that 95% of the minimum design concentration of gas is discharged within 60 seconds, through the nozzles of the system.

Each nozzle shall be permanently marked to identify the manufacturer as well as type and size of the orifice along with tag / part number, orifice code, or other suitable marking as specified in relevant norms / codes.

h) Piping, Fittings

Pipes shall be of ASTM A-53 or A-106 type (Seamless Carbon Steel High Pressure Sch. 80 pipe) and pipe fittings shall be provided as per the requirements specified in NFPA-2001 (Latest Edition). Pipe thickness calculation shall be as per ASME B31.1 and fittings conforming to ANSI B1.20.1. All CS Studs, Bolts and Nuts shall be Hot Dip Galvanized as per ANSI A153 for corrosion resistance. The Pressure Reduction device shall be easily identifiable. All Valves shall be approved for intended use. The Gaskets, O-Rings and other Valve material shall be compatible to the Clean Agent.

The Clean Agent piping and nozzles shall be planned avoiding fouling with the following facilities, in the areas where protection is being envisaged:

- i) AC ducts.
- ii) Cabling in false flooring.
- iii) Light fittings, detectors etc.
- iv) Other miscellaneous equipment/ fittings

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[182]	15.01.2016

i) Operating Devices

- i) Operating devices shall include Clean Agent releasing devices or valves, discharge controls and shut down equipment necessary for successful performance of the system.
- ii) The automatic Clean Agent system shall be of robust design and shall not be readily rendered inoperative. The Clean Agent system shall be designed to function properly for the temperature range specified in NFPA-2001.
- iii) The Clean Agent cylinders shall be mounted on front and firmly supported in brackets in a manner that they will not be easily subjected to mechanical, chemical or other damage, which would render the system inoperative.
- iv) In addition to Automatic actuation, there shall be a normal manual control for actuation, which shall be located so as to be conveniently and easily accessible at all times. This control shall cause the complete system to operate in its normal fashion.
- v) Manual controls shall not require a pull of more than 40 lb or a movement of more than 14 inches to secure operation. Each remote manual control for activation shall be located not more than 4 feet above the floor.

j) Local Control Panel

- i) Local control panel shall be free standing, floor mounted type and shall be suitable for both auto and manual operation. The panel shall be naturally ventilated, totally enclosed, dust and vermin proof, with IP-55 enclosure as a minimum. The Clean Agent system shall be actuated automatically from the fire alarm and detection panel. Fire alarm and detection panel, after detecting the fire in the protected area / zone, shall energize the solenoid valve/ electrically operated valve of cylinder to trigger the gas release operation in the respective protected area / zone. In addition to direct actuation of the cylinder valve from main fire alarm panel, those cylinders shall also get actuated through local control panel/ gas release panel. Necessary control / interlock cabling between Fire Alarm and Detection Panel and Clean Agent system panel, using multi-core 2.5 mm², Cu conductor PVC insulated flame retardant cable shall be provided by the Clean Agent Vendor. The main fire alarm and detection panel shall be located in pump house Control Room. The location of local control panel shall be decided during the detailed engineering.
- ii) The local control panel shall be equipped with adequate capacity of battery charger and Ni-Cod. Battery with 48 hour back up, for efficient operation of the system during mains power failure.
- iii) Local control panel shall be provided with all alarms, indicators, and caution/sign board and relays/ control switches meeting all the requirements of NFPA- 2001 and shall include but not be limited to the following:
 - Two alarms and one fault indicator lamp for each zone to be protected.
 - Combination of alarm silence and alarm off switch.
 - Combination of fault silence and trouble lamp switches.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[183]	15.01.2016

- Alarm test switch
 - Alarm re-set switch.
 - The system shall have a positive warning device by sounding alarm to alert personnel of the gas discharge and also a positive indication to show that the system has actuated.
 - Alarm indicating failure of supervised devices of equipment shall give prompt and positive indication of any failure and shall be distinctive from alarm indicating operation of hazardous conditions.
 - All indication lamps shall be LED type with minimum size of 10 mm.
- iv) Warning and instruction signs at entrance to and inside protection areas shall be provided.
- v) Potential free contacts shall be provided to shut off the fire dampers / louvers and Air Conditioning System.
- vi) Operating instructions shall be displayed on a name plate fitted permanently on the Clean Agent skid.
- vii) Clean Agent extinguishing system shall incorporate a pre-discharge alarm with a time delay, sufficient to allow personnel evacuation prior to discharge. The delay shall be minimum 30 seconds. However it shall be adjustable from 30 to 120 seconds.
- viii) Operating devices shall be by mechanical, electrical and pneumatic means conforming to NFPA2001. The power supply to electrical actuators shall be backed up with reliable battery supply. Such batteries shall be charged automatically by battery chargers. Power supply is taken from the Fire detection alarm system panels of the respective units. Required annunciations such as "Gas released", "Failure of automatic actuation", "Gas release aborted" etc shall be exhibited in the fire alarm panel.
- ix) Where pilot cylinders are employed for actuation of the cylinder banks, the number of pilot cylinders shall be as per the listed design manual.
- x) All manual operating devices shall be identified to the hazard they protect.
- xi) Manual abort switches for each of the area / zone shall be as per NFPA2001 or as specified by listing authorities.
- xii) The gas releasing devices at cylinder outlets shall be of reusable type after discharge at any instant.
- xiii) Supervision of automatic actuation devices, power supply, manual actuation circuits and complete wiring shall be provided through control system I panel and the healthiness shall be reported or indicated in the panel automatically.

k) Inspection and Testing

The complete system shall be tested to meet the requirement of NFPA 2001 norms. All equipments / devices shall be approved and listed by UL/FMRC/LPC/VDS except pipes, fittings & structural support.

Tests not limited to the following shall be performed:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[184]	15.01.2016

- i) A thorough visual inspection of the installed system and hazard area. The piping, operational equipment and discharge nozzles shall be inspected for proper size and location. The locations of alarms and manual emergency releases shall be confirmed. The hazard area shall be inspected closely for un-closable openings and sources of agent loss.
- ii) The Bidder shall furnish the composition certificate of Clean Agent from the manufacturer satisfying the requirements of the NFPA-2001.
- iii) Gas filling certificate shall be submitted from the manufacturer/ gas filling agency
- iv) A check of labeling of devices for proper designations and instructions. Name plate data on the storage cylinders shall be as per specifications.
- v) A test for mechanical tightness of the piping shall be conducted as per NFPA-2001
- vi) Storage containers shall meet the statutory requirement of approval / acceptance by CCE, Nagpur.
- vii) Design calculation shall be provided by the designer to prove that the area is not over pressurized and extinguishing capability is not affected due to existing ventilation of that area.
- viii) Complete system shall be installed, inspected, tested and commissioned as per recommendations of NFPA 2001. Bidder shall also consider Gas for one smallest room for system testing.
- ix) Prior to handing over of the system to Owner, the supplier shall provide operational training to Owner's operating personnel which shall consist of control system operation, trouble procedures, emergency procedures, safety requirements etc.
- x) The performance test of the system shall be carried out by releasing the agent gas in a selected area and all the design parameters shall be measured. All equipments, refilling of gas after test, instruments etc shall be provided by the contractor for the same.

I) Safety

- i) All the safety requirements recommended in NFPA2001 or as specified by listing authorities shall be incorporated in the installation by the bidder.
- ii) Appropriate warning signs shall be fixed outside of those areas protected by the system and also in areas where the gas may spread indicating clearly the hazard associated with the system such as Noise, turbulence, cold temperature, physiological effects on personnel etc.
- iii) Apart from written warning signs, audiovisual type warning signs (i.e.) hooters & strobe lights shall be provided; for pre-discharge and post-discharge activity. The sounder shall have selectable tone options.
- iv) The gas shall be discharged after a set time delay on receiving signal from the fire detection system. The duration of the timer shall be set at site after conducting test to find out the duration for evacuation of the personnel from the area.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[185]	15.01.2016

- v) To prevent the loss/release of gas automatically or manually during maintenance, the system shall have the facility of "LOCKOUT". The status of the system lockout condition shall be annunciated audio visually in the panel.
- m) **Materials of Construction**
- The material of construction shall be as per this specification for the items specified.
- For other items, the materials of construction used in the system shall be in accordance with NFPA-2001 or as specified by the equipment manufacturer for the intended use (if the same is not specified in NFPA-2001). However, all the items shall bear UL/FMRC/LPC/VDS listing
- Operating and maintenance manual.

7.4.6 Fire detection and alarm system

- a) General
- i) The annunciation panel at pump houses shall indicate the status of each pump, system pressure, operation of hydrant and/ or spray system, failure of starting of pumps, healthiness & failure of batteries/ chargers, main supply, low level of fuel oil tanks of diesel engines, tripping of pumps, low level / very low level of water level in the water supply system, selection status of batteries & chargers of panels and diesel engines etc. Alarms from these panels shall also be available to operator at fire station and at central monitoring station.
- ii) The addressable type panels at common control room shall receive signal from sensors from various areas/ equipments.
- iii) The Main Fire Alarm Panel to be located at common control room for two units shall cover the fire detection and protection system of the complete (all the areas) plant. This shall give audio -visual annunciations for fire in each of the risk area / equipment/ status of the fire protection system as well as system operator open /short circuit status of detector or control cabling etc. Further this shall activate a hooter/sounder in each of the area provided with fire/smoke detection system.
- iv) Number of Area Panels with alphanumeric mode and LED(cluster type) indication to be installed in control rooms of CHP, AHP, DM Plant, ESP Control Room, Switchyard control building, CW pump house and any other suitable area. In case of detection of fire, the fire signal (audio-visual) of particular area shall appear in the respective Area Panel and Main Fire Alarm Panel, Also it will be annunciated in the fire Station repeater panel.
- v) Area Panels shall have their own power supply unit and 24 V stand by battery in case of failure of normal AC supply. APs shall have facility to display all alarm and fault conditions, status of detectors of their respective area.
- vi) The Main Fire Alarm Panel, Repeater Panels and Area Panels shall be networked using RS 485 interface with fibre optic cable including all related accessories. Also, Main fire alarm panel and repeater alarm panel shall be connected through wireless network also. Distance between MFAP, AP, RP shall depend upon site conditions. The bidder shall provide all required hardware, software, cabling, interface cards, etc in this regard as per system requirement. A provision shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[186]	15.01.2016

kept to add/remove panels from the network. In network connection, bidder to provide two spare cores to be used in case of fault in working cores.

- vii) The addressable panel shall evaluate the signals received from the detectors, transmit the fire or trouble alarms (audio-visual) to prearranged points, supervise and monitor the complete fire detection & extinguishing circuits, initiate control functions like stoppage of Coal conveyers, closure of fire doors, shutdown of air-conditioning and ventilation plant/equipment, closure of fire dampers in a/c & ventilation system etc. Opening smoke extraction vents, switching on smoke extraction equipment, emergency lighting, tripping of transformer lockout relays etc. Details of such auxiliary functions shall be finalized as per Owner's requirement.
- viii) Bidder shall provide required electrical contacts relay (upon detection of fire) in their fire alarm panel to enable Owner to complete the output function for equipments/hydrants which are in the scope of Owner like tripping of conveyors etc.
- ix) All the circuits from the detectors to the panels and the circuits from the panels to the actuating devices (such as solenoid valves, deluge valves, push buttons etc.) Shall be closed loop type and shall be supervised for open and short-circuiting. The trouble signal shall also be annunciated in the respective panels.
- x) Facilities shall be provided on the fire alarm panel for simulating fire conditions, sensitivity adjustment, isolation of detectors etc. from the panel.
- xi) Complete fire detection, alarm monitoring and annunciation system from the panels shall be operated on DC supply, suitably converted by a dedicated rectifier bank taking supply from each of the panel. Further each panel shall be provided with 2x100% batteries and 2x100% battery chargers with provision for automatic change over from mains to batteries, automatic charging etc.
- xii) Each set of battery shall be of adequate capacity to supply fire detection and alarm system and as well actuating devices such as solenoid valves etc. for a period of 12 hours from the instant of charger/ ac failure.
- xiii) The batteries shall be of maintenance free sealed (NI - CD) type.
- xiv) The detector cable and other control cable shall be armored, screened and twisted FRLS type in external areas and shall be of unarmored FRLS type inside the buildings (in conduits). However, the cables associated with "Lignite conveyor-detection & protection system (within Lignite handling plant)" and unit control & control equipment room shall be of short term fire proof type conforming to category "s" as per BS: 6387.
- xv) The fire alarm system, of each unit shall be provided with necessary interface hardware and software for interconnection with LAN / WAN (respective unit as the case may be) of DCS for transfer of signals for the purpose of information to the unit control room. The plant information shall be made available through a serial link following mod bus or industry standard protocol to be decided during detailed engineering. All required plant data shall be transferred to/from DCS through a suitable gateway ensuring complete security. The exact number of points to be transferred through the communication link and the format of the data shall be finalized during the detailed engineering. The fire protection vendor shall provide all assistance to the DCS supplier including coordination and flow of required

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[187]	15.01.2016

information etc to achieve the following:

- Display of all input points under alarm, connected to/or generated by fire alarm system on the main operator console of DDCMIS
 - To display diagnostic messages of fire alarm system.
 - Selection of suitable communication protocol between fire alarm system and DCS.
- xvi) The Bidder shall produce a design philosophy document stating the criteria for the fire detection and protection systems and in particular for zoning of the plant, selection of the control system, the detectors, their positioning, precautions against spurious signals, the interfaces between the fire detection and HVAC systems, the remote/local operation of fire dampers, smoke extraction fans and smoke vents, local indication of dampers, smoke extraction fans and vents and the operation of the fire protection systems etc. The Bidder shall ensure that, wherever possible, the zoning of the fire systems shall coincide with the zoning of the HVAC systems to simplify sequencing, interlocking and tripping of the HVAC and fire systems under operational, fire and emergency conditions. The bidder shall provide all necessary interfaces to other systems.
- b) Smoke Detection System
- i) In the areas where only smoke detectors are envisaged upon detection of fire, the same shall be annunciated in the respective panels and shall activate a local hooter/ sounder in the areas where fire is activated.
 - ii) Wherever both the Multi sensor type & photo - electric type smoke detection systems are provided, cross zoning of the signal shall be provided to initiate the fire extinguishing system of that area such as automatic MVW spray system of cable galleries etc.
 - iii) Two smoke detectors of both the types shall be provided for return air ducts of each room which shall consist of intake probe, detector housing, and exhaust pipe etc. The detector shall be mounted outside the duct.
 - iv) The design coverage area for smoke detectors (to be considered) shall not exceed 25 m².
- c) Detection System for Coal Conveyors
- i) The LHS cable detector for each conveyor shall be layed as per the standard practice of the manufacturer/ supplier. The arrangement shall be designed such a way that the same shall not hinder the normal operation and maintenance. LHSC shall be layed on pipe racks supplied by Bidder.
 - ii) The detection zone/loop divisions of LHSC system shall match with the MVW spray system.
 - iii) Upon detection of fire either by IR detector or LHSC detector, the running conveyors shall be stopped and the spray system shall be initiated. It shall also initiate spray system for the two adjacent zones after a time delay settable at site.
 - iv) The LHSC detector may be digital type/ analogue type and shall comply with latest TAC guidelines. In case of digital type suitable interface unit shall be provided which shall generate/ make the signal compatible with fire alarm panel.
 - v) The infra red type (IR) detectors shall be suitable for detecting moving fires in Lignite conveyors and at least one detector shall be provided for each of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[188]	15.01.2016

conveyor if specified elsewhere.

- vi) The IR detector shall stop the conveyor upon detection of fire and give audiovisual annunciation locally and in fire alarm panel.
- vii) The IR detector shall be outdoor type weather proof and shall be able to function continuously in heavily coat-dust prone atmosphere without regular maintenance.
- viii) The IR detector shall be designed to reject deceptive phenomenon such as electric arc, heaters, artificial light sources (HPSV/ LPSV / incandescent lamps etc.) sunlight etc. While retaining the inherent detection characteristics.
- ix) Each of the IR detectors shall be provided with its own purging arrangement using blowers, hoses, etc and required power supply shall be derived from the fire alarm panel, or from nearby power supply system. Alternatively, supplier/ Bidder may offer separate blowers (2x100%) for purge air supply for all the detectors separately and the complete air piping air from the blowers to each of the IR detector shall be provided by the supplier/ Bidder.
- x) The performance of the proposed IR detector model for detecting moving fires shall be demonstrated to Owner as per test procedure acceptable to Owner before supply of the same at site. Such demonstration test shall be conducted in a typical Lignite conveyor test set up at works or in a plant.
- d) Detection System of Cable Galleries
 - i) In cable galleries, MVW spray system shall be actuated either by detection of fire by linear heat sensing cable detectors or by fire signal from smoke (after cross zoning) detection system. Apart from the automatic operation of spray system in the detected zone the adjacent two zones shall also be sprayed with water automatically after a set time delay simultaneously.
 - ii) LHSC detector shall run in a zigzag fashion (with an included angle of minimum 90°) at least in each of the top tray, bottom tray and in every alternate tray.
 - iii) The detection zone/loop divisions shall match with MVW spray zones.
- e) In the battery rooms, wherein electrical spot type detectors are to be provided,, alarm shall be provided whenever fire is detected. The coverage factor for the electrical type detector shall not exceed 25 sq. M per detector.
- f) The foam system of fuel oil tanks shall be operated by probe type heat detection system. In case fire is detected, the automatic Foam system shall be actuated for the detected tank and simultaneously MVWS cooling of the balance tanks shall be actuated as mentioned in CI 3.00.00 above.
- g) Analogue Addressable System
 - i) Complete system and all major/critical equipments such as detectors, panels etc shall be approved and listed by UL/FM/LPCB/VDS/TAC.
 - ii) All types of smoke & heat detectors shall be of analogue addressable type. Conventional detectors with interface modules are not acceptable. Each zone of LHSC detector and each IR detector shall be provided with interface module.
 - iii) All the fire detection systems, process actuated switch devices such as pressure/flow/temperature switches and relays of control functions shall be hooked up with the analogue addressable fire detection and alarm system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[189]	15.01.2016

Required addressable interface units shall be provided for various switch devices by the supplier/ Bidder to make them addressable.

- iv) The wiring shall be of style 7 as per NFPA-72 with loop / short circuit isolators.
- v) Each of building / areas shall be considered as a zone and isolators shall be provided zone wise. In case of large building, isolators shall be provided for every 20 devices.
- vi) The complete system shall include, but not be limited to the following:
 - Master system CPU.
 - Analog addressable fire detection and alarm system panels including alarm modules, system supervisory control modules, auxiliary output control modules etc.
 - PC based monitoring station with colour graphic display terminal with programming and historical archiving facility along with laser printer.
 - Power supplies, batteries and battery chargers.
 - Analog addressable type heat detectors and analog addressable type smoke detectors.
 - Non addressable type conventional detectors (linear heat sensing cable detector/ infra red type heat detector) and switching devices each with its own addressable interface modules.
 - Software and hardware as required for complete operation of the system.
 - Complete wiring/cabling including its conduits/trays/fixtures etc.
- vii) The fire alarm control panel shall function as a communication interface between central processing unit and sensors. This panel shall have facility to process the input signal and to control all the input data received from initiating and indicating devices.
- viii) Fire alarm control panel shall have filters to ignore false alarm and increase sensitivity to real fire from sensors. The sensitivity of each detector should be automatically raised if detectors are gradually polluted due to dust and dirt entering inside the detector. If detectors are more polluted the control panel shall give a warning. The trouble report shall indicate the location of device requiring service.
- ix) The fire alarm control panel shall have separate LCD display to indicate the address of each device and clear text about the location of the alarm/ trouble. It shall record the event within the non-volatile system historical memory.
- x) Fire alarm control panel shall have printer to print out the alarm/ trouble occurrences.
- xi) The CPU shall serve as the systems central processor. Software shall be designed especially for fire alarm annunciation system applications and shall provide to monitor status of processing alarms according to priorities, controlling/processing communications and synchronizing all system activities.
- xii) The video display unit shall be the primary operator for data retrieval, alarm

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[190]	15.01.2016

- annunciation, commands and programming functions.
- xiii) The system shall be able to recognize and indicate an alarm condition in a degrade mode of operation, in the event of processor failure or the loss of system communications to the circuit interface panels.
 - xiv) Field testing facility shall be provided by the system for either the complete system or specified area or a specified device while maintaining full function of areas not under test.
 - xv) All devices shall be individually identifiable for its type, its zone location, alarm set value, alarm and trouble indication by a unique alpha numerical label.
 - xvi) The software logic modules and system database shall be programmable using a ms - windows compatible program on pc at site and required hardware shall be included in scope of supply. The system software program shall be password protected and shall include full upload and download capability and during program upload or download through the pc, the capability of alarm reporting shall be retained. The software shall be downloaded to a pc for editing. The software shall enable Owner to add the spare loop provided in the fire alarm panels or addition of additional devices/detectors in any of the fire alarm panel.
 - xvii) The system shall support the use of color graphic display terminal for the display of information in an appropriate format.
 - xviii) The system shall include software for system data base, historical event log, logic, and operating system. The system shall require no manual input to initialize in the event of a complete power down condition. It shall return to an on line state as an operating system performing all programmed functions upon power restoration.
 - xix) Activation of any fire alarm initiating device shall display (LCD alpha numeric display) message in describing the device originating the alarm condition at the central monitoring station, at alarm panel, simultaneously at the repeater annunciation panel and shall initiate the associated protection systems & other related control functions. Similarly activation of any supervisory circuit, (supervised valve closure, air pressure abnormal, fire pump trouble, water pressure low, etc.) Or receipt of trouble report (primary power loss, open or grounded initiating or signaling circuit wiring, battery disconnect etc) shall display at the fire alarm control panel the origin of supervisory condition or origin of trouble condition as the case may be. It shall also record the occurrence of the event, the time of occurrence and the device initiating the same.
 - xx) System configuration shall be menu driven and capable of being operated by a person with no previous computer programming experience.
- h) Addressable System Hardware
- i) The detectors shall be self compensating for ambient temperature and humidity.
 - ii) The detectors shall display a steady led when in the alarm state. The led shall flash when in stand by or normal mode.
 - iii) The monitor system shall retain in local memory, minimum four pages of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[191]	15.01.2016

system activity, allowing scrolling of the data. It shall be capable of logging events to a hard disk drive for future retrieval. The number of events shall be limited only by the hard disk drive capacity.

- iv) At least one spare loop shall be provided in addressable type fire alarm panel located in unit control room and various area panels at specified locations. Further at least 20% of loop capacity shall be left free in each of the connected loop in all the panels, so that, additional devices may be connected to the system in any of the loop by Owner in future.
- v) Services
 - The Bidder's scope of services shall also include two inspections of the complete system including testing and repairs, if any, and system re-commissioning in full compliance with the requirements of NFPA during guarantee period of the contract.
 - The Bidder's scope of services shall also include imparting training in receipt, handling and acknowledgment of alarms, in the system operation including manual control of output functions from the system control panel. Training in the testing of the system including logging of detector sensitivity, field test of devices and response to troubles for number of employees of Owner at site on the installed system for sufficient duration
- vi) Telephone Auto Dialer
 - The main fire alarm panel shall include a telephone auto dialer in to it. It shall be possible to record a minimum of 6 (six) voice message into the auto dialer on field. It shall be possible to program / configure a minimum of 6 telephone numbers into the auto dialer on field. The auto dialer shall activate during the fire and convey a voice message to programmed numbers indicating the area under fire.

7.4.7 Piping and Valves

a) General

- i) Piping for all fire protection systems shall generally be laid under ground with proper wrapping and coating. At rail/road crossings, fire water pipes shall be laid inside hume pipes of suitable ratings.
- ii) For calculating friction loss in piping system: William & Hazen formula shall be used with c value as per TAC/NFPA norms.
- iii) Inserts/ embedment required for all pipe/ valve / equipment supports shall provided by the agency providing civil works. However the clamps, channels, bolts, nuts etc to support/mount piping/valves/equipments shall be supplied and erected by the Bidder.

b) Material of Construction

- i) Mild steel as per IS: 1239 (part-I) medium grade (up to 150 NB) & as per IS: 3589 Gr 410 (200 NB and above) or equivalent for pipes normally filled with water.
- ii) Mild steel as per IS: 1239 (part-I) medium grade (up to 150 NB) & as per IS: 3589 gr.410 (200 NB and above) or equivalent and galvanized as per IS: 4736 for pipes normally empty and periodically charged with water and foam system application.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[192]	15.01.2016

- iii) To prevent soil corrosion buried pipes shall be properly lagged with corrosion protective tapes of minimum thickness of 4 mm (in two layers) of Lignite tar type as per AWWA C 203 or coating and wrapping as per IS: 10221/IS: 15337..
- iv) Strainer wire shall be SS (AISI316). Strainer area shall be at least 4 times the pipe cross section at the pipe inlet.
- v) Minimum pipe thickness shall be 6 mm for 200 NB to 350 NB, 7 mm for 400 NB and 8 mm for beyond 400 to 600 mm.
- vi) All valves shall be as per applicable IS/BS codes & approved by tariff advisory committee (TAC)-INDIA/ LPA /TAC accredited professionals for specific fire protection system and shall be provided with locking arrangement (with locks) in open or close condition.
- vii) All the flanges and counter flanges shall conform to ANSI B 16.5 CI 150.
- viii) Strainer body as per IS: 2062.
- ix) Unless otherwise specified all elbows / bends shall be long radius type.
- x) For pipe fittings the material shall conform to ASTM A 234 Gr WPB or ASTM A 105 or equivalent and dimensional standard conforming to ANSI B16.9 (socket & threaded type), ANSI B 16.22 (for butt welded fittings) and ANSI B16.5 (for flanges and flanged fittings) as the case may be. Further galvanized malleable cast iron fittings as per IS 1879 or cast iron fittings as per BS-1641 are also acceptable.
- xi) The fittings shall be galvanized as per IS: 4736 for galvanized pipe application. In case of branching connections from GI mains for spray piping network, socket may be welded for more than two pipe reduction instead of standard tees.
- xii) Fabricated fittings shall not be acceptable up to pipe size of 300 NB. For sizes 350 NB and above, fittings may be fabricated as per BS: 2633 / BS: 534.
- xiii) Welding of galvanized iron pipes/fittings would be permitted provided the same is carried out by means of special electrodes suitable for the above application and the same shall be approved by Owner. After welding, welded portions shall be applied with three coats of zinc silicate treatment /rich paint over one coat of suitable primer. Further the Bidder shall provide proper zinc paint at the point of welding.

7.4.8 *[Fire Water Storage System]*

- a) *[Fire Water Tank of capacity [.....] m3 shall be designed to meet the requirements of TAC. The suction level of the fire water pumps is kept lower than the other make up water pumps so that always a fixed quantity of water is available for the fire protection system as per TAC norms.]*
- b) *[Required numbers of level transmitters / switches shall be provided so that required minimum fire water storage (as per TAC rules) is available for fire water service always and the whenever the water level is reduced to that extent, all the pumps located in service water pump house shall be tripped with prior audio-visual annunciation.]*

8 COMPRESSED AIR SYSTEM

8.1 General

The compressed air system shall consist of Instrument Air compressors & their motor drives, Air Drying (ADPs) Plants, Service Air compressors & their motor drives, air receivers for each Air compressor, instrumentation and control, control panels, interconnecting compressed air piping in the compressor house, Instrument Air Piping network, service air piping network and Unit Instrument Air receivers (One for each SG/TG unit).

Air from Instrument air compressors shall be dried in respective Air Drying Plants in compressor house and delivered to the Air receivers. From the Compressed air piping header at the downstream of Air receivers, one instrument air piping header for each unit of main plant and one for balance of plant shall be provided.

Generally instrument air compressors are to be used for supplying instrument air application and service air compressors for service air duty. Valves & piping shall be arranged, so that interchange is possible during exigency. The instrument air header piping & valves at ADP outlet in compressor house shall be provided such that all the instrument air compressors may be interconnected and the entire system can be used as a station facility.

8.2 Codes and Standards

The equipment to be provided under this section shall specifically conform to the following codes, standards, specifications and regulations as applicable, including all its latest amendments subsequent to the year of publication as mentioned in table below.

S.No	Code	Description
1	IS-2825/1969	Code for unfired pressure vessels
2	IS-4503/1967	Shell and Tube Type Heat Exchanger
3	IS-5456/1985	Code of Practice for testing of positive displacement type air compressors and exhausters
4	IS-5727/1981	Glossary of terms relating to compressors and exhausters
5	IS-1239 part-1/1990	Mild Steel tubes, tubular and other wrought steel pipes
6	IS-1239 Part-2/1992 IS- 3589	Mild steel tubes, tubular and other wrought steel fittings
7	IS-6206/1985	Guide for selection, installation and maintenance of air compressors/plants with operating pressure up to 10 bars
8	ANSI-B16.5(1988)	Steel Pipes Flanges and Fittings
9	IS-7938/1976 IS-2002 ASME Sec.VIII Div.-1	Air Receivers for Compressed Air Installations

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[197]	15.01.2016

S.No	Code	Description
10	IS-10431 Part-1/1983 IS- 5456	Measurement of Air Flow of Compressor and Exhausters by nozzles
11	ASME PTC-9	Performance Test Codes for Displacement Compressors, Vacuum Pumps and Blowers
12	ISO-7183	Compressed Air Dryers - Specification and Testing

In case of any contradiction with the aforesaid standards and the stipulations as per this Section and Attachments/Annexure of this section, the stipulations of this Section and its Annexure shall prevail.

8.3 Design Criteria

The Compressed Air System shall ensure a reliable supply of adequate quantity and quality of oil free air on continuous and intermittent basis for the $[(2 \times \dots)]$ MW units. It consists:

- Instrument Air (IA) for Instrumentation and Control purposes for the station.
- Service Air (SA) for usage in boiler, turbine, various BOP facilities and electrical equipment area general house cleaning and other miscellaneous usage.
- The normal pressure of Instrument Air supply at the outlet of Air Dryer shall be 8.0 Kg/Sq. cm(g) and shall not be lower than 7.5 kg/sq.cm(g) under any circumstances. Corresponding to the normal pressure at the outlet of dryer, the rated discharge pressure of IA compressor shall be worked out by the Bidder, allowing for pressure drops in system piping, equipment and all other accessories.
- The maximum expected pressure in the system shall be computed by considering 10% overpressure over and above the rated discharge pressure of each air compressor.
- Suitable interconnections shall be kept between SA and IA headers before Air Dryers for each unit with normally closed motorized isolation valves.
- The temperature of compressed air at the outlet of compressor house shall be limited to 45 °C. However instruments require air temperature less than 45 °C the same will be achieved by outlet header.
- Compressed air system equipment requiring clarified cooling water shall be capable of operation at design capacity with cooling water inlet temperature subject to a maximum of $[39 \text{ } ^\circ\text{C}]$. The above equipment shall also be capable to withstand a pressure not less than the shut off head of each clarified cooling water pump.
- The temperature of air at outlet from after cooler shall not exceed 10 °C above the cooling water inlet temperature.
- Air Compressors shall be identical and shall be designed for continuous operation with high efficiency to satisfy the performance requirements as specified in Annexure-A enclosed with this section.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[198]	15.01.2016

- j The power rating of the driver shall be selected such that a minimum margin of 15% is available over the power required to deliver rated capacity against rated discharge pressure. When the driver is not directly coupled to the compressor, due account should be made for losses in power transmission, in addition to the above margin.
- k Each Air Receiver shall be so sized that even in the event of total stoppage of air inflow to the same, the pressure in the Air Receiver shall not fall below 5.5 kg/cm² (g) within two (2) minutes of such stoppage, while maintaining an out flow of air at a rate equal to the rated capacity of a single compressor, during the aforesaid period. In no case, the size of each Air Receiver shall be less than that arrived from IS 7938.
The water filled volume of each Air Receiver shall be calculated in accordance with the guidelines specified above or 10 m³, whichever is higher.
- l The drying capacity of each Air Drying Plant (ADP) shall be provided to match the corresponding capacity of each compressor
- m The air drying plants receiving compressed air saturated with moisture shall be capable of operating continuously to provide reliable moisture free compressed air. Dew point of the outlet air measured at the stated operating pressure shall be -40 °C or lower throughout the operation.
- n Driers shall be suitable for part load operation while maintaining the outlet air dew point as specified above. Necessary instruments and controls shall be provided to ensure that the specified dew point is maintained irrespective of input variations.
- o The compressor and air dryer plant shall be designed for the following conditions:
 - i. Design Temperature- 50 Deg.C
 - ii. Design Relative Humidity- 100 %
- p The air drying plant shall be designed to deliver continuously air at dew point at atmospheric pressure and the quality of dry outlet air shall be conform to Instrument Society American Standard S 7.3 " Quality Standard for Instrument Air".
- q The temperature rise of cooling water in heat exchanger of compress air system shall be limited to 5 degree centigrade.
- r The after coolers and intercoolers shall be water cooled shell and tube type. The intercooler shall have air in shell side and water in tube side to add surge volume for reducing air pulsation before the second stage. Inter coolers and after coolers shall be designed in accordance with Sec.VIII, Div-I ASME code or equivalent.
- s Coolers shall be provided with removable tube bundle design in accordance with design code TEMA Class-C and shall be constructed with removable shell cover.
- t The coolers shall be designed for maximum heat load and atleast 10% design margin shall be provided in the number of tubes.
- u Noise level shall not exceeds 85 dBA when measured at distance of 1.5 m above the floor & from the equipment.
- v The IA & SA compressor shall be of same design parameter.

System Description

a) Air compressors

- i) The design shall be such as to ensure trouble free operation with least vibration and noise. Suitable acoustical treatment will be provided to ensure the noise level within permissible limits as specified. Different parts of the compressor and accessories shall be arranged neatly in a compact manner. Due consideration shall be given for easy accessibility and maintenance of the compressors.
- ii) The compressors shall be oil free, multi-stage water cooled, electric motor driven screw type, heavy duty, rugged construction. Their speed shall be so selected as to result in low maintenance and trouble-free operation under specified conditions.
- iii) Compressor components shall be interchangeable as far as possible. Material of construction shall be suitable for the service.
- iv) Compression chamber wall thickness shall be such that to withstand maximum design pressure.
- v) Casing shall be cooled by means of water or oil as per manufacturer's standard practice.
- vi) During maintenance of compressor suitable arrangement for cleaning of the cooling water jackets shall be provided.
- vii) Dynamically balanced, one-piece Rotor construction with a symmetric profile to keep leakage loss to a minimum and ensure high efficiency.
- viii) Highly precise timing gears to maintain rotors in correct relative position shall be shaft mounted; oil lubricated & designed to counteract the axial forces incurred in compression.
- ix) Bearings shall be antifriction type, designed to suit radial & axial loads & minimum operating life of 40,000 running hours.
- x) Safety valves shall be provided on low pressure & high pressure stage. Inlet throttle
- xi) The rotor and shaft shall be of single piece construction, made of forged steel with suitable corrosion resistant coated material to minimize leakage and wear (AISI C1141 or equivalent). The stator (casing) shall be of Cast-Iron Construction with corrosion resistant material and with integral jacket cooling.
- xii) The seal rings and retainers shall be of stainless steel construction and shall be free for radial self adjustment on the rotor shaft. The seals shall prevent air and oil leakage along the shaft and shall be of floating restrictive ring type. Air vented

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[202]	15.01.2016

from second stage discharge end seals shall provide buffer air to the other seals to prevent migration of oil towards the compression chamber under all operating conditions.

- xiii) The gaskets shall be of asbestos free material & Use of Oil lubricated anti friction type bearings to be at least 8000 running hours.
- xiv) The discharge blow off silencer shall be located at the downstream of discharge blow off valve.
- xv) Couplings shall be of non-lubricated flexible element spacer type & coupling guard shall be provided.

b) Lubrication system

- i) The compressor package shall include a lubricant management system which shall lubricate the bearings and seal. By the design, the compressor chamber (screw rotor housing) is totally separated from bearing/gear chamber.
- ii) The lubrication system shall consist of lube oil reservoir, lube oil pumps, suction strainers for pumps, supply & return system, oil cooler & twin full flow (2x100%) oil filters, required instruments etc.
- iii) Direct shaft driven positive displacement type oil pump having stainless steel rotors and steel casing shall be provided. An auxiliary motor driven pump shall be provided if required by the manufacturer to supply pre-start and shut down system. The pump discharge system will be protected by a relief valve.
- iv) The fouling factor shall be considered as per the recommendation of TEMA.
- v) Lube oil cooler shall be of water cooled & shell-&-tube type with water on the tube side.
- vi) Oil coolers shall be equipped with vent & drain connections on oil & water sides. Oil temperature control valve with manual override feature or bypass construction shall be provided to maintain constant temperature.
- vii) The lube oil cooler shall be designed for a heat duty corresponding to the peak power demand of the compressors.
- viii) The cooler shall be designed in accordance with the requirement of IS-2825.
- ix) Due consideration for the differential expansion of shell and tube shall be given in the design of the coolers.

c) Gear Box

Speed increasing gears between the motor and compressor stages shall consist of a common helical gear (alloy steel) driving the pinion of each stage. Helical timing gears shall be mounted on the rotor shafts to maintain accurate relative rotor position. Gears shall have a rating of AGMA-12 or equivalent.

d) Inter Cooler, After Cooler and Moisture Separator

- i) Inter-cooler shall be located between the low and high-pressure stages, if required, to reduce overall power consumption. Design performance shall be in accordance with Manufacturer's Standard and wall thickness of tubes and expansion joints shall ensure maximum trouble-free service for long period.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[203]	15.01.2016

- ii) It shall be located after compressor discharge to bring the outlet temperature of the compressed air within 10 °C, of the cooling water inlet temperature. Necessary safety valves shall be provided on inter coolers and after coolers.
- iii) Inter-cooler, After-cooler and Moisture Separator shall be provided with Auto trap stations including strainer, bypass and double isolating valves for the traps. Automatic traps shall be of reputed make and shall be of float type suitable for intended services. Y-strainer of 20 mesh screen of stainless steel shall be placed before each trap.
- iv) The moisture separator to be provided on after cooler air outlet shall have suitable internal baffling for removal of moisture and oil & shall be equipped with a level gauge with isolating cock.
- v) The design pressure of coolers shall be selected based on maximum air/oil/water pressure that may be encountered during operation. The shut off head of cooling water supply pumps shall be of the order of 8kg/cm²(g).
- vi) The shell, tubes, tube sheets and expansion joints with tube sheets particularly at flange portion etc. of the heat exchangers shall be designed to withstand the maximum working pressures encountered. Necessary allowance for corrosion shall be provided.
- vii) Intercoolers/After coolers shall be provided with supports, which are designed to avoid undue stress or deflection in support or body of the equipment.
- viii) Necessary drain and vent nozzles shall be provided for intercooler and after cooler.

e) Air Receiver

- i) There shall one air receiver for each compressor near compressor house, one receiver for DM plant & one instrument air receiver for each unit.
- ii) Air receiver(s) shall be in accordance with IS-2825 or ASME Volumes-VIII Div.I and IS-7938.
- iii) The air receiver shall be vertical self-supporting cylindrical vessel with dished ends and with supporting stand for resting on the civil foundation.
- iv) Design pressure & temperature shall be minimum 10 kg/cm² (g) and 50 °C
- v) Receivers shall be of welded construction with minimum number of joints. Longitudinal seams in adjacent sections of shell shall not be in the same line.
- vi) Each receiver shall be provided with drain connection with electrically operated automatic trap arrangement with isolation and bypass valves.
- vii) The material of construction of shell, dished ends, flanges etc. of the air receivers shall be of carbon steel as per IS: 2062 or equivalent.
- viii) All welding shall be performed in accordance with relevant codes. Filler material that will deposit weld metal with a composition and structure as near as that of the material being welded shall be used. The electrodes shall be dried in oven immediately before use to ensure freedom from porosity.
- ix) Receivers shall be provided with required number of nozzles, the orientations of which shall be subject to approval by the Owner. At least two gasketed inspection holes shall be provided for receivers up to 500 mm diameter. All

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[204]	15.01.2016

openings shall be placed as far as possible from welded seams and in no instance shall pierce the seam.

- x) Receivers shall be provided with one or more safety relief valves of proper capacity so that the maximum working pressure of the system is not exceeded under any circumstance and set pressure of the same shall be atleast 10% above working pressure. Unless otherwise mentioned, each receiver shall be provided with at least one pressure gauge and one temperature gauge of proper range and required number of pressure switches for compressor control purposes.

- xi) Receiver shall be heat-treated in accordance with BS-5169.

f) Intake Air Filter and Silencer

- i) The intake air filter & silencer shall be of dry type with replaceable type filtering media, high efficiency suitable for outdoor duty.
- ii) Filters with multiple elements and quick removal type for easy cleaning to be provided at suction of each air compressor and shall also be of heavy-duty dry type. Oil bath type shall not be acceptable for non-lubricated compressors.
- iii) The filters shall be complete with integral silencers and all other accessories. The filtering elements shall be easily removable for cleaning or for replacement.
- iv) Minimum dust concentration of 30 mg / m³ may be considered.
- v) The silencer shall be provided to adequately dampen the operating noise as per the requirements.
- vi) Pulsation dampener of approved design shall be provided on the compressor suction and discharge manifold.
- vii) Maximum pressure drop across filter at design flow rate in any condition be 250 mm of water column.

g) Drive Unit

- i) The compressors shall be driven by constant speed squirrel cage induction motor unless otherwise specified.
- ii) The power rating of the driver shall be selected such that a minimum margin of 15% is available over the power required to deliver rated capacity against rated discharge pressure. When the driver is not directly coupled to the compressor, due account should be made for losses in power transmission, in addition to the above margin.
- iii) For other types of connection between drive unit and compressor, suitable flexible coupling shall be provided.
- iv) Necessary guard shall cover all exposed moving parts.
- v) Motor shall be suitable for eight (8) equally spreaded starts per hour.

h) Air Drying Plant

- i) Air-drying plant shall be of Heat of compression type.
- ii) Hot unsaturated compressed air shall be used for regeneration of exhausted desiccant in ADP.
- iii) In the rotary drum dryer, since the drum is continuously rotating, the regeneration and drying are continuously occurring cycles.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[205]	15.01.2016

- iv) Air dryer shall be Indoor located.
- v) The air dryer rotary drum motor should start automatically on compressor load command and stop the moment compressor unloads.
- vi) All hot vessels & pipelines to be insulated to restrict the outside temperature within 60 °C with mineral wool (or equivalent).
- vii) Quantity of desiccant to be calculated taking into account residual moisture content at the end of regeneration cycle.
- viii) Complete ADP equipments shall be preferably mounted on a skid.
- ix) Each ADP shall be provided with 2 Nos. of 100% capacity Pre-filters and 2 Nos. of 100% capacity after filters at the upstream and downstream of towers. The filtering media shall be of ceramic candle type elements design to withstand at least 50% of static pressure as differential pressure. The pre-filters shall be provided with automatic electrically operated drain trap arrangement with isolation with bypass valves.

i) Pressure Vessels

- i) All pressure vessels shall be designed as per IS : 2825 or approved equal
- ii) The vessels shall be of self supporting construction. All welding materials and procedures shall be as per IS: 2825 or approved equal.
- iii) All vessels shall be included with required manholes/hand holes.
- iv) Relief valves of adequate capacity shall be provided for each vessel. Relief valves shall be provided with hand lever. The valves shall be of stainless steel construction.
- v) Internal surfaces of all the vessels shall be suitably protected against corrosion and rusting. Corrosion allowance of 2.5 mm shall also be provided on shell and dished end thickness.
- vi) Draining trap station complete with Auto drain trap, isolation and by-pass valves and Y-strainer shall be provided for the moisture separator.

j) Solenoid Valves and Multi-way Valves

- i) The solenoid valve shall be of approved make. The solenoid valves shall have heavy duty, double impregnated tropicalised coils (Single or double solenoid as required) and shall be suitable for the operating temperature and for operation continuously energized, in a tropical climate.
- ii) The solenoid valves shall be of bronze body with stainless steel trim. The coil shall be of continuous duty and of epoxy moulded type, Class-F. The enclosure shall be watertight, dust tight, weather proof and shall conform to NEMA-4X standard. The valves shall be suitable for mounting in any position. Solenoid coils shall be Class-H high temperature construction and shall be suitable for continuous operation.

k) Interconnecting Piping, Valves and Fittings

- i) Pipelines shall be selected as per IS-6206/equivalent standard. Piping in airlines and cooling water lines up to 50 NB shall be socket welded and 65 NB and above shall be butt-welded and flanged type. All interconnected air piping and cooling water piping etc., as indicated in tender drawings shall be furnished by the Bidder, complete with valves, fittings, pipe supports as necessary.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[206]	15.01.2016

- ii) The air discharge piping shall be full size of compressor outlet or larger, short and direct with minimum number of fittings. Only long radius elbows shall be used where bends are unavoidable. The velocity of compressed air in pipe shall be limited to 6 to 10 m/sec for headers and 11 to 15 m/sec for piping network.
- iii) Long runs of vertical piping at compressor discharge shall not be acceptable.
- iv) The layout shall be such as to prevent resonance. Provision of thermal expansion of hot pipes shall be made.
- v) All pipe connections with equipment shall be flanged type. All pressure gauges/switches shall be complete with root valves and all temperature elements shall be mounted in a proper thermowell.
- vi) For water cooled compressors, cooling water shall normally be piped through the intercooler and after cooler in parallel. From the intercooler, the water shall be taken to cylinder jackets. A solenoid valve shall be provided on the water inlet line for interlocked starting of compressors. Where provision for automatic water flow regulation by thermostatic valve has been made, a suitable bypass arrangement to the valve shall be made so that flow to the cylinder is ensured under all circumstances.
- vii) The velocity in water pipes shall be limited to 2.0 m/s.
- viii) Sight flow indicators shall be provided on water discharge from each cylinder, intercooler and after cooler.
- ix) All traps shall be float operated. All traps shall be of auto drain type to drain out moisture at regular intervals. The body and cover shall be of cast iron/solid steel construction and internals shall be of SS. Isolating valves shall be of stainless steel.

I) Dew Point Indicator

Dew point indicator shall be digital type for spot measurement of dew point of air. The specification of the meter shall be as follows:

Range : (-) 40 °C to (+) 20 °C
Accuracy : ± 0.2 °C

Dew point monitoring facility shall also be provided in local Control Panel as well as in unit DCS operator work station

8.6 Performance Guarantee

a) Performance Guarantee Parameters

Following guarantee parameters to be demonstrated under Category-III

- i) Capacity and discharge pressure of each air compressor.
- ii) Parallel operation of Air Compressor.
- iii) Dew point of air at outlet of air dryer of Instrument Air Compressor.
- iv) NPSH across the whole range of the pump (if applicable).
- v) Pressure drop across the air dryer plant of the air compressor.
- vi) The Air drying plant shall be designed to deliver continuously air at dew point of minus (-) 40 deg C at atmospheric pressure and the Quality of dry outlet air to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[207]	15.01.2016

conform to Instrument Society of American Standard S7.3 "Quality Standard for Instrument Air".

- vii) Discharge pressure available at the outlet of Air drying Plant shall be minimum 8.0 Kg/cm² (g).

8.7 Inspection & Testing

- a) The Bidder shall carry out the following specific tests and inspections to ensure that the equipment furnished shall conform to the requirements of this section and in accordance with relevant codes and standards.
- b) Material identification of compression chambers, rotor, rotor shaft, suction and delivery valves constituting the compressors and all parts of intercoolers, after coolers, moisture separators, air receivers, strainers, filters, all interconnecting air and water piping with valves and all other parts and accessories that could not spelt out in this clause.
- c) Hydrostatic testing of compressor, intercoolers, after coolers, moisture separators, air receivers, strainers, filters, all interconnecting air and water piping with valves and all other applicable pressure parts that could not be spelt out in this clause will be carried out. Hydrostatic testing shall be carried out at 150% of the design pressure for at least one (1) hour, unless contradicted by the relevant test code.
- d) Specific tests to be carried out for each compressor.
- e) Non-destructive testing of rotors, rotor shaft and all other applicable parts.
- f) Type test/Routine tests for all the air compressors as per IS-5456. All performance tests for compressors shall be carried out with actual motor being furnished. Routine tests shall include the following tests and measurements:
 - i) Capacity (Free Air delivery)
 - ii) Speed
 - iii) Specific power consumption
 - iv) Volumetric and overall efficiency of machine
 - v) Test of loading and unloading mechanism
 - vi) Any other test deemed necessary for the system
- g) Dynamic balancing of all rotating components and assembly of each air compressor including all drive motors in the compressed air system.
- h) Tests for capacity, pressure drop and efficiency of each Intake Air Filter with silencer shall be as Manufacturer's standard. These tests shall be conducted along with performance testing of each compressor.
- i) Testing of all motor drives and control panels in the compressed air system.
- j) Dew Point tests to be carried out on each Air Drying Plant.
- k) Any other test deemed necessary for the system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[208]	15.01.2016

9 FUEL OIL HANDLING SYSTEM

9.1 General

- i. This Specification is intended to cover HFO & LDO unloading system from railway wagons to fuel oil storage tank (HFO/LDO) using unloading pumps and other facilities like storage of HFO and LDO in the storage tanks, complete heating and transfer from storage tank to further handling by the pressurizing and heating system up to the boiler area and back.
- ii. The heating steam required for floor heater, suction heater in HFO storage tanks and all other areas as required shall be tapped off from a single point near the Fuel oil pump house (FOPH) Building at approximately 16 kg/cm²(g) at saturated condition. Steam pressure shall be reduced suitably by the Bidder as per the system requirement through a pressure reducing station equipped with a pressure relief valve, located near the FOPH. The bidder to calculate the steam requirement for the following heating applications:
 - HFO unloading header
 - HFO railway wagons
 - HFO unloading pumps, suction strainers and valves
 - HFO storage tank, floor heaters and suction heaters
 - HFO pipeline tracing & HFO equipment steam jacketing
 - HFO Oil heaters and valves
 - Oil water separator heating
 - Any other area as required.

Auxiliary steam piping from the steam generators to steam headers in unloading area and steam piping, tracer pipes for HFO heating and indicating type temperature control valves for suction heaters & temperature switches for control valves of floor coil heaters for HFO tanks shall be provided. Steam tracing with insulation shall be provided for HFO unloading headers up to unloading pump suction. All pumps, strainers and the HFO pipeline beyond unloading pumps shall be steam traced and insulated. Tanks, rail tankers, and heaters are also heated by steam

- iii. Condensate from various heat exchangers and floor coil heaters will be led to condensate flash tank. A portion of the hot condensate from the flash tank will be used for heating the oil water separator and rest will be sent to the effluent treatment plant. Flash tank vent will be vented out in atmosphere at a suitable and safe height. Necessary piping & accessories shall be provided for efficient operation of the condensate system.
- iv. Oil Water Separator System (OWS)
Oil handling area run off is the main source of oil in plant effluent. Oil spillage during unloading, washing of floors, leakage of pumps, etc. will be taken to oily water drain pit through trenches. From here mixture will be pumped to the oil water separator by oily water transfer pumps. For maintaining the oil viscosity and flow ability, hot condensate & steam will be used. The oil-water separator will

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[209]	15.01.2016

be provided with a floor coil heater for heating by means of condensate from flash tank. In case of lesser quantity of available condensate for heating of OWS, steam shall be utilized for OWS heating. Heater shall be designed to handle both the heating media. The oil separator shall be a gravity separator (i.e., tank fitted with baffles and separation mechanism). The separated oil will be collected in barrel & disposed off suitably or can be pumped back to the HFO storage tanks by using the oil recovery pumps. The treated water from the separator shall be sent to the effluent treatment plant for further treatment

v. HFO Pipe Line Flushing

Provision shall be made for flushing all HFO pipelines by using LDO to avoid any blockage due to solidification. The flushed oil will be sent to HFO storage tanks.

vi. Fuel oil Drain System

The fuel oil drains from different equipment and piping etc. shall be brought by gravity to a drain oil tank. The oil collected in this tank shall be periodically pumped back to the Fuel Oil Storage Tanks.

vii. Fuel oil condensate system

Condensate from complete fuel oil plant shall be brought to a common condensate flash tank of [6 m³] capacity complete with all accessories in fuel oil area. Drains from this condensate tank shall be connected to station drains

9.2

Codes and Standards

Following codes and standards shall be followed by the bidder for fuel oil system:

- IS: 5120: Technical Requirements for Roto Dynamic Special Purpose Pumps.
- IS: 6536: Pumps for handling volatile liquids.
- IS: 11053: Process Pumps
- IS: 1593: Code for Furnace oil
- IS: 1460: Code for Light diesel oil
- IS: 803: Code of practice for design, fabrication and erection of vertical mild steel cylindrical welded oil storage tank
- IS: 804: Rectangular pressed steel tank
- IS: 816: Code of practice for use of metal arc welding for general construction in mild steel.
- IS: 817: Code of practice for training and testing for metal arc welders.
- IS: 823: Code of procedure for manual metal arc welding of mild steel.
- IS: 5312: Swing check type reflux (non-return valves) (Part-I).
- IS: 620: Recommended rules for design and construction of large welded, low pressure storage tank.
- API: 650: Welded steel tank for oil storage.
- API-12 D: Large welded production tank.
- IS: 4503: Code for design & manufacture of heater.
- ANSI B31.1: Design of power piping system.
- API-600: Code for design & construction of gate valve for sizes

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[210]	15.01.2016

- API-602: 50 NB or above.
Code for design & construction of gate valve for sizes below 50NB.
- API-598: Code for testing of gate valve.
- BS-1873: Code for design & testing of globe valve.
- BS-1863: Code for design & testing of check valve.
- BS-5351: Code for design & testing of ball valve.
- API-599: Code for design & testing of plug valve.
- IS: 1239: Mild steel tubes, tubular and other wrought steel Fittings (Part I & II)
- IS:554: Dimensions for pipe threads where pressure tight joints required on the threads.
- IS:4736: Hot dip line coating on steel tubes..
- IS:2712: Compressed asbestos fiber jointing.
- ANSI B16.5: Steel pipe flanges and flanged fittings.
- ANSI B16.9: Wrought steel butt-welding flanged.
- ANSI B16.11: Forged steel fittings, socket-welding and threaded.
- BS-2633: Class I arc welding of ferritic steel pipe work for carrying fluids
- OISD: Oil Industry Safety Directorate.
- Standards for Hydraulic Institute, USA
- ASME Boiler & Pressure Vessel Code: Section VIII, Division I, Pressure Vessel.
- ASME Boiler & Pressure Vessel Code: Section IX, Welding & Brazing qualification.

9.3 Design Criteria

i) General

Bidder shall adhere to the requirements stipulated in the data sheet and the technical specification. Bidder shall further note that the requirements/parameters indicated in the data sheet for various equipment/items/components shall be treated as indicative minimum and Bidder shall establish the final requirements of these parameters as per their system design but in no case these parameters shall be less than the indicative value specified.

ii) Unloading System for Heavy fuel oil (HFO) and LDO System

The unloading header shall be complete with minimum *[6 nos.]* for HFO & minimum *[3 nos.]* for LDO of unloading points and each point shall have *[6 meter]* long *[80 NB]* flexible metallic hose conforming to BS: 1435 with suitable flange and coupling to connect the road tanker with unloading header. One plug type isolating valve and a hose stand shall also be required for each unloading point. *[Three (3)]* nos. of HFO unloading pumps and *[two (2) nos.]* of LDO unloading pumps shall be envisaged.

LDO unloading pump (rotary positive displacement screw pump) shall be complete with isolating, drain and vent valves. Necessary supporting arrangements for unloading arrangement shall also be provided by the bidder.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[211]	15.01.2016

The unloading header for HFO service shall be steam heat traced and insulated. HFO unloading pump shall be horizontal rotary positive displacement screw pumps, steam jacketed with simplex filter in upstream of HFO unloading pumps.

iii) Tanks

Tanks shall be designed, fabricated, erected and tested in accordance with latest edition of IS: 803/API-650. Supports shall be as per IS: 800. Tanks shall be made of tested quality mild steel plates conforming to IS: 2062. The plates shall be rolled through plate bending machine by several numbers of passes to true curvature. The tanks shall be of welded construction.

Tank seams shall be positioned suitably so that they do not pass through tank connections. For cylindrical vessels consisting of more than two sections, longitudinal seams shall be offset. Reinforcement pads at tank connections shall be provided as per relevant codes. Flange faces of all nozzle connections shall be machined and square with the centre line of the tank. Where possible, inside seam weld shall be ground smooth, suitable for application of corrosion resistant primer.

Conical roof with a slope not less than 1 in 16 to ensure drainage of rain water shall be provided supported over the periphery; and the tank shall have single central column. The roof shall be designed for a live load of 200 kg/m². Structural support in the form of the rafter shall be provided when diameter of tank is greater than 4.75 m or when diameter of tank is less than 4.75 m and thickness less than 6 mm. Sufficient number of plugged holes shall be provided in the bottom plates of tanks for bottom testing as per IS-803.

Gaskets shall be suitable for specified service and shall be replaced after hydro test. No oil connection shall be made until the tank is ready for oil filling. After oil connection is made to the tank, no welding or hot work shall be done on the tank and associated pipelines.

Vent shall be designed as per API standards and shall have adequate venting area. Venting area shall be such that over pressure/ vacuum is not created during maximum filling/ draw-off rate. The open end of the vent line shall be covered with two layers of fine copper wire gauge of not less than 11 meshes/cm and fitted with hood.

Lightening protection system conforming to IS-2309 shall be provided for all tanks. System shall constitute suitable number of horizontal and vertical air terminals. All the air terminals shall be connected to an earthing ring conductor 300mm above the ground.

Design and construction features of Fuel Oil Storage Tanks:

S.No	Description	HFO Tank	LDO Tank
1.	Quantity	[...]	[...]
2.	Type of construction	Vertical cylindrical, fixed conical roof (supported roof), non-pressure type with vent & flame arrestor.	Vertical cylindrical, fixed conical roof (supported roof), non-pressure type with vent & flame arrestor.

LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[213]	15.01.2016

Description	Drain oil tank	Condensate Flash Tank
Insulation	Required	Required

iv) Floor Coil Heater(For HFO & Drain Oil Tanks)

The coil heat transfer area shall be calculated based on saturated steam condition. The coils shall be laid at the bottom of the tank and shall be provided with steam inlet and condensate outlet flanges, outside the tank.

Steam floor coil heaters shall be designed suitably to initially raise the temperature of oil from minimum ambient temperature to the HFO handling/tank maintenance temperature of 60 °C in 72 hours time and maintaining the temperature at 60 °C during normal course of operation taking care of heat losses from the tank due to convection and radiation.

Steam flow to the floor coil heater shall be controlled by providing pneumatically operated control valve (On-Off Type) in the common header of segments of heater coils to maintain the desired level of temperature and the other three sections to be used during initial heating shall be provided only with isolation valves.

v) Suction Heater (for HFO Tanks)

Shell and tube type suction (outflow) heaters with “U” tubes shall be provided at the tank discharge of rated capacity [...] T/h and the same shall be designed to raise the temp of HFO from 55 °C to 65 °C. Seamless tubes, as per TEMA, class C of welded construction shall be used for tube bundle.

The heater shall have oil in shell side and steam in the tube side. Steam flow to suction heater shall be regulated through one pneumatically operated control valve on the steam supply line to the suction heater and the same shall be actuated from heater outlet temperature.

Each suction heater shall be mounted on the side wall of the storage tank and shall be suitably supported. Heating coil of suitable surface area shall be provided for heating the oil using steam. All other technical particulars shall be as per data sheet.

Design and construction features of HFO Heaters:

Type and no of heaters	[Three], shell and tube type, with oil through tubes (oil through shell is also acceptable)
Capacity of each heaters	To suit the rated capacity of each heavy fuel oil pressuring pump.
Heater design / construction	TEMA, ASME Boiler & pressure vessel code, HEI standards, USA pipe connections to heater as per TEMA class C BEV type.
Heater inlet fuel oil temperature	30 deg C

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[214]	15.01.2016

Heater outlet temp	To suit the viscosity requirement at the fuel oil burner tips for the grade of oil used.
Metal temperature of HT surface	210 deg C
Heater Tubes	Seamless

vi) Pressure Reducing Station

One (1) no. pressure reducing station located near the fuel oil pump house for reducing auxiliary steam pressure from 16 kg/cm² to 4 kg/cm²(a).

vii) Oil Water Separator

The oil water separator shall be gravity type as per API and shall be provided with heating coils to maintain the flowability of oil.

Oil recovery pumps shall be provided for transferring the oil. The oil water separator arrangement shall be such that all the leakages, floor drains etc. of the complete fuel oil area is collected in to the same.

viii) Piping

Small pipes, below 50 mm NB shall be socket welded. Pipes 50 mm NB and above shall be butt welded. If any flow nozzles required, it shall be fixed in a pipe piece at shop.

All structural steel work and pipe supports shall be designed as per IS: 800. Insulation protection saddles shall be used at support points of all insulated piping. Hosepipes shall be supported with flexible connections to permit axial and lateral movements without restraint or binding at any supporting element.

All trap stations shall be complete with isolating valves, bypass arrangement and non-return valves. Steam traps shall be provided with integral or separate strainers.

All pipelines shall be given suitable slope towards drain point. All piping shall be provided with vents at the highest point and drain at the lowest point. Adequate supports, hangers, saddles, clamps, anchors shall be provided at regular intervals to keep pipe sag within permissible limits when the pipes are fully filled. Outdoor sliding supports material at the interface shall be such that no rust formation takes place. All steel sliding faces shall be covered with Teflon plates with counter sunk screws on top and bottom faces of sliding support. Hangers, trestles, saddle supports etc shall be fabricated from plates/sections conforming to ASTM-A-53/IS: 2062/equivalent and shall allow necessary pipeline movement. All piping shall be pickled, cleaned and capped before shipping and thoroughly cleaned before installation.

Steam & condensate headers with adequate number of outlet nozzles with isolation valves and flexible hoses shall be provided in the unloading area for heating the HFO road tankers.

Drain valves of required size and quality shall be provided on the pipe lines at drain points. Piping materials and requirement shall be as per data sheet.

The hot lines shall be supported with flexible connection to permit axial and lateral movements. Expansion joints shall be provided in order to restrain forces

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[215]	15.01.2016

and movements for HFO and steam and condensate lines. Design of hangers, supports and auxiliary supporting steel members shall comply with the requirements of ASME B 31.1 as minimum

The layout of oil piping, valves, flanges, steam traps, fittings and supports etc. will be such as to facilitate maximum flexibility of interconnection of pumps, heaters, strainers. All HFO lines will be steam traced and properly lagged. All lines carrying steam and oil will be provided with adequate drain and vent connection. All fuel oil lines and filters will be provided with steam flushing points at suitable locations. All steam and condensate piping handling fluid of pressure below 20 kg/cm² (g) will conform to the latest edition of IS: 1239 (Heavy grade) or ASTM-A-106 Gr. B or other approved equivalent standards. Oil pipelines from discharge of pressurising pump to boilers will conform to IS: 1978 or other approved equivalent standard with latest amendments. Oil pipe lines in the unloading area will be of API-5L Gr B or ASTM A Gr 106 B. Double isolation valves will be provided from the discharge of the pressurizing pumps, for inline items that are to be removed for maintenance. This applies to flow meters, filters, isolation valves and the pressure maintaining valves etc. Larger lengths of piping that can be isolated will be provided with thermal relief valves.

Between the pressure oil line and the return oil line, an interconnecting line will be provided with automatic pressure control system to maintain the pressure of oil to the steam generator at a predetermined value. The interconnecting line will also serve to divert the fuel oil to the return line under conditions when oil supply to the burners is to be cut off or reduced. Suitable non-return valves will be provided on the return oil lines from the steam generators to prevent pressurized fuel oil from going back into the burners in the reverse direction when the quick acting valve closes. The fuel oil lines to individual boilers will be provided with pressure accumulators of adequate size (if warranted by design) to maintain the oil pressure at a constant value.

All flanges will conform to IS: 6392 or equivalent. The nominal pressure and temperature ratings of flanges will be such as to withstand the design condition of the respective pipe/equipment to which they are attached. Matching counter flanges with nuts, bolts and gaskets will be provided for all the system terminal points on oil, steam/condensate and air lines.

All high pressure pipe fitting will be of butt welded construction, wherever possible and will conform to ASTM-A-234 (carbon steel) or other approved equivalent.

All valves on oil, steam and condensate lines will have cast steel body. Valves for oil service will be fire safe ball valves type easy to operate, less maintenance prone, leak proof, and self-lubricating type. The valve internals will be chrome-steel for oil, steam / condensate lines. The drain valves will be located at the lowest points in the system to ensure complete draining of the system.

Suitable supports / hangers will be provided for all the piping covered under fuel oil facilities. Piping in the boiler area will be designed with laying up on trestle supports as far as possible. The pipes crossing roads/rails will also be trestle-supported. Dead zones in pipes will be avoided as much as possible. The high

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[216]	15.01.2016

temperature piping / heat traced piping will be provided with expansion loops to take care of thermal expansion.

The steam traps will be of proven design and provided with integral/separate strainers. The trap body will be of carbon steel and the internals including strainer screen will be of stainless steel conforming to AISI-316.

Fuel oil system Piping, Valves, Fittings, Pipe Support, etc. shall be designed as Criteria and Requirements are given below:

Piping	Code/Material
Fuel oil piping	1) API-5L Gr.BERW or ASTM-106 Gr.B Sch.40 in the unloading area. 2) IS: 1978 or approved equivalent from discharge of pressurising pump to Boiler
Steam/condensate piping	ASTM A106 Gr.B Sch 40
Instrument air piping	IS 1239, Heavy class, Galvanised, Plain end.

ix) Valves

All manually operated valves shall be provided with gear mechanism, if the effort required to operate the valve exceeds 25 kgf. All valves shall be provided with hand wheels, extension spindles and floor stands, suitable operating platform/valve operation mechanism so that they can be easily operated by a single operator from the nearest operating floor. If required, locking devices shall be provided with valves for safety purpose. Chain operator shall be provided for valves, which are inaccessible from any nearest platforms. All flanged valves shall be supplied with its counter flange and associated hardware

Types of Valves:

- Gate Valve

Gate valves shall be used for isolation purpose for all sizes of steam and condensate lines and for sizes above 350 NB in fuel oil lines. Gate valve shall be provided with hand wheel, position indicator and draining arrangement.

Gate valves for sizes 50 mm NB and below shall be class 800, forged carbon steel valves with solid wedge, OS & Y rising stem, bolted bonnet with deep stuffing box and lantern ring with ends socket welded.

For sizes above 50 mm NB, cast carbon steel gate valves of 150/300 lbs class shall be provided. Face to face dimension shall be as per ANSI-B-16.10. Ends flanged shall conform to ANSI 150/300 lbs rating with raised face

- Globe Valve

Globe valves shall be used for regulation purpose for all sizes of steam, condensate and fuel oil lines. Globe valve shall be provided with hand wheel, position indicator and draining arrangement.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[217]	15.01.2016

For sizes 50 mm NB and below shall be class 800, forged carbon steel valves with plug type disc, OS&Y rising stem, bolted bonnet with deep stuffing box and lantern ring with ends socket welded.

For sizes above 50 NB, cast carbon steel globe valves of 150/300 lbs. class with plug or ball type disc shall be provided. Face to face dimension shall be as per ANSI-B-16.10. Ends flanged shall conform to ANSI 150/300 lbs. rating with raised face.

- Check Valve

Check valves shall be used for non-return purpose for all sizes of steam, condensate and fuel oil lines.

For sizes 50 mm NB and below shall be class 800, forged carbon steel horizontal lift type with bolted cover check valves with ends socket welded shall be used.

For sizes above 50 NB, cast carbon steel check valves of 150/300 lbs. class of swing check having bolted cover. Ends flanged shall conform to ANSI 150/300 lbs. rating with raised face.

- Oil Line Plug/Ball Valve

Ball/plug valves shall be used for isolation purpose in fuel oil lines for size 350 NB and below. Ball/plug valve shall be wrench or gear and hand wheel operated and shall have port position indicator with CLOSE/OPEN indications marked on valve body.

Ball valves for size 350 NB and below shall be of 150 lbs. class full bore type. Plug valves shall be self lubricated taper type.

- Steam Trap

The steam trap shall be of kinetic energy operated (e.g. thermodynamic, impulse type) or/and mechanical type (e.g. inverted bucket, float type) and shall be complete with integral strainer. The trap at the outlet of suction heaters shall preferably be of mechanical type. While selecting the trap, due consideration shall be given to back pressure on account of difference in elevation between trap discharge connections and condensate header

- Y-Strainer

The body of Y type strainers shall be bronze and perforated metal screen of type 316 stainless steel construction with less than 1mm opening/perforations. The strainer shall have a screwed blow off connection fitted with a removable plug. The ratio of free hole area to internal pipe area for the strainers shall be at least 10:1.

- Basket Strainer

Duplex strainers shall be provided at the suction side of all pumps. The strainers shall be designed for approved nozzle velocity and pressure drop.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[218]	15.01.2016

All the strainers in HFO service shall be steam traced and properly insulated with facility to accommodate heat tracers. The screen shall be of stainless steel construction with less than 1mm opening/perforations. The ratio of free hole area to internal pipe area for the strainers shall be at least 10:1.

The straining/filtering element shall be basket type suitable for easy removal and replacement. Oil drip plates shall be provided with all strainers for collecting oil. Strainers shall be provided with drain plug at the bottom to completely drain it when required. Differential pressure gauges & switches shall be provided across strainers.

x) Insulation and Cladding

The thickness of insulation shall be adequate to meet the heating system requirements and to limit the insulation outer temperature to 60 °C considering still air. Insulated surfaces of all equipment, piping, valves and fittings shall be covered with 24 SWG aluminum sheet held in place by self tapping nickel plated screws. Apart from the screws, joints shall be sealed with suitable sealing compound. All fastening material such as clips or wires for field weld to equipment, galvanized wire mesh, metal corner bead shall be furnished by the Bidder.

Separate insulation shall be provided for access doors bolted heads or manholes so that they may be readily removed without causing damage to the adjacent insulation. Edges and corners shall be protected by tight structural angles or metal strips.

Pipe clamps, supports of small piping, instrument take-off etc. protruding through the insulation shall be provided with same thickness insulation as the adjacent insulation except at hanger rods, which shall be sealed tightly.

Application of Insulation

a) General

Application of insulation shall be as per IS: 7413. Prior to the application of insulation the surface shall be made dry and clean by use of steel wire brushes. Where more than one layer of insulation is applied, the joints in adjacent layers should not coincide. At the joint of each layer of insulation, a uniform layer of joint filling mastic shall be provided over expansion joints so as to achieve uniform appearance as well as additional safety'

b) Piping

Arrangements for securing the metal finish over the insulation should ensure that direct metal contact between the insulated surface and outer metal cladding shall be reduced to minimum.

All joints shall be vapour tight and shall be able to accommodate thermal movements. Insulation shall be secured to the pipes by means of circumferential tie wires of 1.6 mm to 1.0 mm (16 SWG to 19 SWG), at not greater than 450 mm spacing and after tying, the ends shall be pressed into

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[219]	15.01.2016

the insulation. Piping bend shall be insulated to the same specification as adjacent piping. Preformed material wherever used, it should be cut in lobster cut fashion and wired or strapped into position.

The final layer of insulation shall be secured by galvanized wire netting stitched with GI wire and this shall be anchored by means of wire ties and then covered by sheet metal to have a smooth surface finish. Vertical insulation shall be supported in position by means of metal rings at 3.6 m (max.) interval and suitable clamps.

A min. lapping of 75 mm shall be provided for longitudinal and circumferential joints of aluminum jacketing/cladding. No mitered 90° bend in aluminum shall be used. Expansion joints on insulation should be included in all pipe line to allow movement and expansion of pipe without producing random checking of the insulation. Bidder shall submit the details of expansion joint with the tender. The recommended intervals of Expansion joints are:

Pipe Temperature	Spacing of expansion joint
Below 200 deg C	5.5 Meters
Between 200 to 300 deg C	3.5 meters

c) Tanks

MS flats of 25 mm wide x 6 mm thick strip shall be provided at suitable pitch around the tank walls/roof (circumferential/vertical/floating/radial) over which the insulation shall be applied with wire netting on the outer side. Over the insulating material on roof, 15 mm thick hard setting cement layer as per IS: 5724 shall be built-up & trowelled smooth. Over this cement layer, 5 mm 5-mm thick water thick water proof compound shall be applied.

Aluminum sheet shall be provided over the insulating material so applied with 75 mm overlap and the joints shall be made water proof. Rainwater channel of 22-gauge aluminum sheet shall be provided around the periphery on top. The method of insulating all removable parts (e.g. access doors, man hole covers etc.) shall be such as to eliminate damage to the insulation on the removable part and on adjacent surfaces. Edges and corners shall be protected by tight structural angles or metal strips and shall be insulated to the same thickness to the adjacent surface. Dished ends of equipment shall be insulated by welding studs or cleats to the surface at approximately 300 mm intervals.

d) Valves and Flanges

For valves, pipe fittings, flanges, etc. clear space between ends or covering and flange of sufficient length shall be left to permit withdrawal of flange bolts

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[220]	15.01.2016

without interface. Flanges, valve bonnets, end flanges and fittings shall be adequately insulated. End of the covering at these joints shall be leveled from the outside covering to the pipe and sealed. Flange insulation covers shall be made in two halves so that these may be removed readily without interference with the adjacent covering.

9.4 Inspection & Testing

- a) The Bidder shall carry out the following specific tests and inspections to ensure that the equipment furnished shall conform to the requirements of this section and in accordance with relevant codes and standards.
- b) Material identification of pumps rotor, rotor shaft, suction and discharge valves constituting the pumps and all parts of HFO coolers, tanks, heaters, strainers, oil separator etc. and all interconnecting fuel oil, auxiliary steam, and oily water piping with valves and all other parts and accessories that could not spelt out in this clause.
- c) Hydrostatic testing of Pumps, coolers, heaters, tanks, strainers, filters, all interconnecting fuel oil, auxiliary steam, and oily water piping piping with valves and all other applicable pressure parts that could not be spelt out in this clause will be carried out. Hydrostatic testing shall be carried out at 150% of the design pressure for at least one (1) hour, unless contradicted by the relevant test code.
- d) Specific tests to be carried out for each fuel oil Unloading & Pressurizing pumps.
- e) Non-destructive testing of rotors, rotor shaft and all other applicable parts.
- f) Type test/Routine tests for all the fuel oil pumps as per Indian of international standard. All performance tests for fuel oil pumps shall be carried out with actual motor being furnished. Routine tests shall include the following tests and measurements:
 - vii) Capacity (flow rate, TDH, NPSH)
 - viii) Speed
 - ix) Specific power consumption
 - x) Volumetric and overall efficiency of machine
 - xi) Test of loading and unloading mechanism
 - xii) Any other test deemed necessary for the system
- g) Dynamic balancing of all rotating components and assembly of each fuel oil pump including all drive motors in the Fuel oil system.
- h) Tests for capacity, pressure drop and efficiency of each Filter of Strainer as Manufacturer's standard. These tests shall be conducted along with performance testing of pumps.
- i) Testing of all motor drives and control panels in the Fuel Oil System.
- j) Any other test deemed necessary for the system.

10 MILL REJECT HANDLING SYSTEM**10.1 General**

[Dense phase pneumatic conveying system shall to be employed for handling of the mill rejects]. Each mill reject discharge hopper shall be fitted with a positive pressure pneumatic conveying vessel which shall discharge the mill rejects through pipe lines in storage 'SILO'. Each unit shall be provided with and independent 'SILO' having a collection capacity of [16 hours]. The transmitting vessel shall operate on level probe mode with timer back-up.

100% standby capacity compressor/ air drying arrangement shall be provided by the bidder. The capacity of the compressors shall be selected considering all the mills of the units operating simultaneously.

10.2 Codes and Standards

The equipment to be provided under this section shall specifically conform to the following codes, standards, specifications and regulations as applicable, including all its latest amendments subsequent to the year of publication as mentioned in table below.

International standards like American/BS/DIN etc. equivalent or superior to below mentioned standards are acceptable. When IS specification is not available the equipment shall confirmed to one such international standard, which shall be indicated in the proposal. All codes and standards used/referred to shall be to their latest edition, version as on the date of the acceptance of the tender.

All equipments as may be necessary shall confirm to the provision of statutory and other regulations in force, such as Indian explosive Act, Indian factories Act, Indian petroleum Act and also those of State Government.

10.3**Design Criteria and System Description**

Mill Reject Handling System of Pneumatic type meeting the following requirement shall be provided:

- Mill reject system shall be provided for all [vertical type of mills].
- Pneumatic dense phase pressure conveying system shall be employed for transportation of mill rejects to silo.
- Design Datasheet is given in the table below:

S.No	System Parameter	Pneumatic Handling System
1	Duty	Continuous
2	Number of mill reject storage bins and capacity	One (1) no. for each unit to store mill reject for 16 effective running hours all the mills of the unit/units are operating simultaneously.
3	Number of mills working per boiler	[.....]
4	Design value of rejects	1% of the mill design capacity for the worst coal.
5	Maximum temperature of rejects	[.....]
6	Maximum size of mill reject to be handled	[(-) 40 mm]
7	Bulk density of mill rejects for volumetric computation	1600 kg/m ³
8	Bulk density of mill rejects for LOADS/STRENGTH computation	2400 kg/m ³
9	Inlet/outlet valves of mill reject discharge hopper	Pneumatically operated knife edge gate valve
10	Inlet valve of the	Plate valve/dome valve/butterfly

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[230]	15.01.2016

S.No	System Parameter	Pneumatic Handling System
	vessel	valve/cone valve.
11	Sizing grid feed	Yes (To separate over size rejects/to give control to crushers, if proposed)
12	Emergency discharge chute with manually operated knife edge gate valves	Yes
13	Piping	MS IS: 3589
14	Bends/Fittings Laterals	Alloy CI to hardness 400 BHN

d) Mill Discharge Spout and Pyrite Hopper

Each coal mill has a discharge spout with an Air electric cylinder operated knife gate valve for discharging rejects into a pyrite hopper of adequate capacity. This hopper shall serve to store the mill rejects between each operating cycle of dense phase system. Minimum effective storage capacity shall be $[0.90 \text{ m}^3]$.

Each pyrite hopper shall be provided with an air electric air cylinder operated plate / dome type valve of approved design at the bottom, adequately sized manhole / inspection door, impingement deflector plate, sizing grid and emergency chute with manually operated flap gate. Any platform required to maintain the above equipment shall also be provided. One (1) no. manually operated gate valve shall also be provided before pneumatically operated plate / dome valve. Necessary explosion vent of proven design shall be provided in each pyrite hopper.

Each emergency chute shall be provided with a manually operated gate valve to transfer mill rejects from pyrite hopper to ground. The gates shall be of robust construction and suitable for trouble free operation. The lever / gear wheel arrangement for manual operation shall be designed such that minimum effort is required to operate the gate. Necessary access and platform shall be provided.

Each pyrite hopper shall be provided with two level switches - one to start the operating sequence and the other to indicate the failure of first level switch.

The sizing grid shall be provided inside the pyrite hopper to prevent oversized mill rejects, tramp iron etc., from entering the conveying vessel. The arrangement for collecting bigger pieces of coal rejects from the grid includes, among others, counter weight operated double flappers, chute work etc. Bigger pieces of coal rejects shall roll down from the grid and through counter weight operated flappers (to be provided preferably at the bottom of inspection door) be discharged to Owners trolley. The arrangement shall be finalized during detail engineering. The grid shall be made of minimum 10 mm dia. M.S. bars IS: 2062 with clear opening of 50 mm x 50 mm.

e) Mill Rejects Valves

Valves isolating pyrite hopper and mill rejects conveying vessel shall be of plate / dome type, pneumatically operated, quick opening and closing remote controlled design. The valve shall be of reliable and proven quality. It shall be possible to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[231]	15.01.2016

operate it cutting through the material flow. These shall be provided with proper sealing arrangement such that whenever the material is being conveyed from vessel to the bin, there shall not be any leakage of air from vessel to pyrite hopper / atmosphere. Solenoid valves and air piping shall be included in contractor's scope, 'Open' and 'close' limit switches shall be provided for panel indication of open/close status of valve. For isolating downstream equipment from pyrite hopper, a manually operated gate valve shall be provided above pneumatically operated plate / dome valve as explained.

Material of Construction

The valve components shall be suitable for trouble free operation while handling hot mill rejects.

S.No	Part	Material of Construction
1	Body	C.I IS: 210/ Grade 260 or BS: 1452
2	Dome/Plate	Alloy C.I/Hardened stainless steel (min. 350 BHN) with leak proof seat
3	Shaft	Stainless steel (AISI: 316)
	Control valves and pneumatic actuators details shall be as per clause no. 3.03.00	

f) Compressed Air Line Valves

- i) Remote actuated main valves on compressed air pipe lines shall be pilot operated solenoid pneumatic cylinder operated 100% leak proof valve.
- ii) Spring balanced two / three position control valve to actuate the pneumatic cylinder of main valves shall be either solenoid operated or pilot air pressure operated. In addition, mechanical lever for manual operation of valves shall be provided. Material of construction is subject to approval during detail engineering stage. Material of construction shall have minimum surface friction and be rust and weather proof.
- iii) Pneumatic actuators shall be completely enclosed type, double acting. The pneumatic cylinders for operation of valves shall be selected considering minimum 3 kg/cm²(g) inlet pressure. Material of construction shall be stainless steel. Integral micro limit switches for 'OPEN' or 'CLOSE' position shall be provided. External pointer for valve position and manual operation facility shall be provided.
- iv) Above valves shall meet the requirements of any international / Indian Standard Codes. Bidder shall clearly indicate in his offer the applicable standard / code.

g) Conveying System

From each surge pyrite hopper Mill Rejects shall be pneumatically conveyed along a pipe line in dense phase using a pressure vessel (conveying vessel) as discharge device. Conveying vessel shall be of bottom discharge type.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[232]	15.01.2016

Supply pressure of compressed air shall be in the range of [5-7 kg/cm²(g)] suitable pressure adjustment device shall be provided by the Bidder before each conveying vessel to obtain the required pressure in the conveying vessel.

Mill Rejects shall be conveyed in the pipe line in intermittent mode i.e. conveying vessel is filled up periodically and all the contents of conveying vessel are emptied at a time. Conveying system shall be idle till sufficient mill rejects are accumulated in surge hopper. This shall be repeated cyclically. Number of cycles of discharge per hour shall be optimized for minimum air consumption considering 0.8T/hr in flow of Mill Rejects into surge pyrite hopper.

Bulk mean velocity of material in the conveying pipe line shall be less than 10 m/s. Average velocity shall be computed from actual cycle time and length of piping (material travel path) during a number of conveying cycles.

Guaranteed Bulk mean solid / Air weight ratio shall not be less than 20 Average value shall be computed from actual air consumption and actual quantity of solids conveyed during a number of conveying cycles, for this purpose conveying cycle shall start from start of conveying vessel inlet valve open and terminate at the close of air supply line to conveying vessel.

Once optimum quantity of mill rejects are collected in the surge pyrites hopper, first level switch shall give cycle initiation signal to various valves. Sequential operation of various valves to complete the conveying cycle shall be effected by either pneumatic controls or solenoid valves with relay based controls or a combination of both. However, complete pneumatic controls shall be provided for the Mill Reject inlet valve to conveying vessel, to close with a time delay after opening. In case the first level switch fails to operate, another level switch provided slightly above the first one shall give an alarm to the operator indicating failure of the first level switch.

All the pneumatic and solenoid valves associated with each surge pyrite hopper conveying system shall be mounted locally in a water and dust tight enclosure. Degree of protection of enclosure shall confirm to IP-62. Manual operation of the system from local shall be possible from this valve enclosure in case of failure of remote operation system.

Pneumatic conveying system shall be designed to empty even the completely filled up surge pyrite hopper through conveying vessel in a number of automatic conveying cycles.

h) Conveying Vessel

Conveying vessel shall be designed and tested based on BS/ASTM standard for pressure vessels. Temperature of the Mill Rejects coming into the conveying vessel shall be considered at [200 degree centigrade] design pressure shall be the maximum pressure the vessel is subjected to during any operating condition. In any case it shall not be less than 10 Kg/cm² (g).

The conveying vessel shall be constructed with tested quality mild steel plates. They shall withstand the abrasive action and hot condition of mill rejects and the operating air pressure. The conveying vessel shall be supported independently on steel columns.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[233]	15.01.2016

The vessel shall have suitable located and adequately numbered air connections for supply of compressed air for conveying mill rejects through pipes to overhead bin.

The isolating valve at the top of vessel and the outlet bend piece at the bottom of the vessel shall be connected to vessel through air tight flanged joints. The material of construction for the outlet bend shall be alloy C.I. with minimum 400 BHN.

Conveying vessel shall be tested hydraulically for 1.5 times the design pressure.

i) Mill Rejects Conveying Piping, bends Fitting and Accessories

Minimum [115.0 mm OD. x 5.4 mm thick] ERW steel pipe as per IS:1239. Heavy class shall be supplied for mill rejects conveying piping.

The routing of the mill rejects conveying pipes is to be submitted by the Bidder, which shall be subject to approval by the Owner, during detailed engineering.

The pipe work shall be of such design as to enable quick dismantling repairs with flanged type joints. The flanges shall be slip on flat faced flanges as per ANSI B16.5 rating, fabricated out of carbon steel plates to IS:226/IS:2062/applicable International Standards. Gaskets shall be of compressed asbestos fiber with minimum 3 mm thickness.

All fittings (i.e. bends, specials etc.) used in the lines shall be as per good engineering practice, commensurate with the service conditions. The material of construction of fittings shall be alloy C.I. with minimum hardness of 400 BHN.

The specification includes the supply of all steel hangers supports and steel pipe bridge for routing of mill rejects piping. However mill rejects piping in the coal mill area shall be supported on Owners columns / floor.

j) Mill Rejects Storage Bin

- i) The proposed system envisages one no. storage bin for each unit having capacity [...] tonne effective storage for 16 effective running hours.
- ii) The reject bin shall be fabricated out of minimum 12 mm thick steel plates with adequate stiffeners. The minimum valley angle of Reject bin shall be 60°. The inside surfaces shall be provided with renewable 3.0 mm thick SS plate liner thickness. The 3 mm thick stainless steel liners (SS 316) covering whole surfaces conical portion and straight portion also above. Explosion diaphragm shall be provided to release the air from the Bin, in case the pressure exceeds 1.0 Kg/cm² (g).
- iii) The reject bin shall be sized at least to above mentioned capacities and shall be designed & located such that they can be emptied from bottom into Owner's trucks approximately [10T capacity] at regular intervals.
- iv) Access and platform shall be provided with 32 mm thick MS grating 32 NB GI pipe hand railing shall be provided wherever required.
- v) Manually operated undercut gate shall be provided at the mouth of each reject bin. Gate shall be double pivoted sector type. Suitable levers, pulleys / sheaves, ropes etc. shall be provided for operating the gate from the operating platform and ground level. The gear shall be made of cast steel and suitably hardened. The gate shall be designed for heavy duty application.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[234]	15.01.2016

- vi) Suitable vent with filters shall be provided at the top external to the silo. Vent filters shall have adequate number of bags made from synthetic fabric suitable for coal dust. Maximum air to cloth ratio ($\text{Nm}^3/\text{min}/\text{m}^2$) shall be considered as 1.5 with isolation of 10% bags. The material of filter bags shall be suitable for prolonged operation up to a temp of 200 °C without losing its collection efficiency and durability. Filter bags shall be suitably treated to minimize the chances of filter bags catching fire. It shall be possible to plug opening for the damaged bag filters, if any, to facilitate uninterrupted operation of the unit. The guaranteed particulate emission rate from the filter shall not be more than 50 mg/Nm^3 of air. Suitable explosion vents shall be provided for the bag filter unit. Sequential cleaning cycle shall be initiated with pressure drop signal across the bag filter once sufficient cleaning air pressure is available. Solenoid / pneumatic valves shall be provided for this purpose.
- vii) Bag cleaning mechanism shall be automatic, and shall comprise of solenoid valves, air nozzles, adjustable solid state timer, pressure switches, piping and fittings etc. Nozzles shall be placed just above the filter bags to facilitate individual cleaning of each bag.
- viii) The reject conveying pipes shall be terminated at the top of bins in individual terminal boxes. The terminal boxes shall be of steel construction with necessary deflector or impingement plate to take care of impact and wear due to high velocity reject particles discharging into the bin.
- ix) The bins, supporting structures etc. shall be suitable for storing hot reject particles at 200 °C. One (1) no. level switch shall be provided in the bin to indicate 'Bin Full' condition.

k) Air Line, Cooling Water and Drain Piping, Valves, Fittings and Accessories
Piping

- i) The scheme and scope of supply of the air, water and drain piping is to be submitted by the Bidder, which shall be subject to reviews and approval by Owner. The Bidders shall work out the sizes of air piping for the various services based on the system requirements (Design) and submit the final layout and pipe sizing data to the Owner for approval.
- ii) All pipes shall be tested hydraulically after installation to minimum 1.5 times the maximum pressure encountered.
- The air piping shall be galvanized and shall be as per IS:1239 Heavy Grade.
 - The water piping shall be as per ASTM-A-36/ASTMA-53 Type 'E' Gr. B/IS: 3589/IS: 1239.
- iii) For compressed air piping for instrument and control following standard shall be adopted.
- Size between 25NB & 50 NB :Seamless & Brass ASTM B 43 Sch. 40.
 - Size below 25 NB :Seamless copper to ASTM B75.
- iv) Following line velocities shall be assumed for estimating pipe sizes of compressed air lines :

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[235]	15.01.2016

S.No	Pipe sizes	Velocity m/sec.		
		Below-50mm	50-150mm	200mm
1	Pressure below 2kg/cm ² (g)	15-20	20-30	25-35
2	Pressure above 2kg/cm ² (g)	20-30	25-40	35-45

- v) Screwed couplings shall be used.

Valves

- i) Code and Standards :

- IS: 778 - Gunmetal gate, globe and check valves for general purpose.
- IS : 780 - Sluice valve for water works purposes (50 to 300mm)
- Any other BS or equivalent international standard.

- ii) For valves of 40 mm size and above and up to a working pressure of 10 kg/cm²(g) :

- Type : Bolted bonnet, outside screw and yoke, rising stem, flat faced flanged eng.
- Material of Construction : Body - Cast iron (IS: 210 Gr. 25) with 0.30% of construction max. (P) and 0.12% max. (S) Trim & Stem - Gun metal

- iii) For valves below 40 mm size and up to a working pressure of 10 kg/cm² (g):

- Type : Union bonnet, rising stem, screwed end.
- Material of construction : Body -Gun metal, Trim & Stem - Gun metal

- iv) All valves will be tested hydraulically to minimum 2.0 times (for body) and 1.0 times (for seat) the maximum pressure encountered Air tests shall be conducted to detect seat leakage.

I) Air Receivers

- i) As far as possible, the design, manufacture and performance of air receivers shall be in accordance with the latest applicable Indian / British / American / DIN standards. The latest editions of the following shall be followed in particular :

- IS: 2825 - Code for unfired pressure vessels.
- ASME - Section - VIII, Division - 1.
- BS - 487 - Fusion welded steel air receivers.
- IS: 7938 - Air receivers for compressed air installation.

- ii) The materials of the various components shall conform to applicable IS/BS/ASTM/DIN standards.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[236]	15.01.2016

- iii) The air receivers shall be vertical self-supporting cylindrical vessels with supporting stands for resting on the civil foundation.
- iv) Other design parameters and design internal pressure of the receiver shall be as per the data specification sheet enclosed. The receiver shall be designed as per IS: 7938.
- v) Receivers shall be of welded construction with a minimum number of joints. Longitudinal seams in adjacent sections of shell shall not be in the same line.
- vi) Receivers shall be provided with gasket inspection openings.
- vii) Receivers below 500 mm diameter shall have at least two inspection holes. For receivers of larger diameter, manhole of minimum 450 mm diameter shall be provided. These openings shall be placed as far as possible from any welded seam and in no instance shall pierce any seam.
- viii) All welding shall be performed in accordance with relevant codes. Filler material that will deposit weld metal with a composition and structure as near as that of the material being welded shall be used. All welding electrodes shall be got approved by the Owner. The electrodes shall be dried in ovens immediately before use to ensure freedom from porosity. All the circumferential and longitudinal butt welds of the air receiver shall be subjected to 100% radiography in accordance with IS: 2825 (paragraph 8.7.2). Tee joints and dished welding shall be subjected to 100% radiography.
- ix) All other welding on the air receiver, including fillet weld and nozzle connection shall be DP tested as per IS: 2825.
- x) Each finished receiver complete with all welded attachments shall be hydraulically tested at 150% of the design pressure. The test pressure shall be maintained for at least 30 minutes. All joints shall be gentle hammered during the test.
- xi) Receivers shall be provided with relief valve of the capacity and set pressure as specified in the data specification sheet. The spring in the relief valve in service for pressure up to and including 250 psi shall not be reset for any pressure more than 10% above or below the design set pressure. For higher pressures, the spring shall not be reset for any pressure more or below 5% design set pressure.
- xii) Each air receiver shall be complete with drain connection of 25 NB with a trap station consisting of a trap, strainer, isolation and bypass valves.
- xiii) The receiver shall be provided with necessary number of nozzles. The orientation of the nozzles shall be subjected to the approval of the Owner.
- xiv) Local instruments like pressure gauge and thermometer of suitable range if asked for in the data specification sheet shall be supplied.
- xv) The Bidder will have all welding procedures & welders qualify in accordance with the relevant codes prior to commencing any welding at the works. These tests will be witnessed by Owner's representative.

11 CRANES & HOIST**11.1 Electric Overhead Traveling (EOT) cranes**

This section deals with the specification of handling and hoisting facilities such as Electric overhead traveling (EOT) cranes, Single girder under slung cranes, Electric hoists, Manual travelling hoists, Passenger and Freight cum Passenger Elevator etc. required for erection & maintenance of the various plant, equipment and systems covered in this Bid document.

In general the specification covers the design, engineering, manufacture, packing, forwarding to site, insurance, unloading and storage, preservation and handling at site, supply erection, testing and commissioning and performance guarantee of the following handling and hoisting facilities for the equipment and system covered in this Bid document.

11.1.1 Codes & Standards

- a) The design, manufacture and testing of the crane(s) shall conform to the latest editions of the following codes and standards in general.

S. No	Code	Description
1	IS: 807	Code of Practice for Design, Manufacture, Erection and Testing (Structural Portion) of Cranes and Hoists.
2	IS: 3177	Code of Practice for Design of Overhead Travelling Cranes and Gantry Cranes other than Steel Works cranes

- b) All electrical installation work shall comply with the provisions of Indian Electricity Act and Indian Electricity Rules as amended up to date.
- c) ANSI-B30.2.0- Safety codes for overhead and Gantry Cranes
- d) ANSI-B30.2.0 – Safety codes for overhead and Gantry Cranes

11.1.2**Design Criteria for Duty & Capacity for EOT Crane**

The EOT cranes shall be used for unloading, erection, maintenance and general station service of steam Turbine Generator and other associated auxiliary equipment to be installed in the TG Building.

The service duty is classified as 'Intermittent and standby service'

- a) Number of hours in service per annum : Above 2000
- b) Number of cycles for fatigue calculations : 2x105 in IS:3177/807
and relevant IS

[Two (2)] identical capacity EOT cranes shall be installed in A-B bay over operating floor of the Power house. These cranes shall work both independently and also in tandem operation. Crane capacity shall be designed for the single heaviest equipment to be handled in the TG hall with a 5% margin.

The performance of the EOT cranes shall be restricted to the following:

Main Hoist

- Safe working load (SWL) : [.....] T
- With a margin of 125 percent of SWL) : [.....] T
(Specified speeds need not be attained)

Above figure is tentative only and safe working load (X) for the EOT cranes shall be computed as:

$$X = 1.25 a$$

And safe working load (Y) for the EOT cranes with Lifting beam and sling shall be computed as:

$$Y = 1.25 \times (a+b)$$

Where a = Single heaviest equipment expected to be handled.

b = Weight of lifting beam and slings.

Normally the cranes are operated intermittently for one (1) shift only, however during overhaul and maintenance of the equipment, the EOT crane may be required to work for all three (3) shifts on intermittent duty and should therefore be capable of such operation.

11.1.3

System Description for EOT Crane Design & Constructional Features

a. General

Drives shall be designed with adequate margin to give best performance and efficiency. Safety arrangements shall be incorporated to prevent damage to motors on account of mechanical overload and electrical faults and to gearing, shafts, etc. due to over stressing and other detrimental conditions.

The crane shall be rigid in construction and all movements shall be smooth and non-jerky.

All materials shall be of tested quality and shall conform to the specification requirements and standards mentioned and shall be new and first class in all respects.

Casting and forgings shall be of testes quality and shall conform to their respective material specifications and shall be free from flaws and objectionable imperfections, machined true and in a workman like manner.

No wood or other combustible material shall be used unless specifically mentioned.

Proposals for repair or any similar operations involving plugging, welding, boring or addition of metal to the original castings or forgings shall be submitted to the Owner and his approval must be obtained before any such work is carried out. Drawing showing details and location of such repairs shall be submitted to the Owner.

All fabrication by welding shall be carried out by qualified and certified welders as per IS: 7318 (part 1).

Design shall provide for easy maintenance of all parts, particularly the wheel bearings on end trucks.

The Bidder / Supplier will ensure that the crane will be manufactured as per the tolerances specified below:

LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[242]	15.01.2016

b. Temperature Effects

Where any portion of the structure is not free to expand or contract under variation of temperature, allowance shall be kept for stress resulting from these conditions: the co-efficient of expansion for each degree centigrade variation of temperature above and below normal being taken as 0.000012 for mild steel.

Maximum use shall be of shop fabricated sub-assemblies.

Alternative design to those prescribed in specifications shall be considered only if found technically suitable and acceptable to the Owner in light of the requirements accompanied by substantial reduction in cost.

c. Material of Construction

The material of construction of the major components of the crane shall be as per Indian or international standard. Manufacturers are however free to use alternative material, which are superior for the intended service. But in all cases they are required to obtain prior concurrence of the Owner after furnishing chemical and physical properties of the offered material and any other information that may be asked for the Owner.

d. Load Indication

The crane bridge shall have permanent inscription in English on each side, readily legible from operating floor, stating manufacturer's name, serial no, the year of manufacture and the safe working load.

e. Structural Design Consideration**i) Minimum thickness of metal**

For load carrying members, the component plates, bars, angles and other rolled sections shall be minimum 8 mm thick. For tubes having both ends sealed the minimum thickness shall be 4.9 mm (6 SWG). For unsealed tubes the minimum thickness shall be 8mm. The chequered plates for platforms shall be minimum 6 mm thick over plane.

ii) Accessibility for maintenance

All structural parts shall be designed so that they are accessible for periodic cleaning, brushing and painting. All rivets/bolts shall also be accessible for periodic checking.

Foot walks shall be of sufficient width to give at least 500 mm clear passage on both sides of the girder except between railing and bridge drive Access stair case from the operating floor of the TG hall up to the crane girder level shall be provided.

The platforms along the bridge girders and over the crab shall allow convenient access for replacement, inspection, lubrication etc. for different mechanical and electrical components.

iii) Ruling dimensions and ratios

- For compression members, the slenderness ratio shall not exceed 120. In case of other load carrying members and subsidiary members the slenderness ratio shall not exceed 180.
- For girders, the following values of maximum span to depth ratio shall be governing as per IS: 807:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[243]	15.01.2016

Plate girders : Span/depth = 18

Lattice girders : Span/depth = 12

iv) Connections

- Unless otherwise specified, only riveted or welded joints shall be used.
- Where welding or riveting is not practicable, turned or fitted bolts shall be used with the approval of Owner.
- Minimum number of rivets or turned or fitted bolts in a connection shall not be less than two.
- Black bolts shall not be used in main structures and high tensile bolts shall not be used unless approved by the Owner. Bolts shall preferably be not used in tension.
- Where bolts pass through sections having tapered flanges, tapered flats shall be welded to inside of the flanges. Tapered washers shall not be used.
- Transverse fillet welds on load carrying members shall be avoided. If side fillets are used in end connections, the length of each side fillet should be not less than the edge distance between the fillets.
- Butt welds on structural members under tensile stress shall be checked by Radiographic examination as and when directed by the Owner.
- Splices shall be designed to resist one and half times the forces and moments to which it is subjected, but in no case it shall be less than $2/3^{\text{rd}}$ of the effective strength of the material spliced except that splices in the webs of the plate girders shall be designed for full strength of the web in shear as well as bending. For splicing tension members, the net section of the splice plate shall be ten percent more than that of the material spliced. Splices shall be proportioned and arranged, so that the gravity axes of the splices are in line with the gravity axis of the member to avoid eccentricity.

v) Deflections and Camber

- The total maximum vertical deflection of the girders for the live load plus trolley and not including impact or dead load of the girder shall not exceed limit of 1/800.
- The girders shall be cambered by an amount equal to the maximum deflection due to dead load plus one half the live load and trolley.

f. Mechanical Details

Material of Construction shall be selected for cranes operating in non hazardous area and relevant IS for each part. The capacity, the rail length, span mentioned are indicative. However the loads and the other dimensions shall be taken from the layouts and weights of the equipments to be lifted in A-B Bay of TG Hall.

i) Rope drums

Rope of drums shall be as per IS 3177. It shall be either Seamless pipe of cast steel or fabricated out of rolled steel plates. Fabricated drums shall be 100% radiographed and stress relieved before machining. The grooves of the drum shall be machine grooved and smooth finished. Rope drum shall be flanged at both ends. The cable reeling drums (wherever provided) shall be positively driven.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[244]	15.01.2016

ii) **Rope sheaves**

Rope sheaves shall be of cast steel or fabricated out of rolled steel plates.

iii) **Wire rope and Hook Block Assembly**

- The lifting main hook block assembly shall be ram's horn type or equivalent approved type for capacity greater than 40 Tonnes and auxiliary point hook with shank of capacity below 40 Tonnes and shall be of steel construction. Each hook shall be supported on ball or roller thrust bearing and shall rotate freely on its bearings. The hooks shall have locking arrangement.
- The sheaves of the hook block shall be encased in an oil tight casing permitting generous lubrication of wire ropes and sheaves and also preventing accidental tapping of hands.
- All sharp edges on the hooks shall be eliminated to prevent damage to the sling ropes. The hooks shall conform to the requirements of IS: 3177 and IS: 3815.
- The ropes shall be hemp cored for all cranes. Ropes shall be regular right hand lay as per IS: 2266-1989. The construction of the ropes shall be 6 x 37 up to 16 mm diameter and 6 x 36 above 16mm diameter. The rope length shall be sufficient so that 2 full lap shall remain on drum at the extreme low position of the hook. The braking loads for the hoist rope shall not be less than the load factor specified in IS 3177.

iv) **Gears & gear- boxes**

Straight and helical spur gearing shall be used for all motions. Worm & bevel gearing may be used in exceptional cases with the specifics approval of the Owner. All first reduction gears shall have helical teeth. All pinions shall be integral with the shaft.

All gears shall be hardened and tempered alloy steel, heat treated and confirming to IS: 4460 having metric module. Overhung gears shall not be used.

Surface hardness for pinion shall be 255 to 300 BHN and for gears it shall be 215 to 260 BHN. Difference in hardness of pinion and gear shall not be less than 20 BHN. All cast steel gear shall be tested by Gamma Ray. All gears shall be enclosed in oil tight gear boxes. Gear-boxes shall be of high Grade/cast steel or fabricated and split at each shaft centre lines. Fabricated gear boxes shall be stress relieved before machining. For cross travel and long travel motion, vertical gear-boxes with 'T' split may be used.

v) **Connection between rope drum & gear-box**

One of the following arrangements shall be adopted for connecting the rope drum with the gear- box.

- Flexible joint, incorporating flexible geared coupling housed within the drum.
- Fully flexible geared coupling between the drum & gearbox.

Drive of the drum by means of spring mounted on the drum shall be avoided as far as practicable.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[245]	15.01.2016

vi) **Wheels**

Crab/crane wheels shall be double flanged. Wheels shall be mounted in anti-friction roller bearing housed in 'L' shaped bearing brackets for easy removal during maintenance. Flangeless wheels with guide rollers are also acceptable.

Solid wheels shall be of forged rolled / cast steel. Wheels from 400 mm diameter and above may consist of hardened, rolled / forged steel tyre of not less than 60 mm thickness, shrunk on to cast iron center.

vii) **Coupling**

Motor shaft shall be connected to the gear-box input shaft through flexible shock absorbing coupling excepting pin bush type. Rotating parts shall be suitably covered by minimum 3.15 mm thick sheet steel hinged covers for safety. In case of single motor central drive for long travel motion, output shaft of the gear-box shall be connected to the line shaft through half geared couplings. Intermediate lengths of the line shaft may be connected through solid flange couplings. Half geared couplings with floating shaft shall be provided between the wheel and the line shaft.

viii) **Bearings & bearing housing**

Anti-friction bearings shall be used throughout except where required otherwise for technical reasons.

ix) **Buffers**

Spring loaded/hydraulic type rubber buffers shall be provided on all the 4 corners of the bridge girders and the end carriages for cross and long travel motions respectively based on the duty class of the crane whereas rubber buffer may be used for class M3 and M5 duty cranes. Amount of impact forces shall be decided depending upon the type of buffers selected.

x) **Bridge Girder and End Carriage**

- The crane shall have double girder.
- The bridge girder shall be box section type or braced I - beam type as per standard design practice. The exterior surface shall be smooth and as free as possible from projections etc. to minimize dust collection on it.
- The crane bridge shall be carried on end trucks of suitable design. Each end truck shall be built up from steel plates welded together to form a closed box section with opening at each end to receive the wheels. Welded to the trucks shall be steel sections to form bearings for the wheel axles and the driving shaft. End trucks shall be provided with rail sweep and bumper. They shall also be provided with suitable jacking pads for maintenance of the wheel and bearings. The location of the jacking pads shall be such that it shall not interfere with the maintenance of the wheels and its bearing.
- Driving wheels shall be of the double flange and taper tread type and shall be ground to equal diameter in pairs. Wheel axles may be either of the stationary or rotating type as per standard practice. If stationary type, they shall be prevented from turning in the truck by means of a key plate fitting

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[246]	15.01.2016

into a slot in the end of the axle and if rotating type, wheels shall be keyed to them.

- Where more than two bridge wheels are used per end truck, the end truck shall be split into two sections, each carrying one bridge independent of other. Two sections of the end truck shall be joined by suitable joining device that shall ensure uniform wheel loading. Steel pads shall be welded on the tops of end trucks where the girder rests and shall be machined to receive the girder ends.
- Trolley travel rail ends shall be curved upwards to stop the trolley smoothly and prevent it from leaving the rails in case of over travel at its maximum speed.
- End trucks shall be equipped with spring/rubber buffers and rail sweep for bridge travel. The rail sweep shall be such that it can push away any object that may fall on the runway. The buffers shall be of substantial design and suitable for engaging the stops at the end of runway.
- Breathing holes shall be provided in completely enclosed welded box type girders. Drain holes shall be provided in all places where water or oil is likely to collect where practicable, means of access shall be provided for inside inspection of completely enclosed box girders.
- In bridge girder strength calculations, the trolley rails and chequered plates shall not be considered as load carrying members.

xi) **Wheel Stops**

Bridge and trolley wheel stops shall be provided before the end stops. These shall match to wheel radius. Wheel stops to prevent rails from creeping and trolley from running off the bridge shall be abutted against ends of rails. Wheel stops shall be welded to the girder.

Sweeps shall be attached to the end carriages and to the trolley, to remove foreign material from the rails.

xii) **Brakes**

All brakes shall be of 'fail-safe' design and shall operate automatically in case of power failure. Two brakes shall be provided for all motions (One Electro hydraulic Thrustor brake and One DC Electromagnetic brake). Out of the two (2) brakes provided for hoisting motion, one shall be provided at the gear box input shaft and other on motor side. Hoisting brakes shall be designed to hold 1.5 times full load torque while cross travel and long travel brakes shall be designed to hold 1.25 times full load torque.

xiii) **Lubrication**

Grouped lubrication system shall be used for the cranes. Lubrication of the gears and pinions in the gear-boxes shall be splash fed from the sump. In case of three reduction, vertical mounted gear-box (having limited motion), are used, an oil pump shall be fitted to ensure lubrication of all gears.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[247]	15.01.2016

xiv) **Trolley Frame**

- The trolley frame shall be built up from heavy steel plates, angles and channels adequately braced to resist vertical, lateral and torsional strains, welded to form a rigid one piece frame. Alternatively, it may be of cast steel construction and should be covered by flooring as far as possible.
- On bottom of trolley frame, on each side a double spring bumper shall be provided to engage stops at each end of the bridge.
- Equalizer sheaves shall be mounted on the trolley frame in such a manner that deflection resulting from the force on the sheaves is not directly transmitted to the hoisting mechanism.
- Sheaves shall be so arranged on the trolley that rope reeling arrangement resulting there from shall ensure a lifting of the load in almost a vertical line with minimum of swing or side-movement.

xv) **Platforms and Ladders**

- Maintenance platform of 1m width at the crane girder level connecting A-B bay for maintenance purpose
- Safe means of access shall be provided at every place where any person engaged in the examination or maintenance of the crane has to work adequate handholds and footholds shall be provided as necessary.
- One meter high double tier handrail and suitable toe-boards shall be provided along the entire length of platform (on the bridge), which shall not be less than 930 mm wide.
- Access ladders one (1) each for access (a) on either side from gantry girder level walkway to crane bridges walkway (b) from crane bridge walkway to Operator's cabin (c) from crane bridge walkway to suspended cradle.
- Every platform shall be provided with steel chequered plate top and shall be securely fenced with one meter high double tier hand rails and toe boards. Platforms shall be of sufficient width to enable undertake of normal maintenance work.
- In case lattice riveted construction is offered for the bridge girder, full length chequered plate platform with adequate headroom shall also be provided at bottom chord level for periodic checking of all rivets/bolts and other items.
- Access to operator's cabin from bridge girder platform shall be by staircase having adequate width and proper sloping.
- Handrails shall be of galvanized steel PVC coated pipe of flush welded construction, ground smooth using 32 mm nominal bore medium class pipe to IS: 1239. Hand-railing construction shall be with double horizontal pipe runs, with top run about one (1) meter above walkway level. Toe plates of 100x6 mm thick or approved equal flat shall be provided. Pipe posts shall not be spaced more than 1.75 meters apart.
- All ladders shall have 450 mm clear width and provided with 20 mm diameter steel rod rungs spaced at 300 mm apart Safety cage in steel welded construction shall be provided for ladders higher than 2.5 meters in height.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[248]	15.01.2016

xvi) Runway Rails

- Crane runway rails with bolts and nuts and complete with shims, taper flats, anchor bolts, inserts and other fixtures for fixing the rails to crane girders shall lie under the scope of supply of the present specification. Erection of LT rails & fixing of the same is included in the scope of the Bidder.
- The length of the rail supplied shall be sufficient to cover the whole of runway length. Crane-runway rails of the sections shall be joined by welding to make it continuous and there should not be any gap between the successive rails. End rails shall be provided with stoppers to prevent longitudinal shifting.
- The rail section shall be as per IS: 3443.
- The Bidder shall quote the unit rate for Runway Rail with holding fixtures, etc. for adjustment of contract price corresponding to changes, if any, in the length of runway rails to be actually required under this specification, compared to what has been specified herein.

xvii) Trolley Rail

- The specification includes the supply of trolley travel rails complete with fixtures for fixing the rails to the body of crane.
- The length of the rail supplied shall be adequate for maximum permissible trolley travel. Gap between successive rails shall not exceed 2 mm and end rails shall be provided with stoppers to prevent longitudinal shifting.

xviii) Rail Joints and Fixing

- Rail joints shall be properly located and shall be joined through flanged bolting/welding. All rail-to-rail joints should be butt welded except the building expansion joint. The rails shall be butt jointed by either Thermit welding or Fusion welding process. The Crane vendor shall get his proposal for edge preparation of rails, welding procedures and sequence approved in advance by the Owner.
- The schemes of securing the rails to the Gantry girder/bridge structure with dampers, bolts and nuts, their alignment etc. shall be subjected to the approval of the Owner. Rail fixing arrangement shall be such that the profiles of damp match the rail flange.

xix) Tolerances

The limits of tolerance as specified in the Data Specification Sheet shall be observed.

xx) Rail End Stops

Rail End Stops of adequate design shall be provided on both ends of the runway. The end stop location and arrangement shall be such that the unavailable length of runway (for crane operation) on any end is a minimum.

xxi) Drive Mechanism

- Equal driving effort shall be applied at each drive wheel of bridge and trolley to prevent one end from travelling faster than the other.
- For bridge, the torsional deflection in the cross shaft shall be limited to safe value.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[249]	15.01.2016

- For bridge drive if twin motors are used, these motors shall be equidistantly located at each wheel end. Suitable interlock shall be provided to prevent single motor operation at any time.
- Trolley drive shall be achieved by single motor in which the motor shall drive a common output shaft through proper gearbox and traction power shall be transmitted to the geared wheels by means of pinions mounted on both ends of the output shaft.
- All machineries for the drive unit shall be properly aligned. Self-aligning type gear couplings shall be used between connection shafts to take care of transverse as well as axial movement wherever necessary. Wherever components of considerable amount of inertia is directly mounted on the high speed shaft (e.g. brake drum, couplings, etc.) they shall be balanced statically to minimize vibration.
- Motor rating shall be calculated keeping margin of at least 15% over the maximum power requirement in the duty condition specified. Further, the hoist motors shall be rated to lift 125% of the design load on the hook at the rated speed.
- Along with the drive mechanisms adequate brakes shall be provided as detailed elsewhere in this specification. Selection and design of brakes shall be the complete responsibility of the manufacturer. The brakes shall be of accurate rating to stop each motion within a very short distance and in a safe and smooth manner.

g. Electrical Details

Power supply to the crane will be from the 415V station PDB/ACDB meant for Crane/Hoist etc., as shown in the Electrical SLD.

Power supply and standard voltage levels

The following standardized voltage levels will be adopted:

S. No	PARTICULARS	DETAILS
1	LTAC	415V, 3 phase, 50 Hz, 4 wire solidly earthed system. Power supply be made available at this voltage only. Other voltages will be obtained by providing transformer/ transformer – rectifier unit with MCBs on both primary and secondary side and $\pm 5\%$ and $\pm 10\%$ taps on transformers secondary.
2	AC control and signaling voltage	240 V, 110 V AC
	Socket outlets for	
3	Hand lamps	24 V, single phase, 50 Hz, AC obtained through suitable transformers

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[250]	15.01.2016

S. No	PARTICULARS	DETAILS	
4	Hand tools	240 V, 15A, 2 pin plus earth with plug interlocked switch	
5	Electro-magnetic brakes	220 V, DC obtained through individual brake control panels.	
6	Monitoring and signaling in electronic installations, mimic panels	24/ 48 V. DC	
7	Illumination/ lighting	240 V, AC	
	The three phase symmetrical short-circuit ratings of the switch gear at 415 V will be 50 kA for 1 second. The system/ unit/ equipment will be designed so as to be suitable for the following variations in voltage and frequency :		
		Voltage	Frequency
8	Permissible variations with rated performance, rated current and control effectiveness maintained	$\pm 10\%$ For LT system	+5% & -5%
9	Permissible variations for control and regulation equipment with rated performance and control quality maintained	$\pm 10\%$	+3% & - 6%

Voltage dip on the starting of largest LT motor will be limited to 15% of the nominal voltage at the motor terminals. Total voltage dips on starting of large motors on crane will be limited to 3% on crane and 6% in DSL system.

i) Following will be included on the pendant unit:

Push button for	Hoist slow, hoist fast, lower slow, lower fast, left cross traverse, right cross traverse, forward long travel, backward long travel, emergency stop conditions.
Switch for	Lights and bells
Lamps for	Power 'ON' indication and emergency corner switch operation.

The Pendant Push Button station will be supported independently, earthed separately independent of suspension.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[251]	15.01.2016

- **Cabin operated cranes:**

The operator's cabin will contain the following:

- Master controllers for all the motions and magnet (wherever applicable).
- Emergency stop push button.
- Foot switch for alarm or bell.
- Switches for all lighting equipment on crane.
- Switches for exhaust fan and for cabin fan.
- A fire extinguisher.
- Insulating mat and operator's chair.
- Cabin light and fan.

Annunciation panel with indication lamps for power 'ON' control 'ON' emergency corner switch operated, ammeter and voltmeter with selector switches.

- **Radio remote control:-**

- In this mode of control system, all the 3 motions Hoist.
- Main/creep for main hoist &aux hoist separately.
- Cross travel.
- Long travel can be controlled.

The system will have capability to provide range of 1.5 times the long travel distance of the crane.

In the case of signal failure, all motion will come to a safe stop.

The system will have facility of controlling speed in two steps:

- Slow speed on the first step of the breaker contact / pushbutton of the radio remote control representing the first or second notch of the master controller.
- Full speed on the second step of the breaker contact / pushbutton of the radio remote control representing the final notch of the master controller.

ii) Transmitter

Transmitter will have following features:-

- Constructed with sophisticated microprocessor technology and surface mounted electronics.
- Transmission type: - FM FSK
- Transmission speed: - 9.6 Kbps.
- Built in self-test for all functions.
- Transmitter will consist of switching breaker, dial switch and push buttons.
- Switching breaker will be non locking to zero position or maintained function.
- Indications:-
- Operation status
- Battery status

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[252]	15.01.2016

- Indicators that display information from crane.
- PIN -code (Personal Identification Number)
- Internal antenna.
- Rechargeable battery.
- Battery 7.2 V NiCd
- Operating time: - About 8 hours.
- Different operating frequencies (minimum 16 nos.)
- Two hand upstart.
- Stop push button.
- Operating conditions: - Areas having large temperature variations, dusty, more vibrations, oil and humidity.
- Operating temperature range: - Min. 10 deg C to Max. 60 deg C
- Protection class: IP - 54
- Casing material: Polycarbonate / ABS Plastic

iii) Receiver

Receiver will have following features

- Upto20 functions exclusive safety relays (for transmitting preset reference values to VFD in the crane).
- 2 safety relays (for control of main contactor)
- Power supply suitable for 240 V AC, 6 A.
- Minimum 16 different operating frequencies.
- Two redundant microprocessors for monitoring each others.
- Cyclically redundancy checks check for high security of transmitted radio messages.
- Frequency scanning in the receiver.
- Memories last 10 users.
- Interlocking of the relays.
- Momentary or latched relay functions.
- Two hand up start (to avoid unintentional start).
- Protection class: IP - 65.
- Casing material: Aluminum profile for fast mounting on DIN rail -
Operating temperature range: - Min. 10°C to Max. 60°C

iv) Enclosure Class

- For indoor operations
 - Resistance boxes : IP : 11
 - Motors : IP : 54
 - All other electric equipment : IP : 54
- For outdoor operations

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[253]	15.01.2016

- Resistance boxes : IP : 33 with canopy
- Motors & panel : IP : 55 with canopy
- All other electrical equipment : IP : 65 with canopy

v) Cables

For details refer Part-B, Section-II, Volume-II.

vi) Earthing

A ring earthing system will be provided on the crane. Each and every electrical equipment will be connected to this earthing at least at two points. However the electronic circuit insulated earth wire will run in panel and terminate at main earth connection only at one point. The earthing will be connected to the fourth trolley line in DSL system through 2 no's of current collector. Additionally current collectors will also be provided on crane rails for earthing on crane . All these collectors will be connected to earthing ring.

An earth core will be provided in trolley feed cable and the magnet. The cable reeling drum will have a separate slip ring for earthing purpose.

It will conform to general specification for earthing.

Rubber matting's will be provided in front of the protective and control panels.

All bonds between earth conductors and crane parts will be welded if possible, or riveted and soldered. Where screwed bonds are made, care will be taken that there is satisfactory contact surface and nuts will be locked to prevent their loosening? Earth connections to equipment will be made by means of multi strand flexible conductor to adequate section.

The earth ring on the crane/ machine will be connected to the plant earthing system through to gantry rails. Each end of each gantry rail will be bonded to the plant earthing system.

In addition, intermediate earthing bond will also be provided on the rails at every 60 m in case of longer tracks.

Flexible copper bonds will be provided across any gap in the running gantry rail. For mobile equipment with flexible cables, one separate copper conductor of adequate size will be provided for earthing.

h. Operation

The crane shall be operated either from cabin in the crane bridge and from a pendant control station and through remote control unit.

i. Operator's Cabin

The operator's cabin shall be steel fabricated open type, suitable for indoor service, and air conditioned, fire proof construction and complete with light, fan and seat. The cabin shall be located on one end of the crane bridge and on the opposite side of Down Shop Lead (DSL) and under one of the bridge girders, so that it is offset to one side. The cabin shall be provided with guarding handrails

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[254]	15.01.2016

and the floor shall be covered with electric insulating carpet. Clear headroom of 2300 mm shall be ensured within the cabin. The cabin shall be well braced in order to provide adequate strength and rigidity. The outside surfaces of the cabin and floor beams shall present smooth and pleasing appearance.

A foot operated type-warning gong shall be provided within the cabin. The cabin shall be compact and adequately sized to accommodate controllers, protective panel, distribution board and other accessories required for operating the crane. Arrangement shall be such as to provide unrestricted view of load at any position to the operator.

Dead man's Handle/Control for each of the crane motions shall be provided in the cabin.

Cabin's platform shall be provided with 10 mm thick rubber sheet on the floor to comply with I.E. Rules. No wooden paneling shall be permitted. The sides of the cabin shall be covered with plate steel to a height of one (1) meter. The floor shall be designed for a load of 300 kg per meter square of floor area exclusive of the weight of any equipment mounted on or attached to the cab. An access ladder shall be provided from the bridge girder to the Operator's cabin.

In addition to above, accessories not limited to the following shall be adequately arranged/ mounted in the cabin:

- Manually operated master control switches, main line disconnecting switches and other necessary controls and wiring with fittings.
- A swing way operator's chair.
- Complete concise instructions covering the crane operation, maintenance and periodical lubrication etc typed in English and neatly framed in a permanent frame for each reference.
- A non-oscillating-ventilating fan having 350 mm swing (240V AC, single phase) with suitable guard, and separate regulator.
- Adequate fluorescent illumination with switch inside the cabin.
- An electric alarm gong and an additional 300 mm dia. hand operated metal gong.
- Portable carbon dioxide fire extinguisher and sand bucket.

Location of the cabin shall be on one side of the crane so as to permit maximum visibility of all operations of the crane. Location of cabin and/or access ladder shall be such as to prevent personnel from making accidental contact with crane and/or trolley runway conductors.

Enclosure protection class of all Electrical equipment shall be at least IP 54 or better except that for motor which shall have IP-55 protection & Resistance boxes, which may have IP-23 protection.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[255]	15.01.2016

j. Pendent Station

The pendent station shall locate the push buttons for controlling the various motions of the crane and shall be hung from the crane trolley to a height of approximately 1 meter above the operating floor.

With pendent operation, foot operated travel brake and the drum controllers need not be provided.

k. Repair Cage

- i. A repair cage shall be provided on the inside of the end carriage for attending the main current collectors. In case, the trolley current collectors are located below trolley rail level on the inside webs of the bridge girders, guards shall be provided on the trolley to prevent the hoisting ropes from coming in contact with conductors as well as a repair cage shall be provided on the trolley to attend to these conductors.
- ii. Repair cages shall also be provided at the corners of the crane, if required, to facilitate removal and replacement of long travel wheels.
- iii. The repair cages shall be adequately sized, guarded for safety and correctly located for the intended service. Suitable access to the cages shall be provided.

l. Guarding

- i. Guards of an approved design, which shall push forward or off the rail track any object placed across it, such as person's foot or arm, shall be attached to each end of the end carriage.
- ii. Protection guards to live electrical wirings/conductors shall be provided.
- iii. Suitable guards to revolving shafts and coupling, long travel cross shafts and gears, shall be provided.
- iv. The sheaves of the hook block fitted with two sheaves or fewer shall be guarded to prevent trapping of a hand between a sheave and the in running rope.
- v. Effective means of guiding the wire ropes over the sheaves shall be provided so as to prevent dismounting of rope from the sheave grooves even when a slack rope condition is developed.
- vi. All openings in foot walk flooring, for access to bottom chord platform, if any, and to other inspection platforms, shall be provided with covers having suitable locking means to avoid any accidental opening.
- vii. All electrical panels, resistance boxes and crane trolley wires shall have suitable rain/dust hoods over them to prevent water and building construction material falling on them, as it is apprehended that erection and commissioning of the crane might have to be taken up before the completion of the building roof.

11.1.4 Quality assurance and Test & Inspection

The crane shall be offered for inspection and testing during different stages of its manufacture, starting from raw materials till the completion of the crane, by the Owner/his authorized representative at the Supplier's or his sub-supplier's works as per the inspection procedure mutually agreed between the Owner or his authorized representative and the Supplier. Inspection shall be regarded as a check up and shall be in no way binding on the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[256]	15.01.2016

Documents for all electrical and mechanical equipment supplied with the crane shall be put up for inspection along with the equipment.

After inspection, an endorsement would be made in the inspection certificate about the availability of the documents.

The crane shall be completely assembled and tested in the Supplier's works for full load and 25% over load on hoisting and cross traverse motion, in presence of Owner in addition to other tests as specified in the latest revision of IS:3177 as applicable.

The following test shall be carried out at manufacturer's works during inspection.

High voltage test of panels.

Contact sequence test for all motions.

Necessary clearance from statutory authorities (if any) shall be obtained by the Bidder on behalf of the Owner before the cranes are put under operation immediately after the cranes are commissioned. The crane after erection shall be tested as follows:

- a) Insulation tests and other tests mentioned shall be carried out as per the latest edition of IS: 3177 (as applicable).
- b) Deflection Test
- c) The deflection test of the bridge girders shall be carried out as per latest edition of IS: 3177. After the deflection test with safe working load, the crane shall be tested for deflection with 25% over load and there shall not be any permanent set after the removal of the load.
- d) Speed Tests
 - i) All motion of the crane shall be tested with rated load on all notches at the time of commissioning of the crane at site and the speeds shall be attained within the tolerance limit.
 - ii) All motions of the crane shall be tested with 25% over load in which case the specified speeds need not be attained but the crane shall show itself capable of dealing with the over load without difficulty.
 - iii) Note for point (i) and (ii) above:
Necessary test loads for testing at both shop floor and site shall be arranged by Bidder.
- e) Brake Tests
 - i) The hoist brakes shall be capable of braking the movement with rated as well as over load. (150% for hoisting and 125% for traveling. However, the braking path with rated load shall not exceed hoisting speed/ 150 for class 1 & 2 duty cranes, speed/ 120 for class 3 duty cranes, speed/100 for class 4 duty cranes.
 - ii) The long travel and cross travel brakes shall be capable of arresting the motion within a distance in meters equal to 10% of the speed in meter / min and the retardation due to braking shall not exceed the values as given in the table below :

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[257]	15.01.2016

Working condition of the crane	Retardation, according to percentage number of driving wheels, in m/sec ²

Indoor (When $\mu = 0.2$)	1.5	0.75	0.40

Legend μ = Friction Factor

11.2

Single Girder Under slung Crane (EOT/HOT)

a) Codes and standards:

The design, manufacture and performance of EOT/HOT U/S crane along with manual hoist and Geared trolley shall comply with all currently applicable status, regulations and safety codes and shall also confirm to the latest applicable Indian or International standards.

i) The crane structures shall be designed Manufactured and tested in accordance with IS: 807-2006. The Crane shall be designed with a margin of 25%.

- Black bolts shall not be used in the load bearing structures of the crane. Also high tensile friction grip bolts shall not be used unless approved by Owner.
- Traverse fillet welding on the load carrying members shall be avoided.
- All butt welds on the structural members, subject to tensile stress, shall be X-rayed.
- Maximum deflection of the bridge girder of U/S crane with safe working load on the travelling hoist shall not exceed 1/900 of the span of crane with travelling hoist stationed at mid span and excluding deflection due to dead load.
- U/S crane shall be supplied complete with buffer & buffer stops.
- The u/s crane after installation at site shall be load tested as per IS: 807-2006.

ii) Technical specification of Manual Hoists & Geared Trolleys to be used in HOT U/S crane

- Ball and roller anti frictional bearing only shall be used. Swiveling type standard shank hook mounted on grease lubricated anti-friction thrust bearing shall be used. The Chain Pulley Block shall conform to class-I duty as per IS: 3832-2005.
- Load chain & operating chain shall be of calibrated type.
- Pulley used for the operating mechanism shall have suitable guards to prevent the operating chain from coming out.
- All the open gearings shall have suitable cover.
- No-load testing shall be done at works after full assembly in presence of Owner. The Chain Pulley Block shall be load tested at site after erection.
- No wooden parts shall be used in the Chain Pulley Block.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[258]	15.01.2016

- Travelling speeds, tractive effort & bill of materials shall be indicated by the Bidder during approval of drawing & shall be subjected to Owner's approval.

b) Technical specification of EOT U/S crane

Please refer Electrical details furnished for electrically operated (EOT) Crane above. The Under slung electrically operated crane is excluded from the following.

- Operator cabin & Cabin operation
- Remote control operation

c) Inspection & Testing

The manufacturer shall conduct all tests required to ensure that the equipment furnished shall conform to the requirements of the specification and in compliance with the requirements of the latest edition of IS: 3832-2005 or equal standards for manually operated hoists and IS3177.

All the monorail hoists shall be tested at site as per the stipulations of relevant Indian Standards.

d) Painting

The exposed surface of all items of equipment shall be thoroughly cleaned and painted. Refer chapter on painting given elsewhere in the specification.

11.3

Electric Hoist

a) Technical Specification

- The hoist shall be designed in accordance with IS: 3938-983.
- For outdoor hoists, motors, brakes & other equipment shall be covered to suit to outdoor operations.
- All Electric hoists shall be pendent operated.
- Power supply shall be through flexible trailing cables, which shall be clamped with PVC or non-metallic clamps.
- Power isolator shall be provided at operating height.
- Defects in the materials like fractures, cracks, blowholes, or laminations are not allowed.
- No cast iron parts shall be used except for electrical equipments and no wood or combustible material shall be used unless specifically mentioned otherwise.
- All working parts requiring replacements or inspection or lubrication shall be easily accessible without the need for dismantling of other equipment or structure.
- All parts of the hoist shall be thoroughly cleaned of all loose mill scales, rust or foreign matter & then painted as specified. All parts inaccessible after assembly shall be painted before assembly & assembled while paint is still wet.
- All Elec. hoists shall be provided with maintenance / repair platforms with handrails and staircase at one end.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[259]	15.01.2016

- xi) All parts except motors, resistors, thrustors, solenoids, etc. shall be de-rusted manually & painted before assembly& assembled while paint is still wet.

b) Construction Features

Electrically operated hoist shall be a complete unit with travelling trolley, hoisting motor, travel motor, rope drum, wire rope, necessary gearing, sheaves, brakes, hook, pendent push button station, contactor panel, all wiring, conductor for travel motion, limit switches, end stops, buffers, earthing terminals and other accessories to make the equipment complete in all respects. Electrically operated hoist shall have minimum factor of safety as five (5).

i) Mechanical Details

• Travelling Trolley

The travelling trolley shall be motor driven. Trolley frames shall be fabricated from rolled structural steel sections. The side plates of the trolley shall extend beyond wheel flanges, thus providing bumper protection for the wheels. The two side plates shall be connected by means of an equalizing pin.

• Wheel & drive

The electric hoist shall run on two pairs of wheels, a pair of which shall be driven by motor through reduction gear. The wheels shall be of cast steel/forged steel, single flanged with taper / parallel treads to suit to monorail. The wheels shall be machined on their treads to match the profile of the monorail. The wheels shall be mounted on anti-friction bearings & shall be easily removable for repair & replacement. The wheel diameter shall be selected such that skidding does not take place even under unloaded condition.

• Hoist mechanism

The hoist mechanism shall consist of a bottom block fitted with a standard forged swivel hook of the specified capacity, supported on 2 or 4 falls of wire rope. However, non-spinning type of wire rope shall be used for 2 falls rope arrangement. The wire rope shall be wound on a grooved drum which shall be sufficiently long to accommodate in one layer the length of rope requisite for the specified lift & in addition not fewer than two turns at each anchored end & one spare groove at the opposite end. The hoist drum shall be motor driven through gears enclosed in oil filled reduction gearbox.

• Rope Drum

Rope drum shall be as per IS 3938. Rope drum shall be either cast or welded to sustain concentrated loads resulting from rope pull. Drum shall be machine grooved right and left with grooves of a proper shape for the rope used. Grooving shall be of proper length to handle entire rope required to make the specified lift plus the two dead laps at each anchor point, without overlapping.

• Wire Ropes

Wire ropes shall be of Right Hand Ordinary (RHO) lay construction. The rope shall be fastened to the drum with an attachment having strength equal to that of the rope. The rope fastening at the swinging end shall be aligned so as to prevent rope coming off its reeling. Rope shall be of sufficient length so that two (2) full laps shall remain on the drum at extreme low position of the hook.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[260]	15.01.2016

Reverse bends or cross bends and bird caging shall be avoided. The breaking loads for the hoist ropes shall not be less than the factor specified in IS 3938. The load shall include rated load on hooks, weight of the bottom block and the weight of rope. Wire rope for hoists shall conform to IS: 2266-2002

- **Gearing.**

Straight & helical spur gearing shall be used for all motions. Worm & bevel gears shall not be used without specific permission from Owner. Preferably all first reduction gears shall have single helical teeth. All gears shall be hardened & tempered alloy or carbon steel with machine cut teeth. Surface hardening of teeth is not acceptable. All gears shall be enclosed in oil filled gear box except when not possible.

- **Couplings**

Each motor shall be connected to its gear drive by a flexible coupling.

- **Lubrication**

All gears & bearings shall be lubricated either by splash lubrication or by grease. If possible, all the lubricating points shall be grouped together in easily accessible positions.

- **Bearings**

Ball & roller antifriction bearings of reputed make shall only be used, with minimum bearing life as per IS: 3938.

- **Brakes**

D.C. Electromagnetic brake shall be provided for each motion, however in case of conical rotor motors manufacturer's standard brake can be used. Bidder to indicate the type of brake offered.

- **Shafts and Axles**

Shafts and axles shall be of forged steel and shall have ample strength, rigidity and adequate bearing surface for intended duties. Shafts and axles shall be accurately machined and properly supported. Shafts shall, as far as possible, be furnished straight. If shouldered, these shall be provided with fillets of ample radius or shall be tapered to avoid loss of strength and stress concentration. These shall be designed considering allowances for keys and splines.

- **Lifting Hook**

The lifting hook shall be single hook type, solid, forged, heat treated, of rugged construction and provided with a standard depress type safety latch. Lifting hook shall have swivels and operate on ball or roller thrust bearings with hardened races. Lock to prevent hook from swiveling shall be provided. Lifting hook shall conform to IS 15560:2005 as applicable.

- **Buffers, Stops and Sweeps**

Spring or rubber buffers shall be provided on the trolley. Suitable end stops shall be provided which shall be welded on the ends of monorail to contact the buffers mounted on the trolley.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[261]	15.01.2016

Trolley wheel stops shall be provided before the end stops. These shall match to wheel radius. Stops to prevent trolley from running off the monorail shall be abutted against ends of monorail. Stops shall be welded to the monorail.

Sweeps shall be attached to the trolley to remove foreign material from the rails.

- **Guards**

All exposed couplings, shafts, gear wheels, pinions, drives etc. shall be safely encased and guarded.

The sheaves of hook blocks shall be guarded to prevent trapping of hand between a sheave and the in-running rope

ii) **Electrical Details**

- **Standards**

The equipment shall be selected as per the guide lines provided in the latest edition of the relevant Indian Standards. The equipment shall also conform to the latest Indian Electricity Rules & other statutory Regulations prevalent at the place of installation as regards to safety requirements, earthing & other essential provisions specified therein.

Following shall be followed:

Indian Standards, relevant international standards such as IEC, VDE, BS, JIS, NFPA etc. Indian Factory Act 1948

Indian Electricity Act 1910

Indian Electricity rules-1956, State's regulations.

All electrical equipment including cables shall be selected for an ambient temperature of [50 deg C] and relative humidity of [88 %].

- **Power supply condition**

Power supply to the hoist shall be 415V +/- 10%, 3 phase, 50Hz +/- 5% AC 4 wire with solidly earthed neutral to be tapped from Station PDB/ACDB shown in SLD..

The following voltages shall be used in the hoist:

415 volts, 3 phase, 50 HZ - for motors 110 volts, single phase, 50 Hz -for electrical circuit of pendant control / control posts. 220 volts, DC for DC electromagnetic brakes.

The different voltages mentioned above, other than 415 V, 3 phases, 50 Hz shall be obtained through individual separate transformers & transformer rectifier units connected to 415 V.

Each transformer shall be provided with tapplings at +5% & + 10% on the primary.

Electrical system shall be designed for a fault level of 50 kA. Earthing system adopted shall be type TN-CS.

- **Power supply collection & distribution**

Incoming power supply to the hoist shall be terminated at the line side terminal of sheet steel, dust proof cable junction box installed near hoist gantry in an accessible position. Bidder shall provide proper flexible festoon cable system to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[262]	15.01.2016

deliver the power supply to the electrical control panel of the hoist. Electrical control panel of hoist shall contain following equipment/devices:

- A three pole isolator with suitably rated fuses to take care of the system fault. The rating of the isolator shall be sufficient to carry the combined full load currents of the hoist & travel motor.
- A three pole main line magnetic contactor suitable to carry the combined full load currents of hoist & travel motor.
- Fuse & over load relays in the individual motor power circuit. The over load relays shall be self reset type.
- Reversing contactors for individual motor. The rating of the contactors shall be at least 50% higher than the respective motor full load current at the specified duty cycle. The minimum rating of the power contactor shall be 30 amps. It shall be heavy duty & of class AC-4 as per IS: 2959-1985.
- Transformer & transformer rectifier set for control voltage supply & for supply to DC electromagnetic brakes respectively.
- Speed control equipment as necessary. Plugging of motors shall be avoided by suitable control.

Suitable arrangement shall be provided to intimate control room during emergency in the form of audio-visual alarm. Necessary contacts/auxiliary relays shall be provided.

The electrical panel shall be sheet metal clad (16 gauge), totally enclosed (IP-54) with hinged & gasketed front door. Cable entry/exit shall be through compression type cable glands.

● **Pendant control station**

All drive motors shall be controlled with individual magnetic reversing type contactors operated through momentary contact push buttons (mounted on pendant unit/ control posts. The push button shall return to the 'off' position as soon as the pressure is released. The release of the push button shall immediately & automatically cause the brake to clamp. In addition to the start up 'ON' push button, which shall energise the main Bidder, one lockable 'OFF' push button shall be provided in the push button station & shall be connected in the main contactor coil circuit. The push buttons shall be clearly marked as per the recommendations of IS: 3938-1983 to indicate the function of each button.

The pendant unit shall be fixed either to the hoist unit or to the monorail as specified. It shall be capable of withstanding rough handling without damage. The weight of the pendant shall be supported independent of cable by means of PVC sleeved chain or wire rope. The pendant shall be effectively earthed. A chain or rope does not provide an effective earth connection & shall not be relied upon for that purpose.

The reversing contactors for individual motors shall be electrically interlocked. The control scheme adopted shall ensure smooth normal speed lowering, hoisting & travel as specified.

The pendant shall comprise of following push buttons and indicating lamps.

- Start & stop

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[263]	15.01.2016

- Trolley travel to & fro
- Hoist & lower
- Red lamp for supply ON

- **Limit switches**

Hoist & travel motion shall be provided with limit switches to limit the ultimate positions of the hook & the hoist block.

The limit switches shall conform to the requirements specified in IS: 3938-1983/ International Standards.

- **Motors**

All motors shall be totally enclosed fan cooled, crane duty, squirrel cage induction motors. It shall be ensured that these are special motors suitable for crane duty with pull out torque of not less than 150% of the rated torque. Motors shall conform to IS:325-1996 . All motors shall be suitable for 60starts/hour.

The motors shall be selected for the duty class of hoist unit. The duty cycle factor for each motor shall not be less than 40%.

The motor selected shall be suitable for frequent reversal, braking & acceleration. Motors shall have class 'F' insulation with max. utilization to within class 'B' admissible temperature rise corresponding to ambient air temperature as per clearance diagram. All windings shall be impregnated for service in the tropics having ambient temperature as stated in the clearance diagram of the hoist.

Each motor shall have a robust terminal box accurately fixed to the frame. Each terminal box shall have ample room for termination of the aluminium conductor cables.

- **Brakes**

Separate electromagnetic brakes, operated through direct current shall be provided for each motor driven mechanism. Brakes shall be of approved make & shall be connected so as to apply automatically when power supply fails or when the push button is released or with adjustable delayed time lag preceded by electrical braking when the push button is released.

Brakes shall be designed as per the latest edition of IS: 3938-1983/ International Standards.

Disc brake may be provided for CT motion and shoe brakes may be provided for hoist motion.

- **Enclosure class**

The equipment in the hoist shall be suitably protected against direct radiant heat and rain. It shall be rendered proof against ingress of dust and vermin.

All electrical equipments like motors, junction boxes, electrical panel, limit switches, brakes etc. shall be provided with enclosure class IP-54 for non-dusty or indoor environment and IP-55 for outdoor application.

Canopy shall also be provided for outdoor hoist.

- **Power collection system**

Power supply to the hoist unit shall be through flexible festoon cable system. The festoon cable shall be mounted on a retracting roller supports for the full length of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[264]	15.01.2016

the working zone parallel to the I-beam carrying the hoist unit. The retracting trolleys shall run on a separate supporting beam. Vendors shall specify the supporting beam according to the retracting rollers offered by him to enable provide such beam in the building structure.

One end of the festoon cable shall terminate in main cable junction box at the extreme end of the monorail beam. The other end shall terminate on to the main power disconnecting switch located in the control panel. The flexible trailing cable shall have ample length to cover full track length & shall be supported at suitable intervals by means of properly selected movable trolleys. These retracting rollers shall be prevented from bumping through suitable spacers so that undue stress is avoided on the cable. Similarly the trolleys shall be inter-connected through metallic drag chains to avoid pull on cables. Suspension of flexible cable system below the support rail shall be restricted to avoid mechanical damage & interference with operation.

- **Earthing**

TN-CS type of earthing shall be provided. This would require a separate earth conductor in the power cables, both for fixed wiring as well as for flexible festoon cables. Earth bus shall be formed on the hoist and each equipment shall be earthed through this earth bus.

c) Inspection & Testing

The manufacturer shall conduct all tests required to ensure that the equipment furnished shall conform to the requirements of the specification and in compliance with the requirements of the latest edition of IS: 3938-1983 or equal standards for electrically operated hoists.

All the monorail hoists shall be tested at site as per the stipulations of relevant Indian Standards.

11.4

Manual Hoist

a) Technical Specification

- i) Ball and roller anti frictional bearing only shall be used. Suitable greasing points shall be provided.
- ii) Swiveling type standard shank hook mounted on grease lubricated anti-friction thrust bearing shall be used. Lifting hook shall be solid, forged, heat treated alloy or carbon steel of rugged construction and provided with a standard depress type safety latch. Lock to prevent the hook from swiveling shall be provided.
- iii) The Chain Pulley Block shall conform to class-I duty as per IS: 3832-2005.
- iv) Load chain & operating chain shall be of calibrated type as per relevant IS. The total length of the load chain shall exceed the minimum length required to give the prescribed range of lift by not less than three links per fall to ensure that the slack end anchorage is not loaded. The load chain wheel shall be of adequate strength and shall be suitably designed to ensure effective operation of the chain and shall be properly secured with shaft, preferably with splines.
- v) Pulley used for the operating mechanism shall have suitable guards to prevent the operating chain from coming out. The length of the hand chain shall be such that the lowest point of the suspended loop shall hang 400 mm above the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[265]	15.01.2016

operating level. Hand chain wheels shall be provided with flanges and designed to ensure effective operation with hand chain. Minimum diameter of pulling chains shall be 6 mm.

- vi) Gears shall be cut from solid cast or forged steel blanks or shall be of stress-relieved welded steel construction or built-up from steel billets and welded together to form a one piece gear section. All open gearing shall be suitably covered.
- vii) The hoist shall also conform to various safety codes as applicable at the place of installation.
- viii) Shafts and axles shall have ample strength and rigidity and adequate bearing surface for the intended duties.
- ix) Pulleys used for operation mechanism shall have suitable guards to prevent the operating chain from covering off.
- x) Brakes shall be of automatic type that shall stop and hold the load when hand-chain pull is released and shall permit controlled lowering of the load when hand-chain pull is applied in the lowering direction.
- xi) Pawls shall be of sufficient strength to arrest the full load from lowering due to gravity. The pawl and ratchet wheel shall be of steel, hardened and tempered so as to attain required wear resistance and toughness.
- xii) All hoists shall be provided with maintenance / repair platforms with handrails and staircase at one end.

b) Inspection & Testing

The manufacturer shall conduct all tests required to ensure that the equipment furnished shall conform to the requirements of the specification and in compliance with the requirements of the latest edition of IS: 3832-2005 or equal standards for manually operated hoists.

All the monorail hoists shall be tested at site as per the stipulations of relevant Indian Standards.

c) Painting

The exposed surface of all items of equipment shall be thoroughly cleaned and painted. Refer Chapter on painting given elsewhere in the specification.

LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[266]	15.01.2016

12

QUALITY ASSURANCE, INSPECTION & TESTING

The Bidder shall adopt Quality Assurance Programmes as per relevant standards subject to Owner's approval, to ensure that the equipment and services under the scope of work, whether manufactured or performed within the Bidder's works or at his sub-vendor's premises or at the Owner's site or at any other place of work, are in accordance with the specifications. Such programmes shall be outlined by the Bidder and shall be finally accepted by the Owner after discussions before the award of the contract. The QA programme shall be generally in line with IS/ISO-9001. The Quality Assurance Programme of the Bidder shall generally cover the following:

- a) Organization structure for the management and implementation of the proposed Quality Assurance Programme.
- b) Quality System Manual.
- c) Design Control System.
- d) Documentation and Data Control System.
- e) Qualification data for Bidder's key personnel.
- f) The procedure for purchase of materials, parts, components and selection of sub-contractor's services including vendor analysis, source inspection, incoming raw-material inspection, verification of materials purchased etc.
- g) System for shop manufacturing and site erection controls including process, fabrication and assembly.
- h) Control of non-conforming items and system for corrective actions and resolution of deviations.
- i) Inspection and test procedure both for manufacture and field activities.
- j) Control of calibration and testing of measuring testing equipment.
- k) System for Quality Audits.
- l) System for identification and appraisal of inspection status.
- m) System for authorizing release of manufactured product to the Owner.
- n) System for handling, storage and delivery.
- o) System for maintenance of records, and
- p) Quality plans for manufacturing and field activities detailing out the specific quality control procedure adopted for controlling the quality characteristics relevant to each item of equipment/component.

12.1**General Requirements - Quality Assurance**

- a) All materials, components and equipment covered under this specification shall be procured, manufactured, erected, commissioned and tested at all the stages, as per a comprehensive Quality Assurance Programme. A programme of inspection/tests to be carried out by the Bidder for some of the major items is given in the respective technical specification. This is, however, not intended to form a comprehensive programme as it is the Bidder's responsibility to draw up

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[267]	15.01.2016

and implement such programme duly approved by the Owner. The detailed Quality Plans for manufacturing and field activities shall be drawn up by the Bidder and will be submitted to Owner for approval.

- b) Manufacturing Quality Plan (MQP) will detail out for all the components and equipment, various tests/inspection, to be carried out as per the requirements of this specification and standards mentioned therein and quality practices and procedures followed by Bidder's/ Sub-vendor's Quality Control Organization, the relevant reference documents and standards, acceptance norms, inspection documents raised etc., during all stages of materials procurement, manufacture, assembly and final testing/performance testing. The Quality Plan shall be submitted to the Owner for review and approval. The format for MQP shall be submitted by the Bidder for the approval of the Owner before the award of Contract.
- c) Field Quality Plans (FQP) will detail out for all the equipment, the quality practices and procedures etc. to be followed by the Bidder's "Site Quality Control Organization", during various stages of site activities starting from receipt of materials/equipment at site. The format for FQP shall be submitted by the Bidder for the approval of the Owner before the award of Contract.
- d) The Bidder indicate in the QP the reference documents/plant standards/acceptance norms/tests and inspection procedure etc., These Quality Plans and reference documents/standards etc. will be subject to Owner's approval without which manufacturer shall not proceed. These approved documents shall form a part of the contract. In these approved Quality Plans, Owner shall identify customer hold points (CHP), i.e. test/checks which shall be carried out in presence of the Owner or his authorized representative and beyond which the work will not proceed without consent of Owner in writing. All deviations to this specification, approved quality plans and applicable standards must be documented and referred to the Owner along with technical justification for approval and dispositioning.
- e) The material shall be dispatched from the manufacturer's works after the same is accepted by the Owner.
- f) All material used for equipment manufacture including casting and forging etc. shall be of tested quality as per relevant codes/standards. Details of results of the tests conducted to determine the mechanical properties; chemical analysis and details of heat treatment procedure recommended and actually followed shall be recorded on certificates and time temperature chart. Tests shall be carried out as per applicable material standards and/or agreed details.
- g) All welding and brazing shall be carried out as per procedures drawn and qualified in accordance with requirements of ASME Section IX/BS-4870 or other International equivalent standard acceptable to the Owner.
The welding/brazing procedures shall be followed as per Indian/International Standards.
- h) All brazers, welders and welding operators employed on any part of the contract either in Bidder's/sub-vendor works or at site or elsewhere shall be qualified as per ASME Section-IX or BS-4871 or other equivalent International Standards acceptable to the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[268]	15.01.2016

- i) Welding procedure qualification & Welder qualification shall be as per Indian/International Standards. However, where required by the Owner, tests shall be conducted in presence of Owner for the site erection. Any other statutory requirements for the equipment/systems shall be complied with.
- j) On all back-gauged welds MPI/LPI shall be carried before seal welding.
- k) Unless otherwise proven and specifically agreed with the Owner, welding of dissimilar materials and high alloy materials shall be carried out at shop only.
- l) No welding shall be carried out on cast iron components for fabrication or repair.
- m) All non-destructive examination shall be performed in accordance with written procedures as per International Standards but qualified operator. NDT shall be recorded in a report, which includes details of methods and equipment used, result/evaluation, job data and identification of personnel employed and details of co-relation of the test report with the job.
- n) All plates of thickness above 40 mm and all bars stock/Forging above 40 mm diameter shall be ultrasonically tested.
- o) The Bidder shall list out all major items/ equipment/ components to be manufactured in house as well as procured from sub-vendors.
- p) For components/equipment procured by the Bidders for the purpose of the contract, after obtaining the written approval of the Owner, the Bidder's purchase specifications and inquiries shall call for quality plans to be submitted by the suppliers. The quality plans called for from the sub-vendor shall set out, during the various stages of manufacture and installation, the quality practices and procedures followed by the vendor's quality control organization, the relevant reference documents/ standards used, acceptance level, inspection of documentation raised, etc. Such quality plans of the successful vendors shall be finalized with the Owner.
- q) If required, the Owner shall carry out quality audit and quality surveillance of the system and procedures of the Bidder's or their sub-vendor's quality management and control activities. The Bidder shall provide all necessary assistance to enable the Owner carry out such audit and surveillance. The Bidder shall also take requisite corrective measures for restoring/ improving the system in line with the outcome of such quality surveillance and audits.
- r) The Bidder shall carry out an inspection and testing programme during manufacture in his work and that of his sub-vendor's and at site to ensure the mechanical accuracy of components, compliance with drawings, conformance to functional and performance requirements, identity and acceptability of all materials, parts and equipment. Bidder shall carry out all tests/inspection required to establish that the items/equipment conform to requirements of the specification and the relevant codes/standards specified in the specification, in addition to carrying out tests as per the approved quality plan.
- s) Quality audit/surveillance/approval of the results of the tests and inspection will not, however, prejudice the right of the Owner to reject the equipment if it does not comply with the specification when erected or does not give complete satisfaction in service and the above shall in no way limit the liabilities and responsibilities of the Bidder in ensuring complete conformance of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[269]	15.01.2016

materials/equipment supplied to relevant specification, standard, data sheets, drawings, etc.

- t) For all spares and replacement items, the quality requirements as agreed for the main equipment supply shall be applicable.
- u) Rectification procedures to be adopted to make the job acceptable shall be subject to the approval of the Owner.
- v) In case any deviation is observed with respect to relevant document or good engineering practices, and the same is considered by the Bidder to be acceptable, as it is or with certain rectifications/ modifications, based on his detailed technical analysis, then the Bidder shall refer the same to Owner along with reason for deviation, proposed corrective action, technical justification for suitability of the proposal and preventive measures for avoiding recurrence of similar deviations. Based on his evaluation, the Owner may accept the proposal as it is or with modifications or may reject the same. Such proposals shall be raised in suitable Non-conformity report format (NCR). The NCR can be raised irrespective of the CHP stages in the QP.
- w) Burn in and Elevated Temperature Test Requirement for Electronics Solid State Equipment:
- x) All solid state electronic systems/equipment shall be tested as a complete system/equipment with all devices connected for a minimum of 168 hours (7 Days) continuously under energized conditions prior to shipment from manufacturing works, as per the following cycle.

Elevated Temperature Test Cycle

During the elevated temperature test which shall be for 48 hours of the total 168 hours of testing, the ambient temperature shall be maintained at 50 °C. The equipment shall be interconnected with devices which will cause it to repeatedly perform all operations it is expected to perform in actual service with load on various components being equal to those which will be experienced in actual service.

During the elevated temperature test the cubicle doors shall be closed (or shall be in the position same as they are supposed to be in the field) and inside temperature in the zone of highest heat dissipating components/modules shall be monitored. The temperature rise inside the cubicle should not exceed 10°C above the ambient temp at 50 °C.

Burn in Test Cycle

The 48 hours elevated temperature test shall be followed by 120 hours of burn in test as above except that the temperature shall be reduced to the ambient temperature prevalent at that time.

During the above tests, the process I/O and other load on the system shall be simulated by simulated inputs and in the case of control systems; the process which is to be controlled shall also be simulated. Testing of individual components or modules alone shall not be acceptable.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[270]	15.01.2016

In case the Bidder/ sub-vendor is having any alternate established procedure of eliminating infant mortality of components, the detail procedures followed by the Bidder/ sub- vendor along with the statistical figures to validate the alternate procedure may be submitted to the Owner for his consideration.

The Bidder/Sub-vendor shall carry out routine test on 100% item at Bidder/sub-vendor's works. The quantum of check/test for routine and acceptance test by Owner shall be generally as per criteria/sampling plan defined in referred standards. Wherever standards have not been mentioned quantum of check/test for routine / acceptance test shall be as agreed during detailed engineering stage.

12.2 QA Documentation Package

The Bidder shall submit the QA Documentation in *[two hard copies and two CD ROMs]*, as identified in respective quality plan with tick (✓) mark.

Each QA Documentation shall have a project specific Cover Sheet bearing name & identification number of equipment and including an index of its contents with page control on each document.

The QA Documentation file shall be progressively completed by the Bidder/ sub-vendor and the same shall be submitted to the Owner in *[2 hard copies and 2 CD-ROMs]*, within two weeks of dispatch of the equipment.

11.2.1 Typical contents of QA Documentation is as below:-

- a) Approved Quality Plan.
- b) Material mill test reports on components as specified by the specification and approved Quality Plans.
- c) Manufacturer / works test reports/results for testing required as per applicable codes and standard referred in the specification and approved Quality Plans.
- d) Non-destructive examination results /reports including radiography interpretation reports. Sketches/drawings used for indicating the method of traceability of the radiographs to the location on the equipment.
- e) Heat Treatment Certificate/Record, if applicable (Time- temperature Chart).
- f) All the accepted Non-conformance Reports (Major/Minor) / deviation, including complete technical details / repair procedure).
- g) Inspection reports duly signed by the Inspector of the Owner and Bidder for the agreed Customer Hold Points.
- h) Certificate of Conformance (COC) wherever applicable.

Similarly, the Bidder shall be required to submit two sets *[(two hard copies and two CD ROMs)]*, containing QA Documentation pertaining to field activities as per Approved Field Quality Plans and other agreed manuals/ procedures, prior to commissioning of individual system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[271]	15.01.2016

12.3 Inspection, Testing and Inspection Certificates

- a) The word 'Inspector' shall mean the Owner's Inspection engineer and/or agency acting on behalf of the Owner to inspect and examine the materials and workmanship of the works during its manufacture or erection.
- b) The Owner's Inspection Engineer and/or agency acting on behalf of the Owner shall have access at all reasonable times to inspect and examine the materials and workmanship of the works during its manufacture or erection and if part of the works is being manufactured or assembled on other premises or works, the Bidder shall obtain for the Owner's Inspection Engineer and/or an outside inspection agency acting on behalf of the Owner, permission to inspect as if the works were manufactured or assembled on the Bidder's own premises or works.
- c) The Bidder shall give the Owner [fifteen (15)] days written notice of any material being ready for inspection/testing. Such tests shall be to the Bidder's account except for the expenses of the Inspector's. The Owner's Inspection Engineer and/or an outside inspection agency acting on behalf of the Owner, unless the witnessing of the tests is virtually waived and confirmed in writing, will attend such tests within [fifteen (15)] days of the date on which the equipment is noticed as being ready for test/inspection failing which the Bidder may proceed with test which shall be deemed to have been made in the inspector's presence and he shall forthwith forward to the Owner duly certified copies of test reports in [two (2) copies] for his review and approval.
- d) The Owner's Inspection Engineer and/or Owner's inspection agency acting on behalf of the Owner shall within fifteen [(15) days] from the date of inspection as defined herein give notice in writing to the Bidder, on any objection to any drawings and all or any equipment and workmanship which is in his opinion is not in accordance with the contract. The Bidder shall give due consideration to such objections and shall either make modifications that may be necessary to meet the said objections or shall inform in writing to the Owner's Inspection Engineer and/or agency acting on behalf of the Owner, giving reasons therein, that no modifications are necessary to comply with the contract. After due consideration, the Owner may accept or reject the same.
- e) When the factory tests have been completed satisfactorily at the Bidder's or sub-vendor's works, the Owner shall issue a certificate to this effect within [fifteen (15) days] of completion of tests. The completion of these tests or the issue of the certificates shall not bind the Owner to accept the equipment should it, on further tests after erection be found not to comply with the contract.
- f) In all cases where the contract provides for tests whether at the premises or works of the Bidder or any sub-vendor, the Bidder, except where otherwise specified, shall provide free of charge such items as labour, material, electricity, fuel, water, stores, apparatus and instruments as may be reasonably demanded by the Owner's Inspection Engineer agency acting on behalf of the Owner, to carry out effectively such tests on the equipment in accordance with the Contract and shall provide the facilities to accomplish testing.
- g) The inspection by the Owner's Inspection Engineer agency acting on behalf of the Owner and issue of Inspection Certificate thereon shall in no way limit the liabilities and responsibilities of the Bidder in respect of the contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[272]	15.01.2016

- h) To facilitate advance planning of inspection in addition to giving inspection notice, the Bidder shall furnish quarterly inspection programme indicating schedule dates of inspection at Customer Hold Point and final inspection stages. Updated quarterly inspection plans will be made for each three consecutive months and shall be furnished before beginning of each calendar month.
- i) All inspection, measuring and test equipment used by Bidder shall be calibrated periodically depending on its use and criticality of the test/measurement to be done. The Bidder shall maintain all the relevant records of periodic calibration and instrument identification. Wherever asked specifically, the Bidder shall re-calibrate the measuring/test equipment in the presence of Owner's Inspection Engineer agency.

12.4 Shop and Site Tests

- a) Shop tests will include all tests to be carried out at Bidder's works, at works of his sub-vendor and at works where raw material supplied for manufacture of equipment is manufactured.
- b) All materials will be of tested quality supported with correlated test certificates. Whenever tested quality material is specified and wherever called upon by Indian Boilers Regulations or by design code, the test pieces are to be prepared and tested to Owner's satisfaction. The results of the tests will be certified.
- c) Shop and Site tests will include electrical, mechanical, performance and hydraulic tests in accordance with relevant IS or any other approved standard or any other tests called for by the Owner under these specifications to ensure that the plant being supplied fulfills the requirements of the specifications. For equipment not covered by any IS or other approved standards, the tests to be carried out will be in accordance with the quality plan to be agreed to between the Bidder and the Owner.

General Notes

- a) For IBR items, if applicable, stamping on the components, inspection and certification will be carried out by the IBR as per the IBR procedures. However the Bidder will also be identified the same to which project they are meant by stamping/ stenciling.
- b) For non IBR items inspection will be as per mutually agreed QAP. The QAP will be submitted for major items and will be finalized during detail engineering. Joint protocol and dispatch clearance will be based on the agreed QAP.
- c) Major items for which the QAP are to be furnished will be mutually discussed and agreed during detail engineering.
- d) For items/ components not covered in the QAP, Bidder will furnish the certificate of compliance.

12.5 Site Tests

The successful Bidder will prepare and submit detailed quality plans in the format prescribed by Owner setting out the quality practice and procedures to be adopted by him for assuring quality for each equipment under this specification from the receipt of material at site, during storage, erection, pre-commissioning to final commissioning of the plant. These procedures will necessarily include all

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	03	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-A	[273]	15.01.2016

checks/tests conducted at site for preservation, assembly, alignment, positioning of the equipment, foundation preparation, welding/bolting, heat treatment, non-destructive examination, hydraulic test, running test, performance test etc. The above will be discussed and finalized by the Bidder with the Owner.

The Bidder will also furnish detailed quality procedure proposed by him for storage, preservation, painting, acid cleaning, alkali boil out, steam blowing, hydraulic test, air/gas tightness test etc. to the Owner. The same will be discussed and finalized by the Bidder with the Owner.

12.6 System Checking / Reliability Trials:

- a) Successful Bidder will carry out tests at site to prove to the Owner that each equipment of the supply complies with requirements stipulated and is erected in accordance with requirements specified. Before the plant is put into trial operation the Successful Bidder will be required to conduct tests to demonstrate to the Owner that each item of the plant is capable of correctly performing the functions for which it was specified and its performance, parameters etc. are as per the specified/approved values. These tests may be conducted concurrently with those required under commissioning sequence.
- b) The tests required will specifically include the following :
 - Checks on operation of all fans to ascertain level of noise and vibration.
 - Test running of pumps
 - Calibration test of orifice, flow nozzles, instruments and control equipment to the extent included in these specifications.
 - Tests on C & I Equipment - The Bidder will demonstrate the performance of all C&I equipment.

1.1 General

This specification is intended to cover the [design, engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, erection, site testing and commissioning] of Balance of Plant complete with all accessories for efficient and trouble-free operation of R&M of Unit No. [...] Of [Name of the Power Plant] at [District], [State] for [Name of the Client].

1.2 List of Attachments

The following List of attachments is enclosed along with this specification.

[Note: List of attachments is depends on specific project scope of work. R & M consultant may attach the attachments as per project specific scope of work. For reference all attachments are considered in this package as per scope of work considered]

ANNEXURES-E1

1.0 MOTOR

1.1 General

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of Electric Motor complete with all accessories for efficient and trouble-free operation of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client].

1.2 Codes & Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table: 1.0

IS : 325	:	Specification for three phase induction motor.
IS : 900	:	Code of Practice for installation and maintenance of induction motors
IS : 996	:	Single phase AC motors
IS : 1231	:	Dimensions of three-phase foot-mounted induction motors
IS : 1271	:	Thermal evaluation and classification of electrical insulation.
IS : 2223	:	Dimensions of flange mounted ac induction motors.
IS : 2254	:	Dimensions of vertical shaft motors for pumps
IS : 3177	:	Crane duty motors
IS : 4029	:	Guide for testing three phase induction motors.
IS : 4691	:	Degree of protection for enclosures of rotating electrical machinery.
IS : 4722	:	Specification for rotating electrical machinery.

CEA	:	CEA Regulations
CEA	:	Standard Technical Specifications For Main Plant Package
IEC: 60034	:	Rotating electrical machines.
NEMA, MG-1	:	Motors and Generators
ISO : 1940-1	:	Mechanical vibration – Determination of permissible residual unbalance

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[2]	25.09.2014

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted. In such case, copies of the English version of the standard adopted shall be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Code of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- a. All motors shall be suitable for an ambient temperature of 50 °C and relative humidity of 95%. The motors shall be suitable for operation in a highly polluted environment.
- b. AC Motors shall be of [constant speed, squirrel cage, three/ single phase, induction type.] Motors shall be rated for [continuous duty/intermittent duty]. They shall also be suitable for long period of inactivity. They shall also be suitable for direct online starting (DOL starting).
- c. DC motors provided for emergency service shall be shunt / compound wound type. Motor shall be sized for operation with fixed resistance starter for maximum reliability.
- d. Power supply for AC motors shall be as follows:

Table: 2.0

1.	[Below 0.22 kW]	:	240V, 1 Phase, 50Hz
2.	[From 0.22 kW up to & including 160 kW]	:	415V, 3 Phase, 50Hz
3.	[Above 160 kW]	:	6.6kV, 3 Phase, 50Hz

- e. All AC motors shall be suited for the following range of frequency and voltage variations:

- i. Voltage Variation : +/-10%
- ii. Frequency Variation : 50Hz (+)3% to (-)5%
- iii. Combined Variation of : 10% (absolute sum)
Voltage & Frequency

- f. DC motors shall be rated for 220V DC supply with voltage variation of -15% to +10%.
- g. The motor characteristics shall match the requirements of the driven equipment so that adequate starting, accelerating, pull up, break down and full load torques are available for the intended service.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[3]	25.09.2014

- h. Moreover, motors shall be so designed that maximum inrush currents and locked rotor and pullout torque developed by them at extreme voltage and frequency variations do not endanger the motor and driven equipment.
- i. Motors shall be capable of developing the rated full load torque even if the supply drops to 70% of the rated voltage.
- j. For 6.6kV motors, locked rotor current not to exceed [600%] of full load current, including positive tolerance, except for BFP. For BFP the starting current shall be [450%] of FLC. For 415 V motors Locked rotor current not to exceed [600%] of full load current with IS tolerance.]
- k. For DC motors, the starters shall be provided to limit the starting current to [2] times of the full load current.
- l. Maximum continuous motor ratings shall be at least [10%] above the maximum load demand of the driven equipment under entire operating range including voltage and frequency variations.
- m. Accelerating torque at any speed with the lowest permissible starting voltage shall be at least [10%] motor full load torque. Pull out torque at rated voltage shall not be less than 205% of full load torque. It shall be 275% for crane duty motors.
- n. The motors shall be suitable for bus transfer schemes provided on the 6.6kV and 415V systems without any injurious effect on its life. If motors are connected to an automatic bus transfer system, they may be subjected to 150% of the nominal voltage during changeover of buses due to the phase difference between the incoming voltage and motor residual voltage. In such cases, motors shall be capable of restarting under full load after momentary loss of voltage.
- o. Motors shall be of [energy efficient of type Eff-2] as per IS: 12615/equivalent IEC/ International Standards.
- p. Motor shall be designed to keep torsional and rotational natural frequencies of vibration of the motor and driven equipment at least 25% above the motor operating speed range.

1.3.1 System Grounding

b)	Paint Thickness	:	[Within 100 to 150 micron.]
c)	Paint Shade	:	[RAL5012 BLUE]

1.4 Specific Requirements

1.4.1 Locked Rotor Withstand Time

- The starting time of the motor shall be at the minimum permissible voltage.
- For motors with starting time up to 20 seconds at minimum permissible voltage during starting, the locked rotor withstand time under hot

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[6]	25.09.2014

condition at highest voltage limit shall be at least 2.5 second more than starting time.

- c) For motors with starting time more than 20 second and up to 45 seconds at minimum permissible voltage during starting, the locked rotor withstand time under hot condition at highest voltage limit shall be at least 5 second more than starting time.
- d) For motors with starting time more than 45 seconds at minimum permissible voltage during starting, the locked rotor withstand time under hot condition at highest voltage limit shall be more than starting time by at least 10% of the starting time.
- e) Speed switches mounted on the motor shaft shall be provided in cases where above requirements are not met.

1.4.2 Starting Voltage Requirement

I.	All motors (except mill motors):
a)	[85% of rated voltage for motors up to 4000 kW]
b)	[75% of voltage for motors above 4000 kW]

II.	For mill motors:
a)	[85% of rated voltage for motors above 1000 kW]
b)	[90% of rated voltage for motors below 1000 kW]

The motor shall be capable of withstanding the stresses imposed if started at 110% rated voltage.

Pump motor subject to reverse rotation shall be designed to withstand the stresses encountered when starting with non-energized shaft rotating at [125%] rated speed in reverse direction.

The motor may be subjected to sudden application of 150% rated voltage during bus transfer, due to the phase difference between the incoming voltage and motor residual voltage.

1.4.3 Winding and Insulation

a)	6.6 kV AC motors	:	Winding material shall be of copper. Insulation shall be of [Class F with winding temperature rise limited to Class B]. They shall withstand 1.2/50 microsecond switching surges of "4U + 5 KV" (U = Line voltage in KV). The coil inter-turn insulation shall be suitable for 0.3/3 micro second surge of 32 / 12 KV followed by 1 min
----	------------------	---	---

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[7]	25.09.2014

			power frequency high voltage test of appropriate voltage on inter turn insulation.
b)	415V AC & 220V DC motors	:	Winding material shall be of copper. Insulation shall be of [Class B with temperature rise limited to Class B.]
c)	Conveyor motors		Short circuit rings of conveyor motors shall be either joint less or welded type. Brazed joint is not acceptable.

1.4.4 Motor Control

a) For HV Motors

- i. Motors of rating above [160 kW] shall be suitable for 6.6 KV voltage
- ii. Frequent starting motors of rating above [160 kW] shall be suitable to be controlled by vacuum contactors

(b) For LV Motors

- i. Motors of rating less than [132 kW] shall be operated by Contactor from respective MCCs. Motors of rating up to [18.5 kW] shall be provided with MPCBs and Electronic overload relays. Motors of rating above [18.5 kW] and below [45 kW] shall be provided with MCCBs and Electronic overload relays. Motors of rating [45 kW] and above but less than [132 kW] shall be provided with MCCBs and CT operated Electronic over load relays.
- ii. Motors of rating [132 kW] and up to [160 kW] shall be suitable to be controlled by Air circuit breakers from switchgear, PMCCs and shall be provided with comprehensive numerical motor protection relays.
- iii. Only for firefighting system, motor rated [upto 200kW] shall be fed from 415V switch board.

1.4.5 Starting duty

Motors shall be suitable for [3 nos. consecutive Cold starts ups and 2 nos. consecutive Hot starts ups.] Motors shall be suitable for three equally spread starts per hour when the motor is under normal service condition.

1.4.6 Bearings

- a) Anti-friction type radial and thrust bearings (ball, roller) and sleeve bearing shall be rated for minimum standard life of 40,000 hours taking bearing and driven equipment loads (in case the drive is not having

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[8]	25.09.2014

separate thrust bearing) into account. If bearings are lubricated, loss of grease shall be scarce and it shall not creep along shaft into motor housing. Facility of removal of excess grease shall also be provided for grease lubricated bearings.

- b) Vertical shaft motors shall be provided with thrust and guide bearings. Thrust bearing of tilting pad type is preferred. However, if Anti-friction bearings can take vertical thrust, thrust & guide bearings are not required.
- c) Bearing shall be effectively sealed against dust ingress and shall be pressure grease gun lubricated. The bearing and housing shall be so designed that greasing shall be possible while the motor is running, without removal of covers.
- d) Where bearing supports are attached to the motor casing, adequate bracing shall be provided on these supports to reduce vibrations and ensure life of bearings.
- e) If the bearings are oil lubricated, a drain plug shall be provided for draining residual oil and oil level gauge shall be provided to show precisely oil level required under standstill and running conditions.
- f) Unless otherwise approved, bearing lubricating system shall be such that no external forced oil or water is necessary to maintain required oil supply to keep bearing temperature within design limits.
- g) Lubricants shall be selected for prolonged storage and normal use of motors in tropical climate and shall contain corrosion and oxidation inhibitors. Greases shall have suitable bleeding characteristics to minimize setting. The selected lubricants shall be indigenously available.
- h) Motors rated above 1000 kW shall have insulated bearings to prevent flow of shaft currents.

1.4.7 Temperature Rise

- a) For Air Cooled Motors, temperature rise of insulation should be limited to [70 °C] over ambient temperature by resistance method.
- b) For Water Cooled Motors, temperature rise of insulation should be limited to [80 °C] over inlet cooling water temperature mentioned elsewhere, by resistance method.

1.4.8 Cooling

[All motors shall be either Totally Enclosed Fan Cooled (TEFC) or Totally Enclosed Tube Ventilated (TETV) or Closed Air Circuit Air Cooled (CACA) type. However, motors rated 3000 kW or above can be Closed Air Circuit Water Cooled (CACW)]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[9]	25.09.2014

1.4.9 Enclosure

- a) All motor enclosures shall conform to the degree of protection of [IP54] for indoor and IPW-55 for outdoor installation unless otherwise specified. Motor for outdoor or semi outdoor service shall be of weather proof construction. Motors of large output rating located indoor could have screen protected drip proof (SPDP) enclosure conforming to [IP-23.]
- b) For motors located in outdoor & corrosive locations, FRP canopy shall be provided. In case steel canopy is provided, the same shall be epoxy painted to meet the surrounding atmosphere. Motors located in hazardous areas such as Hydrogen plant shall have flame proof enclosures of Group – IIB conforming to IS: 2148.
- c) For hazardous locations such as fuel oil facilities area, the enclosure of motor shall have flame proof construction conforming to IS 2148.

1.4.10 Noise Level and Vibration

Noise level shall be limited to 85 dB (A) at 1.5 meters from the motor. However the same shall be as per IS: 12065 unless otherwise specified. The peak amplitude of vibration shall be within the specified limits laid down in IS: 12075. Motors shall withstand vibrations produced by driven equipment. HV motor bearing housings shall have flats in both X and Y directions suitable for mounting 80mmX80mm vibration pads. Vibration pads with screwed holes for mounting vibration probes shall be provided at both DE and NDE.

1.4.11 Temperature Monitoring

[In HV motors, at least four numbers simplex/ two numbers duplex platinum resistance type temperature detectors shall be provided for each phase of stator winding]. Each bearing shall be provided with dial type thermometer with adjustable alarm contact and two numbers duplex Platinum resistance type temperature detector (3 wire, 100 ohm at zero °C). In case of CACA and CACW motors dial type temperature indicator shall be provided (one each for hot and cold air temperature monitoring for CACA and CACW and one each for inlet and outlet water temperature monitoring for CACW). If alarm and trip are required for cooling air temperature, temperature switch shall be provided. The contact rating shall be minimum 0.5A at 220V DC and 5A at 240V AC. Flow switches shall be provided for monitoring cooling water flow of CACW motor and oil flow of forced lubrication bearing. Low voltage motors rated 100 kW and above shall be provided with two PT100 RTDs per phase of winding.

1.4.12 Earthing

Motor body shall have two earthing points on opposite sides. Motor terminal boxes shall also have separate grounding terminals.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[10]	25.09.2014

1.4.13 Termination

- a) HV motors can be offered with either Elastimold termination or dust tight phase segregated double walled (metallic as well as with insulated barrier) cable boxes. In case Elastimold terminations are offered, then protective cover and trifurcating sleeves shall also be provided. Removable gland plates of thickness 3 mm (hot/cold rolled sheet steel) or 4 mm (non magnetic material for single core cables) shall be provided in case of cable boxes. The main cable box / terminal box shall withstand *[a fault current up to 40 kA for 0.25 seconds for HV motors and 50 kA for 0.25 seconds for LV motors]*. Separate terminal boxes shall be provided for space heaters and RTDs and NCT (if applicable).
- b) *[All terminal boxes shall be capable of being turned through 360 degrees in steps of 90 degrees unless otherwise specified.]*
- c) For HV motors the distance between gland plate and the terminal studs shall not be less than 500 mm.

1.4.14 Differential Protection

For motors rated 6.6kV, *[2000 KW & above,]* neutral current transformers of PS class shall be provided on each phase in a separate neutral terminal box for differential protection.

1.4.15 Tropical Protection

- (a) All motors shall have fungus protection involving special treatment of insulation and metal against fungus, insects and corrosion.
- (b) All fittings and hardware shall be corrosion resistant.
- (c) Space Heater
- (d) Suitable single phase space heaters operated at 240V, 50Hz, 1Phase AC supply shall be provided on motors rated for 30KW and above to maintain windings in dry condition when motor is standstill. Separate terminal box for space heaters & RTDs shall be provided.
- (e) The space heater shall be sized to maintain the motor internal temperature above dew point when the motor is in idle condition.

1.4.16 Rating Plate

Motor shall have Stainless steel nameplate(s) showing diagram of connections, all particulars as per IS: 325 / NEMA-MG-1 and following additional information:

- (a) Type of bearing and recommended lubricants along with location of insulated bearing.
- (b) Temperature rise under normal/abnormal conditions.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[11]	25.09.2014

(c) In addition to above, an arrow block shall be screwed on to the body of motor on the non-driving end to indicate normal direction of rotation of motor.

(d) Year of Manufacture

1.4.17 Drain Plug

Motor shall have drain plugs so located that they shall drain the water, resulting from the condensation or other causes from all pockets of the motor casing.

1.4.18 Dowel Pins

Motor shall be designed to permit easy access for drilling holes through motor feet or mounting flange for installation of dowel pins after assembling the motor and driven equipment.

1.4.19 Painting

The complete motor assembly including fan shall be painted with corrosion proof paints of approved class.

1.4.20 Lifting provision

Motor weighing 25 Kg or more shall be provided with eyebolt or other adequate provision of lifting.

1.4.21 Local Push Button Station (LPBS)

- a) Each motor shall be provided with push button station as per process requirement i.e. Start/Stop or Emergency Stop.
- b) The degree of protection of LPBs shall be IPW 55 for outdoor and IP 54 for indoor applications.
- c) All Push Buttons shall be push to actuate type and stop Push Button shall be lockable in off position as per the scheme requirement.
- d) The Emergency local stop push button of Stay put type shall be provided with Press to lock & turn to release keyless mechanism.
- e) All PBs shall be provided with 2 numbers NO and 2 numbers NC contacts for various interlocking purposes. One contact of stop PB shall be directly wired to switchgear module for direct tripping and another contact to control system.
- f) Terminals to be suitable for 2 cores of 2.5 Sq.mm. cable with 20% spare terminals.
- g) All LPBS shall be of Poly Carbonate /FRP / Die Cast Aluminium material.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[12]	25.09.2014

I) TestsType Test

For each type & rating of HV and LV motors of rating above [50 kW], the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within last[five] years from the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last [five] years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

The following shall constitute the type tests:

- (a) Visual and dimensional check
- (b) Winding resistance measurement
- (c) No load test
- (d) Mechanical vibration
- (e) Direction of rotation versus phase sequence
- (f) Insulation resistance measurement
- (g) High potential test
- (h) Locked rotor test
- (i) Speed/torque test
- (j) Over speed test
- (k) Temperature rise test
- (l) Determination of characteristic
- (m) Degree of protection test for the enclosure.
- (n) Noise level
- (o) Shaft current and bearing insulation test (Applicable for HV motors)

II) Routine Test

All equipment shall be completely assembled, wired, adjusted and routine tested as per relevant IS / IEC Standards at manufacturer's works in the presence of consultant /purchaser or his representative.

III) Test Witness

[The tests shall be carried out in presence of the Owner's representative, for which a minimum 7 days notice shall be given by the Bidder. The Bidder shall obtain the Owner's approval for the type test procedure before conducting the type test. The test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc. for the type test(s) to be carried out.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E1	[13]	25.09.2014

IV) Test Certificates

- a) Certified copies of all tests carried out at works and at site shall be furnished in requisite no. of copies for approval of the Owner.
- b) The equipment shall be dispatched from works only after receipt of Owner's written approval of shop test reports.

1.5 Drawings, Data & Manuals

Drawings, data & manuals for the motors shall be submitted as indicated below:

Dimensional General Arrangement drawing

- a) [Motor sizing calculation
- b) Foundation Plan & Loading
- c) Cable end box details
- d) Space requirement for rotor removal
- e) Thermal withstand curves hot & cold
- f) Starting and speed torque characteristics at 80% & 100% voltage
- g) Complete motor data
- h) Erection & Maintenance Manual
- i) Test reports
- j) QAP]

1.6 Rating and Requirements

Major technical parameters of motor are listed below. However, Bidder may also refer to Volume-III, technical schedule in order to submit technical data of equipment along with their technical proposal.

S. No.	Technical Particulars	Unit	Parameters	Remarks
1	Motor application		[As per requirement]	
2	Rated Output, kW	kW	[As per requirement]	
3	Maximum continuous kW obtainable without exceeding specified temperature rise	kW	[By Bidder]	
4	Motor type		Squirrel cage induction motor	
5	Duty Cycle (IEC 60034-1)		[S1]

1.0 MOTORIZED ACTUATORS

1.1 General

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of Motor Operated Actuator complete with all accessories for efficient and trouble-free operation of valves, dampers and gates for R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes & Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table 1.0

IS : 325	Specification for three phase induction motor.
IS : 900	Code of Practice for installation and maintenance of induction motors

CEA	CEA Regulations
CEA	Standard Technical Specifications For Main Plant Package
IEC: 60034-1	Rotating electrical machines.
NEMA, MG-1	Motors and Generators

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted. In such case, copies of the English version of the standard adopted shall be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Code of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- All motor operated actuators shall be suitable for an ambient temperature of 50 °C and relative humidity of 95%.
- Depending on the required type of services, the rating of motor operated actuators shall be selected. For isolating service, the actuator shall be [rated for three successive open-close operations of the valve/ damper or 15 minutes continuous operation whichever is higher.] Whereas for regulating service, the actuator shall be suitably [time rated for required number of duty cycle or 150 start per hour whichever is higher].
- The actuator shall be accompanied with constant speed, squirrel cage, three/ single phase, induction motor. The motor shall be designed for high

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E2	[2]	25.09.2014

torque and reversing service. They shall also be suitable for direct online starting (DOL starting).

- d. Motors of actuators shall be suited for the following range of frequency and voltage variations:

- i. Voltage Variation : +/-10%
- ii. Frequency Variation : 50Hz (+)3% to (-)5%
- iii. Combined Variation of : 10% (absolute sum)
Voltage & Frequency

- e. The motor operated actuator shall be sized for performing open / close operation at rated speed against designed differential pressure at [90%] of rated voltage. The motor shall have [10%] design margin on the shaft design power.

The actuator shall meet the following performance requirements:

- i. Open & Close the valve completely and make leak tight valve closure without jamming.
- ii. Attain full speed of operation before valve load is encountered and impart an unseating blow to start the valve in motion (hammer blow effect).
- iii. The motor reduction gearing shall be sufficient to lock the shaft when the motor gets de energized and prevent drift from torque switch spring pressure.
- iv. The entire mechanism shall withstand shock resulting from closing with improper setting of limit switches or from lodging of foreign matter under the valve seat.
- v. The actuator shall be designed for mounting in any position without any lubricant leakage or operating difficulty.

1.4 Specific Requirements

1.4.1 Construction

- a) The actuator shall essentially comprise of drive motor, limit switches, gear train, clutch, hand wheel, position indicator/ transmitter, space heater and internal wiring.
- b) The actuator enclosure shall be totally enclosed, dust tight, weather proof with [IPW 55] degree of protection.
- c) All electrical equipment, accessories and wiring shall be provided with tropical finish to prevent fungus growth.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E2	[3]	25.09.2014

- d) Gear train shall be made of metal (fiber gears are not acceptable). Self locking feature shall be provided to prevent drift under torque switch (wherever applicable) spring pressure when motor is de energized.
- e) Manual wheel shall disengage automatically during motor operation.

1.4.2 Type

- a) The actuators shall have integral starters along with overload relays with built-in single phase preventer.
- b) A 415 V, 3 phase, 3 wire, 50 Hz power supply will be provided from power plant 415 V switchgear through MCCB. Control voltage of the starter circuit shall be 110 V AC or depending on manufacturer's practice. But the same shall be derived from incoming 415 V, 3 phase, 3 wire supply.

1.4.3 Motors

- a) Type: The drive motor shall be three phase, squirrel cage induction motor suitable for direct on line starting with starting current limited to six times the rated current
- b) Enclosure: The motor shall be totally enclosed, self ventilated with [IPW 65] degree of protection.
- c) Insulation: The motor winding shall be insulated with [Class – B] insulation having temperature rise limited to [Class – B].
- d) Bearing: The motor bearing shall be [double shielded, grease lubricated and antifriction type].
- e) Earthing: At least two earthing terminals shall be provided for the motor body. Separate earthing terminal should be provided for terminal box.
- f) Protection: The following electrical protections should be provided for the motor:
 - i. Single Phasing Protection
 - ii. Overload Protection
 - iii. Overheating Protection through thermostat
 - iv. Wrong Phase Sequence Protection
- g) Limit Switches: Each actuator shall be accompanied with following switches:
 - i. Four nos. positional limit switches (2 for open & 2 for close), each adjustable at any position from fully open to fully closed positions of the valve / damper.
 - ii. Two torque limit switches, one for each direction of travel, self blocking & adjustable torque type.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E2	[4]	25.09.2014

- iii. Four nos. end travel limit switches, two for each direction of travel.
 - iv. A single shaft shall actuate all contacts of limit switches at each position.
- h) Interface: Open/close command termination logic with position and torque limit switches, positioned circuit shall be suitably built in the PCB inside the actuator.
 - i. For binary drive, open/close command and status thereof and disturbance monitoring signal (common contact for overload, thermostat, control supply failure, L/R selector switch at local, other protections operated) shall be provided. Interface with the control system shall be through hardwired signal only. Interposing relays provided (with coil burden 2.5 VA) in the DCS shall be energized to initiate opening and closing, by 24V DC signal from the external control system. Potential free contact provided by the IPR shall be utilized in the control circuit of the contactor of motorized actuators.
 - ii. For modulating drive, the command to actuator shall be in form of 4- 20mA signal. The necessary positioning circuit and motor protection shall be provided.
 - iii. Open/close command termination logic shall be suitably built inside actuator.
- i) Hand Wheel: Each actuator shall be provided with a hand wheel for emergency manual operation. The hand wheel shall disengage automatically when the motor is energized.
- j) Position Indicator / Transmitter: The actuator shall have
 - i. One built in local position indicator for 0 – 100% travel.
 - ii. One position transmitter of modulating / inching type for remote indication suitable to stabilize 4-20mA signal and operated with [24V DC].
- k) Space Heater: Space heater of suitable rating shall be provided. The power supply shall be derived from main power supply available in the actuator.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E2	[5]	25.09.2014

- l) Wiring: All electrical devices shall be wired up to and terminated in a terminal box. The internal wiring shall be done with [2.5 sqmm] copper wires. All wiring shall be well identified at both ends with ferrules.
- m) Terminal Box:
- i. The terminal box shall be weather proof with removable front cover and cable glands suitable for cable connection. The terminals shall be suitable for connection of [2.5 sq.mm copper] conductor.
 - ii. Necessary double compression cable glands with nickel coating and tinned copper lugs for cables shall be provided.
 - iii. The terminal block shall be suitable for 650V grade power cable.
- .
- n) Rating Plate : Motor and actuator shall have Stainless steel nameplate(s) showing all particulars as per relevant IS/ IEC and following additional information:
- i. Type of bearing and recommended lubricants.
 - ii. Temperature rise under normal/abnormal conditions.
 - iii. Degree of Protection
 - iv. In addition to above, an arrow block shall be screwed on to the body of motor on the non-driving end to indicate normal direction of rotation of motor.
 - v. Year of Manufacture

1.5 Tests

The actuator and all components thereof shall be subject to routine factory tests as per relevant IS standards. In addition, if any special test is called for in equipment specification, the same shall be performed.

1.5.1 Test Witness

[The tests shall be carried out in presence of the Owner's representative, for which a minimum [7] days notice shall be given by the Bidder. The Bidder shall obtain the Owner's approval for the type test procedure before conducting the type test. The test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc.]

1.5.2 Test Certificates

- a) Certified copies of all tests carried out at works and at site shall be furnished with requisite no. of copies for approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E2	[6]	25.09.2014

- b) The equipment shall be dispatched from works only after receipt of owner's written approval of shop test reports.

1.6 Drawings Data and Manuals

The drawings, data & manuals for the motorized actuators shall be submitted as indicated below:

1. [Actuator Data Sheet]
2. General arrangement drawing
3. Internal wiring Diagram and Control Schematic.
4. Torque switch and Limit switch contacts development.
5. QAP for Test Reports
6. Manufacturer's Catalogue.
7. Instruction manuals on Installation methods.]

1.7 Rating and Requirements

Major technical parameters of motor are listed below. However, Bidder may also refer to Volume-III, technical schedule in order to submit technical data of equipment along with their technical proposal.

S. NO.	DESCRIPTION	UNIT	DATA
1.	Type		Integral
2.	Application		[As per project specific]
3.	Motor type		Squirrel Cage
4.	Supply voltage	V	415 V, 3 ph, 3 wire.
5.	Phase, frequency	Hz	3ph, 50 Hz
6.	Motor rated voltage	V	415V/230 V
7.	Control Voltage	V	[110 V AC]
8.	Voltage and its variation	V	± 10%
9.	Frequency and its variation	Hz	+ 3 to -5%
10.	Combined V & f variation	%	10%

TECHNICAL SPECIFICATION FOR LV TRANSFORMERS

**PREPARED BY
LAHMEYER INTERNATIONAL (INDIA) PVT. LTD.
THE CONSULTANT**

ANNEXURES-E3

1.0 LV TRANSFORMER (DRY TYPE/OIL TYPE)

1.1 General

This specification is intended to cover [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of LV Transformers (Dry type/Oil type) complete with all accessories for efficient and trouble free operation for of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table 1.0

CODE	NAME OF STANDARD
IS:334	Dimensions for porcelain Transformer bushing
IS:335	New insulating oil for transformers and switchgears
IS:1271	Classification of insulating materials for Electrical Machinery and apparatus in relation to their stability in service.
IS 2026	Specification for power Transformer (all parts)
IS:2071	Method of high voltage testing
IS:2099	High voltage porcelain bushings
IS:2147	Degree of protection.

CODE	NAME OF STANDARD
NEMA ST 20	Dry Type Transformers for General Applications
CEA	CEA Regulations
CEA	Standard Technical Specifications For Main Plant Package

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted. In such case, copies of the English version of the standard adopted shall be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Code of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- a) The transformers shall be dry type (AN) for indoor location and shall be oil type (ONAN) for outdoor location.
- b) The oil type transformer shall be installed in hot, humid and tropical atmosphere with ambient temperature equal to 50°C. All equipment, accessories and wiring shall be provided with tropical finish to prevent fungus growth.
- c) The transformer shall be capable of continuous operation at specified rating under the following condition:
 - i) Voltage variation - $\pm 10\%$
 - ii) Frequency variation - $[+3\%, -5\%]$
 - iii) Combined voltage and frequency variation (absolute sum) - $[10\%]$
- d) The transformer shall be capable of withstanding the short circuit stresses due to a terminal fault on one winding with full voltage maintained on the other winding for minimum period of two (2) seconds.
- e) The noise level shall be limited to the value specified by NEMA Standard Publication No. TR-1-1993 when measured in accordance with conditions outlines in ANSI/IEEE C57.12.90-1999/IS13964/CBIP publication.
- f) The design shall be such as not to cause any undesirable interference with radio or communication circuits.
- g) Transformers shall accept without injurious heating, combined voltage and frequency variation which produce an over fluxing condition of 120% for one (1) minute.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[3]	25.09.2014

- h) Each transformer shall be sized based on actual load with 10% margin and considering voltage regulation factor. It shall be sized by considering 100% load connected on the bus considering other transformer outage. An appropriate load factor of 0.9 for continuous and 0.2 for intermittent shall be considered.
- i) The impedance of the transformers shall be chosen such that the fault level on the LV switchgear does not exceed 50kA including the motor contributions and also voltage dip while starting the motor does not exceed 15% at motor terminal.

1.4 Specific Requirements of Transformers

1.4.1 Enclosure (for dry type)

- a) The encapsulated cast resin transformer shall be housed in naturally ventilated floor mounted cold rolled sheet steel cubicle with louvers backed by fine brass wire mesh. The enclosure shall be of bolted type fabrication and degree of protection shall be at least IP32. The minimum sheet steel thickness shall be 2 mm.
- b) Enclosure shall be provided with lifting lugs and grounding terminals at both ends. Further the enclosure door shall have pad locking provision.
- c) The enclosure door shall be interlocked with service transformer incoming breaker such that.
 - The door can be opened only when the service transformer HV side circuit breaker is in Test/Isolated position.
 - [6.6] kV side circuit breaker can be closed only when the doors are closed.
- d) Necessary illumination with controls shall be provided in the enclosure.
- e) Thermostatically controlled space heater inside the enclosure of suitable rating shall be provided if necessary.

1.4.2 Tank (for oil type)

- a) For LV transformers, the tank shall be of conventional type.
- b) Tank shall be made from good commercial grade low carbon steel and shall be of welded construction.
- c) Tank shall be designed to permit lifting, by crane or jacks of the complete transformer assembly filled with oil. Suitable lugs and bosses shall be provided for this purpose.
- d) Tank together with radiators, coolers, conservator, bushings vessel and other fittings, shall be designed to withstand full vacuum without permanent distortion.
- e) The transformer top shall be provided with a detachable tank cover with a bolted flanged gasket joint. Lifting lugs shall be provided for removing the cover. The surface of the cover shall be suitably sloped so that it does not retain rain water.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[4]	25.09.2014

- f) The material used for gaskets shall be cork-neoprene or approved equivalent. Gasketed joints for tank and manhole covers, bushings and other bolted attachments shall be so designed that the gasket will not be exposed to the weather. Spare gaskets shall be provided for all openings as shipping gaskets will not be reused.
- g) Tank shall be provided with all necessary valves.
- h) Tank shall be provided with a pressure release device which shall operate at a pressure below the test pressure for the tank and radiators. This device shall be of sufficient size for rapid release of any pressure that may be generated in the tank and which may result in damage to the equipment. The device shall be rain proof after blowing and shall be provided with a device visible from ground to indicate operation. An equaliser pipe connecting the pressure relief device to the conservator shall be supplied. This device shall be provided for all transformers. Pressure relief device shall be equipped with remote monitoring/alarm contacts

1.4.3 Core

- a) The transformers shall be three phase core type. The core shall be built up with high grade, non-ageing, low loss, high permeability grain oriented cold rolled silicon steel laminations especially suitable for core material. Laminations shall be annealed in a non-oxidizing atmosphere to relieve stresses and restore the original magnetic properties of CRGO sheets after the cutting and punching operations.
- b) CRGO sheets shall be coated with insulation varnish. Insulation shall be able to withstand the curing temperature and shall reduce eddy current to minimum. The core shall be protected from corrosion with a rust-resistant coating.
- c) The core clamping brackets shall be designed to provide an even distribution of clamping forces to the core, yokes and legs and shall be rigidly braced to reduce sound levels and losses.

1.4.4 Winding

- a) The coils shall be manufactured from electrolytic copper conductor with sufficient number of radial supports and fully insulated for rated voltage.
- b) The insulating material shall conform to Class F. Coils shall be so insulated that impulse and power frequency voltage stresses are minimum and shall withstand even the severest of temperature fluctuations.
- c) Coil assembly shall be suitably supported between adjacent sections by insulating spacers and barriers. The windings shall be arranged to ensure a free circulation of the air and to reduce the hot spots in the winding.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[5]	25.09.2014

- d) All leads from the windings to the terminal board and bushings shall be rigidly supported to prevent injury from vibration or short circuit stresses. Guide tube shall be used where practicable.
- e) The core and coil assembly shall be securely fixed in position so that no shifting or deformation occurs during movement of transformer, under short circuit stresses, switching or other transients.
- f) All coils rated 1200V or higher shall be subjected to partial discharge tests to ensure a properly cured and void free casting.

1.4.5 Encapsulation (for dry type)

- a) HV and LV coils shall be separately cast under vacuum in fibre glass reinforced epoxy resin compound. The insulation shall be fire resistant, non-inflammable, non-hygroscopic and resistant to temperature fluctuations.
- b) The epoxy shall contain filler material providing characteristics superior to unfilled epoxy including higher temperature rating, better heat conductivity, better arc resistance and adhesion to the conductor, plus a coefficient of expansion closer to that of the conductor material. The epoxy resin shall be self extinguishing.
- c) Encapsulated winding shall be free of internal voids, surface irregularities, etc. No surface finishing of encapsulated winding shall be undertaken after the process of encapsulation.

1.4.6 Insulating Oil (for oil type)

- a) The transformer shall be filled with mineral insulating oil suitably inhibited to prevent sludging.
- b) The quality of oil to be supplied for the transformer shall conform to the parameter specified in IS: 335 with latest amendments. No inhibitors shall be used in oil. Prior to filling oil shall be tested as per IS: 335 for tan delta, specific resistivity, breakdown voltage, moisture content etc.
- c) Transformer shall be dispatched oil filled. 10% excess oil for topping up shall be supplied in non-returnable container suitable for outdoor storage.
- d) Oil preservation shall be by means of conservator tank complete with silica gel breather and oil seal.
- e) Oil preservation shall be by means of bellows/ diaphragm sealed conservator tank with silica gel breather to avoid direct connection between atmosphere and transformer oil. It shall be complete with level gauges, pipes , drain valve etc. The level gauges shall be so placed that same can be readable standing from ground.
- f) Necessary device shall be kept to provide annunciation in the event of rupturing of bellow.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[6]	25.09.2014

1.4.7 Tappings (OCTC)

- a) Off-circuit taps as specified shall be provided on the high voltage winding.
- b) The transformer shall be capable of operation at its rated KVA on any tap provided the voltage does not vary by more than $\pm 10\%$ of the rated voltage corresponding to the tap.
- c) The winding including the tapping arrangement shall be designed to maintain electromagnetic balance between HV and LV windings at all voltage ratios.
- d) A warning plate indicating that switch shall be operated only when the transformer is de-energized shall be provided.
- e) Off circuit tap changer switch where provided shall be 3 phase, hand operated, by an external handle with position markings and pad locking facility and mechanical stops to prevent over cranking beyond extreme positions.
- f) Arrangement shall be such that switch can be operated at standing height from ground level.
- g) The operating handle can be padlocked at any tap position. The design shall be such that the lock cannot be inserted unless the contacts are correctly engaged. The mechanism shall be provided with a mechanical tap position indicator with pad locking facility.

1.4.8 Fittings and Accessories:

The following fittings and accessories shall be provided :

- a) Earthing pads: Two earthing pads of copper or other non-corrodible material shall be welded at the bottom corners of the transformer tank and supplied with clamp type terminals suitable for the purchaser's earthing conductors. Suitable earthing terminals on cable boxes shall also be provided.
- b) Terminal marking and rating plates shall be as per the specified standard.
- c) In case of oil type, the conservator shall be of sufficient volume to maintain the oil seal from the minimum ambient temperature of -5°C up to an oil temperature of 100°C , with oil level varying within the minimum and maximum visible levels with necessary accessories.
- d) In case of oil filled type, Valves shall be supplied on the transformer tank and radiators.
- e) Pressure relief device: Pressure relief device shall be provided for transformers rated 2 MVA and above which shall be of sufficient size for rapid release of any pressure that may be generated within the tank and which may result in damage of the equipment
- f) Gas and Oil Actuated Relay (Magnetic Reed Type Gas & Oil Relay):

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[7]	25.09.2014

A double float type magnetic reed type gas and oil relay as per applicable standard shall be provided for all oil filled transformers. All gas evolved in the transformer shall collect in this relay. The relay shall be provided with a test cock suitable for a flexible pipe connection for checking its operation. The device shall be provided with two electrically independent ungrounded contacts, one for alarm on gas accumulation and the other for tripping on sudden rise of pressure. These contacts shall be wired up to the transformer marshalling box. The relay shall be provided with shut off valves on the conservator side as well as the tank side.

g) Temperature Indicators

i Oil temperature indicator (OTI)

All oil type transformers shall be provided with a 150 mm dial type thermometer for top oil temperature indication. The thermometer shall have adjustable, electrically independent ungrounded alarm and trip contacts, maximum reading pointer and resetting device. The contacts shall be rated minimum 0.5A making and 0.2A breaking at 220V DC.

ii Winding Temperature Indicator (WTI):

A device for measuring the hot spot temperature of the winding shall be provided. The accuracy class of winding temperature indicator shall be $\pm 20^{\circ}\text{C}$ or better.

iii Oil Level Indicator:

A magnetic type oil level indicator shall be provided to indicate oil level in the tank.

iv RTD/transducers for remote annunciation:

In addition to the above mentioned indicators, the Oil and winding temperature measurement, RTDs / transducers shall be provided for remote indication in the DCS. RTDs shall be duplex platinum type with nominal resistance of 100 ohms at zero degree centigrade.

h) Bushing Current Transformers for stand by earth fault protection shall be provided in the neutral bushing and lead shall be brought to Marshalling box.

i) Radiator (oil filled type): Tank mounted radiators banks shall have bolted flanged connections and pipe extensions to permit withdrawal of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[8]	25.09.2014

transformer tank without disturbing the radiators. Flexible joints shall be provided in the interconnecting pipes (unless otherwise approved) to facilitate erection and dismantling and reduce transfer of vibrations from tank to radiator. The interconnecting pipes shall be provided with drain plug and air release vents.

- j) Conservator (For oil filled type): The transformers rated below 7.5MVA shall be provided with conventional single compartment conservator with dry air filling the space above the oil.

1.4.9 Bushings

- a) The bushing shall conform to the requirements of IS:2099 and IS:3347.
- b) All transformer bushings shall be of porcelain (for oil filled)/ epoxy (for dry type).
- c) The neutral terminal of 433V winding shall be brought out on a bushing along with the 433V phase terminal to form a 4 wire system for the 433V. Neutral CTs shall be located in the lead coming out of the winding and location of these CTs shall not be inside the tank.
- d) The neutral terminal of secondary shall be brought out through an outdoor. Further this neutral terminal shall be connected by a copper flat of size [50 mm x 6] mm, which shall be brought down upto 100 mm above ground. The copper flat shall be insulated and supported from the tank body.

1.4.10 Terminal arrangement

- a) Cable boxes
- Wherever cable connections are specified, suitable cable boxes shall be provided and shall be air insulated.
 - Cable boxes shall have drilled gland plate of adequate size to receive cables and to allow easy termination.
 - Removable drilled gland planes shall be provided in the cable boxes.
 - The additional supports for the cable boxes shall be galvanised iron.
 - The contractor shall provide earthing terminals on the cable box, to suit [50mmx6] mm GI flat.
- b) Bus duct
- Wherever Bus duct termination is specified a flanged throat or equivalent connection shall be provided for termination of bus duct enclosure. The winding termination shall be outdoor type bushing. The material of the bus duct termination arrangement of the transformer shall be nonmagnetic. The bus duct may be either phase-segregated or non-segregated.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[9]	25.09.2014

- ii. Tolerance permissible for the height of terminals and bus duct flange location specified for bus duct termination over ground level is $\pm 5\text{mm}$. Contractor has to ensure that radiator, conservator and explosion vent do not obstruct the path of the bus-ducts.

1.4.11 Marshalling box

- a) A sheet steel weather, vermin and dust proof marshalling box shall be furnished. The sheet steel used shall be at least 2.0 mm (CRCA) thick. The box shall be free standing floor mounted/tank mounted type and have a sloping roof. The degree of protection shall be IP-55 in accordance with IS:2147.
- b) The marshalling box shall have a glazed door of suitable size for convenience of temperature indicators reading.
- c) All incoming cables shall enter the marshalling box from the bottom.

1.4.12 Wiring

- a) All control, alarm and indication devices provided with the transformer shall be wired up to the terminal blocks.
- b) Wiring shall be done with 650V PVC wires in conduit or PVC armored cable. *[Minimum wire size shall be 1.5 sq.mm stranded copper. Not more than two wires shall be connected to a terminal. 20% spare terminals shall be provided.]*
- c) Multi-way terminal block complete with mounting channel, binding screws and washers for wire connections and marking strip for circuit identification shall be provided for terminating the panel wiring. *[Terminals shall be stud type, suitable for terminating 2 nos. 2.5 mm2 stranded copper conductor and provided with acrylic insulating cover.]*
- d) All devices and terminal blocks shall be identified by symbols corresponding to those used in applicable schematic or wiring diagram. Each wire shall be identified, at both ends, with interlocking type permanent markers bearing wire numbers as per Bidder's Wiring Diagrams. AC / DC wiring shall have separate colour-coding.
- e) Wire termination shall be made with crimping type connectors with insulating sleeves. Wires shall not be spliced between terminals.

1.4.13 Painting

- a) All steel surfaces shall be thoroughly cleaned by sand blasting and / or by chemical agents, as required to produce a smooth surface free of scales, grease and rust.
- b) The external surfaces, after cleaning, shall be given a coat of high quality red oxide or yellow chromate primer followed by filler coats.
- c) The transformer finished with two coats of epoxy based powder coated paint. The paints shall be carefully selected to withstand tropical heat,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[10]	25.09.2014

rain etc. The paint shall not scale off or crinkle or be removed by abrasion due to normal handling.

- d) Painting shade shall be subject to owner's approval.
- e) Sufficient quantity of touch-up paint shall be furnished for application at site.

1.4.14 Name Plate

Nameplates of approved design shall be furnished at each cubicle (one no. each at front as well as at backside of cubicle) and at each instruments & device mounted on or inside the cubicle. The material shall be lamicaid or approved equal, 3 mm thick with white letter on black background. Self-tapping screws shall hold the nameplate. *[Nameplate size shall be minimum 20 x 75mm for instrument/device and 40 x 150mm for panels. Caution notice on suitable metal plate shall be affixed at the back of terminal Box.]*

1.5 Tests

1.5.1 Type Tests

For each type & rating of LV Transformers, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within *[last five]* years from the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within *[last five]* years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

The following shall constitute the type tests:

- a) Temperature rise test
- b) Dielectric test

1.5.2 Routine Tests

All equipment shall be completely assembled, wired, adjusted and routine tested as per relevant IS / IEC Standards at manufacturer's works in the presence of consultant /purchaser or his representative.

The following tests shall be performed on each transformer as a minimum:

- a) After assembly, each core shall be pressure tested for one minute at 2KV (r.m.s.) A.C. between all bolts, side plates, structural steel works and the core.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E3	[11]	25.09.2014

- b) The wiring for auxiliary power and control circuitry shall be subjected to withstand one minute power frequency test with 2.0KV (r.m.s.) to earth
- c) Measurement of winding resistance
- d) Measurement of voltage ratio and check of phase displacement
- e) Measurement of short circuit impedance and load loss
- f) Measurement of no load loss and current
- g) Dielectric routine tests
- h) Excitation loss and current measurements shall be made at 90%, 100% and 110% of the rated voltage as routine test.
- i) Partial discharge test
- j) Tan delta test

1.5.3 Test Witness

[The tests shall be carried out in presence of the Owner's representative, for which a minimum 7 days notice shall be given by the Bidder. The Bidder shall obtain the Owner's approval for the type test procedure before conducting the type test. The test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc. for the type test(s) to be carried out.]

1.5.4 Test Certificates

- a) Certified copies of all tests carried out at works and at site shall be furnished in requisite no. of copies for approval of the Owner.
- b) The equipment shall be dispatched from works only after receipt of Owner's written approval of shop test reports.

1.6 Drawings/ Data and Manuals

Drawings, data, and manuals for the transformers shall be submitted as indicated below:

- a) *[General Arrangement Drawing]*
- b) *Dimensioned general arrangement drawing showing enclosure, core coil assembly, terminal arrangement, marshalling box and various fittings.*
- c) *Transport/shipping dimensions with weights, wheel base detail etc.*
- d) *Foundation plan & loading.*
- e) *Bus duct/cable termination arrangement.*
- f) *Control schematics and wiring diagrams.*
- g) *Test reports and QAP*
- h) *Any other relevant drawing or data necessary for satisfactory installation, operation and maintenance.*
- i) *Instruction manuals on Transformer and its various fittings The manual shall clearly indicate method of installation, checkups and tests to be carried out before commissioning of the equipment.]*

THE CONSULTANT**

ANNEXURES-E4**1.0 415V SWITCHGEAR, MCC AND DB****1.1 General**

This specification is intended to cover the *[design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning]* of 415V Switchgear MCC and DBs, complete with all accessories for efficient and trouble-free operation for of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table 1.0

Codes	Name of Standard
IS : 1248	Direct acting indicating analogue electrical measuring instruments and their accessories
IS: 2551	Danger notice plates
IS :2705	Current transformers-specification
IS :3156	Voltage transformer specification
IS :3231	Specification for electrical relays for power system protection
IS: 8084	Specification for interconnection busbars for AC voltages above 1kV up to and including 36kV.
IS :8623	Specification for low-voltage switchgear and control gear assemblies
IS :8686	Specification for static protective relays
IS :10118	Code-of practice for selection installation and maintenance of switchgear and control gear
IS :12021	Specification for control transformers for switchgear and control gear for voltages not exceeding 1000 v ac
IS : 13947 (Part 1)	Specification for low-voltage switchgear and control gear
IS : 13947 (Part 2)	Specification for low-voltage switchgear and control gear –part 2: circuit breakers
IS : 13947 (Part 4)	Specification for low-voltage switchgear and control gear -part 4 : contactors and motor feeders

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[1]	25.09.2014

Codes	Name of Standard
IS : 13947 (Part 5)	Low-voltage switchgear and control gear specification Part 5 : control circuit devices and switching elements
IEC 61439	Low voltage switchgear and control gear assemblies.
CEA	CEA regulations for installation and operation of meters 2006.
CEA	Standard technical specifications for main plant package

Equipment and material conforming to any other standard which ensures equal or better quality may be accepted. In such case, copies of the English version of the standard adopted shall be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Codes of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- All 415V Switchgear, MCC and DB shall be suitable for an ambient temperature of 50 °C and relative humidity of 95%. The Switchgear shall be suitable for operation in a highly polluted environment.
- All 415V Switchgear, MCC and DB shall be suitable for following voltage & frequency variations as follows:

Voltage Variation	:	(±) 10%
Frequency Variation	:	(+) 3% to (-) 5%
Combined Variation of Voltage & Frequency	:	10% (absolute sum)
For DC system	:	-15% to +10%

- 415 V switchgear & MCCs shall be of indoor /outdoor, double front/single front [Preferably single front] and fully draw out type. ACB feeder may be of single tier/two tier configuration depending upon rating. DBs (ACDB / DCDB) shall be of single / double front [Preferably single front] and fixed type. These shall be CRCA sheet metal enclosed and assembled to form a rigid, free-standing floor mounted structure. Vertical units shall be assembled to form a continuous line up of panels. Compartmentalized multi-tier configuration shall be provided.
- All AC motor starters shall be suitable for Direct on Line (DOL) starting. Motors rated below [132]kW shall be provided with combination starters consists of MCCB/MPCB, contactors and electronic over load relay and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[2]	25.09.2014

the motor starter shall comply with Type – 2 coordination conforming to relevant code and standards. Motors rated [132] kW and above shall be breaker controlled and shall be provided with comprehensive motor protection relay. Motors rated above [160]kW shall be fed from MV Switchgear [Only for firefighting system Motor rated up to 200kW shall be fed from 415V switch board].

- e) For 415 V switchgear & MCCs Feeders rated [630A] and above shall be equipped with Air Circuit Breaker (ACB). Outgoing/Incoming feeders rating below [630] A shall be MCCBs.
- f) For DBs Incomer rated 630A and above shall be ACB. Incomer below 630A shall be MCCB. Outgoing feeder may be MCCB/MCB depending upon the bus fault level.
- g) All ACB shall be draw out type & should have Service, test and disconnected positions with positive indications for service & test positions. It shall be possible to charge the springs manually, if, required
- h) Local/remote selection shall be provided for all incoming/Outgoing ACB module. Incoming/Outgoing breaker shall be closed at service position from remote (DCS) and at test position from Local(Switchgear).
- i) Two out of three breaker logic shall be considered for switchgear/MCC. However mechanical interlock shall be considered for income of MCCB operated DBs.
- j) Also, Local/remote selection switch shall be provided for all motor modules for control from Remote(DCS). Also for breaker operated motor, breaker shall be closed in Test position from local(Switchgear).
- k) All motors shall be provided with Emergency stop push button.
- l) Control circuits shall operate at suitable voltage of 110V AC or 220V DC. Necessary control supply transformers having primary and secondary MCCB/MCB shall be provided for each MCC, 2 x 100% per section. However breaker shall operate on 220V DC. The auxiliary bus bars for control supply shall be segregated from bus bars. This control supplies shall be monitored.
- m) All the numerical relays shall have communication on two ports, local front port communication to laptop and a second port with [IEC 61850 protocol] to communicate with DCS.

1.4 Specific Requirements

1.4.1 Construction

All 415V switchgear, MCC and DBs shall have following minimum features.

- a) All 415V switchgear, MCC and DBs shall be metal enclosed, indoor, floor mounted and free standing type. The panels shall be suitable for cable entry at bottom and busduct connection at top.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[3]	25.09.2014

- b) Between 415V Switchgear and dry type transformers, non segregated phase bus duct is considered. Hence switchgear shall be suitable for this connection and necessary flange connection and co ordination with busduct manufacturer in this regards is covered in this specification.
- c) All frames and load bearing members shall be fabricated using mild steel structural sections or pressed and shaped cold rolled sheet steel of thickness not less than 2 mm.
- d) Frame shall be enclosed in cold rolled sheet steel of thickness not less than 2 mm. Doors and covers shall also be of cold rolled sheet steel of thickness not less than 1.6 mm. Removable gland plates of thickness 3mm (hot/cold rolled sheet steel) or 4 mm (non magnetic material)shall be provided for all panels. Suitable removable type lifting hooks and / or jacking pad shall be provided on each panel or shipping section for ease of lifting of switchgear. These hooks when removed shall not leave any opening in the panels
- e) Each breaker shall be housed in a separate cubicle, complete with an individual front access door. Each vertical section shall have a removable back cover.
- f) The switchgear enclosure shall confirm to the degree of protection IP-54 (for outdoor). For indoor, enclosure shall confirm to IP52, however for Busbar chamber of switchboards rated above 1600A, degree of protection shall be IP-42.
- g) Paint shade for complete panels excluding end covers shall be [RAL 9002] and [RAL 5012] for extreme end covers for all board.
- h) The switchgear assembly shall comprise a continuous, line-up of single / multi tier cubicles. The installations of circuit breakers however shall be limited to the bottom two tiers only. Working height shall be limited to [250 mm to 1800 mm] from the floor level.
- i) Metallic barriers shall be provided between vertical sections and also between adjacent modules to ensure prevention of accidental contact with live parts during routine inspection/maintenance of functional units or cable terminations of one or more functional units when working on those of adjacent units. These barriers shall have insulating inserts as necessary for taking the interconnections etc
- j) A nameplate with switchgear designation shall be fixed at the top of the central panel. A separate nameplate giving feeder details shall be provided for each compartment. A separate nameplate giving details of bus section shall also be provided for switchgears having more than one bus section.
- k) Name plate shall be provided for each equipment (lamps, push buttons, switches, relays, auxiliary contactor, etc) mounted on the switchboard. Special warning plates one each on each feeder of a shipping section shall be provided on removable covers of doors giving access to cable

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[4]	25.09.2014

terminals and busbars. Name plate size shall be minimum of 20x75 mm for Instruments/devices and 40x50 mm for panels. Thickness shall be minimum 3 mm.

- l) For MCC/DB a full height vertical cable chamber with cable supports shall be provided in each section to facilitate unit wiring.
- m) 2x100%, 415V/110V AC control transformer shall be provided for control, Indication and annunciation supply for contactor operated motor feeder. All the necessary auxiliary and main contactor shall be provided suitable for this control supply.
- n) Two 220V DC feeders shall be provided for control, Indication and annunciation of breaker operated module.
- o) Compartment door shall be interlocked with main power isolating device for safety with provision for defeating it by authorized person.
- p) Supplier shall provide total 20% or minimum one (1) no. spare feeder of each type & rating with respect to total requirement of the switchgear.
- q) Motors of rating 30 kW and above shall be provided with anti-condensation heaters. Necessary provision for supply of motor space heating shall be considered in the switchgear.
- r) The incoming connection to transformer of more than 1000kVA and inter-connecting sections between switchboards shall preferably be of bus ducts.
- s) It should be possible to carryout maintenance on a feeder with adjacent feeders alive.

1.4.2

Bus and Bus taps

- a) The main buses and connections shall be of high [conductivity Aluminum / Copper] alloy sized for specified current ratings with temperature rise limited [to 40°C over ambient temperature of 50°C].
- b) Silver plating shall be done on copper bar wherever copper to copper and copper to aluminum contacts are envisaged. All connection hardware shall be non-magnetic and shall have high corrosion resistance. Adequate contact pressure shall be ensured by means of two bolts connection with plain & spring washers and locknuts. Temperature rise shall not exceed 105 degree for silver plated joints over an ambient temperature of 50 degree.
- c) Bus bars and connections shall be fully insulated for working voltage with adequate phase / ground clearances. Insulating sleeves for bus bars and shrouds for joints shall be provided.
- d) Bus insulators shall be flame-retardant, track resistant type with high creepage surface. All buses and connections shall be supported and braced to withstand the stresses due to maximum short-circuit current and also to take care of thermal expansion.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[5]	25.09.2014

- e) Bus bars shall be color coded for easy identification and so located that the sequence R-Y-B shall be from left to right, top to bottom or front to rear, when viewed from the front to switchgear assembly.
- f) Power shall be distributed to each module or compartment by a set of vertical bus bars. The vertical bus bars shall run behind the modules. Necessary tee off connectors shall be used for distributing auxiliary supply to each vertical panel. Rubber grommets shall be used for all wire entries to make the entries dust and vermin proof.
- g) The clearance between the individual bare phase power bus bars and between the phase and earth bus bars in air shall be not less than [25.4] mm.
- h) Three phase, neutral (with at least [50] % rating of main Bus bar and continuous earth bus shall be provided. Bus bar and tapping shall be provided with color coded PVC sleeves.

1.4.3

Air Circuit Breaker

- a) All Circuit Breakers for incoming feeders and Bus couplers shall be [four] poles; single throw, motor operated and air break type. Circuit breaker for outgoing feeders shall be triple pole, single throw and air break type. However for supply feeders it shall be [four] pole.
- b) Circuit Breakers shall be [draw out type] having Service, Test & Disconnected positions with positive indication for each position.
- c) Circuit breakers of identical rating shall be physically and electrically interchangeable.
- d) Bolted disconnected links shall be provided for all outgoing feeders for isolation of neutral, if necessary.
- e) For motor wound mechanism, spring charging shall take place automatically after each breaker closing operation. One open – close – open operation of the circuit breaker shall be possible after failure of power supply to the motor when the spring is charged after a closing operation.
- f) Mechanical safety interlock shall be provided to prevent the circuit breaker from being racked in or out of the service position when the breaker is closed.
- g) Automatic safety shutters shall be provided to fully cover the female primary disconnects when the breaker is withdrawn.
- h) Each breaker shall be provided with an emergency manual trip, mechanical ON-OFF indicator, an operational counter and mechanism to indicate spring charge / discharge condition.
- i) In addition to the auxiliary contacts required for normal breaker operation and indication, each breaker shall be provided with followings for interlocking purpose:-
 - i. Position / cell switch with 4 No + 4 NC contacts.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[6]	25.09.2014

- ii. Limit / auxiliary switches shall be convertible type that is facility for changing N.O. contact to N.C. and vice-versa.
- iii. Mechanical stopper to prevent accidental falling while withdrawing.
- j) Breaker cannot be racked in from 'isolated' to 'test' position with the door open together with provision for defeat of this interlocking, however, the door can be closed only when the breaker is brought back to 'isolated' position. Insertion of breaker into 'Service' position not possible if the shutters are not free.
- k) Door can be opened only when breaker is OFF and is in 'Isolated' position. Remote closing of breaker not permitted with door open.
- l) Anti pumping relay / device to ensure that there can be only one closing operation for each closing command.
- m) Suitable trolley arrangement shall be provided for breaker/starter modules. Two trolleys per switchgear room shall be provided so that top most breaker module of all types, sizes and rating can be withdrawn on trolley and lowered for maintenance purpose.
- n) Closing and tripping coil shall operate satisfactorily under the following conditions.
 - i. Closing Coil: 85% to 110% of rated voltage.
 - ii. Tripping Coil : 70% to 110% of rated voltage.

1.4.4 Contactors, MCCB and MPCB

- a) Incomers for MCCs and DBs rated below 630A shall be MCCB.
- b) Incomer and bus coupler rated below 630A shall be mechanically Interlocked.
- c) Motor starter contactors shall be of air break, electromagnetic type. Suitable for DOL starting of motor, and shall be of utilization category AC-3 for ordinary and AC-4 for reversing starters. DC contactor shall be of DC-3 utilization category.
- d) The contactors shall be three pole, air break type designed for [duty class III category A.C. –3 with non-bouncing silver / silver alloy.]
- e) Each contactor shall be provided with two (2) normally open and two (2) normally closed auxiliary contacts unless otherwise specifically stated. Rating shall be decided by the bidder.
- f) Reversing contacts shall be electrically and mechanically interlocked.
- g) Contactors with delayed dropout feature shall be provided for some essential auxiliaries. These contactors shall not dropout on power failure if the voltage is restored within 3 seconds.

1.4.5 Electronic over load relays

- a) Electronic overload relays shall conform to IEC:292-1 and shall be triple pole, ambient temperature compensated with adjustable setting, inverse time lag, built in single phase preventer and hand/auto reset type

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[7]	25.09.2014

provided as per requirement along with necessary command, feedback cable, coupling relays etc.

- b) Provided with 1 NO and 1NC contact of rating same as the auxiliary contact of the contactors.
- c) The relay shall be able to withstand prospective short circuit current without damage or injurious heating till the motor protection MCCB/MPCB clears the fault.
- d) Relays may be direct acting or CT operated, depending on current rating. CTs shall be included in the scope of supply.

1.4.6 Bus Transfer scheme:

Each switchgear of two incomer and bus coupler shall be provided with the following provisions.

- i) Dead bus closing.
- ii) Manual live change over (Momentary paralleling)
- iii) Automatic bus transfer scheme.

1.4.7 Current Transformer

- a) Current Transformers shall be cast-resin type. All secondary connections shall be brought out to terminal blocks where wye or delta connection shall be made.
- b) CTs shall have polarity makings indelibly marked on each transformer at the lead terminations and at the associated terminal block. Facility shall be provided for short circuiting and grounding the CT secondary at the terminal blocks. Secondary terminals shall be provided with protective cap.
- c) CT terminal block shall be disconnecting type and suitable for round type lugs with facility for testing and short circuiting of individual CT.
- d) All CTs shall be provided with supports independent of busbars / busbar supports. The CTs shall be located in such a way that they can be easily approached for maintenance without necessitating shutdown of adjacent feeders.
- e) CTs shall be provided with disconnected type test links in both secondary leads for carrying out current and phase angle measurement.

1.4.8 Voltage Transformer

- a) Voltage transformers(VT) shall be cast-resin type with an accuracy class of 1.0 for metering and 3P for protection.
- b) VTs shall be of the single-phase type. VTs shall be protected on their primary side by MCCBs with interrupting ratings corresponding to breaker rating and by MCB (with auxiliary contacts) on the secondary sides.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[8]	25.09.2014

- c) VTs shall have continuous over voltage factor of 1.2 and short time over voltage factor of 1.5 for 30 seconds for effectively earthed system
- d) It shall be possible to replace VTs without having to de-energise the main busbars.
- e) VTs shall be provided with disconnected type test links in both secondary leads for carrying out current and phase angle measurement.

1.4.9 Transducer

For all the incoming and the outgoing of 415V Switchgear / MCC/ DB Feeders requiring remote metering and/or current monitoring shall be provided with multi-functional transducers. The output shall be 4-20 mA DC which shall correspond to the normal range.

1.4.10 Secondary Wiring

- a) The switchgear shall be fully wired at the factory to ensure proper functioning of control, protection and interlocking schemes.
- b) Fuse /MCB and links shall be provided to permit individual circuit isolation from bus wires without disturbing other circuits. All spare contacts of relays, switches and other devices shall be wired up to terminal blocks.
- c) Secondary wiring within the switchgear shall be carried out in a neat and systematic manner and securely held in position (either loomed or run in conduit / trunking). Wherever wiring passes through compartment, it shall be run in conduit / trunking, if metallic shall be bonded to the main earth busbar.
- d) Wiring shall be done with flexible, 1.1/0.650kV grade, PVC insulated switchboard wires with [stranded copper conductors of 2.5 mm² for CT & PT circuits and 1.5mm² for control circuit wiring.]
- e) Each wire shall be identified, at both ends, with permanent markers bearing wire numbers as per bidder's wiring diagrams. Wire terminations shall be made with crimping type connectors with insulating sleeves, wire shall not be spliced between terminals.

1.4.11 Terminal Blocks

- a) Terminal blocks shall be 660V grade box-clamp type with marking strips, similar to 10 mm² or equal. Terminals for C.T. secondary leads shall have provision for shorting.
- b) Not more than two wires shall be connected to any terminal. If more than two wires at one terminal are required, separate terminals with function wise shorting links shall be provided. [Spare terminal equal in number to 20% of active terminals shall be furnished.]
- c) Terminal blocks shall be located to allow easy access. Wiring shall be so arranged so that individual wires of an external cable can be connected to consecutive terminals.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[9]	25.09.2014

1.4.12 Ground bus

- a) A ground bus, rated to carry maximum fault current, shall extend full length of the switchgear. The ground bus shall be provided with two-bolt drilling with G.I. bolts and nuts at each end to for connection to the grounding conductor / flat.
- b) Each unit shall be connected directly to the ground bus. The frame of each circuit breaker and draw out V.T. unit shall be grounded through heavy multiple contacts at all times except when the primary disconnecting devices are separated by a safe distance.
- c) C.T. & V.T. secondary neutrals shall be earthed through removable links so that earth of one circuit may be removed without disturbing others. All hinged doors shall be earthed by flexible copper bride.

1.4.13 Space Heater

- a) Each vertical section shall be provided with thermostat controlled space heater 5A, 3 pin socket plug.
- b) In addition, motor feeders rated [30 KW and above] shall be wired up for feeding the motor space heater through suitably rated breaker auxiliary NC contact and/or contactor.
- c) Cubicle heater, Motor heater, and Plug socket circuit shall have individual switch fuse units/MCB.

1.4.14 AC Distribution Boards (ACDBs)

- a) AC Distribution Boards shall have MCCB/MCB at incomer depending upon the short circuit rating. Distribution Boards may be fed from switchgear and shall have two incomers. AC distribution Boards shall be of two types - one with 415V, 4-wire, triple pole and neutral (TPN) outgoing feeders and the other with 240V, 2-wire, single pole and neutral (SPN) outgoing feeders.
- b) For small loads, MCB boards with TPN MCB as incomer and TPN/SP MCBs for outgoing may be considered. The feeder rating and quantity shall be as per requirement.
- c) Board shall be single/double front [preferably single front], metal clad, front matched, dust and vermin proof, fixed type, compartmentalized and extensible on both sides.
- d) Bus bars shall have same cross section throughout the length. Rating of the neutral bus bar shall be 50% of the main bus bar. Earth bus bar shall run in bottom chamber throughout the length of the Board.

1.4.15 DC Distribution Boards

DCDBs shall have two incomers and a bus coupler. Incomers and outgoing feeders of DCDBs shall be MCB/MCCB modules. They shall be fixed type and floor mounted. Other constructional features shall be similar to ACDB.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[10]	25.09.2014

The feeder rating and quantity shall be as per requirement.

1.4.16 Control & Indication

The circuit breaker shall be wired up for local & remote operation. Each breaker cubicle shall be equipped with following:

- a) Remote selector switch with pistol grip handle and key interlock for breakers with motor wound spring charging mechanism. In Remote position, the breaker can be operated in service position with all interlock and protections. In switchgear position, the breaker shall be operated from switchgear only in test position with only protection (no interlock).
- b) Two (2) heavy duty, oil-tight, push buttons for Trip & Close.
- c) Circuit breaker shall be indicated electrically. The following indication colour shall be used.

Breaker open - GREEN

Breaker closed - RED

Spring Charged - WHITE

Breaker Auto Trip- AMBER

- d) However, any other indication shall be provided as per owner's requirement.
- e) Lamps shall be LED type with resistance for voltage protection. Lamp and lens shall be replaceable from the front.
- f) For all MCCB feeders, trip indication lamp shall be provided on front of the compartment.
- g) For all starters, ON, OFF and trip indication lamps shall be provided on front of the compartment.

1.4.17 Relays, Protection & Metering

- a) The hardware design for protection and associated equipment shall use latest state-of-the-art technology and shall generally be integrated numerical/digital, modular in nature. Where design is based on numerical technology, adequate self testing/monitoring/diagnostic facilities shall be provided.
- b) All numerical relays, auxiliary relays and devices shall be of types, proven for the application; satisfying requirements specified elsewhere and shall be subject to Purchaser's approval. Numerical Relays shall have appropriate setting ranges, accuracy, resetting ratio, transient overreach and other characteristics to provide required sensitivity to the satisfaction of the Owner.
- c) All protective relays shall be in draw out or plug-in type / modular cases with proper testing facilities. Necessary test plugs / test handles shall be supplied loose and shall be included in supplier's scope of supply.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[11]	25.09.2014

- d) All AC operated relays shall be suitable for operation at 50 Hz. AC voltage operated relays shall be suitable for 110 Volts VT secondary and current operated relays for [1 or 5] amp CT secondary. All relays and timers shall be rated for control supply voltage as mentioned elsewhere under parameters and shall be capable of satisfactory continuous operation between 80-120% of the rated voltage. Voltage operated relays shall have adequate thermal capacity for continuous operation.
- e) Energy meters shall be provided for incomer of 415V Switchgear and MCC and shall be able to communicate with DCS. These meters shall be as per CEA regulation 2006 "Installation and operation of meters". Accuracy class shall not be less than 1.0S.
- f) Provision shall be made for easy isolation of trip circuits of each relay for the purpose of testing and maintenance.
- g) All protective relays and alarm relays shall be provided with one extra isolated pair of contacts wired to terminals exclusively for future use.
- h) The relay shall be designed to perform satisfactorily under highly noisy electrical environment. Sufficient degree of high frequency disturbance immunity and impulse voltage withstand capacity shall be built into electronic designs as stipulated in relevant standards.
- i) All protections shall be furnished complete with necessary auxiliary, supervisory, lock out relays. Suitably separate sets of single phase auxiliary C.T with multiple taps shall be provided with relay whenever required.
- j) Visual and audible alarm annunciation shall be initiated in the event of operation of protective/supervisory relay.
- k) D.C supply shall be supervised by DC supervision relays.
- l) Trip circuit shall be supervised by Trip circuit supervision.
- m) Tripping shall be done through high speed lock out relays.
- n) All meters/ instrument shall be flush mounted on front panel, at least 96mm² size with 90° linear scales and accuracy class of 2.0.
- o) Interposing relays for ON/OFF command or any other command shall be as per system requirement.
- p) For alarm and Indication at DCS end necessary contacts shall be provided at switchgear end.
- q) Metering and protection shall be as per below table

a)	Incomers	
	Protections	Metering
i	Time graded short circuit protection	Local Current (single phase) indication and remote indication through transducer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[12]	25.09.2014

ii	Over current protection	Voltage Measurement for all three phases and remote indication through transducer.
iii	Earth fault protection	KW, Kwhr
b)	Bus coupler	
	Protections	Metering
i	Over current protection(51)	Local Current (single phase) indication.
ii	IDMT Earth fault protection(51N)	
c)	Contactor controlled motor feeders [90kW and above motor only]	
	Protections	Metering
i	Time graded short circuit protection	Local Current indication and remote indication through transducer.
ii	Over current protection	
c)	[Motor Feeders [of 132KW and above only]]	
	Protections	Metering
	Composite motor protection to cover a minimum of protections such as over current, short circuit, earth fault, locked rotor, Negative phase sequence, thermal overload etc.	Local Current indication and remote indication through transducer.
[Other feeders]		
a)	Bus PT / Line PT Modules	
	Protections	Metering
	Under voltage protection	[Voltage – phase to phase,]
	Fuse failure protection	
b)	Motor feeders (MPCB/MCCB with Contractors)	
	Protections	Metering
	Electronic Overload relay (with single phase preventor), short circuit protection (through fuse/MCCB/MPCB as specified)	
c)	Incoming feeders for ACDB/DCDB	
	Protections	Metering

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[13]	25.09.2014

	Short circuit protection (if MCCB)	[Voltage (single phase and, Phase Current (1 Phase))] Local indication only.
d)	Outgoing feeders of ACDB/DCDB	
	Protections	Metering
	Short circuit protection (through fuse/MCCB)	

1.5

Tests

I) Type Test

For each type & rating of 415V Switchgear, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within [last five] years from the date of bid opening. These reports should be for the tests conducted on the switchgear similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last five years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

II) Routine Test

All equipment shall be completely assembled, wired, adjusted and routine tested as per relevant IS / IEC Standards at manufacturer's works in the presence of consultant /purchaser or his representative.

The minimum tests shall be conducted are as follows:

- Measurement of insulation resistance of Circuit Breaker in closed and open positions.
- Measurement of milli-volt drop across Circuit Breaker main contacts and other joints.
- Measurement of Circuit Breaker/Contactor operating time for close & open at nominal voltage and 80% of rated voltage.
- Measurement of resistance, IR value and drop-off/pick-up voltage of close and trip coils.
- Healthiness of limit switch contacts.
- Spring charging motor functional checks.
- Verification of phase sequence and checking of clearances of busbars between phase to phase and phase to earth.
- Measurement of milli-volt drop across busbar joints

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[14]	25.09.2014

- i) Torque tightness test.
- j) High voltage test on busbar.
- k) Measurement of CT/PT polarity, ratio and knee point voltage.
- l) Electrical and mechanical interlock checks.
- m) Secondary injection of all protection relays by using service settings and simulation of all protection functions.
- n) Secondary injection of all metering circuits.
- o) Functional tests to demonstrate the specified control and interlocks

III) Test Witness

[The tests shall be carried out in presence of the Owner's representative, for which a minimum 7 days notice shall be given by the Bidder. The Bidder shall obtain the Owner's approval for the type test procedure before conducting the type test. The test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc. for the type test(s) to be carried out.]

IV) Test Certificates:

Certified copies of all tests carried out at works and at site shall be furnished in requisite no. of copies for approval of the Owner. The equipment shall be dispatched from works only after receipt of Owner's written approval of shop test reports.

1.6 Drawing & Documents

Drawings, data & manuals for the motors shall be submitted as indicated below

- a) [General Arrangement drawings and cross-section showing constructional features & cable entry with bottom view with opening.
- b) Bill of Materials.
- c) Technical Data sheet and Catalogue.
- d) Foundation drawing details with bottom view of switchgear.
- e) Descriptive write-ups and literature for the main equipment offered including relays, meters, etc.
- f) Control Schematics & Wiring diagram.
- g) Inspection and Test Plan (ITP).
- h) Suggestive list of protective relays.
- i) Transport/shipping dimensions and weights].

1.7 Ratings & Requirements

415V switchgears, MCC and DB shall comply with the particulars indicated in the following tables.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E4	[15]	25.09.2014

Table- 2.0

S. No.	DESCRIPTION	UNIT	DATA
1.0	General		
1.1	Name of Manufacturer		
1.2	Place & Country of manufacture		
1.3	Specifications and Standards		
2.0	Switchgear Details		
2.1	Rated voltage, phases & frequency		415 Volts, 3 Phase, 4 wire 50 Hz.
2.2	System neutral earthing		Solidly earthed
2.3	Voltage & frequency variation	%	+/-10%, -5%to +3% Hz.
2.4	Rated frequency	Hz	50Hz
2.4	One minute power frequency Voltage a) For power Circuits b) For Control Circuits		a) 2.5kV b) 1.5kV
2.5	Continuous current rating of busbars under site reference ambient temp.		[As per Project requirement]
2.6	Reference ambient temperature		50°C
2.7	Maximum temperature of bus bars and droppers/connectors under site conditions specified		90°C for busbars having non-silver plated joints 105°C for busbars having silver plated joints
2.8	Short circuit current withstand for busbars and droppers		
a	Short time	kA (rms)	50
b	Dynamic Rating	kA (peak)	105
2.9	Whether busbars have been insulated	Yes	Required
2.10	Type of insulation		[By Bidder]
2.11	Material of bus bar supports		[By Bidder]

Document Number	Rev No.	Description	Page No.	Date of Issue

TECHNICAL SPECIFICATION FOR 415V NON
SEGREGATED PHASE BUS DUCTS**

**PREPARED BY
LAHMEYER INTERNATIONAL (INDIA) PVT. LTD.
THE CONSULTANT**

ANNEXURES-E5**1.0 415V NON SEGREGATED PHASE BUS DUCT****1.1 General**

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of 415V Non Segregated Phase Busduct, complete with all accessories for efficient and trouble-free operation for of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table: 1.0

IS 8084	Interconnecting Bus bar for AC Voltage above 1KV up to and Including 36kV
IEC 60947	Low Voltage Switchgear and Control gear
ANSI/IEEE C37.20	Metal-Clad and Station-Type Cubicle Switchgear
ANSI/IEEE C37.24	Guide for Evaluating the Effect of Solar Radiation on Outdoor Metal Enclosed Switchgear
IEC 60439	Low-voltage switchgear and control gear assemblies.
BS 159:1957	Bus bar and Bus bar connection
CEA	CEA regulations and standards

Equipment and material conforming to any other standard which ensures equal or better quality may be accepted. In such case, copies of the English version of the standard adopted shall be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Code of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3 Design Criteria

- a) The 415V Non-segregated phase bus duct shall serve as an interconnection between the 415V Switchgear and 11/0.433kV LV Transformer. The Non-segregated phase bus duct shall be installed

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[1]	25.09.2014

indoor/Outdoor in a hot, humid and tropical atmosphere. All panels associated with Non-segregated phase bus duct shall be located indoors/Outdoors.

- b) Bus duct, associated equipment and wiring shall be provided with tropical finish to prevent fungus growth. All ventilation openings shall be screened and drains shall be filtered to prevent entrance of dust and insects.
- c) For continuous operation at specified ratings, temperature rise of the bus duct and auxiliary equipment shall be as specified in Clause 1.7 Rating and requirements.
- d) Bus duct and auxiliary equipment shall be capable of withstanding the mechanical forces and thermal stresses of the required short-circuit currents.
- e) The bus ducts and supporting structures shall be designed & constructed so as to withstand without damage the horizontal / vertical ground accelerations due to earthquake.
- f) The bus ducts shall be self cooled and shall not be equipped with blower or any other type of forced ventilation.
- g) The equipment rating shall be based on an ambient temperature. Same phase disposition shall be maintained throughout the run of the bus duct. Phase crossover units, if required, shall also be provided inside the Busduct itself.
- h) Bus ducts shall be suitable for continuous operation at maximum system voltage and shall be adequately sized to withstand short circuit current.

1.4 Specific Requirements

1.4.1 General

- a) 415V Non Segregated Phase Busduct is provided for connection between low voltage side of 11/0.433kV cast resin dry type /oil type transformers and associated 415V Switchgears shall be of TPN (3 phase and neutral) along with necessary bends, flexible at both transformer & switchgear ends, flanges, phase crossover chambers (if required), support structures & accessories including terminations at the equipment ends.
- b) The 415V bus duct shall be metal enclosed, non-phase segregated enclosure type, self cooled and insulated for 1.1kV voltage. The cooling medium inside the duct shall be air.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[2]	25.09.2014

- c) All parts and accessories shall have appropriate match mark and part numbers for easy identification and installation at site.
- d) The 415V non-segregated phase bus duct will be installed indoor or partially indoor & outdoor depending upon the location of equipment being interconnected in a hot, humid and tropical atmosphere. All panels associated with LV non-segregated phase bus duct will be located indoors.
- e) The continuous current rating and momentary peak withstand current rating of the Busduct between transformers & their associated switchgears shall be same as that of the associated switchgears and as indicated in the specification.
- f) All supporting steel structures shall be hot dip galvanized.
- g) The bus ducts shall be provided with space heaters to control moisture. Slicagel breather if required same shall be provided.

1.4.2 Enclosures

- a) The enclosure shall be rectangular and shall be made of [aluminium alloy/Mild steel] of grade [19000H2] as per IS-5082. The entire bus duct shall be designed with dust, weather and vermin-proof construction. The inside of the bus enclosure shall be treated with a matt paint of dark colour, preferably black to facilitate efficient heat dissipation. The bare enclosure with above painting shall be designed so as not to exceed the temperature specified in IS: 8084.
- b) *[Phases shall be enclosed in a weather-proof, dust-tight, non-magnetic metal (aluminum alloy) of 3mm for bus rating including and above 3000A whereas enclosures for normal bus current rating (<3000 A) shall be sheet steel fabricated type of 2.5mm thick].*
- c) Enclosures shall be provided with flange ends with drilled dimensions to suit the flanges at the switchgear and transformer ends.
- d) Circumferential neoprene rubber gaskets shall be provided for dust tight joints with adjacent enclosure section.
- h) The bus enclosure shall have extended bellows or equivalent means to allow for temperature changes and vibrations. Flexible joints shall be provided in enclosures at all points where the bus duct terminates at equipment to withstand vibration, expansion / contraction and at suitable intervals in any straight run of the bus duct where expansion and contraction would otherwise result in stresses in the supporting structures.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[3]	25.09.2014

- i) All outdoor bus-enclosures shall be so designed & constructed as to prevent accumulation of rain water on top sheet. Similarly all Gasketed flanged joints shall be suitably protected against direct splashing of rain water in case of outdoor runs. The connection flanges shall be sufficiently stiffened so as not to bend while tightening the bolts.
- j) Outdoor portions of the bus duct, if any, shall have continuous rain hood of non magnetic material or with suitable arrangement for rainwater prevention.
- k) Suitable inspection openings shall be provided for access to support insulators, bus joints, transformer terminals, switch gear terminals etc. All inspection openings shall have reliable sealing arrangement with neoprene gaskets.
- l) Seal-off bushings complete with wall-frame and support plates shall be provided where the bus duct penetrates the building wall. The seal is to prevent free exchange of air between indoor and outdoor portions of the bus duct.
- m) In case, the bus duct penetrates the firewall, the wall frame assembly and the seal shall be designed for the same fire rating as the firewall.
- n) Silica-gel breather shall be provided on both indoor and outdoor portions of the bus duct. Space Heaters shall be provided in the bus duct.
- o) Filtered drains for drainage of condensate shall be provided at the lowest points and at such locations where accumulation of condensate can be expected.
- p) Shipping length of the Busduct shall be not more than three (3) meters in length.
- q) Minimum Degree of protection of Busduct enclosure shall be IP-52 for indoor and IPW-55 for outdoor section of the Busduct.

1.4.3 Bus Conductor

- a) The bus conductor shall be of high conductivity, [Aluminium alloy / Aluminium].
- b) The bus conductors shall be given a coat of matt black paint to facilitate heat dissipation. However the sizing of the bus conductor shall consider the conductor as bare.
- c) The bus conductor shall be designed for bolted connections throughout the run.
- d) Flexible connection shall ensure an efficient and trouble-free connection.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[4]	25.09.2014

- e) Silver plating shall be done on copper bar wherever copper to copper and copper to aluminium contacts are envisaged. All connection hardware shall be non-magnetic and shall have high corrosion resistance.
- f) The bus conductors and their support insulators shall be designed to withstand, without damage, the forces developed while carrying the short circuit current.
- g) The bus bar shall be sleeved with FRLS heat shrinkable, colour coded PVC sleeves at intermittent points for phase identification.
- h) The material of the conductor shall be aluminium alloy of grade [63401WP] as per IS: 5082. The temperature rise of conductor shall be 40 degree over design ambient temperature of 50 degree. Also, the temperature of the bus shall not exceed 250°C while carrying the specified short circuit current for one second when a fault occurs at the operating temperature.

1.4.4 Disconnect Link

- a) Removable bolted disconnected link shall be provided in the bus for the purpose of isolation.
- b) Disconnect link shall consist of a removable section of conductor and shall be so constructed as to permit easy removal or reinsertion without alignment difficulties.
- c) The bus on both sides of the link shall be rigidly supported so that the disconnect link is equal in mechanical strength to any other section of the bus.
- d) A minimum clearance of [300 mm. (12")] shall be provided between the disconnected bus sections with the link removed.

1.4.5 Insulators

- a) The bus conductor supporting insulators shall be flame retardant, non-hygroscopic, high impact and high dielectric strength material with an anti tracking contour.
- b) Material of insulator shall be [Epoxy SMC moulded /FRP].
- c) Spacing of the bus support insulators shall be considered by giving due factor of safety to withstand the forces due to the short circuit current assigned to the bus duct.
- d) Bus support insulators shall be interchangeable, high creepage, high strength, wet process, fine glazed porcelain. Alternatively good quality cast resin insulators may be offered.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[5]	25.09.2014

- e) Insulator shall be mounted in such a way so as to permit easy removal or replacement without disassembly of the bus. The insulator mounting plate shall be designed for cantilever loading to withstand the short circuit.
- f) The conductor shall be fastened on the insulator through fixed and slip joints so as to allow conductor expansion or contraction without straining the insulator.
- g) Space heater shall be provided preferably located near to each insulator to avoid moisture condensation within bus duct.

1.4.6 Connections & Terminations

- a) All matching flanges, seal-off bushings, gaskets, fittings, hardware and supports required for termination of the Busduct at the switchgear, transformers and other equipment shall be furnished.
- b) In this connection the bidder is required to coordinate with the switchgear and auxiliary transformers manufacturer with regard to connection details, mechanical and thermal stresses.
- c) Flexible connections both for conductor and enclosure shall be furnished at all equipment termination to provide for misalignment up to 25 mm in all directions.
- d) The equipment terminal connections shall be readily accessible and shall provide sufficient air gap for safe isolation of equipment during testing.

1.4.7 Supporting Structures

- a) All supporting structures required for hanging and/or supporting the complete bus duct shall be furnished. These include all members, indoor/outdoor posts, bolts, shims, base plates, beams, hangers, brackets, bracings and hardware.
- b) All buses shall be adequately supported and braced to successfully withstand normal operation, vibration, thermal expansion, short circuit forces and all specified design loads including wind & earthquake forces.
- c) Support shall be designed to provide tolerance of ± 12 mm in the horizontal and vertical directions.
- d) All steel members shall be hot-dip galvanized after fabrication. All hardware shall be of high strength steel with weather resistant finish.
- e) The mounting arrangement of Busduct on the supporting structure shall be designed to allow movement of the Busduct during expansion and contraction.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[6]	25.09.2014

- f) All structure shall be self supporting and in no case rely for support on equipment to which the busbars are connected.

1.4.8 Ground bus

- a) The ground bus of two numbers of separately run [50x10 mm] minimum GS flat shall be provided along the run of the bus duct. All parts of the bus enclosure, supporting structures and equipment frames shall be bonded to above ground bus.
- b) Ground bus shall be finally to connected to power plant earth grid at one end.

1.4.9 Wiring

All wiring for space heaters shall be done with insulated stranded copper conductor of not less than [2.5 mm² cross-section]. Each wire shall be identified at both ends with wire designation as per bidder's wiring diagram and shall be brought out to a terminal box outside the bus duct.

Terminal blocks shall be box-clamp type minimum 10 mm² with marking strips.

At [least 20% spare terminals] shall be furnished in the terminal block.

1.4.10 Name Plate

Suitable name plate shall be furnished with each piece of equipment.

[Materials for name plate shall be plastic / lamicaid, 3 mm thick, using white letters on black background.]

1.4.11 Space Heater

Thermostatically controlled Space heaters shall be provided in the bus ducts, wherever the manufacturer considers them necessary and recommends their provision for preventing harmful moisture condensation. At least one number space heater with thermostat shall be provided at each transformer and switchgear end.

The space heaters shall be suitable for continuous operation on single phase supply, and shall be automatically controlled by thermostats. Necessary wiring up to junction boxes mounted on bus duct and from junction boxes to switchboards shall be provided.

1.4.12 Painting and Finish

- a) All surfaces to be painted including interior and enclosures and other metal parts shall be shot or sand blasted or chemically treated to remove all rust, scale, grease and other adhering foreign matters as far as

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[7]	25.09.2014

possible shall be painted with not less than two (2) coats of Acid and corrosion resistant paint

- b) Steel surfaces, exposed to weather shall be given two (2) coats of zinc chromate and two (2) coats of an 'approved' Manufacturer's paint of 'approved' colour.
- c) All metal parts not accessible for painting shall be made of corrosion resistant materials. All machine finished or bright surfaces shall be coated with a suitable rust preventive compound and wrapped or otherwise protected.
- d) Inside of the bus enclosure shall be treated with a matt paint of dark colour, preferably black to facilitate efficient heat dissipation. The shade of exterior surface finish shall be [RAL 5012].
- e) The interior surface finish shall be as per manufacturer's standard.
- f) Pretreatment consisting of degreasing, de-rusting etc. shall be done on all fabricated parts before painting or galvanizing.
- g) Paints shall be carefully selected to withstand heat and weather conditions. The paint shall not scale-off or crinkle or get removed by abrasion due to normal handling.
- h) Sufficient quantities of all paints and preservatives required for touching up at sites shall be furnished.
- i) The paint shade shall be subject to owner's approval.

1.5 Tests

l) Type Test

For each type & rating of 415V Non segregated phase bus duct, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within last [five] years from the date of bid opening. These reports should be for the tests conducted on the Busduct similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last [five] years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E5	[8]	25.09.2014

II) Routine Test

All equipment shall be completely assembled, wired, adjusted and routine tested as per relevant IS / IEC Standards at manufacturer's works in the presence of consultant / purchaser or his representative.

Some of the specific tests required are listed below.

- a) Visual inspection and verification of dimensions
- b) Dry power frequency voltage withstand for 1-minute
- c) Milli-volt drop test & Water tightness test

1.6 Drawings and Documents

Drawings, data & manuals for the 415V Non segregated phase bus duct shall be submitted as indicated below:

- a) [Dimensional GA drawing
- b) Data sheets
- c) Typical calculation for arriving at the size of conductor and the insulator spacing.
- d) Type test report (short circuit, temperature rise test) for similar bus duct manufactured by the proposed manufacturer.
- e) Foundation layout and requirements
- f) The bidder may note that the drawings, data and manuals listed are minimum requirement only. The bidder shall ensure that all other necessary write-ups, curves and information required to fully describe the equipment offered are submitted with his bid.]

1.7 Ratings and Requirements

Major technical parameters of 415V non segregated Bus Duct are listed below. However, Bidder may also refer to Volume-III, technical schedule in order to submit technical data of equipment along with their technical proposal.

Table: 2.0

S. No.	Technical Particulars	Unit	Parameters	Remarks

TECHNICAL SPECIFICATION FOR 220V DC SYSTEM

**PREPARED BY
LAHMEYER INTERNATIONAL (INDIA) PVT. LTD.
THE CONSULTANT**

ANNEXURES-E6

1.0 220 V DC SYSTEM

1.1 General

This specification is intended to cover the [design, engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, erection, site testing and commissioning] of 220V DC system with its all accessories for efficient and trouble-free operation of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client].

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC / IEEE as given below except where modified and/or supplemented by this specification.

Table: 1.0

Code		Name of Standard
IS- 266	:	Specification for Sulfuric Acid

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted subject to approval of the Owner. In such case, copies of the English version of the standards adopted shall have to be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity (IE) Rules as amended up to date and relevant IS Codes of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- 220 V DC Systems shall be suitable for an ambient temperature of 50 °C and relative humidity of 95%. The system shall be suitable for operation in a highly polluted environment.
- The permissible voltage variation for 220V battery shall be from -15% to +10%.
- The battery shall be of storage type [Lead Acid Plante Positive Plate/Ni-Cd] Type. The Battery shall be of high discharge performance type. The plates shall be designed for maximum durability during all service conditions including high rate of discharge & rapid fluctuation of load.
- While estimating the battery size, temperature correction factor [based on lowest expected temperature 5 Deg C], margin on capacity [10%] and aging factor [1.0 for Lead Acid Plante and 1.2 for Ni-Cd] shall be considered.
- Cell Voltages for Lead Acid batteries:

i.	Nominal Discharge Voltage/cell	2.0 V
ii.	Float Voltage/cell	2.2 V
iii.	Boost Voltage/cell	2.7 V
iv.	Capacity for ten(10) hour rate at 27°C any time during the entire duty	1.85 V/Cell

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[4]	25.09.2014

	cycle	
--	-------	--

f) Cell Voltages for Ni-Cd Batteries

i.	Nominal Discharge Voltage/cell	1.2 V
ii.	Float Voltage/cell	1.42 V
iii.	Boost Voltage/cell	1.7 V
iv.	Capacity for five(5) hour rate at 27°C any time during the entire duty cycle	1.14 V/ Cell

- g) 2x100% sets, 220V of either Lead-Acid Plante Type or Nickel-Cadmium battery banks with 2 x100% float cum boost charger catering to 100% of unit as well as station loads shall be provided.
- h) Permissible voltage variation for 220V battery shall be from 190V to 240V.
- i) The Ampere-Hour capacity of DC Storage Battery shall be based on [Three] hours' continuous DC supply at rated voltage to essential auxiliaries.
- j) Batteries shall be suitable for being boost charged to fully charged condition from fully discharged condition within 10 hours.
- k) Lead acid batteries shall be boost charged at about 2.7 volts per cell maximum and float charged at about 2.2V/cell.
- l) Ni-Cd batteries shall be boost charged at about 1.54 to 1.7 volts per cell maximum and float charged at about 1.42V/cell.
- m) The float-cum-boost charger shall be rated to cater to the following:
- Trickle charging current of the battery
 - Equalizing charging of the Battery
 - Boost charging of the Battery
 - Continuous load on the DC system
 - 25% spare capacity over above loads.

1.4 Specific Requirements

1.4.1 Constructional requirements of battery

a) Containers

Container shall be made of transparent glass for lead acid and polypropylene for Ni-Cd batteries. It shall be robust, heat resistance, leak

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[5]	25.09.2014

proof, non-absorbent, acid resistant, non-bulging type and free from flaws, such as wrinkles, cracks, blisters, pin holes etc. Electrolyte level lines shall be marked on container. The marking for the electrolyte level should be for the upper and lower limits. Container shall be closed / sealed lid type.

The pole sealing arrangement should be such that no acid particle gets entrapped due to acid creep as a result of capillary action and it should be possible to remove and refix the sealing to carry out the maintenance.

b) Vent Plugs

Vent plug shall be provided in each cell. They shall be anti-splash type, having more than one exit hole shall allow the gases to escape freely but shall prevent acid from coming out. The design shall be such that the water loss due to evaporation is kept to minimum. In addition the ventilator shall be easily removed for topping up the cells and of such dimensions that the spring type hydrometer can be inserted into the vent to take electrolyte sample.

c) Plates

The plates shall be designed for maximum durability during all service conditions including high rate of discharge and rapid fluctuation of load. The construction of plates shall conform to latest revisions of standards as applicable for type of battery.

The separators shall maintain the electrical insulation between the plates and shall allow the electrolyte to flow freely. Separators should be suitable for continuous immersion in the electrolyte without distortion. The positive and negative posts shall be clearly marked.

The plante positive plates shall be supported from the ledges of the SAN container. They should not be supported at the bottom of container. Sufficient space shall allowed to allow the creepage of the plates.

d) Sediment Space

Sufficient sediment space shall be provided so that the cells shall not have to be cleaned out during normal life and prevent shorts within the cells.

e) Cell Insulators

Each cell shall be separately supported on PVC / Porcelain / Hard rubber insulators fixed on the racks with adequate clearances between adjacent cells. Minimum distance between adjacent cell shall be more than the bulge allowed for two cells in accordance with relevant IS standard.

f) Electrolyte

The electrolyte shall be prepared from battery grade sulphuric acid conforming to IS: 266 and distilled water conforming to IS: 1069 for lead

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[6]	25.09.2014

acid batteries and battery grade potassium hydroxide for Ni-Cd batteries. The cells shall be shipped dry uncharged. The electrolyte shall be supplied separately in a separate non-returnable container. 10% extra electrolyte shall be furnished to cover spillage in transit or during erection.

g) Connectors and Fasteners

Lead or Lead coated copper connectors (For Lead acid Plante Type batteries) and Nickel coated copper connectors (for Ni-Cd batteries) shall be used for connecting up adjacent cells and rows. Bolts, nuts and washers shall be effectively lead coated/Nickel coated to prevent corrosion. The thickness of lead coating of connectors should not be less than 0.025 mm. All the terminals and cells inter-connectors shall be fully insulated or have insulated shrouds. End take-off connections from positive and negative poles of battery shall be made by single core cables having stranded aluminum conductors and XLPE insulation. Necessary supports and lugs for termination of these cables on battery shall also be supplied. All connectors and lugs shall be capable of continuously carrying the 30 minutes discharge current of the respective battery and through fault short circuit current which the battery can produce and withstand for the period declared. Suitable number of inter rack connectors shall be supplied by the bidder to suit the battery room layout during the detail engineering.

h) Battery Racks

Steel racks with anti-corrosive epoxy paint for all the battery shall be provided. They shall be free standing type mounted on porcelain / hard rubber / PVC pads insulators. Battery shall be located in the single tier arrangement. However battery having a complete cell weight of lower than 50 Kg could be located in the double tier arrangement. The battery rack and support for cable termination shall be coated with three (3) coats of anti-acid paint of approved shade. Numbering tags, resistant to acid, for each cell shall be attached on to the necessary racks. The bottom tier of the stand shall not be less than 150 mm above the floor.

Wherever racks are transported in dismantled condition, suitable match markings shall be provided to facilitate easy assembly.

i) Manufacturer's Identification Systems

The following information shall be indelibly marked on outside of each cell:

- i. Manufacturer's name and trade marks
- ii. Country and year of manufacture
- iii. Manufacturer type of designation
- iv. AH capacity at 10 hour discharge rate
- v. Serial number

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[7]	25.09.2014

1.4.2 Constructional Requirements of battery charger

- a) The Charger shall be indoor, floor mounted, self supporting sheet metal enclosed cubicle type. All necessary base frames, anchor bolts and hardware shall be supplied. The charger shall be fabricated using cold rolled sheet steel shall not less than 1.6 mm and shall have folded type of construction. The panel frame shall be fabricated using cold rolled sheet steel of thickness not less than 2.0 mm. Removable undrilled gland plates of at least 3.0 mm sheet steel and lugs for all cables shall be supplied. The lugs for cables shall be made of electrolytic copper with tin coat. The chargers shall be tropicalised and vermin proof. Ventilation louvers shall be backed with fine brass wire mesh. All doors and covers shall be fitted with synthetic rubber gaskets. The chargers shall have hinged double leaf doors provided on front / or backside for adequate access to the charger internals. All the charger cubicle doors shall be properly earthed. The degree of protection of charger enclosure shall be at least IP-42.
- b) All indicating instruments, control and selector switches and indicating lamps shall be mounted on the front side of the charger.
- c) Electronic equipments shall be of modular design consisting of plug in modules in standard 19 inches metallic racks with metallic card guides. The cards should be provided with proper handles. Card to card wiring should be preferably through a motherboard. Unplanned jumpering and track modifications are not permitted and track modifications are not permitted. Mechanical interlocks to prevent wrong insertion of cards should be provided. Each card shall have its junction and test points identified. Maintenance aids such as extension printed wiring boards and jumper leads shall be provided.
- d) The layout of charger equipment shall be such that their heat losses do not give rise to excessive temperature within the charger panel surface. Location of the electronic modules shall be such that temperature rises of the location, in no case, shall exceed 10°C over ambient air temperature outside the charger.
- e) Printed Circuit Boards (PCB)
PCB shall be made of glass epoxy of 1.6 mm thick, fire resistant, bonded with 99.8% pure copper foil, free of wrinkles, blisters, scratches and pinholes. The contact surface of the edge connectors of the PCBs shall be plated with hard gold to a minimum thickness of 5 microns. Component identification shall be printed on PCB by silk screen method. All PCBs shall be tropicalised and masked.
- f) Contactors

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[8]	25.09.2014

All battery chargers shall have an AC contactor on the input side. It shall be of air break type and suitable for continuous duty. The operating coil shall be rated for 415 Volts AC.

g) Thermal Overload Relay

A thermal overload relay incorporating a distinct single phase protection (using differential movement of bimetal strips) shall also be provided for the AC input. The relay shall trip the above contactor.

h) Rectifier-Transformer and Chokes

The rectifier-transformer and chokes shall be dry and air cooled (AN) type. The rating of the rectifier transformers and chokes shall correspond to the rating of the associated rectifier assembly. The rectifier-transformers and chokes shall have class-B insulation with temperature rise limited to class A insulation value.

i) Rectifier Assembly

The rectifier assembly shall be full wave bridge type and designed to meet the duty as required by the respective charger. The rectifier cells shall be provided with their own heat dissipation arrangement with natural air cooling. The rectifier shall utilize diodes / thyristors and heat sinks rated to carry 200% of the load current continuously and the temperature of the heat sink shall not be permitted to exceed 85 °C absolute duly considering the maximum charger panel inside temperature. Calculations to show what maximum junction temperature shall be and what the heat sink temperature shall be when operating at 200% and 100% load current continuously duly considering the maximum surrounding air temperature of 50°C outside the panel have to be submitted. Necessary surge protection devices and rectifier type fast acting fuses shall be provided in each arm of the rectifier connections.

1.4.3 System Concept for 220 V DC system

- a) First float cum boost charger shall be normally ON in float mode, supplying the D.C. load and at the same time trickle charging the battery and shall (a) provide occasional equalizing charge (b) boost charge the battery up to 2.7/1.7 Volts per cell as required.
- b) The characteristics shall be such that if load is high and exceeds the charger capacity, the excess load shall be supplied by the battery.
- c) The second float-cum-boost charger shall be normally in stand-by (auto float/charge) mode and shall come into the circuit automatically (a) to take over the functions of first float cum boost charger in case of its failure (b) to provide occasional equalizing charge as required, (c) boosting charge the battery up to 2.7/1.7 Volts per cell.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[9]	25.09.2014

- d) The float-cum-boost charger shall also have provision for float, equalizing, and boost charging the battery through manual selection. On failure of station A.C. supply, float-cum-boost charger shall go out of service and battery shall take over to supply emergency loads.

1.4.4 Operational requirements of charger

- a) The float-cum-boost charger shall be sized to restore the fully discharged battery to full charge condition in ten (10) hours with 10% margin over maximum charging rate and also to operate as a float charger.
- b) The batteries & chargers shall be so designed that the maximum fault level on DC DB is limited to 15KA (Indicative only; the actual value shall be decided by the contractor after substantiating the same by calculation.)
- c) The battery shall be trickle charged at 2.15 to 2.25 V per cell and 1.4 to 1.42V per cell for lead acid and Ni-Cd battery respectively. All chargers shall also be capable of boost charging the associated battery at 2.0 to 2.7 V per cell for lead acid and 1.53 to 1.7V for Ni Cd at the desired rate. The chargers shall be designed to operate, as mentioned above, at an ambient air temperature of 50 °C.
- d) Necessary interlocks shall also be provided to avoid accidental boost mode operation when loads are connected to the bus.
- e) The battery chargers as well as their automatic regulators shall be of static type. Battery chargers shall be capable of continuous operation at the respective rated load in trickle mode i.e. trickle charging the associated lead acid battery/Ni-Cd battery while supplying the DC loads.
- f) Battery chargers shall have a selector switch for selecting the battery charging mode i.e. whether trickle / float or Boost charging.
- g) All battery chargers shall be provided with facility both automatic and manual control of output voltage and current. A selector switch shall be provided for selecting the mode of output voltage / current control, whether automatic or manual. Means shall be provided to avoid current / voltage surges of harmful magnitude/ nature which may arise during changeover from Auto to Manual mode or vice versa under normal operating condition.
- h) Soft start feature shall be provided to build up the voltage to the set value slowly within fifteen (15) seconds. The chargers shall have load limiters which shall cause, when the voltage control is in automatic mode, a gradual lowering of the output voltage when the DC load current exceeds the load limiter setting of the charger. The load limiter characteristic shall be such that any sustained overload or short circuit in DC system shall neither damage the charger nor shall it cause blowing of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[10]	25.09.2014

any of the charger fuses. The charger shall not trip on overload or external short circuit. After clearance of fault, the charger voltage shall build up automatically when working in automatic mode.

- i) When on automatic control mode, during trickle / float charging, the charger output voltage shall remain within (\pm) 1% of the set value for AC input voltage variation of (\pm) 10%, frequency variation of (+) 3 / (-) 5%, a combined voltage and frequency variation of 10% (absolute sum) and a continuous DC load variation from zero to full load. Uniform and step less adjustment of voltage setting (in both manual and automatic modes) shall be provided on the front of the charger panel covering the entire trickle / float charging output range specified. Step less adjustment of the load limiter setting shall be possible from 80% to 100% of the rated output current for trickle / float charging mode.
- j) During boost charging, the battery chargers shall operate on constant current mode (when automatic voltage regulator is in service). It shall be possible to adjust the boost charging current continuously over a range of 50% to 100% of the rated output current for Boost charging mode. The charger output voltage shall automatically go on rising, when it is operating on boost mode, as the battery charges up. For limiting the output voltage of the charger, a potentiometer shall be provided on the front of the panel, whereby it shall be possible to set the upper limit of this voltage anywhere in the output range specified for boost charging mode. All voltage and current setting potentiometers shall be vernier type.
- k) Energizing the chargers with fully charged battery connected plus 10% load shall not result in output voltage greater than 110% of the voltage setting. Time taken to stabilize, to within the specified limits as mentioned elsewhere shall be less than fifteen (15) seconds.
- l) Momentary output voltage of the charger, with the battery connected shall be within 94% to 106% of the voltage setting during sudden load change from 100% to 20% of full load or vice versa. Output voltage shall return to, and remain, within the limits specified as mentioned elsewhere in less than 2 seconds after the above mentioned change.
- m) The charger manufacturer may offer an arrangement in which the voltage setting device for trickle/ float charging mode is also used as output voltage limit setting device for Boost charging mode, and the load limiter of the trickle / float charging mode is also used as Boost charging current setting device.
- n) Suitable filter circuits shall be provided in all the chargers to limit the ripple content (peak to peak) in the output voltage to 1% irrespective of the DC load, even when they are not connected to a battery.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[11]	25.09.2014

1.4.5 Auxiliary Equipment

- a) DC Voltmeter, DC ammeter and AC voltmeter in 96 mm square shall be provided for each charger. The instruments shall be 240 scale, antiglare glass, flush mounted type, dust proof and moisture resistant. The instrument shall have easily accessible means from zero adjustments. The instruments shall be of 1.5 accuracy class.
- b) In addition to above, following metering provision shall be given for remote metering / recording at PLC/DCS
 - i. Battery Voltage
 - ii. DC voltage of float & Boost charger
 - iii. DC current of float & Boost charger
 - iv. DC load voltage
 - v. DC load current
 - vi. DC Voltage and Current at FCBC
 - vii. Centre Zero Ammeter with Shunt to read Discharge/Charge current
 - viii. Ammeter for Battery Trickle Charge current
 - ix. DC Bus Voltmeter indicating - +ve to Earth, -ve to Earth and +ve to -ve with Selector switch.

The following indications shall be provided

- i. AC Supply – R,Y,B Healthy
- ii. DC supply – Available
- iii. Charger in Float Mode
- iv. Charger in Equalising mode
- v. Charger in Boost mode
- vi. Charger tripped on fault
- vii. D.C Earth fault sensing & alarm

Suitable soft link to be provided for interfacing with DDCMIS.

c) Air Break Switches

All chargers shall have AC input and DC output switches of air break, single throw, load break and fault make type. The contacts of the switches shall open and close with a snap action. Switches shall be rated for 120% of maximum continuous load. 'ON' and 'OFF' position of the switch shall be clearly indicated.

d) Control and Selector Switches

Control and selector switches shall be rotary, stay put type with escutcheon plates showing the functions and positions. The switches shall be of sturdy construction and suitable for mounting on panel front. Switches with shrouding of live parts and sealing of contacts against dust ingress shall be preferred. The contact ratings shall be at least the following:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[12]	25.09.2014

- i. Make and carry continuously - 10 Amps
- ii. Breaking current at 220V DC - 0.5 Amp (inductive)
- iii. Breaking current at 240V AC - 5 Amp. at 0.3 p.f.

e) Fuses

Fuses shall be of HRC cartridge fuse link type. Fuses shall be mounted on fuse carriers which are mounted on fuse bases. Wherever it is not possible to mount fuses on fuse carriers, fuses shall be directly mounted on plug in type bases. In such cases one insulated fuse pulling handle shall be supplied for each charger. Kick-off fuses (trip fuses) with alarm contacts shall be provided for all DC fuses.

f) Indicating Lamps

Three (3) indicating lamps shall be provided to indicate AC supply availability. The indicating lamp shall be of panel mounting, LEDs and capable of clear status indication under the normal room illumination. The lamps shall be replaceable from front. The lamp covers shall be preferably screwed type, unbreakable and moulded from heat resistant material.

g) Blocking Diode

Blocking diode shall be provided in the output circuit of each charger to prevent current flow from the Battery into the charger.

h) Annunciation System

Following annunciation shall be provided for local and remote indications in all chargers(List is indicative only)

- i. AC supply failure
- ii. Rectifier fuse failure
- iii. Surge circuit fuse failure
- iv. Filter capacitor fuse failure
- v. Load limiter operated
- vi. Charger fail / trip
- vii. Battery on Boost
- viii. Battery on Trickle
- ix. DC output fuse failure
- x. Positive grounded
- xi. Negative grounded
- xii. Battery fully discharged
- xiii. AC input under voltage
- xiv. DC voltage low
- xv. DC voltage high
- xvi. DC system earth fault

The annunciation system shall have audio-visual arrangement and shall incorporate acknowledge, reset and test push buttons. On occurrence of fault, the corresponding window lights up and shall stay in lighted

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[13]	25.09.2014

condition till the fault is cleared and the reset push button is pressed. At least 20% spare annunciation windows with accessories shall be provided.

i) Lamp / Space Heaters / Receptacles

The charger panels shall be provided with:

- i. Internal illumination lamp with door switch.
- ii. Space heater with thermostat control.
- iii. 3-pin 5A receptacle with plug.
- iv. Lamp, heater and receptacle circuits shall have individual switch fuse units/MCB.

1.4.6 Battery Accessories

Each battery shall be furnished complete with following:

- a) First charge of electrolyte plus 10% extra.
- b) Teak wood racks with 3 coats of anti-acid paints.
- c) Stand insulators 5% extra.
- d) Cell inter-connectors 5% extra and one extra end take-off.
- e) Lead-coated connection hardware 5% extra
- f) Cell numbering tag with fixing arrangements
- g) Insulated cable clamps with hardware
- h) Six (6) extra cell with all accessories but without acid
- i) In addition to the above each battery shall be furnished with a set of following accessories.
- j) One (1) Interconnector bolt wrench
- k) One (1) Hydrometer syringe
- l) One (1) Thermometer with specific gravity correction scale.
- m) One (1) Cell testing voltmeter with leads.
- n) One (1) Pocket thermometer
- o) One (1) set of Acid resisting funnels
- p) One (1) set of Acid resisting jugs of adequate capacity
- q) One (1) set of Rubber aprons
- r) One (1) set of Rubber gloves
- s) PVC spill trays under the battery cells
- t) Spanner for cells

Catalogues and Instruction manuals of battery and battery charger to be furnished.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[14]	25.09.2014

1.4.7 Painting

- a) All surfaces shall be sand blasted, pickled and grounded as required to produce a smooth, clean surface free of scale, grease and rust.
- b) After cleaning, the surfaces shall be given a phosphate coating followed by 2 coats of high quality lead oxide primer and stoved after each coat.
- c) The equipment shall be finished in Siemens Gray RAL: 9002 color with two coats of epoxy based powder coated paint except end covers and RAL 5012 for end covers. The coating shall be done electro statically followed by stoving.
- d) Sufficient quantity of touch-up paint shall be furnished for application at site.

1.4.8 Installation

- a) The battery room floor shall be acid resistant type and walls shall have acid resistant tiles up to a suitable height. Alternatively acid resistant paints are also acceptable. Adequate ventilation shall be provided in the battery room for the removal of hydrogen.
- b) The Battery charger along with D.C. distribution board shall be located in separate rooms.
- c) After erection and connection of the Battery Charger, the contractor shall complete the charging discharging cycles recommended by the manufacturer. The contractor shall rig up a suitable discharge resistor for this purpose.
- d) Connection from Battery terminals shall be made by means of cables. Lead coated terminal connector shall be furnished for this purpose.

1.5 Tests

1) Type Test

For each type of Battery and battery charger, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within last [five] years from the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last [five] years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[15]	25.09.2014

II) Routine Test

All equipment shall be completely assembled, wired, adjusted and routine tested as per relevant IS / IEC Standards at manufacturer's works in the presence of consultant / purchaser or his representative.

All Battery, Battery chargers, Inverters and its components thereof shall be subject to shop tests as per relevant IS/IEC standards. The tests on Battery chargers shall include but not limited to the following:

- a) Voltage regulation check from 0 to 100% loads with $\pm 10\%$ input voltage variation.
- b) Ripple content measurement.
- c) D.C short circuit test to prove ability of current limit.
- d) Measurements of transient overshoot/undershoot during switching ON/load throw-off.
- e) Current limiter operation.
- f) Special tests for electrical equipment, when specified in relevant Indian / International standard shall be carried out on at least one item of each rating.

III) Test Witness

[The tests shall be carried out in presence of the Owner's representative, for which a minimum 7 days notice shall be given by the Bidder. The Bidder shall obtain the Owner's approval for the type test procedure before conducting the type test. The test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc. for the type test(s) to be carried out.]

IV) Test Certificates

- a) Certified copies of all tests carried out at works and at site shall be furnished in requisite no. of copies for approval of the Owner.
- b) The equipment shall be dispatched from works only after receipt of Owner's written approval of shop test reports. Drawings, Data & Manuals:

1.6

Drawings, Data & Manuals

1. Following drawings/ data and Manuals to be submitted for approval:

- a) [Dimensional battery layout diagram and plan & section.
- b) Connection details of take-off terminals.
- c) Dimensional general arrangement drawings of battery charger clearly showing device dispositions, cable entry, space requirement, etc.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E6	[16]	25.09.2014

- d) Sectional views of battery charger.
- e) Charger foundation plan and loading.
- f) Charger schematics and wiring diagrams.
- g) Test reports
- h) Detailed bill of materials
- i) Any other relevant drawing or data necessary for satisfactory installation, operation and maintenance.
- j) Instruction manuals of battery and battery Charger. The manual shall clearly indicate method of installation, check-ups, and tests to be carried out before commissioning of the equipment.
- k) Bidders shall note that the drawings, data and manuals listed herein are minimum requirements only. The Bidders shall ensure that other necessary write-ups, curves and information required to fully describe the equipment are submitted with their bids].

ANNEXURES-E7

1.0 HV CABLEs

1.1 General

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of HV cables complete with all accessories for efficient and trouble-free operation for of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified or supplemented by this specification.

Table: 1.0

IS: 2982	:	Copper conductor in insulated cables and cords.
IS: 3961	:	Recommended current ratings for cables.
IS: 3975	:	Mild steel wires, strips and tapes for armouring cables
IS: 5609	:	Specification for low frequency wirers and cables with PVC insulation and PVC sheath
IS:5831	:	PVC insulation and sheath of electric cables
IS: 6380	:	Specification of elastomeric insulation of sheath of electric cables.
IS:7098(Part II)	:	XLPE insulated PVC sheathed cables for working voltage from 3.3kV up to and including 33kV
IS: 8130	:	Conductors for insulated electric cables and flexible cords
IEC: 60	:	High voltage test techniques
IEC: 230	:	Impulse tests on cables and their accessories
IEC: 287	:	Calculation of the continuous current rating of the

		cables(100% load factor).
IEC: 288	:	Nominal cross sectional area and composition of conductor of insulated cables.
IEC-331	:	Fire resisting characteristics of electric cables
IEC: 332-1	:	Test on electric cables under fire conditions.
IEEE: 383	:	Standard for type test for class IE electric cables, filled splices and connection for nuclear power generation station.
IEC: 502	:	Extruded solid dielectric insulated power cables for rated voltages from 1kV upto 30kV.
IEC: 540	:	The methods for insulations and sheath of electric cables and cords(elastomeric and thermoplastic compounds)
IEC-754-I	:	Test method for acid gas generation
NEMA-WC-5	:	Thermoplastic insulated wires and cables for transmission and distribution of electrical energy.
ASTM-D-2843	:	Standard test method for density of smoke from burning/decomposition of plastics.
ASTM-D-2863	:	Test for determination of oxygen index.
CEA	:	CEA Regulations
CEA	:	Standard Technical Specifications For Main Plant Package

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted subject to approval of the Owner. In such case, copies of the English version of the standards adopted shall have to be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended upto date and relevant IS Codes of Practice. In addition, other rules and regulations applicable to the work shall be followed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[2]	25.09.2014

1.3 Design Criteria

- a) The cables shall be installed in hot, humid tropical atmosphere with ambient temperature of 50°C.
- b) All HV cables shall be suitable for operation under the following voltage & frequency variations:

Voltage Variation : (±) 10%

Frequency Variation : (+) 3% to (-)5%

Combined Variation of Voltage & Frequency : 10% (absolute sum)

- c) The HV power cables shall be 6600V unearthed grade, single/multi core stranded Aluminum conductor, extruded XLPE insulated with extruded PVC inner sheath, armoured and overall sheath with extruded Flame Retardant Low Smoke (FRLS) PVC compound (Type ST-2). These cables shall conform to IS 7098 (Part II).
- d) The continuous and short time current carrying capacity of XLPE insulated cables shall be based on maximum operating temperature of 90°C and 250°C respectively.
- e) HV power cables shall be sized taking into account the following derating factors:
 - i. Max Ambient air temperature
 - ii. Max Ambient ground temperature
 - iii. Grouping of cables/Method of laying
 - iv. Depth of laying for cable buried in ground.
 - v. Soil thermal resistivity for cable buried in ground.
- f) HV cables shall be chosen taking into account the following factors:
 - i. System Fault level.
 - ii. Maximum time for fault clearance (i.e, operating time of the backup protection relays plus the time of operation of the circuit breakers).
 - iii. Full load current of the circuit.
 - iv. Short circuit current and duration (for breaker protected cables)
 - v. Installation conditions.
 - vi. Voltage drop under normal running and starting condition
 - vii. Voltage drop at motor terminals shall be within permissible limit during starting & normal running. i.e 5% during steady state and 15% during transient or starting at motor terminal.
 - viii. The cable should withstand the maximum fault current corresponding to the particular voltage level for the minimum time before the fault is cleared.
 - ix. Consideration shall also be given to limit the cable to the nearest standard sizes instead of using too many types.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[3]	25.09.2014

1.4 Specific Requirements

1.4.1 Type of Cable

a) HV cables shall be 6600V unearthed grade, heavy duty, stranded aluminium conductor, XLPE insulated, extruded black FRLS PVC inner sheathed, armoured and overall FRLS extruded black PVC outer sheathed (Type ST-2) cables conforming to IS: 7098 part II.

1.4.2 Conductor

The cable conductor shall be made from standard Aluminum to form compact conductor having a resistance within the limits specified.

1.4.3 Conductor Shield

The conductor having a semi-conducting screen shall ensure perfectly smooth profile and avoid stress concentration. The conductor screen shall be provided over the conductor by applying non metallic semi conducting tape or by extrusion of semi conducting tape or by extrusion of semi-conducting compound or a combination of the two. The semi conducting polymer shall be cross linked for XLPE cables.

1.4.4 Insulation

The insulation of the HV cables shall be XLPE type. It shall be designed and manufactured for the specified system voltage. The manufacturing process shall ensure that insulation shall be free from voids. The insulation shall withstand mechanical and thermal stresses under steady state and transient operating conditions. The extrusion method should give a very smooth interface between semi conducting screen and insulation. The insulation of the cables shall be of high standard quality.

1.4.5 Insulation Shield

A non magnetic semi conducting shield shall be put over the insulation to confine electrical field to the insulation. The XLPE cable insulation shield shall be strippable.

The metallic layer of the insulation shield shall be grounded at least at one location in the cable's run. In the case of single conductor cable, care should be taken with regard to ampacity when grounding at more than one point.

For all the cables having insulation shield, it shall have some form of stress relief measure at every splice at termination. This can be stress cones, moulded devices, heat shrink or cold shrink kits. All kits must be suitable for the voltage class and cable size.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[4]	25.09.2014

1.4.6 Inner Sheath

The sheath shall be suitable to withstand the site conditions and the desired temperature. It shall be of adequate thickness and applied by a continuous process to produce a sheath of consistent quality free from all defects. PVC sheath shall be extruded with FRLS properties.

1.4.7 Armour

HV cables shall be provided with galvanized steel wire/strip armouring. The hard drawn aluminium wire for armour shall be of H4 grade, as per IS-8130 (having tensile strength above 150 N/mm²). The diameter of the aluminium wire shall be as per the table for the dimensions of the galvanized steel wire armour given in the relevant standard.

1.4.8 Outer sheath

Outer sheath shall be extruded layer of FRLS PVC compound (ST-1). Sheath shall be resistant to water, Ultra Violet radiations, fungus, termites and rodent attacks. The color of the sheath shall be black.

1.4.9 Packing

[Cables shall be supplied in non-returnable drums]. Drum lengths shall be such so that cable joints are totally avoided. The drums shall be of heavy construction. *[All wooden parts shall be manufactured from seasoned wood.]* All ferrous parts used shall be treated with suitable rust preventive finish or coating to avoid rusting during transit or storage. *[Wooden cable drum shall be treated by immersing in copper-nitrate solution.]*

The ends of each cable length shall be sealed before shipment. Heat shrinkable cable cap shall be used for this purpose.

[A label shall be securely attached to each end of the reel indicating the Purchaser's order number, Owner's identification mark, length, type, voltage grade, conductor size and number of cores of the cable.] A tag containing the same information shall be attached to the leadings end of the cable inside. An arrow and necessary instructions shall be marked on the drum indicating the direction in which it should be rolled. Drum numbers are to be indicated on the cable drums. Drum length shall not be less than 500m or as per required length.

1.4.10 Identification of cores:

HV power cables shall be identified by color code.

1.4.11 Constructional Requirements

- a) Cable shall have suitable filters laid up with the conductors to provide a substantially circular cross section before the sheath is applied. Fillers

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[5]	25.09.2014

shall be suitable for the operating temperature of the cable and compatible with the insulating material. All materials shall be new, unused and of finest quality.

b) Workmanship shall be neat, clean and of the highest grade.

c) Special Properties:

All the above cables shall be conforming to the relevant Indian/IEC standard in general, with the following special properties:

- i. Oxygen Index of the outer sheath shall not be less than 29, when tested as per ASTM-D-2863.
- ii. Temperature Index of the outer sheath shall not be less than 250 °C, when tested as per ASTM-D-2863.
- iii. Halogen acid contents in outer sheath shall not be more than 20%, when tested as per IEC-60754.
- iv. The maximum smoke density in percent light absorption should not exceed 60% in case of PVC compound and 20% in case of fire survival cables, when tested as per ASTM-D-2843.
- v. Swedish chimney test as per SS-4241475 class F3 and ladder test for flammability as per IEEE-383.
- vi. The cables shall be tested for resistance to Ultraviolet radiation. The retention values of tensile strength and ultimate elongation after test shall be minimum 60% of tensile strength.
- vii. Outer sheath of cable shall be subject to tests for water absorption. The methodology shall be as per IS 10810 part 33.

1.4.12 Joints and Terminations

Materials of construction for a joint/termination shall perfectly match with the dielectric chemical and physical characteristics of the associated cables. The material and design concepts shall incorporate a high degree of operating compatibility between the cable and joints. The protective outer covering (jacket) used on the joints/terminations shall have the same qualities as that of the cable outer sheath in terms of ambient/operating temperature withstand capability and resistance to hazardous environments and corrosive elements. No joints shall be allowed unless the cable drawn length is exceeded.

1.4.13 Cable Identification

Cable identification shall be provided by embossing the following on the outer sheath:

- a. [Manufacturer's name or trade mark]
- b. Voltage grade
- c. Year of manufacture
- d. Type of insulation.
- e. Type of outer sheath e.g. "FRLS" etc.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[6]	25.09.2014

- f. ISI marks
- g. Nominal cross sectional area of the conductor & no of cores
- h. Sequential marking
- i. Owner's identification mark]

1.4.14 Fire Proof sealing system

- i) General
 - a) Fire proof sealing system shall consist of Fire-stops/fire-seals for sealing of cable/cable tray and conduit/pipe penetrations, both horizontal and vertical, through brick or RCC walls/floors, to prevent the spread of fire from one area, which is separated from others by fire-resistant barriers.
 - b) 'Fire-breaks' provided on long runs of cable racks/trays to prevent the propagation of fire along the cable rack, within a single fire-area or fire- zone.
 - c) The FPS system shall also include all the necessary accessories and equipment required for supporting, holding in position, fixing and installation of the fire-stop/fire-break.
 - d) The FPS system shall comply in all respects with the requirements of the codes and standards listed below

IEEE-634 ASTM-E-814

ANSI-IEEE-383 IEC-331 IEC-332

ii) Fire stop/ seal

The FPS system adopted for cables or cable trays penetrating through walls and floor constitute a openings, or cables passing through embedded conduits / pipes / pipe- sleeves, fire stop / seal', which is meant to prevent spreading of fire between areas separated by fire-resistant barriers.

iii) Fire Break

The fire proofing system, other than fire-stops, adopted to retard flame propagation long runs of horizontal or vertical cable trays in the same fire zone or area, in an event of a fire, shall constitute a 'fire-break' and shall be provided by applying a suitable fire –resistance coating on cables and cable trays for the required length, with or without a fire resistant panel, at the point of the fire break to obtain the fire-rating specified.

iv) Application of fire proof sealing system

Fire stops shall be provided for cable penetration openings listed below

The passage of cables/cable trays pipe sleeves/embedded conduits through walls / floors.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[7]	25.09.2014

Vertical raceways, which carry cables between successive floors, through openings provided in the RCC floor slab, shall be sealed by fire stops at each floor level.

Cable entry through openings in floor slabs below HT/LT switchgear, MCCs, various Control and relay panels and other bottom entry panels, shall be effectively sealed by fire stop

Location of fire breaks

Firebreaks shall be provided on both cable rack and trenches at all cable tray Intersections and tee-offs.

On linear runs of cable trays between fire stops or fire breaks, fire breaks shall be provided at intervals of 15 metres on horizontal cable runs and 5 m on vertical cable runs.

Fire breaks in linear runs of cable trenches between intersections and tee-offs shall be provided at intervals of 30 metres.

Bidder shall furnish the test certificates for the fire stops and fire breaks after award of contract for Owner/Owner's Representative review. If the certificates are not satisfactory all the tests shall be conducted free of cost. The offered system i.e. fire stops and fire breaks shall be identical (or better) with the system which is successfully type tested for the specified rating i.e. the composition density of the material, thickness of coating in case of fire breaks and any other properties of the material / system offered shall be identical or better than the tested system and shall be subject to Owner / Owner's Representative.

v) Test on fire stops

The fire stops shall be subjected to the following type tests:

- a. Fire Rating Test
- b. Hose Stream Test

Type tests shall be conducted on different fire stop test specimens described above as per IEEE-634. The sizes of the fire stop test specimens shall be similar to the largest of the sizes being used in the plant.

Preconditioning of fire stop test specimens before conducting the fire rating and hose stream tests, each test specimen shall be preconditioned for thermal ageing, water immersion and vibration.

Test on Fire Stops

During the fire rating test, the transmission of heat through the cable penetration fire stop shall not raise the temperature on its unexposed surface above the self ignition temperature of the outer cable covering, the cable penetration fire stop material, or material in contact with the cable

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[8]	25.09.2014

penetration fire stop, with a maximum temperature limit on the unexposed surface of 200°C.

Tests on fire breaks

Firebreaks shall undergo the following tests as per ANSI-IEEE-383:

- Ampacity test
- Flame test

1.5 Tests

1.5.1 Type Test

For each type & rating of HV cables, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within [last five] years from the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last five years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

The list of type tests are as follows:

- a) Tests on conductor:
 - i. Annealing test (for copper)
 - ii. Tensile test (for aluminum)
 - iii. Wrapping test (for aluminum)
 - iv. Conductor resistance test.
- b) Test for armouring wires/strips
- c) Test for thickness of insulation and sheath
- d) Physical tests for insulation and outer sheath:
 - i. Tensile strength and elongation at break
 - ii. Ageing in air oven
 - iii. Shrinkage test
 - iv. Hot deformation
 - v. Loss of mass in air oven
 - vi. Heat shock test
 - vii. Thermal Stability
- e) Insulation resistance test
- f) High voltage test (water immersion test)
- g) High voltage test at room temperature
- h) Flammability test

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E7	[9]	25.09.2014

1.5.2 Routine Test

Cables shall be subject to acceptance and routine tests as per IS codes. Acceptance tests and FRLS test as specified earlier shall be conducted on cables and the same shall be witnessed by purchaser.

The FRLS test shall be carried out on one cable of each batch of compound used. Other acceptance tests shall be carried out on drums selected as per sampling plan as indicated in IS. Test certificates for routine acceptance and special tests shall be furnished by the Bidder for review and approval of purchaser.

1.6 Drawings, Data and Manuals

The following drawings/documents and calculation as listed below but not limited to shall be furnished along with the bid for review

- [Cable datasheets and cross sectional drawings]
- [Cable sizing calculation]
- [QAPs & Test Reports]
- [Relevant catalogues]
- [Estimated weight of cable and cable drum]

ANNEXURES-E8

1.0 LV CABLES

1.1 General

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of LV cables for power & control applications complete with all accessories for efficient and trouble-free operation for of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client]..

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified or supplemented by this specification.

Table: 1.0

IS:1554(Part I)	:	PVC insulated (heavy duty) electric cables for working voltage up to and including 1100V
IS: 2982	:	Copper conductor in insulated cables and cords.
IS: 3961	:	Recommended current ratings for cables.
IS: 3975	:	Mild steel wires, strips and tapes for armouring cables
IS: 5609	:	Specification for low frequency wirers and cables with PVC insulation and PVC sheath
IS:5831	:	PVC insulation and sheath of electric cables
IS: 6380	:	Specification of elastomeric insulation of sheath of electric cables.
IS:7098(Part I)	:	XLPE insulated PVC sheathed cables for working voltage up to 1.1kV
IS: 8130	:	Conductors for insulated electric cables and flexible cords
IEC: 60	:	High voltage test techniques

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[1]	25.09.2014

IEC: 230	:	Impulse tests on cables and their accessories
IEC: 287	:	Calculation of the continuous current rating of the cables(100% load factor).
IEC: 288	:	Nominal cross sectional area and composition of conductor of insulated cables.
IEC-331	:	Fire resisting characteristics of electric cables
IEC: 332-1	:	Test on electric cables under fire conditions.
IEEE: 383	:	Standard for type test for class IE electric cables, filled splices and connection for nuclear power generation station.
IEC: 502	:	Extruded solid dielectric insulated power cables for rated voltages from 1kV upto 30kV.
IEC: 540	:	The methods for insulations and sheath of electric cables and cords(elastomeric and thermoplastic compounds)
IEC-754-I	:	Test method for acid gas generation
NEMA-WC-5	:	Thermoplastic insulated wires and cables for transmission and distribution of electrical energy.
ASTM-D-2843	:	Standard test method for density of smoke from burning/decomposition of plastics.
ASTM-D-2863	:	Test for determination of oxygen index.
CEA	:	CEA Regulations
CEA	:	Standard Technical Specifications For Main Plant Package

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted subject to approval of the Owner. In such case, copies of the English version of the standards adopted shall have to be submitted along with the bid.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[2]	25.09.2014

The electrical installation shall meet the requirements of Indian Electricity Rules as amended upto date and relevant IS Codes of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- a) The cables shall be installed in hot, humid tropical atmosphere with ambient temperature of 50°C.
- b) All LV cables shall be suitable for operation under the following voltage & frequency variations:

Voltage Variation : (±) 10%

Frequency Variation : (+) 3% to (-)5%

Combined Variation of Voltage & Frequency : 10% (absolute sum)

- c) The LV power cables shall be 1100V grade, single/multi core stranded Aluminum conductor, extruded XLPE/PVC insulated with extruded PVC inner sheath, armoured and overall sheath with extruded Flame Retardant Low Smoke (FRLS) PVC compound (Type ST-1). These cables shall conform to IS 7098 (Part I) for XLPE and 1554(part 1) for PVC insulation.
- d) The control cables shall be 1100 V grade, multi core, stranded annealed high conductivity copper with extruded PVC insulated inner sheath, armoured and overall sheath with extruded Flame Retardant Low Smoke (FRLS) PVC compound (Type ST-1).
- e) The continuous and short time current carrying capacity of XLPE insulated cables shall be based on maximum operating temperature of 90°C and 250°C respectively.
- f) The continuous and short time current carrying capacity of PVC insulated cables shall be based on maximum operating temperature of 70°C and 160°C respectively.
- g) LV power cables shall be sized taking into account the following derating factors:
 - i. Max Ambient air temperature
 - ii. Max Ambient ground temperature
 - iii. Grouping of cables/Method of laying
 - iv. Depth of laying for cable buried in ground.
 - v. Soil thermal resistivity for cable buried in ground.
- h) Power cables shall be chosen taking into account the following factors:
 - i. System Fault level.
 - ii. Maximum time for fault clearance (i.e, operating time of the backup protection relays plus the time of operation of the circuit breakers).
 - iii. Full load current of the circuit.
 - iv. Short circuit current and duration (for breaker protected cables)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[3]	25.09.2014

- v. Installation conditions.
- vi. Voltage drop under normal running and starting condition
- vii. Voltage drop at motor terminals shall be within permissible limit during starting & normal running. i.e 5% during steady state and 15% during transient or starting at motor terminal.
- viii. The cable should withstand the maximum fault current corresponding to the particular voltage level for the minimum time before the fault is cleared.
- ix. Consideration shall also be given to limit the cable to the nearest standard sizes instead of using too many types.
- x. The minimum size of cables to be used shall be as follow :
 - Aluminium conductor : 6 Sq. mm.
 - Copper conductor : 2.5 Sq. mm

1.4 Specific Requirements

1.4.1 Type of Cable

- a) LV power cables shall be 1100V grade, heavy duty, stranded aluminium conductor, XLPE/ PVC insulated, extruded black FRLS PVC inner sheathed, armoured and overall FRLS extruded black PVC outer sheathed (Type ST-1) cables conforming to IS: 1554(Part 1) for PVC insulation and IS 7098(Part 1) for XLPE insulation.
- b) Control Cables shall be 1100 V grade, heavy duty with annealed high conductivity stranded copper conductor, PVC insulated, FRLS PVC inner sheathed, armoured and FRLS extruded black PVC outer sheathed (Type ST-1) cables conforming to IS : 1554.
- c) LV power cables of size above 35 sq. mm may be provided with XLPE insulation. Bidder shall clearly indicate the type of insulation provided in the technical bid.

1.4.2 Conductor

The cable conductor shall be made from standard Aluminum for LV Power cables and Copper for control cables to form compact conductor having a resistance within the limits specified. All the cables of size 25mm² and above shall have sector shaped conductors.

1.4.3 Insulation

The insulation of the LV power and control cables shall be [XLPE/PVC] type. It shall be designed and manufactured for the specified system voltage. The manufacturing process shall ensure that insulation shall be free from voids. The insulation shall withstand mechanical and thermal stresses under steady state and transient operating conditions. The extrusion method should give a very smooth interface between semi conducting screen and insulation. The insulation of the cables shall be of high standard quality.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[4]	25.09.2014

1.4.4 Inner Sheath

The sheath shall be suitable to withstand the site conditions and the desired temperature. It shall be of adequate thickness and applied by a continuous process to produce a sheath of consistent quality free from all defects. PVC sheath shall be extruded with FRLS properties.

1.4.5 Armour

LV power and control cables shall be provided with galvanized steel wire/strip armouring. The hard drawn aluminium wire for armour shall be of H4 grade, as per IS-8130 (having tensile strength above 150 N/mm²). The diameter of the aluminium wire shall be as per the table for the dimensions of the galvanized steel wire armour given in the relevant standard.

1.4.6 Outer sheath

Outer sheath shall be extruded layer of FRLS PVC compound (ST-1). Sheath shall be resistant to water, Ultra Violet radiations, fungus, termites and rodent attacks. The color of the sheath shall be black.

1.4.7 Packing

[Cables shall be supplied in non-returnable drums]. Drum lengths shall be such so that cable joints are totally avoided. The drums shall be of heavy construction. *[All wooden parts shall be manufactured from seasoned wood.]* All ferrous parts used shall be treated with suitable rust preventive finish or coating to avoid rusting during transit or storage. *[Wooden cable drum shall be treated by immersing in copper-nitrate solution.]*

The ends of each cable length shall be sealed before shipment. Heat shrinkable cable cap shall be used for this purpose.

[A label shall be securely attached to each end of the reel indicating the Purchaser's order number, Owner's identification mark, length, type, voltage grade, conductor size and number of cores of the cable.] A tag containing the same information shall be attached to the leadings end of the cable inside. An arrow and necessary instructions shall be marked on the drum indicating the direction in which it should be rolled. Drum numbers are to be indicated on the cable drums. Drum length shall not be less than the following:

- a) Power cables: 500m
- b) Control cables: 1000m

1.4.8 Identification of cores and spares:

LV power cables shall be identified by color code. However LV control cables shall be identified by the number of its cores.

[Multi-core control cables shall have 20% spare core, minimum one spare.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[5]	25.09.2014

1.4.9 Constructional Requirements

- a) Cable shall have suitable filters laid up with the conductors to provide a substantially circular cross section before the sheath is applied. Fillers shall be suitable for the operating temperature of the cable and compatible with the insulating material. All materials shall be new, unused and of finest quality.
- b) Workmanship shall be neat, clean and of the highest grade.
- c) Special Properties:
All the above cables shall be conforming to the relevant Indian/IEC standard in general, with the following special properties:
 - i. Oxygen Index of the outer sheath shall not be less than 29, when tested as per ASTM-D-2863.
 - ii. Temperature Index of the outer sheath shall not be less than 250 °C, when tested as per ASTM-D-2863.
 - iii. Halogen acid contents in outer sheath shall not be more than 20%, when tested as per IEC-60754.
 - iv. The maximum smoke density in percent light absorption should not exceed 60% in case of PVC compound and 20% in case of fire survival cables, when tested as per ASTM-D-2843.
 - v. Swedish chimney test as per SS-4241475 class F3 and ladder test for flammability as per IEEE-383.
 - vi. The cables shall be tested for resistance to Ultraviolet radiation. The retention values of tensile strength and ultimate elongation after test shall be minimum 60% of tensile strength.
 - vii. Outer sheath of cable shall be subject to tests for water absorption. The methodology shall be as per IS 10810 part 33.

1.4.10 Joints and Terminations

Materials of construction for a joint/termination shall perfectly match with the dielectric chemical and physical characteristics of the associated cables. The material and design concepts shall incorporate a high degree of operating compatibility between the cable and joints. The protective outer covering (jacket) used on the joints/terminations shall have the same qualities as that of the cable outer sheath in terms of ambient/operating temperature withstand capability and resistance to hazardous environments and corrosive elements. No joints shall be allowed unless the cable drawn length is exceeded.

1.4.11 Cable Identification

Cable identification shall be provided by embossing the following on the outer sheath:

- a. [Manufacturer's name or trade mark]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[6]	25.09.2014

- b. Voltage grade*
- c. Year of manufacture*
- d. Type of insulation.*
- e. Type of outer sheath e.g. "FRLS" etc.*
- f. ISI marks*
- g. Nominal cross sectional area of the conductor & no of cores*
- h. Sequential marking*
- i. Owner's identification mark]*

1.5 Tests

1.5.1 Type Test

For each type & rating of LV power and control cables, the Bidder shall submit for Owner's approval the reports of all the type tests as per relevant standards and carried out within [last five] years from the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been conducted at an independent laboratory.

In case the Bidder is not able to submit report of the type test(s) conducted within last five years from the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Bidder shall conduct all such tests under this contract free of cost to the Owner and submit the reports for approval.

The list of type tests are as follows:

- a) Tests on conductor:
 - i. Annealing test (for copper)
 - ii. Tensile test (for aluminum)
 - iii. Wrapping test (for aluminum)
 - iv. Conductor resistance test.
- b) Test for armouring wires/strips
- c) Test for thickness of insulation and sheath
- d) Physical tests for insulation and outer sheath:
 - i. Tensile strength and elongation at break
 - ii. Ageing in air oven
 - iii. Shrinkage test
 - iv. Hot deformation
 - v. Loss of mass in air oven
 - vi. Heat shock test
 - vii. Thermal Stability
- e) Insulation resistance test
- f) High voltage test (water immersion test)
- g) High voltage test at room temperature
- h) Flammability test

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors – Balance of Plant Volume-II, Section-II, Part-B,Annexure-E8	[7]	25.09.2014

1.5.2 Routine Test

Cables shall be subject to acceptance and routine tests as per IS codes. Acceptance tests and FRLS test as specified earlier shall be conducted on cables and the same shall be witnessed by purchaser.

The FRLS test shall be carried out on one cable of each batch of compound used. Other acceptance tests shall be carried out on drums selected as per sampling plan as indicated in IS. Test certificates for routine acceptance and special tests shall be furnished by the Bidder for review and approval of purchaser.

1.6 Drawings, Data and Manuals

The following drawings/documents and calculation as listed below but not limited to shall be furnished along with the bid for review

- [Cable datasheets and cross sectional drawings]
- [Cable sizing calculation]
- [QAPs & Test Reports]
- [Relevant catalogues]
- [Estimated weight of cable and cable drum]

1.7 Ratings and Requirements

1.7.1 L.V. Power and control cables, 1100 V grade

Table: 2.0

S.No.	Technical Particulars	Unit	Parameters	Remarks
1.	System voltage		415 V	
2.	Voltage Grade		1.1 kV	
3.	Ambient Temperature		50°C	
4.	Maximum conductor temperature for continuous operation for XLPE/PVC cables		For XLPE: 90°C For PVC: 70°C	
5.	Maximum conductor temperature for		For XLPE: 250°C For PVC: 160°C

TECHNICAL SPECIFICATION FOR ILLUMINATION SYSTEM

**PREPARED BY
LAHMEYER INTERNATIONAL (INDIA) PVT. LTD.
THE CONSULTANT**

ANNEXURES-E9

1.0 ILLUMINATION SYSTEM

1.1 General

This specification is intended to cover the [design, Engineering, manufacture, assembly, testing at manufacturer's works, supply in properly packed condition for transport to site, Erection, site testing and commissioning] of Illumination System complete with luminaries and all accessories for efficient and trouble-free operation of R&M of Unit No. [...] of [Name of the Power Plant] at [District], [State] for [Name of the Client].

1.2 Codes and Standards

All equipment and materials shall be designed, manufactured and tested in accordance with the latest applicable Indian Standards (IS) / IEC as given below except where modified and/or supplemented by this specification.

Table: 1.0

Code		Name of Standard
IS 1913	:	Electrical lighting fittings- General and safety requirements
IS 2418 - Part I	:	Tubular fluorescent Lamp
IS 3480	:	Flexible steel conduits for electrical wiring
IS 3646 (Part I to III)	:	Code of Practice For Interior Illumination
IS 4012	:	Dust proof electric lighting fittings
IS4013	:	Flame proof enclosure
IS 6665	:	Code of practice for industrial lighting
IS 5077	:	Decorative light fittings
IS 9537 - Part II	:	Rigid steel conduits for electrical installations

Document Number	Rev No.	Description	Page No.	Date of Issue

IS 9583	:	Emergency lighting units
IS 9900	:	High pressure mercury vapor lamp
IS 9974	:	High pressure sodium vapor lamp
IS 10322	:	Luminaries for street lighting
CBIP Manual	:	Substation Equipment, Illumination and Layouts
IES (Illuminating Engineering Society of North America)	:	Application and Reference Volume
IEC 60598	:	Luminaries
CEA	:	CEA regulations and standard technical specification.

Equipment and material conforming to any other standard, which ensures equal or better quality, may be accepted subject to approval of the Owner. In such case, copies of the English version of the standards adopted shall have to be submitted along with the bid.

The electrical installation shall meet the requirements of Indian Electricity Rules as amended up to date and relevant IS Codes of Practice. In addition, other rules and regulations applicable to the work shall be followed.

1.3

Design Criteria

- a. All illumination systems shall be suitable for an ambient temperature of 50 °C and relative humidity of 95%. The illumination systems shall be suitable for operation in a highly polluted environment.
- b. Lighting fixtures shall be suited for the following range of frequency and voltage variations:
 - i. Voltage Variation : $\pm 10\%$
 - ii. Frequency Variation : 50Hz (+)3% to (-)5%
 - iii. Combined Variation of Voltage & Frequency : 10% (absolute sum)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[2]	25.09.2014

- c. All emergency DC lighting systems shall be suited for voltage variation from -15% to + 10% of rated voltage.
- d. The design of the lighting systems shall be such that it shall ensure average lux levels specified for different areas.
- e. The illumination system shall comprise of the following:
 - i. Normal AC lighting
 - ii. Normal cum emergency lighting system
 - iii. 220V DC Emergency lighting system
 - iv. Maintenance 24V AC lighting system
 - v. Portable emergency lights with self contained battery packs.

1.4 Specific Requirements

1.4.1 Scope of work

The scope of work shall include design, preparation of Lighting design and manufacture, supply, unloading at site, storing, laying, fixing, jointing/termination, erection, testing and commissioning of equipment associated with Lighting system for following areas Listed below but not limited to the following:

[Note: With reference to particular package, scope of work shall be modified.]

a) TG Area:

- i) TG Platforms.
- ii) TG area Grade Levels Maintenance area.
- iii) Switchgear room and cable gallery.
- iv) All roads within battery limit.
- v) Perimeter and boundary illumination of the above premises.
- vi) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.

b) Boiler Area:

- i) Boiler Platforms
- ii) Boiler Grade Levels covering coal mill and Maintenance area.
- iii) ESP Platforms
- iv) ESP/FOPH switchgear room and cable gallery.
- v) FOPH area.
- vi) Transfer towers & Conveyor galleries.
- vii) All roads within battery limit.
- viii) Perimeter and boundary illumination of the above premises.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[3]	25.09.2014

- ix) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.
- c) Balance of plant Area:
 - i) Lighting system for Mechanical BOP package like Raw water, Water pre-treatment, Fuel oil, CW / ACW System and Cooling Towers, AC and ventilation Vacuum Pump House, Silo Area, Compressor House, Guard Pond, Effluent Treatment Plant, Chimney, Fire water pump house, Cable galleries, all Switchgear Rooms, Control rooms, all roads within battery limit etc.
 - ii) All roads within battery limit.
 - iii) Perimeter and boundary illumination of the above premises.
 - iv) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.
- d) CHP Area:
 - i) Switchgear rooms
 - ii) All roads within battery limit.
 - iii) Perimeter and boundary illumination of the above premises.
 - iv) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.
- e) AHP Area:
 - i) Switchgear rooms.
 - ii) All roads within battery limit.
 - iii) Perimeter and boundary illumination of the above premises.
 - iv) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.
- f) Electrical Balance of Plant(Switchyard) Area:
 - i) Switchyard control room
 - ii) GIS building (if applicable)
 - iii) Transformer area
 - iv) All roads within battery limit.
 - v) Perimeter and boundary illumination of the above premises.
 - vi) Any other area/premises not specifically mentioned here, but which fall under the battery limit of this package is included in the scope.

1.4.2 Illumination System Description

The plant illumination system shall comprise of the following categories:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[4]	25.09.2014

a. Normal AC lighting

In this system, the lighting circuits shall be fed by the 3 phase, 4 wire normal AC supply from the normal lighting distribution boards (LDB). All the lighting fixtures connected to this system shall be available as long as the 415V station / unit auxiliary service supply is available.

b. Normal cum emergency lighting system

Certain lighting fixtures considered essential shall be connected to this system. In this system the lighting circuits shall be fed from lighting distribution board connected to 415V Normal cum Emergency Switchgear. The lighting fixtures connected to this system shall be available whenever normal supply is available in the plant and also whenever DG set supplies the power to 415V Normal emergency switchgear.

These lighting fixtures will go off for a few seconds when normal supply fails but will be automatically restored when the emergency AC bus is re-energized by automatic transfer to standby DG supply.

[20% of the total fittings shall be fed from Emergency lighting for areas such as Switchgear room and control rooms etc.]

c. Emergency 220 V D.C. Lighting

The Emergency DC Lighting System shall be located strategically in critical operating areas and at emergency exits. Emergency DC lighting shall also be provided in the Control rooms, Switchgear/ MCC rooms and other strategically important areas. These fixtures shall be fed from respective Emergency DC Lighting Panels. The Emergency DC Lighting Panels (DC ELLP) shall be fed from 220V DC Distribution Boards (DCDB).

These lights shall remain normally OFF but on failure of AC supply these lights shall be automatically ON. Tube lights with Electronic choke suitable for 230 V, AC / DC operation or other Energy Efficient Lamps may be used for DC emergency lighting.

d. Maintenance 24 V AC Lighting System

For lighting facilities comprising portable hand lamps and/or connection of portable hand tools etc., required during the routine maintenance work, 24V single phase 3 pin sockets with switches shall be provided at selected points in the areas listed below. Such sockets for routine maintenance shall be clearly identified by colour coding in order to distinguish them from the normal 240V power outlets. Necessary outlets shall be made on the inside walls of the building near equipments.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[5]	25.09.2014

- i. Boiler area: Near inspection manholes on the boiler platforms and near boiler drum at different levels on all four sides.
- ii. TG building: Near HP & LP heaters, turbine flash tank, blow down tank, near condenser water box and near bus duct termination of generator end.
- iii. ESP columns: Near inspection manholes
- iv. Near de-aerator.
- v. Cable galleries.

Any other areas considered necessary identified during detailed engineering.

e. Portable Emergency Lights

This system shall be provided by portable self-contained battery / automatic charger / inverter fed compact fluorescent lamps in isolated buildings / areas where station D.C. supply is not available. These portable emergency light units shall be switched on automatically on loss of normal AC supply. *[Battery packs for portable emergency lights shall be rated for minimum 3 hours duty and the battery shall be of Ni-Cd.]*

f. Exit lights

Emergency escape signs shall be provided at the exit doors, escape routes, intersection corridors, at different floor levels/directions, windowless rooms, toilets, firefighting equipment, lifts, control rooms, switchgear rooms and the areas considered necessary by bidder. *[9W CFL]* lamp shall be used for exit lamps.

The contractor shall design emergency exit lighting system based on plant layouts and install escape lights at suitable locations considering the various escape routes. Emergency exit lights will be fed from normal-cum-emergency lighting panel, wherever available, *[and will be with in-built battery (Ni-Cd) back up of 3 hours operation.]*

1.4.3

Illumination Calculation

- a. Standard Lumen method shall be adopted for interior and exterior lighting in order to determine the number of lighting fixtures for obtaining the desired average level of illumination.
- b. The coefficient of utilization shall be considered to take care of Lumen loss due to:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[6]	25.09.2014

- i. Effect of room dimensions.
 - ii. Absorption of light in luminaries.
 - iii. Absorption of light at various room surfaces i.e. ceiling wall etc.
 - iv. Floor cavity, ceiling cavity.
 - v. Mounting height.
- c. Moreover a maintenance factor shall also be considered to account for the fall of illumination due to aging, pollution like dust deposits etc.
 - d. Voltage drop at the fixture terminals from the MLDB shall [not exceed 3%]. Circuit loading of each lighting Panel shall be done in such a way that almost balanced loading in all the phases i.e. R, Y and B is achieved. At least two sub circuits shall be used for illumination of a particular area. Sub circuit loading of each lighting panel shall be restricted to 2000 Watts.
 - e. Design of lighting system shall be such that the average lux level as specified is achieved. The Bidder shall submit illumination calculation/layout for the purchaser's review.

1.4.4 Lighting Distribution System

- a. Separate lighting transformers shall be provided inside the lighting distribution boards located at required location. Lighting distribution system shall be distinct and separate from the LV main distribution. Lighting transformers shall be encapsulated cast resin dry type.
- b. AC lighting panels shall have 240V single-phase, 2 wire incomer controlled by earth leakage circuit breaker and number of single phase outgoing circuits controlled by MCBs. The lights connected to a circuit or few circuits shall be 'ON' automatically through photocell for outdoor lighting. Provision shall be made for switching 'ON' the rest of the lights. Lighting fixtures in indoor areas shall be controlled from the respective lighting panels
- c. Normal 240 V AC Lighting System
For this system, lighting points shall be supplied at 240 V AC through 415 V, 3-phase, 4-wire, 50 Hz, LDB. The supply shall be derived from 415 V, 3-phase, 4-wire, 50 Hz switchgear through delta/star lighting transformer. The secondary of lighting transformer shall be connected to respective 415 V, 3-phase, 4-wire AC lighting distribution board (LDB). The LDBs shall be provided with number of outgoing circuits controlled by double pole MCBs to feed the lighting panels distributed in and around the plant. Different circuits shall be used from different source. The whole lighting network shall be balanced as far as possible.
- d. Normal/Emergency 240V AC System
For these systems, the distribution shall be by 415V, 3-phase, 4-wire, 50 Hz supply. This supply shall be derived from 415 V, 3-phase, 4-wire, 50

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[7]	25.09.2014

Hz normal emergency switchgear for NE & lighting through delta/star lighting transformer. The secondary of lighting transformer shall be connected to respective 415 V, 3-phase, 4-wire AC lighting distribution board (LDB). The LDBs shall be provided with number of outgoing circuits controlled by double pole MCBs to feed the lighting panels distributed in and around the plant.

e. Emergency 220 V DC Lighting System

The power supply shall be obtained from the nearest 220 V DC switchboard. DC lighting panel will have one (1) incomer controlled by double pole MCB, Outgoing circuits will be controlled by DP MCB. Upon failure of the normal-cum-emergency AC supply, emergency DC lighting fixtures will be made automatically ON. The change over in the reverse direction shall also be automatic.

f. Maintenance 24V AC Lighting System

24 V AC supply for maintenance purposes (for hand lamps and/or hand operated tools) shall be supplied from 24 V AC distribution panel, which receives 240 V power supply from 415 V/240V transformer modules of N/E switchgear. 24 V AC distribution panel consists of one incomer controlled by MCB, one 240/26.5 V dry type transformer of adequate rating and number of outgoing circuits controlled by MCB.

1.4.5 Illumination levels and choice of lighting fixtures

The area-wise distribution of average illumination levels and type of luminaries shall be as indicated below:

[Note: These are indicative only. However as per specific Existing project, Bidder may refer section I of this specification for exact details of type of fixtures.]

Table 2.0

Sl. No.	Area/Structure	Average Illumination Level in Lux	Type of Fixture	Type of Luminaries
A - TURBINE GENERATOR BUILDING				
1.1	General (auxiliary equipment areas)	200	Industrial well glass fixture, dust & jet proof, die cast aluminium body, stove enamel finish, vitreous enamel reflector integral mounted control gear/industrial bulk head with integral mounted control gear.	1x70 W/ 1x150 W HPSV lamp

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[8]	25.09.2014

Sl. No.	Area/Structure	Average Illumination Level in Lux	Type of Fixture	Type of Luminaries
1.2	Cable vault	100	Industrial type FTL with vitreous enamel reflector	Energy Efficient FTL
1.3	All switchgear room area (including off-site building control room)	250	Industrial type with vitreous enamel reflector	Energy Efficient FTL
1.4	TG Building operating floor	250	Industrial high bay with anodized aluminium reflector with all accessories including control gear	1x400 W Metal Halide lamp
1.5	Unit control room and Switchyard control room	400	Decorative recessed with wide angle mirror optic antiglare type	Energy Efficient FTL
1.6	Battery rooms	150	Corrosion-proof	Energy Efficient FTL
1.7	TG building ground, mezzanine floor and misc. floors	200	Industrial well glass with integral control gear	1x150 W/ 1x250W Metal Halide lamp
1.8	Air washer room and A/C plant room	200	Totally enclosed vapor proof with clear acrylic cover	Energy Efficient FTL
1.9	Unloading and maintenance bay	300	Industrial high bay with anodised aluminium reflector	250 W HPSV lamp (for mounting height > 9m)

Sl. No.	Area/Structure	Average Illumination Level in Lux	Type of Fixture	Type of Luminaries
1.1	Control room	400	Energy Efficient 2x40W FTL industrial type of vitreous enamel finish and with Electronic choke suitable for 220V DC operation	CFL lamp
1.2	Other areas	250	Energy Efficient 2x40W FTL industrial type of vitreous enamel finish and with Electronic choke suitable for 220V DC operation	CFL lamp

1.4.6 Area wise distribution of Lighting system in plant

Area wise lighting distribution shall be as below:

Table: 3.0

Area/building	Percentage Distribution of Lighting		
	Normal	Normal & Emergency	220V DC
Turbine Generator Building (all the bays)	80%	20%	10%
Control rooms	80%	20%	10%
Boiler Area (Grade level & Platforms)	80%	20%	5%
Service building	90%	10%	5%
Various pump houses and electrical switchgear rooms such as AHP, CHP, FOPH switchgear room, etc.	90%	10%	5%
Electro static precipitator	90%	10%	5%
Switchyard and Transformer yard	80%	20%	5%

1.4.7 Lighting System Design

The lighting system design shall comply with the acceptable norms and the best engineering practices. The system design shall consider principles of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[12]	25.09.2014

lighting specified in following paragraph. The lighting layout shall be designed to provide uniform illumination with minimum glare. The layout design shall meet all the statutory requirement, local rules etc.

a. Indoor Lighting

The recommended values of illumination level for various areas in the plant are indicated in the table above. Lighting layouts shall be designed such that the ratio of minimum to average illumination shall not be less than [0.6]. Following factors shall be considered while arriving at the utilization factor to determine the number of fixtures for each area/buildings in the plant.

i. Maintenance Factor:

- Air conditioned clean interiors like office rooms, Laboratories, Auditoriums : 0.8
- Air conditioned clean interiors like office rooms, Laboratories, Auditoriums : 0.8
- Industrial areas with normal interiors such as workshops, stores : 0.7
- Industrial areas with dusty interiors : 0.6
- Industrial areas with very dusty interiors such a crusher house and junction towers : 0.5

ii. Reflection factor for wall/ceiling

- White and very light colors : 0.7
- Light colors : 0.5
- Middle tints : 0.3
- Dark colors : 0.1

iii. The working plane shall be considered at 0.85 m from the floor level.

iv. The value of the ratio of spacing (S) to mounting height (H) shall be commensurate with the type of fittings selected and uniformity of illumination. The suspension height for suspended fixtures shall not exceed 1 meter.

b. Outdoor Lighting

- i) The recommended illumination levels for outdoor areas are indicated in the above table.
- ii) Mounting height, spacing of flood lights shall be based on lamp wattage, uniformity of illumination and vertical angles. Ratio of minimum to average illumination shall not be less than 0.3 and for minimum to maximum shall not be less than 0.05.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[13]	25.09.2014

- iii) Maintenance factor shall be generally 0.6 under average conditions.
- iv) Flood lights for area lighting shall be mounted on building structures. For outdoor lighting i.e. around the power plant building and transformer yard provision to be made with 400W outdoor type lamps mounted on wall/structures.
- v) Automatic switching ON/OFF shall be shall be provided through timers/photo cells.
- vi) For road illumination inside the boundary limit lighting poles shall be provided and the distance between the poles shall not exceed 30m.
- vii) Aviation obstruction lights shall be provided on tall installations (Chimney, Cooling Towers etc) as per Airports Authority and international standards. Aviation warning lights shall be high intensity type-A flashing LED type with varying intensity for day and night.
- viii) In an area, the lighting fixtures shall be arranged in different phase / LPs such that even in case one lighting panel is faulty complete lighting is not affected. In any location the lighting shall be arranged from two phases.
- c. The circuit loading on each circuit shall be restricted to 80% of the MCB rating.
- d. The voltage drop from LDB and any fixture shall not exceed 3%.
- e. All lighting design calculations, layouts, conduit wiring diagrams, LDBs and LPs drawings and technical data sheets etc shall be furnished for Owner/ Owner's consultant's approval.

1.4.8 Lighting system equipment

- a. Lighting Distribution Boards (LDB) & Lighting Panels (LP)
 - i. The Lighting Distribution board shall be fed through 415V/433V lighting transformers with off circuit taps $\pm 5\%$ in steps of 2.5%. The lighting transformer shall be cast resin dry type , vector group of [Dy1], class F insulation with temperature rise limited to class F and shall be housed in a suitable enclosure. In general, the transformers shall conform to the specification covered under 'Service transformers. The lighting distribution boards shall consist of MCCB incomer and required number of double pole MCB controlled out going feeders to LPs. The LDB shall be designed for the required short circuit level of [20] kA. All the distribution boards shall be sheet steel clad, dust and vermin proof, cubicle type with degree of protection conforming to IP-52. Outdoor panels shall be weather proof type with IPW-55 protection. The

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-003	01	Tender Document for Selection of R&M Contractors –Balance of Plant Volume-II, Section-II, Part-B,Annexure-E9	[14]	25.09.2014

thickness of sheet steel enclosures shall be CRCA, 2 mm minimum for load bearing and 1.6 mm for other members.

- ii. Number of outgoing feeders in each LDB shall be provided as per requirement including the minimum 3 nos spare feeders for "Purchaser use". Each outgoing MCB in LDB's shall be of 15 A, but load to be limited to 2 kW or maximum 10 nos. fittings to be connected to one MCB
