LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[ii]	15.01.2016

BACKGROUND

What is R&M (Renovation & Modernization) of Thermal Power Plants?

Coal based power stations contribute more than 70% share of total power generation in India. Thermal Power Stations are designed for an economical and stable life span of 25 years, after which, the level of performance starts deteriorating as a result of degradation of its equipments, components and materials. Deterioration in performance can also take place before the completion of useful life of 25 years, if the units are not properly operated and maintained. Deterioration in performance is reflected in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. This results in costly repair and loss of revenue. Renovations & Modernization (R&M) and Life Extension (LE) programme of thermal power station is an activity of carrying out repairs, refurbishments and replacement of defective equipments & components so as to extend the life of the power plant by at least 20 years and to restore the performance parameters to equal or better than the original design parameters.

Need of R&M

In spite of new capacity additions, India continues to face shortages of varying degree in the supply of energy and peaking power. Implementation of fresh capacity additions for bridging the demand supply gap involves huge investments and long gestation periods primarily due to the process of land acquisition and getting the required fuel and water allocations, permits & clearances, particularly, the environmental clearance.

On the other hand, R&M activity of existing old power plants which requires less investment and can be completed in shorter duration has been recognized as a techno-economically viable option to supplement the fresh capacity addition for maximizing the energy generation. Also it helps in reducing the emissions by adopting upgraded modern technologies.

Objectives of R&M and R&M/LE Programme

As per the Guidelines issued by Central Electricity Authority (CEA) the following should be the objectives of R&M and R&M/LE Programmes.

Objectives of R&M Programme:

- To restore rated capacity and design parameters such as Heat Rate, Auxiliary Power Consumption and Secondary Oil Consumption etc.
- To make the operating units well equipped with modified/ augmented latest technology.
- To overcome technological obsolescence and non-availability of spares.
- To improve the performance parameters in terms of Plant Load Factor, Efficiency, Forced Outages, Availability and Reliability.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[iii]	15.01.2016

- To reduce maintenance requirements and enhance the ease in maintenance.
- Compliance of stringent environmental norms, safety and other statutory requirements.

Objectives of R&M/LE Programme:

- Extension of useful economic life of generating units by another 20 years.
- To focus on full load operation of the unit beyond their original design life.
- To restore rated capacity and design parameters such as heat rate,
- Improvement in Auxiliary Power Consumption Secondary Oil Consumption etc
- Up-rating of Generating Unit.
- Improvement beyond design parameters.

Criteria for the Consideration of R&M and R&M/LE Programmes

As per the Guidelines issued by Central Electricity Authority (CEA) the following criteria is to be adopted for considering the R&M and R&M/LE Programmes.

- Estimated cost of unit for complete R&M/ LE works should be limited to 50% of cost of new unit.
- Cost of Main Plant (BTG) should be limited to 50% cost of new BTG unit.
- Plant Life should be extended by about 20 years.
- The Pay Back Period should be from 5 to 7 years.

Need of Preparation of Model R&M Documents

The countrywide R&M programme was first initiated in 1980 when Government of India approved the scheme of Central Loan Assistance (CLA) of Rs. 500 crores benefitting 34 power stations mostly of 50/60/100/110/120/140 MW capacities. R&M in a structured manner was initiated as a centrally sponsored programme during the 7th Five Year Plan. The momentum of carrying out R&M works was continued through 8th and 9th Plans but the same could not be sustained during the 10th Plan.

Based on the discussions held with Ministry of Power, various utilities, PFC and BHEL, CEA prepared a document on “National Perspective Plan for Renovation & Modernization and Life Extension and Up-rating (LE&U) of thermal power stations up to the year 2016-17”. This document which also includes revised guidelines for Renovation & Modernization / Life Extension works on coal/lignite based thermal power stations was released by Honourable Minister of Power on 14th December 2009. Plan-wise Achievements of R&M and R&M/LE Programmes starting from 7th Five Year Plan till 11th Five Year Plan is furnished below:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[iv]	15.01.2016

Feasibility Report For R&M of Unit No.[..]Capacity [..]of [Name of the Power Plant]	[Logo of Utility]
---	-------------------

Plan–Wise Achievements

S.No.	Plan	Year	No. of TPS / No. of Units	Capacity (MW)	Additional Generation Achieved MU/ Annum	Equivalent MW
1	7 th Plan and Two Annual Plans	85-86 to 89-90 & 90-91, 91-92	34 / 163	13570	10000	2000
2	8 th Plan (R&M) (LEP)	92-93 to 96-97	44 / 198 43/(194) 1/ (4)	20869 (20569) (300)	5085	763
3	9 th Plan (R&M) (LEP)	97-98 to 2001-02	37 / 152 29/ (127) 8/ (25)	18991 (17306) (1685)	14500	2200
4	10 th Plan (R&M) (LEP)	2002-03 to 2006-07	9/ 25 (14 out of 57 planned) (11 out of 106)	3445 (2460) (985)	2000	300

11th Plan R&M Programme & Achievements (2007-12)

	Programme (MW)	Achievement (MW)
Life Extension Programme (LEP)	7318 (53 units)	1291 (13 Units)
R&M Programme	18965 (76 units)	14855 (59 units)
Total	26383 (129 units)	16146 (72 units)

In the past, R&M measures were hampered due to lack of proper planning. Proper investigation to identify the R&M works to be carried out and preparation of technical bid documents based on the investigation was not done. This resulted in unsystematic and additional work during execution phase and uncertainty about costs resulting in excessive implementation time, long shutdown periods of plants and cost overruns. In the absence of standard commercial rules and policies, suppliers showed little interest in R&M work. Therefore a strong need was felt for providing standardized bidding procedures as well as model contracts, formats and specifications etc. to the utilities. Standardization will harmonize the requirements of all the stakeholders and will lead to their increased participation.

The Indo-German Energy Forum (IGEF)

The Indo-German Energy Forum (IGEF), inaugurated in 2006, provides a platform to discuss energy related issues of mutual interest. The first meeting of the ad-hoc sub-group on “energy

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[v]	15.01.2016

efficiency in thermal power stations”, constituted as per decision of meeting of IGEF in December 2007, was held under the chairmanship of Joint Secretary (Thermal), Ministry of Power on 12th March, 2008 in which preparation of standard tendering document for the purpose of R&M activities was, inter-alia, identified as an area of the activities. The scope of the assignment was divided in two parts as under:-

Phase-I Activity:

Phase-I activity comprised an assessment of tendering procedures currently being followed by public utilities in India and a review of documents used for standard R&M projects and the documents which have already been developed for energy efficient R&M projects financed by particularly World Bank. This activity was carried out by M/s Evonik (India) under the grant provided by GTZ. M/s Evonik (India) submitted the report in September 2009.

Phase-II Activity

Phase-II activity comprised the preparation of the model documents / templates in consultation with Task Force, power utilities & financing agencies.

In the 3rd meeting of Indo-German Energy Forum (IGEF) convened in Berlin on 4th November 2009, KfW proposed to finance and carryout the work programme of phase-II Activity, on behalf of CEA & in consultation with the Task Force. In a meeting held in MOP on 17th December 2009, chaired by Joint Secretary (Thermal), MOP, the representative of KfW suggested that CEA may act as “Project Executing Agency” for the phase-II activity. Accordingly Ministry of Power, Govt. of India have entrusted the task of “Project Executing Agency” to CEA for implementing Phase-II activity. Under Indo-German Energy Forum (IGEF) assisted programme, M/s Lahmeyer International (India) was appointed on 16th March 2012 to provide the consultancy services for ‘Development of tendering procedures and model contract document for R&M of Fossil Fuel Based Power Plants in India.’ The scope of consultancy services included the preparation of the following model documents:

- I) Standard Bidding Procedure for engagement of Consultants and R&M Works Contractor.
- II) Residual Life Assessment (RLA) / Condition Assessment (CA) Report.
- III) Energy Audit (EA) Report.
- IV) Feasibility Report.
- V) Detailed Project Report.
- VI) Request for Qualification (RFQ) & (RFP) Documents for R&M Consultants and R&M Contractors.
- VII) Technical Specifications.

Due Diligence done by LII of the R&M Documents of other Projects

Before the preparation of this model document, LII did a thorough review of the R&M Documents of the following Power Plants:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[vi]	15.01.2016

Documents Provided by CEA

- Remaining Life Assessment / Condition Assessment Report- Nasik Unit-3 of MAHAGENCO.
- Energy Audit Report- Nasik Unit- 3 of MAHAGENCO.
- Detailed Feasibility Report- Nasik Unit-3 of MAHAGENCO.
- Draft Detailed Project Report -Kolaghat Unit-3 of WBPDC.
- Service Contract- R&M of Unit-1 Panipat TPS of HPGCL.
- Tender document for Supply, Erection, Testing and Commissioning of Air Preheater for Unit 5 & 6 Koradi TPS, MAHAGENCO.
- Tender document for replacement of 6.6 KV station transformer incoming breaker & Tie-breaker of Koradi TPS, MAHAGENCO.
- Tender specification for Design, Engineering, Supply, Erection, Testing and Commissioning of Rotary Air Preheater for Units 4 & 5, Nasik TPS of MAHAGENCO.

Documents Provided by WBPDC

- Energy Audit Report of Bandel Unit -5 (210 MW) of WBPDC.
- Detailed Project Report of Bandel Unit -5 (210 MW) of WBPDC.
- Project Design Report of Bandel Unit -5 (210 MW) of WBPDC.
- Technical Specifications. (Vol. II of RFP Document for R&M Contractor).
- RLA for Boiler for Bandel Unit -5.
- RFP for R&M Consultant for Bandel Unit -5.
- Commercial Volume-I of RFP for Bandel Unit -5 for R&M Contractor.

KfW Documents

- Model Contract Document issued by KfW.
- Guidelines issued by KfW for the assignment of Consultants.

World Bank Documents

- Standard Bidding Document for Procurement of Plant, Design, Supply and Installation.
- Standard Request for Proposal for the Selection of Consultants

This Feasibility Report has been prepared to conceptualize the systematic methods and procedures to be implemented for carrying out R&M works for the Thermal Power Plants, taking into account the different practices followed in the past, the practices and methodologies being adopted by KfW and World Bank, as indicated in the various documents indicated above. Detailed standard documents like DPR, RFP & RFQ documents to carry out R&M works for the Thermal Power Plants shall be prepared based on this Feasibility Report.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[vii]	15.01.2016

GUIDELINES FOR USING THE MODEL FEASIBILITY REPORT

Central Electricity Authority (CEA), the Project Executing Agency / Employer has appointed Lahmeyer International India Pvt. Ltd. (LII), the Consultant to Develop Standard Procedures and Model Documents for the Renovation and Modernization (R&M) of Fossil Fuel based Power Plants in India. The above assignment is being financed by KfW Entwicklungsbank. Accordingly, this Model Feasibility Report has been prepared for the guidance of Project Authorities who may decide to carryout R&M of their old Coal based Power Plants so as to extend the life of their plants and make them energy efficient and reduce emissions.

The purpose of this model document is to standardize the format of the Feasibility Report for R&M works. Since majority of 200/210 MW units are potential candidates for consideration of Renovation as they have crossed 20 to 25 years of useful life, the enclosed format has been prepared keeping those 200 MW/210 MW units in view. Since in due course of time, many 500 MW units will also become due for R&M, the Utilities are advised to suitably modify this document for its application to 500 MW units.

The format of Feasibility Report contains two kinds of texts written in black and in blue colours. The text in blue italics and enclosed in square bracket ([...]) represents variable information which may differ from project to project. The text and numbers in blue colour are written for the sake of citing an example. The Utilities and their Consultants are advised to check the relevance of the same and replace these texts and numbers with the ones as may be applicable to their specific Project. A few guidelines have also been provided in blue italics enclosed within red curly brackets ({...}), wherever applicable.

1 EXECUTIVE SUMMARY

This Feasibility Report has been prepared for carrying out the Renovation & Modernization (R&M)/ Life Extension (LE) of Unit No... ofThermal Power Plant, located at [...], in District [...] in the State of [...] and having a configuration of [...x...MW].

The unit no. [...] was first commissioned in the year [...]. After [...] years of operation, the performance of the unit has gradually deteriorated resulting in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. It is proposed to carry out required refurbishments and replacements in the plant so as to restore the unit's performance parameters and to extend its life of by at least [...] years.

The report discusses the salient features and operational history of the power plant and also the specific problems being faced from the operation of various plant equipment & systems.

To determine the residual life of critical components of the plant, various studies namely the Residual Life Assessment (RLA), Condition Assessment (CA) and Energy Audit have been conducted during the period [...]. Based on the recommendations of RLA/CA & EA Studies, review of the performance data and discussions with the plant engineers, [five R&M options] were formulated by the R&M Consultant.

Estimated cost for each option was worked out after taking into account the scope of R&M measures to be implemented for each option. Cost Benefit analysis of each option was then performed. After cost-benefit analysis of [Five] options, the most attractive option has been identified for implementation of the R&M Project.

The cost of the R&M Project is estimated as [Rs.....Crores]. The Payback Period is estimated as [.....Years]. The R&M activity is expected to bring out the improvements as indicated in the following table:

Improvements Expected after R&M of the Unit

2 INTRODUCTION

2.1 Description

The Power Plant, having a configuration of [...x...MW] is located at [...], in District [...] in the state of [...].The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator, respectively. The consumptive water for the unit is being sourced from [...]. The primary fuel [coal / lignite] for the unit is being sourced from [...]. The boiler for the unit is of [PF/CFBC] design. The boiler is provided with [front & rear/ corner/down shot] firing system. LP stage of Turbine is designed with [Bauman] exhaust. Condenser cooling system of the unit is designed on [once through / re-circulation system]. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [... substation]. The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [.....&.....] coal mines. The consumptive water for the power plant is being sourced from [.....river/.....sea].

2.2 Operational Background

After the first commissioning during the year [...], the unit was giving a stable operation with [... MW] of Gross Power Output at an average PLF of [... %] and a Gross Heat Rate of [...kCal/kWh]. The Auxiliary Power Consumption after the first commissioning was [...%]. [Based upon the recommendations of RLA / CA and EA Studies conducted during the year major replacements were made during the year..... comprising.....and]. The unit is presently performing with a maximum Gross Power Output of [... MW] with an average PLF of [...%] and a Gross Heat Rate of [...kCal/kWh]. The present Auxiliary Power Consumption is [...%].

2.3 Objective of the Feasibility Study

The feasibility study has been carried out to establish the cost effectiveness of the proposal for taking up R&M measures to improve the efficiency and performance parameters of the plant and to extend its life. During the course of feasibility study, the following sub-studies were carried out.

- Cold Walk-down and Hot Walk-down Survey.
- Discussion with the Plant Engineers.
- Review of the operational history of the power plant, reports of Condition Assessment (CA) and Residual Life Assessment (RLA) studies carried out earlier and major replacements done in the past, prior to taking up this study.
- Review of reports of Condition assessment (CA) and Residual Life Assessment (RLA) of major equipment and systems of the power plant carried out recently.
- Review of reports of Energy Audit of main equipments and auxiliary systems carried out recently to identify the reasons and sources of excess power consumption.

LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[3]	15.01.2016

- f. Review of recommendations of R&M Consultant for carrying out R&M measures for increasing the useful life, efficiency and output of the plant as well as for meeting the latest environment standards prescribed by the regulating agencies at the national and state level.
- g. Study of the financial impact of the R&M Measures proposed.
- h. Financial analysis based on internal rate of return and cost benefit ratio.

3 SALIENT FEATURES OF POWER PLANT

{Describe in this chapter, the Design Parameters and Salient Features of all the important Equipment and Systems of the Power Plant as mentioned below}

3.1 Boiler & Auxiliaries

a) Boiler

[The Steam Generator is of natural circulation, pulverized fuel fired, dry bottom, balanced draft using direct firing system. The design parameters of the Boiler are furnished below]

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[....]
Steam Pressure at SH outlet	kg/cm ²	[....]
Steam Temperature at SH outlet	°C	[....]
Re-heater Flow	T / hr	[....]
Steam Pressure at RH outlet	kg/cm ²	[....]
Steam Temperature at RH outlet	°C	[....]
Feed Water Flow	T / hr	[....]
Feed Water Pressure at inlet of Economiser	kg/cm ²	[....]
Feed Water Temperature at inlet of Economiser.	°C	[....]

b) Furnace

[The boiler is equipped with a water cooled furnace of balanced draft and fusion welded membrane wall construction. It is equipped with.....numbers of coal burners and.....numbers of oil burners located at numbers of elevations. The design parameters of the Furnace are furnished below.]

Description	Units	Design Parameters
Type of Firing	[.....]
Combustion Chamber Volume	m ³	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[5]	15.01.2016

Description	Units	Design Parameters
Furnace Dimensions (Width x Depth x Height)	m	[.....]
Heating Surface Areas		[.....]
i) Water Walls	m ²	[.....]
ii) Superheaters	m ²	[.....]
iii) Reheaters	m ²	[.....]
iv) Economiser	m ²	[.....]
v) Air Heater	m ²	[.....]
vi) Steam Coil Air Heater	m ²	[.....]
vii) Temperature Measurement of Super-heater tubes	Yes / No	[.....]
viii) Temperature Measurement of Re-heater tubes	Yes / No	[.....]

c) Super Heaters and Re-Heater

[The super heaters are composed of four sections, a platen section, a pendant section, a rear low temperature section and a steam cooled wall & roof section. The Re-heater consists of two sections, the front pendant and the rear pendant sections. The details are given below:]

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Low Temperature Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[6]	15.01.2016

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Platen Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Pendant Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Ceiling and Enclosure Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Front Assembly	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Rear Assembly	[.....]	[.....]	[.....]	[.....]	[.....]

d) **Economiser**

[The Economizer is of a single stage, continuous finned tube and horizontal, mixed flow type, located in the second pass of the boiler]

e) **Air Pre-Heater**

[The air pre-heater is of regenerative rotary type. Special sealing arrangements have been provided in the air pre-heater to prevent leakage between air and gas sides. Adjustable sector plates have also been provided to prevent the leakage during expansion. The heating surfaces of the air pre-heater have been provided with two types of cleaning systems, soot blowing and water washing system.]

f) **Raw Coal Bunkers**

[Each boiler is provided with [...] raw coal bunkers. The total capacity of the bunkers is to meet [...] hour's requirement at maximum mills capacity of the unit. The upper portion of the bunkers is of cylindrical shape made of carbon steel plate, while the conical portion is made of stainless steel plate. Each outlet of the bunker is provided with an isolation gate which is motor operated. In addition to the isolation gates, rod gates have been provided to control the flow of coal from the bunkers]

g) **Raw Coal Feeders**

[One gravimetric type of raw coal feeder has been provided for each coal mill. The coal feeders have been provided with micro-processor based controls with variable frequency drive. The feeders have been provided with dual independently measuring

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[7]	15.01.2016

load cells. All parts of the feeders coming in contact with coal, except the belt, are made of stainless steel]

h) Fuel Firing System

[The boiler is working on a direct firing system. The pulverized coal is being dried and transported to the coal burners by means of hot primary air being supplied by two primary air fans. The boiler is having [front and rear/corner/down shot] firing system. There are [...] pulverized coal burners and [...] oil burners. The burners are located at [...] floors.

i) Coal Mills

[The unit is provided with numbers of BHEL make XRP-783 bowl type mills, out of which mills are designed to work with designed coal andnumbers of mills are standby . The rated capacity of each mill isT/hr.]

Description	Units	Design Parameters
Make and Model of Mills	[...]
Capacity of Mills	T/hr	[...]
Total Number of Mills per boiler	Nos.	[...]
Number of Mills to work per boiler with design coal quality	Nos.	[...]
Motor Rating	kW	[...]

j) Primary Air Fans

[Two Primary Air (PA) Fans have been provided for each boiler. Each PA Fan is designed to meet 60% MCR condition of the boiler. The PA Fans are Hot PA Fans. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Hot Air	°C	[...]

Description	Units	Design Parameters
Motor Rating	kW	[...]
Method of Regulation	[...]

k) **Forced Draft Fans**

[Two Forced Draft (FD) Fans have been provided for each boiler. Each FD Fan is designed to meet 60% MCR condition of the boiler. The FD Fans supply combustion air to the boiler, mill air through PA Fans and tempering air to control the classifier temperature of the mills. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Air	°C	[...]
Motor Rating	kW	[...]
Method of Regulation	[...]

l) **Induced Draft Fans**

[Two Induced Draft (ID) Fans have been provided for each boiler. Each ID Fan is designed to meet 60% MCR condition of the boiler. Each ID Fan evacuates flue gases through two parallel paths of ESP and discharge them into stack through separate ducting. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Number of Fans per Boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]

Description	Units	Design Parameters
Temperature of Flue Gases	°C	[...]
Motor Rating	kW	[...]
Method of Regulation	[...]

m) **Wall Blowers and Long Retractable Soot Blowers (LRSBs)**

[Adequate number of Wall Blowers and Long Retractable Soot Blowers (LRSBs) are being used for cleaning the soot deposited on the heating surfaces of the water walls and super heaters respectively. Automatic sequential soot blowing system has been provided. Details are given below:]

Description	Units	Design Parameters
Wall Blowers		
Make and Model of Wall Blowers	[...]
No. of Wall Blowers per boiler at water walls	Nos.	[...]
Medium of soot blowing at water walls	[...]
LRSBs		
Make and Model of LRSBs	[...]
No. of LRSBs per boiler at pendant surfaces of pressure parts	Nos.	[...]
Medium of soot blowing at pendant surfaces of pressure parts	[...]
No. of LRSBs per boiler at convection pass tube banks	Nos.	[...]
Medium of soot blowing at convection pass tube banks	[...]

n) **ESP**

[An Electrostatic Precipitator (ESP) has been installed on the cold end side of the Air Pre-heater to remove the particulate matter from the flue gases. The ESP has been

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[10]	15.01.2016

provided with Gas Distribution System, Collecting Electrodes, Discharge Electrodes, Transformer Rectifier Sets and [electrically/mechanically] operated rapping system. The hoppers of ESP have been provided with capacitance type level indicators and thermostatically controlled heating elements. Details are given below:]

Description	Units	Design Parameters
Make and Model of ESP	[....]
Number of Passes per ESP	Nos.	[....]
Number of fields per pass	Nos.	[....]
Dust concentration at outlet	mg/Nm ³	[....]
Type of Control	[....]
Gas Velocity in ESP	m/sec	[....]

Particle Migration Velocity	cm/sec	[....]
Plate Area/TR Set	m ² /TR Set	[....]
Storage Capacity of ESP Hoppers	hrs	[....]
Pressure Drop	mmwc	[....]
Dust Collection Efficiency with (N-1) fields in operation	%	[....]

3.2

Turbine & Auxiliaries

a) Steam Turbine

[The steam turbine is of three cylinder, 3000rpm, tandem compound, condensing type designed to operate on a re-heat and re-generative feed water cycle. The LP stage of turbine is designed with Bauman exhaust. The turbine is provided with HP/LP bypass system of 60% capacity of Steam Generator MCR. The turbine is provided with an electro - hydraulic control system, automatic turbine run up system and turbo supervisory instrumentation. The condensing system consists of a surface condenser of single shell and two pass, divided water box construction. Cooling water being supplied to the condenser is of raw water/ clarified water quality. The design parameters of the steam turbine are furnished below]

Document Number	Rev No.	Description	Page No.	Date of Issue

Temperature of Hot Reheat (HRH) Steam	⁰ C	[...]
Pressure at the inlet of LP Turbine	kg/cm ²	[...]
Temperature at the inlet of LP Turbine	⁰ C	[...]

b) Condenser

[The condenser is a [single/twin] shell, horizontal, surface type with integral air cooling section designed to maintain a pressure of 76 mm of Hg at turbine exhaust with a cooling water temperature of [...] deg C and an outlet temp of [...] deg C. The condenser is capable of operation with [...] % tubes plugged and has hot well storage capacity of [...] minutes.]

e) **Gland Steam Cooler**

[A Gland Steam Cooler has been provided to condensate the leak-off steam from intermediate chambers of end sealings of HP and IP turbine, thereby heating the main condensate water. The Gland Steam Cooler consists of shell, tube bundle and removable water box.]

f) **LP Heaters and Drain Coolers**

[Each steam turbine is provided with four numbers of low pressure heaters to increase the temperature of the condensate in stages. LP Heater -1 consists of two halves and is installed in neck of the condenser. The remaining LP Heaters are of shell and tube design and have been placed vertically. An integral drain cooling section is provided in each LP Heater. The design details of LP Heaters are furnished in the table below.]

j) **HP/ LP Bypass**

[HP/LP bypass system has a capacity of 60% of BMCR (Boiler Maximum Continuous Rating). HP bypass system has been provided between the Main Steam Line and Cold Reheat Line. LP bypass system has been provided between the Hot Reheat Line and the Condenser. HP bypass water spray has been taken from the discharge of Boiler Feed Pumps. LP bypass water spray has been provided from the discharge of Condensate Extraction Pumps.]

k) **Turbine Governing System**

[The turbine is equipped with a electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. The system is designed to sustain full load dump from the generator. The system is provided with a quick closing Emergency Stop Valve (ESV), to interrupt the supply of steam from the boiler and stop the turbine under emergency conditions. The turbine governing system includes, speed governor,]

l) **Lube Oil System**

[The lube oil system consists of Main Oil Tank, Turbine driven main oil pump, AC driven bearing oil pump, DC driven emergency oil pump, AC driven jacking oil pump and oil coolers of 3x50% capacity, Lube oil is being purified by means of a centrifuge. Oil storage tanks consisting of Clean Oil Tank and Dirty Oil Tank have been provided.]

m) **Turbine Gland Sealing System**

[Turbine Gland Sealing System consists of gland steam condenser, gland steam exhauster, all associated motors, associated piping, valves & fittings, strainers / filters etc]

3.3

Electrical System

a) Generator

[The Generator is a 15.75 kV, 50 Hz, 0.85 power factor machine, operating at 3000 rpm, with.....type of excitation system and digital programmable voltage regulator. The Generator has direct water cooled stator winding and direct hydrogen cooled rotor winding. The stator winding cooling water is cooled in a closed cycle cooling system using DM water, while the hydrogen in the machine is cooled in gas to water hydrogen coolers mounted inside the machine. The Parameters of the Generator are briefly mentioned below.]

e) Electrical Distribution System

[Unit auxiliaries receive their normal power supplies at 6.6 kV through two (2) nos. unit transformers. For lower size drives, 6.6 kV is further stepped down to 415 V by two (2) nos. unit service transformers. The 415 V distribution system feeds a number of Motor Control Centers (MCCs) for running 415 V drives. 6.6 kV unit switchgears are connected to station switchgear for start up and emergency power supply. The details are mentioned below]

g) Emergency Power Supply System

[Diesel generating sets are installed for meeting the power requirements of essential auxiliaries (viz. jacking oil pumps, AC lube oil pump, hydrogen seal oil pump, float charger for DC battery, emergency lighting, scanner air fan and stator cooling water pump) during total failure of AC Power Supply in the power station. Diesel generating sets are located in the CD bay at the ground floor. The details are mentioned below]

3.4

Control & Instrumentation

[The existing control and instrumentation system generally is an old analogue based system and requires large scale replacement owing to obsolescence of the existing equipments. Furnace Supervisory Safeguard System (FSSS) is of obsolete design for which, no spares are available. Soot blowers are of manual type. No online Boiler Tube Leakage detection system has been provided. Control system for the existing

LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[19]	15.01.2016

turbine auxiliaries is relay based. Turbine Supervisory system is of electromagnetic type. No continuous monitoring system has been provided for observing the health of the turbine. HP- LP bypass system is in the form of standalone control panel. Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for SG & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.5

Balance of Plant

a) Coal Handling Plant

[Coal Handling Plant is a common facility which is feeding all the units of the power plant having a total installed capacity of...x....MW. Coal to the power plant is brought through railways by 'Box N' wagons and is unloaded by wagon tipplers. One crusher has been provided for crushing the coal from 250 mm size to 25 mm size. The plant is provided with one stacker reclaimer to stock the crushed coal. The coal stock yard has a storage capacity of 20 days. For feeding the coal to the bunkers of all the units, two streams of conveyors having a capacity ofTPH have been provided. The coal handling plant operates for 16 hrs a day.]

b) Ash Handling Plant

[Ash Handling System is of continuous type. The bottom ash from the furnace falls into bottom ash hopper having a storage capacity of [...] hrs. The ash is ground to the size [...] mm by the clinker grinders and is removed with the help of submerged Scrapper Chain Conveyors. The ash from the air pre-heater and economizer hoppers is being disposed off along with bottom ash. The ash in the form of ash slurry is conveyed through sluice channels to the ash slurry pump house with the help of high pressure jets, from where, it is pumped to the ash pond located the distance of [...] km. The ash slurry disposal system is having [...] numbers of identical streams of ash slurry pumps connected to [...] numbers of ash slurry pipelines going to the ash pond. Fly ash is collected in dry form below the ESP hoppers and the same is then conveyed by vacuum system to surge hoppers from where it is either conveyed through pressurized system to dry fly ash silos or is sent to ash pond in the form of slurry. From the dry fly ash silos, the ash is disposed off through the covered trucks. The datasheet indicating the particulars of major equipments for hopper ash handling and fly ash handling system is furnished below.]

c) Raw Water System

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. The intake water pump house is installed with [...] intake pumps of capacity [...] m³/hr, out of which [...] pumps are normally working and the remaining [...] pumps are standby. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days.]

d) CW / ACW System and Cooling Towers

[CW system for the power plant works on re-circulating system with induced draft cooling towers. The CW system uses raw/clarified quality of water and is working on [...] cycles of concentration. CW pump house is a common facility for all the units of the power plant. There are two CW pumps of capacity [...] m³/hr provided for each unit. In addition, there are two standby CW pumps common to all the units. The requirement of ACW system is being tapped from the cold CW header feeding the condenser. The hot return ACW water after cooling the auxiliaries of boiler and turbine joins the hot CW header and is sent to the cooling towers for cooling. The cold water from the cooling water flows to the fore bay of CW Pump House for recirculation into the system. One (Induced draft / Natural Draft) Cooling Tower has been provided for each unit. The cooling tower cools the water from [...] deg C to [...] deg C. The cooling tower has been designed for an ambient wet bulb temperature of [...] deg C and Relative Humidity of [...] %. The cooling towers are of cross flow/ counter flow design. The Cooling Tower fills are made of (RCC/PVC/ Polypropylene).

e) Water Pre-Treatment Plant

Water Pre-Treatment Plant is a common facility for all the units of the power plant. Pre-treatment plant supplies clarified water to DM plant, cooling water to the auxiliaries of BOP system, coal handling plant dust suppression and to the drinking water system.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[21]	15.01.2016

There are two numbers of clarifiers of [...].m³/hr capacity to meet all the clarified water requirements of the whole plant, except DM plant. The clarified water requirement for DM plant is met by a separate clarifier of capacity [...] m³/hr.]

f) DM Plant

[DM plant consists of three streams, each of [...] m³/hr capacity. There are two DM water tanks of [...].m³ capacity. A common regeneration system has been provided for all the three streams. DM plant operates on semi-automatic system with PLC controls.]

g) Air-Conditioning and Ventilation System

[The central control room, switchyard control room, ESP controls room and selected areas of service building have been provided with centralized air-conditioning system. The central air-conditioning system of chilled water type has been provided for various control rooms and DX type of plant has been provided for ESP control room, switchyard control room and other areas in the service building. Packaged type of air-conditioners has been provided for water treatment plant control room. Evaporative ventilation system has been provided for TG building along with roof extractors. Other areas are ventilated by a combination of exhaust and supply air fans].

h) Fire Fighting System

[Fire fighting system is a common facility provided for all the units. This consists of pressured hydrant system for all the auxiliary buildings, pump houses and administrative building. Automatic high velocity sprinklers system has been provided for power transformers, turbine oil tanks and lube oil system equipments. Medium velocity sprinkler system has been provided for cable galleries and coal conveyor galleries. Portable types of fire extinguishers have been provided throughout the plant for fighting small and localized fires.]

i) Plant and Instrument Air System

[Plant and instrument air system is a common facility for all the units of the plant. For meeting the instrument air requirement, [...] number of oil free screw compressors [...] working and [...] standby, each of [...] m³/hr capacity and discharge pressure of [...] kg/cm (g) have been provided along with dryers. Equal number of air compressors of similar rating has been provided to meet the requirement of plant air system. The air drying plant for the instrument air has been provided to achieve a dew point of (-) 40°C at atmospheric pressure.]

j) Fuel Oil System

The fuel oil system has been designed for the use of Light Diesel Oil (LDO) for start-up and Heavy Fuel Oil (HFO) for load carrying and flame stabilization purposes. Two tanks of [...] kl each have been provided for the storage of HFO and two tanks of [...] kl each have been provided for the storage of LDO. The system has been provided with unloading, transferring and pressurization pumps along with necessary filters and heating arrangement.]

3.6

Civil Works

Major civil facilities consist of the following:

a) Main Power House Building:

[3x200 MW units have been placed side by side. Centre to centre placing of units is [67.5 m.] The railway entry has been provided from the rear side of Power House Building. Turbine Generator (TG) Sets have been placed between AB rows of columns are laid out longitudinally. The TG bay, also houses, the Boiler Feed Pumps, Regenerative Heaters, Lube Oil System and other TG accessories. The total length of TG bay for 3x210 MW units is [276 m] and width [30 m]. The spacing of the column is at [7.5 m]. TG bay is provided with 2 Nos. of overhead EOT Cranes. In order to make the handling facilities of the cranes available to the heat exchangers, boiler feed pumps and other equipments, removable chequered plates have been provided at appropriate locations.

A sub zero floor has been avoided except for the localized pits required for Condensate Pump, pipe channels and HP Heaters etc. This sub zero pits are suitably connected and provided with a common sump for drainage purposes.

Three stairs for approaching the operating floor level at [+10 m] have been provided in this bay adjacent to B row columns. In addition, there are stairs for providing access to various equipments at intermediate platforms and sub zero pits.

Switchgear and Control Room bay has been provided in the BC bay which is [12 m] wide. The length of the bay is [249.0 m]. A common Control Room for all the three units is provided at [10 m] floor. In BC bay at [16 m] elevation, equipments for chemical dosing, air handling and MCC for soot blowers etc have been located. The deaerator is placed at an elevation of [23.0 m]. Air washer units and cooling water tanks are also located at [23.0 m] floor.

Mill Bunker Bay, designated as CD bay, has a span of [10.5 m] which accommodates coal bunkers, coal feeders and coal mills. CD bay houses the vertical mills at Zero m and has space for collection of disposal of mill rejects at sub zero levels adjacent to 'D' row. A stair to connect operating floor at [16.0 & 23.0 m] of BC & CD bay has been provided.]

b) Boiler Area

[In boiler area, the boiler with its auxiliaries like PA fan, FD fan, ID fan as well as Electrostatic Precipitator has been located.]

c) Transformer Yard

[A [60] m wide yard has been provided outside the 'A' row columns. The transformer yard houses station transformer, unit auxiliary transformers and generator transformers along with oil pits etc. To facilitating erection and maintenance of transformers, the area has been provided with rail tracks parallel to 'A' row at a distance of [45 m] from 'A' row which is further connected through cross tracks. In addition, space has been provided for laying the CW pipelines and locating the butterfly valve chambers.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[23]	15.01.2016

d) Service building

[A common four storey building has been provided near the main plant building and it is connected with the operating floor of TG bay at [10 m] level.].

e) Chimney

[A single chimney having a height of [...] meters comprising of concrete wind shield has been provided for [...] units. The flue gases from each unit are let out through independent steel flues. The Chimney is provided with an elevator]

f) Cooling Tower.

[One Cooling Tower of (Induced draft / Natural Draft) has been provided for each unit. The dimensions of each Cooling Tower are [...]. The cooling towers are of cross flow/ counter flow design. The Cooling Tower fills are made of (RCC/PVC/ Polypropylene].

g) Miscellaneous buildings

[Besides the above, miscellaneous buildings like administrative building, CW Pump House, Fire Water Pump House, CHP Control Room, ESP Control Room, DM Plant Building, Chemical House and Ash Silos have been provided.]

4 OPERATIONAL HISTORY OF THE UNIT

4.1 Operational History of the Plant

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ/KWU] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. The deterioration experienced over the years in Plant's performance parameters is shown in Table 4.1. Table 4.2 illustrates variations over the last three years in the performance parameters.

Table 4.1- Unit's Performance Parameters over the life

5 RESULTS OF RLA/CA AND EA STUDIES AND TECHNICAL SOLUTIONS

5.1 Approach Adopted

Complete approach adopted for finalizing the R&M option is shown in Figure 5.1.

Figure 5.1

Steps followed in arriving at the most cost effective R&M solution

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[30]	15.01.2016

The existing condition of the Plant was assessed on the basis of the results of RLA/CA and EA studies. Various R&M options were formulated based on the alternative solutions available to extend the life and improve the efficiency of the unit. The above R&M options were examined on the basis of cost benefit analysis and the most attractive option was then selected for implementing the R&M works.

5.2 Equipments/Components subjected to Health Condition Assessment

The health condition of the unit was investigated by carrying out RLA/CA and EA Studies. The required tests were performed on the sub-systems / components listed below.

A) Boiler and Auxiliaries

5.3

Formulation of R&M Options

[Based on the recommendations of RLA/CA & EA Studies, review of the performance data and discussions with the plant engineers, various R&M options were formulated. All the R&M options were aimed at achieving the following minimum objectives:

- i) Redesigning the boiler to suit the average coal quality likely to be available for the next 20 years.
- ii) Restoring the performance parameters to the original design values.
- iii) Extending the life of the unit by a minimum of 20 years.
- iv) Replacing the existing obsolete technology.
- v) Meeting the revised statutory emission standards.
- vi) Increasing Efficiency.
- vii) Reducing Auxiliary Power Consumption

The first option considered for R&M was for the case, in which the objectives were restricted to the bare minimum for restoring design output, design heat rate and Auxiliary Power Consumption of the unit and to extend the unit life by 15 years. Other options were formulated for not only the life extension of the unit but also for further improving its output, heat rate and auxiliary power consumption from the original design values, as discussed in the Table 5.1 below.]

Option	Objectives to be achieved by carrying out R&M	Shut Down Period	Major Parameters after R&M
	<p><i>Consumption better than Options 'III' & 'IV'.</i></p> <p><i>iii) Replacing the existing obsolete technology.</i></p> <p><i>iv) Meeting the revised statutory emission standards.</i></p> <p><i>v) Extending the life of the unit by a minimum of 25 years.]</i></p> <p><i>{This option is advised only when the unit to be renovated is either the first or last unit of the power plant, since intermediate units are likely to have space constraint for installation of new Boiler and TG.}</i></p>		<p><i>[Heat Rate ... kCal/kWh]</i></p> <p><i>[Aux. Power Consumption%]</i></p>

{While evaluating the options, the utilities are advised to also check the residual life of the switchyard, the Balance of Plant and the Material Handling System. Further, the utilities should note that if the proposed calorific value of coal is inferior to the original calorific value for which the boiler was designed, then the boiler will require re-engineering.}

Estimated cost for each option was worked out after taking into account the scope of R&M measures to be implemented for each option. Cost Benefit analysis of each option was then performed. After cost-benefit analysis of [Five] options mentioned above, option [...] has been identified as most attractive option for implementation. Cost-benefit analysis of various options is discussed in Section 7.0.

5.4 R&M option identified for Implementation

Option [...] has been selected for implementation. This is expected to bring out the following improvements:

- Extending the Plant life to [...] years.
- Increasing the output rating to [... MW].
- Improving the Heat Rate to [... kCal/kWh].
- Restoring the Auxiliary Power Consumption to the original level and attempting to achieve the same to the level of CERC/SERC norms.
- Achieving the revised statutory emission standards.

System wise / Equipment wise Modifications / replacements proposed on the basis of CA/RLA/EA studies are discussed in Section 6.0

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[41]	15.01.2016

6 PROPOSED MODIFICATIONS AND REFURBISHMENTS

6.1 Boiler and Auxiliaries

{Discuss in this section the following aspects for each item of the Boiler and its Auxiliaries:

i) The problems being faced from in view of the shortfall in achieving the performance parameters and

ii) The R&M measures to be adopted based on the recommendation of RLA/CA and EA studies.

It may please be noted that the check points mentioned in paragraphs below are of indicative nature only, whereas the same has to be as per the project specific requirements.}

6.1.1 Boilers

[.....
.....
.....]

{Note: Check the requirement of re-engineering the boiler and the capacity of the furnace in view of more quantity of coal of lower GCV is to be burnt in the boiler in place of existing design for higher GCV coal. Check for the possible requirements of refurbishment / replacement of boiler structure, down comers, safety valves, pressure parts like, drum, drum internals, water wall tubes, tube bends near gooseneck, bottom 's'-panels, coils and headers of super heaters, re-heater & economizers, refurbishing of air pre-heater by replacement of baskets & seals, modification of attemperators, retrofitting of low NOx burners, oil burners, wind box, burner tilting arrangement, high energy arc igniters, reapplication of refractory & insulation, penthouse pressurizing fans, buck stays, ducting, insulation, soot blowers, LRSBs, bottom ash evacuation system, clinker grinders, hangers and supports etc.}

6.1.2 Coal Mills

[.....
.....
.....]

{Note: Check for the possible requirements of replacement of existing mills with higher capacity mills in view of increased quantum of low quality coal to be fed to the boiler. Also check for the requirements of changing the grinding rolls, grinding rings, classifiers, drive motors, gears, oil pumps, cooling water circuit, sealing air system etc. Incorporate the recommendation of Performance Test.}

6.1.3 PA Fans

[.....
.....
.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[42]	15.01.2016

{Note: Check the capacity of fans in view of the higher capacity of mills. Check for the possible requirements of the replacement of impellers, casing, bearings etc. Incorporate the recommendation of Energy Audit Studies.}

6.1.4 ID Fans

[.....]
[.....]

{Note: Check the capacity of fans in view of the higher capacity of mills. Check for the possible requirements of the replacement of impellers, casing, bearings, VFD etc. Incorporate the recommendation of Energy Audit Studies.}

6.1.5 F D Fans

[.....]
[.....]

{Note: Check the capacity of fans in view of the higher capacity of mills. Check for the possible requirements of the replacing the impellers, casing, bearings, inlet vanes etc. Incorporate the recommendation of Energy Audit Studies. }

6.1.6 ESP

[.....]
[.....]

{Note: Check the capacity of the ESP in view of more quantity of inferior quality of fuel to be burnt in the boiler. Check for the possible requirements of refurbishment /replacement of Transformer Rectifier sets and ESP controllers, addition of fields, installation of bag filters etc. for meeting the revised statutory emission norms prescribed by the pollution control authorities. Incorporate the recommendation of the Performance Test.}

Summary of R&M Measures

R&M Measures to be adopted for the Boiler and its Auxiliaries have been discussed in detail at **Annexure 6.1** for all the [five] options along with their cost impact for each option.

6.2 Steam Turbine & Auxiliaries

{Discuss in this section the following aspects for each item of the Steam Turbine and its Auxiliaries:

i) The problems being faced from in view of the shortfall in achieving the performance parameters and

ii) The R&M measures to be adopted based on the recommendation of RLA/CA and EA studies.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[43]	15.01.2016

It may please be noted that the check points mentioned in paragraphs below are of indicative nature only, whereas the same has to be as per the project specific requirements.}

6.2.1 Steam Turbine

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of refurbishing / replacing the existing LP Turbine having Baumann Exhaust with more efficient LP turbine designed to suit local condensing conditions, replacing the HP/IP turbine rotors with three dimensional blade designs, replacement of HP / IP casings/ diaphragms, gland sealing, inter-stage packing, internal parts of ESV, IV, CV, servomotors, governing system, turning gear, jacking oil system etc.}

6.2.2 Condenser

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the condenser tubes, refurbishment/replacement of online tube cleaning system/ debris filter, application of anti-corrosive coating on water box/tube plates, replacement of air ejector with vacuum pump etc. Check the existing capacity of condenser, if a turbine of higher capacity is proposed. Incorporate the recommendation of Performance Test.}

6.2.3 Ejectors

[.....]
[.....]
[.....]

{Note: Check the condition of nozzles and diffusers of starting ejectors and main ejectors. Check the requirement of replacing the ejectors with the vacuum pumps. Check the existing capacity of ejectors, if a turbine of higher capacity is proposed.}

6.2.4 Condensate Extraction Pumps

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the impellers & bowl assemblies, retrofitting of energy efficient motors, replacement of recirculation valves, provision of auto changeover to standby pump, replacement of thrust bearings etc. Check the existing capacity of condensate extraction pumps, if a turbine of higher capacity is proposed. Incorporate the recommendation of performance Test.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[44]	15.01.2016

6.2.5 LP Heaters

[.....]
[.....]

{Note: Check for the possible requirements of replacing the tube bundles with the new ones having the same material or alternatively with the material of stainless steel, retrofitting the LP Heaters with the modified ones having better Drain Cooler Approach etc. Check the existing capacity of LP Heaters, if a turbine of higher capacity is proposed. Incorporate the recommendation of Performance Test.}

6.2.6 Deaerator

[.....]
[.....]

{Note: Check for the possible requirements of replacing the spray nozzles and internals etc. Check the existing capacity of deaerator, if a turbine of higher capacity is proposed.}

6.2.7 Boiler Feed Pumps

[.....]
[.....]

{Note: Check for the possible requirements of replacing the cartridges with energy efficient models, replacement of booster pumps with modified versions, modification of cooling water circuit etc. Check the existing capacity of BFPs, if a turbine of higher capacity is proposed. Incorporate the recommendation of Energy Audit Studies.}

6.2.8 HP Heaters

[.....]
[.....]

{Note: Check for the possible requirements of replacing the tube bundles with the new ones having the same material or alternatively with the material of stainless steel, retrofitting the LP Heaters with the modified ones having better Drain Cooler Approach etc. Check the existing capacity of HP Heaters, if a turbine of higher capacity is proposed. Incorporate the recommendation of Performance Test.}

6.2.9 Critical Piping including valves

[.....]
[.....]

{Note: Check for the possible requirements of replacing the pipes, valves, fittings, hangers and supports for MS, CRH, HRH and Feed water piping, check for the replacement of bends and clamping areas, since these are prone to develop leakage.}

Summary of R&M Measures

Summary of R&M Measures to be adopted for the Steam Turbine and its Auxiliaries has been discussed in detail at **Annexure 6.2** for all the [five] options along with their cost impact.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[45]	15.01.2016

6.3 Balance of Plant

{Discuss in this section the following aspects for each item of the Balance of Plant:

i) The problems being faced from in view of the shortfall in achieving the performance parameters and

ii) The R&M measures to be adopted based on the recommendation of RLA/CA and EA studies.

It may please be noted that the check points mentioned in paragraphs below are of indicative nature only, whereas the same has to be as per the project specific requirements.}

6.3.1 Coal Handling Plant

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of augmenting the capacity of the existing coal handling plant due to much lower calorific value of coal being received than the calorific value for which the boiler was designed, requirement of installing additional wagon tippler, increasing the storage capacity of coal stock yard, refurbishment of coal crushers, installation of more effective dry fog dust suppression system at Wagon Tippler, Stock Pile, Transfer Points and Junction Towers, provision of stacker-reclaimer and facilities for coal blending etc.}

6.3.2 Ash Handling Plant

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of augmenting the capacity of the existing ash handling plant due to higher consumption of coal having higher ash content, improvements in bottom ash handling system/ fly ash handling system, storage capacity of ash silos & ash dyke, installing of evacuation & disposal system for the dry fly ash, installing of ash water recycling system (AWRS) for the bottom ash handling system, providing arrangement for maintaining continuous water blanket over the ash dyke to prevent pollution due to blowing of fugitive ash from the dried portion of ash dyke, checking the adequacy of the existing system for 100% utilization of fly ash etc. etc.}

6.3.3 Water Intake System

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of installation of Travelling water screens at the makeup water pump house, replacement of line shafts/ impellers / bowl assemblies of water intake pumps, motors, piping and valves etc }

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[46]	15.01.2016

6.3.4 Water Pre-Treatment Plant

[.....]
[.....]

Note: Check for the possible requirements of renovating the pretreatment plant for a smaller output rating in view of substantial reduction in the requirement of makeup water quantity as a result of installation of dry fly ash handling system/ash water recycling system / increasing the value of COC etc. Check the condition of stirrers, mixing chambers rotating bridge, chlorination plant etc.}

6.3.5 DM Plant

[.....]
[.....]

{Note: Check for the possible requirements of refurbishing the pressure vessels, pipes, pumps, air blowers, valves, acid and alkali storage tanks, DM Water tanks etc}

6.3.6 CW & ACW System

[.....]
[.....]

{Note: Check for the possible requirements of installation of Travelling water screens at the CW pump house, replacement of line shafts/ impellers / bowl assemblies of CW pumps/ ACW pumps, motors, piping and valves etc}

6.3.7 Cooling Towers

[.....]
[.....]

{Note: Check for the possible requirements of refurbishing of riser pipes water distribution system, valves, fan motors, gear boxes, splash pipes and fills etc. Incorporate the recommendation of Performance Test.}

6.3.8 Fire Detection and Protection System

[.....]
[.....]

{Note: Check for the possible requirements of replacing the hydrants and sprinklers which do not work properly, replacement of air compressor, hydro pneumatic tank and jockey pump, renovation of emulsifier system for the transformers, provision of fire detection and protection system for the cable galleries etc. Check for the required changes to be made to ensure that the system meets the statutory requirements of TAC / LPA of Insurance Association of India.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[47]	15.01.2016

6.3.9 Fuel Oil Handling System

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the damaged unloading hoses / defective portion of fuel oil pipeline, replacement of heat tracing system /pumps/ fittings / valves of fuel forwarding system etc.}

6.3.10 Compressed Air System

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the existing reciprocating type of air compressors with screw type air compressors, replacement of existing air driers with energy efficient Heat of Compression type air driers, replacement of damaged pipelines etc.}

6.3.11 Air Conditioning & Ventilation System

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of augmenting the existing air conditioning and ventilation system including the need of its relocation from relatively dusty to cleaner location. Explore the option of vapour absorption machines.}

6.3.12 EOT Crane in TG Hall

[.....]
[.....]

{Note: Check for the possible requirements of replacing the damaged / misaligned portions of railings, installing system for the remote operation & control of EOT Crane etc. Check the capacity of the crane by carrying out the load test.}

6.3.13 Effluent Treatment Plant

[.....]
[.....]

{Note: Check for the possible requirements of modifying the existing ETP to have zero discharge in line with the current practice of the Industry / the requirement of most of the State Pollution Control Boards, to recycle treated water from the ETP for use in ash handling system / coal dust suppression system etc.}

Summary of R&M Measures

R&M Measures to be adopted for the Balance of Plant have been discussed in detail at **Annexure 6.3** for all the [five] options along with the cost impact for each option.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[48]	15.01.2016

6.4 Electrical System

{Discuss in this section the following aspects for each item of the Electrical System:

i) The problems being faced from in view of the shortfall in achieving the performance parameters and

ii) The R&M measures to be adopted based on the recommendation of RLA/CA and EA studies.

It may please be noted that the check points mentioned in paragraphs below are of indicative nature only, whereas the same has to be as per the project specific requirements.}

6.4.1 Generator- Stator

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the stator winding bars, replacing the Class 'B' bitumen based insulation with epoxy based Class F insulation etc.}

6.4.2 Generator-Rotor

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the existing retaining ring with new type made of better material, replacement of Desiccant type of dryer with refrigerant type of dryer, providing the system for on-line dew point measurement of H₂, replacement of excitation system with dual channel Digital Voltage Regulator (DVR) etc.}

6.4.3 Generator Transformer

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the existing Generator Transformer with higher capacity Generator Transformer in case the capacity of the unit is being revised upwards. In case the existing Generator Transformer is to be retained, check for the need of replacing the windings/ bushings/ cooling system/ emulsifier system etc.}

6.4.4 Unit Auxiliary Transformer

[.....]
[.....]
[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[49]	15.01.2016

{Note: Check for the possible requirements of replacing the existing Transformer with a new transformer of higher capacity to safely meet the increased auxiliary load of mills, coal handling plant and Ash Handling plant etc.}

6.4.5 Generator Protection & Synchronization

[.....]
[.....]
[.....]

{Note: Check for the implementation of latest protections. Check for the possible requirements of replacing the existing electromagnetic / static relays with numerical relays, replacement of existing system of manual synchronization with Auto synchronizer etc.}

6.4.6 Station Service Transformer

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing the existing Station Service Transformer with a new transformer of higher capacity to safely meet the increased auxiliary load of mills, coal handling plant and Ash Handling plant etc.}

6.4.7 6.6 kV System

[.....]
[.....]
[.....]

{Note: Check for the need of replacement/ retrofitting of the system due to increase in the electrical load as a result of replacement of existing mills with the higher capacity mills. Check for the possible requirements of change in the type of Circuit Breakers with SF6 breakers, replacement of electromagnetic / static type relays, with numerical relays, replacement of control wiring, providing Interposing relay (IPR) cabinet in Switchgear / Control Room to control the HT feeders / motors and selected LT feeders / motors from the DDCMIS etc.}

6.4.8 415 V System

[.....]
[.....]
[.....]

{Note: Check for the need of replacement/ retrofitting of the system due to increase in the electrical load as a result of addition of additional equipment, if any. Check for the possible requirements of replacing the existing LT boards with LT boards of draw out type, installing Air Circuit breakers (ACBs) for motors above 110 kW rating, providing latest microprocessor based protection for the motors, replacing electromagnetic relay based protection with numerical relay based protection, installing ammeters for motors above 30 kW rating and electronic energy meters for motors above 110 kW rating etc.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[50]	15.01.2016

6.4.9 HT & LT Motors

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of replacing/refurbishing the Class 'B' insulation Motors with Class 'F' insulation energy efficient motors, modification of motors foundations etc}

6.4.10 DC system

[.....]
[.....]
[.....]

{Note: Check for the possible requirements of augmenting the ventilation system, replacing / refurbishing the battery charger and batteries, DC Distribution Boards, improvement of availability of redundant system etc.}

6.4.11 Public Address system

[.....]
[.....]
[.....]

{Note: Check for the possible requirement of a better and clearly audible public address system with latest modern features for providing good communication inside the power plant.}

6.4.12 Illumination System

[.....]
[.....]
[.....]

{Note: Check for the possible requirement of a better illumination system for providing optimum lux level at all important locations of the plant. The possibility of providing Automatic Switching System should also be checked.}

6.4.13 DG Sets

[.....]
[.....]
[.....]

{Note: Check for the possible requirement of refurbishing/ replacing/ augmenting the DG Sets for providing the power back up required. Explore the possibility of providing automatic switch on/off for energy conservation.}

Summary of R&M Measures

R&M Measures to be adopted for the Electrical System have been discussed in detail at **Annexure 6.4** for all the [five] options along with their cost impact.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[51]	15.01.2016

6.5 Control & Instrumentation

[The total control and instrumentation system generally requires large scale replacement owing to obsolescence of the existing equipments.

Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for SG & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are to be envisaged for the plant.

The unit control and instrumentation system and other major proprietary control systems will be based on integrated Microprocessor Based Distributed Digital Control and Management Information System (DDCMIS). Complete operation and control of Steam Generator, Turbine Generator, Station C&I and auxiliary systems will be carried out from DDCMIS.

Field process transmitters, Pneumatic control valve's & damper's positioners will be smart type. Each transmitter and positioner will communicate with the control system in the form of analog signal 4 – 20 mA DC along with superimposed digital signal through HART protocol to facilitate configuration, zero adjust, calibration and diagnostic from remote station in addition to configuration by hand held smart configurator. Separate PC based configuration station with 22" TFT monitor along with maintenance and diagnostic facility for HART devices will be provided in case the features are not achievable in DDCMIS. The DDCMIS will be interfaced with BOP control systems using soft links. DDCMIS Interface Requirements for Packages will be as per the Table given below]

Table 6.1
DDCMIS Interface Requirements for Packages

S.No.	System / package	Control System / Scope	Operation From		Interface with DDCMIS	Remarks
			Local Control	UCR		
1.	Coal Handling Plant & Auxiliaries	PLC based / BOP Package Bidder	Yes	No	Redundant, Uni-Directional OPC Link	PLC with Redundant hot standby processor and necessary HMI will be considered.
2.	Ash Handling Plant &	PLC based / BOP	Yes	Yes	Redundant, Uni-Directional OPC	PLC with Redundant hot

			Local Control	UCR		
						from unit control room also through Hard ware / soft ware interface.]

6.5.1 DDCMIS

[The existing control system is old analogue based station controls, which have become obsolete and spares are no longer available. Hence DDCMIS should be provided. Boiler controls, turbine controls and station controls should be included in DDCMIS. DDCMIS operation will be from a set of TFT based Operator Workstations, TFT based EWS & TFT based shift in charge OWS. LVS will be provided to enable continuous display of many useful parameters and equipment status.

All Closed Loops, Open Loops as well as monitoring functions of both boiler and turbine will be included in DDCMIS.

Sequence of Events should be included within DDCMIS within the OWS. Data Communication system, Historical Storage and retrieval system, plant Performance Calculations and Optimization System, Management Information System will also be included in DDCMIS. Automatic Run-back will be provided on loss of critical auxiliaries.

Master Clock system based on Global Positioning System will be provided and it should be linked to plant DDCMIS and other PLC based system clock.

The DDCMIS will be compatible with OPC, Ethernet, TCP/IP communication for high speed LAN so that it can be connected seamlessly with other OPC compliant PLC / DDCMIS.]

6.5.2 Closed Loop Control System

[All control loops for boiler as well as TG will be included in the DDCMIS.]

6.5.3 Boiler & Auxiliaries

i) Existing Furnace Safeguard and Supervisory System (FSSS)

[Existing system is old obsolete system based on [.....] technology. Existing flame

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[56]	15.01.2016

scanners are of old version being obsolete and spares are not available presently.

Hence considering all these facts, fully proven microprocessor based system for Furnace Safeguard & Supervisory System will be provided for boiler protection i.e. Master Fuel Trip (MFT), Boiler purge, oil burner controls, Pulverizer sequence control & protection; control of Seal air fans and scanner cooling fans and fuel oil systems etc.

Furnace supervisory and safeguard System (FSSS) will be preferably implemented in the DDCMIS or within a proven PLC system with adequate safety, self-diagnostic and redundancy with fault tolerant hardware and software.

ii) Soot Blower control

As per modern practice in thermal power plants the microprocessor based control system shall be provided for sequence operation replacing the existing manual operation.

iii) Automatic Tube leak detecting system

[At present there is no Online Boiler tube leak detection system. Automatic steam leak detection system will be provided for detecting leaks at different zones of boiler. The detecting sensors will be mounted in the boiler at suitable locations. The system will include necessary acoustic signal generator, signal receiver, air purging system, signal processor & controller, PC with KB & TFT colour monitor, cabinet, junction boxes, connecting cables and interface to DDCMIS. The system will be able to eliminate the affect of varying surrounding noise to obtain a high accuracy of leak detection. Separately isolated 4-20mA DC analog signals will be provided for monitoring the acoustic level in DDCMIS.]

6.5.4

Turbine & Auxiliaries

Turbine Protections

[Existing Turbine Protections are Relay based. Turbine Protections should be shifted to DDCMIS or within a proven PLC based system with suitable interface with DDCMIS by hardwire and software.

Existing over speed protection is only mechanical. Existing one tacho-generator gives speed measurement signal to control room. New eddy current type speed measurement system (redundant measuring probe and module will be incorporated within the new Turbine supervisory system. Electronic over speed sensing with tripping interlocks to be implemented with latest hardwires and software.)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[57]	15.01.2016

i) Turbine EHC

[The existing Hydraulic governing control will be replaced with electro--hydraulic control (EHC).]

ii) Turbine ATRS

[An automatic run-up system will be provided for safe and reliable automatic startup & shutdown of the Turbine.]

Turbine Supervisory System

[Old electromagnetic type TSI System is installed. TSI can be replaced with new system (Eddy Current type) with monitoring software.]

iii) Machine Condition Monitoring System

[At present there is no Continuous monitoring and analysis of the mechanical health of the turbine. This will be performed with proven and latest on-line Rotating Machine Condition Monitoring Systems. It will display shaft vibration, bearing vibration, key phasor and other relevant machine data like speed for the Turbine, Generator & Exciter.]

iv) Turbine Stress Evaluator

[At present Turbine Stress Evaluator (TSE) system is not included within the turbine control and monitoring system. A proven turbine stress evaluation and control system is to be provided, which will work in conjunction with turbine governing system and ATRS.]

v) Automatic Turbine Testing

[Automatic Turbine Testing (ATT) will be provided as presently it is not included.]

vi) HP-LP bypass & Aux PRDS system

[HP-LP bypass control will be included in DDCMIS, in place of existing stand alone control panel. Auxiliary PRDS system control should be included in DDCMIS. PRDS (2nos. Pressure CV and one Temperature CV) should be replaced by Special critical zero leak type valves with actuators.]

vii) Gland steam pressure control

[Existing pneumatic control valve is provided with electronic controller. Controller should be included in new DDCMIS].

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[58]	15.01.2016

6.5.5 Primary, Secondary Instruments

All the existing Primary & Secondary instruments shall be replaced with latest available instruments. All transmitters shall be replaced with Smart type transmitters with HART protocol compatibility.

6.5.6 Control Valves

All the existing Control Valves will be replaced with new control valves with pneumatic actuators having smart HART compatible positioners

6.5.7 UPS

[Existing UPS system is obsolete and battery condition is also very poor. Hence new redundant UPS with suitable AC power distribution panel along with VRLS type Battery set should be provided to cover power supply for DDCMIS and other related control cabinets and operator stations.]

6.5.8 Analyzers, Steam and Water Analysis System

[Existing SWAS (Steam and Water Analyser System) are not working properly. Individual analysers are not in working condition. Total monitoring system is mainly based on manual measurement from plant chemical laboratory. Hence this system is required to be provided in totality. Complete Steam and Water Analysis System (SWAS) with dry and wet panel, stainless steel sampling line and sample conditioning system, analyzer monitors, and stainless steel grab sampling system with tray are to be considered.

6.5.9 Continuous Emission Monitoring System

New CEMS will be provided to monitor SO_x , NO_x , Particulates matter, CO & CO₂ emission from the chimney as per the latest guidelines received from the pollution control board.

6.5.10 Pipes & tubes

[Quality of existing Impulse lines in flue gas systems and other high pressure (more than 40 kg/cm²) systems are very poor. Hence total impulse lines should be replaced including root valves and drain valves. Process connection for instruments on line and vessel will be in accordance to standards such as ASME and other recognized international standards.]

6.5.11 Cables

[Old instrumentation cables will be replaced with are of 2.5 sq. mm. Height of cable gallery is very low. Removal of existing cables and laying of new cables in cable gallery will be very difficult. Suitable ventilation system in cable gallery should be provided. Terminating of all old field cables (2.5 sq. mm.) into marshalling cabinets and then,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[59]	15.01.2016

using of max 1 sq mm cable from marshalling cabinet to DDCMIS cabinets are to be followed.]

Summary of R&M Measures

R&M Measures to be adopted for C&I have been discussed in detail at **Annexure 6.5** for all the [five] options along with their cost impact.

6.6 Civil Works

{Discuss in this chapter the following aspects:

i) the nature of damage & distress caused to the foundations and civil & structural works of TG Building / Boiler Supporting Structure / Coal Handling Plant /Ash Handling Plant / Water Treatment Plant / Cooling Tower / CW Pump House / Chimney and Equipment foundations etc. and

ii) the R&M measures to be adopted based on the recommendation of visual examination, destructive & non destructive tests etc.

It may please be noted that the check points mentioned in paragraphs below are of indicative nature only, whereas the same has to be as per the project specific requirements.}

6.6.1 Boiler and Auxiliaries

[.....]
.....]
.....]

{Note: Check for the requirement of repair / replacement of the foundations of boiler, mills and fans etc.}

6.6.2 TG-Building

[.....]
.....]
.....]

{Note: Check for the requirement of repair / replacement of TG Building foundations, main and auxiliary columns, beams, bracings, walls, flooring, EOT crane rails etc.}

6.6.3 Chimney

[.....]
.....]
.....]

{Note: Check for the requirement of repair of concrete surface due to local spalling of concrete, exposure of reinforcement, damage to corbels etc.}

6.6.4 Coal Handling Plant

[.....]
[.....]
[.....]

{Note: Check for the requirement of repair /replacement to the foundations & supporting structure of crusher house / coal conveying gallery, repair of concrete and plastered surfaces of track hopper/ wagon tippler hopper/ CHP control room building, civil works for the additional wagon tippler if any.}

6.6.5 Ash Handling Plant

[.....]
[.....]
[.....]

{Note: Check for the requirement of repair of ash silos, ash slurry pump house, ash pipe racks, pedestals of slurry disposal pipelines, ash dyke etc.}

6.6.6 Water Treatment Plant

[.....]
[.....]
[.....]

{Note: Check for the requirement of repairing the clariflocculator / chemical house / DM Plant building/ pump house, arresting the water seepage through the structures, fixing the displaced tiles in the neutralizing pit etc.}

6.6.7 Raw Water Reservoir

[.....]
[.....]
[.....]

{Note: Check for the requirement of repairing the dyke of the reservoir, de-silting the reservoir basin, replacement of lining, replacement of tilesetc..}

6.6.8 CW System

[.....]
[.....]
[.....]

{Note: Check for the requirement of repairing the fore bay, cold water ducts, leaking joints, anchors of CW piping bends, super structure & basin of cooling towers etc.}

6.6.9 Ash Pond

[.....]

.....]
.....]

{Note: Check for the requirement of increasing the height of ash dyke to increase the capacity of Ash Pond, replacement of lining, replacement of tiles etc..}

6.6.10 Miscellaneous Works

[.....]
.....]
.....]

{Note: Check for the requirement of repairing the civil works of other buildings like, Administrative building, service building, canteen, stores, security building, de-silting basin, raw water reservoir, etc.}

Summary of R&M Measures

R&M Measures to be adopted for the Civil Works have been discussed in detail at **Annexure-6.6** for all the [five] options along with their cost impact.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[62]	15.01.2016

7 FINANCIAL EVALUATION OF R&M OPTIONS

7.1 Introduction

The scope and technical details of the *[five R&M options]* considered have already been discussed. This chapter evaluates the financial implication of the R&M options to decide whether to go for R&M and if yes, which R&M option is to be adopted for implementation. The objective of the financial evaluation is to make a comparative analysis of the financial implications of the *[five R&M options]* as well as the base case option of not undertaking any R&M project at all.

7.2 Capital Expenditure for R&M

The estimate of capital expenditure likely to be incurred for each R&M option comprises dismantling cost, supply cost, construction /erection /commissioning cost, taxes/duties, interest during construction, financing cost and contingency. The hard cost of each R&M option was estimated by summing up the estimated cost for the different components/activities of the R&M project. The cost for different constituent parts of the project was estimated on the basis of past cost data for similar work wherever available and/or budgetary quotes. The estimated capital cost of different R&M options is summarized at **Annexure 7.1**.

7.3 Impact on Tariff

[The tariff for electricity sent out from this power plant is determined by Tariff Norms of appropriate Electricity Regulator]. Capitalization of capital expenditure incurred for the project will affect cost of generation. Capitalization may increase Capacity Charge where as improvement in plant heat rate may bring down Energy Charge. Owner will have to take up the regulatory commission for acceptance of the revised tariff. The estimated Cost of Generation for different R&M options is shown in **Annexure 7.2**.

7.4 Basis of Comparison

Net Present Value (NPV) and Internal Rate of Return (IRR) have been used to compare the relative financial merit of different R&M options. Considering that expected economic plant life after R&M under different R&M options differ among themselves and also from the residual plant life without R&M, NPV has been used as the criterion for final decision as to whether R&M will be carried out and which R&M option will be adopted. Net Present Value is the sum of present value of all the project cash outflows and inflows using an appropriate discount rate. IRR is another metric used to assess the financial attractiveness of the different R&M options. IRR is the discount rate that makes the project NPV zero.

For the sake of comparison of different R&M options, the revenue stream of all the options have been calculated on the basis of a single indicative tariff per kWh of electricity for each year. Assuming that the regulator will prefer minimum tariff, the indicative tariff per unit for a year has been taken to be the minimum value among the calculated Costs of Generation (COG) as per Electricity Regulator's Norm for the different R&M options and base case tariff for that year. The estimated capital cost of each R&M option is used for calculation of Return on Equity and Depreciation.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[63]	15.01.2016

Normative Debt Equity ratio and depreciation rates are as per Tariff Regulation of appropriate Electricity Regulator. The revenue from electricity generation during a year in which plant is shut down is calculated considering normative availability/plant load factor. The loss of generation due to shut down for R&M is accounted for by considering that equivalent amount of electricity will have to be procured from the grid/market at the prevailing tariff. Therefore, the tariff at which power will be procured during shut down also affects the financial analysis. The negative cash flow due to shut down is calculated as the product of loss of generation and average tariff at which power will be procured from the grid net of variable cost .

7.5 Assumptions for Financial Comparison

- Cost of Generation calculation is done as per Tariff norms of appropriate Electricity Regulator
- O&M cost is taken as per Tariff norms of appropriate Electricity Regulator
- Average annual Availability/PLF of [85%] is considered for all R&M options for financial analysis. This is in line with Normative Availability Factor prescribed by Electricity Regulator. If any unit is operating at PLF higher than 85%, such higher PLF may be considered for Financial Analysis.
- Operating life of plant without R&M is [... years]. The lower plant life in base case captures the cost of closure of unit instead of undertaking R&M.
- Without R&M, the present Availability/PLF is considered [...% with linear reduction of PLF to% in year.]
- [For calculating the financial quantities of the Base Case of operating the plant for the residual economic life without undertaking any Renovation and Modernization activity, actual observed average annual Heat Rate is considered the plant Heat Rate during RLA and the plant heat rate is considered to increase by [%] per annum. For calculating the financial quantities of each option for which some Renovation & Modernization is undertaken, the design/guaranteed heat rate with operating margin of [6.5%] is considered the plant Heat Rate for all the years during the economic life after Renovation & Modernization.]
- In line with the approach followed in Tariff Norms of Electricity Regulators, single value is considered for Plant Gross Heat Rate for financial analysis over the plant life after R&M. This single value of Heat Rate includes suitable operating margin over Design Heat Rate. Similarly, single value of auxiliary power consumption and specific oil consumption is considered over the entire plant life after R&M for financial analysis.
- Specific oil consumption is considered [actual consumption in ml/kWh without R&M and 1 ml/kWh with R&M]
- An operating margin of [6.5%] on Design Gross Heat Rate is considered for all R&M options. For base case without R&M, [Heat Rate is escalated by% every year from present actual average heat rate.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[64]	15.01.2016

- Present coal price and fuel oil prices are considered to be equal to the actual coal price and fuel oil prices for the unit.
- The discount factor and coal price escalation rate are taken to be [that notified by appropriate Electricity Regulator].

Table- 7.1
Factors for Financial Analysis

unit shutdown						

7.7 Selection of R&M Option

The NPV, IRR and Payback Period calculation for different R&M options and NPV for base case is summarized at **Annexure-7.3**. R&M option [...] is found to be having the highest NPV and hence selected for implementation.

Table – 7.3
Financial Evaluation of R&M Options

Option	Levelized COG (Rs/kWh)	IRR (%)	NPV (Rs Million)	Differential NPV w.r.t Base Case (Rs Million)	Payback Period (Years)
Base Case(No R&M)	[...]	—	[...]	—	—
I	[...]	[...]	[...]	[...]	[...]
II	[...]	[...]	[...]	[...]	[...]
III	[...]	[...]	[...]	[...]	[...]
IV	[...]	[...]	[...]	[...]	[...]
V	[...]	[...]	[...]	[...]	[...]

The selected R&M option [...] has Differential NPV of Rs [...] Million with respect to the base case for a project cost of [...]. The selected R&M option has IRR of [...%] against cost of capital of [... %]. The selected R&M option has payback period of [...] years.

7.8 Impact of Adverse Scenarios

R&M projects are complex in nature and are associated with many uncertainties. The cost and time for execution of the project may overshoot estimates and the project may fall short of achieving its objectives. The financial viability of the selected R&M option should have some level of tolerance for such uncertainties.

Renovation & Modernization projects are associated with high risk of Time overrun and cost overrun due to unique nature of each project and also due to the complexities and uncertainties associated with retrofitting work. The reasons for Time/Cost overrun

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[67]	15.01.2016

are discussed in the Chapter on Risks (Chapter-11). Time overrun itself is a reason for Cost Overrun due escalation of hard cost, increase in overheads and increase in interest during construction. Therefore, R&M projects very often run into time overrun and cost overrun simultaneously. Time and/or cost overrun adversely affect the financial viability/attractiveness of R&M projects by negatively affecting Net Present Value and Internal Rate of Return of the project.

The three prime objectives of any R&M project are Heat Rate improvement, Electricity Output restoration/up rating and Plant Availability/Reliability enhancement with concomitant adverse impact on project financials. R&M projects are associated with the risk of partially or fully failing to achieve these objectives. Failure to achieve the desired Heat Rate may itself contribute to less than targeted electrical output. Therefore, in many cases, R&M projects are likely to miss Heat Rate and Output objectives simultaneously.

The financial impact of certain level of cost overrun, time overrun and shortfall in performance is depicted in Table-7.4.

Table – 7.4
Impact of Adverse Scenarios on Selected R&M Option

Availability variation (-3%)	[...]	[...]	[...]	[...]
Availability variation (-5%)	[...]	[...]	[...]	[...]

{Note: Identify the scenarios for which the NPV of chosen R&M option becomes negative and analyze them in detail. Discuss the likelihood of occurrence of each such negative NPV scenarios. If a negative NPV scenario appears to be highly unlikely or remote possibility, then it may be neglected. However, in case a negative NPV scenario has a fair chance of becoming a reality, the impact of such a scenario on the owner utility may be deliberated upon and accordingly decide whether to go ahead with the implementation of the chosen R&M option.}

If the Project qualifies for any financial benefit due to reduction in carbon emission or enhancement of energy efficiency, resulting from Renovation and Modernization, it will enhance the financial viability/attractiveness of the R&M Project. However, it will be project specific. In case the project is likely to get any such benefit, it shall be factored into the financial evaluation. }

8

CARBON CREDIT AND ENERGY EFFICIENCY CREDIT

[With growing worldwide concern regarding carbon emission and depletion of energy resources, governments and international bodies are trying to put in place incentive mechanisms to encourage reduction in carbon intensity of economic activities and promote energy efficiencies. The various initiatives in this regard are evolving both nationally and internationally. Projects that lead to carbon emission reduction and energy efficiency improvement have the potential to earn carbon credit and energy efficiency credit that can be sold and serve as an additional revenue stream.]

The R&M project will increase plant efficiency and reduce plant heat rate and specific coal consumption. This in turn, will result in reduction of emissions of Green House Gas carbon dioxide (CO₂) per unit of electricity generated. The selected R&M option envisages change in plant design (particularly change in turbine) so as to increase its efficiency beyond the original design efficiency and involves additional investment on this account. This R&M project may qualify for carbon credit benefits. Further, implementation of this energy efficient R&M project involves overcoming technological barriers as infrastructure for this kind of project implementation is not well established in India. Carbon Credit benefit will help make this project viable which is as such a challenging project from financial and technological stand point.]

{There are various mechanisms such as Clean Development Mechanism under Kyoto Protocol, Verified Carbon Standard, National Action Plan on Climate Change (PAT mechanism of National Mission on Enhanced Energy Efficiency) etc. that can be explored to have financial benefit on account of reduction in carbon emission and enhancement of energy efficiency. However, success in securing any benefit under these schemes will be project specific.}

9.3 Means of Finance

[Utility is implementing the project by leveraging the existing balance sheet to raise the debt required for the project. At present the Company has a debt equity ratio of ..., which is being leveraged to finance various projects including this R&M project.]

The cost of the Project is estimated to be Rs. [.....] million. Utility plans to fund it at a debt-equity ratio of 70:30, which is same as the normative debt equity ratio for financing of generation projects by the Central Electricity Regulatory Commission ("CERC") in the CERC (Terms and Conditions of Tariff) Regulations 2009. The debt and equity requirement for the Project works out to approximately Rs. [.....] million and Rs. [.....] million respectively. Utility plans to fund the equity component from internal accruals. Utility plans to raise the debt component of the Project cost through a combination of rupee term loan and foreign currency loan as follows]:

Debt:	[....]
Rupee Term Loan	[... .]
Foreign Currency Loan	[....]
Total	[....]

[Given the strong balance sheet, the utility can support this kind of financing arrangement.]

9.4

Market Scenario

{Discuss about the scarcity and demand of power in the state or region where the project is located. Discuss about the likely prospect of future demand growth and infer about the prospect of demand for power from the project after implementation}

Table 9.3
Energy and Peak Deficit in Electricity supply during the last Financial Year

Period	Peak Demand	Peak Met	Peak Deficit/ Surplus	Peak Deficit/ Surplus	Energy Requirement	Energy Availability	Energy Deficit/ Surplus	Energy Deficit / Surplus
	(MW)	(MW)	(MW)	(%)	(MU)	(MU)	(MU)	(%)
India	130,250	115,847	-14,403	-11.1	936,568	857,239	-79,329	-8.5
[Region]	[42,352]	36509	-5,843	-13.8	290423	257,408	-33,015	-11.4
[State]	21069	16417	-4,652	-22.1	141464	117804	--23660	-16.7]

[Availability of power in the state is not adequate to meet the present requirement. With rapid economic growth and socio-economic development, the power deficit is likely to widen in coming years. Therefore, the power generated from the renovated unit is likely to be sold without any special effort. Therefore, there is no demand-side constraint for this R&M project.]

---	-------------------

10 IMPLEMENTATION OF R&M PROJECT

[The scope of R&M works was decided on the basis of the most attractive option which was selected after the cost-benefit analysis and detailed study of various options recommended by R&M Consultant. For implementing the R&M Project, the total work will be divided in suitable number of packages. A PERT Chart is attached with this Report highlighting the various timelines, parallel activities and critical paths for the implementation of the R&M project. For the selection of R&M Contractors, the tendering procedure and bidding norms will be designed to ensure a fair and transparent competition.]

10.1 Project Team

*[.....
.....
.....]*

{Explain the organization structure of the Project Team along with the Organization Chart}

10.2 Project Schedule

*[.....
.....
.....]*

{Discuss the project completion schedule along with the schedule of completion of critical activities. Refer Annexure- 10.1}

10.3 Project Management

*[.....
.....
.....]*

{Discuss the various aspects of Project Management like, Contracting, Engineering, Procurement, Construction, Erection and Commissioning so as to ensure that the quality of work conforms to relevant codes / standards and statutory requirements.}

10.4 Project Monitoring

*[.....
.....
.....]*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[75]	15.01.2016

{Discuss the methods to be used for regular monitoring the progress of R&M activities, holding of progress review meetings etc to ensure the timely and successful completion of Project.}

10.5 Role of R&M Consultant

[.....
.....
.....]

{Discuss the role of the R&M Consultant to carry out the activities from initial study stage up to the stage of finalizing the R&M contract and to facilitate approval from regulatory agencies if required.}

10.6 Role of the ISC Consultant

[.....
.....
.....]

{Discuss the role of the Implementation Support Consultant for the review of design documents & drawings to ensure compliance with the spirit, intent & contents of the EPC contract, inspection & testing before dispatch, site supervision and witnessing of Performance Guarantee Tests of the equipments.}

10.7 Quality Management

[.....
.....
.....]

{Discuss the aspects of Field Quality Plans to ensure that the work performed by the contractor is as per the relevant codes / standards and statutory requirements.}

10.8 Performance Guarantee Test

After the commissioning of the unit post completion of R&M works, the unit shall be tested to demonstrate the following Guaranteed Parameters as per the provisions of the R&M Contract.

Table 10.1
Performance Guarantee Parameters

S. No.	Performance Guarantee Parameter	Value
1.0	Gross Output for the unit at Generator terminals at 100% TMCR	[...]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[76]	15.01.2016

S. No.	Performance Guarantee Parameter	Value
2.0	Steam Turbine Heat Rate for the unit at 100% TMCR conditions with 0% makeup.	[...]
3.0	Boiler Efficiency at 100% TMCR conditions while firing design coal	[...]
4.0	Auxiliary Power Consumption @ 100% TMCR while firing design coal	[...]
5.0	Emissions of SPM @ 100% TMCR while firing worst coal	[...]
6.0	Noise Level during day time at plant boundary.	[...]
7.0	Noise Level during night time at plant boundary.	[...]

10.9 Liquidated Damages

The R&M Contract shall have provisions of levying Liquidated Damages (LD) for:

- Delay in Completion of the Project and
- Shortfall in Performance.

LD for delay in shall accrue at a rate of Rs. [...] per MW per day for each day of delay up to [...] days of delay and Rs. [...] per MW per day for each day of delay beyond [...] days of delay. LD for shortfall in performance of the Unit shall be as per the values given in the following table.

Sl. No.	Parameter	Condition	LD Amount
1.0	Gross Output	For each kW of shortfall.	[...]
2.0	Turbine Heat Rate	For each 1 kCal/kWh of increase	[...]
3.0	Steam Generator efficiency	For every 0.1% short fall in efficiency	[...]
4.0	Auxiliary Power Consumption	For each 1 kW of increase	[...]

10.10 Health, Safety and Environment (HSE)

[.....]
[.....]
.....]

{Discuss the steps to be taken for the maintenance of healthy and safe working environment with the aim to complete the project without any accident and any

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[77]	15.01.2016

Feasibility Report For R&M of Unit No.[.] of [Name of the Power Plant]	[Logo of Utility]
---	--------------------------

adverse effect on the health of manpower. Discuss also the implementation of HSE Plan by the EPC contractor.}

10.11 Supply of Spares and Special Tools and Tackles

*[.....
.....
.....]*

{Discuss the R&M Contractor's scope to include the supply of spares and special tools & tackles.}

10.12 Training

*[.....
.....
.....]*

{Discuss the R&M Contractor's scope to impart training to the O&M staff of the utility for the required up-gradation in their skills.}

10.13 O&M Manuals

*[.....
.....
.....]*

{Discuss the R&M Contractor's scope to prepare and submit sufficient number of O&M Manuals, Technical Diaries indicating various Equipment Specifications, Process Parameters, Key Schematic Diagrams and As Built Drawings.}

10.14 Operation and Maintenance

*[.....
.....
.....]*

{Discuss the O&M Philosophy of the utility to carry out safe, efficient and reliable plant operation of the plant in compliance with environmental legislation. Discuss the strengthening of existing O&M Organization on modern lines. The O&M organization should necessarily include an Operation & Efficiency Cell to evaluate the actual efficiency, Heat Rate and Cost Of Generation on day to day basis, a Maintenance Planning Department for maintaining updated data base of assets of the unit as well as for carrying out condition monitoring of the rotating equipments on a weekly basis and for detailed planning of Annual and Capital

11 RISKS

Renovation and Modernization projects are very complex in nature and associated with high level of uncertainty. The various risk factors along with mitigation measures are discussed below.

11.1 Limitation of CA, RLA and LE Studies

Information and inference flowing from Condition Assessment, Residual Life Assessment and Life Extension studies forms the basis of planning, designing, costing and tendering of R&M projects. However, these reports may not give accurate idea about actual state of the plant and equipment. Similarly, the rehabilitation and retrofitting programme may not lead to the intended life, reliability and performance of the plant. In some cases serious damage might be detected for plant and equipment during the implementation stage which could not be detected during the CA studies. Such surprises may adversely affect the cost estimate and schedule.

The probability and impact of such risks may be moderated by designing proper condition assessment plans. Further, contingencies may be built into cost estimates and contractual clauses may be suitably designed to take care of such surprises.

11.2 Regulatory Risk

The capital expenditure incurred for the R&M project has to be serviced by suitable electricity tariff. If the concerned Electricity Regulatory Commission does not allow adequate tariff to cover the expenses incurred, it will adversely affect the cash flow and net worth of the owner.

The regulatory risk may be mitigated by designing and implementing the R&M Project in compliance and in sync with the extant regulatory regime.

11.3 Risk of R&M Contractor and Personnel

There is limited availability of competent contractors and personnel for carrying out R&M works. There is dearth of contractors and personnel with expertise and experience in implementation of energy efficient R&M works.

Government and industry bodies can play big role in mitigating this risk by taking initiative expands contractor base and talent pool. Owner on its part can somewhat mitigate this risk by designing tendering process and contracts that encourages better participation by available contractors.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[80]	15.01.2016

11.4 Risk of Non-Availability of Spares.

As the units are very old, there may be difficulty in sourcing many spare parts. This risk may be obviated in some cases by devising suitable sourcing strategy or design modifications or reverse engineering.

11.5 Risk of Getting Shutdown for Implementation

As R&M of the complete plant calls for shutdown for considerable time and there is acute shortage of electricity, the grid condition may not permit shutdown period. This risk may be mitigated by proper planning and taking all stakeholders into confidence during the planning phase and adhering to the planned schedule.

11.6 Financing Risk

The owner may find it difficult to arrange equity and debt financing for the R&M project. This risk may be mitigated by proper financial planning. Similarly, the R&M contractor may face cash flow problem. This risk may be mitigated by specifying suitable financial qualification criteria in tender specification and incorporating suitable payment term in the contract.

11.7 Implementation Risk

Poor implementation of project may lead to cost and/or time overrun and deficiency in quality. This risk may be mitigated by efficient Project Management set up and selection of reliable R&M contractor.

11.8 Equipment Underperformance Risk

The renovated plant and equipment may not perform as envisaged due to deficiency in design, manufacturing and O&M practices. The risk of underperformance due to design and manufacturing shortcomings may be managed by selecting reliable contractor and incorporating appropriate LD clause in the contract. The risk of O&M deficiency can be mitigated by proper training of O&M personnel.

---	-------------------

12 CONFORMITY TO STATUTORY ENVIRONMENTAL NORMS

{Discuss in this chapter, the need of compliance to the conditions prescribed by MOEF and State Pollution Control Board (SPCB)}

12.1 Environmental Monitoring Cell

[.....
.....
.....]

{Discuss the role of Environment Monitoring Cell established at the project. Discuss the steps to be taken for strengthening the above cell to monitor and control the environmental impacts from the renovated plant, as per the revised stringent norms prescribed by the regulating authorities.}

12.2 Stack Emissions

[.....
.....
.....]

{Discuss the present levels of emissions of SPM, SO₂, NO_x and NH₃ from the stack, levels of Ground Level concentrations and the pollutants in the liquid effluents with respect to the statutory norms vis a vis the levels of emissions after the implementation of R&M Project. Discuss the methods and frequency to be adopted by the utility for monitoring and controlling these emissions as per the revised conditions prescribed by the regulating authorities.}

12.3 Ambient Air Quality (AAQ)

[.....
.....
.....]

{Discuss the National Ambient Air Quality Standards prescribed by MOEF and SPCB. Discuss the methods and frequency to be adopted by the utility for monitoring and controlling the Ground Level Concentrations (GLC).}

12.4 Liquid Effluents

[.....
.....
.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-002	05	FEASIBILITY REPORT FOR R&M WORKS	[82]	15.01.2016

{Discuss the quality of liquid effluents permitted by SPCB from different systems of the plant like, effluent from Water Treatment Plant, Boiler Blow down, Cooling Tower Blow down, recycled water from ash pond and sewage disposal from plant and colony. Discuss the recycling of ash water from ash pond and reuse of Cooling Tower Blow down for ash handling and coal dust suppression. Discuss the proposal of zero discharge, if applicable to your project.}

12.5 Noise

[.....
.....
.....]

{Discuss the noise level permitted during day and night and methods proposed to contain the noise level produced from power plant equipment within the limits imposed.}

12.6 Ash Utilization

[.....
.....
.....]

{Discuss the norms for the utilization of ash from the thermal power plants as per the latest notification from MOEF. Discuss the quantum of fly ash & bottom ash to be produced from the plant and implementation of ash utilization plan by the utility, after the completion of R&M project. Please note that as per MoEF notification dated 3rd November 2009, all the coal and lignite based thermal power stations operating before the date of the above notification are required to achieve the target of 100% utilization of fly ash before the expiry of a period of five years from the date of issue of the said notification.}

12.7 Corporate Social Responsibility

[.....
.....
.....]

{Discuss the initiatives proposed to be taken by the Project to actively contribute to the social and economic development of the weaker sections of the communities around which the Project is going to operate.}

Model RLA/CA Report For R&M of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

BACKGROUND

What is R&M (Renovation & Modernization) of Thermal Power Plants?

Coal based power stations contribute more than 70% share of total power generation in India. Thermal Power Stations are designed for an economical and stable life span of 25 years, after which, the level of performance starts deteriorating as a result of degradation of its equipments, components and materials. Deterioration may also take place before the completion of useful life of 25 years, if the units are not operated and maintained properly. Deterioration in performance is reflected in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. This results in costly repair and loss of revenue. Renovations & Modernization (R&M) and Life Extension (LE) Programme of thermal power station is an activity of carrying out repairs, refurbishments and replacement of defective equipments & components so as to extend the life of the power plant by at least 20 years and to restore the performance parameters to equal or better than the original design parameters.

Need of R&M

In spite of new capacity additions, India continues to face shortages of varying degree in the supply of energy and peaking power. Implementation of fresh capacity additions for bridging the demand supply gap involves huge investments and long gestation periods primarily due to the process of land acquisition and getting the required fuel and water allocations, permits & clearances, particularly, the environmental clearance.

On the other hand, R&M activity of existing old power plants which requires less investment and can be completed in shorter duration has been recognized as a techno-economically viable option to supplement the fresh capacity addition for maximizing the energy generation. Also it helps in reducing the emissions by adopting upgraded modern technologies.

Objectives of R&M and R&M/LE Programme

As per the Guidelines issued by Central Electricity Authority (CEA) the following should be the objectives of R&M and R&M/LE Programmes.

Objectives of R&M Programme:

- To restore rated capacity and design parameters such as Heat Rate, Auxiliary Power Consumption and Secondary Oil Consumption etc.
- To make the operating units well equipped with modified/ augmented latest technology.
- To overcome technological obsolescence and non-availability of spares.

Document Number	Rev No.	Description	Page No.	Date of Issue

Model RLA/CA Report For R&M of Unit No. [..] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	--------------------------

- To improve the performance parameters in terms of Plant Load Factor, Efficiency, Forced Outages, Availability and Reliability.
- To reduce maintenance requirements and enhance the ease in maintenance.
- Compliance of stringent environmental norms, safety and other statutory requirements.

Objectives of R&M/LE Programme:

- Extension of useful economic life of generating units by another 20 years.
- To focus on full load operation of the unit beyond their original design life.
- To restore rated capacity and design parameters such as heat rate,
- Improvement in Auxiliary Power Consumption Secondary Oil Consumption etc
- Up-rating of Generating Unit.
- Improvement beyond design parameters.

Criteria for the Consideration of R&M and R&M/LE Programmes

As per the Guidelines issued by Central Electricity Authority (CEA) the following criteria is to be adopted for considering the R&M and R&M/LE Programmes.

- Estimated cost of unit for complete R&M/ LE works should be limited to 50% of cost of new unit.
- Cost of Main Plant (BTG) should be limited to 50% cost of new BTG unit.
- Plant Life should be extended by about 20 years.
- The Pay Back Period should be from 5 to 7 years.

Need of Preparation of Model R&M Documents

The countrywide R&M programme was first initiated in 1980 when Government of India approved the scheme of Central Loan Assistance (CLA) of Rs. 500 crores benefitting 34 power stations mostly of 50/60/100/110/120/140 MW capacities. R&M in a structured manner was initiated as a centrally sponsored programme during the 7th Five Year Plan. The momentum of carrying out R&M works was continued through 8th and 9th Plans but the same could not be sustained during the 10th Plan.

Based on the discussions held with Ministry of Power, various utilities, PFC and BHEL, CEA prepared a document on "National Perspective Plan for Renovation & Modernization and

---	--------------------------

Life Extension and Up-rating (LE&U) of thermal power stations up to the year 2016-17". This document which also includes revised guidelines for Renovation & Modernization / Life Extension works on coal/lignite based thermal power stations was released by Honourable Minister of Power on 14th December 2009. Plan-wise Achievements of R&M and R&M/LE Programmes starting from 7th Five Year Plan till 11th Five Year Plan is furnished below:

Plan-Wise Achievements

S.No.	Plan	Year	No. of TPS / No. of Units	Capacity (MW)	Additional Generation Achieved MU/ Annum	Equivalent MW
1	7 th Plan and Two Annual Plans	85-86 to 89-90 & 90-91, 91-92	34 / 163	13570	10000	2000
2	8 th Plan (R&M) (LEP)	92-93 to 96-97	44 / 198 43/(194) 1/ (4)	20869 (20569) (300)	5085	763
3	9 th Plan (R&M) (LEP)	97-98 to 2001-02	37 / 152 29/ (127) 8/ (25)	18991 (17306) (1685)	14500	2200
4	10 th Plan (R&M) (LEP)	2002-03 to 2006-07	9/ 25 (14 out of 57 planned) (11 out of 106)	3445 (2460) (985)	2000	300

11th Plan R&M Programme & Achievements (2007-12)

	Programme (MW)	Achievement (MW)
Life Extension Programme (LEP)	7318 (53 units)	1291 (13 Units)
R&M Programme	18965 (76 units)	14855 (59 units)
Total	26383 (129 units)	16146 (72 units)

In the past, R&M measures were hampered due to lack of proper planning. Proper investigation to identify the R&M works to be carried out and preparation of technical bid documents based on the investigation was not done. This resulted in unsystematic and additional work during execution phase and uncertainty about costs resulting in excessive implementation time, long shutdown periods of plants and cost overruns. In the absence of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	04	MODEL RLA/CA REPORT	[iv]	25.09.2014

standard commercial rules and policies, suppliers showed little interest in R&M work. Therefore a strong need was felt for providing standardized bidding procedures as well as model contracts, formats and specifications etc. to the utilities. Standardization will harmonize the requirements of all the stakeholders and will lead to their increased participation.

The Indo-German Energy Forum (IGEF)

The Indo-German Energy Forum (IGEF), inaugurated in 2006, provides a platform to discuss energy related issues of mutual interest. The first meeting of the ad-hoc sub-group on “energy efficiency in thermal power stations”, constituted as per decision of meeting of IGEF in December 2007, was held under the chairmanship of Joint Secretary (Thermal), Ministry of Power on 12th March, 2008 in which preparation of standard tendering document for the purpose of R&M activities was, inter-alia, identified as an area of the activities. The scope of the assignment was divided in two parts as under:-

Phase-I Activity:

Phase-I activity comprised an assessment of tendering procedures currently being followed by public utilities in India and a review of documents used for standard R&M projects and the documents which have already been developed for energy efficient R&M projects financed by particularly World Bank. This activity was carried out by M/s Evonik (India) under the grant provided by GTZ. M/s Evonik (India) submitted the report in September 2009.

Phase-II Activity

Phase-II activity comprised the preparation of the model documents / templates in consultation with Task Force, power utilities & financing agencies.

In the 3rd meeting of Indo-German Energy Forum (IGEF) convened in Berlin on 4th November 2009, KfW proposed to finance and carryout the work programme of phase-II Activity, on behalf of CEA & in consultation with the Task Force. In a meeting held in MOP on 17th December 2009, chaired by Joint Secretary (Thermal), MOP, the representative of KfW suggested that CEA may act as “Project Executing Agency” for the phase-II activity. Accordingly Ministry of Power, Govt. of India have entrusted the task of “Project Executing Agency” to CEA for implementing Phase-II activity. Under Indo-German Energy Forum (IGEF) assisted programme, M/s Lahmeyer International (India) was appointed on 16th March 2012 to provide the consultancy services for ‘Development of tendering procedures and model contract document for R&M of Fossil Fuel Based Power Plants in India.’ The scope of consultancy services included the preparation of the following model documents:

- I) Standard Bidding Procedure for engagement of Consultants and R&M Works Contractor.
- II) Residual Life Assessment (RLA) / Condition Assessment (CA) Report.
- III) Energy Audit (EA) Report.
- IV) Feasibility Report.

Document Number	Rev No.	Description	Page No.	Date of Issue

Model RLA/CA Report For R&M of Unit No. [..] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	--------------------------

V) Detailed Project Report.

VI) Request for Qualification (RFQ) & (RFP) Documents for R&M Consultants and R&M Contractors.

VII) Technical Specifications.

Due Diligence done by LII of the R&M Documents of other Projects

Before the preparation of this model document, LII did a thorough review of the R&M Documents of the following Power Plants:

Documents Provided by CEA

- Remaining Life Assessment / Condition Assessment Report- Nasik Unit-3 of MAHAGENCO.
- Energy Audit Report- Nasik Unit- 3 of MAHAGENCO.
- Detailed Feasibility Report- Nasik Unit-3 of MAHAGENCO.
- Draft Detailed Project Report -Kolaghat Unit-3 of WBPDCCL.
- Service Contract- R&M of Unit-1 Panipat TPS of HPGCL.
- Tender document for Supply, Erection, Testing and Commissioning of Air Preheater for Unit 5 & 6 Koradi TPS, MAHAGENCO.
- Tender document for replacement of 6.6 KV station transformer incoming breaker & Tie- breaker of Koradi TPS, MAHAGENCO.
- Tender specification for Design, Engineering, Supply, Erection, Testing and Commissioning of Rotary Air Preheater for Units 4 & 5, Nasik TPS of MAHAGENCO.

Documents Provided by WBPDCCL

- Energy Audit Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Detailed Project Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Project Design Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Technical Specifications. (Vol. II of RFP Document for R&M Contractor).
- RLA for Boiler for Bandel Unit -5.
- RFP for R&M Consultant for Bandel Unit -5.
- Commercial Volume-I of RFP for Bandel Unit -5 for R&M Contractor.

KfW Documents

- Model Contract Document issued by KfW.
- Guidelines issued by KfW for the assignment of Consultants.

World Bank Documents

- Standard Bidding Document for Procurement of Plant, Design, Supply and Installation.
- Standard Request for Proposal for the Selection of Consultants

.....
This Model Residual Life Assessment (RLA) / Condition Assessment (CA) Report has been prepared to conceptualize the format of the Report based on the systematic methods and procedures to be applied for checking the health of various equipments and components so as to identify such equipments and components which require replacement or refurbishments. Detailed standard documents like FR, DPR, RFP & RFQ documents to carry out R&M works for the Thermal Power Plants shall be prepared based on this RLA/CA Report.

---	-------------------

NOTES & GUIDELINES FOR USING THE MODEL RLA/CA REPORT

Central Electricity Authority (CEA), the Project Executing Agency / Employer has appointed Lahmeyer International India Pvt. Ltd. (LII), the Consultant to Develop Standard Procedures and Model Documents for the Renovation and Modernization (R&M) of Fossil Fuel based Power Plants in India. The above assignment is being financed by KfW Entwicklungsbank. Accordingly, this Model RLA/CA Report has been prepared for the guidance of Project Authorities who may decide to carryout R&M of their old Coal based Power Plants so as to extend the life of their plants and make them energy efficient and reduce emissions.

The purpose of this model document is to standardize the format of the RLA/CA Report for R&M works. Since majority of 200/210 MW units are potential candidates for consideration of Renovation as they have crossed 20 to 25 years of useful life, the enclosed format has been prepared keeping those 200 MW/210 MW units in view. Since in due course of time, many 500 MW units will also become due for R&M, the Utilities are advised to suitably modify this document for its application to 500 MW units.

This format of RLA/CA Report contains two kinds of texts written in black and in blue colours. The text in blue italics and enclosed in square bracket ([...]) represents variable information which may differ from project to project. The text and numbers in blue colour are written for the sake of citing an example. The Utilities and their Consultants are advised to check the relevance of the same and replace these texts and numbers with the ones as may be applicable to their specific Project. A few guidelines have also been provided in blue italics enclosed within red curly brackets ({...}), wherever applicable.

EXECUTIVE SUMMARY

This Residual Life Assessment and Condition Assessment Report has been prepared for carrying out the Renovation & Modernization (R&M) / Life Extension (LE) of Unit No [...] of [...] Thermal Power Plant, located at [...], in District [...] in the State of [...] and having a configuration of [...x...MW].

The unit no. [...] was first commissioned in the year [...]. After [...] years of operation, the performance of the unit has gradually deteriorated resulting in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. It is proposed to carry out required refurbishments and replacements in the plant so as to restore the unit's performance parameters and to extend its life of by at least [...] years.

The report discusses the salient features and operational history of the power plant and also the specific problems being faced from the operation of various plant equipment & systems.

To assess the health and determine the residual life of all the major components of the plant, various Residual Life Assessment (RLA) and Condition Assessment studies were conducted during the period [...]. The studies and tests conducted were based on the latest available technology.

Summary of Recommendations of RLA/ CA Studies are furnished below:

[.....]

]

{Describe above the major recommendations of RLA/ CA studies which could comprise Replacement/ Refurbishment of Boiler drum internals, Down comers, Water Wall Headers / Tubes, Headers/ Coils of Platen Super Heaters/ Final Super Heaters/ Convection Super Heaters/ Re-Heaters, Inlet/ Outlet Headers/ Coils of Economisers, Baskets/ Seals of Rotary Regenerative Air Pre-Heater, Wall Soot Blowers/ LRSBs, Coal Feeders, Wind Box, Low NOx Burners, Burner Tilting Arrangement, Boiler Structure, Buckstays, Ducting & Insulation, Bottom ash Hoppers, Clinker Grinders, ID/ FD/PA Fans, Grinding Rolls/ Gear Boxes/ Classifiers of Mills, Collecting Electrodes/ Emitting Electrodes/ Transformer Rectifier Sets of ESP, HP/IP/LP Modules of Steam Turbines, HP / IP Casings/ Diaphragms/ Gland Sealing System/ Inter-Stage Packing of Steam Turbines, Emergency Stop Valve, Interceptor Valves, Control Valves, Servomotors, Governing System, Turning Gear, Jacking Oil System, Online Tube Cleaning System of Condensers, Ejectors,

2

INTRODUCTION

Unit No [...] of [...] Thermal Power Station was first synchronized on [...]. The Unit has been operating for more than [...] years and its performance has deteriorated gradually over the years. Extending the life of the unit and increasing its efficiency and output appears feasible by carrying out Renovation and Modernization of the Unit. This Residual Life Assessment (RLA) and Condition Assessment (CA) Report has identified those equipments and components of the Unit which need to be rehabilitated to prevent loss of generation, improve efficiency, enhance availability and enable the unit to produce power in conformity with the statutory environmental regulations in force.

The RLA & CA studies were conducted to assess the health condition and determine the residual life of all the major equipments like Boilers, Turbines, Generators, Power Transformers, Electrical Systems, Coal Handling Plant, Ash Handling Plant, Water Systems, Equipment Foundations and Civil Structures etc, which are the backbone of the generating unit to give its sustained performance. The studies comprised Visual Examination through Cold Walk Down Survey / Hot Walk Down Survey, Dimensional Measurements, Destructive & Non-Destructive Tests, Steam Path Audit and In-Situ Metallographic Tests etc. The studies and tests conducted were based on the latest available technology.

This report is based upon review of RLA & CA studies done during the period [...], review of the operation data of the unit and detailed discussions held with the project authorities as well as operating personnel.

The recommendations of the RLA/ CA studies have been discussed in detail in section 6.0 of this report. These recommendations are being hereby submitted to the Project Authorities for further discussions and for evolving various options for Renovation and Modernization of the Unit.

Document Number	Rev No.	Description	Page No.	Date of Issue

3 DESCRIPTION AND OPERATIONAL HISTORY OF THE UNIT

3.1 Description

The Power Plant, having a configuration of [...x...MW] is located at [...], in District [...] in the state of [...]. The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator, respectively. The boiler for the unit is of [PF/CFBC] design. The boiler is provided with [front & rear/ corner/down shot] firing system. LP stage of Turbine is designed with [Bauman] exhaust. Condenser cooling system of the unit is designed on [once through / re-circulation system]. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [... substation.] The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [...&.....] coal mines. The consumptive water for the power plant is being sourced from [.....river /.....sea].

3.2 Salient Features and Details of the Unit

{Describe in this sub-section, the Design Parameters and Salient Features of all the important Equipment and Systems of the Power Plant as mentioned below}

3.2.1 Boiler & Auxiliaries

a) Boiler

[The Boiler is of natural circulation, pulverized fuel fired, dry bottom, balanced draft using direct firing system. The design parameters of the Boiler are furnished below]

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[...]
Steam Pressure at SH outlet	kg/cm ²	[...]
Steam Temperature at SH outlet	°C	[...]
Re-heater Flow	T / hr	[...]
Steam Pressure at RH outlet	kg/cm ²	[...]
Steam Temperature at RH outlet	°C	[...]
Feed Water Flow	T / hr	[...]

LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[4]	25.09.2013

Description	Units	Design Parameters
Feed Water Pressure at inlet of Economiser	kg/cm ²	[...]
Feed Water Temperature at inlet of Economiser.	°C	[...]

b) Furnace

[The boiler is equipped with a water cooled furnace of balanced draft and fusion welded membrane wall construction. It is equipped with.....numbers of coal burners and.....numbers of oil burners located at numbers of elevations. The design parameters of the Furnace are furnished below.]

Description	Units	Design Parameters
Type of Firing	[.....]
Combustion Chamber Volume	m ³	[.....]
Furnace Dimensions (Width x Depth x Height)	m	[.....]
Heating Surface Areas		[.....]
i) Water Walls	m ²	[.....]
ii) Superheaters	m ²	[.....]
iii) Reheaters	m ²	[.....]
iv) Economiser	m ²	[.....]
v) Air Heater	m ²	[.....]
vi) Steam Coil Air Heater	m ²	[.....]
vii) Temperature Measurement of Super-heater tubes	Yes / No	[.....]
viii) Temperature Measurement of	Yes / No	[.....]

Description	Units	Design Parameters
Re-heater tubes		

c) Super Heaters and Re-Heater

[The super heaters are composed of four sections, a platen section, a pendant section, a rear low temperature section and a steam cooled wall & roof section. The Re-heater consists of two sections, the front pendant and the rear pendant sections. The details are given below:]

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Low Temperature Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Platen Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]

Reheater-Front Assembly	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Rear Assembly	[.....]	[.....]	[.....]	[.....]	[.....]

d) Economiser

[The Economizer is of a single stage, continuous plane tube and horizontal, mixed flow type, located in the second pass of the boiler]

e) Air Pre-Heater

[The air pre-heater is of regenerative rotary type. Special sealing arrangements have been provided in the air pre-heater to prevent leakage between air and gas sides. Adjustable sector plates have also been provided to prevent the leakage during expansion. The heating surfaces of the air pre-

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[6]	25.09.2013

heater have been provided with two types of cleaning systems, soot blowing and water washing system.]

f) Raw Coal Bunkers

[Each boiler is provided with [...] raw coal bunkers. The total capacity of the bunkers is to meet [...] hour's requirement at maximum mills capacity of the unit. The upper portion of the bunkers is of cylindrical shape made of carbon steel plate, while the conical portion is made of stainless steel plate. Each outlet of the bunker is provided with an isolation gate which is motor operated. In addition to the isolation gates, rod gates have been provided to control the flow of coal from the bunkers]

g) Raw Coal Feeders

[One gravimetric type of raw coal feeder has been provided for each coal mill. The coal feeders have been provided with micro-processor based controls with variable frequency drive. The feeders have been provided with dual independently measuring load cells. All parts of the feeders coming in contact with coal, except the belt, are made of stainless steel]

h) Fuel Firing System

[The boiler is working on a direct firing system. The pulverized coal is being dried and transported to the coal burners by means of hot primary air being supplied by two primary air fans. The boiler is having [front and rear/corner/down shot] firing system. There are [...] pulverized coal burners and [...] oil burners. The burners are located at [...] floors.

i) Coal Mills

[The unit is provided with numbers of [BHEL] Make [XRP-783] bowl type mills, out of which mills are designed to work with designed coal andnumbers of mills are standby . The rated capacity of each mill isT/h.]

Description	Units	Design Parameters
Make and Model of Mills	[....]
Capacity of Mills	T/h	[....]
Total Number of Mills per boiler	Nos.	[....]
Number of Mills to work per boiler with design coal quality	Nos.	[....]
Motor Rating	kW	[....]

LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[7]	25.09.2013

j) Primary Air Fans

[Two Primary Air (PA) Fans have been provided for each boiler. Each PA Fan is designed to meet 60% MCR condition of the boiler. The PA Fans are Hot PA Fans. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Hot Air	°C	[...]
Motor Rating	kW	[...]
Method of Regulation	[...]

k) Forced Draft Fans

[Two Forced Draft (FD) Fans have been provided for each boiler. Each FD Fan is designed to meet 60% MCR condition of the boiler. The FD Fans supply combustion air to the boiler, mill air through PA Fans and tempering air to control the classifier temperature of the mills. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Air	°C	[...]
Motor Rating	kW	[...]

Description	Units	Design Parameters
Method of Regulation	[...]

l) Induced Draft Fans

[Two Induced Draft (ID) Fans have been provided for each boiler. Each ID Fan is designed to meet 60% MCR condition of the boiler. Each ID Fan evacuates flue gases through two parallel paths of ESP and discharge them into stack through separate ducting. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of Fans per Boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Flue Gases	°C	[...]

n) ESP

[An Electrostatic Precipitator (ESP) has been installed on the cold end side of the Air Pre-heater to remove the particulate matter from the flue gases. The ESP has been provided with Gas Distribution System, Collecting Electrodes, Discharge Electrodes, Transformer Rectifier Sets and [electrically/mechanically] operated rapping system. The hoppers of ESP have been provided with [capacitance] type level indicators and thermostatically controlled heating elements. Details are given below:]

3.2.2 Steam Turbine & Auxiliaries

a) Steam Turbine

[The steam turbine is of three cylinder, 3000rpm, tandem compound, condensing type designed to operate on a re-heat and re-regenerative feed water cycle. The LP stage of turbine is designed with Bauman exhaust. The turbine is provided with HP/LP bypass system of 60% capacity of Steam Generator MCR. The turbine is provided with an electro - hydraulic control system, automatic turbine run up system and turbo supervisory instrumentation. The condensing system consists of a surface condenser of single shell and two pass, divided water box construction. Cooling water being supplied to the condenser is of raw water/ clarified water quality. The design parameters of the steam turbine are furnished below]

Description	Units	Design Parameters
Pressure of Steam at inlet of ESV of HPT	kg/cm ²	[...]
Temperature of Steam at inlet of ESV of HPT	°C	[...]

Description	Units	Design Parameters
Pressure at the inlet of LP Turbine	kg/cm ²	[...]
Temperature at the inlet of LP Turbine	°C	[...]

b) Condenser

[The condenser is a [single/double] pass, horizontal, surface type with integral air cooling section designed to maintain a pressure of 76 mm of Hg at turbine exhaust with a cooling water temperature of [...] deg C and an outlet temp of [...] deg C. The condenser is capable of operation with [...] tubes plugged and has hot well storage capacity of [...] minutes]

Description	Units	Design Parameters
Make and Model	[...]
Type of Condenser	[...]
Total Cooling Surface	m ²	[...]
Number of Cooling Water Tubes	[...]

Diameter and thickness of tubes	mmxmm	[...]
Cooling Water Quantity through Condenser	m ³ /h	[...]
Cooling Water Temperature at the inlet to Condenser	°C	[...]
Condenser Vacuum	mm Hg	[...]

c) Ejectors

[The Condenser is provided with two quick starting ejectors which operate in parallel to remove large volumes of air for raising the initial vacuum during the starting of the Unit. Two main ejectors of 100% capacity each have been provided remove air and non condensable gases from the condenser to maintain the required vacuum in the condenser during the normal operation of the unit.]

d) Condensate Extraction Pumps

[Condensate extraction pumps are of vertical, multistage, centrifugal pumps of canister type.]

Document Number	Rev No.	Description	Page No.	Date of Issue

e) **Gland Steam Cooler**

[A Gland Steam Cooler has been provided to condensate the leak-off steam from intermediate chambers of end sealings of HP and IP turbine, thereby heating the main condensate water. The Gland Steam Cooler consists of shell, tube bundle and removable water box.]

f) **LP Heaters and Drain Coolers**

[Each steam turbine is provided with four numbers of low pressure heaters to increase the temperature of the condensate in stages. LP Heater -1 consists of two halves and is installed in neck of the condenser. The remaining LP Heaters are of shell and tube design and have been placed vertically. An integral drain cooling section is provided in each LP Heater. The design details of LP Heaters are furnished in the table below.]

LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[13]	25.09.2013

[The deaerator is of [horizontal spray cum tray type]. It is designed to remove dissolved oxygen from the condensate in excess of 0.005 cc per liter. The feed water storage tank has a capacity of [...] minutes feed water requirement of the boiler corresponding to TMCR Heat Balance]

h) Boiler Feed Pumps

[The boiler feed pumps are horizontal, multi stage centrifugal pumps of barrel type, motor driven pumps coupled with hydraulic coupling, taking the suction from the deaerator. The boiler feed pumps discharge feed water through HP heaters to the economizer of the boiler.]

Description	Units	Design Parameters

j) HP/ LP Bypass

[HP/LP bypass system has a capacity of 60% of BMCR (Boiler Maximum Continuous Rating). HP bypass system has been provided between the Main Steam Line and Cold Reheat Line. LP bypass system has been provided between the Hot Reheat Line and the Condenser. HP bypass water spray has been taken from the discharge of Boiler Feed Pumps. LP bypass water spray has been provided from the discharge of Condensate Extraction Pumps.]

k) Turbine Governing System

[The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. The system is designed to sustain full load dump from the generator. The system is provided with a quick closing Emergency Stop Valve (ESV), to interrupt the supply of steam from the boiler and stop the turbine under emergency conditions. The turbine governing system includes, speed governor,]

l) Lube Oil System

[The lube oil system consists of Main Oil Tank, Turbine driven main oil pump, AC driven bearing oil pump, DC driven emergency oil pump, AC driven jacking oil pump and oil coolers of 3x50% capacity, Lube oil is being purified by means of a centrifuge. Oil storage tanks consisting of Clean Oil Tank and Dirty Oil Tank have been provided.]

3.2.3 Electrical System

a) Generator

[The Generator is a 15.75 kV, 50 Hz, 0.85 power factor machine, directly coupled with steam turbine operating at 3000 rpm, with.....type of excitation system and digital programmable voltage regulator. The Generator has direct water cooled stator winding and direct hydrogen cooled rotor winding. The stator winding cooling water is cooled in a closed

Document Number	Rev No.	Description	Page No.	Date of Issue

b) Station Transformer

[Two Station Transformers have been provided to meet the station [common] auxiliary loads of the power plant. The Station Transformers have been provided with on-load tap changers to keep the station 6.6 kV voltage constant. Cooling of this transformer is ONAN/ONAF/OFAF and has 2x50 % separately mounted radiators and 2x50% oil pumps. The Parameters of the Station Transformers are briefly mentioned below]

Document Number	Rev No.	Description	Page No.	Date of Issue

Voltage Ratio	[...]
Type of Cooling	[...]
Quantity	Nos.	[...]

c) Generator Transformer

[The power output from each Generator is being stepped up to 220/400 kV through a 240 MVA step up Generator Transformer. It has 3x50% coolers and 3x50% oil pumps. The Parameters of the Generator Transformer are briefly mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]

d) Unit Auxiliary Transformer

[Two unit auxiliary transformers have been provided for each unit for meeting all unit auxiliary loads. These transformers have been provided on-load tap changers. The Parameters of unit auxiliary transformers are briefly mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]
Quantity	Nos.	[...]

e) Electrical Auxiliary Power Distribution System

[Unit auxiliaries receive their normal power supplies at 6.6 kV through two (2) nos. unit transformers. For lower rating drives, 6.6 kV is further stepped down to 415 V by two (2) nos. unit service transformers. The 415 V distribution system feeds a number of Motor Control Centers (MCCs) for running 415 V drives. 6.6 kV unit switchgears are connected to station switchgear for start up and emergency power supply. The details are mentioned below]

Description	Units	Design Parameters
Voltage Level	kV	[...]
Type of Breaker	[...]
Type of Grounding	[...]
Type of Protection	[...]

f) DC System

[Each unit has its own DC system located in the BC bay at ground floor of the Power House. Separate DC systems have been provided in switchyard control room, intake pump house and DM plant for controlling the systems. Each DC system comprises of the Storage Battery, the Battery charger and the distribution boards. The details are mentioned below]

Description	Units	Design Parameters

Rating of DG Sets	kVA	[...]
Quantity	Nos.	[...]

h) Public Address System

[The unit is provided with paging and party channels comprising handset stations with amplifiers, transmitters, receivers and loud speakers. The system facilitates paging, communication and also private conversation as on conventional telephone.]

i) Illumination System

[For indoor application, fluorescent/ energy saving compact fluorescent fixtures have been provided. For high bay areas and outdoor application, suitable high intensity discharge Mercury Vapour/ Sodium Vapour lighting fixtures have been installed. Aviation type fixtures have been installed at the Chimney]

3.2.4 Control & Instrumentation

[The existing control and instrumentation system generally is an old analogue based system and requires large scale replacement owing to obsolescence of the existing equipments. Furnace Supervisory Safeguard System (FSSS) is of obsolete design for which, no spares are available. Soot blowers are of manual type. No online Boiler Tube Leakage detection system has been provided. The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. Turbine Supervisory system is of electromagnetic type. No continuous monitoring system has been provided for observing the health of the turbine. HP- LP bypass system is in the form of standalone control panel. Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for SG & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.2.5 Balance of Plant

a) Coal Handling Plant

[Coal Handling Plant is a common facility which is feeding all the units of the power plant having a total installed capacity of...x.....MW. Coal to the power plant is brought through railways by 'Box N' /'BOBR' wagons and is unloaded by wagon tipplers/ track hopper. One crusher has been provided

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[19]	25.09.2013

for crushing the coal from 250 mm size to 25 mm size. The plant is provided with one stacker reclaimer to stock the crushed coal. The coal stock yard has a storage capacity of 20 days. For feeding the coal to the bunkers of all the units, two streams of conveyors having a capacity ofTPH have been provided. The coal handling plant operates for 16 hrs a day.]

Description	Units	Design Parameters
No. of Wagon Tiplers	Nos.	[....]
Rating of Wagon Tiplers	T/h	[....]
Length of the Track Hopper	m	[....]

No. of Stacker Reclaimers	Nos.	[....]
Stacking Capacity	TPH	[....]
Reclaiming Capacity	TPH	[....]
Storage Capacity of Stock Yard	days	[....]

b) Ash Handling Plant

[Ash Handling System is of continuous type. The bottom ash from the furnace falls into bottom ash hopper having a storage capacity of [...] hrs. The ash is removed with the help of submerged Scraper Chain Conveyors. The ash from the air pre-heater and economizer hoppers is being disposed off along with bottom ash. The ash in the form of ash slurry is conveyed through sluice channels to the ash slurry pump house with the help of high pressure jets, from where, it is pumped to the ash pond located the distance of [...] km. [...] The ash slurry pump house is provided with [...] numbers of ash slurry pumps of rating [...], out of which [...] pumps are normally working. The ash slurry disposal system is having [...].numbers of identical streams of ash slurry pumps connected to [...] numbers of ash slurry pipelines going to the ash pond. Fly ash is collected in dry form below the ESP hoppers and the same is then conveyed by vacuum system to surge hoppers from where it is either conveyed through pressurized system to dry

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[20]	25.09.2013

fly ash silos or is sent to ash pond in the form of slurry. From the dry fly ash silos, the ash is disposed off through the covered trucks.]

c) Raw Water System

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. The intake water pump house is installed with [...] intake pumps of capacity [...] m³/hr, out of which [...] pumps are normally working and the remaining [...] pumps are standby. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days.]

d) CW / ACW System and Cooling Towers

[CW system for the power plant works on re-circulating system with induced draft cooling towers. The CW system uses raw/clarified quality of water and is working on [...] cycles of concentration. CW pump house is a common facility for all the units of the power plant. There are two CW pumps of capacity [...] m³/hr provided for each unit. In addition, there are two standby CW pumps common to all the units. The requirement of ACW system is being tapped from the cold CW header feeding the condenser. The hot return ACW water after cooling the auxiliaries of boiler and turbine joins the hot CW header and is sent to the cooling towers for cooling. The cold water from the cooling water flows to the fore bay of CW Pump House for recirculation into the system. One induced draft cooling tower (IDCT) has been provided for each unit. The cooling tower cools the water from [...] deg C to [...] deg C. The cooling tower has been designed for an inlet wet bulb temperature of [...] deg C].

e) Water Pre-Treatment Plant

[Water Pre-Treatment Plant is a common facility for all the units of the power plant. Pre-treatment plant supplies clarified water to DM plant, cooling water to the auxiliaries of BOP system, coal handling plant dust suppression and to the drinking water system. There are two numbers of clarifiers of [...].m³/hr capacity to meet all the clarified water requirements of the whole plant, except DM plant. The clarified water requirement for DM plant is met by a separate clarifier of capacity [...] m³/hr.]

f) DM Plant

[DM plant consists of three streams, each of [...] m³/hr capacity. There are two DM water tanks of [...].m³ capacity. A common regeneration system has been provided for all the three streams. DM plant operates on semi-automatic system with PLC controls.]

g) Air-Conditioning and Ventilation System

[The central control room, switchyard control room, ESP controls room and selected areas of service building have been provided with centralized air-conditioning system. The central air-conditioning system of chilled water type has been provided for various control rooms and DX type of plant has been provided for ESP control room, switchyard control room and other areas in the service building. Packaged type of air-conditioners has been

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[21]	25.09.2013

provided for water treatment plant control room. Evaporative ventilation system has been provided for TG building along with roof extractors. Other areas are ventilated by a combination of exhaust and supply air fans].

h) Fire Fighting System

[Fire fighting system is a common facility provided for all the units. This consists of pressured hydrant system for all the auxiliary buildings, pump houses and administrative building. Automatic high velocity sprinklers system has been provided for power transformers, turbine oil tanks and lube oil system equipments. Medium velocity sprinkler system has been provided for cable galleries and coal conveyor galleries. Portable types of fire extinguishers have been provided throughout the plant for fighting small and localized fires.]

i) Plant and Instrument Air System

[Plant and instrument air system is a common facility for all the units of the plant. For meeting the instrument air requirement, [...] number of oil free screw compressors [...] working and [...] standby, each of [...] m³/hr capacity and discharge pressure of [...] kg/cm (g) have been provided along with dryers. Equal number of air compressors of similar rating has been provided to meet the requirement of plant air system. The air drying plant for the instrument air has been provided to achieve a dew point of (-) 40°C at atmospheric pressure.]

j) Fuel Oil System

[The fuel oil system has been designed for the use of Light Diesel Oil (LDO) for start- up and Heavy Fuel Oil (HFO) for load carrying and flame stabilization purposes. Two tanks of [...] kl each have been provided for the storage of HFO and two tanks of [...] kl each have been provided for the storage of LDO. The system has been provided with unloading, transferring and pressurization pumps along with necessary filters and heating arrangement.]

k) Cranes/Hoists

[For the maintenance of various equipments, manually /electrically operated cranes and hoists have been provided.]

3.2.6

Civil Works

Major civil works of the unit consist of the following:

(a) Main Power House Building:

[A common Power House Building has been provided to house [3x200 MW] units which are placed side by side. Centre to centre placing of units is [67.5 m.] The railway entry has been provided from the rear side of Power House Building. Turbine Generator (TG) Sets have been placed between AB rows of columns are laid out longitudinally. The TG bay, also houses, the Boiler Feed Pumps, Regenerative Heaters, Lube Oil System and other TG accessories. The total length of TG bay for 3x210 MW units is [276 m] and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[22]	25.09.2013

width [30 m]. The spacing of the column is at [7.5 m]. TG bay is provided with 2 Nos. of overhead EOT Cranes. In order to make the handling facilities of the cranes available to the heat exchangers, boiler feed pumps and other equipments, removable chequered plates have been provided at appropriate locations.

A sub zero floor has been avoided except for the localized pits required for Condensate Pump, pipe channels and HP Heaters etc. This sub zero pits are suitably connected and provided with a common sump for drainage purposes.

Three stairs for approaching the operating floor level at [+ 10 m] have been provided in this bay adjacent to B row columns. In addition, there are stairs for providing access to various equipments at intermediate platforms and sub zero pits.

Switchgear and Control Room bay has been provided in the BC bay which is [12 m] wide. The length of the bay is [249.0 m]. A common Control Room for all the three units is provided at [10 m] floor. In BC bay at [16 m] elevation, equipments for chemical dosing, air handling and MCC for soot blowers etc have been located. The deaerator is placed at an elevation of [23.0 m]. Air washer units and cooling water tanks are also located at [23.0 m] floor.

Mill Bunker Bay, designated as CD bay, has a span of [10.5 m] which accommodates coal bunkers, coal feeders and coal mills. CD bay houses the vertical mills at Zero m and has space for collection of disposal of mill rejects at sub zero levels adjacent to 'D' row. A stair to connect operating floor at [16.0 & 23.0 m] of BC & CD bay has been provided.]

(b) Boiler Area

[In boiler area, the boiler with its auxiliaries like PA fan, FD fan, ID fan as well as Electrostatic Precipitator has been located.]

(c) Chimney

[A common multi-flue Chimney of 220 m height has been constructed in which, flue cans of [3x200 MW] have been erected.]

(d) Transformer Yard

[A [60] m wide yard has been provided outside the 'A' row columns. The transformer yard houses station transformer, unit auxiliary transformers and generator transformers along with oil pits etc. To facilitating erection and maintenance of transformers, the area has been provided with rail tracks parallel to 'A' row at a distance of [45 m] from 'A' row which is further connected through cross tracks. In addition, space has been provided for laying the CW pipelines and locating the butterfly valve chambers.]

(e) Service building

[A common four storey building has been provided near the main plant building and it is connected with the operating floor of TG bay at [10 m] level.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[23]	25.09.2013

(f) Miscellaneous buildings

[Besides the above, miscellaneous buildings like administrative building, CW Pump House, Fire Water Pump House, CHP Control Room, ESP Control Room, Chimney, DM Plant Building, Chemical House and Ash Silos have been provided.]

3.3 Operational History of the Plant

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. The deterioration experienced over the years in Plant's Average Performance Parameters is shown in Table 3.1.

Table 3.1
Unit's Average Performance Parameters over the Life

Stack Emissions, Ambient Air Quality and Process Effluents

The Project has been regularly monitoring the environmental parameters such as stack monitoring, ambient air quality (AAQ), noise pollution and liquid waste pollution in accordance with applicable norms by employing [M/s....., which is an agency approved by State Pollution Control Board].

The existing environmental data and the limits specified for different pollutants, the locations of their measurements and the frequency of monitoring are given in the table below.

Table 3.3

3.5 Feedback from the Plant Operators

Detailed discussions with the Plant operators provided the feedback about the design and operation related problems about the various systems which are listed in the Table 3.4 below.

3.6 History of Failures and Trend Analysis

The year wise record of failures experienced by the plant during the period of last ten (10) years is furnished in the Table 3.5 below.

{While giving the History of Failures during the last ten (10) years in the Table below, categorize the Failures into two types as follows:

- i) Failures leading to Tripping of Unit and
- ii) Failures leading to Reduced Generation.

Further, indicate for each category, the total number of occurrences of such incidents in a year and the corresponding time in hours for which the incidents persisted.}

Table 3.5
History of Failures

Year	Total Number of Failures in a Year	Incidents Leading to Tripping of Unit			Incidents Leading to Reduced Generation		Remarks
		Total Number of Boiler Tube Leakages in the Year	Total Number of Trippings in the Year	Total Hours of Tripping in the Year	Total Incidents in the Year	Total Hours of Reduced Generation	
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]

Year	Total Number of Failures in	Incidents Leading to Tripping of Unit			Incidents Leading to Reduced Generation		Remarks
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]

[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]
[...]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]	[.....]

{Furnish the trend chart by plotting (i) number of trippings (ii) number of boiler tube leakages and (iii) number of incidents leading to reduced generation of the unit against successive years of operation since commissioning. Analyze the trend of failures and discuss the underlying reasons. Expand the table for the total years of operation.}

3.7

Major Replacements done in the Plant

{Furnish the record of major replacements done for the main plant (BTG) and the Balance of Plant right from the first date of commissioning. Expand the table for the total years of operation.}

Table 3.6

9	[.....]	[.....]
10	[.....]	[.....]
.....	[.....]	[.....]

{Note: Reports on major failure in the past should be reviewed by the consultant to identify any major cause of fault, rectifications carried out and performance after rectification. Based on such review, if any further Condition Assessment of test, over and above specified in this Model Report are required, same should be carried out and results and recommendations should be incorporated in Project specific Report.}

3.8 Objectives of R&M Solution

[Based on the condition and age, it is necessary to study the following renovation possibilities, if the unit's performance is to be improved;

- Restoring / up-rating of Generation Capacity on a continuous, safe and reliable basis to suit the present coal quality.
- Increasing unit availability and reliability on a sustainable basis to meet the current requirements like availability based tariff.
- Achieving rated or better efficiency of the unit so that the Cost of Generation (COG) remains competitive.
- Achieving an extended plant life by minimum twenty (20) years. Different options as per the FR are to be explored.
- Meeting current statutory environmental norms.
- Improving safety of plant and personnel.
- Reduction of Auxiliary Power Consumption.
- Replacing the existing obsolete technology.]

4 RESIDUAL LIFE AND CONDITION ASSESSMENT OF EQUIPMENTS AND COMPONENTS

4.1 General

{Describe in this section, the operating data collected during the Walk Down Survey and the results and findings of various Residual Life Assessment and Condition Assessment Studies conducted on the equipments and components of the Boiler & Auxiliaries, Turbo Generator & Auxiliaries and all the systems of the Balance of Plant.}

4.2 Operating Data Collected During the Hot Walk Down Survey

Major Operating Parameters of the Plant as noted during the Hot Walk Down Survey are indicated in the Table 4.1 below:

Table 4.1
Operating Parameters of the Plant as per Hot Walk Down Survey

Description	Units	Design Parameters	Operating Parameters

4.3 Equipments Subjected to Various Tests and Results Obtained

{Summarize in the table below, various equipment & their components, subjected to various types of RLA&CA tests / inspections starting from the Walk Down Surveys and mention the results obtained from each of these tests. Identify each equipment by its unique tag number wherever applicable. Also attach the test reports of each test in the form of Annexure.

The Guidelines for conducting various Destructive and Non-Destructive type of tests, which are normally performed for the major equipments of the Power Plant are appended at the end of this report for general reference.

Formats for reporting the test results are also appended at the end of this report, for general reference.

Also attach the Major Operational Parameters of the Plant as noted down during the Hot Walk Down Survey.}

Results of various RLA/CA Tests and Inspections have been attached at Annexure [4.1 to 4.18] of the Report.

5 CONDITION ASSESSMENT OF CIVIL AND STRUCTURAL WORKS

5.1 General

{Describe the methods adopted to assess the condition and residual life of the Civil and Structural Works.}

5.2 Tests Conducted and Results Obtained

{Summarize in the table below, one by one, the Equipment Foundations, and Civil Structures & Foundations of various Buildings, which were subjected to various RLA&CA tests /inspections, starting from the Walk Down Surveys, clearly mentioning the method of each test, the tools used and the foundations/ civil structures of the equipments/ buildings/ systems on which the respective test was performed. Also attach the test reports of each test in the form of Annexure.}

The Guidelines for conducting various Non-Destructive and Partially Destructive tests, which are normally performed for this purpose, are appended at the end of this report, for general reference

Formats for reporting the test results are also appended are appended at the end of this report, for general reference.}

Table-5.1

Summary of Tests / Inspections Conducted and Results Obtained

{GUIDELINES FOR RLA AND CA STUDIES ON EQUIPMENTS/COMPONENTS}

{The life assessment studies involve knowledge of prior history of operation and information of design & manufacturing of components of equipment. To carry out exhaustive diagnostic analysis about the condition of the critical components of the unit, various RLA/CA studies are conducted at the time of shut down of the unit. The purpose of these tests is to determine the extent of deterioration of the components from the original specifications. Various tests which are generally conducted for such RLA/CA studies are mentioned below.}

These tests are over and above the routine tests which are normally required to be conducted at an interval of two to three years as per the recommendations of the Original Equipment Suppliers namely the Insulation Resistance (IR) test & Polarization Index (PI) test etc for Generators / HT Motors, Dissolved Gas Analysis (DGA) for Transformers and Hydraulic & Pneumatic tests for the Generator Cooling System and Hydraulic Test for Regenerative LP/HP Heaters & Steam Condensers.

*A Check List for conducting various RLA&CA Tests for Equipments and Components of the main plant is placed at **Annexure - A**.*

(A) Non Destructive Tests (NDTs)

Non Destructive Tests are carried out to assess the integrity of a system or component without compromising its performance. A brief discussion on various tests is discussed below:

a) Visual Examination (VE)

Visual examination is the simplest NDT method which is carried out to broadly assess the material deterioration due to corrosion, erosion, swelling, cracking, bowing, sagging and misalignment etc of all the equipments and components of the Power Plant. Visual examination covers all equipments and their components.

Visual examinations are carried out both when the unit is in operation (Hot Walk Down Survey) and when the unit is shut down (Cold Walk Down Survey).

b) Fiberscopic/ Boroscopic Inspection

Fiberscopic / Boroscopic Inspections are extension of visual examinations. Borescope and fiberscope are two different instruments, commonly used for various visual inspections. Users can insert these typical instruments into confined spaces to see or even record images detected by these instruments. The purpose of both these scopes is to do non destructive inspection in confined spaces.

A Fiberscope is a flexible instrument made from optical fibers. A Fiberscope can be snaked and threaded into spaces located at an angle. In case of a fiberscope, light transmits down the optic fibers, thus illuminating the entire area.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[75]	25.09.2013

A Borescope, on the other hand, is relatively a rigid instrument fitted with lenses and mirrors, which allows light to bounce from the mirrors. The entire process is responsible for illuminating a particular area.

In order to carry out the inspection successfully, the inspector must be familiar with equipment internals, suspected locations of damage and should be able to recognize propagation of cracks and whether a condition is merely an insignificant aberration or potentially catastrophic.

Fiberscopic Inspections can be carried out to examine the internal condition of Water wall Headers and inlet & Outlet Headers of Final Super Heaters.

Boroscopic Inspections can be carried out to examine the internal condition of bores which are less deep, like studying the cracks in bore surfaces of rotors of HP/IP/LP Turbines (if rotors are provided with bores).

c) Dye Penetrant Test (DPT)

This test is carried out primarily to locate surface defects such as cracks, pitting, weld pinholes, porosity, and other flaws which occur in almost any material. This method involves application of [coloured / fluorescent] liquid dye on oxide-free, smooth cleaned surface, which penetrates into the surface flaw and is highlighted by using a developer. The developer absorbs the penetrant by capillary action thereby highlighting the flaw. Applicable Standard for Testing is ASTM D5 117-09.

Components like Economiser Outlet Header, Boiler Drum, Down-comers, Inlet and Outlet Headers of Super heaters & Re-heaters, Main Steam Piping, CRH & HRH Headers, CRH & HRH Piping, Steam inlet pipe weld joints, Strainer, Valve body, Turbine Rotors, Impellers of ID/FD/BFP/CEP Fans, Casings of Turbines, Casings of Gear Boxes, Turbine Blades, Diaphragms and bearing etc. can be subjected to DPT to locate surface defects such as cracks, pitting, porosity, and other flaws.

DPT can also be usefully conducted to assess the soundness of welds of Boiler structure & platforms etc and those of the Trestles of coal conveyors/ pipe-lines/ cables etc.

d) Magnetic Particle Inspection (MPI)

Magnetic Particle Inspection (MPI) is utilized to detect surface and sub-surface flaws in ferrite materials by inducing a magnetic field into the parent material. By sprinkling fluorescent magnetic particles on the surface of the parent material after the magnetic fields are induced, discontinuities are located by observing the patterns formed due to the distortions of the magnetic fields. Magnetizing is done at two mutually perpendicular fields to ensure detection of defects in all possible directions. Applicable Standard for Inspection is ASTM E 709-1995.

Components like Boiler Drum, Main Steam piping, CRH & HRH Headers, CRH Piping, HRH Piping, Turbine Rotors, Casings and Diaphragms, etc. can be subjected to Magnetic Particle Inspection.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[76]	25.09.2013

e) Ultrasonic Test -Scanning (UT-S)

One of the most effective examination techniques is ultrasonic testing. The UT-S technique for scanning is used to detect with high accuracy, the internal defects like wall thinning, pitting, metal embrittlement, cracking, or material defects. For flaw detection standard ultrasonic flaw detector is used. Applicable Standard for Testing is ASTM E164 and ASTM E114.

Components like Economiser Outlet Header, Boiler Drum, Down-comers, Inlet and Outlet Headers of Super heaters & Re-heaters, Main Steam Piping, CRH & HRH Headers, CRH & HRH Piping, Turbine Rotors and Casings etc. can be subjected to (UT-S).

f) Ultrasonic Thickness Testing (UT-T)

Ultrasonic techniques are also used to measure the wall thickness. For thickness measurement a pulse-echo ultrasonic transducer is used. The ultrasonic thickness gauge determines the thickness of a part by accurately measuring the time required for a short ultrasonic pulse generated by a transducer to travel through the thickness of the material reflected from the back and inside surface. Applicable Standard for Testing is ASTM-E787-05.

Components like Economiser Outlet Header, Boiler Drum, Down-comers, Inlet and Outlet Headers of Super heaters & Re-heaters, Main Steam Piping, CRH & HRH Headers, CRH & HRH Piping, Turbine Rotors, Blades and Casings etc. can be subjected to (UT-T).

g) Oxide Scale Thickness Measurement

Scale Deposits on the water side of the boiler tubes undesirably increase the heat transfer resistance and have long been recognized as a cause of boiler tube failures.

The oxide scale is generally a concern in 'Heat Affected Zones' (HAZ) of Super Heaters and Re-Heaters. The scale thickness within these zones may vary because of the range of temperatures. Selecting the circumferential location for scale thickness measurement is very important. Because of the temperature variations, the scale thickness may vary around the tube circumference. Oxide scale measurements should be performed at circumferential locations, which are expected to have experienced the highest temperature.

The thickest scale is expected on tubes located in the hottest sections. Thermocouple measurements are used to plan oxide scale measurement. History of prior overheat failures is also used to identify tubes for oxide scale measurement. Locations which have history of a large number of high temperature failures can be identified for inspection. Generally speaking, oxide scale thickness up to 200-250 microns is not critical for failure for the given tube material specification at corresponding temperature and pressure and hence the tubes having oxide scale deposition of more than the above stated value are only considered for calculation of residual life.

The ultrasonic method is used which is based on transmitting a high frequency sound wave of more than 50 MHz through the tube thickness.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[77]	25.09.2013

The thickness of oxide scale is calculated by measuring the time difference between the signals reflected from the tube / scale interface and the scale / fluid interface. The outer surface of the tube under inspection region is made free of fireside oxide deposit and polished to expose the base metal.

Using oxidation growth rate data for the specific material, the equivalent metal temperature of the tube under which it has been operating, can be determined indirectly.

The expected creep rupture life of a material is predicted with the knowledge of a commonly known parameter, the Larson Miller Parameter (LMP or P_{LM}) given by the following equation:

$$LMP \text{ or } P_{LM} = T [\text{Log } tr + C]$$

Where, T = Temperature in Kelvin,

tr = Stress Rupture Time (or Life) in hours and

C = a constant usually of the order 20.

Manufacturers usually conduct accelerated creep –rupture life tests of various materials. The data obtained from these tests includes temperature, stress and time to rupture. Based upon the test data, plots are generated between the values of stress and LMP, as shown in the figure below.

With the knowledge of working hoop stress and metal temperature, it is possible to determine the time for creep rupture failure. The remaining life of the tube is arrived at by calculating the difference between total expected creep rupture life at a given set of conditions minus the life the tube has already spent at those conditions.

The following methodology is used for the calculation of the residual life:

- (i) Data / Empirical formula that correlates the growth rate of oxide scale thickness with time is first used to compute the equivalent temperature of the tube metal under which it has been operating.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[78]	25.09.2013

- (ii) Larson Miller Parameter (LMP) is then determined for the hoop stress in the tube.
- (iii) Knowing the LMP and the tube metal temperature, the Stress Rupture Time (or Life) in hours is calculated.
- (iv) The remaining life of the tube is arrived at by calculating the difference between total expected creep rupture life at a given set of conditions minus the life the tube has already spent at those conditions.

Components like Final Super Heater Tubes, Platen Super Heater Tubes, and Re-Heater tubes can be subjected to oxide scale thickness measurement.

h) In-situ Microstructure Replica Analysis

Creep is one of the most critical factors affecting the integrity of the components working at elevated temperatures. Components subjected to creep stress have a limited lifetime. Under the influence of temperature and stress, materials undergo transformation which leads to segregation and precipitation in their micro-structure. Microstructure degradation norms being universally followed by the industry are based on the following classification of damage rating:

Damage Rating	Status of Microstructure
<i>Class 1</i>	<i>Undamaged</i>
<i>Class 2</i>	<i>Isolated Cavities</i>
<i>Class 3</i>	<i>Oriented Cavities</i>
<i>Class 4</i>	<i>Linked Cavities / Micro Cracks</i>
<i>Class 5</i>	<i>Macro Cracks</i>

For examining the microstructure, a cellulose acetate sheet is applied to a polished and etched surface to be examined which is first wetted with acetone. The details of component microstructure are retained by the acetate sheets in the form of replicas. These replicas are then examined under the microscope to determine the extent of damage caused to the microstructure. Damage rating is then correlated with the creep curve to estimate the remaining life of the components. Applicable Standard for Testing is ASTM E135.

Components like Boiler Drum and Headers of Super Heaters & Attemperators, Critical Piping, Turbine Rotors, Turbine Casings and Control Valves which are subjected to high temperatures continuously and where sample removal is either difficult or economically not viable can be subjected to in-situ metallographic Replica Analysis.

i) Hardness Measurement

Hardness measurements are indicators of real time mechanical properties and micro structural degradation due to thermal exposure and creep damage in components operating at high temperatures and pressures. A portable

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[79]	25.09.2013

hardness tester is used for in-situ measurement of hardness of various critical components. All critical areas, especially the high temperature weld joints and heat affected zones are tested for their hardness values. Applicable Standard for Testing is ASTM E18-11.

j) Dimensional Measurement (DIM):

The components liable for deformation/ bulging due to wear/ creep, namely bolts, valves stems, bushing, bearings etc are thoroughly cleaned and dimension measured to compare with original dimensions. The Dimensional Measurement of outside diameter and thickness are carried out with the help of various precision measuring instruments like digital vernier calipers, screw gauges and bow gauges.

k) Steam Path Audit (SPA)

The purpose of the steam path audit is to verify the internal condition of the steam turbine. A steam path audit typically addresses the following areas of concern:-

1) Leakages:

- Past stationary stage blading.*
- Past rotating stage blading.*
- Past shaft end packings, where rotors emerge from casings.*
- Across poorly fitting joints.*
- Other miscellaneous leakages.*

2) Surface finish degradation:-

- Deposits.*
- Corrosion.*
- Solid particle erosion.*
- Mechanical damage.*

3) Flow blockages from:

- Deposits.*
- Foreign objects.*
- Mechanical damage.*

4) Flow path modification from:

- Solid particle erosion.*
- Water droplet erosion.*
- Mechanical damage*

The steam turbine is opened to examine the condition of all the components coming in the steam flow path, stage by stage. Sources of excess leakage are identified at the horizontal joint of the casing and packing at both the shafts ends and at the inter-stage. For determining the sources of excess leakage, radial clearances are measured at respective places.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[80]	25.09.2013

In addition, inspection is done on the blade geometry, increased surface roughness, solid particle erosion and mechanical damage caused due to foreign objects.

The Audit data so collected is compared with the new and clean condition of the turbine to quantify the impact of each problem on heat rate, power output and efficiency.

l) Eddy Current Test

Eddy current tests are used to detect cracks, discontinuities measurement of metal thickness, detection of metal thinning due to corrosion / erosion, determination of coating thickness and the measurement of electrical conductivity and magnetic permeability.

Recent advances in instrumentation technology has created significant opportunities for in place inspection of stationary and rotating blades of steam turbines for cracks and other damages. Eddy current inspections can also be performed on condenser tubes to find any defects that may be present before the tubes develop leakages.

The most basic eddy current testing instrument consists of an alternating current source, a coil of wire in the form of an inspection probe and an analog or digital instrument to measure the change in impedance/voltage. Eddy current probes are available in a large variety of shapes & sizes and can be custom designed for a variety of applications. As long as the material being tested is very uniform, the eddy current will be uniform and consistent. If there is any defect, the eddy current will be disturbed and the disturbance will be indicated by the instrument.

m) ELCID Test

The Electromagnetic Core Imperfection Detection (ELCID) Test is done to detect healthiness of stator core inter-laminar insulations of the Generator. Generator ranks high in terms of criticality and value among the major equipments in the power plant. As there is no standby Generator available at sites, its reliability is of paramount importance.

ELCID test is conducted to detect insulation failure between laminations of stator core of the Generator. The test has the advantage that it does not require a large energy source to test a large machine. Generally speaking, the test can be conducted with only 4% of a machine's rated flux using a toroidal winding of a few turns. A 3 kVA supply at 110 V is sufficient to produce the required excitation.

n) Recurrent Surge Oscillograph (RSO) Test

RSO test is performed to detect faults in rotor windings. The electrical faults in generator rotors fall into two main categories; faults from the winding to the rotor body (earth faults) and faults between parts of the winding (inter-turn winding faults). The existence of these faults frequently display excessive mechanical vibration and cause serious concern. An RSO test identifies the type of fault and pinpoints the position of the fault.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[81]	25.09.2013

The test is conducted by applying a 12V D.C Voltage step between one end of the rotor winding and the rotor body. The transmitted wave at the far end of the winding and the reflected wave at the input end of the winding is monitored using two oscilloscope channels. A healthy rotor winding will have two identical traces, which can be superimposed. A rotor with a fault has different traces and the position of the fault is deduced by scaling in the time domain.

o) Tan Delta Test

The Dielectric Loss Analysis (DLA) is an off line test used to determine both the dielectric loss energy and the loss tangent (Tan Delta) of a machine at various voltage steps up to line voltage. Dielectric Loss Analysis (DLA) and Tan Delta testing are well established tests and have been used for many years to evaluate the condition of the windings and the bushings of the transformers. Both dielectric loss energy and loss tangent are affected by the void content of the insulation, the higher the void content the higher the loss tangent and dielectric loss. The loss tangent represents the sum of solid material (conductive type) losses and the gaseous losses, as the voids within the insulation discharge causes breakdown and ionization. The dielectric loss energy is representative of the gaseous discharge losses within the voids and can also be affected by other external sparking type discharges. The results can also be affected by contamination, damp, corona shield and stress grading problems.

p) Furfural Test

Condition of a transformer is mainly decided by the condition of its insulating materials. The two major insulating materials in the Transformer are mineral insulating oil and insulating paper. Transformer core and winding have mainly paper insulation. Base of paper is cellulose.

While the condition of insulating oil of a transformer is periodically checked in the power plants through Dissolved Gas Analysis (DGA) test as a preventive maintenance measure, the condition of insulating paper of old transformers is checked by Furfural Test. The condition of insulating paper is determined by Furfural Test as per IEC: 1198.

The insulating paper degrades with time at rates which depend on factors like temperature, amount of air and moisture present. As the degradation progresses, the products of degradation are released in the oil in the form of organic compounds known as furfuraldehyde compounds and commonly referred to as 'furans'.

It is not possible to bring out a piece of paper insulation from a transformer in service, for testing purpose. However, through Furfural Test, the condition of paper insulation can be examined without touching it. This method is called 'Furfuraldehyde Analysis Test' or in short 'Furfural Test'. For conducting this test, samples are taken from the transformer oil and are tested for the presence of furans. Generally a value of less than 100 ppb (parts per billion) is considered normal and a value above than 1500 ppb in oil indicates high risk of insulation failure. In case the total furan content is

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[82]	25.09.2013

more than 2500 ppb, the windings of the transformer need to be replaced or rewound.

Through DGA test also, it is possible to predict the condition of the insulating paper. In DGA test, the gases in the oil are extracted and the quantity of gases in a specific amount of oil is analyzed. By observing percentages of different gasses present in the oil, like Hydrogen (H_2), Methane (CH_4), Ethane (C_2H_6), Ethylene (C_2H_4), Acetylene (C_2H_2), Carbon Monoxide (CO), Carbon Dioxide (CO_2), Nitrogen (N_2) and Oxygen (O_2), one can predict the condition of transformer oil and take corrective action for its replacement. During DGA test, if the ratio of CO_2 / CO is less than 5.0, it is predicted that decomposition of insulation paper has set in. If the ratio of CO_2 / CO is less than 3.0, it can be concluded that severe deterioration of cellulose is taking place.

(B) Destructive Tests

Samples of selected portions of Water Wall Tubes and Super Heater Tubes are taken to evaluate their mechanical properties like Tensile Strength, Yield Strength and Elongation. The results of these destructive tests are correlated with the results of non destructive tests to finalize the assessment and recommendations.}

INSPECTION CHECK LIST FOR BOP EQUIPMENT

Condition Assessment of BOP Equipment should be done during the visual examination of cold walk down and Hot walk Down Survey. In addition, Performance Test and Auxiliary Power Consumption Test should be carried out as covered in the Energy Audit Report.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[85]	25.09.2013

{GUIDELINES FOR CONDITION ASSESSMENT OF CIVIL / STRUCTURAL WORKS}

{Normally, the life of Civil and Structural Works should be of the order of sixty (60) years and above, which is much more than the life of Mechanical and Electrical Components of Thermal Power Plants. However, in certain cases like exposure to harsh and corrosive environment or natural calamities, the buildings / structures/ foundations of a plant may get damaged or become weak due to corrosion or rusting etc. Therefore before taking up the R&M activity of any plant, it is utmost important to critically examine the condition of all the civil and structural works. Based on the examination, any part(s) of the civil and structural works which might have become weak or defective must be identified and solutions found for their repair, retrofitting or replacement so as to increase their service life.

On the basis of condition assessment, a building / structure can be placed into one of the following three categories:

- The building / structure does not show any signs of distress and It satisfies all the safety and serviceability requirements according to relevant Codes of Practice and hence, no action is needed towards retrofitting.*
- The building/structure is seen to be deficient (or distressed) but it can be repaired and strengthened to satisfy the Codal safety requirements or performance criteria set by the user.*
- The building/structure is badly damaged. It is to be demolished and a new building is to be built.*

One needs complete record of building and structure design, construction drawings including that of foundations, architectural details, specifications of materials used, geotechnical details of the area, details of any repair or retrofitting done from the time of construction and details of usage of the building including the loads. Some Non-Destructive Tests or Partially Destructive Tests may also be required to check the strength of concrete masonry etc. The various tests which should be conducted are listed below. Condition Assessment can be made both through visual examination and through detailed investigation.

(A) Visual Examination

The main purpose of visual investigation is to observe and note down all the items of distress or design deficiency and their locations, supported by sketches and drawings. The visual inspection includes:

- Identification of visible structural damage, such as concrete cracking or spalling and observations on quality of construction.*
- Identification of potential non-structural falling hazards, including ceilings, partitions, curtain Walls, parapets, fixtures, and other non-structural building elements.*
- Identification of major alterations made during the operating life of the plant.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[86]	25.09.2013

- Observations on the changed condition of soil in very special cases like that of a natural calamity requiring a fresh geotechnical investigation, particularly when new equipment is required to be installed within the plant area.
- Documentation of existing conditions with photographs at key locations.

Based on the data collected about the details of the building, visual observation of damage/distress in different structural components and the system, the structural engineering experts can categorize the type and seriousness of damage and make judgments about further course of action.

A Check List for conducting Visual Examination is placed at **Annexure B**.

(B) Detailed Investigations

Detailed investigations may have to be carried out in the following events:

- When the visual examinations suggest corrosion and rusting of foundations/structures due to weathering effect, say, as a result of exposure to corrosive environment.
- When the adequacy of existing foundations is required to be checked for retrofitting of the machines and equipments and especially when the original construction drawings for the foundations may not be available.
- When a part of the building or structure might have been severely damaged due to a major accident.

Detailed investigations are required for making following types of checks.

- Checking the Strength of Concrete Structures.
- Assessment of Corrosion of Concrete in RCC Structures.
- Assessment of Corrosion of Reinforcement in RCC Structures.
- Health Assessment of Structural Steel Works.
- Checking the Strength of Concrete Structures.

The investigations may either be in the form of Non-Destructive Tests or Partially Destructive Tests which are discussed below.

Check List for conducting Detailed Investigations is placed at **Annexure-C**.

(a) Checking the Strength of Concrete Structures

Non Destructive Tests

i) Rebound Hammer Test

This test is based on the principle that when a spring-loaded mass strikes the surface of concrete, the rebound distance can be used to determine the surface hardness. A standard equipment known as Rebound Hammer or Schmidt Hammer is used for this purpose which gives the rebound number.

Surface hardness determined during the test also gives an idea about the soundness and quality of cover concrete. Locations having very low rebound numbers indicate weak surface concrete that may be affected by corrosion. The quality of concrete may be interpreted as shown in the Table below.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[87]	25.09.2013

Table A- Average Rebound Number and Quality of Concrete

Average Rebound Number	Quality of Concrete
> 40	Very good hard layer
30 to 40	Good layer
20 to 30	Fair
< 20	Poor concrete
0	Delaminated

ii) Ultrasonic Pulse Velocity (UPV) Test

The dynamic modulus of elasticity of concrete is determined by measuring the velocity of ultrasonic pulse through the concrete. The test equipment has provisions for generating ultrasonic pulse, transmitting it to concrete, receiving, amplifying and measuring the pulse and displaying its travel time. For this test, a good acoustic coupling is required to be established between the transducers and the concrete for correct measurement of the speed. Applicable Standard for Testing is BS1881 Part 203, IS: 13311 Part-2, IS:516-1959, IS:8900

By this test, one can assess the quality of concrete, such as, honey combing or quality of compaction as per the guidelines indicated in the table below. However, conducting this test requires special expertise. In case of any doubt, it will be desirable to carry out further tests.

Table B - UPV Value and Concrete Quality

UPV Value in km/sec	Concrete quality
> 4.5	Excellent
Between 3.5 and 4.0	Good
Between 3.0 and 3.5	Medium
Below 3.0	Doubtful

Partially Destructive Tests

These are surface zone tests, which require access to one exposed concrete face and cause some localized damage. This damage is sufficiently small to cause no loss in structural performance. The strength of concrete is estimated with the help of correlation charts. Different tests in this category

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[88]	25.09.2013

are based on core sampling, penetration resistance, pull-out, pull-off and break-off.

i) Core Test

For core test, the samples are taken from the interior of the concrete. The core samples provide the visual inspection of the interior of the concrete and can be subjected to direct measurement of the compressive strength. Other physical properties, such as, density, water absorption, indirect tensile strength and expansion due to alkali-aggregate reaction can also be determined. After testing the compressive strength, these samples can be used for chemical analysis. Applicable Standard for Testing is BS 1881 Part 120.

In core testing, the determination of core size and location is a crucial factor. The test should be taken at points where minimum strength and maximum stress are likely to coincide. But, at the same time, the core cutting causes some damage to the member and may impair the future performance of the member. Therefore, in slender members, the core should be taken, away from the critical section. For compression testing, the diameter of the core should be at least three times the nominal maximum aggregate size. The accuracy of the test increases with the ratio of core diameter to the aggregate size. The generally recommended length to diameter ratio of the cores is between 1 to 2.

The core samples can be used for determination of voids and chemical analysis. Broken samples from the cores can also be used to determine the pH value and the chloride content in the sample. The chemical tests of core samples also provide information to assess the state of corrosion of reinforcing steel.

ii) Penetration Resistance

In penetration resistance testing, a specially designed bolt is fired into concrete with the help of a standardized explosive cartridge. The equipment and testing procedure have been standardized by ASTM C803. A consistent correlation has been found between the depth of penetration and the strength of concrete.

iii) Pull-Out Testing

In pull-out testing, the force needed to pull a bolt or some similar device embedded into concrete is measured and correlated with the strength of concrete. This correlation has been shown to be unaffected by the mix characteristics and the curing history. The bolt may be inserted at the time of casting of the concrete or it may be epoxy grouted into a hole drilled into the hardened concrete. Different versions of this test are in practice in different parts of the world, such as, Lok-test, North American Pull-out Method, Internal fracture test, ESCOT, CAPO test etc.

iv) Pull-off Testing

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[89]	25.09.2013

Two versions of the test are possible. One application consists of in-situ measurement of tensile strength of concrete. Another application of the test is in testing of the bond between original and new concrete in repairs and strengthening. In first case a metallic disk is glued directly to the surface of concrete and pulled off to measure the force necessary to pull a piece of concrete away from the surface. In the second case partial coring is done with a standard diameter of 75 mm and the above procedure is repeated by gluing the disk at the top of the partial core. For assessing the bonding strength of the repairs with the original concrete, the depth of the partial coring should be below the surface of the original concrete.

(b) Corrosion Assessment of Concrete in Reinforced Concrete Structures

For effective inspection and monitoring of reinforced concrete structure, the condition assessment of reinforcement is an important step. Even for deciding appropriate repair strategy for a distressed concrete structure, the determination of corrosion status of reinforcing bars is a must. Most of NDT methods used for corrosion assessment are based on electrochemical process. The following Table gives guidelines for interpretation about corrosion.

Table C-Interpretation of Test Results on Corrosion

Test Results from Chemical Analysis	Interpretation
High pH value (> 11.5) and very low ($< 0.30\%$) chloride content.	No corrosion
High pH value (≥ 9.5) and high chloride content greater than 0.4% - 0.6% by weight of cement	Corrosion prone
Low pH value (< 7) and high chloride content greater than 0.4% - 0.6% by weight of cement.	Highly corrosion prone

Corrosion assessment of concrete in reinforced concrete structures can be made by conducting the following non-destructive tests.

i) Carbonation Test

This test measures the pH of the concrete. Freshly placed concrete normally has a pH between 12 and 13, which provides protection of the embedded steel and prevents corrosion even in the presence of water and oxygen. Concrete is considered carbonated when the pH falls below 11.5. At this pH level, only moisture is needed to initiate corrosion. Phenolphthalein solution is a typical color changing indicator that is used to perform the carbonation tests. The test solution is colorless at and below a pH of 8.2 and is pink/purple at a pH greater than 10.0. Other indicators are available that

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[90]	25.09.2013

measure different pH intervals. One commercially available indicator measures pH from 1 to 14 with a rainbow spectrum.

Testing is performed by exposing a freshly broken face of a concrete surface. This is accomplished either by chipping off a small piece of concrete with a rock hammer and chisel, if the carbonation is shallow, or by drilling a hole with an electric hammer drill. The broken surface is washed with distilled water to remove dust that may contaminate the surface. The indicator solution is then sprayed on and the results recorded. The depth of the probe will need to be increased if only carbonated concrete is found. Applicable Standard for Testing is ASTM C 457.

ii) Chloride Concentration Test

In coastal areas, saline water may corrode structures; penetrate the concrete, eventually initiating the corrosion of any uncoated embedded reinforcement. The accepted threshold value for chloride content in concrete is 300 parts per million (ppm), above which active corrosion in the embedded steel will occur. This threshold becomes lower if the concrete is carbonated.

To determine the durability of the structure, it is important to determine the chloride environment around the location of rebar. Testing is performed by taking powder samples from the concrete with a small electric impact hammer to create a profile of chloride content versus depth. The sampling should be taken at approximately 25 mm intervals to a depth below the nearest level of reinforcement. Samples should be taken from visibly deteriorated areas, from visibly "clean" areas, and from areas where exposure to contaminants is unlikely, such as the un-cracked soffit of a parking structure. This last sampling area is necessary to establish background levels of chloride. There is always some level of chloride present in concrete that comes from the individual components. This is allowed, but limited, by codes. Applicable Standard for Testing is BS 1881 Part 124.

(c) Corrosion Tests for Embedded Steel in Reinforced Concrete Structures

Corrosion of reinforcement in concrete structures is a complex electrochemical process. Migration of moisture and aggressive chemicals through the porous cover concrete would cause corrosion of steel reinforcement. The factors that influence corrosion are:

- Cover thickness,
- Quality of concrete in the cover region, especially its permeability and diffusivity,
- Environmental conditions,
- Value of pH and level of chloride in concrete, and
- Presence of cracks.

Following non-destructive tests are found useful for the determination of corrosion of reinforcement.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[91]	25.09.2013

i) Half-Cell Potential Test

This test can give the probability of corrosion activity taking place at the point where the measurements of potentials are taken from a half-cell, typically, a copper-copper sulphate half-cell. An electrical contact established with the exposed steel and the half-cell is moved across the surface of concrete for measuring the potentials.

ii) Cover Thickness Test

This test is useful for the determination of concrete cover, location of embedded rebars & estimation of size of embedded rebars. The instrument is based on the magnetic technique and is calibrated for different purposes. The cover thickness is important from the point of view of estimation of initiation of corrosion. The location and estimation of bar diameter becomes useful in structures where no structural drawings are available. Applicable Standard is BS 1881 Part 204.

d) Health Assessment of Structural Steel

Flaws and cracks can play havoc with the performance of structures and for improving the performance, detection of these defects is very much necessary. Visual inspections do not give correct picture of internal structural defects. By using non-destructive testing methods, the structures can be evaluated to a greater degree of accuracy, without damaging them. The following non-destructive tests can be done for evaluating the quality of steel structures.

i) Dye Penetration Inspection (DPI).

ii) Magnetic Particle Inspection.

iii) Eddy current testing.

iv) Radiography testing.

v) Ultrasonic testing.

i) Dye Penetration Inspection (DPI)

Dye Penetration Inspection is a method that is used to reveal surface breaking flaws by bleed out of a colored or fluorescent dye from the flaw. The technique is based on the ability of a liquid to be drawn into a "clean" surface breaking flaw by capillary action. After a period of time called the "dwell," excess surface penetrant is removed and a developer applied. This acts as a "blotter." It draws the penetrant from the flaw to reveal its presence. Colored (contrast) penetrants require good white light while fluorescent penetrants need to be used in darkened conditions with an ultraviolet "black light". Applicable Standard for Testing is IS: 822-1957.

ii) Magnetic Particle Inspection (MPI)

Magnetic particle inspection is a NDT method used for defect detection in steel structures. This is a fast and relatively easy method to apply in field. MPI uses magnetic fields and small magnetic particles, such as iron fillings to detect flaws in components. The component being inspected must be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-003	03	MODEL RLA/CA REPORT	[92]	25.09.2013

made of a ferromagnetic particle such as iron, nickel, cobalt or some of their alloys. Ferromagnetic materials are materials that can be magnetic to a level that will allow the inspection to be effective.

The method may be used effectively for inspection of steel girders and other parts made of steel. Applicable Standard for Testing is IS: 822-1957.

iii) Eddy Current Test

Eddy current equipment can be used for a variety of applications such as detection of cracks, discontinuity, measurement of metal thickness, detection of metal thinning due to corrosion / erosion, determination of coating thickness and the measurement of electrical conductivity and magnetic permeability.

The most basic eddy current testing instrument consists of an alternating current source, a coil of wire connected to this source, and a voltmeter to measure the voltage change across the coil. An ammeter could also be used to measure the current change in the circuit instead of using the voltmeter. Applicable Standard for Testing is IS: 822-1957.

For inspection of major steel beams and columns, this technique can be used for detection of surface breaking cracks. This is an excellent method for detecting surface and near surface defects when the probable defect location and orientation is well known. Defects such as cracks are detected when they disrupt the path of eddy current and weaken their strength.

iv) Radiographic Testing

This is the technique of obtaining a shadow image of a solid using penetrating radiation such as X-rays or Gamma rays. These rays are used to produce a shadow image of an object on film. Thus if X-ray or Gamma ray source is placed on one side of a specimen and a photographic film on the other side, an image is obtained on the film which is in projection, with no details of depth within the solid. Images recorded on the films are known as radiographs. Applicable Standard for Testing is IS: 822-1957.

The contrast in a radiograph is due to different degrees of absorption of X-rays in the specimen and depends on variations in specimen thickness, different chemical constituents, non-uniform densities, flaws, discontinuities, or to scattering processes within the specimen.

v) Ultrasonic Testing

Mechanical vibrations of different kinds can travel through solids due to their elastic properties. Ultrasonic waves due to their higher frequency and smaller wave length provide a much better possibility to find defects and determine their size and their position. The vibrations are normally generated by the use of a piezoelectric crystal, which can be excited by an electrical pulse. The two most common test methods, the through transmission technique and the pulse echo technique are used to determine the test. Applicable Standard for Testing is IS: 822-1957.}

ULTRASONIC TEST REPORT

ANNEXURE- 4.6

Plant Name [.....]
 Unit No. [.....]
 Capacity [.....]
 Inspection No. [.....]
 Component [.....]
 W.O. No. [.....]
 Material Specification [.....]

Test Details

Equipment used : [Ultrasonic flaw detector, Model:,]
 Make : [.....]
 Technique : [Pulse echo, A-scan direct contact]
 Surface condition : [Free from loose scale, dust, paint, Surface was clean]
 Scanning : [Manual]
 Standard : [ASME Sec 5 & ASTM E164 & ASTM E114]

Test Results

S. No.	Name of parts	Quantity		Finding/ Observation	Remark
		Inspected	Defect Noticed		
1	[.....]	[...%]	[.....]	[.....]	[.....]

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[i]	25.09.2014

BACKGROUND

What is R&M (Renovation & Modernization) of Thermal Power Plants?

Coal based power stations contribute more than 70% share of total power generation in India. Thermal Power Stations are designed for an economical and stable life span of 25 years, after which, the level of performance starts deteriorating as a result of degradation of its equipments, components and materials. Deterioration may also take place before the completion of useful life of 25 years, if the units are not operated and maintained properly. Deterioration in performance is reflected in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. This results in costly repair and loss of revenue. Renovations & Modernization (R&M) and Life Extension (LE) programme of thermal power station is an activity of carrying out repairs, refurbishments and replacement of defective equipments & components so as to extend the life of the power plant by at least 20 years and to restore the performance parameters to equal or better than the original design parameters.

Need of R&M

In spite of new capacity additions, India continues to face shortages of varying degree in the supply of energy and peaking power. Implementation of fresh capacity additions for bridging the demand supply gap involves huge investments and long gestation periods primarily due to the process of land acquisition and getting the required fuel and water allocations, permits & clearances, particularly, the environmental clearance.

On the other hand, R&M activity of existing old power plants which requires less investment and can be completed in shorter duration has been recognized as a techno-economically viable option to supplement the fresh capacity addition for maximizing the energy generation. Also it helps in reducing the emissions by adopting upgraded modern technologies.

Objectives of R&M and R&M/LE Programme

As per the Guidelines issued by Central Electricity Authority (CEA) the following should be the objectives of R&M and R&M/LE Programmes.

Objectives of R&M Programme:

- To restore rated capacity and design parameters such as Heat Rate, Auxiliary Power Consumption, Secondary Oil Consumption etc.
- To make the operating units well equipped with modified/ augmented latest technology.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[ii]	25.09.2014

- To overcome technological obsolescence and non-availability of spares.
- To improve the performance parameters in terms of Plant Load Factor, Efficiency, Forced Outages, Availability and Reliability.
- To reduce maintenance requirements and enhance the ease in maintenance.
- Compliance of stringent environmental norms, safety and other statutory requirements.

Objectives of R&M/LE Programme:

- Extension of useful economic life of generating units by another 20 years.
- To focus on full load operation of the unit beyond their original design life.
- To restore rated capacity and design parameters such as heat rate,
- Improvement in Auxiliary Power Consumption Secondary Oil Consumption etc
- Up-rating of Generating Unit.
- Improvement beyond design parameters.

Criteria for the Consideration of R&M and R&M/LE Programmes

As per the Guidelines issued by Central Electricity Authority (CEA) the following criteria is to be adopted for considering the R&M and R&M/LE Programmes.

- Estimated cost of unit for complete R&M/ LE works should be limited to 50% of cost of new unit.
- Cost of Main Plant (BTG) should be limited to 50% cost of new BTG unit.
- Plant Life should be extended by about 20 years.
- The Pay Back Period should be from 5 to 7 years.

Need of Preparation of Model R&M Documents

The countrywide R&M programme was first initiated in 1980 when Government of India approved the scheme of Central Loan Assistance (CLA) of Rs. 500 crores benefitting 34 power stations mostly of 50/60/100/110/120/140 MW capacities. R&M in a structured manner was initiated as a centrally sponsored programme during the 7th Five Year Plan. The momentum of carrying out R&M works was continued through 8th and 9th Plans but the same could not be sustained during the 10th Plan.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[iii]	25.09.2014

Detailed Project Report For R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

Based on the discussions held with Ministry of Power, various utilities, PFC and BHEL, CEA prepared a document on “National Perspective Plan for Renovation & Modernization and Life Extension and Up-rating (LE&U) of thermal power stations up to the year 2016-17”. This document which also includes revised guidelines for Renovation & Modernization / Life Extension works on coal/lignite based thermal power stations was released by Honourable Minister of Power on 14th December 2009. Plan-wise Achievements of R&M and R&M/LE Programmes starting from 7th Five Year Plan till 11th Five Year Plan is furnished below:

Plan–Wise Achievements

S.No.	Plan	Year	No. of TPS / No. of Units	Capacity (MW)	Additional Generation Achieved MU/ Annum	Equivalent MW
1	7 th Plan and Two Annual Plans	85-86 to 89-90 & 90-91, 91-92	34 / 163	13570	10000	2000
2	8 th Plan (R&M) (LEP)	92-93 to 96-97	44 / 198 43/(194) 1/ (4)	20869 (20569) (300)	5085	763
3	9 th Plan (R&M) (LEP)	97-98 to 2001-02	37 / 152 29/ (127) 8/ (25)	18991 (17306) (1685)	14500	2200
4	10 th Plan (R&M) (LEP)	2002-03 to 2006-07	9/ 25 (14 out of 57 planned) (11 out of 106)	3445 (2460) (985)	2000	300

11th Plan R&M Programme & Achievements (2007-12)

	Programme (MW)	Achievement (MW)
Life Extension Programme (LEP)	7318 (53 units)	1291 (13 Units)
R&M Programme	18965 (76 units)	14855 (59 units)
Total	26383 (129 units)	16146 (72 units)

In the past, R&M measures were hampered due to lack of proper planning. Proper investigation to identify the R&M works to be carried out and preparation of technical bid documents based on the investigation was not done. This resulted in unsystematic and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[iv]	25.09.2014

additional work during execution phase and uncertainty about costs resulting in excessive implementation time, long shutdown periods of plants and cost overruns. In the absence of standard commercial rules and policies, suppliers showed little interest in R&M work. Therefore a strong need was felt for providing standardized bidding procedures as well as model contracts, formats and specifications etc. to the utilities. Standardization will harmonize the requirements of all the stakeholders and will lead to their increased participation.

The Indo-German Energy Forum (IGEF)

The Indo-German Energy Forum (IGEF), inaugurated in 2006, provides a platform to discuss energy related issues of mutual interest. The first meeting of the ad-hoc sub-group on "energy efficiency in thermal power stations", constituted as per decision of meeting of IGEF in December 2007, was held under the chairmanship of Joint Secretary (Thermal), Ministry of Power on 12th March, 2008 in which preparation of standard tendering document for the purpose of R&M activities was, inter-alia, identified as an area of the activities. The scope of the assignment was divided in two parts as under:-

Phase-I Activity:

Phase-I activity comprised an assessment of tendering procedures currently being followed by public utilities in India and a review of documents used for standard R&M projects and the documents which have already been developed for energy efficient R&M projects financed by particularly World Bank. This activity was carried out by M/s Evonik (India) under the grant provided by GTZ. M/s Evonik (India) submitted the report in September 2009.

Phase-II Activity

Phase-II activity comprised the preparation of the model documents / templates in consultation with Task Force, power utilities & financing agencies.

In the 3rd meeting of Indo-German Energy Forum (IGEF) convened in Berlin on 4th November 2009, KfW proposed to finance and carryout the work programme of phase-II Activity, on behalf of CEA & in consultation with the Task Force. In a meeting held in MOP on 17th December 2009, chaired by Joint Secretary (Thermal), MOP, the representative of KfW suggested that CEA may act as "Project Executing Agency" for the phase-II activity. Accordingly Ministry of Power, Govt. of India have entrusted the task of "Project Executing Agency" to CEA for implementing Phase-II activity. Under Indo-German Energy Forum (IGEF) assisted programme, M/s Lahmeyer International (India) was appointed on 16th March 2012 to provide the consultancy services for 'Development of tendering procedures and model contract document for R&M of Fossil Fuel Based Power Plants in India.' The scope of consultancy services included the preparation of the following model documents:

- I) Standard Bidding Procedure for engagement of Consultants and R&M Works Contractor.
- II) Residual Life Assessment (RLA) / Condition Assessment (CA) Report.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[v]	25.09.2014

III) Energy Audit (EA) Report.

IV) Feasibility Report.

V) Detailed Project Report.

VI) Request for Qualification (RFQ) & (RFP) Documents for R&M Consultants and R&M Contractors.

VII) Technical Specifications.

Due Diligence done by LII of the R&M Documents of other Projects

Before the preparation of this model document, LII did a thorough review of the R&M Documents of the following Power Plants:

Documents Provided by CEA

- Remaining Life Assessment / Condition Assessment Report- Nasik Unit-3 of MAHAGENCO.
- Energy Audit Report- Nasik Unit- 3 of MAHAGENCO.
- Detailed Feasibility Report- Nasik Unit-3 of MAHAGENCO.
- Draft Detailed Project Report -Kolaghat Unit-3 of WBPDCCL.
- Service Contract- R&M of Unit-1 Panipat TPS of HPGCL.
- Tender document for Supply, Erection, Testing and Commissioning of Air Preheater for Unit 5 & 6 Koradi TPS, MAHAGENCO.
- Tender document for replacement of 6.6 KV station transformer incoming breaker & Tie- breaker of Koradi TPS, MAHAGENCO.
- Tender specification for Design, Engineering, Supply, Erection, Testing and Commissioning of Rotary Air Preheater for Units 4 & 5, Nasik TPS of MAHAGENCO.

Documents Provided by WBPDCCL

- Energy Audit Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Detailed Project Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Project Design Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Technical Specifications. (Vol. II of RFP Document for R&M Contractor).
- RLA for Boiler for Bandel Unit -5.
- RFP for R&M Consultant for Bandel Unit -5.
- Commercial Volume-I of RFP for Bandel Unit -5 for R&M Contractor.

KfW Documents

- Model Contract Document issued by KfW.
- Guidelines issued by KfW for the assignment of Consultants.

World Bank Documents

- Standard Bidding Document for Procurement of Plant, Design, Supply and Installation.
- Standard Request for Proposal for the Selection of Consultants

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[vi]	25.09.2014

This Detailed Project Report has been prepared to conceptualize the systematic methods and procedures to be implemented for carrying out R&M works for the Thermal Power Plants, taking into account the different practices followed in the past, the practices and methodologies being adopted by KfW and World Bank, as indicated in the various documents indicated above. Detailed standard documents like RFP & RFQ documents to carry out R&M works for the Thermal Power Plants shall be prepared based on this Detailed Project Report.

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[vii]	25.09.2014

NOTES & GUIDELINES FOR USING THE MODEL DETAILED PROJECT REPORT

Central Electricity Authority (CEA), the Project Executing Agency / Employer has appointed Lahmeyer International India Pvt. Ltd. (LII), the Consultant to Develop Standard Procedures and Model Documents for the Renovation and Modernization (R&M) of Fossil Fuel based Power Plants in India. The above assignment is being financed by KfW Entwicklungsbank. Accordingly, this Model Detailed Project Report (DPR) has been prepared for the guidance of Project Authorities who may decide to carryout R&M of their old Coal based Power Plants so as to extend the life of their plants and make them energy efficient and reduce emissions.

The purpose of this model document is to standardize the format of the DPR for R&M works. Since majority of 200/210 MW units are potential candidates for consideration of Renovation as they have crossed 20 to 25 years of useful life, the enclosed format has been prepared keeping those 200 MW/210 MW units in view. However, within a few years, some of the 500 MW Units will also become due for R&M. The utilities are therefore advised to suitably modify this model document, as applicable, before adopting the same for 500 MW Units.

This format of DPR (Detailed Project Report) contains two kinds of texts written in black and in blue colours. The text in blue italics and enclosed in square bracket ([...]) represents variable information which may differ from project to project. The text and numbers in blue colour are written for the sake of citing an example. The Utilities and their Consultants are advised to check the relevance of the same and replace these texts and numbers with the ones as may be applicable to their specific Project. A few guidelines have also been provided in blue italics enclosed within red curly brackets ({...}), wherever applicable.

EXECUTIVE SUMMARY

This Detailed Project Report has been prepared for carrying out the Renovation & Modernization (R&M)/ Life Extension (LE) of Unit No [...] of [...]. Thermal Power Plant, located at [...], in District [...] in the state of [...] and having a configuration of [...x...MW].

The unit no. [...] was first commissioned in the year [...]. After [...] years of operation, the performance of the unit has gradually deteriorated resulting in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. It is proposed to carry out required refurbishments and replacements in the plant so as to restore the unit's performance parameters and to extend its life of by at least [...] years. This report is based on the outcome of the Feasibility Report in which various options of renovating the plant were discussed through corresponding financial cost benefit analysis, to arrive at the most appropriate option.

The cost of the R&M Project is estimated as Rs. [...] crores. The Payback Period is estimated as [...] years. The R&M activity is expected to bring out the improvements as indicated in the following table:

[Improvements Expected after R&M of the Unit]

S.No.	Parameters	Units	Before R&M	After R&M

2 INTRODUCTION

2.1 Description

The Power Plant, having a configuration of [...]MW is located at [...], in District [...] in the state of [...]. The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator, respectively. The boiler is provided with [front & rear/corner/down shot] firing system. LP stage of Turbine is designed with [Bauman] exhaust. Condenser cooling system of the unit is designed on [once through / re-circulation system]. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [... substation.] The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [...] coal mines. The consumptive water for the power plant is being sourced from [...river/...sea].

2.2 Operational Background

After the first commissioning during the year [...], the unit was giving a stable operation with [...] MW of Gross Power Output at an average PLF of [...] % and a Gross Heat Rate of [...]kCal/kWh]. The Auxiliary Power Consumption after the first commissioning was [...%]. [Based upon the recommendations of RLA / CA and EA Studies conducted during the year major replacements were made during the year..... comprising.....and]. The unit is presently performing with a maximum Gross Power Output of [...] MW with an average PLF of [...%] and a Gross Heat Rate of [...]kCal/kWh]. The present Auxiliary Power Consumption is [...%].

2.3 Objective of undertaking Renovation & Modernisation

Renovation and Modernisation of the unit is proposed for refurbishing the unit in a cost effective manner so as to extend its life, increase its output and efficiency and to ensure that its performance is in compliance with the revised statutory standards prescribed by the environmental authorities.

A detailed Feasibility Study consisting of the following sub-studies has already been carried out to arrive at the most cost effective and feasible solution.

- a. [Cold Walk-down and Hot Walk-down Survey.
- b. Discussion with the Plant Engineers.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[3]	25.09.2014

- c. Review of the operational history of the power plant, reports of Condition Assessment (CA) and Residual Life Assessment (RLA) studies carried out earlier and major replacements done in the past, prior to taking up this study.*
- d. Review of reports of Condition assessment (CA) and Residual Life Assessment (RLA) of major equipment and systems of the power plant carried out recently.*
- e. Review of reports of Energy Audit of main equipments and auxiliary systems carried out recently to identify the reasons and sources of excess power consumption.*
- f. Review of recommendations of R&M Consultant for carrying out R&M measures for increasing the useful life, efficiency and output of the plant as well as for meeting the latest environment standards prescribed by the regulating agencies at the national and state level.*
- g. Study of the financial impact of the R&M Measures proposed.*
- h. Financial analysis based on internal rate of return and cost benefit ratio.]*

Detailed Project Report For R&M of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[Logo of Utility]
---	-------------------

3 SALIENT FEATURES OF POWER PLANT

{Describe in this chapter, the Design Parameters and Salient Features of all the important Equipment and Systems of the Power Plant as mentioned below}

3.1 Boiler & Auxiliaries

a) Boiler

[The Boiler is of natural circulation, pulverized fuel fired, dry bottom, balanced draft using direct firing system. The design parameters of the Boiler are furnished below]

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[....]
Steam Pressure at SH outlet	kg/cm ²	[....]
Steam Temperature at SH outlet	°C	[....]
Re-heater Flow	T / hr	[....]
Steam Pressure at RH outlet	kg/cm ²	[....]
Steam Temperature at RH outlet	°C	[....]
Feed Water Flow	T / hr	[....]
Feed Water Pressure at inlet of Economiser	kg/cm ²	[....]
Feed Water Temperature at inlet of Economiser.	°C	[....]

b) Furnace

[The boiler is equipped with a water cooled furnace of balanced draft and fusion welded membrane wall construction. It is equipped with.....numbers of coal burners and.....numbers of oil burners located at numbers of elevations. The design parameters of the Furnace are furnished below.]

Description	Units	Design Parameters
Type of Firing	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[5]	25.09.2014

Description	Units	Design Parameters
Combustion Chamber Volume	m ³	[.....]
Furnace Dimensions (Width x Depth x Height)	m	[.....]
Heating Surface Areas		[.....]
i) Water Walls	m ²	[.....]
ii) Superheaters	m ²	[.....]
iii) Reheaters	m ²	[.....]
iv) Economiser	m ²	[.....]
v) Air Heater	m ²	[.....]
vi) Steam Coil Air Heater	m ²	[.....]
vii) Temperature Measurement of Super-heater tubes	Yes / No	[.....]
viii) Temperature Measurement of Re-heater tubes	Yes / No	[.....]

c) Super Heaters and Re-Heater

[The super heaters are composed of four sections, a platen section, a pendant section, a rear low temperature section and a steam cooled wall & roof section. The Re-heater consists of two sections, the front pendant and the rear pendant sections. The details are given below:]

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Low	[.....]	[.....]	[.....]	[.....]	[.....]

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Temperature Super Heater					
Platen Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Pendant Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Ceiling and Enclosure Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Front Assembly	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Rear Assembly	[.....]	[.....]	[.....]	[.....]	[.....]

d) Economiser

[The Economizer is of a single stage, continuous plain tube and horizontal, mixed flow type, located in the second pass of the boiler]

e) Air Pre-Heater

[The air pre-heater is of regenerative rotary type. Special sealing arrangements have been provided in the air pre-heater to prevent leakage between air and gas sides. Adjustable sector plates have also been provided to prevent the leakage during expansion. The heating surfaces of the air pre-heater have been provided with two types of cleaning systems, soot blowing and water washing system.]

f) Raw Coal Bunkers

[Each boiler is provided with [...] raw coal bunkers. The total capacity of the bunkers is to meet [...] hour's requirement at maximum mills capacity of the unit. The upper portion of the bunkers is of cylindrical shape made of carbon

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[7]	25.09.2014

steel plate, while the conical portion is made of stainless steel plate. Each outlet of the bunker is provided with an isolation gate which is motor operated. In addition to the isolation gates, rod gates have been provided to control the flow of coal from the bunkers]

g) Raw Coal Feeders

[One gravimetric type of raw coal feeder has been provided for each coal mill. The coal feeders have been provided with micro-processor based controls with variable frequency drive. The feeders have been provided with dual independently measuring load cells. All parts of the feeders coming in contact with coal, except the belt, are made of stainless steel]

h) Fuel Firing System

[The boiler is working on a direct firing system. The pulverized coal is being dried and transported to the coal burners by means of hot primary air being supplied by two primary air fans. The boiler is having [front and rear/corner/down shot] firing system. There are [...] pulverized coal burners and [...] oil burners. The burners are located at [...] floors.

i) Coal Mills

[The unit is provided with numbers of [BHEL] make [XRP-783] bowl type mills, out of which mills are designed to work with designed coal andnumbers of mills are standby . The rated capacity of each mill isT/hr]

Description	Units	Design Parameters
Make and Model of Mills	[....]
Capacity of Mills	T/hr	[....]
Total Number of Mills per boiler	Nos.	[....]
Number of Mills to work per boiler with design coal quality	Nos.	[....]
Motor Rating	kW	[....]

j) Primary Air Fans

[Two Primary Air (PA) Fans have been provided for each boiler. Each PA Fan is designed to meet 60% MCR condition of the boiler. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Hot Air	°C	[...]
Motor Rating	kW	[...]
Method of Regulation	[...]

k) Forced Draft Fans

[Two Forced Draft (FD) Fans have been provided for each boiler. Each FD Fan is designed to meet 60% MCR condition of the boiler. The FD Fans supply combustion air to the boiler, mill air through PA Fans and tempering air to control the classifier temperature of the mills. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of fans per boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Air	°C	[...]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[9]	25.09.2014

Description	Units	Design Parameters
Motor Rating	kW	[...]
Method of Regulation	[...]

I) Induced Draft Fans

[Two Induced Draft (ID) Fans have been provided for each boiler. Each ID Fan is designed to meet 60% MCR condition of the boiler. Each ID Fan evacuates flue gases through two parallel paths of ESP and discharge them into stack through separate ducting. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[...]
Type of Fans	[...]
Number of Fans per Boiler	Nos.	[...]
Capacity	m ³ /sec	[...]
Discharge Pressure	mmwc	[...]
Temperature of Flue Gases	°C	[...]
Motor Rating	kW	[...]
Method of Regulation	[...]

m) Wall Blowers and Long Retractable Soot Blowers (LRSBs)

[Wall Blowers [...numbers] and Long Retractable Soot Blowers (LRSBs) [...numbers] are being used for cleaning the soot deposited on the heating surfaces of the water walls and super heaters respectively. Manual soot blowing system has been provided. Details are given below:]

Description	Units	Design Parameters
Wall Blowers		
Make and Model of Wall Blowers	[...]

Description	Units	Design Parameters
No. of Wall Blowers per boiler at water walls	Nos.	[...]
Medium of soot blowing at water walls	[...]
LRSBs		
Make and Model of LRSBs	[...]
No. of LRSBs per boiler at pendant surfaces of pressure parts	Nos.	[...]
Medium of soot blowing at pendant surfaces of pressure parts	[...]
No. of LRSBs per boiler at convection pass tube banks	Nos.	[...]
Medium of soot blowing at convection pass tube banks	[...]

n) ESP

[An Electrostatic Precipitator (ESP) has been installed on the cold end side of the Air Pre-heater to remove the particulate matter from the flue gases. The ESP has been provided with Gas Distribution System, Collecting Electrodes, Discharge Electrodes, Transformer Rectifier Sets and [electrically/mechanically] operated rapping system. The hoppers of ESP have been provided with [capacitance] type level indicators and thermostatically controlled heating elements. Details are given below:]

Description	Units	Design Parameters
Make and Model of ESP	[...]
Number of Passes per ESP	Nos.	[...]
Number of fields per pass	Nos.	[...]
Number of ESP Hoppers	Nos.	[...]

Description	Units	Design Parameters
Dust concentration at outlet	mg/Nm ³	[...]
Type of Control	[...]
Gas Velocity in ESP	m/sec	[...]
Specific Collection Area	m ² /m ³ /sec	[...]
Aspect Ratio	[...]
Particle Migration Velocity	cm/sec	[...]
Numbers of TR Sets	[...]
Rating of TR Sets	[...]
Plate Area/TR Set	m ² /TR Set	[...]
Storage Capacity of ESP Hoppers	hrs	[...]
Pressure Drop	mmwc	[...]
Dust Collection Efficiency with (N-1) fields in operation	%	[...]

3.2 Turbine & Auxiliaries

a) Steam Turbine

[The steam turbine is of three cylinder, 3000rpm, tandem compound, condensing type designed to operate on a re-heat and re-generative feed water cycle. The LP stage of turbine is designed with Bauman exhaust. The turbine is provided with HP/LP bypass system of 60% capacity of Boiler MCR. The turbine is provided with an electro - hydraulic control system, automatic turbine run up system and turbo supervisory instrumentation. The condensing system consists of a surface condenser of single shell and two pass, divided water box construction. Cooling water being supplied to the condenser is of raw water/ clarified water quality. The design parameters of the steam turbine are furnished below]

Description	Units	Design Parameters
Pressure of Steam at inlet of ESV of HPT	kg/cm ²	[...]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[12]	25.09.2014

Description	Units	Design Parameters
Temperature of Steam at inlet of ESV of HPT	°C	[...]
Pressure of Cold Reheat (CRH) Steam	kg/cm ²	[...]
Temperature of Cold Reheat (CRH) Steam	°C	[...]
Pressure of Hot Reheat (HRH) Steam	kg/cm ²	[...]
Temperature of Hot Reheat (HRH) Steam	°C	[...]
Pressure at the inlet of LP Turbine	kg/cm ²	[...]
Temperature at the inlet of LP Turbine	°C	[...]

b) **Condenser**

[The condenser is a [single/double] pass, horizontal, surface type with integral air cooling section designed to maintain a pressure of 76 mm of Hg at turbine exhaust with a cooling water temperature of [...] deg C and an outlet temp of [...] deg C. The condenser is capable of operation with [...] tubes plugged and has hot well storage capacity of [...] minutes]

Description	Units	Design Parameters
Make and Model	[...]
Type of Condenser	[...]
Total Cooling Surface	m ²	[...]
Number of Cooling Water Tubes	[...]
Material of Tubes	[...]
Diameter and thickness of tubes	mmxmm	[...]
Cooling Water Quantity through Condenser	m ³ /h	[...]
Cooling Water Temperature at the inlet to Condenser	°C	[...]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[13]	25.09.2014

Description	Units	Design Parameters
Condenser Vacuum	mm Hg	[....]

c) Ejectors

[The Condenser is provided with two quick starting ejectors which operate in parallel to remove large volumes of air for raising the initial vacuum during the starting of the Unit. Two main ejectors of 100% capacity each have been provided remove air and non condensable gases from the condenser to maintain the required vacuum in the condenser during the normal operation of the unit.]

d) Condensate Extraction Pumps

[Condensate extraction pumps are of vertical, multistage, centrifugal pumps of canister type.]

Description	Units	Design Parameters
Make and Model	[....]
Type	[....]
Capacity	m ³ /h	[....]
TDH	mwc	[....]
Speed	rpm	[....]
Motor Rating	kW	[....]

e) Gland Steam Cooler

[A Gland Steam Cooler has been provided to condensate the leak-off steam from intermediate chambers of end sealings of HP and IP turbine, thereby heating the main condensate water. The Gland Steam Cooler consists of shell, tube bundle and removable water box.]

f) LP Heaters and Drain Coolers

[Each steam turbine is provided with four numbers of low pressure heaters to increase the temperature of the condensate in stages. LP Heater -1 consists of two halves and is installed in neck of the condenser. The remaining LP Heaters are of shell and tube design and have been placed vertically. An

Bled Steam Pressure (kg/cm ²)	[...]	[...]	[...]	[...]
Bled Steam Temperature (deg C)	[...]	[...]	[...]	[...]

g) Deaerator

[The deaerator is of [horizontal spray cum tray type]. It is designed to remove dissolved oxygen from the condensate in excess of 0.005 cc per liter. The feed water storage tank has a capacity of [...] minutes feed water requirement of the boiler corresponding to TMCR Heat Balance]

h) Boiler Feed Pumps

[The boiler feed pumps are horizontal, multi stage centrifugal pumps of barrel type, motor driven pumps with hydraulic coupling taking the suction from the deaerator. The boiler feed pumps discharge feed water through HP heaters to the economizer of the boiler.]

Description	Units	Design Parameters
Make and Model	[....]
Type	[....]
No of stages	Nos.	[....]

Description	Units	Design Parameters
Gland sealing arrangement	[...]
Minimum flow	m ³ /h	[...]
Method of Speed Regulation	[...]
Type of Hydraulic Coupling	[...]
NPSH required at design condition	mwc	[...]
Motor Rating	kW	[...]

i) HP Heaters

[Each steam turbine is provided with three numbers of high pressure heaters to increase the temperature of the feed water in stages. The Heaters are of shell and tube design and have been placed vertically. The design details of HP Heaters are furnished in the table below.]

Heater No.	1	2	3
Extraction Steam taken from	[...] stage of HP turbine	[...] stage of HP turbine	[...] stage of HP turbine
Bled Steam Pressure (kg/cm ²)	[...]	[...]	[...]
Bled Steam Temperature (deg C)	[...]	[...]	[...]

j) HP/ LP Bypass

[HP/LP bypass system has a capacity of 60% of BMCR (Boiler Maximum Continuous Rating). HP bypass system has been provided between the Main Steam Line and Cold Reheat Line. LP bypass system has been provided between the Hot Reheat Line and the Condenser. HP bypass water spray has been taken from the discharge of Boiler Feed Pumps. LP bypass water spray has been provided from the discharge of Condensate Extraction Pumps.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[16]	25.09.2014

k) Turbine Governing System

[The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. The system is designed to sustain full load dump from the generator. The system is provided with a quick closing Emergency Stop Valve (ESV), to interrupt the supply of steam from the boiler and stop the turbine under emergency conditions. The turbine governing system includes, speed governor,]

l) Lube Oil System

[The lube oil system consists of Main Oil Tank, Turbine driven main oil pump, AC driven bearing oil pump, DC driven emergency oil pump, AC driven jacking oil pump and oil coolers of 3x50% capacity, Lube oil is being purified by means of a centrifuge. Oil storage tanks consisting of Clean Oil Tank and Dirty Oil Tank have been provided.]

3.3

Electrical System

a) Generator

[The Generator is a 15.75 kV, 50 Hz, 0.85 power factor machine, directly coupled with steam turbine operating at 3000 rpm, with.....type of excitation system and digital programmable voltage regulator. The Generator has direct water cooled stator winding and direct hydrogen cooled rotor winding. The stator winding cooling water is cooled in a closed cycle cooling system using DM water, while the hydrogen in the machine is cooled in gas to water hydrogen coolers mounted inside the machine. The Parameters of the Generator are briefly mentioned below.]

Description	Units	Design Parameters
Rated MW Capacity	MW	[....]
Rated MVA Capacity	MVA	[....]

b) Station Transformer

[Two Station Transformers have been provided to meet the station [common] auxiliary loads of the power plant. The Station Transformers have been provided with on-load tap changers to keep the station 6.6 kV voltage constant. Cooling of this transformer is ONAN/ONAF/OFAF and has 2x50 % separately mounted radiators and 2x50% oil pumps. The Parameters of the Station Transformers are briefly mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity / Rating	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]
Quantity	Nos.	[...]

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[18]	25.09.2014

c) Generator Transformer

[The power output from each Generator is being stepped up to 220/400 kV through a 240 MVA step up Generator Transformer. It has 3x50% coolers and 3x50% oil pumps. The Parameters of the Generator Transformer are briefly mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]

d) Unit Auxiliary Transformer

[Two unit auxiliary transformers have been provided for each unit for meeting all unit auxiliary loads. These transformers have been provided on-load tap changers. The Parameters of unit auxiliary transformers are briefly mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]
Quantity	Nos.	[...]

e) Electrical Auxiliary Power Distribution System

[Unit auxiliaries receive their normal power supplies at 6.6 kV through two (2) nos. unit transformers. For lower rating drives, 6.6 kV is further stepped down to 415 V by two (2) nos. unit service transformers. The 415 V distribution system feeds a number of Motor Control Centers (MCCs) for running 415 V drives. 6.6 kV unit switchgears are connected to station switchgear for start up and emergency power supply. The details are mentioned below]

Description	Units	Design Parameters
Voltage Level	kV	[...]
Type of Breakers	[...]
Type of Grounding	[...]
Type of Protection	[...]

f) DC System

[Each unit has its own DC system located in the BC bay at ground floor of the Power House. Separate DC systems have been provided in switchyard control room, intake pump house and DM plant for controlling the systems. Each DC system comprises of the Storage Battery, the Battery charger and the distribution boards. The details are mentioned below]

Description	Units	Design Parameters
Make	[...]
Capacity / Rating	[...]
Voltage	V	[...]
Type of Charger	[...]
Area of Application	[...]

g) Emergency Power Supply System

[Diesel generating sets are installed for meeting the power requirements of essential auxiliaries (viz. jacking oil pumps, AC lube oil pump, hydrogen seal oil pump, float charger for DC battery, emergency lighting, scanner air fan and stator cooling water pump) during total failure of AC Power Supply in the power station. Diesel generating sets are located in the CD bay at the ground floor. The details are mentioned below]

Description	Units	Design Parameters
Make of DG Sets	[...]
Rating of DG Sets	kVA	[...]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[20]	25.09.2014

Description	Units	Design Parameters
Quantity	Nos.	[...]

h) Public Address System

[The unit is provided with paging and party channels comprising handset stations with amplifiers, transmitters, receivers and loud speakers. The system facilitates paging, communication and also private conversation as on conventional telephone.]

i) Illumination System

[For indoor application, fluorescent/ energy saving compact fluorescent fixtures have been provided. For high bay areas and outdoor application, suitable high intensity discharge Mercury Vapour/ Sodium Vapour lighting fixtures have been installed. Aviation type fixtures have been installed at the Chimney]

3.4 Control & Instrumentation

[The existing control and instrumentation system generally is an old analogue based system and requires large scale replacement owing to obsolescence of the existing equipments. Furnace Supervisory Safeguard System (FSSS) is of obsolete design for which, no spares are available. Soot blowers are of manual type. No online Boiler Tube Leakage detection system has been provided. The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. Turbine Supervisory system is of electromagnetic type. No continuous monitoring system has been provided for observing the health of the turbine. HP- LP bypass system is in the form of standalone control panel. Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for SG & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.5 Balance of Plant

a) Coal Handling Plant

[Coal Handling Plant is a common facility which is feeding all the units of the power plant having a total installed capacity of...x.....MW. Coal to the power plant is brought through railways by 'Box N' /'BOBR' wagons and is unloaded by wagon tipplers / track hoppers. One crusher has been provided

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[21]	25.09.2014

for crushing the coal from 250 mm size to 25 mm size. The plant is provided with one stacker reclaimer to stock the crushed coal. The coal stock yard has a storage capacity of 20 days. For feeding the coal to the bunkers of all the units, two streams of conveyors having a capacity ofTPH have been provided. The coal handling plant operates for 16 hrs a day.]

Description	Units	Design Parameters
No. of Wagon Tiplers	Nos.	[...]
Rating of Wagon Tiplers	T/hr	[...]
Length of Track Hopper	m	[...]
No. of streams of conveyor	Nos.	[...]
Capacity of each conveyor	T/hr	[...]
Type of Crushers	[...]
Number of Crushers	Nos.	[...]
Capacity of Crushers	T/ hr	[...]
No. of Stacker Reclaimers	Nos.	[...]
Stacking Capacity	TPH	[...]
Reclaiming Capacity	TPH	[...]
Storage Capacity of Stock Yard	days	[...]

b) Ash Handling Plant

[Ash Handling System is of continuous type. The bottom ash from the furnace falls into bottom ash hopper having a storage capacity of [...] hrs. The ash is removed with the help of submerged Scraper Chain Conveyors. The ash from the air pre-heater and economizer hoppers is being disposed off along with bottom ash. The ash in the form of ash slurry is conveyed through sluice channels to the ash slurry pump house with the help of high pressure jets, from where, it is pumped to the ash pond located the distance of [...] km. [...] The ash slurry pump house is provided with [...] numbers of ash slurry pumps of rating [...], out of which [...] pumps are normally working. The ash slurry disposal system is having [...].numbers of identical streamlines of ash slurry pumps connected to [...] numbers of ash slurry pipelines going to the ash pond. Fly ash is collected in dry form below the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[22]	25.09.2014

ESP hoppers and the same is then conveyed by vacuum system to surge hoppers from where it is either conveyed through pressurized system to dry fly ash silos or is sent to ash pond in the form of slurry. From the dry fly ash silos, the ash is disposed off through the covered trucks.]

c) Raw Water System

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. The intake water pump house is installed with [...] intake pumps of capacity [...] m³/hr, out of which [...] pumps are normally working and the remaining [...] pumps are standby. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days.]

d) CW / ACW System and Cooling Towers

[CW system for the power plant works on re-circulating system with induced draft cooling towers. The CW system uses raw/clarified quality of water and is working on [...] cycles of concentration. CW pump house is a common facility for all the units of the power plant. There are two CW pumps of capacity [...] m³/hr provided for each unit. In addition, there are two standby CW pumps common to all the units. The requirement of ACW system is being tapped from the cold CW header feeding the condenser. The hot return ACW water after cooling the auxiliaries of boiler and turbine joins the hot CW header and is sent to the cooling towers for cooling. The cold water from the cooling water flows to the fore bay of CW Pump House for recirculation into the system. One induced draft cooling tower (IDCT) has been provided for each unit. The cooling tower cools the water from [...] deg C to [...] deg C. The cooling tower has been designed for an inlet wet bulb temperature of [...] deg C].

e) Water Pre-Treatment Plant

[Water Pre-Treatment Plant is a common facility for all the units of the power plant. Pre-treatment plant supplies clarified water to DM plant, cooling water to the auxiliaries of BOP system, coal handling plant dust suppression and to the drinking water system. There are two numbers of clarifiers of [...].m³/hr capacity to meet all the clarified water requirements of the whole plant, except DM plant. The clarified water requirement for DM plant is met by a separate clarifier of capacity [...] m³/hr.]

f) DM Plant

[DM plant consists of three streams, each of [...] m³/hr capacity. There are two DM water tanks of [...].m³ capacity. A common regeneration system has been provided for all the three streams.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[23]	25.09.2014

G) Air-Conditioning and Ventilation System

[The central control room, switchyard control room, ESP controls room and selected areas of service building have been provided with centralized air-conditioning system. The central air-conditioning system of chilled water type has been provided for various control rooms and DX type of plant has been provided for ESP control room, switchyard control room and other areas in the service building. Packaged type of air-conditioners has been provided for water treatment plant control room. Evaporative ventilation system has been provided for TG building along with roof extractors. Other areas are ventilated by a combination of exhaust and supply air fans].

h) Fire Fighting System

[Fire fighting system is a common facility provided for all the units. This consists of pressured hydrant system for all the auxiliary buildings, pump houses and administrative building. Automatic high velocity sprinklers system has been provided for power transformers, turbine oil tanks and lube oil system equipments. Medium velocity sprinkler system has been provided for cable galleries and coal conveyor galleries. Portable types of fire extinguishers have been provided throughout the plant for fighting small and localized fires.]

i) Plant and Instrument Air System

[Plant and instrument air system is a common facility for all the units of the plant. For meeting the instrument air requirement, [...] number of oil free screw compressors [...] working and [...] standby, each of [...] m³/hr capacity and discharge pressure of [...] kg/cm (g) have been provided along with dryers. Equal number of air compressors of similar rating has been provided to meet the requirement of plant air system. The air drying plant for the instrument air has been provided to achieve a dew point of (-) 40°C at atmospheric pressure.]

j) Fuel Oil System

[The fuel oil system has been designed for the use of Light Diesel Oil (LDO) for start- up and Heavy Fuel Oil (HFO) for load carrying and flame stabilization purposes. Two tanks of [...] kl each have been provided for the storage of HFO and two tanks of [...] kl each have been provided for the storage of LDO. The system has been provided with unloading, transferring and pressurization pumps along with necessary filters. Fuel oil system has been provided with steam / electric tracing.]

k) Cranes/Hoists

[For the maintenance of various equipments, manually /electrically operated cranes and hoists have been provided.]

Document Number	Rev No.	Description	Page No.	Date of Issue

3.6 Civil Works

Major civil work facilities consist of the following:

(a) **Main Power House Building:**

[A common Power House Building has been provided to house [3x200 MW] units which are placed side by side. Centre to centre placing of units is [67.5 m.] The railway entry has been provided from the rear side of Power House Building. Turbine Generator (TG) Sets have been placed between AB rows of columns are laid out longitudinally. The TG bay, also houses, the Boiler Feed Pumps, Regenerative Heaters, Lube Oil System and other TG accessories. The total length of TG bay for 3x210 MW units is [276 m] and width [30 m]. The spacing of the column is at [7.5 m]. TG bay is provided with 2 Nos. of overhead EOT Cranes. In order to make the handling facilities of the cranes available to the heat exchangers, boiler feed pumps and other equipments, removable chequered plates have been provided at appropriate locations.

A sub zero floor has been avoided except for the localized pits required for Condensate Pump, pipe channels and HP Heaters etc. This sub zero pits are suitably connected and provided with a common sump for drainage purposes.

Three stairs for approaching the operating floor level at [+10 m] have been provided in this bay adjacent to B row columns. In addition, there are stairs for providing access to various equipments at intermediate platforms and sub zero pits.

Switchgear and Control Room bay has been provided in the BC bay which is [12 m] wide. The length of the bay is [249.0 m]. A common Control Room for all the three units is provided at [10 m] floor. In BC bay at [16 m] elevation, equipments for chemical dosing, air handling and MCC for soot blowers etc have been located. The deaerator is placed at an elevation of [23.0 m]. Air washer units and cooling water tanks are also located at [23.0 m] floor.

Mill Bunker Bay, designated as CD bay, has a span of [10.5 m] which accommodates coal bunkers, coal feeders and coal mills. CD bay houses the vertical mills at Zero m and has space for collection of disposal of mill rejects at sub zero levels adjacent to 'D' row. A stair to connect operating floor at [16.0 & 23.0 m] of BC & CD bay has been provided.]

(b) **Boiler Area**

[In boiler area, the boiler with its auxiliaries like PA fan, FD fan, ID fan as well as Electrostatic Precipitator has been located.]

(c) **Chimney**

[A common multi-flue Chimney of 220 m height has been constructed in which, flue cans of [3x200 MW] have been erected.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[25]	25.09.2014

(d) Transformer Yard

[A [60] m wide yard has been provided outside the 'A' row columns. The transformer yard houses station transformer, unit auxiliary transformers and generator transformers along with oil pits etc. To facilitating erection and maintenance of transformers, the area has been provided with rail tracks parallel to 'A' row at a distance of [45 m] from 'A' row which is further connected through cross tracks. In addition, space has been provided for laying the CW pipelines and locating the butterfly valve chambers.]

(e) Service building

[A common four storey building has been provided near the main plant building and it is connected with the operating floor of TG bay at [10 m] level.]

(f) Miscellaneous buildings

[Besides the above, miscellaneous buildings like administrative building, CW Pump House, Fire Water Pump House, CHP Control Room, ESP Control Room, DM Plant Building, Chemical House and Ash Silos have been provided.]

4 OPERATIONAL HISTORY OF THE UNIT

4.1 Performance Parameters of the Unit

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ/KWU] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. The deterioration experienced over the years in Plant's performance parameters is shown in Table 4.1.

Table 4.1- Unit's Performance Parameters over the life

Years after Installation	PLF (%)	Availability (%)	Output (MW)	Aux. Power Consumption (%)	Specific Oil Consumption (ml/kWh)	Unit's Gross Efficiency (%)	Unit's Gross Heat Rate (kCal/kWh)

4.2 Stack Emissions, Ambient Air Quality and Process Effluents

The Project has been regularly monitoring the environmental parameters such as stack monitoring, ambient air quality (AAQ), noise pollution and liquid waste pollution by employing an agency approved by State Pollution Control Board and in accordance with applicable norms.

{Indicate the environmental data of the unit for the past three years against the limits specified for different pollutants. Furnish the information for each year as per the table 4.3 below. Also provide the map(s) showing the locations for various measurements as Annexure to the Detailed Project Report.}

5 SELECTION OF R&M OPTION TO BE IMPLEMENTED

5.1 Formulation of R&M Options

[A detailed Feasibility Study was carried out to arrive at the most cost effective and feasible solution for implementing the Renovation & Modernization activities of the unit. Existing conditions of the unit were assessed on the basis of the results of RLA/CA & EA Studies. Based on the recommendations of RLA/CA & EA Studies, review of the performance data and discussions with the plant engineers, five R&M options were formulated. All the R&M options were aimed at achieving the following minimum objectives:

- i) Redesigning the boiler to suit the average coal quality likely to be available for the next 20 years.*
- ii) Restoring the performance parameters to the original design values.*
- iii) Extending the life of the unit by a minimum of 20 years.*
- iv) Replacing the existing obsolete technology.*
- v) Meeting the revised statutory emission standards.*
- vi) Increasing Efficiency.*
- vii) Reducing Auxiliary Power Consumption*

The first option considered for R&M was for the case, in which the objectives were restricted to the bare minimum for restoring design output, design heat rate and Auxiliary Power Consumption of the unit and to extend the unit life by 20 years. Other options were formulated for not only the life extension of the unit but also for further improving its output, heat rate and auxiliary power consumption from the original design values, as discussed in the Table 5.1 below.]

Table 5.1- R&M Options Considered for Cost Benefit Analysis

Option	Objectives to be achieved by carrying out R&M	Shut Down Period	Major Performance Parameters
I	<i>i) [Designing boiler to suit average coal quality likely to be available for the next 20 Years.]</i> <i>ii) [Increasing the output of the unit to 215 MW from (200/210MW) by retrofitting the LP turbine without retrofitting Generator. Improving heat rate beyond the original design heat rate and restoring the Auxiliary Power Consumption to the original design</i>	[...]	<i>[Life Extension Years]</i> <i>[OutputMW]</i> <i>[Heat Rate ...</i>

Power Consumption</p> <p>.....%]</p>

{While evaluating the options, the utilities are advised to also check the residual life of the switchyard, the Balance of Plant and the Material Handling System. Further, the utilities should note that if the proposed calorific value of coal is inferior to the original calorific value for which the boiler was designed, then the boiler will require re-engineering.}

Estimated cost for each option was worked out after taking into account the scope of R&M measures to be implemented for each option. Cost Benefit analysis of each option was then performed. After cost-benefit analysis of [Five] options mentioned above, option [...] has been identified as most appropriate option for implementation. Cost-benefit analysis of all options is discussed in Section 6.0.

5.2

R&M option identified for Implementation

Based upon the cost benefit exercise carried out and details furnished in the Feasibility Report for various R&M options, Option [...] has been selected for implementation. This is expected to bring out the following improvements:

7 PROJECT COST AND COST BENEFIT ANALYSIS

7.1 Introduction

The objective of the financial analysis during feasibility study was to make a comparative analysis of the financial implications of the *[five R&M options]* as well as the base case option of not undertaking any R&M project at all. On the basis of the financial analysis of the R&M options, R&M option [...] was chosen for implementation. In this chapter, a detailed cost-benefit analysis of the selected R&M option is carried out.

7.2 Capital Expenditure for the selected R&M option

The estimate of capital expenditure likely to be incurred for the selected R&M option comprises dismantling cost, supply cost, construction /erection /commissioning cost, taxes/duties, interest during construction, financing cost and contingency. As a discussed in Chapter-6, the detailed scope of Renovation & Modernization work for the different systems and subsystems of the power plant was decided. The cost for different constituent parts of the project (i.e. systems and subsystems) was estimated on the basis of past cost data for similar work wherever available and/or budgetary quotes.

The R&M project work is split into *[six]* packages to be executed through *[six]* different contracts. The Engineering, Procurement and Construction cost of each of the packages is determined by summing up the cost of the constituent works covered in the scope of work of the package. The total Cost of the R&M project is sum of the Engineering, Procurement and Construction cost of individual packages and other costs such as taxes/duties, Pre-commissioning costs, interest during construction, financing cost and contingency.

The estimated capital cost of the selected R&M option is summarized at **Annexure 7.1**.

7.3 Cost Estimate for R&M Contract Packages

Package wise Cost Estimate is summarized at **Annexure 7.2**.

7.4 Impact on Tariff

[The tariff for electricity sent out from this power plant is determined by Tariff Norms of appropriate Electricity Regulator]. Capitalization of capital expenditure incurred for the project will affect cost of generation. Capitalization increases Capacity Charge (Fixed Charge) whereas improvement in plant heat rate brings down Energy Charge (Variable Charge). Owner will have to take up with the regulatory commission for acceptance of the revised tariff. The estimated Cost of Generation for selected R&M options is shown in **Annexure 7.3**.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[59]	25.09.2014

7.5 Financial Impact

Net Present Value (NPV) and Internal Rate of Return (IRR) have been used to assess the financial merit of selected R&M option. Net Present Value is the sum of present value of all the project cash outflows and inflows using an appropriate discount rate. All the future cash flows are discounted suitably to arrive at their present day value considering time value of money. IRR is another metric used to assess the financial attractiveness of the selected R&M option. IRR is the discount rate that makes the project NPV zero. It is the discount rate at which the present value of all future cash flows becomes equal to the initial investment. IRR is used in capital budgeting to compare the profitability of different investment options. The higher the IRR, the more profitable an investment is. For a project to create value for the proponent, the IRR should be higher than the cost of fund.

The revenue stream of the selected R&M options has been calculated on the basis of a single indicative tariff per kWh of electricity for each year. The indicative tariff is the same as that used for comparing different R&M options during feasibility study. Assuming that the regulator will prefer minimum tariff, the indicative tariff per unit of electricity for a year has been taken to be the minimum value among the calculated Costs of Generation (COG) as per Regulatory Norms for Tariff of Thermal Power Projects for the different R&M options and base case tariff for that year. The estimated capital cost of each R&M option is used for calculation of Return on Equity and Depreciation. Normative Debt Equity ratio and depreciation rates are as per Tariff Regulation of appropriate Electricity Regulator. The revenue from electricity generation during a year in which plant is shut down is calculated considering normative availability/plant load factor. The loss of generation due to shut down for R&M is accounted for by considering that equivalent amount of electricity will have to be procured from the grid/market at the prevailing tariff. Therefore, the tariff at which power will be procured during shut down also affects the financial analysis. The negative cash flow due to shut down is calculated as the product of loss of generation and average tariff at which power will be procured from the grid net of variable cost .

7.6 Assumptions for Financial Comparison

- Cost of Generation calculation is done as per Tariff norms of appropriate Electricity Regulator
- O&M cost is taken as per Tariff norms of appropriate Electricity Regulator
- Average annual Availability/PLF of [85%] is considered for financial analysis. This is in line with Normative Availability Factor prescribed by Electricity Regulator.
- In line with the approach followed in Tariff Norms of Electricity Regulators, single value is considered for Plant Gross Heat Rate for financial analysis over the plant life after R&M. This single value of Heat

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[60]	25.09.2014

Rate includes suitable operating margin over Design Heat Rate. Similarly, single value of auxiliary power consumption and specific oil consumption is considered over the entire plant life after R&M for financial analysis.

- [For calculating the financial quantities, the design/guaranteed heat rate with operating margin of [6.5%] is considered the plant Heat Rate for all the years during the economic life after Renovation & Modernization.]
- Specific oil consumption is considered [1 ml/kWh] after R&M.
- Present coal price and fuel oil prices are considered to be equal to the actual coal price and fuel oil prices for the unit.
- The discount factor and coal price escalation rate are taken to be [that notified by appropriate Electricity Regulator].

The main factors for financial analysis are given in Table 7.1.

Table- 7.1
Factors for Financial Analysis

Description	Value of Factors
Escalation rate for domestic coal	[....]
Discount Rate	[....]
Return on Equity	[....]
Interest Rate on Rupee Term Loan	[....]
Interest Rate on Forex Loan plus cost of Forex Rate Coverage	[....]

{The value of factors indicated in the above table is to be taken from Norms of Regulator applicable as on the date of analysis. The values indicated in the table are for illustration only.}

[...]	[...]	[...]	[...]

7.9 Other Benefits

The economic benefit of Renovation & Modernization has been described above. Apart from the direct economic benefits, R&M of old coal fired thermal power plants has many other benefits. Some of such benefits are briefly discussed below:

- R&M increases the residual life of ageing power plants and restores/enhances their capacity. This is a low cost and quicker method of increasing India's electricity generation capacity. This is very important in the present precarious demand-supply scenario of India marked by both energy shortage and peak shortage.
- R&M reduces the downtime of the power plant and increase the plant availability. This enhances the reliability of electricity supply from the plant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[62]	25.09.2014

- R&M of coal fired power plants is the low hanging fruit for rapidly ramping up the electricity generation capacity. Not only R&M adds capacity with at lower capital expenditure and shorter gestation period, but also enables us to sidetrack complex project implementation challenges such as land acquisition, resettlement & Rehabilitation, environmental clearance etc.
- As the environmental norms for thermal power plants gets stricter, R&M is the only way for old power plants to meet the evolving environmental norms. This is particularly relevant for SPM emissions as many old coal fired power plants have SPM emission levels far in excess of what is acceptable my present day environmental regulation.
- Renovation and Modernization is necessary to restore design output level of power plants receiving coal with calorific values much poorer than coal considered for boiler design.
- R&M leads to lower plant heat rate and lower auxiliary power consumption thereby reducing specific coal consumption for each unit of electricity sent out of the power plant. This helps to reduce CO₂ emission and emission of other polluting gases. Further, lower coal and oil consumption helps to decelerate the depletion of fossil fuel reserves.
- R&M may increase the plant rated capacity beyond the original design capacity and reduce plant heat rate below original design heat rate.

7.10 Impact of Adverse Scenarios

R&M projects are complex in nature and are associated with many uncertainties. The cost and time for execution of the project may overshoot estimates and the project may fall short of achieving its objectives. The financial viability of the selected R&M option should have some level of tolerance for such uncertainties.

Renovation & Modernization projects are associated with high risk of Time overrun and cost overrun due to unique nature of each project and also due to the complexities and uncertainties associated with retrofitting work. The reasons for Time/Cost overrun are discussed in the Chapter on Risks (Chapter-14). Time overrun itself is a reason for Cost Overrun due escalation of hard cost, increase in overheads and increase in interest during construction. Therefore, R&M projects very often run into time overrun and cost overrun simultaneously. Time and/or cost overrun adversely affect the financial viability/attractiveness of R&M projects by negatively affecting Net Present Value and Internal Rate of Return of the project.

The three prime objectives of any R&M project are Heat Rate improvement, Electricity Output restoration/up rating and Plant Availability/Reliability enhancement with concomitant adverse impact on project financials . R&M projects are associated with the risk of partially or fully failing to achieve these objectives. Failure to achieve the desired Heat Rate may itself contribute to less than targeted electrical output. Therefore, in many cases,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[63]	25.09.2014

R&M projects are likely to miss Heat Rate and Output objectives simultaneously.

The financial impact of certain level of cost overrun, time overrun and shortfall in performance is depicted in Table-7.4.

Table – 7.4
Impact of Adverse Scenarios on Selected R&M Option

Scenario	Levelized COG (Rs/kWh)	IRR (%)	NPV (Rs Million)	Differential NPV w.r.t Base Case (Rs Million)

Availability variation (-5%)	[...]	[...]	[...]	[...]

{Note: Identify the scenarios for which the NPV of chosen R&M option becomes negative and analyze them in detail. Discuss the likelihood of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[65]	25.09.2014

occurrence of each such negative NPV scenarios. If a negative NPV scenario appears to be highly unlikely or remote possibility, then it may be neglected. However, in case a negative NPV scenario has a fair chance of becoming a reality, the impact of such a scenario on the owner utility may be deliberated upon and accordingly decide whether to go ahead with the implementation of the chosen R&M option.}

8

CARBON CREDIT AND ENERGY EFFICIENCY CREDIT

[With growing worldwide concern regarding carbon emission and depletion of energy resources, governments and international bodies are trying to put in place incentive mechanisms to encourage reduction in carbon intensity of economic activities and promote energy efficiencies. The various initiatives in this regard are evolving both nationally and internationally. Projects that lead to carbon emission reduction and energy efficiency improvement have the potential to earn carbon credit and energy efficiency credit that can be sold and serve as an additional revenue stream.]

The R&M project will increase plant efficiency and reduce plant heat rate and specific coal consumption. This in turn, will result in reduction of emissions of Green House Gas carbon dioxide (CO₂) per unit of electricity generated. The selected R&M option envisages change in plant design (particularly change in turbine) so as to increase its efficiency beyond the original design efficiency and involves additional investment on this account. This R&M project may qualify for carbon credit benefits. Further, implementation of this energy efficient R&M project involves overcoming technological barriers as infrastructure for this kind of project implementation is not well established in India. Carbon Credit benefit will help make this project viable which is as such a challenging project from financial and technological stand point.]

{There are various mechanisms such as Clean Development Mechanism under Kyoto Protocol, Verified Carbon Standard, National Action Plan on Climate Change(PAT mechanism under National Mission on Enhanced Energy Efficiency) etc. that can be explored to have financial benefit on account of reduction in carbon emission and enhancement of energy efficiency. Improvement in combustion process and burners due to R&M may reduce NO_x emission as well. However, success in securing any benefit under these schemes will be project specific.}

9.2 Means of Finance

[Utility is funding the R&M project by a combination of equity and debt. The cost of the Project is estimated to be Rs. [...] million. Utility plans to fund it at a debt-equity ratio of 70:30, which is same as the normative debt equity ratio for financing of generation projects specified by Regulator in Tariff Regulation. The debt and equity requirement for the Project works out to approximately Rs. [...] million and Rs. [...] million respectively.

Utility plans to fund the equity component from internal accruals/fresh equity infusion. Utility needs to infuse fresh equity of [Rs. Crore] to meet the equity requirement of the R&M Project. Utility is planning to raise the necessary debt for the R&M project by leveraging its balance sheet. At present the Company has a debt equity ratio of ..., which is being leveraged further to finance various projects including this R&M project.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[69]	25.09.2014

Utility plans to raise the debt component of the Project cost through a combination of rupee term loan and foreign currency loan as given in Table 9.2]:

Table 9.2
Means of Financing

Means of Financing	Amount
Equity	[...]
Debt:	[...]
Rupee Term Loan	[...]
Foreign Currency Loan	[...]
Total	[...]

[Given the balance sheet, the utility can support this kind of financing arrangement.]

The likely year wise phasing of the debt and equity requirement for this R&M project is as follows:

Table 9.3
Year Wise Debt & Equity Requirement

Year No	-2	-1	0	1	2
Capex (Rs Cr)	[...]	[...]	[...]	[...]	[...]
Equity (Rs Cr)	[...]	[...]	[...]	[...]	[...]
Debt (Rs Cr)	[...]	[...]	[...]	[...]	[...]

Note: Year 1 is the year in which plant is shut down and R&M work is implemented.

10 IMPLEMENTATION OF R&M PROJECT

[The scope of R&M works was decided on the basis of the most attractive option which was selected after the cost-benefit analysis and detailed study of various options recommended by R&M Consultant. For implementing the R&M Project, the total work will be divided in suitable number of packages. A PERT Chart is attached with this Report highlighting the various timelines, parallel activities and critical paths for the implementation of the R&M project. For the selection of R&M Contractors, the tendering procedure and bidding norms will be designed to ensure a fair and transparent competition.]

10.1 Project Team

*[.....

11 SELECTION OF R&M CONTRACTOR

11.1 Introduction

[The salient features of the tendering procedure for selecting R&M Contractor have been discussed in this chapter. It is proposed to carry out a pre-qualification process to identify qualified bidders. The RFP document/ Tender Document will be issued to only those interested bidders that are found to be qualified in the pre-qualification process. The bidders will be asked to submit Techno-commercial proposal and price bid in separate envelopes. First the techno-commercial proposal will be opened and evaluated for techno-commercial responsiveness. Price bid of only those bidders, whose techno-commercial proposal is found to be responsive, will be opened.]

{The utilities may refer the Standard Document on Tendering Procedure for R&M Contractor, which is being issued separately.}

11.2 Bidding Process

11.2.1 Qualification of Bidders

[The R&M work is technologically complex and challenging in terms of execution. It is important to ascertain the availability and willingness of capable and qualified bidders through a pre qualification process before inviting tenders. Further, evaluating tenders from large number of bidders, both qualified and unqualified, will make the tendering process time consuming. Therefore, only parties qualified in a pre-qualification process will be issued Tender Documents and will be allowed to participate in the Tendering process. For all the packages, bids will be invited after conducting a pre-qualification process to shortlist qualified bidders.]

11.2.2 Stages of Bidding Process

[Each R&M project is unique and associated with many complexities regarding assessment of the quantum and nature of retrofit and replacement to be carried out. It is important to firm up the technical contours of the contract before opening price quotations so that all the bidders and the owner have agreement and clarity about the nature and scope of the work on which the price bids are based. Therefore, it is envisaged to invite bid in two parts. The bidder will submit Part-I and Part-II of the bid together. The Part-I bid will comprise the techno-commercial bid and the Part-II bid will comprise quotations for price and performance guarantee parameters. First the Part-I bid (techno – commercial offer without price) will be opened and evaluated for techno commercial responsiveness. Part-II bid (price bid along with guaranteed parameters) of only parties whose techno-commercial offers are found to be responsive to tender documents and conditions during

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[75]	25.09.2014

evaluation of Part-I bids will be opened. The rationale behind asking bidders to submit Part-II bid along with Part-I bid is that bidders will make their quotes before the number of responsive techno commercial bids is known. This will encourage competitive price quotes. However in case a bidder is asked to make changes in its techno commercial offer that have price implications, the bidder may be allowed to submit supplementary price against such changes before opening of Part-II bid (price bid). The broad sequence and tentative timelines for the tendering procedure is described in the Table-10.1.]

Table-11.1
Broad Outline of Tendering Procedure

	Activity	<i>Tentative Timeline</i>
1	Request for Qualification	
(a)	Publication of RFQ and start of issue of RFQ document	<i>Zero Date</i>
(b)	Last date for issue of RFQ document	<i>15th Day from zero date</i>
(c)	Last date for submission of response to RFQ	<i>45th Day from zero date</i>
(d)	Short listing based on response to RFQ	<i>75th Day from zero date</i>
2	Request for Proposal	
(a)	Issue of RFP	<i>90th Day from zero date</i>
(b)	Site Visit and O&M Document Review	<i>Before Pre-Bid Discussion</i>

(g)	Selection of Successful Bidder and Placement of Lol	<i>285th Day from zero date</i>

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[76]	25.09.2014

11.3 Pre-Qualification

11.3.1 Objective

[The objective of the pre-qualification is to allow only capable and qualified bidders having requisite technical expertise, relevant experience, project execution capability and financial resources to participate in the tendering process. The pre-qualification document will specify the qualification criteria to be met by the prospective bidders to be eligible to participate in the tendering process. The prequalification is not intended to limit competition to a predetermined number of potential bidders. All the interested parties meeting the specified criteria will be issued tender documents and allowed to submit bid.]

11.3.2 Qualification Requirement

[The Qualification Requirement will include Technical Qualification Requirement, Financial Qualification Requirement and Reasons for Exclusion if any. The Technical Qualification Requirement will include technological and execution capabilities and experience in the execution of comparable projects. Financial Qualification Requirement will include evidence of financial soundness; past experience in executing projects of similar magnitude and ability to mobilize financial resources for executing the project. The reasons of exclusion are aimed at excluding parties that may have unfair advantage over other parties or that have past record of wrongdoing. Any bidder who is or was involved as a consultant in the preparation or implementation of the project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of the project is to be excluded. Any bidder who is legally barred from the procurement process in India on the grounds of previous violations of regulations on fraud and corruption is to be excluded.]

The specified Technical and Financial Qualification Requirement will balance the twin objectives of restricting participation in the tendering process to capable and experience bidders with ability to successfully undertake the Renovation & Modernization work and ensuring participation by adequate number of interested parties to encourage competitive bids.

Bidders may meet the Qualification Requirements jointly with associates or consortium partners. In such cases, bidders and his associates and/or consortium partners will have to furnish joint undertaking in the prescribed format to discharge their obligations. The bidder can be a Joint Venture Company as well. In all cases of qualification through Consortium/Associate/JV, all the parties will be jointly and severally liable to the employer to discharge all contractual obligations.]

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[77]	25.09.2014

11.3.3 Documentary Evidence for Qualification

[The intending Bidders will be required to furnish documentary evidence and performance certificates in support of their qualification credentials along with their response to Request for Qualification. The documentary evidence will include inter alia list of orders executed along with copies of orders, Performance Certificates indicating date of completion, documents of company profile incorporating information about technical man power, financial strength, resources, organization and experience to undertake such jobs, copy of audited accounts for last three years along with copy of latest income tax return etc.]

11.4 Request for Proposal and Selection of Successful Bidder

[The bids for the Renovation and modernization work will be submitted in two parts. Both the parts will be submitted together.]

11.4.1 Techno-Commercial Bid (Stage-I)

[The Part-I bid will comprise the techno-commercial bid without prices. The main components of the techno-commercial bid will be Bid Guarantee, scope, technical descriptions/details, technical data sheets, list of Tools & Tackles, deviations to technical and commercial specifications/conditions, overall time schedule & L-1 Network Schedule, resource deployment schedule, detail of Sub-Contractors/Sub-Suppliers/Sub-Vendors, spares list, Quality Assurance Programme, Details of the present commitments of the bidder & details of contracts in hand, Indices and Coefficients for Price Variation etc. After evaluation of the techno-commercial (Part-I) bids, each bidder who has submitted a broadly responsive Part-I bid will be invited for techno-commercial discussion, during which all the required amendments, additions, deletions and other adjustments will be noted and recorded in a Memorandum. Part-II bid (Price Bid) of only those bidders whose Part-I bid is found to be responsive to tender specifications and conditions will be opened.]

11.4.2 Price Bid (Part-II)

[The Part-II bid will comprise quote for Prices and the Performance Guarantee parameters. The bidders will be asked to submit filled up Schedule of Prices and Schedule of Performance Guarantees. After evaluation of Part-I bid (techno-commercial bid) and before opening of Part-II (Price Bid), However in case a bidder is asked to make changes in its techno commercial offer that have price implications, the bidder may be allowed to submit supplementary price against such changes before opening of Part-II bid (price bid) A comparative evaluation of the price bids will be carried out to identify the techno-commercial responsive and qualified bidder with Lowest Overall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[78]	25.09.2014

Evaluated Price after taking into account adjustment for differential quote for Performance Guarantee parameters using adjustment factors specified in the Tender Documents (adjustment to price of bids with quoted Performance Guarantee figure inferior to the value quoted in the responsive bid with most competitive quote for that Performance Guarantee parameter) and cost compensation if any arising from evaluation of techno-commercial bids. However, bids with quote for any Performance Guarantee Parameter inferior to the minimum or maximum value for the parameter specified in the tender conditions will be rejected.

The qualified and techno-commercially responsive bidder with the lowest evaluated price will be selected as contractor for carrying out the R&M work. In case the lowest price quoted is higher or lower than the estimated reasonable cost for the work by a very large amount, further investigation will be made regarding the reasonableness of the quoted price.]

11.5 Packaging and Contracting Concept

11.5.1 Packaging

[Implementing the Renovation and Modernization of the entire plant as a single package by a single contractor makes the tendering and execution process simple for the owner as it obviates the need to split the work into different packages, to ensure interface between different packages during design and execution, and to properly align the completion schedule of different packages. Further, single package allows owner to fix single point responsibility and avoids contractual disputes arising out of acts of omission of one contractor affecting other contractors. However, Renovation and Modernization of different systems of the plant need different expertise and experience. There will be very few contractors, if any, who have in house expertise and experience to carry out the R&M of all areas of a coal fired power plant. A single EPC bid for R&M work will thus restrict number of qualified bidders, which will also increase the cost of R&M. In order to balance the conflicting needs of minimizing project/contract management complexities and having adequate number of eligible and willing bidders having relevant expertise and experience to carry out the R&M work under a package, it is proposed to split the R&M work into the following packages:

- 1. Boiler & Auxiliaries (including but not limited to Pulverizes, Feeders, PA Fans, FD Fans, ID Fans), ESP, Auxiliary Steam system and MS, HRH, CRH, HPBP & LPBP piping and associated Electrical, C&I and civil works.*
- 2. Turbo-Generator & Auxiliaries (including but not limited to Heaters, Deaerator, Condenser, BFP, CEP), TG Cycle piping including Boiler Feed piping and associated Electrical, C&I and civil works. . This package will also including R&M of C&I system common to both SG and TG.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[79]	25.09.2014

Detailed Project Report For R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
---	-------------------

3. Coal Handling Plant and associated Electrical, C&I and civil works.
4. Ash Handling system and associated Electrical, C&I and civil works.
5. Mechanical Balance of Plant (BOP) systems which includes Plant Water System (Raw water treatment system, CW System, ACW system and other water systems), Compressed Air system, Fuel Oil system, Fire Fighting system and Miscellaneous balance mechanical systems.
6. Electrical BoP including inter alia switchyard, power transformers.]

11.5.2 Contracting

[R&M of BTG, BTG auxiliaries, Power Transformers and switchyard are likely to be technologically complex & involve higher value contracts and hence likely to evoke response from many reputed international bidders. Hence packages covering these systems will be tendered on International Competitive Bidding basis. However, R&M of other BoP packages are not likely to see participation by many reputed international bidders and hence will be tendered on Domestic Competitive Bidding basis.]

Table-11.2
Nature of Bidding

SI No	Package	Nature of Bidding
1	[Boiler & Auxiliaries (including but not limited to Pulverizes, Feeders, PA Fans, FD Fans, ID Fans), ESP, Auxiliary Steam system and MS, HRH, CRH, HPBP & LPBP piping and associated Electrical, C&I and civil works.]	[ICB]
2	[Turbo-Generator & Auxiliaries (including but not limited to Heaters, Deaerator, Condenser, BFP, CEP), TG Cycle piping including Boiler Feed piping and associated Electrical, C&I, and civil works. This package will also including R&M of C&I system common to both SG and TG.]	[ICB]
3	[Coal Handling Plant and associated Electrical, C&I, and civil works.]	[DCB]
4	[Ash Handling System and associated Electrical, C&I and civil works.]	[DCB]
5	[Mechanical Balance of Plant (BOP) systems which includes Plant Water System (Raw water treatment system, CW System, ACW system and other water systems),	[DCB]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[80]	25.09.2014

Detailed Project Report For R&M of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
--	--------------------------

SI No	Package	Nature of Bidding
	<i>Compressed Air system, Fuel Oil system, Fire Fighting system and Miscellaneous balance mechanical systems]</i>	
6	<i>[Electrical BoP including inter alia switchyard, power transformers]</i>	<i>[ICB]</i>

[Each package will be awarded on lump sum EPC contract basis. The scope of work for each package will consists of design, engineering, manufacture, supply, inspection & testing at supplier's works, packing, forwarding to site, transportation, unloading, storage, handling at site, steel structures, civil works, insurance, erection, painting, start-up, trial operation, testing, commissioning and performance guarantee testing, guarantee & warranty and handing over on turnkey contract basis.

The price of the contract will be on lump sum price basis for the entire scope covered in the contract. The contract price will be subject to adjustment during the contract period to reflect change in labour and material price levels as per price variation formula specified in the tender document. The adjustment in price to reflect in change in labour and material price levels as per price variation formula will be subject to limits specified in the tender specification.

Appropriate change order clause will be built into the contract to deal with the need to change the scope of the contract due to surprises encountered during the execution of the R&M work

The selected contractor will be required to furnish Contract Performance Bank Guarantee equivalent to 10% (ten percent) of contract price. The contractor will be required to furnish Advance Payment Bank Guarantee equivalent to the advance payment made to it. Progressive payment will be made to the contractor against supply and erection/construction. Last 10% of the payment will be made on completion of the facilities by the contractor.

The contractor will be required to pay Liquidated Damages for delay in completion of R&M work. The aggregate liability for delay will be limited to 10% of contract price.

The contractor will be required to pay Liquidated Damages for shortfall in achieving guaranteed performance parameters. The aggregate liability for shortfall in performance guarantee parameters will be limited to 10% of contract price.]

LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[81]	25.09.2014

12 RISKS

Renovation and Modernization projects are very complex in nature and associated with high level of uncertainty. The various risk factors along with mitigation measures are discussed below.

12.1 Limitation of CA, RLA and LE Studies

[Information and inference flowing from Condition Assessment, Residual Life Assessment and Life Extension studies forms the basis of planning, designing, costing and tendering of R&M projects. However, these reports may not give the accurate idea about actual state of the plant and equipment. Similarly, the rehabilitation and retrofitting programme may not lead to the intended life, reliability and performance of the plant. In some cases serious damage might be detected for plant and equipment during the implementation stage which could not be detected during the CA studies. Such surprises may send the cost estimate and schedule for a toss.

The probability and impact of such risks may be moderated by designing proper condition assessment plans. Further, contingencies may be built into cost estimates and contractual clauses may be suitably designed to take care of such surprises.]

12.2 Regulatory Risk

[The capital expenditure incurred for the R&M project has to be serviced by suitable electricity tariff. If the concerned Electricity Regulatory Commission does not allow adequate tariff to cover the expenses incurred, it will adversely affect the cash flow and net worth of the owner.

The regulatory risk may be mitigated by designing and implementing the R&M Project in compliance and in sync with the extant regulatory regime.]

12.3 Risk of R&M Contractor and Personnel

[There is limited availability of competent contractors and personnel for carrying out R&M works. There is dearth of contractors and personnel with expertise and experience in implementation of energy efficient R&M works.

Government and industry bodies can play big role in mitigating this risk by taking initiative expands contractor base and talent pool. Owner on its part can somewhat mitigate this risk by designing tendering process and contracts that encourages better participation by available contractors.]

12.4 Risk of too weak or too stringent QR for R&M Contractor

[Too weak qualification requirements may lead to entry of incompetent bidders with lower price quotes. Awarding the R&M Contract to an incapable Contractor may severely jeopardize the R&M programme. Similarly, too stringent qualification requirement may restrict the number of eligible bidders

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[82]	25.09.2014

to a few thereby restricting competition and this may lead to higher price quotes.

Due care should be taken to frame appropriate qualification requirement (QR) to ensure adequate participation of competent bidders. While framing the QR, information should be collected from prospective bidders regarding their experience and capability.]

12.5 Risk of Non-availability of Spares

[As the unit is very old, there may be difficulty in sourcing many spare parts. This risk may be obviated in some cases by devising suitable sourcing strategy or design modifications or reverse engineering.]

12.6 Risk of Getting Shutdown for Implementation

[As R&M of the complete plant calls for shutdown for considerable time and there is acute shortage of electricity, the grid condition may not permit shutdown period. This risk may be mitigated by proper planning and taking all stakeholders into confidence during the planning phase and adhering to the planned schedule.]

12.7 Financing Risk

[The owner may find it difficult to arrange equity and debt financing for the R&M project. This risk may be mitigated by proper financial planning. Similarly, the R&M contractor may face cash flow problem. This risk may be mitigated by specifying suitable financial qualification criteria in tender specification and incorporating suitable payment term in the contract.]

12.8 Implementation Risk

[Poor implementation of project may lead to cost and/or time overrun and deficiency in quality. This risk may be mitigated by efficient Project Management set up and selection of reliable R&M contractor.

Aligning the timeline of tendering and execution of different packages and interfacing among different packages when R&M is being implemented in multiple packages is essential for smooth and timely execution of the R&M project. This risk may be mitigated by proper planning of tendering and execution of R&M project and employing suitable Project Management / Coordination team.]

12.9 Equipment Underperformance Risk

[The renovated plant and equipment may not perform as envisaged due to deficiency in design, manufacturing and O&M practices. The risk of underperformance due to design and manufacturing shortcomings may be managed by selecting reliable contractor and incorporating appropriate LD clause in the contract. The risk of O&M deficiency can be mitigated by proper training of O&M personnel.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[83]	25.09.2014

13 CONFORMITY TO STATUTORY ENVIRONMENTAL NORMS

{Discuss in this chapter, the need of compliance to the conditions prescribed by MOEF and State Pollution Control Board (SPCB)}

13.1 Environmental Monitoring Cell

[.....]
[.....]
[.....]

{Discuss the role of Environment Monitoring Cell established at the project. Discuss the steps to be taken for strengthening the above cell to monitor and control the environmental impacts from the renovated plant, as per the revised stringent norms prescribed by the regulating authorities.}

13.2 Stack Emissions

[.....]
[.....]
[.....]

{Discuss the present levels of emissions of SPM, SO₂, NO_x and NH₃ from the stack, levels of Ground Level concentrations and the pollutants in the liquid effluents with respect to the statutory norms vis a vis the levels of emissions after the implementation of R&M Project. Discuss the methods and frequency to be adopted by the utility for monitoring and controlling these emissions as per the revised conditions prescribed by the regulating authorities.}

13.3 Ambient Air Quality (AAQ)

[.....]
[.....]
[.....]

{Discuss the National Ambient Air Quality Standards prescribed by MOEF and SPCB. Discuss the methods and frequency to be adopted by the utility for monitoring and controlling the Ground Level Concentrations (GLC).}

13.4 Liquid Effluents

[.....]
[.....]
[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-004	04	DETAILED PROJECT REPORT FOR R&M WORKS	[84]	25.09.2014

{Discuss the quality of liquid effluents permitted by SPCB from different systems of the plant like, effluent from Water Treatment Plant, Boiler Blow down, Cooling Tower Blow down, recycled water from ash pond and sewage disposal from plant and colony. Discuss the recycling of ash water from ash pond and reuse of Cooling Tower Blow down for ash handling and coal dust suppression. Discuss the proposal of zero discharge, if applicable to your project.}

13.5 Ambient Noise

[.....
.....
.....]

{Discuss the noise level permitted during day and night and methods proposed to contain the noise level produced from power plant equipment within the limits imposed.}

13.6 Ash Utilization

[.....
.....
.....]

{Discuss the norms for the utilization of ash from the thermal power plants as per the latest notification from MOEF. Discuss the quantum of fly ash & bottom ash to be produced from the plant and implementation of ash utilization plan by the utility, after the completion of R&M project. Please note that as per MoEF notification dated 3rd November 2009, all the coal and lignite based thermal power stations operating before the date of the above notification are required to achieve the target of 100% utilization of fly ash before the expiry of a period of five years from the date of issue of the said notification.}

BACKGROUND

What is R&M (Renovation & Modernization) of Thermal Power Plants?

Coal based power stations contribute more than 70% share of total power generation in India. Thermal Power Stations are designed for an economical and stable life span of 25 years, after which, the level of performance starts deteriorating as a result of degradation of its equipments, components and materials. Deterioration may also take place before the completion of useful life of 25 years, if the units are not operated and maintained properly. Deterioration in performance is reflected in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. This results in costly repair and loss of revenue. Renovations & Modernization (R&M) and Life Extension (LE) Programme of thermal power station is an activity of carrying out repairs, refurbishments and replacement of defective equipments & components so as to extend the life of the power plant by at least 20 years and to restore the performance parameters to equal or better than the original design parameters.

Need of R&M

In spite of new capacity additions, India continues to face shortages of varying degree in the supply of energy and peaking power. Implementation of fresh capacity additions for bridging the demand supply gap involves huge investments and long gestation periods primarily due to the process of land acquisition and getting the required fuel and water allocations, permits & clearances, particularly, the environmental clearance.

On the other hand, R&M activity of existing old power plants which requires less investment and can be completed in shorter duration has been recognized as a techno-economically viable option to supplement the fresh capacity addition for maximizing the energy generation. Also it helps in reducing the emissions by adopting upgraded modern technologies.

Objectives of R&M and R&M/LE Programme

As per the Guidelines issued by Central Electricity Authority (CEA) the following should be the objectives of R&M and R&M/LE Programmes.

Objectives of R&M Programme:

- To restore rated capacity and design parameters such as Heat Rate, Auxiliary Power Consumption and Secondary Oil Consumption etc.
- To make the operating units well equipped with modified/ augmented latest technology.
- To overcome technological obsolescence and non-availability of spares.
- To improve the performance parameters in terms of Plant Load Factor, Efficiency, Forced Outages, Availability and Reliability.
- To reduce maintenance requirements and enhance the ease in maintenance.
- Compliance of stringent environmental norms, safety and other statutory requirements.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[ii]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	--------------------------

Objectives of R&M/LE Programme:

- Extension of useful economic life of generating units by another 20 years.
- To focus on full load operation of the unit beyond their original design life.
- To restore rated capacity and design parameters such as heat rate,
- Improvement in Auxiliary Power Consumption Secondary Oil Consumption etc
- Up-rating of Generating Unit.
- Improvement beyond design parameters.

Criteria for the Consideration of R&M and R&M/LE Programmes

As per the Guidelines issued by Central Electricity Authority (CEA) the following criteria is to be adopted for considering the R&M and R&M/LE Programmes.

- Estimated cost of unit for complete R&M/ LE works should be limited to 50% of cost of new unit.
- Cost of Main Plant (BTG) should be limited to 50% cost of new BTG unit.
- Plant Life should be extended by about 20 years.
- The Pay Back Period should be from 5 to 7 years.

Need of Preparation of Model R&M Documents

The countrywide R&M programme was first initiated in 1980 when Government of India approved the scheme of Central Loan Assistance (CLA) of Rs. 500 crores benefitting 34 power stations mostly of 50/60/100/110/120/140 MW capacities. R&M in a structured manner was initiated as a centrally sponsored programme during the 7th Five Year Plan. The momentum of carrying out R&M works was continued through 8th and 9th Plans but the same could not be sustained during the 10th Plan.

Based on the discussions held with Ministry of Power, various utilities, PFC and BHEL, CEA prepared a document on “National Perspective Plan for Renovation & Modernization and Life Extension and Up-rating (LE&U) of thermal power stations up to the year 2016-17”. This document which also includes revised guidelines for Renovation & Modernization / Life Extension works on coal/lignite based thermal power stations was released by Honourable Minister of Power on 14th December 2009. Plan-wise Achievements of R&M and R&M/LE Programmes starting from 7th Five Year Plan till 11th Five Year Plan is furnished below:

Plan–Wise Achievements

S.No.	Plan	Year	No. of TPS / No. of Units	Capacity (MW)	Additional Generation Achieved MU/ Annum	Equivalent MW
1	7 th Plan and Two Annual Plans	85-86 to 89- 90 & 90-91, 91-92	34 / 163	13570	10000	2000

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[iii]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

S.No.	Plan	Year	No. of TPS / No. of Units	Capacity (MW)	Additional Generation Achieved MU/ Annum	Equivalent MW
2	8 th Plan (R&M) (LEP)	92-93 to 96-97	44 / 198 43/(194) 1/ (4)	20869 (20569) (300)	5085	763
3	9 th Plan (R&M) (LEP)	97-98 to 2001-02	37 / 152 29/ (127) 8/ (25)	18991 (17306) (1685)	14500	2200
4	10 th Plan (R&M) (LEP)	2002-03 to 2006-07	9/ 25 (14 out of 57 planned) (11 out of 106)	3445 (2460) (985)	2000	300

11th Plan R&M Programme & Achievements (2007-12)

	Programme (MW)	Achievement (MW)
Life Extension Programme (LEP)	7318 (53 units)	1291 (13 Units)
R&M Programme	18965 (76 units)	14855 (59 units)
Total	26383 (129 units)	16146 (72 units)

In the past, R&M measures were hampered due to lack of proper planning. Proper investigation to identify the R&M works to be carried out and preparation of technical bid documents based on the investigation was not done. This resulted in unsystematic and additional work during execution phase and uncertainty about costs resulting in excessive implementation time, long shutdown periods of plants and cost overruns. In the absence of standard commercial rules and policies, suppliers showed little interest in R&M work. Therefore a strong need was felt for providing standardized bidding procedures as well as model contracts, formats and specifications etc. to the utilities. Standardization will harmonize the requirements of all the stakeholders and will lead to their increased participation.

The Indo-German Energy Forum (IGEF)

The Indo-German Energy Forum (IGEF), inaugurated in 2006, provides a platform to discuss energy related issues of mutual interest. The first meeting of the ad-hoc sub-group on “energy efficiency in thermal power stations”, constituted as per decision of meeting of IGEF in December 2007, was held under the chairmanship of Joint Secretary (Thermal), Ministry of Power on 12th March, 2008 in which preparation of standard tendering document for the purpose of R&M activities was, inter-alia, identified as an area of the activities. The scope of the assignment was divided in two parts as under:-

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[iv]	26.09.2013

Phase-I Activity:

Phase-I activity comprised an assessment of tendering procedures currently being followed by public utilities in India and a review of documents used for standard R&M projects and the documents which have already been developed for energy efficient R&M projects financed by particularly World Bank. This activity was carried out by M/s Evonik (India) under the grant provided by GTZ. M/s Evonik (India) submitted the report in September 2009.

Phase-II Activity

Phase-II activity comprised the preparation of the model documents / templates in consultation with Task Force, power utilities & financing agencies.

In the 3rd meeting of Indo-German Energy Forum (IGEF) convened in Berlin on 4th November 2009, KfW proposed to finance and carryout the work programme of phase-II Activity, on behalf of CEA & in consultation with the Task Force. In a meeting held in MOP on 17th December 2009, chaired by Joint Secretary (Thermal), MOP, the representative of KfW suggested that CEA may act as "Project Executing Agency" for the phase-II activity. Accordingly Ministry of Power, Govt. of India have entrusted the task of "Project Executing Agency" to CEA for implementing Phase-II activity. Under Indo-German Energy Forum (IGEF) assisted programme, M/s Lahmeyer International (India) was appointed on 16th March 2012 to provide the consultancy services for 'Development of tendering procedures and model contract document for R&M of Fossil Fuel Based Power Plants in India.' The scope of consultancy services included the preparation of the following model documents:

- I) Standard Bidding Procedure for engagement of Consultants and R&M Works Contractor.
- II) Residual Life Assessment (RLA) / Condition Assessment (CA) Report.
- III) Energy Audit (EA) Report.
- IV) Feasibility Report.
- V) Detailed Project Report.
- VI) Request for Qualification (RFQ) & (RFP) Documents for R&M Consultants and R&M Contractors.
- VII) Technical Specifications.

Due Diligence done by LII of the R&M Documents of other Projects

Before the preparation of this model document, LII did a thorough review of the R&M Documents of the following Power Plants:

Documents Provided by CEA

- Remaining Life Assessment / Condition Assessment Report- Nasik Unit-3 of MAHAGENCO.
- Energy Audit Report- Nasik Unit- 3 of MAHAGENCO.
- Detailed Feasibility Report- Nasik Unit-3 of MAHAGENCO.
- Draft Detailed Project Report -Kolaghat Unit-3 of WBPDC.
- Service Contract- R&M of Unit-1 Panipat TPS of HPGCL.

Model Energy Audit Report For R&M of Unit No.[..] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	--------------------------

- Tender document for Supply, Erection, Testing and Commissioning of Air Preheater for Unit 5 & 6 Koradi TPS, MAHAGENCO.
- Tender document for replacement of 6.6 KV station transformer incoming breaker & Tie- breaker of Koradi TPS, MAHAGENCO.
- Tender specification for Design, Engineering, Supply, Erection, Testing and Commissioning of Rotary Air Preheater for Units 4 & 5, Nasik TPS of MAHAGENCO.

Documents Provided by WBPDCCL

- Energy Audit Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Detailed Project Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Project Design Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Technical Specifications. (Vol. II of RFP Document for R&M Contractor).
- RLA for Boiler for Bandel Unit -5.
- RFP for R&M Consultant for Bandel Unit -5.
- Commercial Volume-I of RFP for Bandel Unit -5 for R&M Contractor.

KfW Documents

- Model Contract Document issued by KfW.
- Guidelines issued by KfW for the assignment of Consultants.

World Bank Documents

- Standard Bidding Document for Procurement of Plant, Design, Supply and Installation.
- Standard Request for Proposal for the Selection of Consultants

This Energy Audit Report has been prepared to conceptualize the systematic methods and procedures to be implemented for carrying out R&M works for the Thermal Power Plants, taking into account the different practices followed in the past, the practices and methodologies being adopted in the Industry including the Projects funded by KfW and World Bank, as indicated in the various documents indicated above. Detailed standard documents like DPR, RFP & RFQ documents to carry out R&M works for the Thermal Power Plants shall take into account the findings of Energy Audit of the Project.

The utilities are advised to refer to the guidelines of the standard documents for the preparation of the project specific documents for their project.

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

NOTES & GUIDELINES FOR USING THE MODEL ENERGY AUDIT REPORT

Central Electricity Authority (CEA), the Project Executing Agency / Employer has appointed Lahmeyer International India Pvt. Ltd. (LII), the Consultant to Develop Standard Procedures and Model Documents for the Renovation and Modernization (R&M) of Fossil Fuel based Power Plants in India. The above assignment is being financed by KfW Entwicklungsbank. Accordingly, this Model Energy Audit Report has been prepared for the guidance of Project Authorities, who may decide to carryout R&M of their old Coal based Power Plants so as to extend the life of their plants and make them energy efficient, while ensuring that the plants are in compliance with the revised statutory emission standards.

The purpose of this model document is to standardize the style and contents of the Energy Audit Report for R&M works. Since a large fleet of 200/210 MW units are potential candidates for consideration of Renovation as they have crossed 20 to 25 years of useful life, the Model Energy Audit Report has been prepared keeping those 200 MW/210 MW units in view. Since in due course of time, many 500 MW units will also become due for R&M, the Utilities are advised to suitably modify this document for its application to 500 MW units.

The Model Energy Audit Report contains two kinds of texts written in black and in blue colours. The text in blue colour written in italics and enclosed in square bracket represents variable information which may vary from project to project. The data in blue colour indicates typical data and values for typical coal fired power plants. The Project Authorities and their Consultants, carrying out R&M and LE of a particular plant/project, should review this data in respect of their plant/project and modify these data with the ones as may be applicable to their specific Project. A few guidelines for carrying out the energy audit of the power plant equipment have also been provided in blue italics enclosed within red curly brackets ({...}), wherever applicable.

A variety of performance tests and energy measurement tests are required to be carried out for arriving at decisions for the retrofitting/replacement of the equipments. While discussing the need, importance and methodology of conducting these tests and measuring the energy consumption, the Model Energy Audit Report also provides the templates for the formats for reporting the results of such tests and measurements. Formats for reporting the results of Energy Audit have been appended at the end of this Model Document. The Formats provided for a particular kind of test described for any equipment may be used for similar remaining Equipments.

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

1 EXECUTIVE SUMMARY

This Energy Audit Report has been prepared for carrying out the Renovation & Modernization (R&M) / Life Extension (LE) of Unit No [...] of [...] Thermal Power Plant, located at [...], in District [...] in the State of [...] and having a configuration of [...x...MW].

The unit no. [...] was first commissioned in the year [...]. After [...] years of operation, the performance of the unit has gradually deteriorated resulting in reduced outputs, decreased efficiency and increased cost of generation. To verify the actual energy consumption of the power plant equipments and to work out action plans for improving the efficiency of the unit, an energy audit was carried out during the period [...].

To determine the operating efficiency and energy consumption of various components and systems of the plant, performance tests were carried out on all continuously operating equipments of Boiler & Auxiliaries, Steam Turbine & Auxiliaries and Balance of Plant. The actual values of operating efficiency and power consumption were compared with the corresponding design values and reasons for deterioration in efficiency or excess power consumption were established.

In addition, energy losses due to poor condition of thermal insulation of the equipments and the excess energy consumption by the lighting & illuminating fixtures were also analyzed.

The recommendations made in this energy audit report are based upon the analysis of the operation data of the unit, evaluation of the of the performance test results of various equipments, as well as, the detailed discussions held with the project authorities and operating personnel.

After the overall analysis, suitable solutions and energy saving measures have been recommended which are also found to be attractive from the perspective of cost benefit analysis. Summary of these recommendations are furnished below:

Equipment/ Systems	Summary of the Recommended Action Plans	Cost Impact
Boiler and Auxiliaries	[.....]	[.....]
Steam Turbine Generator and Auxiliaries	[.....]	[.....]

2

INTRODUCTION

[Unit No.....of..... Thermal Power Station was first synchronized on [.....]. The Unit has been operating for more than [...] and its performance has deteriorated gradually over the years. Extending the life of the unit and increasing its efficiency and output appears feasible by carrying out Renovation and Modernization of the Unit. This Energy Audit (EA) Report has identified those equipment and components of the Unit which need to be rehabilitated to prevent excess power consumption, improve efficiency and enable the unit to produce power according to prevailing norms of operation and the current statutory environmental regulations in force.

This report is based upon the analysis of the operation data of the unit, evaluation of the of the performance test results of various equipment of the power plant, as well as, detailed discussions held with the project authorities and operating personnel.

The recommendations of the energy audit have been discussed in detail in Sections 5.0 to 9.0. These recommendations are being hereby submitted to the Project Authorities for minimizing the energy consumption and reducing the cost of generation. These recommendations should be considered along with the recommendations of RLA/CA studies while evolving various options for Renovation and Modernization of the Unit.

As per the Energy Conservation Act of 2001 (BEE 2008), an energy audit is defined as:

"The verification, monitoring and analysis of the use of energy and submission of technical report containing recommendations for improving energy efficiency with cost-benefit analysis and an action plan to reduce energy consumption."

The Energy Audit Report has been prepared keeping in view the above spirit of Energy Conservation Act.

2.1

Objectives of Energy Audit

[The purpose of Energy Audit is to provide recommendation for achieving the following objectives.

- *Increasing the Boiler Efficiency by effective utilization of Heat Energy of fuel through its effective combustion in the Boiler.*
- *Decreasing the Turbine Heat Rate by increasing the effective utilization of Heat Energy of Steam through Steam Turbine.*
- *Enhancing the performance parameters of power plant equipment and their auxiliaries.*
- *Minimizing the auxiliary power consumption of electrically driven equipment.*
- *Increasing the quantum of power generation.*
- *Reducing the cost of generation.*
- *Achieving reduction in the release of green house gases.]*

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

3 DESCRIPTION AND SALIENT FEATURES OF THE UNIT

3.1 General

The Power Plant, having a configuration of [...x...MW] is located at [...], in District [...] in the state of [...]. The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator respectively. The boiler is of [natural circulation, two pass, reheat, dry bottom, balance draft, tangentially fired furnace having PF/CFBC design]. The boiler is provided with [front/front & rear/corner/down shot firing] system. The Steam Turbine consists of HP Turbine having [...] stages, IP Turbine having [...] stages and LP Turbine having [...] stages. [LP stage of Turbine is designed with [bauman exhaust]. Condenser cooling system of the unit is designed on [once through / re-circulation system] with [NDCT/IDCT] Cooling Towers. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [...] substation.] The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [...&.....] coal mines. The consumptive water for the power plant is being sourced from [.....river /.....sea].

3.2 Salient Features and Details of the Unit

{Indicate in the paragraphs below the salient features and other specific technical details of the Project. The description given below is of indicative nature only.}

3.2.1 Boiler & Auxiliaries

a) Boiler

[The Boiler is of natural circulation, pulverized fuel fired, dry bottom, balanced draft using direct firing system. The design parameters of the Boiler are furnished below]

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[....]
Steam Pressure at SH outlet	kg/cm ²	[....]
Steam Temperature at SH outlet	°C	[....]
Re-heater Flow	T / hr	[....]
Steam Pressure at RH outlet	kg/cm ²	[....]
Steam Temperature at RH outlet	°C	[....]

b) Furnace

[The boiler is equipped with a water cooled furnace of balanced draft and fusion welded membrane wall construction. It is equipped with.....numbers of coal burners and.....numbers of oil burners located at numbers of elevations. The design parameters of the Furnace are furnished below.]

Description	Units	Design Parameters
Type of Firing	[.....]
Combustion Chamber Volume	m ³	[.....]
Furnace Dimensions (Width x Depth x Height)	m	[.....]
Heating Surface Areas		[.....]
i) Water Walls	m ²	[.....]
ii) Superheaters	m ²	[.....]
iii) Reheaters	m ²	[.....]
iv) Economiser	m ²	[.....]
v) Air Heater	m ²	[.....]
vi) Steam Coil Air Heater	m ²	[.....]
vii) Temperature Measurement of Super-heater tubes	Yes / No	[.....]
viii) Temperature Measurement of Re-heater tubes	Yes / No	[.....]

c) Super Heaters and Re-Heater

[The super heaters are composed of four sections, a platen section, a pendant section, a rear low temperature section and a steam cooled wall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[7]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[...] of <i>[Name of the Power Plant]</i>	<i>[LOGO OF UTILITY]</i>
--	--------------------------

& roof section. The Re-heater consists of two sections, the front pendant and the rear pendant sections. The details are given below:]

Description	No. of coils / tubes	Pitch (mm)	Dia.x Thickness (mm)	Heating Surface (m ²)	Material
Low Temperature Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Platen Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]
Pendant Super Heater	[.....]	[.....]	[.....]	[.....]	[.....]

Reheater-Front Assembly	[.....]	[.....]	[.....]	[.....]	[.....]
Reheater-Rear Assembly	[.....]	[.....]	[.....]	[.....]	[.....]

d) Economiser

[The Economizer is of a single stage, continuous plane tube and horizontal, mixed flow type, located in the second pass of the boiler]

e) Air Pre-Heater

[The air pre-heater is of regenerative rotary type. Special sealing arrangements have been provided in the air pre-heater to prevent leakage between air and gas sides. Adjustable sector plates have also been provided to prevent the leakage during expansion. The heating surfaces of the air pre-heater have been provided with two types of cleaning systems, soot blowing and water washing system.]

f) Raw Coal Bunkers

[Each boiler is provided with [...] raw coal bunkers. The total capacity of the bunkers is to meet [...] hour's requirement at maximum mills capacity of the unit. The upper portion of the bunkers is of cylindrical shape made of carbon steel plate, while the conical portion is made of stainless steel plate. Each outlet of the bunker is provided with an isolation gate which is motor operated. In addition to the isolation gates, rod gates have been provided to control the flow of coal from the bunkers]

---	-------------------

g) Raw Coal Feeders

[One gravimetric type of raw coal feeder has been provided for each coal mill. The coal feeders have been provided with micro-processor based controls with variable frequency drive. The feeders have been provided with dual independently measuring load cells. All parts of the feeders coming in contact with coal, except the belt, are made of stainless steel]

h) Fuel Firing System

[The boiler is working on a direct firing system. The pulverized coal is being dried and transported to the coal burners by means of hot primary air being supplied by two primary air fans. The boiler is having [front and rear/corner/down shot] firing system. There are [...] pulverized coal burners and [...] oil burners. The burners are located at [...] floors.]

i) Coal Mills

[The unit is provided with numbers of [BHEL] Make [XRP-783] bowl type mills, out of which mills are designed to work with designed coal andnumbers of mills are standby .The rated capacity of each mill isT/h.]

Description	Units	Design Parameters
Make and Model of Mills	[....]
Type of Mills	[....]
Capacity of Mills	T/h	[....]
Total Number of Mills per boiler	Nos.	[....]
Number of Mills to work per boiler with design coal quality	Nos.	[....]
Motor Rating	kW	[....]

j) Primary Air Fans

[Two Primary Air (PA) Fans have been provided for each boiler. Each PA Fan is designed to meet 60% MCR condition of the boiler. The PA Fans are Hot PA Fans. Details are given below:]

Description	Units	Design Parameters
Make and Model of Fans	[....]
Type of Fans	[....]
Number of fans per boiler	Nos.	[....]

n) ESP

[An Electrostatic Precipitator (ESP) has been installed on the cold end side of the Air Pre-heater to remove the particulate matter from the flue gases. The ESP has been provided with Gas Distribution System, Collecting Electrodes, Discharge Electrodes, Transformer Rectifier Sets and [electrically/mechanically] operated rapping system. The hoppers of ESP have been provided with [capacitance] type level indicators and thermostatically controlled heating elements. Details are given below:]

Description	Units	Design Parameters

---	-------------------

3.2.2 Steam Turbine & Auxiliaries

a) Steam Turbine

[The steam turbine is of three cylinder, 3000rpm, tandem compound, condensing type designed to operate on a re-heat and re-generative feed water cycle. The LP stage of turbine is designed with Bauman exhaust. The turbine is provided with HP/LP bypass system of 60% capacity of Boiler MCR. The turbine is provided with an electro - hydraulic control system, automatic turbine run up system and turbo supervisory instrumentation. The condensing system consists of a surface condenser of single shell and two pass, divided water box construction. Cooling water being supplied to the condenser is of raw water/ clarified water quality. The design parameters of the steam turbine are furnished below]

Description	Units	Design Parameters
Pressure of Steam at inlet of ESV of HPT	kg/cm ²	[....]
Temperature of Steam at inlet of ESV of HPT	°C	[....]
Pressure of Cold Reheat (CRH) Steam	kg/cm ²	[....]
Temperature of Cold Reheat (CRH) Steam	°C	[....]
Pressure of Hot Reheat (HRH) Steam	kg/cm ²	[....]
Temperature of Hot Reheat (HRH) Steam	°C	[....]
Pressure at the inlet of LP Turbine	kg/cm ²	[....]
Temperature at the inlet of LP Turbine	°C	[....]

b) Condenser

[The condenser is a [single/double] pass, horizontal, surface type with integral air cooling section designed to maintain a pressure of 76 mm of Hg at turbine exhaust with a cooling water temperature of [...] deg C and an outlet temp of [...] deg C. The condenser is capable of operation with [...] tubes plugged and has hot well storage capacity of [...] minutes]

Cooling Water Quantity through Condenser	m ³ /h	[....]
Cooling Water Temperature at the inlet to Condenser	°C	[....]
Condenser Vacuum	mm Hg	[....]

c) **Ejectors**

[The Condenser is provided with two quick starting ejectors which operate in parallel to remove large volumes of air for raising the initial vacuum during the starting of the Unit. Two main ejectors of 100% capacity each have been provided remove air and non condensable gases from the condenser to maintain the required vacuum in the condenser during the normal operation of the unit.]

d) **Condensate Extraction Pumps**

[Condensate extraction pumps are of vertical, multistage, centrifugal pumps of canister type.]

Motor Rating	kW	[....]

e) **Gland Steam Cooler**

[A Gland Steam Cooler has been provided to condensate the leak-off steam from intermediate chambers of end sealings of HP and IP turbine, thereby heating the main condensate water. The Gland Steam Cooler consists of shell, tube bundle and removable water box.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[14]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

f) LP Heaters and Drain Coolers

[Each steam turbine is provided with four numbers of low pressure heaters to increase the temperature of the condensate in stages. LP Heater -1 consists of two halves and is installed in neck of the condenser. The remaining LP Heaters are of shell and tube design and have been placed vertically. An integral drain cooling section is provided in each LP Heater. The design details of LP Heaters are furnished in the table below.]

Bled Steam Temperature (deg C)	[...]	[...]	[...]	[...]

g) Deaerator

[The deaerator is of [horizontal spray cum tray type]. It is designed to remove dissolved oxygen from the condensate in excess of 0.005 cc per liter. The feed water storage tank has a capacity of [...] minutes feed water requirement of the boiler corresponding to TMCR Heat Balance]

h) Boiler Feed Pumps

[The boiler feed pumps are horizontal, multi stage centrifugal pumps of barrel type, motor driven pumps coupled with hydraulic coupling, taking the suction from the deaerator. The boiler feed pumps discharge feed water through HP heaters to the economizer of the boiler.]

j) HP/ LP Bypass

[HP/LP bypass system has a capacity of 60% of BMCR (Boiler Maximum Continuous Rating). HP bypass system has been provided between the Main Steam Line and Cold Reheat Line. LP bypass system has been provided between the Hot Reheat Line and the Condenser. HP bypass water spray has been taken from the discharge of Boiler Feed Pumps. LP bypass water spray has been provided from the discharge of Condensate Extraction Pumps.]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[16]	26.09.2013

k) Turbine Governing System

[The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. The system is designed to sustain full load dump from the generator. The system is provided with a quick closing Emergency Stop Valve (ESV), to interrupt the supply of steam from the boiler and stop the turbine under emergency conditions. The turbine governing system includes, speed governor.]

l) Lube Oil System

[The lube oil system consists of Main Oil Tank, Turbine driven main oil pump, AC driven bearing oil pump, DC driven emergency oil pump, AC driven jacking oil pump and oil coolers of 3x50% capacity, Lube oil is being purified by means of a centrifuge. Oil storage tanks consisting of Clean Oil Tank and Dirty Oil Tank have been provided.]

3.2.3**Electrical System****a) Generator**

[The Generator is a 15.75 kV, 50 Hz, 0.85 power factor machine, directly coupled with steam turbine operating at 3000 rpm, with.....type of excitation system and digital programmable voltage regulator. The Generator has direct water cooled stator winding and direct hydrogen cooled rotor winding. The stator winding cooling water is cooled in a closed cycle cooling system using DM water, while the hydrogen in the machine is cooled in gas to water hydrogen coolers mounted inside the machine. The Parameters of the Generator are briefly mentioned below.]

b) Station Transformer

[Two Station Transformers have been provided to meet the station [common] auxiliary loads of the power plant. The Station Transformers have been provided with on-load tap changers to keep the station 6.6 kV voltage constant. Cooling of this transformer is ONAN/ONAF/OFAF and has 2x50 % separately mounted radiators and 2x50% oil pumps. The Parameters of the Station Transformers are briefly mentioned below]

Description	Units	Design Parameters
Make	[....]

Description	Units	Design Parameters
Make	[...]
Capacity	MVA	[...]
Voltage Ratio	[...]
Type of Cooling	[...]
Quantity	Nos.	[...]

e) Electrical Auxiliary Power Distribution System

[Unit auxiliaries receive their normal power supplies at 6.6 kV through two (2) nos. unit transformers. For lower rating drives, 6.6 kV is further stepped down to 415 V by two (2) nos. unit service transformers. The 415 V distribution system feeds a number of Motor Control Centers (MCCs) for running 415 V drives. 6.6 kV unit switchgears are connected to station switchgear for start up and emergency power supply. The details are mentioned below]

Description	Units	Design Parameters
Voltage Level	kV	[...]
Type of Breaker	[...]
Type of Grounding	[...]
Type of Protection	[...]

f) DC System

[Each unit has its own DC system located in the BC bay at ground floor of the Power House. Separate DC systems have been provided in switchyard control room, intake pump house and DM plant for controlling the systems. Each DC system comprises of the Storage Battery, the

Rating of DG Sets	kVA	<i>[....]</i>
Quantity	Nos.	<i>[....]</i>

h) Public Address System

[The unit is provided with paging and party channels comprising handset stations with amplifiers, transmitters, receivers and loud speakers. The system facilitates paging, communication and also private conversation as on conventional telephone.]

i) Illumination System

[For indoor application, fluorescent/ energy saving compact fluorescent fixtures have been provided. For high bay areas and outdoor application, suitable high intensity discharge Mercury Vapour/ Sodium Vapour lighting fixtures have been installed. Aviation type fixtures have been installed at the Chimney]

3.2.4 Control & Instrumentation

[The existing control and instrumentation system generally is an old analogue based system and requires large scale replacement owing to obsolescence of the existing equipments. Furnace Supervisory Safeguard System (FSSS) is of obsolete design for which, no spares are available.

Document Number	Rev No.	Description	Page No.	Date of Issue

---	-------------------

Soot blowers are of manual type. No online Boiler Tube Leakage detection system has been provided. The turbine is equipped with an electro-hydraulic system of automatic governing for the smooth and stable operation of turbo-set under all conditions of operation. Turbine Supervisory system is of electromagnetic type. No continuous monitoring system has been provided for observing the health of the turbine. HP- LP bypass system is in the form of standalone control panel. Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for SG & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.2.5 Balance of Plant

a) Coal Handling Plant

[Coal Handling Plant is a common facility which is feeding all the units of the power plant having a total installed capacity of...x.....MW. Coal to the power plant is brought through railways by 'Box N' /'BOBR' wagons and is unloaded by wagon tipplers/ track hopper. One crusher has been provided for crushing the coal from 250 mm size to 25 mm size. The plant is provided with one stacker reclaimer to stock the crushed coal. The coal stock yard has a storage capacity of 20 days. For feeding the coal to the bunkers of all the units, two streams of conveyors having a capacity ofTPH have been provided. The coal handling plant operates for 16 hrs a day.]

---	-------------------

Description	Units	Design Parameters
Storage Capacity of Stock Yard	days	[....]

b) Ash Handling Plant

[Ash Handling System is of continuous type. The bottom ash from the furnace falls into bottom ash hopper having a storage capacity of [...] hrs. The ash is removed with the help of submerged Scrapper Chain Conveyors. The ash from the air pre-heater and economizer hoppers is being disposed off along with bottom ash. The ash in the form of ash slurry is conveyed through sluice channels to the ash slurry pump house with the help of high pressure jets, from where, it is pumped to the ash pond located the distance of [...] km. [...] The ash slurry pump house is provided with [...] numbers of ash slurry pumps of rating [...], out of which [...] pumps are normally working. The ash slurry disposal system is having [...].numbers of identical streams of ash slurry pumps connected to [...] numbers of ash slurry pipelines going to the ash pond. Fly ash is collected in dry form below the ESP hoppers and the same is then conveyed by vacuum system to surge hoppers from where it is either conveyed through pressurized system to dry fly ash silos or is sent to ash pond in the form of slurry. From the dry fly ash silos, the ash is disposed off through the covered trucks.]

c) Raw Water System

[The consumptive water for the plant is sourced from [...] river/sea located at a distance of [...] km from the plant boundary. The intake water pump house is installed with [...] intake pumps of capacity [...] m³/hr, out of which [...] pumps are normally working and the remaining [...] pumps are standby. The raw water is pumped from the intake water pump house to the in-plant raw water reservoir, which has a storage capacity of [...] days.]

d) CW / ACW System and Cooling Towers

[CW system for the power plant works on re-circulating system with induced draft cooling towers. The CW system uses raw/clarified quality of water and is working on [...] cycles of concentration. CW pump house is a common facility for all the units of the power plant. There are two CW pumps of capacity [...] m³/hr provided for each unit. In addition, there are two standby CW pumps common to all the units. The requirement of ACW system is being tapped from the cold CW header feeding the condenser. The hot return ACW water after cooling the auxiliaries of boiler and turbine joins the hot CW header and is sent to the cooling towers for cooling. The cold water from the cooling water flows to the fore bay of CW Pump House for recirculation into the system. One induced draft cooling tower (IDCT) has been provided for each unit. The cooling tower cools the water from [...] deg C to [...] deg C. The cooling tower has been designed for an inlet wet bulb temperature of [...] deg C].

e) Water Pre-Treatment Plant

[Water Pre-Treatment Plant is a common facility for all the units of the power plant. Pre-treatment plant supplies clarified water to DM plant, cooling water to the auxiliaries of BOP system, coal handling plant dust suppression and to the drinking water system. There are two numbers of clarifiers of [...].m³/hr capacity to meet all the clarified water requirements of the whole plant, except DM plant. The clarified water requirement for DM plant is met by a separate clarifier of capacity [...] m³/hr.]

f) DM Plant

[DM plant consists of three streams, each of [...] m³/hr capacity. There are two DM water tanks of [...].m³ capacity. A common regeneration system has been provided for all the three streams. DM plant operates on semi-automatic system with PLC controls.]

g) Air-Conditioning and Ventilation System

[The central control room, switchyard control room, ESP controls room and selected areas of service building have been provided with centralized air-conditioning system. The central air-conditioning system of chilled water type has been provided for various control rooms and DX type of plant has been provided for ESP control room, switchyard control room and other areas in the service building. Packaged type of air-conditioners has been provided for water treatment plant control room. Evaporative ventilation system has been provided for TG building along with roof extractors. Other areas are ventilated by a combination of exhaust and supply air fans].

h) Fire Fighting System

[Fire fighting system is a common facility provided for all the units. This consists of pressured hydrant system for all the auxiliary buildings, pump houses and administrative building. Automatic high velocity sprinklers system has been provided for power transformers, turbine oil tanks and lube oil system equipments. Medium velocity sprinkler system has been provided for cable galleries and coal conveyor galleries. Portable types of fire extinguishers have been provided throughout the plant for fighting small and localized fires.]

i) Plant and Instrument Air System

[Plant and instrument air system is a common facility for all the units of the plant. For meeting the instrument air requirement, [...] number of oil free screw compressors [...] working and [...] standby, each of [...] m³/hr capacity and discharge pressure of [...] kg/cm (g) have been provided along with dryers. Equal number of air compressors of similar rating has been provided to meet the requirement of plant air system. The air drying plant for the instrument air has been provided to achieve a dew point of (-) 40°C at atmospheric pressure.]

---	-------------------

j) Fuel Oil System

[The fuel oil system has been designed for the use of Light Diesel Oil (LDO) for start- up and Heavy Fuel Oil (HFO) for load carrying and flame stabilization purposes. Two tanks of [...] kl each have been provided for the storage of HFO and two tanks of [...] kl each have been provided for the storage of LDO. The system has been provided with unloading, transferring and pressurization pumps along with necessary filters and heating arrangement.]

k) Cranes/Hoists

[For the maintenance of various equipments, manually /electrically operated cranes and hoists have been provided.]

3.2.6

Civil Works

Major civil works of the unit consist of the following:

(a) Main Power House Building:

[A common Power House Building has been provided to house [3x200 MW] units which are placed side by side. Centre to centre placing of units is [67.5 m.] The railway entry has been provided from the rear side of Power House Building. Turbine Generator (TG) Sets have been placed between AB rows of columns are laid out longitudinally. The TG bay, also houses, the Boiler Feed Pumps, Regenerative Heaters, Lube Oil System and other TG accessories. The total length of TG bay for 3x210 MW units is [276 m] and width [30 m]. The spacing of the column is at [7.5 m]. TG bay is provided with 2 Nos. of overhead EOT Cranes. In order to make the handling facilities of the cranes available to the heat exchangers, boiler feed pumps and other equipments, removable chequered plates have been provided at appropriate locations.

A sub zero floor has been avoided except for the localized pits required for Condensate Pump, pipe channels and HP Heaters etc. This sub zero pits are suitably connected and provided with a common sump for drainage purposes.

Three stairs for approaching the operating floor level at [+ 10 m] have been provided in this bay adjacent to B row columns. In addition, there are stairs for providing access to various equipments at intermediate platforms and sub zero pits.

Switchgear and Control Room bay has been provided in the BC bay which is [12 m] wide. The length of the bay is [249.0 m]. A common Control Room for all the three units is provided at [10 m] floor. In BC bay at [16 m] elevation, equipments for chemical dosing, air handling and MCC for soot blowers etc have been located. The deaerator is placed at an elevation of [23.0 m]. Air washer units and cooling water tanks are also located at [23.0 m] floor.

Mill Bunker Bay, designated as CD bay, has a span of [10.5 m] which accommodates coal bunkers, coal feeders and coal mills. CD bay houses

---	--------------------------

the vertical mills at Zero m and has space for collection of disposal of mill rejects at sub zero levels adjacent to 'D' row. A stair to connect operating floor at [16.0 & 23.0 m] of BC & CD bay has been provided.]

(b) Boiler Area

[In boiler area, the boiler with its auxiliaries like PA fan, FD fan, ID fan as well as Electrostatic Precipitator has been located.]

(c) Chimney

[A common multi-flue Chimney of 220 m height has been constructed in which, flue cans of [3x200 MW] have been erected.]

(d) Transformer Yard

[A [60] m wide yard has been provided outside the 'A' row columns. The transformer yard houses station transformer, unit auxiliary transformers and generator transformers along with oil pits etc. To facilitating erection and maintenance of transformers, the area has been provided with rail tracks parallel to 'A' row at a distance of [45 m] from 'A' row which is further connected through cross tracks. In addition, space has been provided for laying the CW pipelines and locating the butterfly valve chambers.]

(e) Service building

[A common four storey building has been provided near the main plant building and it is connected with the operating floor of TG bay at [10 m] level.]

(f) Miscellaneous buildings

[Besides the above, miscellaneous buildings like administrative building, CW Pump House, Fire Water Pump House, CHP Control Room, ESP Control Room, Chimney, DM Plant Building, Chemical House and Ash Silos have been provided.]

4 OPERATIONAL HISTORY OF THE PLANT

4.1 General

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. The Average Performance Parameters of the unit over the past 25 years are shown in Table 4.1.

Table 4.1
Unit's Average Performance Parameters over the life

Years after Installation	PLF (%)	Availability (%)	Output (MW)	Aux. Power Consumption (%)	Specific Oil Consumption (ml/kWh)	Unit's Gross Efficiency (%)	Unit's Gross Heat Rate (kCal/kWh)

4.2 Stack Emissions, Ambient Air Quality and Process Effluents

The Project has been regularly monitoring the environmental parameters such as stack monitoring, ambient air quality (AAQ), noise pollution and liquid waste pollution in accordance with applicable norms by employing *[M/s....., an agency approved by State Pollution Control Board]*.

The existing environmental data and the limits specified for different pollutants, the locations of their measurements and the frequency of monitoring are given in the table below.

Table 4.3

5 BOILER AND AUXILIARIES

5.1 General

{Discuss in this section, the actual operating parameters with respect to the design parameters and the action plan recommended to reduce the energy consumption of the Boiler and its Auxiliaries based upon the findings of Performance and Efficiency Test. Discuss the recommendations based upon the Cost Benefit Analysis and the results of the Energy Audit carried out on the Boiler, Air Pre-Heater, Mills, ID/FD/PA Fans and ESP etc.}

Guidelines for carrying out the Energy Audit for various equipments are appended at the end of this model document, for general reference.}

5.2 Operating Parameters of Boiler and Auxiliaries

{Discuss below the Design Parameters and Actual Operating Parameters of the Boiler}.

5.2.1 Operating Parameters of the Boiler

Design and Actual Operating Parameters of the Boiler are given in the Tables below:

Table 5.1
Design and Operating Parameters of the Boiler

Description	Units	Design Parameter	Actual Operating Parameter
Main Steam flow	tph	[.....]	[.....]
Main steam pressure	kg/cm ²	[.....]	[.....]
Main steam temperature	°C	[.....]	[.....]
Reheater outlet flow	tph	[.....]	[.....]
Steam temperature at re- heater inlet	°C	[.....]	[.....]
Steam temperature at re- heater outlet	°C	[.....]	[.....]
Steam pressure at re -heater inlet	kg/cm ²	[.....]	[.....]
Steam pressure at re -heater outlet	kg/cm ²	[.....]	[.....]
Steam temperature at LTSH outlet	°C	[.....]	[.....]
Saturated steam temperature in drum	°C	[.....]	[.....]
Super heater platen outlet temperature	°C	[.....]	[.....]

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

Description	Units	Design Parameter	Actual Operating Parameter
Pressure drop in re- heater	kg/cm ²	[.....]	[.....]
Economizer inlet temperature	°C	[.....]	[.....]
Super heater spray	tph	[.....]	[.....]
Re heater spray	tph	[.....]	[.....]
Ambient temperature	°C	[.....]	[.....]
Coal consumption	tph	[.....]	[.....]
GCV of Coal	kCal/kg	[.....]	[.....]

5.2.2 Operating Parameters of Economiser

Design and Actual Operating Parameters of the Economiser are given in the Tables below:

Table 5.2
Design and Operating Parameters of Economiser

Description	Unit	Design Parameter	Actual Operating Parameter
Feed water pressure at the inlet	kg/cm ²	[.....]	[.....]
Feed water pressure at the outlet	kg/cm ²	[.....]	[.....]
Feed water flow	tph	[.....]	[.....]
Feed water temperature at the inlet	°C	[.....]	[.....]
Feed water temperature at the outlet	°C	[.....]	[.....]
Oxygen content in flue gas before economizer	%	[.....]	[.....]
Excess air % in flue gas before economizer	%	[.....]	[.....]
Flue gas inlet temperature	°C	[.....]	[.....]
Flue gas outlet temperature	°C	[.....]	[.....]

5.3

Action Plan for Reducing the Energy Consumption

{Discuss in the Table below, one by one, all the equipment for which the action is recommended to be taken for improving the efficiency and reducing the power consumption in the light of energy audit and cost benefit analysis of the recommendations. Discuss the presently operating parameters/ efficiency / power consumption of the equipment at rated performance parameters in comparison to the corresponding values as per design. Target values indicated in the table should be equal or better than the design values. Also attach the results of Energy Audit for the equipments in the form of Annexure. Formats for reporting the results of Energy Audit have been appended at the end of this Model Document for reference. The Formats provided for a particular kind of equipment may be used for similar remaining Equipment.}

9 ILLUMINATION SYSTEM

9.1 General

{Discuss the methodology adopted for conducting the illumination survey and for identifying the illumination deficient areas and the areas where energy loss is taking place due to the inefficient luminaries and lighting fixtures presently installed.

Recommended lux levels for various areas of the power plant and the Guidelines for carrying out the Energy Audit and working out the energy loss are appended at the end of this model document for reference.}

9.2 Action Plan for Reducing the Energy Loss

{Discuss in the Table below, one by one, all the areas where inefficient luminaries and lighting fixtures are recommended to be replaced with the efficient ones as per the cost benefit analysis of energy audit carried out. Some areas have been indicated for reference. Discuss the cost impact of implementing the improvements recommended and the energy loss which can be prevented on annual basis. Support your recommendation with the details of the illumination survey and Cost Benefit Analysis carried out.

Formats for reporting the results of Energy Audit have been appended at the end of this Model Document for reference.}

10 COST BENEFIT ANALYSIS

[During the Energy Audit, the Performance Test was conducted on all the continuous operating equipments to first verify the actual operating efficiency/power consumption of each equipment and compare the same with the corresponding value as per design. The reason for deterioration in the efficiency/excess power consumption, if any, was identified.

Recommendations made by R&M Consultant to refurbish the power consuming equipments for increasing efficiency/reducing the energy consumption were examined with respect to the actual expenditure involved for replacing/refurbishing such equipments including cost of training if any, vis-à-vis the expected benefits in power consumption.

Cost benefit calculation were made on the basis of simple payback period as per illustrations given below. The payback period of 5 to 7 years was considered good criteria for deciding to implement the recommendation of R&M Consultant.]

10.1 Illustration-1 on the basis of efficiency monitoring.

[(Let us say Boiler Efficiency).]

Let

IC be the Installed Capacity in MW,

η_a , the Actual Boiler Efficiency before R&M and

η_e , the Expected Boiler Efficiency after R&M. Then,

$$\text{Annual fuel consumption before R\&M} = \frac{IC * 8760 * PLF * TGHR * 1000}{\eta_a} \quad \text{kCal/annum}$$

Where,

PLF = Plant Load Factor

TGHR = Turbine Heat Rate

$$\text{Annual fuel consumption after R\&M} = \frac{IC * 8760 * PLF * TGHR * 1000}{\eta_e} \quad \text{kCal/annum}$$

Expected annual saving in fuel (in kCal/annum) is therefore,

$$\text{Expected annual saving in fuel} = IC * 8760 * PLF * TGHR * 1000 \left\{ \frac{1}{\eta_a} - \frac{1}{\eta_e} \right\}$$

*Annual fuel cost saving = Annual saving in Fuel * Fuel Cost*

$$\text{Pay Back Period in Years} = \frac{\text{Capital Expenditure}}{\text{Annual fuel cost saving}}$$

10.2 Illustration-2 on the basis of power consumption for any equipment

[(Let us Say - a Motor Driven Boiler Feed Pump)]

Let, IC be the Installed Capacity in MW,

Document Number	Rev No.	Description	Page No.	Date of Issue

Model Energy Audit Report For R&M of Unit No.[..] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

Pa, the actual power consumption of the equipment in kilowatt before R&M and

Pe, the Expected power consumption of the equipment in kilowatt after R&M

Then Saving in power consumption = $P_e - P_a$

*Annual cost of power saving = Power saving (kW) * 8760 * DF * COG*

Where,

DF = Duty factor for equipment in percentage (%).

COG = Cost of Generation (Rs/kWh)

Pay Back Period in Years = $\frac{\text{Capital Expenditure}}{\text{Annual Cost of Power Saving}}$

11

SUMMARY OF THE RECOMMENDATION OF ENERGY AUDIT

Based upon the recommendations of energy audit reports of various systems, the action plans for improving the efficiency and reducing the power consumption of various plants and equipments have been discussed in sections 5.0 to 9.0. An overall summary of the recommended action plans is furnished in the table below.

Table11.1
Summary of the Recommended Action Plans

Equipment/ Systems	Summary of the Recommended Action Plans	Cost Impact
Boiler and Auxiliaries	[.....]	[.....]
Steam Turbine Generator and Auxiliaries	[.....]	[.....]
Balance of Plant and Systems	[.....]	[.....]
Thermal Insulation	[.....]	[.....]
Illumination System	[.....]	[.....]
Any other System	[.....]	[.....]
Total Cost Impact		[.....]

{GUIDELINES FOR ENERGY AUDIT OF BOILER AND AUXILIARIES}**DETERMINATION OF BOILER EFFICIENCY**

Efficiency of the Boiler should be determined by Heat Loss Method. Guidelines as per the ASME Code PTC– 4 provide a more detailed method of determining the heat losses, whereas Bureau of Energy Efficiency (BEE) Guidelines provide a relatively simple method of determining the heat losses. Both the Guidelines are discussed below.

ASME Code PTC – 4 Guidelines

As per the above code, Net Heat Loss should be worked out by deducting the total heat credits from the total heat loss, i.e,

$$\text{Net Heat Loss} = \text{Total Heat Loss} - \text{Total Heat Credits}$$

As per the above Code, Total Heat Loss consists of the following items:

- i) Heat Loss due to dry flue gases.
- ii) Heat Loss due to evaporation of moisture in fuel.
- iii) Heat Loss due to hydrogen in fuel.
- iv) Heat Loss due to moisture in Air.
- v) Heat Loss due to incomplete combustion to CO.
- vi) Heat Loss due to un-burnt carbon.
- vii) Heat Loss due to mill (pulveriser) rejects.
- viii) Heat Loss due to Radiation and convection (Difficult to evaluate. Hence Design Value [normally 0.18%] should be considered.)

Total Heat Credit consists of the following items:

- i) Heat Credit due to entering dry air.
- ii) Heat Credit due to moisture in entering air.
- iii) Heat Credit due to sensible heat in fuel.
- iv) Energy Credit due to Auxiliary Equipment within the Boiler Envelope as per ASME Code PTC - 4.

As per ASME Code PTC – 4, Efficiency of Boiler is to be worked out by the following equation.

$$\text{Efficiency} = 100 - \% \text{ Net Losses of Heat Input.}$$

Where,

$$\text{Net Losses of Heat Input} = \text{Total Heat Losses} - \text{Total Heat Credits}$$

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[55]	26.09.2013

BEE Guidelines

As per BEE Guidelines, both (i) the heat credits and (ii) the losses due to mill rejects are neglected. As per BEE Guidelines, the following formulae are to be used for estimating the losses for calculating the efficiency :

i) Heat loss due to dry flue gases L_{dfg} :

$$\text{Stoichiometric air, kg / kg of fuel} = \frac{(11.6 * C)}{100} + \frac{34.8 * H_2 - O_2/8}{100} + \frac{4.35 * S}{100}$$

$$\text{Excess Air Supplied, EA \%} = \frac{O_2\%}{21 - O_2\%} * 100$$

Whereas O_2 = Oxygen Component measured in Flue Gas

$$\text{Actual Air Supplied (AAS), kg of air/kg of fuel} = \frac{1 + EA\%}{100} * \text{Stoichiometric air}$$

Dry flue gas quantity (Wd), kg/kg of fuel =

$$\frac{100}{12 * (CO_2\% + CO\%)} * \left[\frac{\%C}{100} + \frac{\%S}{267} - \frac{\%C \text{ of BA} * Bash}{100} - \frac{C\% FA * Fash}{100} \right]$$

$$\text{Dry flue gas } L_{dfg} \% = \frac{\text{Dry flue gas quantity Kg/kg of fuel} * \text{Specific heat kCal/kg } ^\circ\text{C} * (FGT ^\circ\text{C} - ABT ^\circ\text{C})}{\text{GCV of Fuel kCal/kg}} * 100$$

Where,

C % BA = % of carbon in bottom ash

C % FA = % of carbon in fly ash

Bash = Bottom ash quantity in kg/kg

Fash = Fly ash quantity in kg/kg

FGT = Flue gas temperature at APH outlet in $^\circ\text{C}$

ABT = Ambient dry bulb temperature in $^\circ\text{C}$

Cp = Specific heat of flue gas in kCal/kg $^\circ\text{C}$ = 0.23

ii) Heat Loss due to evaporation of moisture in fuel, L_{mf}

$$\text{Loss due to moisture in fuel, } L_{mf} = \frac{M * [(0.45 * (FGT - ABT) + 584)] * 100}{\text{GCV}}$$

Where, M is kg of Moisture in 1 kg of fuel

iii) Heat Loss due to Hydrogen in fuel, L_{hf}

$$\text{Loss due to hydrogen in fuel, } L_{hf} = \frac{9 * H_2 * [(0.45 * (FGT - ABT) + 584)] * 100}{\text{GCV}}$$

Where, H_2 is kg of H_2 in 1 kg of fuel

iv) Heat Loss due to moisture in air, L_{ma}

$$\text{Loss due to moisture in air, } L_{ma} = \text{AAS} * \text{humidity} * 0.45 * (FGT - ABT) * \frac{100}{\text{GCV}}$$

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[56]	26.09.2013

Where, AAS = Actual mass of air supplied

Humidity = humidity of air in kg/kg of dry air

v) Heat Loss due to incomplete combustion to carbon monoxide, L_{co}

$$\text{Loss due to carbon monoxide, } L_{co} = \frac{CO\% \cdot C}{CO\% + CO_2\%} * \frac{5744 \cdot 100}{GCV}$$

During the flue gas analysis when CO is obtained in ppm, then losses can be obtained

Loss due to carbon monoxide, L_{co}

$$= CO \text{ in ppm} * 10^{-6} * \text{fuel consumption in kg/h} * 28 * 5744 * 100 / GCV$$

vi) Heat Loss due to un-burnt carbon in ash, L_{uca}

Loss due to un-burnt carbon in ash, $L_{uca} =$

$$\frac{\text{Calorific value of carbon in kCal/kg}}{GCV \text{ of fuel kCal/kg}} * [(C\%FA * F_{ash} + (C\%BA * B_{ash})]$$

vii) Heat Loss due to Radiation and convection.

These losses are taken as per design documents. As per BEE Guidelines, typical value for 210-500 MW is 0.4%-1.0% of GCV.

As per BEE Guidelines,

Boiler Efficiency = 100 – % Sum of Losses mentioned above.

Locations of Measuring Instruments:

For conducting the Boiler Efficiency Test, following locations should be used for installing the measuring instruments and for collecting the samples:

- Flue Gas Analyzers / Orsat Apparatus at the inlet and outlet of Air Pre-Heater for measuring O₂, CO & CO₂.
- Thermocouples for measuring the temperature of flue gas at Air Pre-Heater inlet and outlet.
- Fly ash sampling at Economiser outlet and ESP Hoppers for unburnt carbon in fly ash.
- Dry Bulb and Wet Bulb Thermometer.
- Sampling of bottom ash from hopper or scrapper.
- Sampling of raw coal from RC feeder of the mill for proximate and ultimate analysis of fuel and finding its Gross Calorific Value (GCV).
- Pulverised coal samples from each mill for sieve analysis.
- Sampling of mill rejects for finding GCV.

Notes:

- (i) Before the Efficiency Test is conducted, the contractor will submit a detailed procedure for conducting the test which will be subject

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[57]	26.09.2013

--	-------------------

to the approval of the owner. Among other things, the procedure will also include the type of instruments to be used and the locations of various measuring instruments and sampling points.

- (ii) During the Efficiency Test, the Boiler blow downs and the use of auxiliary steam for purposes like soot blowing should be stopped, since, accurate evaluation of heat loss due to these items is difficult.*
- (iii) Test Instruments should have 0.5% accuracy. Calibration of the instruments should not be more than six months old. Instruments calibration should be certified by Govt. Accredited Laboratories i.e. NABL approved laboratories.*
- (iv) During the test, the operating parameters should be kept stable and close to design parameters.*
- (v) During the Boiler Efficiency Test, quality of fuel to be used should be as close as possible of the design quality.*
- (vi) All loss components should be thoroughly examined for the deviations, since in most of the plants, the actual GCV of the fuel and composition of the fuel does not match with design specifications and the above losses need to be corrected for the actual quality of fuel.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[58]	26.09.2013

{PERFORMANCE TEST OF AIR PRE-HEATERS (APH)}

Air Pre-heater is the last heat exchanger in the path of flue gases. Extracting maximum heat from the outgoing gases helps in improving the efficiency of the Boiler by reducing the heat loss due to dry flue gas. It also helps in limiting the cold end temperature of the Air Pre-Heater as well as the stack temperature.

APH leakage and APH gas side efficiency has to be checked to assess the performance of APH.

Determination of APH Leakage

The static air pressure on the side of incoming air is much higher than that of the flue gas side. Unfortunately, this leads to significant air bypass to flue gas side and consumes unnecessary fan power. When the incoming air bypasses to the flue gas side, the flue gas temperature decreases. The lower stack temperature due to air leakage gives a false indication that the Boiler is operating efficiently. The air leakage therefore needs to be measured and minimized by improving the sealing arrangement.

Air heater leakage in APH is the weight of air passing from the air side to the gas side of the APH. This is an indicator of the condition of the air heater's seals. As the air heater seals wear, air heater leakage increases. The increase in the air heater leakage increases the power requirement of the draft fans, increasing the unit heat rate and possibly limiting the unit loading.

The air leakage can be determined by measuring the O₂ component in the flue gases before and after the APH. Isokinetic Sampling (Grid Measurement) should be taken before and after the APH for measuring the O₂ component and Flue Gas temperature.

$$\text{Air Leakage AL \%} = \frac{\text{O}_2\% \text{ in the gas leaving APH} - \text{O}_2\% \text{ in the gas entering APH}}{21 - \text{O}_2\% \text{ in the gas leaving APH}} * 100$$

Determination of APH Efficiency

The performance of APH can also be checked by finding the operating gas side efficiency. Gas side efficiency is the ratio of gas temperature drop (at no leakage) to the temperature Head expressed as a percentage.. Temperature Head is the gas inlet temperature minus the air inlet temperature.

$$\text{Gas Side Efficiency} = (T_{gnl} - T_{ge}) / (T_{ae} - T_{ge}).$$

The corrected gas outlet temperature T_{gnl} is defined as the outlet gas temperature for no air leakage and is given by the following formula:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[59]	26.09.2013

$$T_{gnl} = \frac{AL * C_{pa} (T_{gl} - T_{ae})}{100 * C_{pg}} + T_{gl}$$

Where,

AL : Air leakage into APH system, in %

T_{gnl} : Gas outlet temperature corrected for no leakage, in °C

C_{pa} : Mean specific heat of air between *T_{ac}* and *T_{gl}*, in kCal/kg/ °C

T_{ae} : Temperature of the air entering the APH, in °C

T_{al} : Temperature of the air leaving the APH, in °C

T_{gl} : Temperature of the gas leaving the APH, in °C

C_{pg} : Mean specific heat of gas between *T_{gl}* and *T_{gnl}*, in kCal/kg/ °C

T_{ge} : Temperature of gas entering the APH, in °C

{PERFORMANCE TEST OF MILLS}

The energy audit of coal mills has to be conducted after obtaining an overview of system which includes mills, RC feeders, PA fans, seal air fans, mill reject handling system and associated ducts, piping, valves and dampers, lubrication system, thermal insulation status of mills/PA fans ducts/piping etc. While monitoring the general health of various installations, noticeable leakages of coal, air, oil and condition of thermal insulation should be checked.

Coal Mills are designed with a particular fuel grinding capacity or throughput at a certain Hardgrove Grindability Index (HGI) based on a definite raw coal size, moisture content and desired fineness level. Since these factors are significant, the coal to be used for testing the performance of mills should preferably be close to the design coal quality.

Testing Methods

For checking the performance of mills, following two tests should be done.

i) Clean Air Pitot Tube Test.

ii) Dirty Pitot Tube Test.

In clean air pitot tube test, no coal is injected into the mills and only primary air from the PA Fans is supplied to the mills to check any unbalance of flow of primary air in the coal lines. Flow of air is checked by measuring the velocity of air with the help of pitot tubes.

In dirty pitot tube test, mills are operated by injecting coal and measurements are taken on all pulverized coal lines to check any unbalance of flow of pulverized coal in coal lines / choking of the lines etc. Samples are taken from each coal line to determine the coal fineness of each supply conduit of the mills. During the test, coal integrator readings of individual raw coal feeder should be compared with the overall coal integrator reading. Quantity and GCV of rejects produced by each mill should be measured.

As explained above, Performance of all the mills should be checked with respect to the following design parameters:

{Performance Test of ID Fans, FD Fans and PA Fans}

ID, FD and PA Fans generate pressure to move air or flue gases against air or gases against a resistance caused by ducts, elbows and dampers etc in the system. Fans being constant volume machines, volume of air or gases moved through the fans remain constant regardless of density. Pressure and power requirements however change proportionately with density.

For doing the energy audit of the ID Fans, FD Fans and PA Fans, Performance parameters of these fans should be checked with respect to the design parameters of total pressure developed, the volume of air / flue gas discharged, power consumption and efficiency of the fans.

Total pressure developed by a fan is the sum of static pressure and the average velocity pressure. Measurements of static and velocity pressure are done both at the suction and discharge of the fans by using a combination of pitot tube and manometer.

Since the velocity pressure in a duct or pipe varies across its cross section, its measurements are taken at various points by traversing the pitot tube across the cross-section. Average velocity of air/flue gas in a duct is determined from the average value of the velocity pressures measured across the cross-section of the duct. Flow through the duct is then determined by the product of the average velocity and the area of cross-section.

Measuring Instruments to be used:

- Pitot tubes.
- Manometer of suitable range.
- Power Analyzer for measuring electrical parameters such as kW, kVA, PF, V, A and Hz.
- Stroboscope for measuring the speed.
- Temperature indicator and probe
- Hygrometer for measuring the relative humidity.

Evaluation of Results:

Following equations may be used for evaluating the performance and efficiency of Fans.

Total pressure developed by a fan = Sum of static pressure and the average velocity pressure.

Static pressure developed by the fan. = Difference of static pressure at discharge and static pressure at suction.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[62]	26.09.2013

Velocity pressure developed by the fan. = Difference of velocity pressure at discharge and velocity pressure at suction.

Total pressure developed by the fan. = Difference of total pressure at discharge and total pressure at suction.

$$\text{Velocity (m/sec)} = \frac{C_p \cdot \sqrt{(2 \cdot 9.81 \cdot \text{velocity pressure developed (mm wc)} \cdot \rho)}}{\rho}$$

Where,

C_p = Pitot tube constant, as given by the manufacturer

ρ = Density of air or gas at test condition in kg/m³

Flow Rate (m³/sec) = Area of Cross-section (m²) * Velocity (m/sec)

$$\text{PA/FD Fan total kW} = \frac{Q \text{ in m}^3/\text{s} \cdot \text{total pressure developed by fan (mmwc)}}{102}$$

$$\text{PA/FD Fan Mechanical Efficiency (\%)} = \frac{\text{Fan total kW} \cdot 100}{\text{Input kW to motor} \cdot \eta_m}$$

Where Fan total kW = Total power consumption of the fan in kW

Input kW to motor = Measured power consumption of the motor in kW

η_m = Motor Efficiency

$$\text{Corrected air density} = \frac{273 \cdot 1.293}{273 + \text{Air temperature (}^\circ\text{C)}}$$

$$\text{ID Fan total kW} = \frac{Q \text{ in m}^3/\text{s} \cdot \text{total pressure developed by fan (mmwc)} \cdot \rho_{fg}}{102 \cdot 1.293}$$

$$\text{ID Fan Mechanical Efficiency (\%)} = \frac{\text{Fan total kW} \cdot 100 \cdot \rho_{fg}}{1.293 \cdot \text{Input kW to motor} \cdot \eta_m}$$

Where ρ_{fg} - Density of flue gas at test condition in kg/m³

As per the basic principles, the combined efficiency of fan and motor can be determined by the following formula

$$\text{Combined Efficiency (Fan \& Motor)} = \frac{P_i}{P} = \frac{dp \cdot q}{P}$$

Where, P_i = Ideal Power Consumption in Watts.

{PERFORMANCE TESTS OF ELECTROSTATIC PRECIPITATOR}**Determination of Efficiency of Electrostatic Precipitator**

For measuring the efficiency of Electrostatic Precipitator (ESP), the volume of the gas flowing through ESP is measured as well as samples of the dust burden are collected and weighed, both at the inlet as well as the outlet of all the streams / passes of the ESP.

Measuring Instruments to be used:

- (i) Stack Monitoring Kit (For Gas Flow and Dust Loading).
- (ii) On-line Instruments.
- (iii) Power Analyzers for measuring electrical parameters like kW, kVA, pf, V, A and Hz.
- (iv) Temperature Indicator.

The Efficiency of ESP is then calculated as per the following formula:

$$Em = \frac{(Di-Do)}{Di} * 100\%$$

Where,

Em = The measured test efficiency.

Di = Weighted mean of dust burdens at the inlet of ESP (mg/NM³)

Do = Weighted mean of dust burdens at the outlet of ESP (mg/NM³)

$$Di = \frac{\{(Vm_1 * Di_1) + (Vm_2 * Di_2) + (Vm_3 * Di_3) + (Vm_4 * Di_4)\}}{(Vm_1 + Vm_2 + Vm_3 + Vm_4)}$$

$$Do = \frac{\{(Vm_1 * Do_1) + (Vm_2 * Do_2) + (Vm_3 * Do_3) + (Vm_4 * Do_4)\}}{(Vm_1 + Vm_2 + Vm_3 + Vm_4)}$$

Vm = Volume of Gas flow Measured at various passes/streams of ESP.
(Suffix 1, 2, 3 & 4 represents four gas streams.)

Measurement of Solid Particulate Matter (SPM):

The test is done by method 17 of Environment Protection Agency (EPA) of US. This involves determination of mass concentration and volumetric flows. The method involves collection of a representative sample of flue gas from all the streams / passes at the ESP's outlet and finding out mass concentration of particulates from this sample.

In sampling, it is to be ensured that a representative sample of flue gas is obtained. To ensure this, isokinetic sampling is done by grid method such that velocity and direction of the gas entering the probe is the same as the gas in the duct at the sampling point. The test is done for a period of at least one hour and sampling from each grid point is done for two

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[65]	26.09.2013

minutes. The dust particulates are collected on the filters. The filters are dried in the oven and the weight of the dust particulates is found by deducting the weight of net filter from the gross filter weight. The actual sampling volume of dry gas is measured by the gas meter which is converted into volume at standard conditions of temperature and pressure. The solid particulate emission is then worked out by dividing the dried mass of solids by the corresponding volume of gas at standard temperature and pressure.

$$SPM = \frac{Do}{Vs} * 100\%$$

Where,

Do = Weighted mean of dust burdens at the outlet of ESP (mg/NM³)

Vs = Volume of Dry Flue Gas at standard temperature and pressure.

Document Number	Rev No.	Description	Page No.	Date of Issue

{GUIDELINES FOR ENERGY AUDIT OF STEAM TURBINE GENERATOR AND AUXILIARIES}

Performance Testing of Steam Turbine Generator

Performance Test of a Steam Turbine Generator (STG) should be conducted in accordance with Standard Test Codes ASME PTC-6.

The performance of a STG is judged by the Net Heat Rate which is a ratio of 'Heat given to the STG cycle' to 'The Gross Electrical Output'. Turbine Heat Rate (HR) is expressed by the following equation:

$$\text{Turbine Heat Rate} = \text{Heat Given to the Cycle} / \text{Gross Electrical Output}$$

Heat given to the cycle is calculated by adding the Enthalpy additions made to the feed water as well as to the Cold Reheat Steam and by making correction due to the enthalpy of de-superheating water injected to the super heated/ re- heated steam. Net Electrical Output is measured at the terminals of Generator.

Turbine Heat Rate is given by:

$$\text{Turbine Heat Rate (kCal/kWh)} = \frac{Q_1 * (H_1 - h_2) + Q_2 * (H_3 - H_2)}{\text{Gross Generator Output}}$$

Where:

Units

Q_1	Main steam flow	kg/ hr
H_1	Main steam enthalpy	kCal/kg
h_2	Feed water enthalpy	kCal/kg
H_3	Hot reheat enthalpy	kCal/kg
H_2	Cold reheat enthalpy	kCal/kg
Q_2	Reheat steam flow	kg/ hr

$$\text{Turbine Cycle Efficiency \%} = \frac{860}{\text{Turbine Heat Rate}} * 100$$

Measurement of Steam Flow Rate:-

The installation and calibration of flow measuring devices for determining the steam flow rate to higher pressure, high temperature turbines is inherently difficult. ASME Code PTC-6 therefore recommends the use of flow measuring devices in the low temperature portion of the water cycle, i.e. either for the condensate flow or the feed water flow.

The measurement of condensate or feed water flow should be done by measuring the differential pressure across the calibrated flow nozzle built to the design and dimensions given in the ASME code.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[67]	26.09.2013

Main Steam flow rate can be worked out from the measured value of condensate flow by adding the flow from the HP Water Heaters calculated through Heat Mass Balance, by adjusting to the equivalent flow corresponding to the level changes in the deaerator, by subtracting un-accounted leakage of maximum allowable value 0.1% and by deducting the amount of water taken for sampling. A typical example of calculating the Main Steam Flow and Reheat Flows is discussed below.

However, it is to be noted that the method of computation for any project will actually depend upon the project specific scheme of the Steam Turbine and its auxiliaries.

EXAMPLE:

Let,

MF1 be the Condensate flow to deaerator,

MF4 be the Ejector steam flow from deaerator,

M_{fw} be the feed water at the out of deaerator,

H7, H6, H5, H4 be the enthalpies of water after HP Heaters, HP7, HP6, HP5 & LP heater LP4 respectively,

H_{fw} be the enthalpy of Feed Water at deaerator outlet and

Mext7, Mext6, Mext5, Mext4 be the extraction steam flow of Ext 7, 6, 5 & 4 respectively.

Then, from Heat Balance of HPH - 7, HPH-6 and HPH-5, we have,

$$M_{fw} * (H7 - H6) = Mext7 * (Hex7 - H_{drip7}) - Eq. (1)$$

$$M_{fw} * (H6 - H5) = Mext6 * (Hex6 - H_{drip6}) + Mext7 * (H_{drip7} - H_{drip6}) - Eq.(2)$$

$$M_{fw} (H5 - H_{fw}) = Mext5 (Hex5 - H_{drip5}) + [(Mext7 + Mext6) * (H_{drip6} - H_{drip5})] - Eq.(3)$$

Similarly from Heat Balance and Mass Balance of Deaerator, we have,

$$M_{fw} * H_{fw} = Mext4 * Hex4 + MF1 * H4 + (Mext7 + Mext6 + Mext5) * H_{drip5} - MF4 * H_{drip5} \text{ ---} \\ \text{----Eq.(4)}$$

$$M_{fw} = Mext7 + Mext6 + Mext5 + Mext4 + MF1 - Mej - Eq. (5)$$

After four unknown quantities of Mext7, Mext6, Mext5 and Mext4 from above five equations are determined by solving above equations, then Feed water flow at the outlet of Deaerator can be worked out from equation-5 above. Main Steam Flow (Q1) can then be established as explained below.

$$Q1 = M_{fw} + M_{dl} - M_s - M_{lk}$$

Where,

M_{dl} = Equivalent flow corresponding to decrease in the level of deaerator.

M_s = Amount of water taken for sampling if any.

M_{lk} = Un-accounted leakage. (Maximum allowable value is 0.1%)

Reheat steam flow Q2 is evaluated by subtracting steam extraction to last two HP Heaters (as per the heat balance across these heaters) & HP Turbine Leak off flows from the main steam flow Q1 and by adding sprays

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[68]	26.09.2013

for the attemptations. Leak off flows shall either be taken as per the design values or evaluated from the collected data.

Thus $Q_2 = Q_1 - \text{Extraction from last 2 HP Heaters} - (\text{HPT leaks})$
As already stated, Turbine Heat Rate can be worked out as follows.

$$\text{Turbine Heat Rate (kCal/kWh)} = \frac{Q_1 * (H_1 - h_2) + Q_2 * (H_3 - H_2)}{\text{Gross Generator Output}}$$

Measuring Instruments to be used:

- (i) Temperature Indicators and Sensors.
- (ii) Pressure Gauges.
- (iii) Water Flow Measuring Instruments (Calibrated Flow Nozzles, Ultrasonic Devices)
- (iv) Helium Leak Detectors for Condensers.

Notes:

- (I) To ensure the accuracy of the test, extraneous flows like, Make up to the cycle, bypass lines and drain lines are isolated from the cycle.
- (II) Test Instruments should have 0.5% accuracy. Calibration of the instruments should not be more than six months old. Instruments calibration should be certified by Govt. Accredited Laboratories i.e. NABL approved laboratories.
- (III) At the beginning of the test, Deaerator and Hot well levels should be kept at high water level.
- (IV) During the test, the operating parameters should be kept stable and close to design parameters.

Determination of Efficiency of Individual Turbine Cylinders

Efficiency of Individual HP, IP and LP Turbine Cylinders can be determined by first calculating the energy extracted from each kg of steam passing through a particular cylinder (HP, IP or LP) by subtracting the exhaust enthalpy ($H_{out \text{ act}}$) from the inlet enthalpy ($H_{in \text{ act}}$). Dividing this quantity by the amount of energy that would have been extracted, if the process was isentropic or ideal, gives the efficiency of the particular Turbine Cylinder. The energy extraction through isentropic process can be determined from the Mollier Chart:

$$\text{Efficiency (\%)} = \frac{(H_{in \text{ act}} - H_{out \text{ act}})}{(H_{in \text{ act}} - H_{out \text{ ideal}})} \times 100$$

Where, $H_{in \text{ act}}$ = The actual inlet enthalpy of the steam.

$H_{out \text{ act}}$ = The actual exhaust enthalpy of the steam.

$H_{out \text{ ideal}}$ = The ideal exhaust enthalpy of the steam.

Document Number	Rev No.	Description	Page No.	Date of Issue

{PERFORMANCE TEST OF CONDENSERS}

Since the performance of the condenser depends upon the cooling water flow and inlet cooling water temperature, it is often cost effective to conduct the performance test of the condenser along with the testing of CW Pumps and Cooling Tower.

Objective of the condenser performance test is to find out whether condenser is performing as per the design expectations or not. Analysis of the condenser performance is based on the following parameters:

- CW Inlet Temperature.
- CW Outlet Temperature.
- Flow Quantity of Cooling Water.
- Turbine exhausts hood temperature.
- Terminal temperature difference (TTD.)
- Log Mean Temperature Difference (LMTD)
- Back Pressure.

The above parameters most importantly the TTD, (LMTD) and Back Pressure are compared with the design /expected parameters and actions are required to be planned to correct the deviations.

Notes:

Before conducting the test, it should be ensured that,

- (i) The condenser tubes are cleaned and
- (ii) Air leakage into the condenser has been tested with the help of Helium leak detection system.

Parameters to be checked

The following parameters need to be checked:

(i) Condenser heat load

$$\text{Condenser heat load (kCal/h)} = Q \times T \times C_p$$

Where,

Q = Water flow rate in (kg/h)

T = Average CW temperature rise in °C

C_p = Specific heat in kCal/kg °C

(ii) Condenser Vacuum

Expected condenser vacuum can be calculated from the performance curves of condenser as given by the manufacturer.

Calculated condenser vacuum

Calculated condenser vacuum = atmospheric pressure – Condenser back pr.

Deviation in condenser vacuum

Deviation in vacuum = Expected condenser vacuum – Measured condenser vacuum

(iii) Condenser TTD

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[70]	26.09.2013

Condenser TTD = Saturation temperature – Cooling water outlet temperature

(iv) Condenser Effectiveness

$$\text{Condenser effectiveness} = \frac{\text{Rise in cooling water temperature}}{\text{Saturation temperature – Cooling water inlet temperature}}$$

(v) Determination of actual LMTD

Actual LMTD is given by:

$$LMTD = \frac{T_{out} - T_{in}}{\ln \frac{T_{sat} - T_{in}}{T_{sat} - T_{out}}}$$

Where

LMTD = Log Mean Temperature Difference

T_{sat} = Saturation temperature (°C) corresponding to back pressure.

T_{in} = Cooling water inlet temperature (°C)

T_{out} = Cooling water outlet let temperature (°C)

Establishing the reasons for loss/gain in condenser vacuum:

After diagnosis, the loss/gain in condenser vacuum should be categorized into the following factors in order to find optimum solutions:

- i) Due to CW inlet Temp.:
- ii) Due to CW inlet flow:
- iii) Due to air ingress:
- iv) Due to dirty tubes :

Document Number	Rev No.	Description	Page No.	Date of Issue

{PERFORMANCE TEST OF LP & HP FEED WATER HEATERS}

Performance of the LP & HP feed Water heaters is to be checked from the following indices:

- Terminal Temperature Difference (TTD)
- Drain Cooler Approach (DCA)
- Temperature Rise across the heaters.(TR)

Formulae to be used are given below

Terminal temperature difference, $TTD = t_{sat} - t_{fw\ out}$

Where,

TTD = Terminal temperature difference ($^{\circ}C$)

T_{sat} = Saturation temperature taken at the heater shell pressure ($^{\circ}C$)

$T_{fw\ out}$ = Temperature of feed water leaving the heater ($^{\circ}C$)

Drain Cooler Approach temperature, $DCA = T_{drains} - T_{fw\ in}$

Where,

DCA = Drain cooler approach temperature ($^{\circ}C$)

T_{drains} = Temperature of the drains leaving the heater ($^{\circ}C$)

$T_{fw\ in}$ = Temperature of feed water entering the heater ($^{\circ}C$)

Temperature Rise, $TR = T_{fw\ out} - T_{fw\ in}$

Where,

TR = Feed water temperature rise across the heater ($^{\circ}C$)

$T_{fw\ in}$ = Temperature of feed water entering the heater($^{\circ}C$)

$T_{fw\ out}$ = Temperature of feed water leaving the heater ($^{\circ}C$)

The above parameters are compared with the design /expected parameters and actions are required to be planned to correct the deviations.

{PERFORMANCE TEST OF CEPs AND BFPs}

For the performance test of CEPs and BFPs, please refer to the 'Guidelines for Testing Centrifugal Pumps' appended after the section on Balance of Plant.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[72]	26.09.2013

{GUIDELINES FOR ENERGY AUDIT OF BALANCE OF PLANT SYSTEMS}**Performance Testing of Centrifugal Pumps**

All kinds of centrifugal pumps namely the Boiler Feed Pumps, Condensate Extraction Pumps, CW Pumps, ACW Pumps, Raw Water Intake Pumps, Ash Water Pumps, DM Water Pumps, Ash Slurry Pumps and Miscellaneous pumps can be tested by the method explained below.

The primary factors affecting the operation of the pumps are the inlet condition at suction side, outlet condition on the discharge side and the operating speed of the pump. The secondary factors are physical and climatic variables, such as the temperature, viscosity, specific weight and turbidity of the liquid being pumped and the elevation of the pumping system above the sea level.

Measuring Instruments to be used:

During the test, the following instruments are required.

- (i) Venturi meters / flow nozzles / orifice meters / pitot tubes for measuring the Discharge,
- (ii) Bourden type pressure gauges for measuring suction and discharge Head
- (iii) Stroboscope for measuring Operating Speed.
- (iv) Power Analyzers for measuring electrical parameters like kW, kVA, pf, V, A and Hz.

Measurement of Discharge:-

Discharge or flow can be measured by installing calibrated devices like venturi meters, flow nozzles, orifice meters and pitot tubes etc.

When the flow is measured by the venturi meter, the flow nozzle or orifice meter, its quantity can be calculated by the following equation:

$$Q = \frac{CA_2\sqrt{2gh}}{\sqrt{1-R^4}}$$

Where,

- Q = Rate of flow (m^3/sec)
- C = Coefficient of discharge for venturi meter, flow nozzle or orifice meter as the case may be.
- A_2 = Area of throat in case of venturi meter /flow nozzle or area of orifice in case of orifice meter, as the case may be (m^2).
- g = Acceleration due to gravity ($9.81 m/sec^2$)
- h = Differential head of liquid between meter inlet and throat in case of venture meter or head across the flow nozzle or orifice meter as the case may be.(m)
- R = Ratio of throat to inlet diameter in case of venturi meter/ flow nozzle or orifice meter as the case may be.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[73]	26.09.2013

When the Discharge or Flow is measured by the pitot tube, its quantity can be calculated by the following equation:

$$Q = A \times \sqrt{2gh}$$

Where,

Q = Flow in m^3/sec

A = Area of cross section of flow, where pilot tube is installed (m^2)

g = Acceleration due to gravity ($9.81 m/sec^2$)

h = Height of rise of water column above the surface of water (m)

Measurement of Total Dynamic Head (TDH):-

For measuring the TDH, measurements are required to be taken both on the suction as well as Discharge side of the pumps. Instruments to be used could be either the direct reading liquid manometers, converted mercury manometers or calibrated bourden pressure gauges.

The TDH is given by the algebraic difference of the total discharge head (hd) and the total suction head (hs) i.e.

$$H = hd - hs$$

The values of hd and hs are calculated by the following equations:

$$hd = hgd + Zd + \frac{V_d^2}{2g}$$

and

$$hs = hgs + Zs + \frac{V_s^2}{2g}$$

Where,

hgd = discharge gauge reading in metres of liquid.

hgs = suction gauge reading in metres of liquid.

Zd = elevation of discharge gauge above datum elevation.

Zs = elevation of suction gauge above datum elevation.

V_d = Velocity in discharge pipe (m/s)

V_s = Velocity in suction pipe (m/s)

Measurement of Power Consumption:-

The power consumption (kW) should be measured at the terminals of the drive motor (in case of motor driven pumps) to exclude any line losses that may occur between the switchboard and the driver.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[74]	26.09.2013

Measurement of Speed:-

The speed of the pump can be measured by revolution counter (manual or automatic), tachometer, stroboscopic device or an electronic counter.

Power Output of Pump:-

Power output of the pump in kW can be determined by the following relationship:

$$\text{Liquid Power Output (kW)} = \frac{Q * H * \rho * g}{1000}$$

Where,

Q = Flow rate of liquid (m^3/sec)

H = Total Dynamic Head (m)

ρ = Density of Liquid / Ash Slurry (kg/m^3)

g = Acceleration due to gravity ($9.81 \text{ m}/\text{sec}^2$)

Pump Efficiency:-

Mechanical Efficiency of the Pump is given by the following relationship:

$$\text{Mechanical Efficiency \%} = \frac{\text{Liquid Power Output (kW)}}{\text{Power Input to the shaft (kW)}} \times 100$$

Overall Efficiency of the Motor Driven Pump including motor is given by the following equation:

$$\text{Overall Efficiency (\%)} = \frac{\text{Liquid Power Output}}{\text{Electrical Power Input}} \times 100$$

Adjustments due to change in pump speed:-

If the frequency of electrical supply of power is other than 50 Hz, the actual speed of the pump during the test will be somewhat different from the rated speed. Adjustments are therefore required to be made in the measured values of Discharge, TDH and Electric Power Consumption, to convert these parameters corresponding to the rated speed of the pump. This can be done by using the following equations:

$$Q_r = \frac{N_r}{N_t} \times Q_t$$

$$H_r = \left(\frac{N_r}{N_t} \right)^2 \times H_t$$

$$P_r = \left(\frac{N_r}{N_t} \right)^3 \times P_t$$

Where,

Q_r = Discharge Capacity at Rated speed

Q_t = Discharge Capacity at Tested Speed

H_r = TDH at Rated Speed

H_t = TDH at Tested Speed

{COOLING TOWER PERFORMANCE TEST}

There are a number of variables, which influence the performance of cooling towers. The various test codes namely CTI Code ATC-105, ASME Code PTC-23 and BS 4485 Part 2 prescribe certain permissible limits for these variables. The permissible limits recommended by CTI Code ATC-105 are given below:-

S.No.	Parameter	Permissible Variation from the Design value
1	Water Rate	$\pm 10\%$
2	Cooling Range	$\pm 20\%$
3	Heat Load	$\pm 20\%$
4	Wet Bulb Temperature	$\pm 10^{\circ} F$
5	Dry Bulb Temperature	$\pm 20^{\circ} F$
6	Wind velocity	$\pm 10\%$
7	Fan Power	$\pm 10\%$

The Wet Bulb Temperature in case of Induced Draft Towers and Wet & Dry Bulb Temperatures in case of Natural Draft Towers are the basic weather conditions on which the cooling towers are designed. The date of conducting the performance test of the Cooling Towers should therefore be chosen considering the trend of the weather conditions so that the above temperatures are as close as possible to the design values.

Testing Method:

The test is conducted for a minimum period of one hour during which time, readings for all the following parameters are taken at an interval of 5 minutes.

- (i) Wind Velocity.
- (ii) Ambient Wet & Dry Bulb Temperatures.
- (iii) Inlet Wet Bulb Temperature.
- (iv) Hot Water Flow to the Cooling Tower.
- (v) Temperature of Hot Water.
- (vi) Re-cooled Water Temperature.
- (vii) Fan Power Consumption in case of Induced Draft Cooling Towers.

Instruments Required

- (i) Mechanically aspirated psychrometer for measuring Wet Bulb Temperature.
- (ii) Dry Bulb Thermometers.
- (iii) Anemometer for measuring wind speed and Cooling Tower Air Flow.
- (iv) Pitot Tube for measuring water velocity to determine Water flow.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[77]	26.09.2013

(v) Mercury in Glass Thermometers or RTD's for measuring hot and cold water temperatures.

(vi) Watt meter for measuring power consumed by the Fan Motor.

Following relationships are used for determining important parameters:

Cooling Range = Hot Water Temperature at Inlet – Cold Water Temperature at Outlet.

Cooling Tower Approach = Cold Water Temperature at Outlet – Wet Bulb Temperature.

$$\text{Effectiveness \%} = \frac{\text{Range}}{\text{Range} + \text{Approach}} \times 100$$

$$\text{Fan Air Flow Actual (NM}^3\text{/h) Per Cell} = \frac{\text{Rated Fan Flow (Nm}^3\text{/h)} \times (\text{Fan Input kW Actual})^{1/3}}{(\text{Fan Input Rated})^{1/3}}$$

$$\text{Air Mass Flow Per Cell} = \text{Air Flow} \times \text{Density of Air}$$

$$\text{L/G Ratio} = \frac{\text{Water Flow in kg/h}}{\text{Air Flow in kg/h}}$$

$$\text{Evaporation Loss} = \frac{\text{Cooling Water Flow (m}^3\text{/h)} \times \text{Cooling Tower Range in } ^\circ\text{C}}{675}$$

Based upon the actual test data, the predicted re-cooled water temperature is determined from the performance curves provided by the manufacturer. The deviation is analyzed and corrective action is planned to remove the deviation.

Note:

To simplify the evaluation of test results and to minimize the chances of errors, blow down and make up is stopped during the time of testing.

Document Number	Rev No.	Description	Page No.	Date of Issue

{PERFORMANCE TEST OF COMPRESSED AIR SYSTEM}

Performance of air compressors and compressed air system deteriorates with the passage of time. During the Energy Audit, the capacity of the air compressor as well as the leakages in the system should be checked.

FREE AIR DELIVERY (FAD) TEST

This test is to be conducted to assess the actual output of the compressor. The procedure of conducting the test is as follows:

- Isolate the compressor along with its individual receiver being taken for test from main compressed air system by tightly closing the isolation valve or blanking the receiver outlet. Ensure that the valves are closed completely.
- Check the pressure gauge and the temperature gauge installed for the air receiver for calibration and working status.
- Open water trap drain outlet and empty the receiver and the pipeline. Make sure that water trap line is tightly closed once again to start the test.
- Start the compressor and activate the stopwatch
- Note the time to attain the normal generated pressure P_2 (in the receiver) from initial pressure P_1 .
- Measure the temperature of ambient and compressed air (receiver)

Calculate the capacity as per the formula given below:

Actual Free Air Discharge:

$$Q = \frac{(P_2 - P_1)}{P_0} * \frac{V}{T}$$

Where,

- Q : Actual free air discharge (m^3/min)
 P_2 : Final pressure after filling ($\text{kg}/\text{cm}^2\text{a}$)
 P_1 : Initial pressure ($\text{kg}/\text{cm}^2\text{a}$) after bleeding
 P_0 : Atmospheric pressure ($\text{kg}/\text{cm}^2\text{a}$)
 V : Receiver and connected pipe volume in m^3
 T : Time taken to build up pressure to P_2 in minutes

The above equation is relevant where the compressed air temperature is same as the ambient air temperature, i.e. perfect isothermal compression.

In case the actual compressed air temperature at discharge, say t_2 °C is higher than ambient air temperature say t_1 °C (as is the usual case), the FAD is to be corrected by a factor $(273 + t_1) / (273 + t_2)$.

Once the actual output is assessed, then it should be compared with rated output. If any deviation is found then the various factors causing deviation should be investigated to arrive at the remedial measures to improve the performance.

Efficiency Calculation

Calculate the ideal kW as per formula given below:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[79]	26.09.2013

$$\text{Ideal Power kW} = \left[\frac{NK}{K-1} \right] \left[\frac{Q * P_s}{0.612} \right] \left[\frac{P_d}{P_s} \right]^{\frac{K}{(K-1)/NK}} - 1$$

Where,

N : No. of stages

K : Ratio of Specific Heat (1.35 for air)

P_s : Suction Pressure in kg / cm²g

P_d : Discharge pressure in kg / cm²g

Q : Actual fir flow (m³/min)

Measure the actual kW during steady state load condition.

Calculate the actual efficiency

$$\eta = \frac{\text{Ideal kW}}{\text{Actual kW}}$$

Compare the actual with the design efficiency. If any deviation is found then the various factors causing deviation should be investigated to arrive at the remedial measures to improve the efficiency.

Method of checking the leakages in the System:

Loud leaks can be spotted without the aid of an ultrasonic leak detector while walking across the route of compressed air pipelines. Check the rags placed over the pipes to reduce the noise level of large scale leaks. Check all the drain traps. Small leaks can be traced with the help of ultrasonic leak detector.

For checking the rate of leakage in a given system, all the isolating valves at supply points and the drain traps should be closed. The normal operating pressure should be established in the air receiver and the compressor should be stopped. The fall in the air pressure of the receiver should be monitored over a period of time. The rate of leakage in the system can be worked out by the following formula.

$$\text{Leakage Rate (Nm}^3/\text{min)} Q = \frac{\text{Pressure loss (kg/cm}^2\text{a)}}{\text{Atmospheric Pr. (kg/cm}^2\text{a)}} * \frac{\text{System volume (m}^3\text{)}}{\text{Time Measured (minutes)}}$$

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[80]	26.09.2013

{Performance Test of Air Conditioning System}**Evaluation of net refrigeration capacity and specific energy consumption**

The test shall include a measurement of the net heat removed from the water as it passes through the evaporator by determination of the following:

1. Water flow rate
2. Temperature difference between entering and leaving water

The heat removed from the chilled water is equal to the product of the chilled water flow rate, the water temperature difference, and the specific heat of the water.

The net refrigeration capacity in tons shall be obtained by the following equation:

$$\text{Net refrigeration capacity (TR)} = \frac{m \times c_p \times (T_{in} - T_{out})}{3024}$$

Where

m - Mass flow rate of chilled water, m^3/hr

C_p - Specific heat, $kcal/kg\ ^\circ C$

T_{in} - Chilled water temperature at evaporator inlet $^\circ C$

T_{out} - Chilled water temperature at evaporator outlet $^\circ C$

The accurate temperature measurement is very vital in refrigeration and air conditioning and therefore least count of temperature measured should be at least to one decimal place.

After arriving at net refrigerating capacity, the specific energy consumption can be arrived at by measuring power consumption.

$$\text{Specific power consumption, kW/TR} = \frac{\text{kW input to the motor}}{\text{Net refrigeration effect in TR}}$$

The compressor power can be measured by a portable power analyzer, which would give reading directly in kW.

Other specific energy parameter is,

$$\text{Co-efficient of Performance COP} = \frac{\text{Refrigeration effect in kW}}{\text{Motor input power}}$$

Performance evaluation of Air Handling Units (AHU)

Performance of air handling units needs to be evaluated for the following:

- TR of AHU (Heat load)
- No of air changes of fresh air supply
- Air flow rate

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[81]	26.09.2013

- Operating parameters

For centralized air conditioning systems the airflow at the air-handling unit (AHU) can be measured with an anemometer. The dry bulb and RH can be measured at the AHU inlet and outlet by using thermal hygrometer. The data can be used along with a psychrometric chart (now a software is available) to determine the enthalpy (heat content of air at the AHU inlet and outlet).

$$\text{Heat load (TR)} = \frac{m \times (h_{in} - h_{out})}{4.18 \times 3024}$$

Where:

- m - Mass flow rate of air, kg/hr
- h_{in} - Enthalpy of inlet air at AHU, kJ/kg
- h_{out} - Enthalpy of outlet air at AHU, kJ/kg

Power Consumption of Auxiliaries:

- Measure all electrical parameters of air conditioning auxiliaries such as pumps, fans and blowers.
- Tabulate the measured parameters
- Evaluate specific energy consumption
- Compare above measurement with respective design / best achieved values.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[82]	26.09.2013

{AUDIT OF WATER CONSUMPTION}

In thermal power stations, monitoring and auditing of specific water consumption (litres/kwh) should also be done similar to the monitoring of specific coal consumption or specific oil consumption.

Requirement of water in a thermal power station is mainly for the following areas:-

- i) Water requirement for Boiler make up.*
- ii) Cooling water for Condenser and Heat Exchangers etc.*
- iii) Make up water for evaporation and blow down loss from cooling tower.*
- iv) Water requirement for ash disposal.*
- v) Water requirement for coal dust suppression.*
- vi) Service water for washing and cleaning purposes.*
- vii) Drinking water supply.*

Auditing of Water Consumption

Auditing of water consumption should be carried out periodically and as frequently as possible for each of the systems covered in the water balance diagram. Effort should be made to conserve the usage of water.

Guidelines for conserving water

A few guidelines are mentioned below for minimizing specific water consumption in the power plants:

- i) Increasing the Cycle of Concentration (COC) in Condenser cooling water system in closed cycle.*
- ii) Increasing the ash concentration in the wet ash disposal system.*
- iii) Recycling of water from the wet ash disposal system.*
- iv) Adopting of dry fog dust suppression system for coal handling plant.*
- v) Checking of leakages from water pipe joints and water taps.*
- vi) Treatment and recycling of waste water.*
- vii) Rain water harvesting*
- viii) Adopting zero discharge system.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[83]	26.09.2013

{Guidelines for the Energy Audit of Thermal Insulation}

In thermal power plants, thermal insulation is provided for the following purposes;

- To minimize the heat loss to environment from the hot surfaces of pipes and equipment specially carrying steam and hot water.*
- To minimize heat gain from environment to the cold surfaces of Air Conditioning System.*
- To protect the working personnel.*

Thermal insulation is normally provided for the following systems in the thermal power plants:

- Piping and equipment carrying steam and hot water e.g. Boiler & Auxiliaries, Steam Turbine & Auxiliaries and Feed Water System.*
- Heat tracings for Fuel Oil Systems.*
- Chimney.*
- Air Conditioning System.*

Generally, it is the avoidable heat loss from the damaged insulation of hot surfaces, which matters most in the thermal power plants. For carrying out energy audit for the thermal insulation system, the condition of the insulation should be inspected and surface temperatures of hot spot areas having damaged insulation, should be measured with the help of infrared temperature indicator. Where the surface temperature is more than 60° C, the estimated heat loss should be calculated. The formula for calculating the Heat Loss or gain from the bare and un-insulated surfaces is indicated below.

$$H = h \times A \times (T_h - T_a)$$

Where,

H = Heat loss/ Heat gain in Watts.

A = Outside Area in m².

h = Heat transfer coefficient, W/m²-K

T_h = Hot surface temperature (for hot fluid piping) & Cold surface temperature for cold fluids piping in °C.

T_a = Average ambient temperature, °C

For horizontal pipes, heat transfer coefficient can be calculated by:

$$h = (B + 0.005 (T_h - T_a)) \times 10 \text{ W/m}^2\text{-K}$$

For vertical pipes, heat transfer coefficient can be calculated by:

$$h = (C + 0.009 (T_h - T_a)) \times 10 \text{ W/m}^2\text{-K}$$

The values of the coefficients B & C are given in the table below.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[84]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[..] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

Surface	B	C
Aluminum, Bright Rolled.	0.25	0.27
Aluminum, Oxidized.	0.31	0.33
Steel	0.32	0.34
Galvanized Sheet Metal	0.53	0.55
Non Metallic Surfaces	0.85	0.87

The material and thickness of appropriate Insulation material has to be worked out so that after the application of insulation, the surface temperature does not exceed 60°C.

The potential saving in heat loss can be worked out by calculating the heat loss with surface temperature as 60°C and subtracting it from the Heat Loss from the bare and un-insulated surface calculated above.

The cost of replacing the damaged insulation should then be compared with the expected savings in the cost of fuel, to work out the payback period

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[85]	26.09.2013

{Guidelines for the Energy Audit of illumination System}

The illumination System is provided in various areas of the Power Plant for rendering comfortable working environment. The primary objective should be to provide the required intensity of lighting at the lowest power consumption.

Annexure -A indicates the recommended average illumination levels (lux level) for different areas of the power plant as well as the suggested type of luminaries to be used.

The purpose of energy audit of any illumination system, therefore, is to identify the illumination deficient areas and the areas where energy loss is taking place due to the usage of inefficient luminaries and to recommend the improvement option.

Measuring Instruments Required

- Power Analyzer for measuring electrical parameters such as kW, kVA, pf, V, A and Hz .
- LUX meters.
- Measuring tape.
- On line energy metering instruments (calibrated)

Method of Energy Audit

For the determination of the number of measurement points and their locations, first of all Room Index (RI) is calculated for each area, by using the expression:

$$RI = \frac{L \times W}{Hm (L + W)}$$

Where,

L = length of interior;

W = width of interior;

Hm = the mounting height of the lighting fittings above the horizontal working plane.

Depending upon the Room Index (RI), the number of measuring points in the given area is determined from the values given in the Table-1 below.

Table-1

Room Index (RI)	Number of Measuring Points
Below 1	9
Between 1&2	16

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-005	02	MODEL ENERGY AUDIT REPORT	[86]	26.09.2013

Model Energy Audit Report For R&M of Unit No.[...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

Between 2&3	25
3 and above	36

Depending upon the number of measuring points, the interior is divided into a number of equal areas, which should be as square as possible. The illumination at the centre of each area is measured with lux meter and the mean value is calculated. By also measuring the power consumed, Installed Load Efficacy (ILE) of the system can be worked out in terms of lux/watt/m². This gives an estimate of the actual illumination on the horizontal working plane. The working plane is usually assumed to be 0.75m above the floor in the offices and at 0.85m above floor level in equipment areas.

The ratio of ILE to the target value of lux/watt/m² is defined as the Installed Load Efficacy Ratio (ILER).

$$\text{i.e. ILER} = \frac{\text{Actual lux/watt/m}^2}{\text{Target lux/watt/m}^2}$$

The target values of lux/watt/m² may be taken from the values given in the Table - 2 which are based on the advanced type of luminaries being used in the industry.

Table - 2

Room Index (RI)	Target lux/watt/m ²
5	53
4	52
3	50
2.5	48
2	46
1.5	43
1.25	40
1	36

Annual energy loss of any illumination system can then be worked out by the following expression.

$$\text{Annual energy loss (kWh)} = \frac{(1 - \text{ILER}) \times \text{watts consumed} \times \text{no. of operating hrs / year}}{1000}$$

The above method is summarized below in the form of steps.

STEP -1: Measure the floor area of the interior in m².

Document Number	Rev No.	Description	Page No.	Date of Issue

2.	Office / Conference room	Decorative recessed type energy efficient 2 x 40 FTL with mirror reflector. OR Decorative Compact fluorescent tube (CFL) fitting with internal mirror reflector with mounting bracket suitable for 1x18W/ 1 x 22W/ 1x25W lamps. For rooms without false ceiling, surface mounted fixtures shall be used.	300
3.	Testing Laboratories	Energy Efficient FTL in Decorative fittings with wide angle mirror optic antiglare reflector. OR Decorative Compact fluorescent tube (CFL) fitting with internal mirror reflector with mounting bracket suitable for 1x18W/ 1 x 22W/ 1x25W lamps.	400
4.	Work shop Building	High fittings – 150W/250W HPSV	300
5.	Transformer area, Switchyard area, outdoor yard area	Dust & weather proof 70 W HPSV well glass fitting with reflector and integral mounted control gear.	50
6.	Indoor GIS Buildings	High Bay fittings – 400W/250W HPSV	300
7.	Air Compressor	Energy efficient 2x40 W FTL industrial	200

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

BACKGROUND

What is R&M (Renovation & Modernization) of Thermal Power Plants?

Coal based power stations contribute more than 70% share of total power generation in India. Thermal Power Stations are designed for an economical and stable life span of 25 years, after which, the level of performance starts deteriorating as a result of degradation of its equipments, components and materials. Deterioration in performance is reflected in frequent forced outages, reduced outputs, decreased efficiency and increased cost of generation. This results in costly repair and loss of revenue. Renovations & Modernization (R&M) of thermal power station is an activity of carrying out repairs, refurbishments and replacement of defective equipments & components so as to extend the life of the power plant by at least 15-20 years, to restore the performance parameters to equal or better than the original design parameters and to ensure that the renovated plant complies with the revised statutory emission standards.

Need of R&M

In spite of new capacity additions, India continues to face shortages of varying degree in the supply of energy and peaking power. Implementation of fresh capacity additions for bridging the demand supply gap involves huge investments and long gestation periods primarily due to the process of land acquisition and getting the required fuel and water allocations, permits & clearances, particularly, the environmental clearance.

On the other hand, R&M activity of existing old power plants which requires less investment and can be completed in shorter duration has been recognized as a techno-economically viable option to supplement the fresh capacity addition for maximizing the energy generation. Also it helps in reducing the emissions by adopting upgraded modern technologies.

Need of preparation of Model R&M Documents

The countrywide R&M programme was first initiated in 1980 when Government of India approved the scheme of Central Loan Assistance (CLA) of Rs. 500 crores benefitting 34 power stations mostly of 50/60/100/110/120/140 MW capacities. R&M in a structured manner was initiated as a centrally sponsored programme during the 7th Five Year Plan. The momentum of carrying out R&M works was continued through 8th and 9th Plans but the same could not be sustained during the 10th Plan.

Based on the discussions held with Ministry of Power, various utilities, PFC and BHEL, CEA prepared a document on “National Perspective Plan for Renovation & Modernization and Life Extension and Up-rating (LE&U) of thermal power stations up to the year 2016-17”. This document which also includes revised guidelines for Renovation & Modernization / Life Extension works on coal/lignite based thermal power stations was released by Honourable Minister of Power on 14th December 2009. In the Perspective Plan, 53 units (7318 MW) for LE works and 76 units (18965 MW) for R&M works were identified for 11th Plan and 72 units (16532 MW) for LE works and 23 units (4871 MW) for R&M works were identified for 12th Plan.

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

In the past, R&M measures were hampered due to lack of proper planning. Proper investigation to identify the R&M works to be carried out and preparation of technical bid documents based on the investigation was not done. This resulted in unsystematic and additional work during execution phase and uncertainty about costs resulting in excessive implementation time, long shutdown periods of plants and cost overruns. In the absence of standard commercial rules and policies, suppliers showed little interest in R&M work. Therefore a strong need was felt for providing standardized bidding procedures as well as model contracts, formats and specifications etc. to the utilities. Standardization will harmonize the requirements of all the stakeholders and will lead to their increased participation.

The Indo-German Energy Forum (IGEF)

The Indo-German Energy Forum (IGEF), inaugurated in 2006, provides a platform to discuss energy related issues of mutual interest. The first meeting of the ad-hoc sub-group on “energy efficiency in thermal power stations”, constituted as per decision of meeting of IGEF in December 2007, was held under the chairmanship of Joint Secretary (Thermal), Ministry of Power on 12th March, 2008 in which preparation of standard tendering document for the purpose of R&M activities was, inter-alia, identified as an area of the activities. The scope of the assignment was divided in two parts as under:-

Phase-I Activity:

Phase-I activity comprised an assessment of tendering procedures currently being followed by public utilities in India and a review of documents used for standard R&M projects and the documents which have already been developed for energy efficient R&M projects, financed particularly by World Bank. This activity was carried out by M/s Evonik under the grant provided by GTZ.

Phase-II Activity

Phase-II activity comprised the preparation of the model documents / templates in consultation with Task Force, power utilities & financing agencies.

In the 3rd meeting of Indo-German Energy Forum (IGEF) convened in Berlin on 4th November 2009, KfW proposed to finance and carryout the work programme of phase-II Activity, on behalf of CEA & in consultation with the Task Force. In a meeting held in MOP on 17th December 2009, chaired by Joint Secretary (Thermal), MOP, the representative of KfW suggested that CEA may act as “Project Executing Agency” for the phase-II activity. Accordingly Ministry of Power, Govt. of India have entrusted the task of “Project Executing Agency” to CEA for implementing Phase-II activity. Under Indo-German Energy Forum (IGEF) assisted programme, M/s Lahmeyer International (India) was appointed on 16th March 2012 to provide the consultancy services for ‘Development of tendering procedures and model contract document for R&M of Fossil Fuel Based Power Plants in India.’

Due Diligence done by LII of the R&M Documents of other Projects

Before the preparation of this model document, LII did a thorough review of the R&M Documents of the following Power Plants:

Document Number	Rev No	Description	Page No.	Date of Issue

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

Documents of the Power Plants where LII was associated with R&M activities

- R&M and LE of Units 1 & 2 of Ukai TPS (2x120 MW) of GSECL.
- R&M of Units 1 & 2 of Kutch Lignite TPS (2x70 MW) of GSECL.
- Refurbishment & Up-gradation of 240 TPH Blast Gas Fired Boiler of Ispat Energy Ltd.
- Detailed design for the Balance of Plant for the R&M of OBRA 'A' & 'B' Thermal Power Station.
- RFP document for the R&M Unit 1, 3, & 4 (3x50 MW) of Patratu TPS of JSEB.
- R&M crash programme document for Units III & IV of Panki Thermal Power Station (2x105 MW).

Documents provided by CEA

- Remaining Life Assessment / Condition Assessment Report- Nasik Unit-3 of MAHAGENCO.
- Energy Audit Report- Nasik Unit- 3 of MAHAGENCO.
- Detailed Feasibility Report- Nasik Unit-3 of MAHAGENCO.
- Draft Detailed Project Report -Kolaghat Unit-3 of WBPDCCL.
- Service Contract- R&M of Unit-1 Panipat TPS of HPGCL.
- Tender document for Supply, Erection, Testing and Commissioning of Air Preheater for Unit 5 & 6 Koradi TPS, MAHAGENCO.
- Tender document for replacement of 6.6 KV station transformer incoming breaker & Tie- breaker of Koradi TPS, MAHAGENCO.
- Tender specification for Design, Engineering, Supply, Erection, Testing and Commissioning of Rotary Air Preheater for Units 4 & 5, Nasik TPS of MAHAGENCO.

Documents provided by WBPDCCL

- Energy Audit Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Detailed Project Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Project Design Report of Bandel Unit -5 (210 MW) of WBPDCCL.
- Technical Specifications. (Vol. II of RFP Document for R&M Contractor).
- RLA for Boiler for Bandel Unit -5.
- RFP for R&M Consultant for Bandel Unit -5.
- Commercial Volume-I of RFP for Bandel Unit -5 for R&M Contractor.

KfW Documents

- Model Contract Document issued by KfW.
- Guidelines issued by KfW for the assignment of Consultants.

World Bank Documents

- Standard Bidding Document for Procurement of Plant, Design, Supply and Installation.
- Standard Request for Proposal for the Selection of Consultants.

OBJECTIVE OF THE MODEL TENDERING PROCEDURE DOCUMENT

Central Electricity Authority (CEA), the Project Executing Agency / Employer has appointed Lahmeyer International India Pvt. Ltd. (LII), the Consultant to Develop Standard Procedures and Model Documents for the Renovation and Modernization (R&M) of Fossil Fuel based Power Plants in India. The above assignment is being financed by KfW Entwicklungsbank. Development of Model Tendering Procedure for Selection of R&M Contractors and Consultants is one of the tasks under this assignment. Accordingly, this Tendering Procedure for Selection of R&M Contractors and CXonsultants has been prepared for the guidance of Project Authorities who may decide to carryout R&M of their old Coal based Power Plants so as to extend the life of their plants and make them energy efficient in compliance with statutory norms. The utilities are advised to refer to the guidelines of the standard documents for the preparation of the project specific documents for their project.

1 INTRODUCTION

1.1 Guiding Principles

This Tendering Procedure has been prepared to provide the guidelines for the methodology to be adopted for selection of R&M Contractors and Consultants in a fair and transparent manner with an objective to carry out the Energy Efficient Renovation & Modernization work by adhering to acceptable standards of quality and cost competitiveness. The prescribed methodology aims at employing capable and competent contractors from any part of the world to best achieve Life Extension, Reliability improvement and Performance Restoration/Enhancement objectives of R&M Projects. While developing the procedure, the tendering practices prescribed by international development banks and practices followed by public sector undertakings of India were reviewed.

1.2 Applicability

This Tendering Procedure may be used by utilities as a guideline for designing a Tendering Process for selection of Contractors and Consultants for Renovation & Modernization work for coal fired thermal power plants in India.

2 OVERALL TENDERING PROCESS FOR CONTRACTORS

2.1 Qualification of Bidders

2.1.1 Pre-Qualification vs. Post Qualification

Pre-qualification is carried out to assess whether or not the interested bidders are capable of properly delivering as per the contractual scope of work. The capability of the bidders is assessed on the basis of qualification documents submitted as part of the pre-qualification exercise. Only such bidders who are found qualified in the pre-qualification stage are issued the tender documents and are allowed to submit the bid for the R&M work.

In tendering process with post-qualification, the qualification documents and the actual bids are submitted simultaneously.

Advantages of pre-qualification:-

In pre-qualification route, bidders have a fair idea whether or not they are qualified to be considered as prospective contractor for the work being tendered, before spending considerable time and expenses for preparing a detailed bid. Further, prequalification gives the Owner some idea about the qualified bidders who are likely to submit the bid. In case it turns out that inadequate number of prospective bidders are qualified to bid; the owner may explore ways to increase participation of qualified bidders.

Advantages of post-qualification:-

Post-qualification route obviates the need for a separate pre-qualification exercise before submission of proposal. Further, as the qualification documents are submitted along with proposal, latest qualification data/status as on the date of submission of proposal can be used for qualification.

Recommended Qualification Procedure for R&M Work:-

Pre-qualification route is more suitable for large or complex work that involves considerable time and effort for preparation of detailed bid/proposal.

The Energy Efficient R&M work is technologically complex and challenging in terms of execution. It is important to ascertain the availability and willingness of capable and qualified bidders through a pre qualification process before inviting tenders. Further, evaluating tenders from a large number of bidders, both qualified and unqualified, will make the tendering process time consuming. Therefore, only parties qualified in a pre-qualification process should be issued Tender Documents and should be allowed to participate in the Tendering process. For all the packages, bids should be invited after conducting a pre-qualification process to shortlist qualified bidders

The objective of the pre-qualification is to allow only the capable and qualified bidders having requisite technical expertise, relevant experience, project execution capability and financial resources to participate in the tendering process. The pre-qualification document should specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The prequalification route is not intended to limit the competition to a predetermined number of potential bidders. While following this route, all the interested parties meeting the specified criteria will be issued tender documents and allowed to submit bid.

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

2.1.2 Qualification Requirement

Due care should be taken to frame appropriate Qualification Requirement (QR) to ensure adequate participation of competent bidders. While framing the QR, detailed information should be collected from prospective bidders regarding their experience and capability.

The Qualification Requirement should include Technical Qualification Requirement, Financial Qualification Requirement and should cover Reasons for Exclusion if any. The Technical Qualification Requirement should call for technological & execution capabilities and experience in the execution of comparable projects. Financial Qualification Requirement should call for evidence of financial soundness; past experience in executing projects of similar magnitude and ability to mobilize financial resources for executing the project. The reasons of exclusion are aimed at excluding parties that may have unfair advantage over other parties or may have past record of wrongdoing. Any bidder who is or was involved as a consultant in the preparation or implementation of the project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of the project is to be excluded. Any bidder who is legally barred from the procurement process in India on the grounds of previous violations of regulations on fraud and corruption is to be excluded.

Too weak a qualification requirement may lead to the entry of incompetent bidders with lower price quotes. Awarding the R&M Contract to an incapable bidder may severely jeopardize the R&M programme. Similarly, too stringent a qualification requirement may restrict the number of eligible bidders to only a few, thereby restricting competition which may lead to higher price quotes.

The specified Technical and Financial Qualification Requirement should balance the twin objectives of restricting participation in the tendering process to capable and experience bidders with ability to successfully undertake the Renovation & Modernization work and ensuring participation by adequate number of interested parties to encourage competitive bids.

Bidders should be entitled to meet the Qualification Requirements jointly with their associates or consortium partners. In such cases, bidders and their associates and/or consortium partners should be asked to furnish a joint undertaking in the prescribed format to discharge their obligations. A bidder can be a Joint Venture Company as well. In all cases of qualification through Consortium/Associate/JV, all the parties will be jointly and severally liable to the Owner to discharge all contractual obligations.

2.1.3 Qualification Document

The intending Bidders should be asked to furnish documentary evidence and performance certificates in support of their qualification credentials along with their response to Request for Qualification. The documentary evidence should include inter alia list of orders executed along with copies of orders, Performance Certificates indicating date of completion as well as documents of company profile incorporating information about technical man power, financial strength, resources, organization, experience to undertake such jobs and certificates of audited accounts for last three years along with copies of latest income tax return etc.

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

2.2 Stages of Tendering Process

The bid/proposal for the Renovation and Modernization work comprises (i) Techno-Commercial proposal/bid (without price) and (ii) Price/Financial Bid. The owner/processor has the option of inviting these two components of the bid simultaneously or in stages/in bids.

2.2.1 Single Stage Single Envelope Bidding

In this method of bidding, the bidder is asked to submit the techno-commercial bid along with price bid, which are opened simultaneously. The quoted prices of the bidders are thus known before the evaluation of techno-commercial proposals of the bidders to assess their techno-commercial responsiveness and before any discussion with the bidders regarding deviation in bids with respect to the tender conditions. The advantage with this method is that in case of large number of bids, detailed evaluation of bids can be restricted to the lowest bid and the bids with price quote close to the lowest bid. However, it has two disadvantages. Firstly, in case the bid with lowest price quote turns out to be techno-commercially non-responsive, it becomes a tough call to reject the lowest price bid and accept a bid with higher price quote. Secondly, this method has no provision of inviting supplementary price quotes, in case; the purchaser wants to introduce some changes in the specifications on the basis of post-bid discussions.

2.2.2 Single Stage Two Envelope Bidding

In this method, the bids for the Renovation and modernization work are submitted in two parts. Both the parts are submitted together.

The Part-I bid comprises the techno-commercial bid without prices. The main components of the techno-commercial bid are Bid Guarantee, Scope of Work & Terminal Points, Technical descriptions/details, Technical data sheets, List of Tools & Tackles, Deviations to technical and commercial specifications/conditions, Overall completion period & L-1 Network Schedule, Resource deployment schedule, Detail of Sub-Contractors/Sub-Suppliers/Sub-Vendors, Spares list, Quality Assurance Programme, Details of the present commitments & details of contracts in hand, Indices and Coefficients for Price Variation etc. Part -II Bid will comprise quoted price and Performance Guarantee Parameters. Initially, only the Part-I bid is opened and Part-II bid is kept in safe custody.

After evaluation of the techno-commercial (Part-I) bids, each bidder who has submitted a broadly responsive Part-I bid, is invited for techno-commercial discussion, during which, all the required amendments, additions, deletions and other adjustments are noted and recorded in a Memorandum. Part-II bid (Price Bid) of only those bidders is opened, whose Part-I bid is found to be responsive to tender specifications and conditions.]

The Part-II bid comprises quote for Prices and the Performance Guarantee parameters in the form of filled up Schedules of Prices and Performance Guarantees.

However, after the evaluation of Part-I bids (techno-commercial bids) and before opening of Part-II bids (Price Bids), in case a particular bidder is asked to make changes in his techno commercial offer that may have price implications, then

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[4]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

that bidder is allowed to submit supplementary price against such changes before the opening of Part-II bids (Price Bids).

This tendering method has the advantage that the evaluation of techno-commercial bid and techno-commercial discussion is carried out without any influence of price quotes. The price-bid of techno-commercially non-responsive bid is not opened at all. Further, in case any bidder is asked to change his proposal during techno-commercial discussions for conformance to tender conditions, the bidder is given an opportunity to submit supplementary price corresponding to that change. However, in this tendering method, techno-commercial bids of all the participating bidders need to be evaluated in detail. This may consume a lot of time and effort when quite a large number of bids are received.

2.2.3 Two Stage Bidding

In this tendering method, in the first stage, the bidders are asked to submit only the techno-commercial bid without any price quote and guaranteed performance parameters. The techno-commercial bids are evaluated to assess the techno-commercial responsiveness of the bid. Techno-commercial discussion is carried out to freeze the techno-commercial conditions of the contract. In the second stage, only the bidders whose techno-commercial bids are found to be responsive, are asked to submit price bids comprising quoted price and quoted performance guarantee parameters. The biggest advantage of this tendering method is that the bidders know the final techno-commercial contours of the tender before submitting any price bid. Therefore, they get the opportunity to base their price quotes on the final agreed techno-commercial conditions of the contract. However, the flip side is, that the bidders know who are the bidders, whose techno-commercial bids have been evaluated to be responsive, before making the price quotes. This may lead to uncompetitive price quotes in case where the number of responsive bidders is low (i.e. one/two). Further, in case only one bid is found to be responsive, the bidder is likely to quote largely inflated price to take advantage of the situation. Further, contracts/procurement norms of Government undertakings may not allow inviting price quotes from only one bidder.

2.2.4 Recommended Tendering Process

Each R&M project is unique and associated with many complexities regarding assessment of the quantum and nature of retrofit and replacement to be carried out. It is therefore important to firm up the technical contours of the contract before opening price quotations so that all the bidders and the owner have agreement and clarity about the nature and scope of the work on which the price bids are to be based. Considering the complexities of R&M Projects, it is recommended to invite the bids in two parts in single stage, as discussed in Para 2.2.2 above. The rationale behind inviting Part-II bid along with Part-I bid is that bidders will make their quotes before the number of responsive techno commercial bids is known. This will encourage competitive price quotes. However in case a bidder is asked to make changes in its techno commercial offer that may have price implications, that bidder may be allowed to submit supplementary price against such changes before opening of Part-II bids (Price Bids).

3 PACKAGING CONCEPT FOR R&M WORK

3.1 Single Package R&M vs Multiple Package R&M

Aligning the timeline of tendering process and execution of different packages and interfacing among different packages when R&M is being implemented in multiple packages is essential for smooth and timely execution of the R&M project. This risk may be mitigated by proper planning of tendering and execution of R&M project and employing suitable Project Management / Coordination team.

When a utility is planning to carry out renovation and modernization of the entire plant covering a number of major equipment and systems, it has the option of do it as a single package by a single contractor or split it into a number of packages each covering a major part of the plant /system and awarding these packages to separate contractors.

The advantages and disadvantages of single package R&M and multi-package R&M are listed in table 3.1.

Table 3.1
Single Package R&M Vs Multi-package R&M

Single Package	Multiple Package
<u>Advantages</u> <ul style="list-style-type: none"> ⇒ An all inclusive scope of work can minimize the need for changes in scope of work during execution and minimize disputes pertaining to scope of work. ⇒ Single point responsibility of one R&M Contractor. ⇒ For delay in any part, liquidated damages will be paid by the Contractor based on total contract value. ⇒ In case of deficiency in performance, liquidated damages will be paid by Contractor based on total contract value. ⇒ Less time and effort required in selection of contractor. 	<u>Advantages</u> <ul style="list-style-type: none"> ⇒ Lower contract price and better control on progress based payment. ⇒ Better suppliers/vendors for each package specialized in their respective area. ⇒ Owner can better monitor and control the work at more granular level.
<u>Disadvantages</u> <ul style="list-style-type: none"> ⇒ Higher contract price. ⇒ Selection of suppliers/vendors for different sub packages at the discretion of the main contractor. ⇒ Less transparency in project execution information flow. ⇒ No of competent Contractors available to execute such big R&M Contract is limited which leads to limited competition. 	<u>Disadvantages</u> <ul style="list-style-type: none"> ⇒ No single point contractor responsibility. Owner responsible for overall R&M work. ⇒ Scope of work, terminal points and interface requirements for different Contractors need to be defined properly to ensure there is no mismatch and no system/equipment is missed. ⇒ Liquidated damage for delay is paid by individual contractor linked to his contract value though delay in

---	-----------------

	single package may delay the whole project. ⇒ More time and effort required for selection of contractors.
--	--

3.2 Recommended Package List

Implementing the Renovation and Modernization of the entire plant as a single package by a single contractor makes the tendering and execution process simple for the owner as it obviates the need to split the work into different packages, to ensure interface between different packages during design and execution and to properly align the completion schedule of different packages. Further, single package allows owner to fix single point responsibility and avoids contractual disputes arising out of acts of omission of one contractor affecting other contractors. However, Renovation and Modernization of different systems of the plant need different expertise and experience. There will be very few contractors, if any, who have in-house expertise and experience to carry out the R&M of all areas of a coal fired power plant. A single EPC bid for R&M work will thus restrict number of qualified bidders, which will also increase the cost of R&M. In order to balance the conflicting needs of minimizing project/contract management complexities and having adequate number of eligible and willing bidders having relevant expertise and experience to carry out the R&M work under a package, it is recommended to split the R&M work into the following packages:

1. Boiler & Auxiliaries (including but not limited to Pulverizes, Feeders, PA Fans, FD Fans, ID Fans), ESP, Auxiliary Steam system and MS, HRH, CRH, HPBP & LPBP piping and associated Electrical, C&I and Civil Works.
2. Turbo-Generator & Auxiliaries (including but not limited to Heaters, Deaerator, Condenser, BFPs, CEPs), TG Cycle piping including Boiler Feed piping and associated Electrical, C&I and Civil Works. This package will also including R&M of C&I system common to both SG and TG.
3. Coal Handling Plant and associated Electrical, C&I and Civil Works.
4. Ash Handling System and associated Electrical, C&I and civil works.
5. Mechanical Balance of Plant (BOP) System which includes Plant Water System (Raw water intake system, Pre-treatment Plant, D.M.Plant, CW System including Cooling Towers, ACW & CCW System), Compressed Air System, Fuel Oil System, Fire Fighting System and Miscellaneous balance mechanical systems.
6. Electrical BoP including inter alia Switchyard, Power Transformers and Switchgears.

---	-----------------

4 CONTRACTING CONCEPT FOR R&M WORK (CONTRACTORS)

The utility should adopt a fair and transparency bidding process that provides equal opportunity to all eligible bidders to participate in the tendering process. The objective of the tendering process is to select a contractor that is likely to execute the scope of renovation and modernization work satisfactorily adhering to envisaged completion schedule and acceptable quality standards at competitive prices.

4.1 International Competitive Bidding vs Domestic Competitive Bidding

International Competitive Bidding (ICB) process will be followed for high value contracts and contracts that are complex in terms of engineering and execution skills to achieve the best possible supply and services at competitive prices. R&M of BTG, BTG auxiliaries, Power Transformers and Switchyard are likely to be technologically complex & involve higher value contracts and hence likely to evoke response from many reputed international bidders. Hence packages covering these systems may be tendered on International Competitive Bidding (ICB) basis. However, R&M of other BoP packages are not likely to see participation by many reputed international bidders and hence may be tendered on Domestic Competitive Bidding (DCB) basis.

Recommended list of packages and suggested nature of bidding is given at Table 4.1 below:

Table-4.1
Nature of Bidding

S. No	Package	Nature of Bidding
1	Boiler & Auxiliaries (including but not limited to Pulverizers, Feeders, PA Fans, FD Fans, ID Fans), ESP, Auxiliary Steam system and MS, HRH, CRH, HPBP & LPBP piping and associated Electrical, C&I and Civil Works.	ICB
2	Turbo-Generator & Auxiliaries (including but not limited to Heaters, Deaerator, Condenser, BFPs, CEPs), TG Cycle piping including Boiler Feed piping and associated Electrical, C&I, and Civil Works. This package will also include R&M of C&I system common to both SG and TG.	ICB
3	Coal Handling Plant and associated Electrical, C&I, and civil works.	DCB
4	Ash Handling system and associated Electrical, C&I and civil works.	DCB
5	Mechanical Balance of Plant (BOP) systems which include Plant Water	DCB

---	-----------------

S. No	Package	Nature of Bidding
	System (Raw water intake system, Pre-treatment Plant, D.M.Plant, CW System including Cooling Towers, ACW & CCW System), Compressed Air System, Fuel Oil System, Fire Fighting System and Miscellaneous balance mechanical Systems	
6	Electrical BoP including inter alia switchyard, power transformers and Switchgears	ICB

4.2 Lump sum Price vs Unit Rate

In a lump sum price contract, the entire scope of supply and services is grouped into a single overall contract price for the contractors to quote their price against. During execution of work, phasing of payment is done against progress of supply and services, but the sum of total of all the payments is the contracted price and it remains unchanged irrespective of the quantity of supply and service required to complete the contracted scope of work. The payments are linked to contractual milestones.

The bidder quoting the lowest lump sum price for the overall contract scope of work is treated as the lowest price bidder.

For unit rate contract, the bidders quote the unit rates for each supply and service against an estimated bill of quantity. The bidder with lowest total price for the estimated BOQ is treated as the lowest price bidder. During execution, payment is made based on actual quantity of each item/type of supply and service.

Given the nature of renovation and modernization work, it is difficult to exhaustively identify all the types/items of supply and service required and estimate quantities for them. Therefore, unit rate contract is difficult to design for renovation and modernization work. It is more practical to contract R&M work on lump sum price basis for the entire scope of plant, equipment, machinery, material, parts and including design, engineering, procurement, supply, assembly, construction, erection, testing & commissioning.

Each package therefore should be awarded on lump sum EPC contract basis based on the Scope and Terminal Points identified in the Bid Documents of the corresponding package.

4.3 Scope Change

The scope of Renovation & Modernization is defined in the bid documents of different packages on the basis of Residual Life Assessment / Condition Assessment and Energy Audit. During execution, in case there arises a need for any change in scope of work, change order should be issued. The contract should include procedure to deal with such change order.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[13]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

Appropriate change order clause will be built into the contract to deal with the need to change the scope of the contract due to surprises encountered during the execution of the R&M work.

4.4 Price Basis & Price Variation

The Contract Price should include price of executing whole scope of work specified in the Contract. The price of the contract should be on lump sum price basis for the entire scope covered in the contract. The contract price should be subject to adjustment during the contract period to reflect change in labour and material price levels as per price variation formula specified in the tender document, which is subject to limits specified in the tender specification.

For adjustment in contract price, bidding document should specify base date for contract price and price variation formula. The price variation formula should break down the total price into components that are not adjustable and components that are adjustable by indices specified for the various components. The bidders may be asked to indicate the coefficients (in the techno-commercial bid) to distribute the adjustable price into different components.

4.4.1 Scope

The scope of work for each package should consists of design, engineering, manufacture, supply, inspection & testing at supplier's works, packing, forwarding to site, transportation, unloading, storage, handling at site, steel structures, civil works, insurance, erection, painting, start-up, trial operation, testing, commissioning and performance guarantee testing, guarantee & warranty and handing over on turnkey contract basis.

4.4.2 Taxation

The tender specification should explicitly indicate the taxes and duties that will be reimbursed to the contractor by the Owner. Usually custom duty, excise duty, VAT, sales tax, GST is reimbursed by the Owner on actual for direct transactions between Owner and Contractor. All other taxes (i.e. taxes other than specifically mentioned in the contract for reimbursement) levied on the contractor in connection with the contract work, are borne and paid by the Contractor. Such taxes are to be included by the bidders in the quoted contract price. Cost of transportation of material, equipment, tools & tackles are to be included in the quoted contract price.

4.4.3 Insurance

Bidding document should include clauses that require contractor to bear the cost of insurance. Bidding document should specify the types and terms of insurance to be bought by the contractor. Usually, all risk type of policy is specified.

4.5 Terms and Methods of Payment

The payment for the supplies and services should be made progressively as the project execution progresses. Payments should be made in currencies agreed between Owner and Contractor in the Contract. The Bidders should be asked to prepare and submit to the Owner item-wise breakup of the Contract price in the currencies of the Contract. The contract price break up should be linked to the

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[14]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

detailed PERT network of the contract. Owner may pay 10% of the contract price as initial interest free amount. Major part of the payment for supply items should be linked to dispatch and receipt of item. A part of the contract price for supply and service should be linked to commissioning/completion equipment/facilities. Payment should be made through Letter of Credit and Electronic Transfer.

4.6 Splitting of Contract

For each package of the renovation & modernization work, there should be a contract encompassing the entire scope of the work and the principal bidder should be made responsible for executing the entire scope of work. However, this contract may be split into two or more independent component contracts for offshore supply, onshore supply, transportation & port clearance, erection & installation services etc. All the independent component contracts should contain a cross-fall breach clause specifying that breach of one contract will constitute breach of the other contracts.

4.7 Assignee

Any foreign bidder should have the option to propose an Assignee in its bid to execute the Indian supply & services part of the contract. The Assignee should have acquired capability and relevant experience to perform his scope of work.

4.8 Sub contractors and Sub vendors

The contractor may subcontract parts of supply and service to sub-contractor/sub-vendors approved by the Owner. However, the successful bidder should not be permitted to subcontract the entire work on back to back basis or otherwise.

4.9 Performance Guarantee

The bidding documents should specify the performance parameters, the bidder is required to guarantee. Against each specified parameter, the bidding document should specify the minimum performance level that the bidder is required to guarantee. The bidding documents should stipulate performance test procedures to measure actual value of performance parameters. If the measured performance parameters fall short of guaranteed or specified value, and the contractors fail to bring it to acceptable levels through repair and rectification within a stipulated period, the executed plant equipment may be rejected and payments already made may be recovered. For shortfall in performance parameters that have economic consequences, if the quantum of shortfall is within certain limits specified in tender specification, the plant and equipment may be accepted after levying liquidated damages. If the shortfall in performance level is beyond the limits specified in tender specification, the plant and equipment will be rejected and payments already made will be recovered. Shortfall in functional parameters pertaining to safety or statutory environmental requirements, the plant and equipment will be rejected and payments already made will be recovered.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[15]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

4.10 Liquidated Damage

The contractor should be made responsible to pay Liquidated Damages for delay in completion of R&M work. The aggregate liability for delay may be limited to 10% of contract price.

The contractor should be made responsible to pay Liquidated Damages for shortfall in achieving guaranteed performance parameters. The aggregate liability for shortfall in performance guarantee parameters may be limited to 10% of contract price.

4.11 Advance Payment Security

The contractor should be made responsible to furnish unconditional Bank Guarantee equivalent to advance payment made to him. The value of advance payment security may be reduced at regular intervals on prorata based on the value of the equipments/service/facilities received.

4.12 Contract Performance Security

The bidding document should specify contract performance security to be furnished by the contractor to protect the Owner in case of breach of contract by the contractor. The contract performance security may be of 10% of the contract price for all the contracts and may be valid till three months beyond the defect liability period.

4.13 Retention Money

10% of price of each item of supply and service should be held as retention money until final acceptance of contractor's work. After provisional acceptable, contractor may be allowed to take the retention money by furnishing retention money security guarantee of equivalent amount.

4.14 Force Majeure

The bidding document should incorporate appropriate force majeure clause to cover any event beyond the reasonable control of the Owner or Contractor and which cannot be avoided notwithstanding reasonable care by the affected party. No delay or non-performance by either party caused by an event of force majeure will constitute a default or breach of contract. The bidding document should specify procedure to deal with the consequences of an event of force majeure.

4.15 Applicable Law

The contract for renovation & modernization work should be governed and interpreted in accordance with laws in force in India.

4.16 Dispute Resolution

The bidding document should specify dispute settlement mechanisms such as Adjudication and Arbitration.

Document Number	Rev No	Description	Page No.	Date of Issue

---	-----------------

5 TENDERING FOR SELECTION OF R&M CONTRACTORS

5.1 Invitation for Bid

Tender documents should be issued to parties qualified in pre-qualification stage. The bidding document should comprise the following main components:

- Invitation for Bid
- General Project Information
- Instruction to Bidders
- General Conditions of Contract.
- Particular Condition of Contract.
- Technical specification & tender drawings.
- Bid forms & other formats
- Bid Datasheets
- Format for Price Schedules.

5.2 Clarification and Amendment

All clarifications/corrigendum/Addendum/Amendment to the Tender Documents should notified to all the Bidders

5.3 Time frame

Adequate time should be allowed to the bidders for preparation and submission of Bid.

5.4 Language of Bid and Tender Document

The bid submitted by the bidders should be in English language. Any document / literature furnished by the Bidder in any other language should be accompanied by authentic English translation. The English translation should be used for interpretation of the bid. The tender documents issued to the bidders should be in English language.

5.5 Currency of Bid and Currency Conversion

The bidders should be allowed to quote prices of supply item in any currency. However, the number of foreign currencies used should be limited to some number specified in tender document.

Indian bidders quoting in foreign currencies should be asked to comply with relevant government regulation. The prices of local (Indian) services such as local transportation, installation, construction etc should be quoted in Indian currency.

5.6 Validity of Bid

The Techno-Commercial bid and price bid submitted by the bidders should be valid for sufficient period to allow ample time for bid evaluation, post-bid discussion, internal processing and award.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[17]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

5.7 Bid Security

Every bidder should furnish, as part of the techno-commercial bid, a Bid Security for an amount to be specified in Tender Documents. The bid security will be forfeited in case (1) the bidder withdraws or modifies the bid during validity of bid or fails to sign the contract document or deposit contract performance security when selected as the successful bidder or (2) commits any fraud.

5.8 Integrity Pact

The Tender Documents should include a format for Integrity Pact. The Owner and Bidder will enter into an integrity pact before the bidders bid is considered by the Owner.

5.9 Components of Bid

5.9.1 Techno-Commercial Bid

The Techno-Commercial Bid should comprise of the following main components:

1. Bid Security.
2. Filled up and signed form of bid.
3. Authorization in favour of a person signing the bid.
4. Overall project completion schedule.
5. Contractor's Resource Deployment schedule.
6. Requirements of the contractor at site.
7. Technical details and Quality Assurance Programme.
8. List of mandatory and recommended spares.
9. Deviation to Technical Specifications.
10. Deviation to commercial conditions.

5.9.2 Price Bid

The price bid should comprise of the following main components:

1. Filled up form of Bid.
2. Filled in schedule of Prices.
3. Filled in schedule of Guaranteed Performance Parameters.

Prices of Indian supply items should be quoted in Ex-works basis including packing and forwarding. Prices of Foreign Supply items should be quoted on CIF Indian Port basis. Cost of inland transportation and insurance should be indicated separately. Taxes & duties on all direct transaction between Owner and Contractor should be indicated separately.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[18]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

6 BID EVALUATION AND AWARD OF CONTRACT FOR R&M WORKS

A comparative evaluation of the price bids should be carried out to identify the techno-commercial responsive and qualified bidder with Lowest Overall Evaluated Price after taking into account, adjustment for differential quote for Performance Guarantee Parameters using adjustment factors specified in the Tender Documents (adjustment to price of bids with quoted Performance Guarantee Figure inferior to the value quoted in the responsive bid with most competitive quote for that Performance Guarantee Parameter) and cost compensation if any arising from evaluation of techno-commercial bids. However, bids with quote for any Performance Guarantee Parameter inferior to the minimum or maximum value for the parameter specified in the tender conditions should be rejected.

The qualified and techno-commercially responsive bidder with the lowest evaluated price should be selected as contractor for carrying out the R&M work.

In case the lowest price quoted is higher or lower than the estimated reasonable cost for the work by a very large amount, further investigation should be made regarding the reasonableness of the quoted price.

6.1 Bid Submission and Bid Opening

The date of bid opening of Part-I (Techno-Commercial) should be same as the last date of bid submission. The Techno-Commercial Bids should be opened promptly after the deadline for receipt of bids. The date and exact time of opening of Techno-Commercial Bid should be specified in the Tender Documents. The date and time of opening of Price Bid should be communicated to the bidders after evaluation of the techno-commercial bid. Bidders or their representatives should be allowed to be present during opening of Part-II and Part-I bid.

6.2 Completeness of Bid

Each of the techno-commercial bid should be first examined to ascertain whether the required bid security has been furnished, all the required components have been submitted and the bids/attached documents have been properly signed.

6.3 Evaluation of Techno-Commercial Bids

The techno commercial bids should be evaluated to ensure that:

- (1) The proposals are in line with the intended scope, quality and performance of the contract;
- (2) The proposals do not adversely affect the rights of Owner and obligations of contractor envisaged in the tender conditions;
- (3) The proposals are in line with and are complete as per technical specification and commercial conditions.
- (4) The proposals conform to completion schedule specified in the tender documents;
- (5) The proposals meet the performance guarantee requirements specified in tender documents.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[19]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

The techno-commercial bids from pre-qualified bidders meeting above criteria during evaluation should be considered techno-commercially responsive to tender conditions. The Owner may invite any bidder(s) for a meeting during the evaluation stage for the purpose of seeking some clarifications..

The Owner may issue amendments to the tender documents, if considered necessary by Owner, based upon evaluation of techno-commercial evaluation and post-bid clarification meeting.

The bidders may be asked to withdraw some deviations to tender conditions and technical specifications to make the bid compliant with the tender specifications.

If any amendment to the tender documents or any withdrawal of deviation by a bidder may have cost implication, that bidder may be allowed to furnish supplementary price quotes against such amendments /withdraw of deviations, before opening of the Part-II Bid (Price Bid).

The bidders of the techno-commercially responsive offers should be intimated the date and time of Part-II Bid (Price Bid). The price bids of such techno-commercially responsive bids should be opened on the scheduled date and time in the presence of bidders or their representatives who want to be present during opening of Price Bid. The bidders of techno-commercially non-responsive bids should be intimated about such finding and their bid security should be returned.

6.4 Evaluation of Part-II Bids

After opening, the price bids should be examined to ensure that

- (i) The bids are complete and signed. The price schedules and performance guarantee schedules are filled up. Incomplete and improperly filled bids should be rejected.
- (ii) There is no arithmetic error in price quotes.

The tender document should elaborate a method for dealing with arithmetic errors.

To facilitate comparison of quoted prices, the bid prices expressed in different currencies may be converted to a single currency. The tender documents should explicitly specify the currency and source and date of exchange note to be used for converting bid prices to a common currency.

For comparison of price bids, the following should be added to the arithmetically corrected quoted price:

- (1) Adjustments for quoted performance guarantee parameters.
- (2) Cost compensation for deviations.
- (3) Any price preference to domestic bidders as per Govt. Policy.

The prices arrived at after adding these values to quoted price will be the evaluated prices of the techno-commercially responsive qualified bids. Bidder with the lowest evaluated price bid should be selected as successful bidder for award for the R&M Contract. The evaluated price arrived at as above will be used for comparison of price bid only. The arithmetically corrected quoted price will be the contract price.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[20]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

The taxes, duties & levies that are to be reimbursed by the Owner on actual basis as per stipulation of tender documents will not be considered for comparison of price bid.

The escalation in prices due to change in material and labour index during execution will not be considered in price bid evaluation.

6.4.1 Price preference

In case Government Rules mandate any price preference to domestic bidders, the same should be clearly brought out in the tendering documents along with an unambiguous procedure for applying the price preference.

6.4.2 Cost Compensation for Deviation

In case the bidder has taken any deviation to technical specification or tender condition and after evaluation of techno-commercial deviation, Owner decides to allow the bidder to retain the deviation, the cost implication, if any, of such deviation will be added to the quoted bid price for evaluation of price bid.

6.4.3 Differential Loading for Quoted Performance Guarantee Parameters

Bidders should be asked to quote guaranteed value of performance guarantee parameters of the retrofitted plant and facilities on the prescribed performance guarantee schedule as part of the price bid. The tender documents should indicate adjustment factors or bid evaluation factors for performance guarantee parameters having financial implication. For evaluation purpose, for every such performance parameter, the most favourable quoted value for the parameter should be taken as the base value and the difference between quoted value of any other bidder and base value should be multiplied with the indicated adjustment factor for loading the price bid of the bidder with the performance parameter inferior to the base value.

6.5 Letter of Award and Signing of Contract

The successful bidder should be notified within the bid validity period in writing that his bid has been accepted. Once the successful bidder submits contract performance security, the unsuccessful bidders will be intimated that they have not been successful and their bid security will be released.

After the deposition of contract performance security and other required details/documents by the successful bidder, the contract will be signed without any delay and the bid security of successful bidder will be released.

6.6 Inadequate Participation by Bidders

To promote competitive price quotes, efforts should be made to ensure that adequate number of prospective bidders participate in the pre-qualification and subsequent bidding process. In case the number of parties qualified in pre-qualification process is less than three, the reasons of non-participation by capable/eligible entities should be analyzed. Similarly, whether the specified qualifying requirements are stringent should be examined. Preferably three or more (at least two) qualified bidders should submit the bid for the R&M work.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[21]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

6.7 Unreasonable Price Quote

If the bid price of bidder with the lowest evaluated price is too low or too high as compared to the updated cost estimate for the R&M work, all the possible reasons for the same should be analyzed. If the quoted price is too high, it should be examined whether or not the tendering process encourages competitive price quotes. If the quoted price is too low, then the seriousness/competence of the bidder should be looked into.

6.8 Rejection of all Bids and Retendering

The tender document should include a clause empowering the Owner to reject all bids, if so required. However rejection of all bids and retendering should be considered only as an extreme measure due to any or combination of the following reasons:-

1. There is lack of adequate and effective competitive competition among the bidders.
2. All the bids are found to be techno-commercially non-responsive or defective.
3. The bid price of lowest evaluated bidder is high as compared to updated estimate of the Owner.
4. Fraud and unfair practices by bidders.

Inadequate participation of bidders in prequalification process or proposal/bid process and inadequate number of techno-commercial bids should trigger review and analysis of the tendering process. However, less number of bidders is not the sole criteria for annulment of tendering process and retender. If it is established that appropriate prequalification and tendering process have been followed, the Owner may persist with the tendering process even if there is only one techno-commercially responsive bid. If the evaluated price of the sole techno-commercially responsive bid is comparable with or within the Owner's estimate and prevalent market prices, such as bidder may be selected as the successful bidder. Similarly, the qualification requirements should be changed only if they are found to be too stringent and that appears to be the reason for inadequate participation/competition among prospective bidders.

If all the bids are rejected and retendering is required to be carried out, the tender documents should be thoroughly reviewed with regard to scope, technical specification, commercial conditions, risk allocating between Owner and contractor and other influencing factors before issue of the retender.

If rejection of all the bids is due to the reason that all the bids are techno-commercially non-responsive, fresh prequalification and retendering may substantially delay R&M project and in case, new capable bidders other than already participating bidders are not likely to participate in the fresh qualification and retendering, new bids may be invited from the already qualified bidders with the original or modified tender documents. If the lowest evaluated price of the responsive bids is substantially higher than the Owner's estimate in spite of adequate participation by the potential bidders, negotiations may be carried out with the bidder with the lowest evaluated price, for reduction in contract price to a reasonable level.

Document Number	Rev No	Description	Page No.	Date of Issue

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

7 TENDERING PROCEDURE FOR SELECTION OF CONSULTANTS

7.1 Types of Consultant

Renovation and Modernization of old Thermal Power Projects involves in-depth study of the power plant equipment, assessment of their health condition, identification of the root causes of the equipments for deficit performance, determination of the residual life of critical components, auditing of auxiliary power consumption of various equipments, finding solutions to various operational problems in terms of Run/ Retrofit/ Replacement options etc. This requires special knowledge, skill and experience which is normally not available with the Operating and Maintenance Engineers of the Power plants. Power plants therefore require the services of consultants who are specialized in the field of conducting various investigative studies and can deliver the services of this nature.

Support of consultants is also needed to review the design and engineering work done by the R&M Contractors, to monitor the progress of R&M works at the site and to evaluate the results of the Performance Guarantee Tests etc. The job of site supervision requires adequate experience of erection and construction activities which is not always available with O&M engineers of the power plants.

Two types of Consultants have been suggested namely, 'R&M Consultants' and 'Implementation Support Consultants' (ISC). The consultancy work is initiated by the R&M Consultant who does all the investigative studies like RLA/CA and EA studies, provides the solutions to various operating problems in the form of formulation of R&M options, selects the most attractive R&M option to be implemented, prepares the DPR (Detailed Project Report), assists the utility in getting the approval of appropriate Regulatory Commission, prepares the Bidding Documents as well as appointment of R&M Contractor(s). Implementation of R&M works is finally done with the help of Implementation Support Consultant (ISC).

7.2 Role and Responsibility of Consultants

7.2.1 Role of R&M Consultant

The consultant to be selected for the role of R&M Consultant should have requisite experience of conducting the plant studies as well as for the preparation and evaluation of bidding documents. Role of R&M Consultant consists of the following activities:

- i. Conducting of Cold Walk-down and Hot Walk-down Survey.
- ii. Review of the operational history of the power plant.
- iii. Discussion with the Plant Engineers.
- iv. Carrying out of technical studies namely, the Residual Life Assessment (RLA) and Condition assessment (CA) of BTG and BOP of the power plant.
- v. Carrying out Energy Audit of BTG and BOP to identify the reasons and sources of excess power consumption.
- vi. Reviewing the results of studies mentioned at v) & vi) above.
- vii. Identification of the equipments needing retrofitting / replacement.

---	-----------------

- viii. Studying the variations in the present quality of coal from the quality considered at the time of original design of the plant.
- ix. Studying the average quality of coal likely to be available during the next twenty years.
- x. Studying the latest environment standards prescribed by the regulating agencies at the national and state level.
- xi. Formulating alternative options including the cost impact for the refurbishment / replacement of specific plant equipments for enhancing their performance and extending their life.
- xii. Preparing a matrix of R&M options for the plant as a whole for extending the useful life by minimum 20 years by either restoring the performance parameters to the original level or for achieving better parameters than the original design.
- xiii. Carrying out detailed economic evaluation of each of the R&M options proposed in the matrix.
- xiv. Discussions with Plant Management.
- xv. Selection of R&M option to be implemented.
- xvi. Finalizing the scope of R&M Works.
- xvii. Preparation of Detailed Project Report.
- xviii. Obtaining approval from appropriate Regulatory Commission.
- xix. Preparation of Bidding Documents for the appointment of R&M Contractors.
- xx. Evaluation of Bids of R&M Contractors.

7.2.2 Role of Implementation Support Consultant

The consultant to be selected for supporting the utilities for implementing the R&M works should have adequate experience of executing the projects of similar nature. The role of the Implementation Support Consultant consists of the following activities:

- i. Reviewing of design documents & drawings of the R&M contractors to ensure compliance of scope of works.
- ii. Site supervision and monitoring the progress of works.
- iii. Checking the quality of construction and erection.
- iv. Holding review meetings with the contractor(s).
- v. Coordination between the Plant head and the R&M Contractor.
- vi. Shop Testing at supplier's works and inspection at site.
- vii. Supervising the commissioning activities.
- viii. Witnessing and evaluation of Performance Guarantee Tests.

---	-----------------

7.3 Tendering for R&M Consultant & Implementation Support Consultant

The Bidding procedure for appointment of R&M Consultant has been standardized. For hiring of Consultants, a two step process comprising Request for Qualification and Request for Proposal is recommended. For the Request for Proposal for selecting R&M Consultant and Implementation Support Consultant (ISC), a Single stage Two Envelope method has been specified since the consultants to be engaged for R&M services must be specialized in their respective fields and must have requisite experience of similar nature.

Following documents were studied to analyze the process of hiring consultants:

- i. World Bank Guideline (January 2011) for Selection and Employment of Consultants
- ii. KfW Guidelines for Assignment of Consultants in Financial Cooperation with developing countries.
- iii. Model Request for Proposal for Selection of Technical Consultants published by Planning Commission, Government of India
- iv. Request for Tender for Selection of Consultant for Feasibility Study for Renovation & Modernization of Unit-4 of Nasik Thermal Power Station.

The recommended Selection Criteria for R&M Consultant and Implementation Support Consultant broadly conforms to the Quality and Cost Based selection process of World Bank guidelines and Two-Stage selection process with pre-selection as per KfW Guideline. However, it is recommended that the first stage or pre-qualification stage will be Pass / No-Pass type without any limitation on number of consultants to be pre-qualified for quality and cost based competition in second stage. The evaluation criteria are in line with the Model RFP for Technical Consultants published by Planning Commission.

Only Applicants found pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the Consultancy work and will be eligible to submit Bid Proposal. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, competence of key personnel, project execution capability and financial resources to discharge the scope of service.

Single Stage Two Part Bidding Procedure will be followed for RFP stage.

The bidders are required to submit, the bids for the Consultancy Services in two parts. Both the parts are to be submitted together before the indicated Bid submission Time & Dates.

The Part-I Bid comprises the techno-commercial bid without prices. The main components of the Techno-Commercial Bid are Bid Guarantee, Methodology & Work Plan for discharging the consultancy services as per Terms of Reference, Details of Key Personnel along with their Curriculum Vitae, Deviations to Terms of Reference, Deviation to commercial Conditions, Overall Completion Time Period & Network Schedule, Resource Deployment Schedule, Detail of Sub-Consultants, Details of the present commitments & details of contracts in hand

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-001119-006	01	Model Tendering Procedure	[25]	25.09.2014

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

etc. Part-II Bid will comprise Quoted Price. Initially, only the Part-I Bid will be opened and Part-II Bid will be kept in safe custody.

The Part-I Bid will be checked for responsiveness to techno-commercial conditions and a detailed Technical Evaluation will be carried out to assign a Technical Score to each Bid. Part-II Bid (Price Bid) of only those Bidders will be opened, whose Part-I Bid is found to be responsive to Tender Specifications and Conditions and Technical Score is above a specified level.

7.4 Request for Qualification for Consultants (R&M Consultant and ISC)

The RFQ document for selection of Consultants has been standardized. The Standard RFQ covers the following aspects:

1. The scope of works for R&M Consultant
2. The RFQ details regarding the
 - i. Participation fee
 - ii. Publication date of RFQ
 - iii. Last date for issue of RFQ document
 - iv. Last date and time for receipt of RFQ applications
 - v. Date for selection of qualified consultancy Firm
3. Qualification Requirement
4. List of Qualification Document
5. Instruction to Applicants
6. Standard Application Forms and Data Sheets

The following Forms and Data Sheets have been standardized

1. Format for the Pre – qualification Application
2. Letter of Consent to be Furnished by the Associate
3. Letter of Consent to be Furnished by the Consortium Partners
4. Sample format for Data sheet regarding Technical Qualification Requirement
5. Sample format for Data sheet regarding Financial Qualification Requirement

7.5 Pre-qualification Documents

The pre-qualification documents requirement for consultants has been standardized. These include the following:

- (i) List of orders executed by them, their Consortium Partners / Associates along with copies of orders to prove their qualifications.
- (ii) Past Performance Certificates from the previous employers in respect of such completed consultancy assignment(s) clearly indicating scope of and date of completion for each assignment.
- (iii) Names of proposed Associates or Consortium member if any, along with Letters of Consent from each Associate / Consortium Partner.
- (iv) Particulars of Key Personnel that must include inter alia their names, details regarding qualification, areas of expertise, professional experience and names of relevant projects.

---	-----------------

- (v) Documents of company profile incorporating details of technical man power, financial strength, resources, organization and experience to undertake such jobs as an evidence of their capacity for the satisfaction of Employer.
- (vi) Firm's audited accounts for last three (3) years along with a copy of latest income tax return filed.
- (vii) Consultancy Assignments in hand / pending jobs and their status along with value.
- (viii) Pending legal cases, if any.

7.6 Request for Proposal for Consultants (R&M Consultant & ISC)

The Standard Request for Proposal for consultants comprises the sections as indicated in the Table below:

Table: 7.1
Structure of Request for Proposal for Consultants

Section	Description
Section-I	Commercial <ol style="list-style-type: none"> 1. Invitation For Bid 2. Instruction to Bidder 3. General Project Information 4. General Condition of Contract (GCC) 5. Special Condition of Contract (SCC) 6. Forms and Schedules
Section-II	Terms of Reference

General Conditions of Contract (GCC)

The GCC contains the Contracting Concept, the scope of the Contractor, the precedence of the Contract Documents, definitions and Acronyms used in the Contract Document, the severability of the Contract, the governing laws to the Contract, methods for settlement of disputes, Time of commencement and completion of the contract, Contractor's Responsibilities, Owner's Responsibilities, Taxes and Duties applicable, Confidential Clause. It also covers the Defect Liabilities, Completion Time and Liquidated damages, Conditions to Performance Guarantees, Limitations of Liability, Transfer of Ownership, Insurance, Force Majeure Conditions and Termination of the Contract.

Special Conditions of Contract (SCC)

- i. Effective date: The Owner shall inform the successful Bidder of its acceptance of the Tender by a formal Letter of Acceptance. The date of this Letter of Acceptance will be the Effective Date for determining the Time for Completion of the milestones for Consultancy work as per the scope of work. The Owner will make the advance payment promptly once Contractor has fulfilled the necessary conditions specified in Terms of Payment. If payment of Advance is delayed beyond two months from the date of Letter of acceptance for reasons attributable to the Owner, the

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

date of payment of advance shall be the effective date for determining the time for completion of facilities. However, failure of the contractor to provide all the required Bonds/Guarantees within the prescribed period will cause the Bid Security to be forfeited.

- ii. Time of Commencement and Completion: The Time Schedule for the execution of the scope of work by the Consultant is to be specified.
- iii. Contract Securities
 - a) Advance Payment Security: The Contractor shall, provide a security for an amount equal to the advance payment, and in the same currency or currencies, with validity of up to ninety (90) days beyond the date of the Scheduled Completion Date for R&M Consultancy Services.
 - b) Performance Security: The Contractor shall provide a security for the due performance of the Contract for five percent (5%) of the Contract Price with an initial validity up to ninety (90) days beyond the the Scheduled Completion Date for R&M Consultancy Services.

7.7 Evaluation Criteria for Consultants (R&M Consultant and ISC)

The selection of the successful Bidder for award of the R&M Consultancy Services Contract and Implementation Support Consultancy (ISC) contract will be based on both Quality of the Technical Proposal and Price quoted by the Bidder for the entire scope of work. The selection process will comprise the following steps:

1. First, Techno-Commercial offer will be assessed for completeness and responsiveness to commercial/contractual conditions. Bidders qualifying the criteria would be considered for further evaluation on the basis of Quality and Price.
2. The Bidder's proposed methodology and Work Plan for discharging the Consultancy Assignment, experience of the Bidder and the experience & expertise of Key Personnel will be assigned a Technical Score 'St'. Only those Bidders whose Technical Proposals get a Technical Score of 70 marks or more out of 100 shall qualify for further consideration.

The Technical score of each Bidder will be equal to the weighted sum scores on three elements with indicated weights

$$S_t = 0.2 \times S_{t-1} + 0.3 \times S_{t-2} + 0.5 \times S_{t-3}$$

Where:

- a. S_t – Technical score
- b. S_{t-1} – should be less than or equal to 100 points, depending on the clarity, completeness, soundness of methodology and scope of work. The Bidder with the best submission will be assigned a score of 100 ($S_{t-1} = 100$). Other Bidders will be assigned scores below 100 considering the relative quality of the submission with respect to the best submission.

Document Number	Rev No	Description	Page No.	Date of Issue

Model Tendering Procedure for Selection of R&M Contractors and Consultants	Logo of Utility
---	-----------------

- c. S_{t-2} – should be less than or equal to 100 points, depending on the Bidders experience on the grounds of size, nature & complexity of scope and similarity with the subject R&M Consultancy Service / Implementation Support Consultancy Service for at least 5 projects.
- d. S_{t-3} – should be less than or equal to 100 points, depending on the experience list of at least a specified number of personnel who would be associated with the R&M Project.

- 3. The Price Proposal of each qualified Technical Bidder will be assigned a Financial Score (S_f) on the basis of its cost competitiveness.

$$S_f = 100 \times (\text{Lowest Quoted Total Price} / \text{Total Price quoted by the Bidder})$$

- 4. Each bidder will be assigned a Composite Score (S_c) equal to the weighted sum of Technical Score and Financial Score. Finally, the bidder with the highest Composite Score will be selected as R&M Consultant for the subject R&M Consultancy Services Contract or Implementation Support Consultancy (ISC) contract.

For selection of successful Bidder, the Technical Score will be a weight of 70% and Financial Score will be given a weight of 30%. For each Bidder, the Composite Score S_c will be computed as follows:

$$S_c = 0.7 \times S_t + 0.3 \times S_f$$

Request for Qualification for the Selection of Contractor for R&M of Boiler of Unit No.[...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

1 INVITATION FOR QUALIFICATION

1.1 Introduction

[Give brief introduction about the name, location and details of the Power Plant of the utility inviting tender for R & M work]

[XXX is undertaking renovation & modernization of XXX MW Unit no.-XX ----- of the Power Plant]

1.2 INVITATION

[Name of The Utility], hereinafter referred to as "Employer / Owner / Purchaser", is undertaking Renovation & Modernization project of Unit No.[XXX] of the [XXX] Power Plant. Under this project, [Name of The Utility] invites sealed Pre-Qualification Tenders from experienced and interested bidders for the Renovation & Modernization Work of [Boiler & Auxiliaries] package of Unit No.[XXX] of the [XXX] Power Plant on International Competitive Bidding (ICB).

Interested bidders may collect the RFQ documents in person from [Name and Contact Details of Designated Official.....]. The RFQ documents can be collected between [---] hrs to [---] hrs on all working days from [.....] to [.....]. Alternatively, the RFQ document can be downloaded from [Name of The Utility] website [.....].

The Pre-Qualification Tender in the form and manner specified in the RFQ document along with necessary attachments and stipulated participation fee should be submitted to [Name and Contact Details of Designated Official.....] by [Date and Time].

1.3 Brief Scope of Work

The scope of work under this R&M package involves disassembly and replacement of specified existing equipments / systems by supplying new equipments/ systems including supply of assembly materials, inspection & testing at suppliers works, supply of mandatory spares, packing & forwarding, transportation & insurance, receipt at site, unloading, handling & storage at site, pre-assembly, fabrication, repair, servicing/ overhauling, erection, carrying out of all associated civil works including supply of cement & steel etc., testing & commissioning and successful completion of trial operation & Performance guarantee tests for [Boiler & Auxiliaries] package of Unit no. [XXX] of [XXX] Power Plant.

1.4 RFQ Details

(a)	Participation Fee	:	INR [---]/ USD [---]/ EUR [---]

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in tendering process for the subject Renovation & Modernization work for [Boiler & Auxiliaries] package, the bidder must meet the Technical Qualification Requirement specified at clause 2.1.1 and Financial Qualification Requirement specified at clause 2.1.2 below. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no 2.1.3.

2.1.1 Technical Qualification Requirement

- (a) The Bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Tenders indicated in row (d) in section 1.4 above, should have designed, engineered, manufactured, supplied, erected/ supervised erection and commissioned / supervised commissioning of one (1) unit of reheat type coal/lignite fired Boiler for a power plant unit of 200 MW or above capacity which should have completed satisfactory operation for a period of not less than One (1) years as on the date of opening of Pre-Qualification Bid.

And

- (b) The bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Tenders indicated in row (d) in section 1.4 above, should have successfully completed execution of Renovation & Modernization of one (1) unit of coal/ lignite fired Boiler for a power plant unit of 50 MW or above capacity.
- (c) The bidder can be a Joint Venture of two firms who collectively meet the Qualification Requirement specified at (a) and (b) above. Each of the JV partner must have at least 26% equity in the JV and in case of award of contract, must maintain JV arrangement till the successful completion of the R&M work. In such a case, parts and components of boiler has to be sourced from the partner who satisfies the Qualification Requirement specified at (a).
- (d) The bidder can be a Consortium of two firms who collectively meet the Qualification Requirement specified at (a) and (b) above. The Consortium members shall designate one member as the Leader of the Consortium with whom the Contract will be entered into in case the Consortium emerges as the successful bidder. In such a case, parts and components of boiler has to be sourced from the Consortium member who satisfies the Qualification Requirement specified at (a).

2.1.2 Financial Qualification Requirement

- (a) The average annual turnover of the Bidder should be at least [Indian Rupees] millions or equivalent foreign currency as per audited annual accounts during the preceding three consecutive years – [FY], [FY] and [FY] For the purpose of conversion of foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of [Boiler & Auxiliaries] package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder or JV Partner or Consortium leader or Consortium partner is found to be factually incorrect or manipulated, the Bidder or JV Partner or Consortium leader or Consortium partner as the case may be, will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder / Consortium leader. Thus the bidder / Consortium leader shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder / Consortium leader and Consortium partner shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. The bidder meeting the Qualifying Requirement on the strength of the JV partners should enclose details of equity holding of the JV partners. However, in the event, the bidder is found pre-qualified and issued RFP document, while submitting the techno-commercial Bid Proposal for R&M work, the bidder shall furnish a copy of the Joint Venture Agreement. Further, while submitting the techno-commercial Bid Proposal for R&M work, the JV partners shall furnish a joint undertaking towards joint and several liability to the employer for the successful performance of the Contract. The undertaking shall be furnished as per the format to be specified in the RFP document.
- 3.6. The bidder meeting the Qualifying Requirement as a Consortium should enclose the Letter of Consent (as per the prescribed format) from the consortium Partner along with the Pre-Qualification Bid signed by the Consortium Partners indicating the scope of work. However, in the event, the bidder is found pre-qualified and issued RFP document, while submitting the techno-commercial Bid Proposal for R&M work, the bidder (consortium leader) shall furnish a Consortium Agreement with the other Consortium member. No new consortium partner, (other than those qualified at Pre-qualification stage)

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-006	02	RFQ for Contractor	[6]	25.09.2014

will be permitted at the time of submitting the Techno commercial Bid. Further, while submitting the techno-commercial Bid Proposal for R&M work, the Consortium leader and Consortium member will furnish a joint undertaking regarding diligent performance of their respective scope of work and towards joint and several liability to the employer for the successful performance of the Contract. The undertaking shall be furnished as per the format to be specified in the RFP document.

- 3.7. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus Ninety (90) days grace period.

If the bidder is a joint venture of two firms who collectively meet the Qualifying Requirement, in addition to the Contract Performance Guarantee (CPG) of 10% furnished by the bidder, each of the JV partner shall furnish Additional Contract Performance Guarantee equal to 1% of Contract Price.

If the bidder is a Consortium of two firms, in addition to the Contract Performance Guarantee (CPG) of 10% furnished by the Consortium Leader, the other consortium member will furnish Additional Contract Performance Guarantee equal to 2% of Contract Price

The Bidder shall provide satisfactory evidence that he and / or, where applicable, the consortium leader and consortium partners have adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid have an adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfillment of the qualifying requirements as specified are liable for rejection without assigning any reason.

- 3.8. The Bidder shall provide satisfactory evidence that he has adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid and adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfillment of the qualifying requirements as specified are liable for rejection without assigning any reason.

LII-GETS12021-G-00100-006	02	RFQ for Contractor	[7]	25.09.2014

Request for Qualification for the Selection of Contractor for R&M of Boiler of Unit No.[..] Capacity [..] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

- 3.9. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the bidder's / Consortium leader's & Consortium Partners' claim on experience and to assess the Bidder's / Consortium leader's & Consortium Partners' capability and capacity to perform the contract, should the circumstances warrant such an assessment in the overall interest of the project.
- 3.10. [Name of Utility] reserves the right to reject any or all Pre-Qualification Bids or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no bidder / intending bidder shall have any claim arising out of such action.
- 3.11. Participation Fee for an amount of [INR.....] or [USD.....] or [Euro.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXX]' is to be submitted along with the Pre-Qualification Bid. Pre-Qualification Bid received without the Participation Fee will be rejected. Participation Fee is non-refundable.
- 3.12. Language of Bid
The Bid submitted by the Bidder and all correspondences and documents relating to the Bid exchanged by the bidder and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.
- 3.13. Signature on Pre-Qualification Bid
The Pre-Qualification Bid must contain the name and place of business of the Bidder and each page of the EOI must be signed and sealed by the authorized person(s) of the Bidder / Consortium leader with his usual signature. The name of all persons signing should be typed or printed below the signature. Satisfactory evidences of authority of the person signing on behalf of the bidder / Consortium leader shall be furnished with the Bid.
The Bidder / Consortium leader's name stated on the Pre-Qualification Bid shall be the exact legal name of the firm.
- 3.14. Method of Submission of Pre-Qualification Bid
The Pre-Qualification Bid shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Bid.
The outside of the covers should indicate clearly the name of the Bidder / Consortium leader and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Bid is submitted ". Pre-Qualification Bid with no indication given on the outside of the envelope that it is a Pre-Qualification Bid which therefore gets opened before the due date shall be liable to be disqualified. All the pages of the Pre-Qualification Bid shall be serially numbered.

Request for Qualification for the Selection of Contractor for R&M of Boiler of Unit No.[..] Capacity [..] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

The Pre-Qualification Bid, complete in all respects, must be submitted to the official and address mentioned below.

'[XXXXXX]
'[XXXXXX]'[XXXXXX]

Submission of Pre-Qualification Bid through Fax, Telex, E-Mail will not be accepted.

[Name of Utility], takes no responsibility for delay, loss or non-receipt of documents or any letter sent by post either way.

Pre-Qualification Bids must reach the above office on or before '[XXXXXX] Hours (IST) on '[XXXXXX]. Any Pre-Qualification Bid received after the expiry of the time specified is liable for rejection.

3.15. Opening of Pre-Qualification Bid

The Pre-Qualification Bids received from the bidders as above will be opened at '[Place XXXXX] on Date and at Time indicated in row (d) in section 1.4 above.

The Pre-Qualification Bids shall be opened in the presence of such bidders who may be present. The bidders are at liberty to be present or authorise their representatives (not more than two per Bidder) to be present at the time of opening of Pre-Qualification Bids.

Accredited Agents / representatives of foreign bidders in India are also permitted to submit the Pre-Qualification Bids on behalf of the foreign bidders with due Authorisation Letter.

Clarification request regarding the content of RFQ Document and RFQ process, if any, should reach at least [15 (Fifteen) days] before the date stipulated for opening of Pre-Qualification Bid. Requests for clarification received after this will not be entertained. [Name of Utility] will issue interpretations and clarifications as it may deem fit.

3.16. Application Data Sheets and Forms

The Pre-Qualification Bid is to be submitted as per the Format at Annexure-1. The following sample formats are to be used for the various attachments to be submitted with the Pre-Qualification Bid. Wherever no sample format has been specified, Bidder is required to use any appropriate format as per prevalent practice in conformity with the requirement stipulated in RFQ document.

Date: - [XXXXXX]

RFQ No. [XXXXXX]

Name of Package: Renovation & Modernization of [.....] Package for Unit No. [XXXXXX] of [XXXXXX] power plant of [XXXXXX].

To,

[Designated Officer XXXXX]

[Address XXXXX]

Dear Sir /Madam

1.0 Having examined the RFQ Document No. [XXXXXX], we the undersigned intend to participate in the pre-qualification process for selection of qualified bidders for Renovation & Modernization of [Boiler & Auxiliaries] Package for unit [XXXXXX] of [XXXXXX] power plant of [XXXXXX]. Towards this end we submit the following details & documents for prequalification.

2.0 Name of the Bidder/Leader of Consortium with name & designation of person authorized to submit the pre-qualification bid:

Name of Bidder/ Leader of Consortium: [.....]

Name & Designation of Authorized Person: [.....]

3.0 We meet the Qualification Requirement stipulated at clause no.2.1.1 & 2.1.2 of RFQ document *on our own/ on the strength of the parent JV partner [XXXXXX] & [XXXXXX] / in association with our Consortium Partner [XXXXXX].(Bidder to strike off whichever is not applicable).*

(The bidder is required to give a detailed description indicating the specific part of the qualification requirement which is met by the Bidder/JV Partner/ Consortium Members. Bidder is also required to furnish the relationship between the Bidder & others on whose strength Qualification Requirement is met.)

4.0 We confirm that neither we nor any of our parent JV Partners/ Our Consortium Members/ Our associates/ affiliates are liable for exclusion from participation in tendering process under 'other criteria' stipulated under clause no.2.1.3 of RFQ document.

5.0 We are enclosing the following attachments as integral part of our Pre-Qualification Bid

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-006	02	RFQ for Contractor	[11]	25. 09.2014

- (i) Covering Letter
- (ii) Power of Attorney in favor of persons signing on behalf of Bidder, Consortium members, Parent JV Partner and Holding Company as applicable.
- (iii) Data Sheet regarding Technical Qualification Requirement at clause 2.1.1 (a)
- (iv) Data Sheet regarding Technical Qualification Requirement at clause 2.1.1 (b)
- (v) Data Sheet regarding turnover requirement at RFQ clause no. 2.2.1 (a)
- (vi) Data Sheet regarding net worth requirement at RFQ at clause 2.2.1 (b)
- (vii) Data Sheet regarding bank balances & available unutilized credit line.
- (viii) Letter of Undertaking pledging unconditional & irrevocable financial support to the bidder for execution of the contract.(In case of financial QR is met on the strength of Holding Company/ Partner Company.)
- (ix) Letter of Consent of Consortium partner in case of Consortium
- (x) Details of equity holding of JV partners for Joint Ventures.

6.0 We are submitting the following supporting documents to demonstrate our qualifications & capability to execute the subject R&M work:-

- (i) List of order executed
- (ii) Copies of order
- (iii) Past performance certificate.
- (iv) Contracts in hands/pending jobs along with value
- (v) Documents regarding company profile, technical manpower, financial strength, resources, construction equipment.
- (vi) Copies of last 3 year audited financial statement.
- (vii) List of major litigations/disputes.
- (viii) Any other document.

7.0 We hereby attach participation fee of [INR-----] in the form of demand draft in favor of '[XXXXX]' payable at '[XXXXX]'.

8.0 We certify that all the information and documents furnished with this Pre-Qualification Bid are true and genuine to the best of our knowledge & belief.

To,
 /Designated Official of Utility XXXXX/
 /Name & Address XXXXX/

Dear Sir/ Madam,

*We, M/s..... (Name and Complete address of the Holding Company) hereby declare that we have controlling interest in(Name of the Bidder) who is submitting Prequalification bid for R&M of Boiler Package for Unit No. [...] of [...] Plant of [...]. M/s.....(Name of the Bidder) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document./

*We have formed a Joint Venture with (name of other JV Partner) and the Joint Venture (Name of JV) is submitting Prequalification bid for R&M of Boiler Package for Unit No. [...] of [...] Plant of [...]. M/s.....(Name of JV) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document. /

*We, M/s..... (Name and Complete address of the Consortium Partner) hereby declare that we have agreed to associate with(Name and Complete address of the Bidder/Consortium Leader) for part scope of work of for the package (Name of the package) for Unit No. [XXXXXX] of [XXXXXX] power plant of [XXXXXX] under RFQ no..... dated and M/s.....(Name of the Bidder/Consortium Leader) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document.

We hereby undertake to pledge our unconditional & irrevocable financial support for the execution of the said package to M/s..... (Name of the Bidder), for the execution of the Contract, in case they are awarded the Contract for the said package at the end of the bidding process. We further agree that this undertaking shall be without prejudice to the various liabilities that M/s..... (Name of Bidder) would be required to undertake in terms of the Contract including the Performance Security as well as other obligations of the Bidder/Contractor.

If any of the date happens to be a public holiday, the deadline will be the next working day.

1.5 Objective of Request for Qualification

[Name of The Utility] is carrying out this Pre-Qualification Process to identify qualified bidders for the issuance of RFP Documents for the Tender of Renovation & Modernization work of [Turbo Generator & Auxiliaries] package of Unit no. [XXX] of [XXX] Power Plant. The objective of the pre-qualification is to allow only the capable and qualified bidders having requisite technical expertise, relevant experience, project execution capability and financial resources to participate in the tendering process.

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-007	02	RFQ for Contractor	[2]	25.09.2014

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in tendering process for the subject Renovation & Modernization work for [Turbo Generator & Auxiliaries] package, the bidder must meet the Technical Qualification Requirement specified at clause 2.1.1 and Financial Qualification Requirement specified at clause 2.1.2. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.3.

2.1.1 Technical Qualification Requirement

- (a) The Bidder during the last 10 years preceding the scheduled date for submission of Pre-Qualification Tenders indicated in row (d) in section 1.4 above, should have designed, engineered, manufactured, supplied, erected/ supervised erection and commissioned / supervised commissioning of one (1) unit of reheat type Steam Turbine Set of 200 MW or above capacity for a coal fired power plant which should have completed satisfactory operation for a period of not less than One (1) years as on the scheduled date for submission of Pre-Qualification Tenders indicated in row (d) in section 1.4 above.

And

- (b) The bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Tenders indicated in row (d) in section 1.4 above, should have successfully completed execution of Renovation & Modernization of Steam Turbine Set of 50 MW or above capacity for a coal fired power plant.
- (c) The bidder can be a Joint Venture of two firms who collectively meet the Qualification Requirement specified at (a) and (b) above. Each of the JV partner must have at least 26% equity in the JV and in case of award of contract, must maintain JV arrangement till the successful completion of the R&M work. In such a case, parts and components of turbine set has to be sourced from the partner who satisfies the Qualification Requirement specified at (a).
- (d) The bidder can be a Consortium of two firms who collectively meet the Qualification Requirement specified at (a) and (b) above. The Consortium members shall designate one member as the Leader of the Consortium with whom the Contract will be entered into in case the Consortium emerges as the successful bidder. In such a case, parts and components of turbine set has to be sourced from the Consortium member who satisfies the Qualification Requirement specified at (a).

2.1.2 Financial Qualification Requirement

- (a) The average annual turnover of the Bidder should be at least [Indian Rupees] millions or equivalent foreign currency as per audited annual accounts during the preceding three consecutive years – [FY], FY [.....] and FY [.....]. For the purpose of conversion of

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-007	02	RFQ for Contractor	[3]	25.09.2014

foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be considered. Other income will not be considered for arriving at the annual turnover.

- (b) The Net Worth of the Bidder as on the last date of preceding Financial Year shall be positive.
- (c) The sum of bank balances (including fixed deposits) and available unutilized credit line of the bidder (including non fund based credit lines) should not be less than [INR.....] as on not more than 30 days prior to the scheduled last date of submission of Pre-qualification Bid
- (d) In case the Bidder/Consortium Leader does not satisfy the Financial Criteria stipulated in the above clauses (a) and (b) on its own and the JV Partner in case the Bidder a Joint Venture of two firms or Holding Company having controlling interest in the Bidder / Consortium Partner Company, as the case may be, meets the stipulated turn-over requirements at Clause (a), then Financial Criteria stipulated in the above clauses (a) and (b) will be deemed to have been met, provided that the Net worth of such Holding Company / Partner Company, as the case may be, as on the last day of the preceding financial year is at least equal to or more than [.....]. In such a case, the Bidder / Consortium Leader has to submit a Letter of Undertaking from the JV Partner Company/ Holding Company/ Consortium Partner company pledging unconditional and irrevocable financial support to the bidder for execution of the Contract.

To establish the financial capacity for performance of the contractual obligations, the Bidder shall furnish documentary proof of their audited annual turnover and net worth for the last three (3) financial years [FY], [FY] & [FY].

2.1.3 Other Criteria

- (a) Any firm who is or was involved as a Consultant in the preparation for this R&M Project for activities such as Feasibility Study or RLA/CA Study or Energy Audit or preparation of DPR/Tender Document or any other preparatory activity or any firm who is or was involved as a consultant for implementation of this R&M project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of this R&M project cannot participate as a bidder for this R&M Tender.
- (b) Any bidder who is legally barred from the procurement process of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as a bidder for this R&M Tender.
- (c) Any firm or its associate company or parent company cannot participate as Bidder or JV Partner or Consortium Member in more than one Bid under this tender.

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of *[Turbo Generator & Auxiliaries]* package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service
- 3.2. *[Name of Utility]* is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder or JV Partner or Consortium leader or Consortium partner is found to be factually incorrect or manipulated, the Bidder or JV Partner or Consortium leader or Consortium partner as the case may be, will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder / Consortium leader. Thus the bidder / Consortium leader shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder / Consortium leader and Consortium partner shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. The bidder meeting the Qualifying Requirement on the strength of the JV partners should enclose details of equity holding of the JV partners. However, in the event, the bidder is found pre-qualified and issued RFP document, while submitting the techno-commercial Bid Proposal for R&M work, the bidder shall furnish a copy of the Joint Venture Agreement. Further, while submitting the techno-commercial Bid Proposal for R&M work, the JV partners shall furnish a joint undertaking towards joint and several liability to the employer for the successful performance of the Contract. The undertaking shall be furnished as per the format to be specified in the RFP document.
- 3.6. The bidder meeting the Qualifying Requirement as a Consortium should enclose the Letter of Consent (as per the prescribed format) from the consortium Partner along with the Pre-Qualification Bid signed by the Consortium Partners indicating the scope of work. However, in the event, the bidder is found pre-qualified and issued RFP document, while submitting the techno-commercial Bid Proposal for R&M work, the bidder (consortium leader) shall furnish a Consortium Agreement with the other Consortium member. No new consortium partner, (other than those qualified at Pre-qualification stage) will be permitted at the time of submitting the Techno commercial Bid. Further, while submitting the techno-commercial Bid Proposal for R&M work,

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-007	02	RFQ for Contractor	[6]	25.09.2014

the Consortium leader and Consortium member will furnish a joint undertaking regarding diligent performance of their respective scope of work and towards joint and several liability to the employer for the successful performance of the Contract. The undertaking shall be furnished as per the format to be specified in the RFP document.

- 3.7. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus Ninety (90) days grace period.

If the bidder is a joint venture of two firms who collectively meet the Qualifying Requirement, in addition to the Contract Performance Guarantee (CPG) of 10% furnished by the bidder, each of the JV partner shall furnish Additional Contract Performance Guarantee equal to 1% of Contract Price.

If the bidder is a Consortium of two firms, in addition to the Contract Performance Guarantee (CPG) of 10% furnished by the Consortium Leader, the other consortium member will furnish Additional Contract Performance Guarantee equal to 2% of Contract Price

The Bidder shall provide satisfactory evidence that he and / or, where applicable, the consortium leader and consortium partners have adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid have an adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfillment of the qualifying requirements as specified are liable for rejection without assigning any reason.

- 3.8. The Bidder shall provide satisfactory evidence that he has adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid and adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfillment of the qualifying requirements as specified are liable for rejection without assigning any reason.

- 3.9. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the

Document Number	Rev. No.	Description	Page No.	Date of Issue

Annexure-1

Format for Pre-Qualification Bid

Date: - [XXXXXX]

RFQ No. [XXXXXX]

Name of Package: Renovation & Modernization of [.....] Package for Unit No. [XXXXXX] of [XXXXXX] power plant of [XXXXXX].

To,

/Designated Officer XXXXX/

/Address XXXXX/

Dear Sir /Madam

1.0 Having examined the RFQ Document No. [XXXXXX], we the undersigned intend to participate in the pre-qualification process for selection of qualified bidders for Renovation & Modernization of [Turbo Generator & Auxiliaries] Package for unit [XXXXXX] of [XXXXXX] power plant of [XXXXXX]. Towards this end we submit the following details & documents for prequalification.

2.0 Name of the Bidder/Leader of Consortium with name & designation of person authorized to submit the pre-qualification bid:

Name of Bidder/ Leader of Consortium: [.....]

Name & Designation of Authorized Person: [.....]

3.0 We meet the Qualification Requirement stipulated at clause no.2.1.1 & 2.1.2 of RFQ document *on our own/ on the strength of the parent JV partner [XXXXXX] & [XXXXXX] / in association with our Consortium Partner [XXXXXX].(Bidder to strike off whichever is not applicable).*

(The bidder is required to give a detailed description indicating the specific part of the qualification requirement which is met by the Bidder/JV Partner/ Consortium Members meet which part of Qualification Requirement. Bidder is also required to the relationship between the Bidder & others on whose strength Qualification Requirement is met.)

4.0 We confirm that neither we nor any of our parent JV Partners/ our Consortium Members/our associates/ affiliates are liable for exclusion from participation in tendering process under 'other criteria' stipulated under clause no.2.1.3 of RFQ document.

5.0 We are enclosing the following attachments as integral part of our Pre-Qualification Bid

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-007	02	RFQ for Contractor	[11]	18.09.2014

Request for Qualification for the Selection of Contractor for R&M of Turbo Generator of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	-------------------

- (i) Covering Letter
- (ii) Power of Attorney in favor of persons signing on behalf of Bidder, Consortium members, Parent JV Partner and Holding Company, as applicable.
- (iii) Data Sheet regarding Technical Qualification Requirement at clause 2.1.1 (a)
- (iv) Data Sheet regarding Technical Qualification Requirement at clause 2.1.1 (b)
- (v) Data Sheet regarding turnover requirement at RFQ clause no. 2.2.1 (a)
- (vi) Data Sheet regarding net worth requirement at RFQ at clause 2.2.1 (b)
- (vii) Data Sheet regarding bank balances & available unutilized credit line.
- (viii) Letter of Undertaking pledging unconditional & irrevocable financial support to the bidder for execution of the contract. (In case of financial QR is met on the strength of Holding Company/ Partner Company).
- (ix) Letter of Consent of Consortium Partner in case of Consortium
- (x) Details of equity holding of JV partners for Joint Ventures.

6.0 We are submitting the following supporting documents to demonstrate our qualifications & capability to execute the subject R&M work:-

- (i) List of order executed
- (ii) Copies of order
- (iii) Past performance certificate.
- (iv) Contracts in hands/pending jobs along with value
- (v) Documents regarding company profile, technical manpower, financial strength, resources, construction equipment.
- (vi) Copies of last 3 year audited financial statement.
- (vii) List of major litigations/disputes.
- (viii) Any other document.

7.0 We hereby attach participation fee of [INR-----] in the form of demand draft in favor of 'XXXXXX' payable at 'XXXXXX'.

8.0 We certify that all the information and documents furnished with this Pre-Qualification Bid are true and genuine to our best of the knowledge & belief.

To,
 /Designated Official of Utility XXXXX/
 /Name & Address XXXXX/

Dear Sir/ Madam,

*We, M/s..... (Name and Complete address of the Holding Company) hereby declare that we have controlling interest in(Name of the Bidder) who is submitting Prequalification bid for R&M of Turbo Generator Package for Unit No. [...] of [...] Plant of [...]. M/s.....(Name of the Bidder) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document./

*We have formed a Joint Venture with (name of other JV Partner) and the Joint Venture (Name of JV) is submitting Prequalification bid for R&M of Turbo Generator Package for Unit No. [...] of [...] Plant of [...]. M/s.....(Name of JV) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document. /

* We, M/s..... declare that we are the holding company of M/s..... (Name of the Bidder) and have controlling interest therein.

* We, M/s..... (Name and Complete address of the Consortium Partner) hereby declare that we have agreed to associate with (Name and Complete address of the Bidder/Consortium Leader) for part scope of work of for the package..... (Name of the package) for Unit No. [XXXXXX] of [XXXXXX] power plant of [XXXXXX] under RFQ no..... dated and M/s.....(Name of the Bidder/Consortium Leader) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document.

We hereby undertake that we hereby pledge our unconditional & irrevocable financial support for the execution of the said package to M/s..... (Name of the Bidder), for the execution of the Contract, in case they are awarded the Contract for the said package at the end of the bidding process. We further agree that this undertaking shall be without prejudice to the various liabilities that M/s..... (Name of Bidder) would be required to undertake in terms of the Contract including the Performance Security as well as other obligations of the Bidder/Contractor.

--	------------------------------

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in tendering process for the subject Renovation & Modernization work for *[Coal Handling Plant]* package, the bidder must meet the Technical Qualification Requirement specified at clause 2.1.1 and Financial Qualification Requirement specified at clause 2.1.2. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.3.

2.1.1 Technical Qualification Requirement

[The Bidder , during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, engineered, manufactured, erected and commissioned [at least one coal Handling Plants of capacityTPH] comprising (Track Hopper/Wagon Tippler) Belt Conveying System, Stacker Reclaimer, Inline Magnetic Separators, Metal Detectors, Coal Crusher, Transfer Points, Traveling Trippers, Dust Extraction & Dust Suppression System complete with associated Electrical and PLC based Instrument and Control System for entire Coal Handling Plant which should have completed satisfactory operation for a period of not less than One (1) year as on the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above.]

2.1.2 Financial Qualification Requirement

- (a) The average annual turnover of the Bidder should be at least *[Indian Rupees]* millions as per audited annual accounts during the preceding three consecutive years – *[FY], FY [.....] and FY [.....]*. Other income will not be considered for arriving at the annual turnover.
- (b) The Net Worth of the Bidder as on the last date of preceding Financial Year shall be positive.
- (c) The sum of bank balances (including fixed deposits) and available unutilized credit line of the bidder (including non fund based credit lines) should not be less than *[INR.....]* as on not more than 30 days prior to the scheduled last date of submission of Pre-qualification Bid
- (d) In case the Bidder does not satisfy the Financial Criteria stipulated in the above clauses (a) and (b) on its own and the Holding Company having controlling interest in the Bidder, meets the stipulated turn-over requirements at Clause (a), then Financial Criteria stipulated in the above clauses (a) and (b) will be deemed to have been met, provided that the Net worth of such Holding Company as on the last day of the preceding financial year is at least equal to or more than *[.....]*. In such a case, the Bidder has to submit a Letter of Undertaking from the Holding Company pledging unconditional and irrevocable financial support to the bidder for execution of the Contract.

To establish the financial capacity for performance of the contractual

--	----------------------

obligations, the Bidder shall furnish documentary proof of their audited annual turnover and net worth for the last three (3) financial years [FY] , [FY] & [FY].

2.1.3 Other Criteria

- (a) Any firm who is or was involved as a Consultant in the preparation for this R&M Project for activities such as Feasibility Study or RLA/CA Study or Energy Audit or preparation of DPR/Tender Document or any other preparatory activity or any firm who is or was involved as a consultant for implementation of this R&M project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of this R&M project cannot participate as a bidder for this R&M Tender.
- (b) Any bidder who is legally barred from the procurement process of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as a bidder for this R&M Tender.
- (c) Any firm or its associate company or parent company cannot participate as Bidder in more than one Bid under this tender.

2.2 Qualification Documents

2.2.1 Documents to be submitted (Pre-qualification)

Bidders are required to furnish following documents for pre-qualification in [five (5)] copies and an application with requisite participation fee along with their Pre-Qualification Bid.

- (i) List of orders executed by them along with copies of orders to prove their qualifications.
- (ii) Past Performance Certificates clearly indicating date of completion from the facility owner in respect of such completed contract(s).
- (iii) Documents of company profile incorporating technical man power, financial strength, resources, organization and experience to undertake such jobs as an evidence of their capacity to the satisfaction of Employer. Firm's audited accounts for last three years along with copy of latest income tax return filed.
- (iv) Contracts in hand / pending jobs and their status along with value.
- (v) Major pending legal cases.

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of [Coal Handling Plant] package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service.
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder is found to be factually incorrect or manipulated, the Bidder will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder. Thus the bidder shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus ninety (90) days grace period.
- 3.6. The Bidder shall provide satisfactory evidence that he has adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid and adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.

Request for Qualification For R&M of Coal Handling Plant of Unit No.[../] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
--	----------------------

3.7. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the bidder's claim on experience and to assess the Bidder's capability and capacity to perform the contract, should the circumstances warrant such an assessment in the overall interest of the project.

3.8. [Name of Utility] reserves the right to reject any or all Pre-Qualification Bids or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no bidder / intending bidder shall have any claim arising out of such action.

3.9. Participation Fee for an amount of [INR.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXXX]' is to be submitted along with the Pre-Qualification Bid. Pre-Qualification Bid received without the Participation Fee will be rejected. Participation Fee is non-refundable.

3.10. Language of Bid
The Bid submitted by the Bidder and all correspondences and documents relating to the Bid exchanged by the bidder and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.

3.11. Signature on Pre-Qualification Bid

The Pre-Qualification Bid must contain the name and place of business of the Bidder and each page of the EOI must be signed and sealed by the authorized person(s) of the Bidder with his usual signature. The name of all persons signing should be typed or printed below the signature.
Satisfactory evidences of authority of the person signing on behalf of the bidder shall be furnished with the Bid.

The Bidder's name stated on the Pre-Qualification Bid shall be the exact legal name of the firm.

3.12. Method of Submission of Pre-Qualification Bid

The Pre-Qualification Bid shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Bid.

The outside of the covers should indicate clearly the name of the Bidder and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Bid is submitted ". Pre-Qualification Bid with no indication given on the outside of the envelope that it is a Pre-Qualification Bid which therefore gets opened before the due

date shall be liable to be disqualified. All the pages of the Pre-Qualification Bid shall be serially numbered.

The Pre-Qualification Bid, complete in all respects, must be submitted to the official and address mentioned below.

'[XXXXXX]

'[XXXXXX]'[XXXXXX]

Submission of Pre-Qualification Bid through Fax, Telex, E-Mail will not be accepted.

[Name of Utility], takes no responsibility for delay, loss or non-receipt of documents or any letter sent by post either way.

Pre-Qualification Bids must reach the above office on or before '[XXXXXX]' Hours (IST) on '[XXXXXX]'. Any Pre-Qualification Bid received after the expiry of the time specified is liable for rejection.

3.13. Opening of Pre-Qualification Bid

The Pre-Qualification Bids received from the bidders as above will be opened at '[Place XXXXX]' on Date and at Time indicated in row (d) in section 1.4 above.

The Pre-Qualification Bids shall be opened in the presence of such bidders who may be present. The bidders are at liberty to be present or authorise their representatives (not more than two per Bidder) to be present at the time of opening of Pre-Qualification Bids.

Clarification request regarding the content of RFQ Document and RFQ process, if any, should reach at least [15 (Fifteen) days] before the date stipulated for opening of Pre-Qualification Bid. Requests for clarification received after this will not be entertained. [Name of Utility] will issue interpretations and clarifications as it may deem fit.

3.14. Application Data Sheets and Forms

The Pre-Qualification Bid is to be submitted as per the Format at Annexure-1. The following sample formats are to be used for the various attachments to be submitted with the Pre-Qualification Bid. Wherever no sample format has been specified, Bidder is required to use any appropriate format as per prevalent practice in conformity with the requirement stipulated in RFQ document.

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of [Ash Handling Plant] package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service.
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder is found to be factually incorrect or manipulated, the Bidder will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder. Thus the bidder shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus ninety (90) days grace period.
- 3.6. The Bidder shall provide satisfactory evidence that he has adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid and adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.

Request for Qualification For R&M of Ash Handling Plant of Unit No. [..] Capacity [..] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

- 3.7. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the bidder's claim on experience and to assess the Bidder's capability and capacity to perform the contract, should the circumstances warrant such an assessment in the overall interest of the project.
- 3.8. [Name of Utility] reserves the right to reject any or all Pre-Qualification Bids or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no bidder / intending bidder shall have any claim arising out of such action.
- 3.9. Participation Fee for an amount of [INR.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXXX]' is to be submitted along with the Pre-Qualification Bid. Pre-Qualification Bid received without the Participation Fee will be rejected. Participation Fee is non-refundable.
- 3.10. Language of Bid
The Bid submitted by the Bidder and all correspondences and documents relating to the Bid exchanged by the bidder and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.
- 3.11. Signature on Pre-Qualification Bid
The Pre-Qualification Bid must contain the name and place of business of the Bidder and each page of the EOI must be signed and sealed by the authorized person(s) of the Bidder with his usual signature. The name of all persons signing should be typed or printed below the signature.
Satisfactory evidences of authority of the person signing on behalf of the bidder shall be furnished with the Bid.
The Bidder's name stated on the Pre-Qualification Bid shall be the exact legal name of the firm.
- 3.12. Method of Submission of Pre-Qualification Bid
The Pre-Qualification Bid shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Bid.
The outside of the covers should indicate clearly the name of the Bidder and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Bid is submitted ". Pre-Qualification Bid with no indication given on the outside of the envelope that it is a Pre-Qualification Bid which therefore gets opened before the due

- (v) Data Sheet regarding net worth requirement at RFQ at clause 2.1.2 (b)
- (vi) Data Sheet regarding bank balances & available unutilized credit line.
- (vii) Letter of undertaking pledging unconditional & irrevocable financial support to the bidder for execution of the contract. (In case of financial QR is met on the strength of Holding Company).

6.0 We are submitting the following supporting documents to demonstrate our qualifications & capability to execute the subject R&M work:

- (i) List of order executed
- (ii) Copies of order
- (iii) Past performance certificate.
- (iv) Contracts in hands/pending jobs along with value
- (v) Documents regarding company profile, technical manpower, financial strength, resources, construction equipment.
- (vi) Copies of last 3 year audited financial statement.
- (vii) List of major litigations/disputes.
- (viii) Any other document.

7.0 We hereby attach participation fee of [INR-----] in the form of demand draft in favor of '[XXXXXX]' payable at '[XXXXXX]'.

8.0 We certify that all the information and documents furnished with this Pre-Qualification Bid are true and genuine to the best of our knowledge & belief.

Dated this '[XXXXXX]' day of '[XXXXXX]' 20XX

Yours Faithfully,

Request for Qualification For R&M of Ash Handling Plant of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

Annexure-2

Format for Letter of Undertaking by Holding Company pledging unconditional & irrevocable support to the Bidder for the execution of R&M work.

Ref.: [XXXXX]

Date : [XXXXX]

To,
 /Designated Official of Utility XXXXX/
 /Name & Address XXXXX/

Dear Sir/ Madam,

We, M/s..... declare that we are the holding company of M/s..... (Name of the Bidder) and have controlling interest therein.

M/s.....(Name of the Bidder) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document for the package..... (Name of the package) for Unit No. [XXXXX] of [XXXXX] power plant of [XXXXX] under RFQ no..... dated

We hereby undertake that we hereby pledge our unconditional & irrevocable financial support for the execution of the said package to M/s..... (Name of the Bidder), for the execution of the Contract, in case they are awarded the Contract for the said package at the end of the bidding process. We further agree that this undertaking shall be without prejudice to the various liabilities that M/s..... (Name of Bidder) would be required to undertake in terms of the Contract including the Performance Security as well as other obligations of the Bidder/Contractor.

This undertaking is irrevocable and unconditional, and shall remain in force till the successful execution and performance of the entire contract and/or till it is discharged by Employer.

Yours faithfully,
 (Signature of Authorized
 Signatory) on behalf of the
 Holding Company)

1 INVITATION FOR QUALIFICATION

1.1 Introduction

[Give brief introduction about the name, location and details of the Power Plant of the utility inviting tender for R & M work]

[XXX is undertaking renovation & modernization of XXX MW Unit no.-XX ---- of the Power Plant]

1.2 INVITATION

[Name of The Utility], hereinafter referred to as "Employer / Owner / Purchaser", is undertaking Renovation & Modernization project of Unit No.[XXX] of the [XXX] Power Plant. Under this project, [Name of The Utility] invites sealed Pre-Qualification Tender from experienced and interested Indian bidders for the Renovation & Modernization Work of [Balance of Plant] package of Unit No.[XXX] of the [XXX] Power Plant on Domestic Competitive Bidding (DCB).

Interested bidders may collect the RFQ documents in person from [Name and Contact Details of Designated Official.....]. The RFQ documents can be collected between [---] hrs to [---] hrs on all working days from [.....] to [.....]. Alternatively, the RFQ document can be downloaded from [Name of the Utility] website [.....].

The Pre-Qualification Tender in the form and manner specified in the RFQ document along with necessary attachments and stipulated participation fee should be submitted to [Name and Contact Details of Designated Official.....] by [Date and Time].

1.3 Brief Scope of Work

The scope of work under this R&M package involves disassembly and replacement/refurbishment of specified existing equipments / systems by supplying new equipments/ systems including supply of assembly materials, inspection & testing at suppliers works, supply of mandatory spares, packing & forwarding, transportation & insurance, receipt at site, unloading, handling & storage at site, pre-assembly, fabrication, repair, servicing/ overhauling, erection, carrying out of all associated civil works including supply of cement, steel etc., testing & commissioning and successful completion of trial operation & performance guarantee tests for [Balance of Plant] package of Unit no. [XXX] of [XXX] Power Plant comprising [.....] systems.

1.5 Objective of Request for Qualification

[Name of the Utility] is carrying out this Pre-Qualification Process to identify qualified bidders for the issuance of RFP Documents for the Tender of Renovation & Modernization work of [Balance of Plant] package of Unit no. [XXX] of [XXX] Power Plant. The objective of the pre-qualification is to allow only the capable and qualified bidders having requisite technical expertise, relevant experience, project execution capability and financial resources to participate in the tendering process.

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-010	01	RFQ for Contractor	[2]	25.09.2014

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in tendering process for the subject Renovation & Modernization work for [Balance of Plant] package, the bidder must meet the Technical Qualification Requirement specified at clause 2.1.1 and Financial Qualification Requirement specified at clause 2.1.3. As per the stipulation in Clause 2.1.1, the Bidder/Consortium Leader/Consortium Member(s)/Sub-Contractor(s), as the case may be, must meet the Qualification Requirements for BoP systems stipulated at Clause 2.1.2. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.4.

2.1.1 Technical Qualification Requirement for Bidder

The Bidder must meet Qualification Requirement stipulated at (a) or (b) or (c) below:

- (a) The bidder should have executed contract(s) on Engineering, Procurement and Construction (EPC) basis for at least one number of coal based / lignite based / gas based combined cycle power plant of installed capacity not less than 100 MW which has been commissioned during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above and has been in satisfactory operation for a period of not less than one year as on the original scheduled date of submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above. The scope of work of such Contract(s) must have included Engineering, Supply, installation (with all associated Mechanical, Electrical, Civil & Structural Works), testing and commissioning of Main power plant equipment (Boiler–Turbine-generator or Gas Turbine - HRSG - STG) with all associated integral auxiliaries.

In addition, the Bidder should meet the Qualification Requirement stipulated at clause 2.1.2 for the four BoP systems listed therein. If the Bidder does not meet the Qualification Requirement for some or all systems listed at Clause 2.1.2, he can employ Sub-Contractor(s) who meet Qualification Requirement stipulated for such system.

or

- (b) The bidder should have executed contract(s) on Engineering, Procurement and Construction (EPC) basis for Balance of Plant of at least one number of coal based / lignite based / gas based combined cycle power plant of installed capacity not less than 100 MW which has been commissioned during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above and has been in satisfactory operation for a period of not less than one year as on the original scheduled date of submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above. The scope of work of such Contract(s) must have included Engineering, Supply, installation (with all associated Mechanical, Electrical, Civil &

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-010	01	RFQ for Contractor	[3]	25.09.2014

Structural Works), testing and commissioning of at least the following four systems with all associated integral auxiliaries:

1. Cooling Tower
2. CW Pumps for Condenser Cooling
3. Water Pre-treatment Plant and/or Liquid Effluent Treatment Plant
4. Demineralization (DM) Plant

In addition, the Bidder should meet the Qualification Requirement stipulated at clause 2.1.2 for the four BoP systems listed therein. If the Bidder does not meet the Qualification Requirement for some or all systems listed at Clause 2.1.2, he can employ Sub-Contractor(s) who meet Qualification Requirement stipulated for such system (s).

or

- (c) The bidder can be a Consortium of firms who collectively meet the Qualification Requirement specified at Clause 2.1.2 for the four systems listed therein. The Consortium members shall designate one member as the Leader of the Consortium with whom the Contract will be entered into in case the Consortium emerges as the successful bidder. The maximum number of Consortium members shall be limited to four. Each of the Consortium Member, including Consortium Leader, must meet Qualification Requirement for at least one of the four stipulated systems. In such a case, each of the listed systems will be executed by the Consortium Partner who meets the Qualification Requirement stipulated for that system.

2.1.2 Technical Qualification Requirement for BoP Systems

2.1.2.1 Qualification Requirement for Cooling Tower

The bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, constructed and commissioned at least one (1) number of [Natural Draft/Induced Draft Cooling tower] with [splash type / film type fill], of capacity not less than {Insert the design Capacity of Existing Cooling Tower in m³/h} which is in successful operation for at least one (1) year as on the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above.

2.1.2.2 Qualification Requirement for CW Pumps for Condenser Cooling

The Bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, manufactured, supplied, erected/ supervised erection, and commissioned/ supervised commissioning of at least one (1) nos. of vertical wet pit pumps for condenser cooling water application/ comparable duty, of capacity not less than {Insert the design Capacity of Existing CW pump in m³/h}, having specific speed in the range of [4000–7000 (US units)] which are in successful operation for at least one (1) year as on the scheduled

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-010	01	RFQ for Contractor	[4]	25.09.2014

date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above.

2.1.2.3 Qualification Requirement for Water Pre-treatment Plant and/or Liquid Effluent Treatment Plant

The Bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, supplied, erected and commissioned at least one (1) numbers of water/waste water treatment plants, each with a total capacity of {Insert the design Capacity of Existing stream in m³/h} (minimum), comprising of clarifiers/tube settlers/ thickeners or a combination thereof. The plants should be in successful operation for at least One (1) years as on the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above.

2.1.2.4 Qualification Requirement for Demineralization (DM) Plant

The Bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, supplied, erected and commissioned at least one (1) number of ion exchange based demineralising plant, consisting of at least two (2) streams of minimum {Insert the design Capacity of Existing stream in m³/h} capacity, capable of producing outlet water quality of silica and conductivity not more than 0.02 ppm as SiO₂ and 0.2 micro mho/cm respectively, which are in successful operation for at least one (1) year as on the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above.

2.1.3 Financial Qualification Requirement

- (a) The average annual turnover of the Bidder or Consortium Leader, as the case may be, should be at least [Indian Rupees] millions or equivalent foreign currency as per audited annual accounts during the preceding three consecutive years – [FY], FY [.....] and FY [.....]. For the purpose of conversion of foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be considered. Other income will not be considered for arriving at the annual turnover.
- (b) The Net Worth of the Bidder or Consortium Leader, as the case may be, as on the last date of preceding Financial Year shall be positive.
- (c) The sum of bank balances (including fixed deposits) and available unutilized credit line of the bidder or Consortium Leader, as the case may be, (including non fund based credit lines) should not be less than [INR.....] as on not more than 30 days prior to the scheduled last date of submission of Pre-qualification Bid
- (d) In case the Bidder/Consortium Leader does not satisfy the Financial Criteria stipulated in the above clauses (a) and (b) on its own and the Holding Company having controlling interest in the Bidder / Consortium Leader, as the case may be, meets the stipulated turn-over requirements

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-010	01	RFQ for Contractor	[5]	25.09.2014

at Clause (a), then Financial Criteria stipulated in the above clauses (a) and (b) will be deemed to have been met, provided that the Net worth of such Holding Company as on the last day of the preceding financial year is at least equal to or more than [...]. In such a case, the Bidder / Consortium Leader has to submit a Letter of Undertaking from the Holding Company pledging unconditional and irrevocable financial support to the bidder for execution of the Contract.

To establish the financial capacity for performance of the contractual obligations, the Bidder shall furnish documentary proof of their audited annual turnover and net worth for the last three (3) financial years [FY], [FY] & [FY].

2.1.4 Other Criteria

- (a) Any firm who is or was involved as a Consultant in the preparation for this R&M Project for activities such as Feasibility Study or RLA/CA Study or Energy Audit or preparation of DPR/Tender Document or any other preparatory activity or any firm who is or was involved as a consultant for implementation of this R&M project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of this R&M project cannot participate as a bidder for this R&M Tender.
- (b) Any Bidder who is legally barred from the procurement process of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as a bidder for this R&M Tender.
- (c) Any firm or its associate company or parent company cannot participate as Bidder or Consortium Member in more than one Bid under this tender.

2.2 Qualification Documents

2.2.1 Documents to be submitted (Pre-qualification)

Bidders are required to furnish following documents for pre-qualification in [five (5)] copies and an application with requisite participation fee along with their Pre-Qualification Bid.

- (i) List of orders executed by them along with copies of orders to prove their qualifications.
- (ii) Past Performance Certificates clearly indicating date of completion from the facility owner in respect of such completed contract(s).
- (iii) Name of any proposed Consortium member (s) along with letter of consent of consortium member.
- (iv) Documents of company profile incorporating technical man power, financial strength, resources, organization and experience to undertake such jobs as an evidence of their capacity to the satisfaction of Employer. Firm's audited accounts for last three years along with copy of latest income tax return filed.
- (v) Contracts in hand / pending jobs and their status along with value.
- (vi) Major pending legal cases.

Document Number	Rev. No.	Description	Page No.	Date of Issue

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of [Balance of Plant] package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service.
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder or Consortium leader or Consortium partner is found to be factually incorrect or manipulated, the Bidder or Consortium leader or Consortium partner as the case may be, will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder / Consortium leader. Thus the bidder / Consortium leader shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder / Consortium leader and Consortium partner shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. The bidder meeting the Qualifying Requirement as a Consortium should enclose the Letter of Consent (as per the prescribed format) from the consortium Partner (s) along with the Pre-Qualification Bid signed by the Consortium Partners indicating the scope of work. However, in the event, the bidder is found pre-qualified and issued RFP document, while submitting the techno-commercial Bid Proposal for R&M work, the bidder (consortium leader) shall furnish a Consortium Agreement with the other Consortium member. No new consortium partner, (other than those qualified at Pre-qualification stage) will be permitted at the time of submitting the Techno commercial Bid. The Consortium Agreement must include but not limited to (1) Scope of Service of each Consortium Member, (2) Authorization in favour of Consortium Leader to Bid and act on behalf of the Consortium Members during tendering and execution stage, (3) Joint and several liability of all consortium members for the entire scope of service, (4) Undertaking that any dispute among Consortium Members will not relieve any Member from its obligations towards the Owner under this Contract, (5) Undertaking by each member for providing expertise, man power and other technical support for successful completion of the respective Scope of Service and (6) Undertaking that each Member

Document Number	Rev. No.	Description	Page No.	Date of Issue

will provide Additional Contract Performance Security in addition to the Contract Performance Security to be furnished by Consortium Leader.

- 3.6. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus ninety (90) days grace period.
- If the bidder is a Consortium of firms, in addition to the Contract Performance Guarantee (CPG) of 10% furnished by the Consortium Leader, each other consortium member will furnish Additional Contract Performance Guarantee equal to 1% of the Contract Price.
- 3.7. The Bidder shall provide satisfactory evidence that he and / or, where applicable, the consortium leader and consortium partners have adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid have an adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.
- 3.8. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the bidder's / Consortium leader's & Consortium Partners' claim on experience and to assess the Bidder's / Consortium leader's & Consortium Partners' capability and capacity to perform the contract, should the circumstances warrant such an assessment in the overall interest of the project.
- 3.9. [Name of Utility] reserves the right to reject any or all Pre-Qualification Bids or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no bidder / intending bidder shall have any claim arising out of such action.
- 3.10. Participation Fee for an amount of [INR.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXXX]' is to be submitted along with the Pre-Qualification Bid. Pre-Qualification Bid received without the Participation Fee will be rejected. Participation Fee is non-refundable.
- 3.11. Language of Bid
- The Bid submitted by the Bidder and all correspondences and documents relating to the Bid exchanged by the bidder and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the

Document Number	Rev. No.	Description	Page No.	Date of Issue

bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.

3.12. Signature on Pre-Qualification Bid

The Pre-Qualification Bid must contain the name and place of business of the Bidder and each page of the Pre-Qualification Bid must be signed and sealed by the authorized person(s) of the Bidder / Consortium leader with his usual signature. The name of all persons signing should be typed or printed below the signature.

Satisfactory evidences of authority of the person signing on behalf of the bidder / Consortium leader shall be furnished with the Bid.

The Bidder / Consortium leader's name stated on the Pre-Qualification Bid shall be the exact legal name of the firm.

3.13. Method of Submission of Pre-Qualification Bid

The Pre-Qualification Bid shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Bid.

The outside of the covers should indicate clearly the name of the Bidder / Consortium leader and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Bid is submitted ". Pre-Qualification Bid with no indication given on the outside of the envelope that it is a Pre-Qualification Bid which therefore gets opened before the due date shall be liable to be disqualified. All the pages of the Pre-Qualification Bid shall be serially numbered.

The Pre-Qualification Bid, complete in all respects, must be submitted to the official and address mentioned below.

'[XXXXXX]

'[XXXXXX] '[XXXXXX]

Submission of Pre-Qualification Bid through Fax, Telex, E-Mail will not be accepted.

[Name of Utility], takes no responsibility for delay, loss or non-receipt of documents or any letter sent by post either way.

Pre-Qualification Bids must reach the above office on or before '[XXXXXX] Hours (IST) on '[XXXXXX]. Any Pre-Qualification Bid received after the expiry of the time specified is liable for rejection.

3.14. Opening of Pre-Qualification Bid

The Pre-Qualification Bids received from the bidders as above will be opened at '[Place XXXXXX] on Date and at Time indicated in row (d) in section 1.4 above.

The Pre-Qualification Bids shall be opened in the presence of such Bidders who may be present. The bidders are at liberty to be present or authorise their

Format for Pre-Qualification Bid

Date: - [XXXXXX]

RFQ No. [XXXXXX]

Name of Package: Renovation & Modernization of [.....] Package for Unit No. [XXXXXX] of [XXXXXX] power plant of [XXXXXX].

To,

[Designated Officer XXXXX]

[Address XXXXX]

Dear Sir /Madam

1.0 Having examined the RFQ Document No. [XXXXXX], we the undersigned intend to participate in the pre-qualification process for selection of qualified bidders for Renovation & Modernization of [Balance of Plant] Package for unit [XXXXXX] of [XXXXXX] power plant of [XXXXXX]. Towards this end we submit the following details & documents for prequalification.

2.0 Name of the Bidder/Leader of Consortium with name & designation of person authorized to submit the pre-qualification bid:

Name of Bidder/ Leader of Consortium: [.....]

Name & Designation of Authorized Person: [.....]

3.0 We meet the Qualification Requirement stipulated at clause no.2.1.1 of RFQ document *on our own / *in association with our Consortium Partner(s) [XXXXXX].

**We on our own meet the Qualification Requirement at Clause 2.1.2.1 of RFQ / *We in association with our Consortium Partner(s) (.....) meet the Qualification Requirement at Clause 2.1.2.1 of RFQ / *We will employ Sub-Contractor who will meet Qualification Requirement at 2.1.2.1.*

**We on our own meet the Qualification Requirement at Clause 2.1.2.2 of RFQ / *We in association with our Consortium Partner(s) (.....) meet the Qualification Requirement at Clause 2.1.2.2 of RFQ / *We will employ Sub-Contractor who will meet Qualification Requirement at 2.1.2.2.*

**We on our own meet the Qualification Requirement at Clause 2.1.2.3 of RFQ / *We in association with our Consortium Partner(s) (.....) meet the Qualification Requirement at Clause 2.1.2.3 of RFQ / *We will employ Sub-Contractor who will meet Qualification Requirement at 2.1.2.3.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-010	01	RFQ for Contractor	[12]	25.09.2014

**We on our own meet the Qualification Requirement at Clause 2.1.2.4 of RFQ / *We in association with our Consortium Partner(s) (.....) meet the Qualification Requirement at Clause 2.1.2.4 of RFQ / *We will employ Sub-Contractor who will meet Qualification Requirement at 2.1.2.4.*

**We on our own meet the Qualification Requirement at Clause 2.1.3 of RFQ / *We on the strength of our Holding Company (.....) meet the Qualification Requirement at Clause 2.1.3 of RFQ.*

(The bidder is required to give a detailed description indicating the specific part of the qualification requirement, which is met by the Bidder/ Consortium Member(s) meet which part of Qualification Requirement and which part of the Qualification Requirement will be met by Sub-Contractor(s). Bidder is also required to the relationship between the Bidder & others on whose strength Qualification Requirement is met.)

4.0 We confirm that neither we nor any of our Consortium Members/our associates/ affiliates are liable for exclusion from participation in tendering process under 'other criteria' stipulated under clause no.2.1.4 of RFQ document.

5.0 We are enclosing the following attachments as integral part of our Pre-Qualification Bid

- (i) Covering Letter
- (ii) Power of Attorney in favor of persons signing on behalf of Bidder, Consortium members, and Holding Company, as applicable.
- (iii) Data Sheet regarding Technical Qualification Requirement at clause 2.1.1
- (iv) Data Sheet regarding Technical Qualification Requirement at clause 2.1.2
- (v) Data Sheet regarding turnover requirement at RFQ clause no. 2.1.3 (a)
- (vi) Data Sheet regarding net worth requirement at RFQ at clause 2.1.3 (b)
- (vii) Data Sheet regarding bank balances & available unutilized credit line.
- (viii) Letter of Undertaking pledging unconditional & irrevocable financial support to the bidder for execution of the contract. (In case of financial QR is met on the strength of Holding Company).
- (ix) Letter of Consent of Consortium Partner in case of Consortium

6.0 We are submitting the following supporting documents to demonstrate our qualifications & capability to execute the subject R&M work:-

- (i) List of order executed
- (ii) Copies of order
- (iii) Past performance certificate.

Format for Letter of Undertaking by Holding Company pledging unconditional
& irrevocable support to the Bidder for the execution of R&M work.

Ref.: [XXXXX]

Date : [XXXXX]

To,

/Designated Official of Utility XXXXX/
/Name & Address XXXXX/

Dear Sir/ Madam,

We, M/s..... declare that we are the holding company of
M/s..... (Name of the Bidder/Consortium Leader) and have
controlling interest therein.

M/s.....(Name of the Bidder/Consortium Leader) have sought financial
strength and support from us for meeting the stipulated Financial Qualifying
Requirement as per Clause 2.1.3 (a) & (b) of RFQ document.

We hereby undertake that we hereby pledge our unconditional & irrevocable
financial support for the execution of the said package to
M/s..... (Name of the Bidder//Consortium Leader), for
the execution of the Contract, in case they are awarded the Contract for the
said package at the end of the bidding process. We further agree that this
undertaking shall be without prejudice to the various liabilities that
M/s..... (Name of Bidder) would be required to
undertake in terms of the Contract including the Performance Security as well
as other obligations of the Bidder/Contractor.

This undertaking is irrevocable and unconditional, and shall remain in force till
the successful execution and performance of the entire contract and/or till it is
discharged by Employer.

Yours faithfully,
(Signature of Authorized
Signatory) on behalf of the
Holding Company)

If any of the date happens to be a public holiday, the deadline will be the next working day.

1.5 Objective of Request for Qualification

[Name of The Utility] is carrying out this Pre-Qualification Process to identify qualified bidders for the issuance of RFP Documents for the Tender of Renovation & Modernization work of [Electrical Balance of Plant] package of Unit no. [XXX] of [XXX] Power Plant. The objective of the pre-qualification is to allow only the capable and qualified bidders having requisite technical expertise, relevant experience, project execution capability and financial resources to participate in the tendering process.

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-011	01	RFQ for Contractor	[2]	25.09.2014

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in tendering process for the subject Renovation & Modernization work for [Electrical Balance of Plant] package, the bidder must meet the Technical Qualification Requirement specified at clause 2.1.1 and Financial Qualification Requirement specified at clause 2.1.2. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.3.

2.1.1 Technical Qualification Requirement

[The Bidder, during the last 10 years preceding the scheduled date for submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above, should have designed, engineered, supplied, erected, tested and commissioned at least two E-BOP (Electrical Balance of Plant) packages of Thermal Power Plants of unit size 200 MW or above comprising Air Insulated Switchyard, Switchyard Automation System and Power Transformers which should have completed satisfactory operation for a period of not less than two (2) years as on the date of opening of Pre-Qualification Bid. Bidders should have experience of manufacturing, supply, erection, testing, commissioning of Power Transformers for Thermal Power Plants of unit size 200 MW or above which are in successful operation for the last minimum two years. In case, the bidder is not a manufacturer of 400/220 kV Air Insulated Switchyard and Switchyard Automation System, the bidder can source these equipments from the original Equipment Manufacturers who have supplied such equipments to Thermal Power Plants of unit size 200 MW or above which are in successful operation for the last minimum one year as on the original scheduled date of submission of Pre-Qualification Bids indicated in row (d) in section 1.4 above. However, the Bidder shall be fully responsible for the successful performance of all such bought out equipments as per the requirements of the contract.]

2.1.2 Financial Qualification Requirement

- (a) The average annual turnover of the Bidder should be at least [Indian Rupees] millions or equivalent foreign currency as per audited annual accounts during the preceding three consecutive years – [FY, FY [.....] and FY [.....]]. For the purpose of conversion of foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be considered. Other income will not be considered for arriving at the annual turnover.
- (b) The Net Worth of the Bidder as on the last date of preceding Financial Year shall be positive.
- (c) The sum of bank balances (including fixed deposits) and available unutilized credit line of the bidder (including non fund based credit lines) should not be less than [INR.....] as on not more than 30 days prior to the scheduled last date of submission of Pre-qualification Bid

Document Number	Rev. No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-011	01	RFQ for Contractor	[3]	25.09.2014

- (d) In case the Bidder does not satisfy the Financial Criteria stipulated in the above clauses (a) and (b) on its own and the Holding Company having controlling interest in the Bidder meets the stipulated turn-over requirements at Clause (a), then Financial Criteria stipulated in the above clauses (a) and (b) will be deemed to have been met, provided that the Net worth of such Holding Company as on the last day of the preceding financial year is at least equal to or more than [.....]. In such a case, the Bidder has to submit a Letter of Undertaking from the Holding Company pledging unconditional and irrevocable financial support to the bidder for execution of the Contract.

To establish the financial capacity for performance of the contractual obligations, the Bidder shall furnish documentary proof of their audited annual turnover and net worth for the last three (3) financial years [FY] , [FY] & [FY].

2.1.3 Other Criteria

- (a) Any firm who is or was involved as a Consultant in the preparation for this R&M Project for activities such as Feasibility Study or RLA/CA Study or Energy Audit or preparation of DPR/Tender Document or any other preparatory activity or any firm who is or was involved as a consultant for implementation of this R&M project or whose associate or affiliate is or was involved as a consultant in the preparation or implementation of this R&M project cannot participate as a bidder for this R&M Tender.
- (b) Any bidder who is legally barred from the procurement process of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as a bidder for this R&M Tender.
- (c) Any firm cannot participate as Bidder in more than one Bid under this tender.

2.2 Qualification Documents

2.2.1 Documents to be submitted (Pre-qualification)

Bidders are required to furnish following documents for pre-qualification in [five (5)] copies and an application with requisite participation fee along with their Pre-Qualification Bid.

- (i) List of orders executed by them along with copies of orders to prove their qualifications.
- (ii) Past Performance Certificates clearly indicating date of completion from the facility owner in respect of such completed contract(s).
- (iii) Documents of company profile incorporating technical man power, financial strength, resources, organization and experience to undertake such jobs as an evidence of their capacity to the satisfaction of Employer. Firm's audited accounts for last three years along with copy of latest income tax return filed.
- (iv) Contracts in hand / pending jobs and their status along with value.
- (v) Major pending legal cases.

3 INSTRUCTION TO APPLICANTS

- 3.1. Only bidders pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the R&M work of [Electrical Balance of Plant] package and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, project execution capability and financial resources to discharge the scope of service
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Bidder is found to be factually incorrect or manipulated, the Bidder as the case may be, will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Bidder shall be on the basis of single bidder responsibility. The contract will be entered into only with the successful Bidder. Thus the bidder shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of this contract.
- 3.5. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus three (3) months grace period.
- The Bidder shall provide satisfactory evidence that he has adequate capability and capacity to perform the work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the installed manufacturing and / or fabrication capacities to meet the requirements appropriate to the works covered in his bid have an adequate field service organization to provide the necessary field erection and management services required to successfully erect, test and commission the equipment / system as required by the bidding documents. Pre-Qualification Bid submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.

Request for Qualification for the Selection of Contractor for R&M of Electrical Balance of Plant of Unit No.[..] Capacity [..] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

- 3.6. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the bidder's claim on experience and to assess the Bidder's capability and capacity to perform the contract, should the circumstances warrant such an assessment in the overall interest of the project.
- 3.7. [Name of Utility] reserves the right to reject any or all Pre-Qualification Bids or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no bidder / intending bidder shall have any claim arising out of such action.
- 3.8. Participation Fee for an amount of [INR.....] or [USD.....] or [Euro.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXXX]' is to be submitted along with the Pre-Qualification Bid. Pre-Qualification Bid received without the Participation Fee will be rejected. Participation Fee is non-refundable.
- 3.9. Language of Bid
The Bid submitted by the Bidder and all correspondences and documents relating to the Bid exchanged by the bidder and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.
- 3.10. Signature on Pre-Qualification Bid

The Pre-Qualification Bid must contain the name and place of business of the Bidder and each page of the EOI must be signed and sealed by the authorized person(s) of the Bidder with his usual signature. The name of all persons signing should be typed or printed below the signature.
Satisfactory evidences of authority of the person signing on behalf of the bidder shall be furnished with the Bid.
The Bidder name stated on the Pre-Qualification Bid shall be the exact legal name of the firm.
- 3.11. Method of Submission of Pre-Qualification Bid

The Pre-Qualification Bid shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of the Pre-Qualification Bid.
The outside of the covers should indicate clearly the name of the Bidder and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Bid is submitted ". Pre-Qualification Bid with no indication given on the outside of the envelope that it is a Pre-Qualification Bid which therefore gets opened before the due date shall be liable to be disqualified. All the pages of the Pre-Qualification Bid shall be serially numbered.

Dear Sir/ Madam,

We, M/s..... declare that we are the holding company of M/s..... (Name of the Bidder) and have controlling interest therein.

M/s.....(Name of the Bidder) have sought financial strength and support from us for meeting the stipulated Financial Qualifying Requirement as per Clause 2.1.2 (a) & (b) of RFQ document for the package..... (Name of the package) for Unit No. [XXXXX] of [XXXXX] power plant of [XXXXX] under RFQ no..... dated

We hereby undertake that we hereby pledge our unconditional & irrevocable financial support for the execution of the said package to M/s..... (Name of the Bidder), for the execution of the Contract, in case they are awarded the Contract for the said package at the end of the bidding process. We further agree that this undertaking shall be without prejudice to the various liabilities that M/s..... (Name of Bidder) would be required to undertake in terms of the Contract including the Performance Security as well as other obligations of the Bidder/Contractor.

This undertaking is irrevocable and unconditional, and shall remain in force till the successful execution and performance of the entire contract and/or till it is discharged by Employer.

Yours faithfully,
 (Signature of Authorized Signatory) on behalf of the Holding Company)

1 INVITATION FOR QUALIFICATION

1.1 Introduction

{Give brief introduction about the name, location and details of the Power Plant for which the utility proposes to appoint a consultant for advising about the Renovation & Modernization and Life extension (R & M and LE) work for any of the identified units.}

1.2 Invitation

[Name of The Utility], hereinafter referred to as "Employer", plans to undertake Renovation & Modernization of Unit No.[XX] of the [XXX] [Coal / Lignite] based Power Plant and desires to appoint a Renovation & Modernization Consultant (R&M Consultant) for a) Carrying out investigation studies such as Hot and Cold Walk down Studies, Residual Life Assessment / Condition Assessment (RLA/CA) Studies and Energy Audit (EA) Studies, b) Preparing Feasibility Report and Detailed Project Report, c) Providing assistance in obtaining Regulatory approval, d) Preparing Tender Documents and d) Providing support in Tendering and Bid evaluation process to appoint R&M Contractor(s). Towards this end, [Name of The Utility] invites sealed Pre-Qualification Tenders from experienced and interested Consultancy Firms for providing Consultancy Services for Renovation & Modernization of Unit No.[XX] of the [XXX] Thermal Power Plant. Consultancy Firms both from India and abroad are eligible to participate in the Pre-Qualification Process and subsequent Request for Proposal process, if found eligible during Pre-Qualification process.

Interested Consultancy Firms may collect the RFQ documents in person from [Name and Contact Details of Designated Official]. The RFQ documents can be collected between [---] hrs to [---] hrs on all working days from [.....] to [.....]. Alternatively, the RFQ documents can be downloaded from [Name of the Utility] website [.....].

The Pre-Qualification Tender in the form and manner specified in the RFQ document along with necessary attachments and stipulated participation fee should be submitted to [Name and Contact Details of Designated Official] by [Date and Time].

1.3 Brief Scope of Work

The Scope of work of the R&M Consultant shall be divided in two Phases. First Phase shall cover scope up to obtaining regulatory approval for R&M works and Second Phase shall cover preparation of tender documents and bid evaluation for the selection of R&M Contractor(s) as described below.

Phase-I

- i) Review and Analysis of Operational Data and Trip Reports provided by Employer.

Document Number	Rev No.	Description	Page No.	Date of Issue

Request for Qualification for Selection of Consultant for Renovation & Modernization of Unit No.[...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

- ii) Hot Walk Down Survey
- iii) Cold Walk Down Survey
- iv) Review of previous RLA/CA and EA Studies, if any.
- v) Conducting Residual Life Assessment (RLA) / Condition Assessment (CA) of the Equipments / Systems of complete Power Plant
- vi) Conducting Energy Audit and Performance Testing of major Equipments/ Systems of the Power Plant
- vii) Working out of various R& M Options for improving the Performance Parameters and extending the life of the Unit.
- viii) Finalizing the most cost effective option for R&M and LE of the unit.
- ix) Preparation of Feasibility Report (FR).
- x) Preparation of Detailed Project Report (DPR).
- xi) Providing Assistance to the Employer in obtaining necessary approvals from statutory / regulatory authorities.

Phase-II

- i) Basic Design & Engineering and Preparation of Tender Documents.
- ii) Support for bid evaluation for the selection of R&M Contractor(s), up to the placement of Letter of Award.

Note: Phase-II shall commence only after obtaining necessary approvals from statutory / regulatory authorities and after obtaining the Notice to Proceed from the "Employer".

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in the RFP process for selection of the R&M Consultant for Renovation & Modernization of Unit no [...] of [...] thermal power plant, the Applicant must meet the two Technical Qualification Requirements specified at clause 2.1.1 and 2.1.2 below. If an Applicant meets only one of the two Technical Qualification Requirements (either Technical Qualification Requirement-1 at 2.1.1 or Technical Qualification Requirement -2 at clause 2.1.2) and does not meet the other, it can associate with another engineering consultancy firm that meets the other Technical Qualification Requirement. The Applicant can also be a Consortium of 2 (two) engineering consultancy firms who collectively meet the two Technical Qualification Requirements specified at clause 2.1.1 and 2.1.2 below.

In addition to meeting Technical Qualification Requirement, the Applicant must meet Financial Qualification Requirement at Clause 2.1.3 below. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.4.

2.1.1 Technical Qualification Requirement-1

The Applicant should be an engineering consultancy firm that has successfully completed at least 2 (two) number of technical consultancy assignments including DPR, Specifications, Bid Evaluation and Review of Vendor Drawings for coal/lignite fired thermal power plants of capacity 200 MW or more as on the date of submission of Pre-Qualification Application.

2.1.2 Technical Qualification Requirement-2

The Applicant during the last [10] years, must have successfully completed at least (1) one technical consultancy assignment for Renovation and Modernization of coal/lignite fired thermal power plant of 100 MW capacity or above comprising, a) Carrying out of investigation studies such as Hot and Cold Walk down Studies, Residual Life Assessment / Condition Assessment (RLA/CA) Studies and Energy Audit (EA) Studies, b) Preparation of the Feasibility Report and the Detailed Project Report, c) Preparation of the Tender Documents and d) Preparation of Tendering Documents and Bid evaluation to appoint R&M Contractor(s), as on the date of submission of Pre-Qualification Application.

Consultancy organizations which do not possess the requisite qualification of carrying out of investigation studies mentioned at a) above, may associate with such organizations which meet the required qualification, in the form of a joint venture or a sub-consultancy agreement.

2.1.3 Financial Qualification Requirement

- (a) The average annual turnover of the Applicant should be at least [Indian Rupees] millions or equivalent foreign currency as per audited

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-012	01	Model RFQ for R&M Consultant	[4]	25.09.2014

---	-------------------

annual accounts during the preceding three consecutive years – [FY], FY [.....] and FY [.....]. For the purpose of conversion of foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be considered. Other income will not be considered for arriving at the annual turnover.

(b) The Net Worth of the Bidder as on the last date of preceding Financial Year shall be positive.

2.1.4 Other Criteria

- (a) Any entity that is legally barred from participation in Consultancy assignments of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as an applicant or associate or consortium member for this R&M Consultancy Tender.
- (b) Any firm or its associate company cannot participate as Applicant or Associate or Consortium Member for more than one RFQ application under this R&M Consultancy Tender.

2.2 Qualification Documents

2.2.1 Documents to be submitted (Pre-qualification)

Applicants/Consortium Leaders are required to furnish following documents for pre-qualification in [five (5)] copies and an application with requisite participation fee along with their Pre-Qualification Bid.

- (i) List of orders executed by them, their Consortium Partners / Associates along with copies of orders to prove their qualifications.
- (ii) Past Performance Certificates from the previous employers in respect of such completed consultancy assignment(s) clearly indicating scope of and date of completion for each assignment.
- (iii) Names of proposed Associates or Consortium member if any, along with Letters of Consent from each Associate / Consortium Partner.
- (iv) Particulars of Key Personnel that must include inter alia their names, details regarding qualification, areas of expertise, professional experience and names of relevant projects.
- (v) Documents of company profile incorporating details of technical man power, financial strength, resources, organization and experience to undertake such jobs as an evidence of their capacity for the satisfaction of Employer.
- (vi) Firm's audited accounts for last three (3) years along with a copy of latest income tax return filed.
- (vii) Consultancy Assignments in hand / pending jobs and their status along with value.
- (viii) Pending legal cases, if any.

3 INSTRUCTION TO APPLICANTS

- 3.1. Only Applicants found pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the subject R&M Consultancy work and will be eligible to submit Bid Proposal for R&M work. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, competence of key personnel, project execution capability and financial resources to discharge the scope of service.
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Applicant or Associate or Consortium leader or Consortium partner is found to be factually incorrect or manipulated, the Applicant or Associate or Consortium leader or Consortium partner as the case may be, will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the R&M Consultant shall be on the basis of single bidder responsibility. The Consultancy Contract will be entered into only with the successful Bidder (Sole Bidder or Principal Consultant or Consortium leader as the case may be). Thus the Bidder / Principal Consultant/ Consortium leader shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder, Bidder's Associate, Consortium leader and Consortium partner shall not subcontract the entire scope of work, back to back or otherwise, for the performance of the subject Consultancy Contract.
- 3.5. The Applicant, meeting the Qualifying Requirement on the strength of Associate (s), should enclose the Letter (s) of Association (as per the prescribed format) from the Associate (s) signed by the Associate (s) indicating the scope of work along with the Pre-Qualification Application. For each such Associate, while submitting the techno-commercial Bid Proposal for R&M Consultancy work, the Associate and Bidder (Principal Consultant) shall furnish a joint undertaking towards joint and several liability to the employer for the successful performance of Associate's Scope of Work. The undertaking shall be furnished as per the format to be specified in the RFP document.
- 3.6. The bidder meeting the Qualifying Requirement as a Consortium should enclose the Letter of Association (as per the prescribed format) from the consortium Partner along with the Pre-Qualification Application signed by the Consortium Partners indicating the scope of work. However, in the event, the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00100-012	01	Model RFQ for R&M Consultant	[6]	25.09.2014

bidder is found pre-qualified and is issued RFP document, while submitting the techno-commercial Bid Proposal for R&M Consultancy work, the bidder (consortium leader) shall furnish a Consortium Agreement with the other Consortium member. No new consortium partner, (other than those qualified at Pre-qualification stage) will be permitted at the time of submitting the Techno commercial Proposal. Further, while submitting the techno-commercial Bid Proposal for R&M work, the Consortium leader and Consortium members will furnish a joint undertaking towards diligent performance of their respective scope of work and towards joint and several liability to the employer for the successful performance of the Consultancy Contract. The undertaking shall be furnished as per the format to be specified in the RFP document.

- 3.7. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Employer within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to five percent (5%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the scheduled date of completion of R&M Consultant's work plus three (3) months grace period.

If the bidder is a Consortium of Consultancy firms, in addition to the Contract Performance Guarantee (CPG) of 5% furnished by the Consortium Leader, the other consortium members shall furnish Additional Contract Performance Guarantee equal to 2% of Contract Price.

If the Bidder meets Qualification Requirement on the strength of Associate (s), in addition to the Contract Performance Guarantee (CPG) of 5% furnished by the Bidder (Principal Consultant), each Associate shall furnish Additional Contract Performance Guarantee equal to 2% of Contract Price.

- 3.8. The Applicant/Consortium Leader shall provide satisfactory evidence that the applicant and / or, where applicable, the Associate (s)/ consortium partners have adequate capability and capacity to deliver the consultancy services properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the expertise, the number of experts and other supporting consultants, to meet the requirements appropriate to the works covered in his bid. Pre-Qualification Application submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.

- 3.9. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to verify the Applicant's / Consortium leader's, Associate's and Consortium Partners' claim on experience and to assess the Applicant's / Consortium leader's, Associate's and Consortium Partners' capability and capacity to execute the

subject R&M Consultancy contract, should the circumstances warrant such an assessment in the overall interest of the R&M project.

3.10. [Name of Utility] reserves the right to reject any or all Pre-Qualification Applications or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no Applicant / intending Applicant shall have any claim arising out of such action.

3.11. Participation Fee for an amount of [INR.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXX]' is to be submitted along with the Pre-Qualification Application. Pre-Qualification Application received without the Participation Fee will be rejected. Participation Fee is non-refundable.

3.12. Language of Bid
The Pre-Qualification Application submitted by the Applicant and all correspondences and documents relating to the Application exchanged by the Applicant and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.

3.13. Signature on Pre-Qualification Bid

The Pre-Qualification Application must contain the name and place of business of the Applicant and each page of the Application must be signed and sealed by the authorized person(s) of the Applicant / Consortium leader with his usual signature. The name of all persons signing should be typed or printed below the signature.

Satisfactory evidences of authority of the person signing on behalf of the Applicant / Consortium leader shall be furnished with the Application.

The Applicant / Consortium leader's name stated on the Pre-Qualification Application shall be the exact legal name of the firm.

3.14. Method of Submission of Pre-Qualification Bid

The Pre-Qualification Application shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Application.

The outside of the covers should indicate clearly the name of the Applicant / Consortium leader and his address. In addition, the envelope or container should indicate the "Tender No. and Name of the work for which the Pre-Qualification Application is submitted ". Pre-Qualification Application with no indication given on the outside of the envelope that it is a Pre-Qualification Application which therefore gets opened before the due date shall be liable to

---	-------------------

1 INVITATION FOR QUALIFICATION

1.1 Introduction

{Give brief introduction about the name, location and details of the Power Plant for which the utility is proposing to appoint an Implementation Support Consultant for R & M works.}

1.2 INVITATION

[Name of The Utility], hereinafter referred to as “Employer”, is planning to undertake Renovation & Modernization of Unit No.[XX] of the [XXX] Power Plant and desires to appoint a Implementation Support Consultant (IS Consultant). Towards this end, [Name of the Utility] invites sealed Pre-Qualification Tenders from experienced and interested Consultancy Firms for Implementation Support Consultancy Services for Renovation & Modernization of Unit No. [XX] of the [XXX] Power Plant. Consultancy Firms from both India and abroad are eligible to participate in the Pre-Qualification Process and subsequent Request for Proposal process if found eligible during pre-Qualification process.

Interested Consultancy Firms may collect the RFQ documents in person from [Name and Contact Details of Designated Official.....]. The RFQ documents can be collected between [---] hrs to [---] hrs on all working days from [.....] to [.....]. Alternatively, the RFQ document can be downloaded from [Name of the Utility] website [.....].

The Pre-Qualification Tender in the form and manner specified in the RFQ document along with necessary attachments and stipulated participation fee should be submitted to [Name and Contact Details of Designated Official.....] by [Date and Time].

1.3 Brief Scope of Work

Scope of work of the Implementation Support Consultant shall include:-

- To provide support to [Name of the Utility] during detailed engineering, supply, implementation and commissioning of R&M works.
- To review the detailed engineering drawings/design calculations, schedule planned for execution and commissioning of all the works in line with the broad parameters of accepted design.
- Preparation of work schedules and monitoring the progress of R&M works through close involvement with the Contractors and other agencies on behalf of Employer.
- Assistance to Employer in decisions making and in taking timely actions to ensure schedule adherence during the tenure of R&M project.

---	-------------------

2 QUALIFICATION REQUIREMENT

2.1 Qualification Requirement

To be pre-qualified for participation in the RFP process for selection of the Implementation Support Consultant for Renovation & Modernization of Unit no [...] of [...] power plant, the Applicant must meet the Qualification Requirements specified at clause 2.1.1 and 2.1.2. Further, the eligibility of the Bidders to participate in the Tendering process is subject to other criteria specified at clause no. 2.1.3.

2.1.1 Technical Qualification Requirement

The Applicant should be an engineering consultancy firm that must have successfully completed during the last [10] years at least 2 (two) number of engineering consultancy assignments pertaining to coal/lignite fired thermal power plants of unit size 200 MW or above as on the date of Pre-Qualification Bid opening. The Consultancy assignments may be for either green field power projects or Renovation & Modernization Power Project. The scope of work for each of the two reference consultancy assignments must have included the following:

1. Review & Approval of Vendor Drawings & Documents
2. Field Services (Assistance in Construction Supervision, Start up, Commissioning and Testing)

2.1.2 Financial Qualification Requirement

- (a) The average annual turnover of the Applicant should be at least [Indian Rupees] millions or equivalent foreign currency as per audited annual accounts during the preceding three consecutive years – [FY], FY [...] and FY [...]. For the purpose of conversion of foreign currency to Indian Rupees, the TT Buying rate of State Bank of India as on 30 days prior to the date of submission of Bid will be considered. Other income will not be considered for arriving at the annual turnover.
- (b) The Net Worth of the Bidder as on the last date of preceding Financial Year shall be positive.

2.1.3 Other Criteria

- (a) Any Applicant who is legally barred from participation in Consultancy assignments of [name of Utility] on the grounds of previous violations of rules/regulations on fraud and corruption or any other reason cannot participate as an applicant for this Implementation Support Consultancy Tender.
- (b) Any firm or its associate company cannot participate as Applicant in more than one Bid under this Implementation Support Consultancy Tender.

Request for Qualification for Selection of Implementation Support Consultant for Renovation & Modernization of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

3 INSTRUCTION TO APPLICANTS

- 3.1. Only Applicants pre-qualified on the evaluation of qualification documents submitted in response to the RFQ will be issued RFP documents for the subject Implementation Support Consultancy Services Contract and will be eligible to submit Bid Proposal. The RFQ Documents specify the qualification criteria to be met by the prospective bidders to become eligible for participating in the tendering process. The bidders are required to submit evidence of their technical expertise, relevant past experience, competence of key personnel, project execution capability and financial resources to discharge the scope of service.
- 3.2. [Name of Utility] is committed to have most ethical business dealing with the Vendors, Bidders and Contractors of goods and services and deal with them in a transparent manner with Equity and Fairness. In case, certificate(s)/document(s) submitted by the Applicant is found to be factually incorrect or manipulated, the Applicant will be disqualified for the tender and will be liable to be blacklisted / debarred by the Employer for future tenders.
- 3.3. The Scope of work of the Implementation Support Consultant shall be on the basis of single bidder responsibility. The Consultancy Contract will be entered into only with the successful Bidder. Thus, the Bidder shall be solely responsible and liable for all the technical, management and all other services required for completing the entire scope of work.
- 3.4. The Bidder shall not Sub-contract the entire scope of work, back to back or otherwise, for the performance of the subject Consultancy Contract.
- 3.5. As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Guarantee (CPG) in the Format to be specified in RFP document, in favour of the Employer within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to five percent (5%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in the documents and specifications. The CPG shall be valid till the scheduled date of completion of Implementation Support Consultant's work plus three (3) months grace period.
- 3.6. The Applicant shall provide satisfactory evidence that he has adequate capability and capacity to perform the consultancy work properly and expeditiously within the time period specified. The evidence shall specifically cover, with written details, the expertise and number of experts and other support staff, to meet the requirements appropriate to the works covered in his bid. Pre-Qualification Application submitted without the proper documentary evidence to substantiate fulfilment of the qualifying requirements as specified are liable for rejection without assigning any reason.

Request for Qualification for Selection of Implementation Support Consultant for Renovation & Modernization of Unit No. [...] Capacity [...] of [Name of the Power Plant]	[LOGO OF UTILITY]
---	-------------------

- 3.7. Notwithstanding anything stated above, [Name of Utility] reserves the right to verify independently all statements / information submitted to confirm the Applicant's claim on experience and to assess the Applicant's capability and capacity to perform the subject Implementation Support Consultancy contract, should the circumstances warrant such an assessment in the overall interest of the R&M project.
- 3.8. [Name of Utility] reserves the right to reject any or all Pre-Qualification Applications or cancel / withdraw the Request for Qualification without assigning any reason whatsoever and in such case no Applicant / intending Applicant shall have any claim arising out of such action.
- 3.9. Participation Fee for an amount of [INR.....] or [USD.....] or [Euro.....] in the form of Demand Draft drawn in favour of '[Name of Utility]', payable at '[XXXXXX]' is to be submitted along with the Pre-Qualification Application. Pre-Qualification Application received without the Participation Fee will be rejected. Participation Fee is non-refundable.
- 3.10. Language of Bid
The Pre-Qualification Application submitted by the Applicant and all correspondences and documents relating to the Application exchanged by the Applicant and [Name of Utility] shall be written in English language. Any printed literature / material furnished by the bidder in any other language shall be accompanied by an authentic English translation of all the pertinent points. For purpose of interpretation of the bid, the English translation shall govern.
- 3.11. Signature on Pre-Qualification Bid

The Pre-Qualification Application must contain the name and place of business of the Applicant and each page of the Application must be signed and sealed by the authorized person(s) of the Applicant with his usual signature. The name of all persons signing should be typed or printed below the signature.
Satisfactory evidences of authority of the person signing on behalf of the Applicant shall be furnished with the Application.
The Applicant name stated on the Pre-Qualification Application shall be the exact legal name of the firm.
- 3.12. Method of Submission of Pre-Qualification Bid

The Pre-Qualification Application shall be submitted in one (1) original and five (5) identical copies indicating clearly as 'original' and 'copy' along with a soft copy in PDF format. The cover shall be pasted properly before applying the official seal. Failure to do so would result in rejection of The Pre-Qualification Application.
The outside of the covers should indicate clearly the name of the Applicant and his address. In addition, the envelope or container should indicate the

1.0 INVITATION FOR BID

Tender No : [-----]

1.1 Introduction

{Give brief introduction about the name, ownership, business & Power Projects of the utility inviting bid proposal for R & M Consultancy work}

1.2 Invitation

[Name of The Utility], hereinafter referred to as “Employer”, is planning to undertake Renovation & Modernization of Unit No.[XX] of the [XXX] Thermal Power Plant and desires to appoint a Renovation & Modernization Consultant (R&M Consultant) to carry out preparatory work for Renovation & Modernization such as Residual Life Assessment (RLA) Study, Energy Audit (EA), Preparation of Feasibility Report (FR) and Detailed Project Report (DPR), providing assistance in obtaining Statutory & Regulatory approvals. [Name of The Utility], hereinafter referred to as “Employer / Owner / Purchaser”, invites sealed Bid Proposals in English language from Prequalified Applicants for the Renovation & Modernization Consultancy Services for Unit No.[XX] of [XXX] Power Plant as per scope of work Section-II.

1.3 Brief Scope of Work

The Scope of work of the R&M Consultant shall be divided in two Phases. First Phase shall cover scope up to obtaining regulatory approval for R&M works and Second Phase shall cover preparation of tender documents and bid evaluation for the selection of R&M Contractor(s) as described below.

Phase-I

- i) Review and Analysis of Operational Data and Trip Reports provided by Employer.
- ii) Hot Walk Down Survey
- iii) Cold Walk Down Survey
- iv) Review of previous RLA/CA and EA Studies, if any.
- v) Conducting Residual Life Assessment (RLA) / Condition Assessment (CA) of the Equipments / Systems of complete Power Plant
- vi) Conducting Energy Audit and Performance Testing of major Equipments/ Systems of the Power Plant
- vii) Working out of various R& M Options for improving the Performance Parameters and extending the life of the Unit.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 1 -	25.09.2014

- viii) Finalizing the most cost effective option for R&M and LE of the unit.
- ix) Preparation of Feasibility Report (FR).
- x) Preparation of Detailed Project Report (DPR).
- xi) Providing Assistance to the Employer in obtaining necessary approvals from statutory / regulatory authorities.

Phase-II

- i) Basic Design & Engineering and Preparation of Tender Documents.
- ii) Support for bid evaluation for the selection of R&M Contractor(s), up to the placement of Letter of Award.

Note: Phase-II shall commence only after obtaining necessary approvals from statutory / regulatory authorities and after obtaining the Notice to Proceed from the "Employer".

The detailed scope of work is given in Terms of Reference Section-II.

1.4 Tender Details

(a)	Cost of Tender Documents	:	INR [---]
(b)	Bid Guarantee Amount	:	INR [-----]
(c)	Date of issuance of Tender Document	:	[-----]
(d)	Date & Time of pre-Bid Conference	:	[-----]
(e)	Last Date & Time of Receipt of Bid (Both Part I & Part II)	:	[-----]
(f)	Date & Time of Opening of Unpriced Techno-Commercial Bid (Part-I)	:	[-----]

1.5 Time Schedule

The time schedule for completion of Consultancy Services shall be as per SCC.

1.6 Bid Submission

- (a) The Tender Documents are issued to bidders already qualified in a pre-qualification process. The Tender documents are not transferable.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 2-	25.09.2014

- (b) The Bid proposals are to be submitted in two parts in separate sealed covers as follows:

Part I : Bid Guarantee and Technical & Commercial Proposal without prices

Part II : Price Schedule.

- (c) All other terms and conditions along with the Terms of Reference, General Conditions of Contract, Special Conditions of Contract, Time Schedule, Bid Guarantee details, Validity of Bid and Instructions to Bidders, etc. are contained in the Tender Documents.
- (d) Bidder shall submit the bid on or before the scheduled date and time as specified. Any offer received after the expiry of the time specified for receiving the completed bids are liable for rejection. The bid shall be submitted to:

*[Designation, Address and Contact details.....
.....]*

- (e) Issuance of Tender Documents to a Bidder shall not be construed to mean that such Bidder would be automatically considered.
- (f) The Bid Prices must be quoted in Indian Rupees. All payments for the entire scope will be made in Indian Rupees.
- (g) Bids submitted by E-mail, Fax, E-tender etc. will not be accepted.
- (h) The Tender Documents are meant for the exclusive purpose of bidding against the subject Consultancy Services tender and shall not be transferred, reproduced or otherwise used for purposes other than for which these are specifically issued.

Document Number	Rev No.	Description	Page No.	Date of Issue

2 INSTRUCTIONS TO BIDDERS

2.1 Introduction

[Name of Utility], the Employer, intends to carry out the Renovation & Modernization of [Unit no.-XX ----- of the XXXX Power Plant]. [Name of The Utility] desires to appoint a Renovation & Modernization Consultant (R&M Consultant) to carry out preparatory work for Renovation & Modernization.

Under the subject Tender, [name of the Utility] invites bid for Renovation & Modernization Consultancy Services to be carried out as per the accompanying Terms of Reference. The Bidder shall submit the offer for complete scope of work indicated in the Terms of Reference.

2.2 Address and Contact Details of Employer

[Designation, Address and Contact details

-----]

2.3 General Project Information

General information about the plant and R&M project is indicated in section 3.0 on General Project Information.

2.4 Cost of Bidding

The Bidder shall bear all costs associated with the preparation and submission of its bid, and the Employer will in no case be responsible or liable for these costs, regardless of the conduct or outcome of the bidding process.

2.5 Non-Transferability of Bid document

Transfer of Bid documents issued to one intending bidder to another is not permissible.

2.6 Scope of Work & Single Bidder Responsibility

The scope of the work shall be on the basis of single Bidder responsibility, covering the complete scope of work specified under these specifications and documents.

2.7 Time Schedule

The completion Time Schedule for Completion of R&M Consultancy Services shall be as given in the SCC.

2.8 Tender Documents

The scope of contract, terms of reference, bidding procedures and contract terms are prescribed in the Tender Documents. The Tender Documents comprise, inter alia, the following Sections:

Section – I	:	Commercial Conditions
Section – I, Chapter-1	:	Invitation for Bid
Section – I, Chapter-2	:	Instructions To Bidders

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 4-	25.09.2014

Section – I, Chapter-3	:	General Project Information
Section – I, Chapter-4	:	General Condition of Contract (GCC)
Section – I, Chapter-5	:	Special Condition of Contract (SCC)
Section – I, Chapter-6	:	Forms & Schedules
Section – II	:	Terms of Reference

The Bidder is expected to examine all instructions, forms, terms and specifications in the Tender Documents including clarifications/corrigendum/amendments for completeness and obtain clarifications, if any, from the Employer.

Failure to furnish all information required as per the bidding documents or submission of a bid not substantially responsive to the bidding documents in every respect will be at the Bidder's risk and may result in rejection of its bid.

A prospective Bidder requiring any clarification to the Tender Documents may notify the Employer in writing by post or by e-mail followed by postal confirmation at the Owner's address indicated in ITB. The Employer will respond in writing by post or by e-mail followed by post confirmation to any request for clarification or modification of the bidding documents that it receives not later than fifteen (15) days prior to the deadline for submission of bids prescribed by the Employer. Employer's response will be sent to all prospective Bidders that have been issued the Bidding Documents.

The Bidder is advised to visit the plant and obtain on its own responsibility all information that may be necessary for preparing the bid. The Employer will facilitate the bidder to collect such information about the plant in the manner that does not interface with plant operation and does not in any way adversely impact the interest of the Employer. The costs of visiting the site including engaging any third party consultant by Bidder, if required as per the assessment of Bidder, shall be borne by the bidder fully.

The Bidder, its personnel and agents will release and indemnify the Owner and its personnel and agents from and against all liability during such information collection and will be responsible for death or personal injury, loss of or damage to property and any other loss, damage, costs and expenses incurred as a result of the inspection.

At any time prior to the deadline for submission of bids, the Owner may, for any reason, whether at its own initiative, or in response to a clarification requested by a prospective Bidder, amend the Tender Documents.

The amendment will be notified in writing by post or by e-mail followed by post confirmation to all prospective Bidders that have received the bidding documents and will be binding on them.

At any time prior to the deadline for submission of bids, the Owner, at its discretion may extend the deadline for submission of the bids.

2.9 Preparation of Bids

2.9.1 Language of Bid

The bid prepared by the Bidder and all correspondence and documents related to the bid shall be in English language, provided that any printed literature furnished by the Bidder may be written in another language, as long as such literature is

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 5-	25.09.2014

accompanied by a translation of its pertinent passages in English language in which case, for purposes of interpretation of the bid, the translation shall govern.

2.9.2 Bidding Procedure

Single Stage Two Part Bidding Procedure will be followed for this package.

The bidders are required to submit, the bids for the R&M Consultancy Services in two parts. Both the parts are to be submitted together before the indicated Bid submission Time & Dates.

The Part-I Bid comprises the techno-commercial bid without prices. The main components of the Techno-Commercial Bid are Bid Guarantee, Methodology & Work Plan for discharging the consultancy services as per Terms of Reference, Details of Key Personnel along with their Curriculum Vitae, Deviations to Terms of Reference, Deviation to commercial Conditions, Overall Completion Time Period & Network Schedule, Resource Deployment Schedule, Detail of Sub-Consultants, Details of the present commitments & details of contracts in hand etc. Part-II Bid will comprise Quoted Price and Quoted Performance Guarantee Parameters. Initially, only the Part-I Bid will be opened and Part-II Bid will be kept in safe custody.

The Part-I Bid will be checked for responsiveness to techno-commercial conditions and a detailed Technical Evaluation will be carried out to assign a Technical Score to each Bid. Part-II Bid (Price Bid) of only those Bidders will be opened, whose Part-I Bid is found to be responsive to Tender Specifications and Conditions and Technical Score is above a specified level.

2.9.3 Bid Submission

- (1). Bid proposals shall be accepted from only those eligible bidders who are found qualified during the pre-qualification process & are issued Tender Documents. Unsolicited bids shall not be taken into cognizance.
- (2). All Bid proposals shall be prepared and submitted in two parts, part-wise in separate sealed covers, with all pages serially numbered.
- (3). *[One original and 3 (three) identical]* copies of the original with all enclosures shall be submitted by each Bidder for Part-I and Part-II, clearly indicating the original and the number of the copy (i.e., "Original", "Copy No. 1", "Copy No. 2" and "Copy No. 3").
- (4). In the event of discrepancy between "Original" and any copy of the bids, the hard copy of Original shall prevail.
- (5). All these covers shall be individually sealed and put in an outer cover which also shall be sealed and super scribed as in other covers.
- (6). The covers should be pasted properly before applying the wax seal. Failure to do so may result in rejection of such bids.
- (7). The Bidder's Bid and the documents attached thereto shall be considered as forming part of the Contract documents.
- (8). The Bid shall be submitted to [-----]. Bid submitted to any other office of Owner is liable for rejection. Bids submitted by Telefax or e-mail will be rejected

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 6-	25.09.2014

- (9). Owner will receive Bids in respect of entire scope of work as set forth in the accompanying Terms of Reference. All bids shall be prepared and submitted in accordance with the Tender Documents.
- (10). Failure to furnish all information required in the Tender Documents or submission of a Bid not substantially responsive to the Tender Conditions and Terms of Reference in every respect or bids received in incomplete shape shall be liable for rejection. A bid shall be determined as substantially responsive in every respect, if it conforms to all the terms, conditions and specifications specified in Tender Documents without material deviations, objections, conditionality or reservations.
- (11). A material deviation, objection, conditionality or reservation is one:
 - (i). That affects in any substantial way the scope, quality or performance of the contract;
 - (ii). That limits in any substantial way, inconsistent with the Tender Documents, the Owner's rights or the successful Bidder's obligations under the contract.
- (12). Deviation(s) to vital clauses listed under the Tender Documents shall be considered to be material deviation(s).
- (13). Notwithstanding any information and data, which may be contained in these Tender Documents, the Bidder has to make independent inquiries and generally obtain his own information on all matters that may in any way affect prices, risks and obligations of the Consultant under the Contract.

2.9.4 Bid Guarantee

- (1). The Bid shall be accompanied by Bid Guarantee either in the form of Bank Guarantee valid for [---] days from the scheduled date of opening of the Bids (Part-I) or Demand Draft of equivalent amount drawn in favour of "[-----]" payable at "[-----]".
- (2). The Bank Guarantee shall be from any scheduled commercial Bank in India authorized by Reserve Bank of India,, to issue such Bank Guarantee on a non-judicial stamp paper of value not less than Rs. [---]/-.The stamp paper shall be purchased in the name of the Bank. Foreign Bidders may submit the Bank Guarantee from any bank in India as above or from any foreign bank which is in the approved list of RBI.
- (3). Unless otherwise expressly stated,
 - a) The Bid Guarantee shall be executed only on behalf of the Bidder in whose name the Tender Documents have been issued.
 - b) The Bid and other documents shall be submitted only by the Bidder in whose name the Tender Documents have been issued.
 - c) The Bid Guarantee shall be executed only as per the format prescribed by Owner at ([-----]). In the event of any deviation in this regard, the decision of Owner as to whether the same could be accepted or not, will be final and binding on the Bidder.
 - d) In case of foreign Bidder, the Bid Guarantee amount shall be in US Dollar / Euro/ Indian Rupee.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 7 -	25.09.2014

- (4). The Bidder shall arrange for extension of validity of Bid and that of the Bid Guarantee upon request from the Owner.
- (5). No interest shall be paid on Bid Guarantee amount. The offer without Bid Guarantee or with short Bid Guarantee or Bid Guarantee in the form other than that specified herein above or from banks not specified hereinabove will be liable for rejection.
- (6). Any Bid not accompanied by the Bid Guarantee shall be rejected and the Bidder shall not be permitted to participate in the tender.
- (7). The Bid Guarantee shall be forfeited if the Bidder withdraws / modifies / changes / impairs / derogates the bid proposal on its own after the Bids are opened or submits forged/bogus certificates or fails to accept the Letter of Award issued by Owner or fails to submit Contract Performance Security (Bank Guarantee).
- (8). The Bid Guarantee of all unsuccessful Bidders shall be returned after selection of the successful Bidder. The Bid Guarantee of the successful Bidder shall be returned after furnishing of the Contract Performance Bank Guarantee to the Owner and acceptance thereof.

2.9.5 Bid Opening

1. This is a single stage two part tender. On the specified date and time of opening, Part- I Bid containing Bid Guarantee and Technical and Commercial Proposal without Prices will be opened. At the time of opening of Part-I of the bids, the names of the bidders who submitted their bids shall be read out and other such details as Owner, at its discretion, may consider appropriate, shall be read out.
2. If the Bidder desires to be present at the time of opening of Part-I of bids, it shall depute its representatives (not more than two persons) in time with due authorization for participating in the Bid opening.
3. Owner takes no responsibility for delays, loss or non-receipt of Bid documents or any letters sent by post/courier either way and also reserve the right to reject any Bid in part or full without assigning any reasons thereof.

2.10 Composition of Techno Commercial Bid (Part-I Bid)

This part shall, inter alia, include the following in the same order as listed below. One original and 3 (three) identical copies shall be submitted.

- (i). Duly filled in "Form of Bid" (As per Annexure-B of this Section).
- (ii). Bid Guarantee- as per Annexure A.
- (iii). Power of Attorney/Authorization with the seal of the company in favour of the person signing the Bid.
- (iv). Letter of Undertaking as per Annexure-D to be furnished by the Bidder and Associate (s) regarding joint and several liability for Associate's scope of work if the Bidder has met Qualification Requirement with the help of Associate (s)
- (v). Consortium Agreement if the Bidder is a Consortium of Consultancy Firms. The Consortium Agreement must include but not limited to (1) Scope of Service of each Consortium Member, (2) Authorization in favour

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 8-	25.09.2014

of Consortium Leader to Bid and act on behalf of the Consortium Members during tendering and execution stage, (3) Joint and several liability of all consortium members for the entire scope of service, (4) Undertaking that any dispute among Consortium Members will not relieve any Member from its obligations towards the Owner under this Contract, (5) Undertaking by each member for providing expertise, man power and other technical support for successful completion of the respective Scope of Service and (6) Undertaking that each other Consortium Member will provide Additional Contract Performance Bank Guarantee equivalent to 2% of Contract Price in addition to the Contract Performance Bank Guarantee equal to 5% of Total Contract Price to be furnished by Consortium Leader.

- (vi). Signed copy of all the corrigendum's/amendments/clarifications, if any issued for the tender
- (vii). Overall Time Schedule as per Schedule – F2 and Bar chart/PERT Network schedule to achieve the time schedule
- (viii). Deviations to the Commercial Conditions, if any, as per Schedule – F3.
- (ix). Deviations to Terms of Reference, if any, as per Schedule – F4.
- (x). Methodology and Work Plan for completing different tasks under the Consultancy Assignment. Bidder to indicate the scope of work to be covered with sufficient details regarding the tasks and subtasks to be covered.
- (xi). Details of Equipment and Instruments to be deployed for RLA Study/Condition Assessment and Energy Audit
- (xii). Details of Key Personnel as per Schedule – F5. Bidder to indicate the minimum number of hours each identified key person will spend on the Consultancy Assignment
- (xiii). Curriculum Vitae of each key person as per Schedule-F6
- (xiv). Organization Structure and Team Composition (Both Professional Staff and Support Staff)
- (xv). Staffing Schedule describing month-wise deployment of personnel
- (xvi). Details of the present commitments of the Bidder, details of contracts in hand
- (xvii). Details of Sub-Consultants, if any

The Part-I Bid shall not contain any Price data.

In addition to the hard copy of Part-I Bid, the Bidder shall submit soft copy the Bid in a compact disk (CD). However, hard copy alone will be considered as authentic for evaluation.

2.11 Composition of Price Bid (Part-II Bid)

The Bidders are requested to quote the Prices with break up as per Schedule-F1. Price given in Part-II Bid should cover the entire scope of work as given in Part-I of the offer. *[One original and 3 (three) identical]* copies shall be submitted.

1. The Price Bid shall contain the following :

- (i). Duly filled in Form of bid as per Annexure-C

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 9-	25.09.2014

- (ii). Completely filled in Schedule of Prices Schedule – F1
2. The Bidder shall quote his price against each item of the schedules as indicated in the enclosed format (Price Schedule). The Bidder shall quote the prices only once after considering all the pros and cons, risks and contingencies. Rebate percentage etc., if any, should be spelt out by the Bidder in the first Bid itself.
3. The amount shall be quoted both in figures and words clearly and legibly. No overwriting is allowed. All scoring and cancellations should be countersigned by the Bidder. In case of illegibility, the interpretation of the Owner shall be final. All entries shall be in English language only.
4. The Price shall be quoted in Indian Rupees only.

2.12 Bid Prices

Bidders shall quote for the entire scope of work on single responsibility basis & the total bid price covers all the obligations of the Consultant mentioned in Tender Documents/Terms of Reference or to be reasonably inferred from the Tender Documents/Terms of Reference.

Bidders are required to quote the price for the entire commercial, contractual and technical obligations outlined in the tender documents.

Prices quoted by the Bidder shall remain firm for the term of the contract .

2.13 Signature of Bids

Each page of the Bid must be signed and stamped by the Bidder with his usual signature. The names of all persons signing should also be typed or printed below the signature. Satisfactory evidences of authority of a person signing on behalf of the Bidder shall be furnished with the Bid. Erasures or corrections in the Bid documents if any shall be signed by the person signing the Bid. Printed literature, it enclosed need not be signed. Bids not conforming to the above requirements are liable to be treated as non-responsive.

2.14 Clarifications/Corrigendum/ Amendment of Tender Specifications

1. At any time prior to the deadline for submission of Bids, the Owner may, for any reason, whether at his own initiative or in response to clarification(s) requested by a prospective Bidder, modify the Tender Documents including the Terms of Reference by amendment.
2. Clarifications/Corrigendum/Amendment shall be construed to be an integral part of the Tender Documents. Amendments will be hosted in Owner's website. Bidders are requested to visit Owner's website and note amendments, if any, before submission of bid. Owner shall not be responsible if any bidder fails to notice any amendment.
3. Amendment shall be numbered serially. Signed copies of amendments & clarifications shall be enclosed in Part-I of bid by bidder.

2.15 Modification of Bids

The Bidder is not permitted to modify his Bid suo-moto after the Bid submission.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 10-	25.09.2014

2.16 Policy of Bids under Consideration

Bids shall be deemed to be under consideration immediately after they are opened. While the Bids are under consideration, Bidder's and/or their representatives or other interested parties are advised to refrain from contacting by any means, the Owner and/or his employees/ representatives on matters related to the Bids under consideration. The Owner, if necessary will obtain clarifications on the Bids by requesting for such information from any or all the Bidders, in writing as may be necessary.

2.17 Validity of Bid

1. The Bid shall be kept valid for acceptance for *[120 days]* from the schedule date of opening of the Part-I Bid.
2. The Bidder will not be permitted to change the substance of the Bid suo-moto, after Bid has been opened.
3. Unilateral revision or withdrawal of offer by the Bidder within the subsistence of the validity period of offer shall not be permitted. Violation of this condition shall result in rejection of the Bid without notice, besides forfeiture of Bid Guarantee. The Bidder shall also be debarred either permanently or for a fixed period, at the discretion of Owner from participating in any of the Owner's tenders.

2.18 Understanding & Clarification on Documents & Specifications

1. The Bidder is required to carefully examine the specifications and documents and fully informs himself as to all the conditions and matters which may in any way affect the 'Renovation and Modernization Consultancy Services to be rendered or the cost thereof. Bidders are free to visit the plant. However, the Bidders' visit to site shall be at their cost and risk, without any liability on part of the Owner.
2. Bidders may seek clarifications to the prescribed clauses and / or different part of the Tender Specifications. Such a request for clarifications, if any, should reach the Owner at least *[7 (seven) days]* before the date stipulated for pre-bid meeting. The Owner then will issue interpretations and clarifications as it may think fit in during the pre-bid meeting. After pre-Bid meeting, Bidder may seek further clarification till *[14 days]* prior to schedule opening date of Part-I Bid. After receipt of such clarifications, the Bidder may submit its Bid but within the time and date as specified in the Invitation for Bid or as amended by the Owner. All such clarifications and the relevant exchange of correspondence between the parties shall be construed to form part of the tender specifications.
3. Pre-Bid Conference will be organized and outcome of the pre-bid conference is binding on all the Bidders. Outcome of the Pre-Bid Conference will be intimated by the Owner to all the Bidders.
4. A copy of such clarifications duly signed and stamped shall be enclosed with the Bid (Part-I). In case any queries remain un-replied, it shall be construed that in respect of those queries, the respective stipulations of the Tender Specifications/Conditions shall continue to apply and/or no new stipulations are made with respect to those queries.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 11 -	25.09.2014

5. No extension of time for submission of Bid will be granted on account of Bidders' request for interpretation/clarifications.

2.19 Latest Hour for Receipt of Bids

Bids must reach the designated Office of Owner not later than [-----] Hrs, Indian Standard Time (IST) on the date fixed for receipt of the Bid as indicated in the Invitation for Bid. Bids delivered / received after the time and date fixed for the receipt of the bids shall be liable for rejection.

2.20 No Claim for Compensation for Submission of Bid

1. The submission of any Bid connected with these documents and specifications shall constitute an agreement that the Bidder shall have no cause of action or claim against the Owner for rejection of his Bid.
2. Regardless of the conduct or outcome of the bidding process, Bidder shall not be entitled to claim any costs, charges and expenses incidental to or incurred by him through or in connection with his submission of Bid or its consideration by the Owner, even though the Owner may elect to modify/withdraw the Invitation for Bid or does not accept the Bid(s).

2.21 Evaluation of Bid

The selection of the successful Bidder for award of the R&M Consultancy Services Contract will be based on both Quality of the Technical Proposal and Price quoted by the Bidder for the entire scope of work. The selection process will comprise the following steps:

1. First, Techno-Commercial offer will be assessed for completeness and responsiveness to commercial/contractual conditions. Only the Bids that are determined to be complete in all respects and responsive to commercial/contractual conditions will be taken up for further evaluation on the basis of Quality and Price.
2. Technical Proposal of Bidders, whose Bid is determined to be complete and responsive to commercial/contractual conditions, will be evaluated on the basis of Bidder's proposed methodology and Work Plan for discharging the Consultancy Assignment, experience of the Bidder and the experience & expertise of Key Personnel and will be assigned a Technical Score S_t . Only those Bidders whose Technical Proposals get a Technical Score of 70 marks or more out of 100 shall qualify for further consideration. All the Bidders with Technical Score of 70 or more will be considered for next stage of evaluation. It is not intended to short list a pre-determined number of Bidders on the basis of evaluation of Technical Proposal.
3. The Price Proposal of each Bidder with Technical Score of 70 or more will be assigned a Financial Score (S_f) on the basis of its cost competitiveness.
4. Each bidder will be assigned a Composite Score (S_c) equal to the weighted sum of Technical Score and Financial Score. Finally, the bidder with the highest Composite Score will be selected as R&M Consultant for the subject R&M Consultancy Services Contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 12-	25.09.2014

2.21.1 Evaluation of Technical Proposal

The evaluation of Technical Proposal will have three elements as depicted in Table below:

SI No	Parameter	Weightage	Basis of Evaluation
1	Methodology and Work Plan (S _{t-1})	20%	Bidder's understanding of Terms of Reference and clarity, completeness and soundness of methodology and work plan to achieve successful completion of the objectives of the R&M Consultancy work. The Bidder with the best submission will be assigned a score of 100 (S _{t-1} = 100). Other Bidders will be assigned scores below 100 considering the relative quality of the submission with respect to the best submission.
2	Bidder's Experience (S _{t-2})	40%	Each Bidder has to list up to 5 technical consultancy projects, pertaining to thermal power plants of unit size 200 MW or above, successfully executed by it during the last 10 years. Bidder has to furnish detailed scope of work executed by it for each listed consultancy project. Each such Project will be assigned a score out of 20 on the basis of size, nature & complexity of scope and similarity with the subject R&M Consultancy Service. If any Bidder lists less than 5 projects, a score of zero will be assigned for the shortfall number of project(s). For each Bidder, the sum of scores for the five projects will be the score (S _{t-2}) out of 100.
3	Experience and Expertise of Key Personnel (S _{t-3})	40%	The Bidder has to list name and other details of 10 key personnel of specified area of expertise in Schedule-F5 who are likely to be substantially associated with this R&M Consultancy assignment if the Bidder emerges as successful Bidder for award of the R&M Consultancy Services Contract. The Bidder is required to submit detailed Curriculum Vitae of these key personnel as per the format at Schedule-F6. Each identified Key Person will be assigned a score out of 10 based on their qualification and nature & quantum of experience in the specified area of expertise. For each Bidder, the sum of scores of these 10 key personnel will be the score (S _{t-3}) out of 100.

The Technical score of each Bidder will be equal to the weighted sum scores on three elements with indicated weights.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 13-	25.09.2014

$$S_t = 0.2 \times S_{t-1} + 0.4 \times S_{t-2} + 0.4 \times S_{t-3}$$

2.21.2 Evaluation of Price Bid

The Price Bid should be complete, unconditional and unqualified. For financial evaluation, the total Price indicated in the Price Schedule excluding Service Tax and associated surcharge & cess will be considered. The price indicated in the Price Bid shall be deemed as final and reflecting the total Price of the entire scope of services as per Terms of Reference. Failure by Bidder to include the price of any item shall not entitle the firm to be compensated and the Consultant shall be liable to fulfill its obligations as per the TOR. The Bidder with lowest quoted total price will be assigned a Financial Score (S_f) of 100. The financial score of other Bidders will be computed as follows:

$$S_f = 100 \times (\text{Lowest Quoted Total Price} / \text{Total Price quoted by the Bidder})$$

2.21.3 Composite Score

For selection of successful Bidder, the Technical Score will be a weight of 70% and Financial Score will be given a weight of 30%. For each Bidder, the Composite Score S_c will be computed as follows:

$$S_c = 0.7 \times S_t + 0.3 \times S_f$$

The Bidder who is determined to secure the highest Composite Score will be selected for award of the R&M Consultancy Contract.

2.21.4 Other Evaluation Conditions

(1) Arithmetical errors will be rectified on the following basis:

- If there is any discrepancy between the unit price and the total price that is obtained by multiplying the unit price and the quantity, the unit price shall prevail and the total price will be corrected.
- If there is a discrepancy between the total Bid Price and the sum of total prices, the sum of the total prices shall prevail and the total Bid Price will be corrected.
- If there is discrepancy between the rates in figures and in words, the rates expressed in words shall only prevail and shall be adopted.

(2). Comparison of Bids will be between main Bids only. Alternative Bids will not be accepted and evaluated.

(3). All the Sl. Nos. and columns in the 'Schedules of Prices' shall be quoted. If no prices are envisaged for any of the entries, 'Nil' shall be mentioned. In this context "Nil" mentioned against any item shall construe that the Bidder shall not charge any amount separately for that item from the Owner. If the terms, such as 'not applicable' "-----" or blank are mentioned against any Sl. Nos./columns, the highest amount quoted for the concerned entry among all Bidders will be loaded for purposes of evaluating the Price Bids.

2.22 Deviations

1. Normally, deviations are not permitted in commercial terms & conditions and Terms of Reference. Nevertheless, if the Bidder takes any deviation, it shall be clearly indicated in the deviation schedule (Schedule – [-----] and Schedule- [-----] with a soft copy in MS-Word format in compact disc, with "Original" of Part-I of the Bid). Deviation listed elsewhere in the Bid shall be summarily

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 14-	25.09.2014

rejected and ignored. Separate printed standard terms and conditions of the Bidder shall not be taken into cognizance and shall be totally rejected.

2. No alterations or disfigurement, other than filling in particulars wherever called for in the formats of the Tender Specifications shall be made in the Bid. Any changes/modifications made by the Bidder in Bid documents itself shall not be taken into consideration.
3. If at any later date, it is found that documents, information, averments and data submitted by the bidder in the Bid, based on which the Bidder has been considered eligible or successful or has been awarded the Contract is incorrect or false to the extent that had the correct or true information been made available to the Owner at time of tender evaluation, the Bid would have been declared ineligible or unsuccessful, the Bidder shall be forthwith disqualified or, as the case may be, the Contract awarded based on such incorrect or false information shall be cancelled and the Bid Guarantee / contract performance Guarantees deposited shall be appropriated by the Owner towards Owner's cost, loss and damage to Owner.

2.23 Blacklisting/Debarring

In case, certificates submitted by the Bidders are found to be a forged/untrue, the Bidder will not only be disqualified for this tender but also would be black listed/debarred by the Owner.

2.24 Award of Contract

1. Award Criteria

The R&M Consultancy Service Contract will be awarded to the Bidder with the highest Composite Score as described in clause 2.21.

2. Owner's Right to Accept Any Bid and to Reject Any or All Bids

The Owner reserves the right to accept or reject any bid, for any reasons including National defense and security consideration and to annul the bidding process and to reject all bids at any time prior to award of contract, without thereby incurring any liability to the affected Bidder or bidders or any obligation to inform the affected Bidder or bidders of the grounds for the Owner's action.

3. Notification of Award

Prior to the expiration of the period of bid validity, the Owner will notify the successful Bidder in writing by registered letter or by email to be confirmed in writing by registered letter, that its bid has been accepted. The notification of award will constitute the formation of the contract.

Upon the successful Bidder's furnishing of the performance securities the Owner will promptly notify each unsuccessful Bidder and will discharge its bid security.

4. Signing the Contract Agreement

At the same time as the Owner notifies the successful Bidder that its bid has been accepted, the Owner will send to the Bidder the Contract Agreement provided in the bidding documents, incorporating all agreements between the parties.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 15-	25.09.2014

Within *[twenty-eight (28)]* days of receipt of the Contract Agreement, the successful Bidder shall sign and date the Contract Agreement and return it to the Owner.

Cost of preparing Contract Agreement shall be borne by the bidder.

5. Performance Security

Within *[thirty (30) days]* after receipt of the Notification of Award, the successful Bidder shall furnish Contract Performance securities as per clause no 2.25. These Bank Guarantees shall be furnished in the form provided in the section "Forms and Procedures" of the bidding documents and shall be initially valid upto *[ninety (90)]* days after the scheduled date of completion of R&M Consultancy Service.

Failure of the successful Bidder to submit Contract Performance Security within stipulated time shall constitute sufficient grounds for the annulment of the award and forfeiture of his bid security, in which event the Owner may make the award to the next lowest evaluated Bidder or call for new bids.

6. Corrupt or Fraudulent Practices

The Owner requires that Bidders, Contractors and Consultants to observe the highest standard of ethics during the Pre-Qualification, Tendering (Request for Proposal) process and during the execution of the contracts. The Employer may reject a Bid Proposal of a successful Bidder if it emerges that the Bidder recommended for award has engaged in Corrupt or Fraudulent practices in competing for the subject contract. The Employer may declare a Bidding firm ineligible for participation in future tenders of the Employer, either indefinitely or for a stated period of time, if it at any time it emerges that the firm has engaged in Corrupt or Fraudulent practices in competing for or in executing a contract of the Owner. Corrupt Practice means the offering, giving, receiving or soliciting of anything of value to influence the tendering process or contract execution. Fraudulent practice means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Employer and includes collusive practice among Bidders designed to establish bid prices at artificial non-competitive levels and to deprive the Employer of the benefits of free and open competition.

2.25 Contract Performance Bank Guarantee (CPBG)

As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Bank Guarantee (CPBG) in the Format attached as Annexure- G, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to five percent (5%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in these documents and specifications. The CPG shall be valid till the Schedule Completion Time Period for Consultancy Services plus ninety (90) days grace period.

If the bidder is a Consortium Consultancy firms, in addition to the Contract Performance Guarantee (CPG) of 5% furnished by the Consortium Leader, each of the other consortium member shall furnish Additional Contract Performance Guarantee equal to 2% of Contract Price.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 16-	25.09.2014

If the Bidder meets Qualification Requirement on the strength of Associate (s), in addition to the Contract Performance Guarantee (CPG) of 5% furnished by the Bidder (Principal Consultant), each Associate shall furnish Additional Contract Performance Guarantee equal to 2% of Contract Price.

2.26 Vital Clauses

The following clauses in the Tender Specification & Form of Contract are vital. Bidder is advised not to take deviations to these clauses. If deviations are taken from the stipulations of these clauses, such Bids would be liable for rejection:

- Scope of Work
- Time Schedule
- Price Basis
- Contract Performance Guarantee
- Force Majeure
- Arbitration
- Taxes & Duties
- Bid Guarantee
- Patents, Indemnity
- Validity of Bids

- xxiii. **"R&M Consultant" or "Renovation & Modernization Consultant"** means the person(s), Firm or a Company or Consortium of Firms whose bid to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 20-	25.09.2014

- perform the R&M Consultancy Services Contract has been accepted by the Owner and is also named "Consultant" in the Contract Agreement.
- xxiv. **"R&M Project"** means the proposed R&M work for Unit [.....] of [.....] plant of Owner. The subject R&M Consultancy Services package is being tendered to appoint an R&M Consultant for carrying out preparatory work for the R&M Project.
- xxv. **"SCC"** means the Special Conditions of Contract.
- xxvi. **"Site"** means the [.....] plant of [.....].
- xxvii. **"Sub Consultant"** means any firm or person to whom execution of any part of the subject R&M Consultancy Services Contract is subcontracted directly or indirectly by the Consultant, and includes its legal successors or permitted assignees.
- xxviii. **"Tender Documents"** means the document, setting out a description and specification of the Consultancy services and statement of the technical and other standards to which the Services are to be performed including any modifications thereto made in accordance with the Conditions. This includes the commercial specifications, Terms of Reference and other Tender Documents forming a part of the Contract and such other Schedules and drawings as may be mutually agreed upon.
- xxix. **"Tenderer"/"Bidder"/"Applicant"** means the Person(s), Firm/Company who has submitted its Bid Proposal in response to the bid invitation by the Owner, for the Project.
- xxx. **"Time for Completion"** means the time within which completion of R&M Consultancy Services by the Consultant (R&M Consultant) covering the entire Scope of Work as per the Terms of Reference and submission of all the reports and other deliverables incorporating Owner's observation on the draft reports to the satisfaction of the owner is to be attained in accordance with the stipulations and provisions of the Contract.
- xxxi. **"Writing" or "Written"** shall include any manuscript, type-written or printed statement, under or over signature and/or seal as the case may be.

When the words "Approved", "Subject to Approval", "Satisfactory", "Equal to", "Proper", "Requested", "As Directed", "Where Directed", "When Directed", "Determined by", "Accepted", "Permitted", or words and phrases of similar importance are used, the approval, judgment, direction, etc., is understood to be a function of the Owner. Words implying persons or the gender neutral pronoun 'it', shall include firms, companies, corporation, associations or body of individuals whether incorporated or not. Words implying masculine gender or singular number shall also include the feminine gender and plural number and vice-versa where the context so requires or permits.

4.2 Contract Documents

- a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 21 -	25.09.2014

- b) The Contract will be signed in three originals and the Consultant shall be provided with one signed original and the rest will be retained by the Owner.

4.3 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Notification of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. The bid & schedules/ attachment submitted by the Consultant.
- vi. Terms of Reference

4.4 Interpretation

All Contract Documents, all correspondence and communications to be given, and all other documentation to be prepared and supplied under the Contract shall be written in English, and the Contract shall be construed and interpreted in accordance with English language.

The singular shall include the plural and the plural the singular, except where the context requires otherwise.

Unless inconsistent with any provision of the Contract, the meaning of any trade term and the rights and obligations of parties there under shall be as prescribed by Incoterms. Incoterms means latest edition of International Rules for Interpreting Trade Terms published by the International Chamber of Commerce Paris, France.

4.5 Independent Consultant

The Consultant shall be an independent Consultant performing the Contract. The Contract does not create any agency, partnership, joint venture or other joint relationship between the parties hereto.

Subject to the provisions of the Contract, the Consultant shall be solely responsible for the manner in which the Contract is performed. All employees, representatives or SubConsultants engaged by the Consultant in connection with the performance of the Contract shall be under the complete control of the Consultant and shall not be deemed to be employees of the Owner, and nothing contained in the Contract or in any subcontract awarded by the Consultant shall be construed to create any contractual relationship between any such employees, representatives or SubConsultants and the Owner.

4.6 Joint Venture or Consortium

If the Bidder/Consultant is a joint venture or consortium of two or more firms, all such firms shall be jointly and severally bound to the Owner for the fulfillment of the provisions of the Contract and the Bidder shall submit a letter of consent to this effect (with Part-I Bid) signed by all joint venture partners / consortium members. The joint venture/consortium partners shall designate one of such firms to act as a leader with authority to bind the joint venture or consortium. The

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 22-	25.09.2014

composition or the constitution of the joint venture or consortium shall not be altered without the prior consent of the Owner.

4.7 Non-Waiver

No relaxation, forbearance, delay or indulgence by either party in enforcing any of the terms and conditions of the Contract or the granting of time by either party to the other shall prejudice, affect or restrict the rights of that party under the Contract, nor shall any waiver by either party of any breach of Contract operate as waiver of any subsequent or continuing breach of Contract. Any waiver of a party's rights, powers or remedies under the Contract must be in writing, must be dated and signed by an authorized representative of the party granting such waiver, and must specify the right and the extent to which it is being waived.

4.8 Severability

If any provision or condition of the Contract is prohibited or rendered invalid or unenforceable, such prohibition, invalidity or unenforceability shall not affect the validity or enforceability of any other provisions and conditions of the Contract.

4.9 Origin

"Origin" means the place where the materials, equipments and other supplies for the Facilities are mined, grown, produced or manufactured, and from which the services are provided.

4.10 Notices

All notices to be given under the Contract shall be in writing, and shall be sent by personal delivery, or post, or special courier, or telefax, or Electronic Data Interchange (EDI) to the address of the relevant party indicated in the Contract. Either party may change its postal, telefax number, or EDI address or addressee for receipt of such notices by ten (10) days' notice to the other party in writing

Notices shall be deemed to include any approvals, consents, instructions, orders and certificates to be given under the Contract.

4.11 Governing Laws

The Contract shall be governed by and interpreted in accordance with laws in force in India. The Courts of [.....] shall have exclusive jurisdiction in all matters arising under the Contract.

4.12 Settlement of Disputes

a) Mutual Consultation

If any differences/ dispute arises between the Owner and the Consultant in connection with or arising out of the Contract, before or after the termination, abandonment or breach of the Contract—the Owner & Consultant shall seek to resolve any such dispute or difference by mutual consultation. If the parties fail to resolve such a dispute or difference by mutual consultation, then the dispute shall be referred in writing by either party to the Arbitrator, with a copy to the other party.

b) Arbitration

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 23-	25.09.2014

Either Owner or the Consultant may, of its intention to commence arbitration, as to the matter in dispute, and no arbitration may be commenced unless such notice is given.

Any dispute, in respect of which a notice of intention to commence arbitration has been given, as above shall be finally settled by arbitration. Arbitration may be commenced prior to or after completion of the Facilities

Any dispute submitted by a party to arbitration shall be heard by an arbitration panel composed of three arbitrators, in accordance with the provisions set forth below.

The Owner and the Consultant shall each appoint one arbitrator, and these two arbitrators shall jointly appoint a third arbitrator, who shall chair the arbitration panel. If the two arbitrators do not succeed in appointing a third arbitrator within *[twenty eight (28)]* days after the latter of the two arbitrators has been appointed, the third arbitrator shall, at the request of either party, be appointed by President, Institution of Engineers as the Appointing Authority.

If one party fails to appoint its arbitrator within *[forty-two (42)]* days after the other party has named its arbitrator, the party which has named an arbitrator may request the Appointing Authority to appoint the second arbitrator.

If for any reason an arbitrator is unable to perform its function, the mandate of the Arbitrator shall terminate in accordance with the provisions of applicable laws and a substitute shall be appointed in the same manner as the original arbitrator.

Adjudication/Arbitration proceedings shall be conducted in accordance with Indian Arbitration and Conciliation Act 1996.

The Place for Arbitration shall be *[...]*, India.

The language of arbitration shall be English.

The decision of a majority of the arbitrators (or of the third arbitrator chairing the arbitration, if there is no such majority) shall be final and binding and shall be enforceable in any court of competent jurisdiction as decree of the court. The parties thereby waive any objections to or claims of immunity from such enforcement.

Notwithstanding any reference to the arbitration,

- the parties shall continue to perform their respective obligations under the Contract unless they otherwise agree
- The Owner shall pay the consideration Consultant due to the Consultant.

4.13 Scope of Services

The Scope of Services shall be as per the Terms of Reference Section-II.

4.14 Time for Commencement and Completion

- a) The Consultant shall commence work on the Scope of Services under this Tender from the date of Letter of Award. Consultant shall thereafter proceed with the Services in accordance with the time schedule specified in SCC & detailed network schedule agreed & appended to the contract.
- b) The Consultant shall attain Completion of the Consultancy Services (or of a part where a separate time for Completion of such part is specified in the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 24-	25.09.2014

Contract) within the time stated in the SCC subject to time extensions, the Consultant is entitled under the contract conditions or time extension expressly granted by the Owner.

4.15 Consultant's Responsibilities

- a) Before entering into this contract the Consultant is responsible to have examined the data relating to the plant and facilities provided by the Owner, and on the basis of information that the Consultant could have obtained from a visual inspection of the Site and of other data readily available to it relating to the Plant & Facilities as at one month days prior to bid submission. Any failure to acquaint itself with all such data and information shall not relieve Consultant of its responsibility for properly estimating the difficulty or cost of successfully performing its scope of work under this contract.
- b) The Consultant shall acquire in its name all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings in the country where the Site is located that are necessary for the performance of the Contract, including, without limitation, visas for the Consultant's and SubConsultant's personnel and entry permits for all imported Consultant's Equipment.
- c) The Consultant shall perform the Services in accordance with the Applicable Laws and shall take all practicable steps to ensure that any Sub-Consultant, as well as the Personnel and agents of the Consultant and any Sub-Consultant, comply with the Applicable Laws. The Consultant shall comply with all laws in force in India and the place where the facility is located out. The laws will include all national, provincial, municipal or other laws that affect the performance of the Contract and bind upon the Consultant. The Consultant shall indemnify and hold harmless the Owner from and against any and all liabilities, damages, claims, fines, penalties and expenses of whatever nature arising or resulting from the violation of such laws by the Consultant.
- d) The Consultant shall perform the Services and carry out its obligations under this Contract with all due diligence, efficiency and economy, in accordance with generally accepted professional techniques and practices, and shall observe sound management practices, and employ appropriate advanced technology and safe and effective equipment, machinery, materials and methods. The Consultant shall always act, in respect of any matter relating to this Owner or to the Services, as a faithful advisor to the Owner, and shall at all times support and safeguard the Owner's legitimate interests in any dealings with Sub-Consultants or Third Parties.

4.16 Owner's Responsibilities

- a) The Owner shall be responsible for access to the plant and the Site and for providing possession of and access to all other areas reasonably required for the proper execution of the Contract.
- b) The Owner shall facilitate plant shut down and controlled operation of the plant reasonably required to enable the Consultant to carry out Residual Life Assessment/ Condition Assessment studies and Energy Audit
- c) The owner shall make available to the Consultant all the plant operation data, Manufacturer's Manual, O&M Manual and other Technical data/information to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 25-	25.09.2014

the extent available with the Owner and reasonably required by the Consultant for discharging Services as per the Terms of Reference

- d) The Owner shall acquire and pay for all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings, which such authorities or undertakings require the Owner to obtain them in the Owner's name, are necessary for the execution of the Contract.
- e) If requested by the Consultant, the Owner shall use its best endeavours to assist the Consultant in obtaining in a timely and expeditious manner all permits, approvals and/or licenses necessary for the execution of the Contract from all local, state or national government authorities or public service undertakings that such authorities or undertakings require the Consultant or SubConsultants or the personnel of the Consultant or SubConsultants, as the case may be, to obtain.

4.17 Taxes & Duties

- a) The Owner shall bear and promptly pay Service Tax along with applicable Surcharge and Cess thereon, in respect of direct transaction between the Owner and the Consultant payable in India as per Indian law. All other Taxes and Duties will be borne by the Consultant.
- b) If any tax exemptions, reductions, allowances or privileges may be available to the Consultant, the Owner shall use its best endeavours to enable the Consultant to benefit from any such tax savings to the maximum allowable extent.

4.18 Intellectual Property

The copyright in all drawings, documents and other materials containing data and information furnished to the Owner by the Consultant herein shall remain vested in the Consultant or, if they are furnished to the Owner directly or through the Consultant by any third party, including suppliers of materials, the copyright in such materials shall remain vested in such third party. The Owner shall however be free to reproduce all drawings, documents and other material furnished to the Owner for the purpose of the contract.

4.19 Confidential Information

- a) The Owner and the Consultant shall keep confidential and shall not, without the written consent of the other party hereto, divulge to any third party any documents, data or other information furnished directly or indirectly by the other party hereto in connection with the Contract, whether such information has been furnished prior to, during or following termination of the Contract. Notwithstanding the above, the Consultant may furnish to its SubConsultant(s) such documents, data and other information it receives from the Owner to the extent required for the SubConsultant(s) to perform its work under the Contract, in which event the Consultant shall obtain from such SubConsultant(s) an undertaking of confidentiality similar to that imposed on the Consultant.
- b) The obligation of a party, shall not apply to that information which
 - now or hereafter enters the public domain through no fault of that party

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 26-	25.09.2014

- can be proven to have been possessed by that party at the time of disclosure and which was not previously obtained, directly or indirectly, from the other party hereto
- Otherwise lawfully becomes available to that party from a third party that has no obligation of confidentiality.

4.20 Conflict of Interest

- a) The Consultant shall not have a Conflict of Interest and any breach hereof shall constitute a breach of the Agreement.
- b) During the term of this Contract and after its termination, the Consultant or any Associate or Consortium Partner thereof and any entity affiliated with the Consultant, as well as any Sub-Consultant and any entity affiliated with such Sub-Consultant, shall be disqualified from providing goods, works, services, loans or equity for any project resulting from or closely related to the Services and any breach of this obligation shall amount to a Conflict of Interest; provided that the restriction herein shall not apply after a period of five years from the completion of this assignment or to consulting assignments granted by banks/ lenders at any time; provided further that this restriction shall not apply to consultancy/ advisory services provided to the Owner in continuation of this Consultancy or to any subsequent consultancy/ advisory services provided to the Owner. For the avoidance of doubt, an entity affiliated with the Consultant shall include a partner in the Consultant's firm or a person who holds more than 5% (five per cent) of the subscribed and paid up share capital of the Consultant, as the case may be, and any Associate thereof.
- c) The Contract Price provided under the provisions of this Contract shall constitute the R&M Consultant's sole remuneration in connection with this Contract or the Services and the Consultant shall not accept for its own benefit any trade commission, discount or similar payment in connection with activities pursuant to this Contract or to the Services or in the discharge of its obligations hereunder, and the Consultant shall use its best efforts to ensure that any Sub-Consultant, as well as the Personnel and agents of either of them, similarly shall not receive any such additional remuneration.

4.21 Representatives

d) Project Manager

If the Project Manager is not named in the Contract, then within fourteen (14) days of the Effective Date, the Owner shall appoint and notify the Consultant in writing of the name of the Project Manager. The Owner may from time to time appoint some other person as the Project Manager in place of the person previously so appointed, and shall give a notice of the name of such other person to the Consultant without delay. The Owner shall take reasonable care to see that no such appointment is made at such a time or in such a manner as to impede the progress of work on the Facilities. The Project Manager shall represent and act for the Owner at all times during the currency of the Contract. All notices, instructions, orders, certificates, approvals and all other communications under the Contract shall be given by the Project Manager, except as herein otherwise provided.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 27-	25.09.2014

All notices, instructions, information and other communications given by the Consultant to the Owner under the Contract shall be given to the Project Manager, except as herein otherwise provided.

e) Consultant's Team Leader

- If the Consultant's Team Leader is not named in the Contract, then within *[fourteen (14) days]* of the Effective Date, the Consultant shall appoint the Consultant's Team Leader and shall request the Owner in writing to approve the person so appointed. If the Owner makes no objection to the appointment within *[fourteen (14)]* days, the Team Leader shall be deemed to have been approved. If the Owner objects to the appointment within *[fourteen (14)]* days giving the reason there for, then the Consultant shall appoint a replacement within *[fourteen (14) days]* of such objection.
- The Consultant's Representative shall represent and act for the Consultant at all times during the currency of the Contract and shall give to the Project Manager all the Consultant's notices, instructions, information and all other communications under the Contract. All notices, instructions, information and all other communications given by the Owner or the Project Manager to the Consultant under the Contract shall be given to the Consultant's Team Leader or, in its absence, its deputy, except as herein otherwise provided. The Consultant shall not revoke the appointment of the Consultant's Representative without the Owner's prior written consent, which shall not be unreasonably withheld. If the Owner consents thereto, the Consultant shall appoint some other person as the Team Leader.
- The Consultant's Team Leader may, subject to the approval of the Owner (which shall not be unreasonably withheld), at any time delegate to any person any of the powers, functions and authorities vested in him or her. Any such delegation may be revoked at any time. Any such delegation or revocation shall be subject to a prior notice signed by the Consultant's Team Leader, and shall specify the powers, functions and authorities thereby delegated or revoked. No such delegation or revocation shall take effect unless and until a copy thereof has been delivered to the Owner and the Project Manager.
- The Owner may by notice to the Consultant object to any representative or person employed by the Consultant in the execution of the Contract who, in the reasonable opinion of the Owner, may behave inappropriately, may be incompetent or negligent, or may commit a serious breach of the Site regulations. In such cases, the Consultant will arrange suitable replacement.

4.22 Work Program

a) Consultant's Organization

The Consultant's Organization chart and list of key personnel and Team Leader identified for the Project will be appended to the Contract Agreement. The Consultant shall ensure adequate and timely availability of these personnel to work on this Consultancy Services. Consultant will also ensure availability and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 28-	25.09.2014

services of any additional personnel required for the successful and timely completion of the Scope of Services as per the Terms of Reference.

b) Program of Performance

Within *[twenty-eight (28)]* days after the date of Notification of Award of Contract, the Consultant shall prepare and submit to the Project Manager a detailed Program of Performance of the Contract, made in the form specified in the SCC and showing the sequence in which it proposes to design, supply, transport, assemble, install and precommissioning the Facilities, as well as the date by which the Consultant reasonably requires that the Owner shall have fulfilled its obligations under the Contract so as to enable the Consultant to execute the Contract in accordance with the program and to achieve Completion and Acceptance of the Facilities in accordance with the Contract. The program so submitted by the Consultant shall accord with the Time Schedule included in Appendix 4 (Time Schedule) to the Form of Contract Agreement and any other dates and periods specified in the Contract. The Consultant shall update and revise the program as and when appropriate or when required by the Project Manager, but without modification in the Times for Completion.

c) Progress Report

The Progress Report shall be in a form acceptable to the Project Manager and shall indicate: (a) percentage completion achieved compared with the planned percentage completion for each activity; and (b) where any activity is behind the program, giving comments and likely consequences and stating the corrective action being taken.

d) Progress of Performance

If at any time the Consultant's actual progress falls behind the program, or it becomes apparent that it will so fall behind, the Consultant shall, at the request of the Owner or the Project Manager, prepare and submit to the Project Manager a revised program, taking into account the prevailing circumstances, and shall notify the Project Manager of the steps being taken to expedite progress so as to attain Completion of the Facilities within the Time for Completion.

e) Work Procedures

The Contract shall be executed in accordance with the Contract Documents and the procedures given in the section on Forms and Procedures of the Contract Documents.

If agreed between the Owner and the Consultant, the Consultant may execute the Contract in accordance with its own standard project execution plans and procedures to the extent that they do not conflict with the provisions contained in the Contract.

4.23 Substitution of Key Personnel

The Owner expects that all the Key Personnel specified in the Bid Proposal shall be available during the execution of R&M Consultancy Services. The Owner will not consider any substitution of Key Personnel except under compelling circumstances beyond the control of the Consultant and the concerned Key Personnel. Such substitution may be permitted only in exceptional cases subject to equally or better qualified and experienced personnel being provided to the satisfaction of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 29-	25.09.2014

4.24 Sub-Consultant

The R&M Consultant or Consortium Leader or Associate shall not subcontract its entire scope of work back-to-back or otherwise. In any case, appointment of any Sub-Consultant to discharge any part of the Scope of Service under this Contract is subject to Owner's prior written approval. Owner may accept or reject any Sub-Consultant at its discretion.

4.25 Completion Time

The Consultant guarantees that it shall attain Completion of the entire Scope of Service as per the Terms of Reference or part thereof within the Time for Completion specified in the SCC.

4.26 Patents Indemnity

The Consultant shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, which the Owner may suffer as a result of any infringement or alleged infringement of any patent, utility model, registered design, trademark, copyright or other intellectual property right registered or otherwise existing at the date of the Contract by reason of: (a) the installation of the Facilities by the Consultant or the use of the such Facilities.

4.27 Accuracy of Data and Document

The Consultant shall be responsible for accuracy of the data collected by it directly or procured from other entities, the designs, drawings, estimates and all other details prepared by it as part of these services. Subject to the GCC provisions regarding limitation of Consultant's liability, the Consultant shall indemnify the Owner against any inaccuracy in its work which might surface during implementation of the R&M Project, if such inaccuracy is the result of any negligence or inadequate due diligence on part of the Consultant or arises out of its failure to conform to good industry practice. The Consultant shall also be responsible for promptly correcting, at its own cost and risk, the drawings including any re-survey / investigations.

4.28 Liability of R&M Consultant

- a) The R&M Consultant's liability under this Agreement shall be determined by the Applicable Laws and the provisions hereunder.
- b) The Consultant shall, subject to the limitation specified hereunder, be liable to the Owner for any direct loss or damage accrued or likely to accrue due to deficiency in Services rendered by it.
- c) Except in cases of criminal negligence or wilful misconduct by the Consultant, the aggregate liability of the Consultant (R&M Consultant) to the Owner, whether under the Contract, in tort or otherwise, shall not exceed the total Contract Price, provided that this limitation shall not apply to any obligation of the Consultant to indemnify the Owner with respect to patent infringement.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 30-	25.09.2014

- d) Except in cases of criminal negligence or wilful misconduct by the Consultant, the Consultant shall not be liable to the Owner, whether in contract, tort, or otherwise, for any indirect or consequential loss or damage, loss of use, loss of production, or loss of profits or interest costs,.

4.29 Equipment and Material provided by the Owner

Equipment and materials made available to the R&M Consultant by the Owner shall be the property of the Owner and shall be marked accordingly. Upon termination or expiration of this Contract Agreement, the Consultant shall furnish forthwith to the Owner, an inventory of such equipment and materials and shall return to the owner or otherwise dispose of such equipment and materials in accordance with the instructions of the Owner. While in possession of such equipment and materials, the R&M Consultant shall, unless otherwise instructed by the Owner in writing, insure them in an amount equal to their full replacement value.

4.30 Loss of or Damage to Property; Accident or Injury; Indemnification

The Consultant shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, in respect of the death or injury of any person or loss of or damage to any property (other than the Facilities whether accepted or not), arising in connection with Consultancy Services and by reason of the negligence of the Consultant or its SubConsultants, or their employees, officers or agents, except any injury, death or property damage caused by the negligence of the Owner, its Consultants, employees, officers or agents.

4.31 Insurance

- a) The Consultant shall, for the duration of this Contract, take and maintain, and shall cause any Sub-Consultant to take and maintain, at its (or the Sub-Consultant's, as the case may be) own cost, but on terms and conditions approved by the Owner, insurance against the risks, and for the coverage, as specified hereunder and in accordance with good industry practice.
- b) Within 15 (fifteen) days of receiving any insurance policy certificate in respect of insurances required to be obtained and maintained under this clause, the Consultant shall furnish to the Owner, copies of such policy certificates, copies of the insurance policies and evidence that the insurance premia have been paid in respect of such insurance. No insurance shall be cancelled, modified or allowed to expire or lapse during the currency of this Contract.
- c) If the Consultant fails to effect and keep in force the aforesaid insurances for which it is responsible pursuant hereto, the owner shall, apart from having other recourse available under this Contract, have the option, without prejudice to the obligations of the Consultant, to take out the aforesaid insurance, to keep in force any such insurances, and pay such premia and recover the costs thereof from the Consultant, and the Consultant shall be liable to pay such amounts on demand by the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 31 -	25.09.2014

- d) Except in case of Third Party liabilities, the insurance policies so procured shall mention the Owner as the beneficiary of the Consultant and the Consultant shall procure an undertaking from the insurance company to this effect; provided that in the event the Consultant has a general insurance policy that covers the risks specified in this Agreement and the amount of insurance cover is equivalent to 3 (three) times the cover required hereunder, such insurance policy may not mention the Owner as the sole beneficiary of the Consultant or require an undertaking to that effect.
- e) The risks and coverages shall include but not be limited to the following:
 - i. Third Party liability insurance as required under Applicable Laws, with a minimum coverage of [.....].
 - ii. Employer's liability and workers' compensation insurance in respect of the Personnel of the Consultant and of any Sub-Consultant, in accordance with Applicable Laws.
 - iii. Professional liability insurance for an amount no less than the Agreement Value.
- f) In case of consortium, the policy should be in the name of Consortium Leader and not in the name of individual Members of the consortium.

4.32 Owner's Prior Approval

The Consultant shall obtain the Owner's written prior approval in writing before taking any of the following actions:

- a) Replacing any Key Personnel listed in the Contract Schedule
- b) Discontinuing participation of any Key Personnel in this R&M Consultancy Services during the currency of the Contract
- c) Any other action that is specified in the Tender Document or Contract Agreement.

4.33 Ownership of Documents Prepared by Consultant (R&M Consultant)

- a) All plans, drawings, specifications, designs, reports and other documents (collectively referred to as "Consultancy Documents") prepared by the R&M Consultant (or by the Sub-Consultants or any Third Party) in performing the Services shall become and remain the property of the Owner, and all intellectual property rights in such Consultancy Documents shall vest with the Owner. Any Consultancy Document, of which the ownership or the intellectual property rights do not vest with the Owner under law, shall automatically stand assigned to the Owner as and when such Consultancy Document is created and the Consultant agrees to execute all papers and to perform such other acts as the Authority may deem necessary to secure its rights herein assigned by the R&M Consultant.
- b) The R&M Consultant shall, not later than termination or expiration of this Contract, deliver all Consultancy Documents to the Owner, together with a detailed inventory thereof. The Consultant may retain a copy of such Consultancy Documents. The R&M Consultant, its Sub-Consultants or a Third Party shall not use these Consultancy Documents for purposes unrelated to this Contract without the prior written approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 32-	25.09.2014

- c) The Consultant shall hold the Owner harmless and indemnified for any losses, claims, damages, expenses (including all legal expenses), awards, penalties or injuries (collectively referred to as 'claims') which may arise from or due to any unauthorised use of such Consultancy Documents, or due to any breach or failure on part of the Consultant or its Sub-Consultants or a Third Party to perform any of its duties or obligations in relation to securing the aforementioned rights of the Owner.

4.34 Change in Laws & Regulation

If, after the date *[seven (7)]* days prior to the date of Bid submission, in India, any law, regulation, ordinance, order or by-law having the force of law is enacted, promulgated, abrogated or changed (which shall be deemed to include any change in interpretation or application by the competent authorities) that subsequently affects the costs and expenses of the Consultant and/or the Time for Completion, the Contract Price shall be correspondingly increased or decreased, and/or the Time for Completion shall be reasonably adjusted to the extent that the Consultant has thereby been affected in the performance of any of its obligations under the Contract. However, these adjustments would be restricted to direct transactions between the Owner and the Consultant.

4.35 Force majeure

- (a) Force Majeure" shall mean any event beyond the reasonable control of the Owner or of the Consultant, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected.
- (b) If either party is prevented, hindered or delayed from or in performing any of its obligations under the Contract by an event of Force Majeure, then it shall notify the other in writing of the occurrence of such event and the circumstances thereof within *[fourteen (14)]* days after the occurrence of such event.
- (c) The party who has given such notice shall be excused from the performance or punctual performance of its obligations under the Contract for so long as the relevant event of Force Majeure continues and to the extent that such party's performance is prevented, hindered or delayed.
- (d) The party or parties affected by the event of Force Majeure shall use reasonable efforts to mitigate the effect thereof upon its or their performance of the Contract and to fulfil its or their obligations under the Contract, but without prejudice to either party's right.
- (e) No delay or non-performance by either party hereto caused by the occurrence of any event of Force Majeure shall
- constitute a default or breach of the Contract
 - to any claim for damages or additional cost or expense occasioned thereby
- if and to the extent that such delay or non-performance is caused by the occurrence of an event of Force Majeure.
- (f) If the performance of the Contract is substantially prevented, hindered or delayed for a single period of more than *[sixty (60)]* days or an aggregate period of more than one hundred and *[twenty (120)]* days on account of one

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 33-	25.09.2014

or more events of Force Majeure during the currency of the Contract, the parties will attempt to develop a mutually satisfactory solution.

- (g) Force Majeure shall not apply to any obligation of the Owner to make payments to the Consultant herein.

4.36 Change in the Scope of Services

The Owner shall have the right to propose, and subsequently require, the Consultant during the performance of the Contract to make any change, modification, addition or deletion to, in or from the Scope of Services, provided that such Change falls within the general scope of the Services and does not constitute unrelated work and that it is technically practicable, taking into account both the state of advancement of the assignment and the technical feasibility. The parties will agree on the change in Contract Price due Change in Scope of Services on mutual consultation basis.

4.37 Extension of Time for Completion

- (a) The Time(s) for Completion specified in the SCC shall be extended if the Consultant is delayed or impeded in the performance of any of its obligations under the Contract by reason of any of the following:

- Any Change in the Facilities or
- any occurrence of Force Majeure or
- any suspension order given by the Owner or reduction in the rate of progress or
- any changes in laws and regulations or
- any default or breach of the Contract by the Owner, or any activity, act or omission of any other Consultants employed by the Owner or
- any other matter specifically mentioned in the Contract;

By such period as shall be fair and reasonable in all the circumstances and as shall fairly reflect the delay or impediment sustained by the Consultant.

- (b) Except where otherwise specifically provided in the Contract, the Consultant shall submit to the Project Manager a notice of a claim for an extension of the Time for Completion, together with particulars of the event or circumstance justifying such extension as soon as reasonably practicable after the commencement of such event or circumstance. As soon as reasonably practicable after receipt of such notice and supporting particulars of the claim, the Owner and the Consultant shall agree upon the period of such extension.
- (c) The Consultant shall at all times use its reasonable efforts to minimize any delay in the performance of its obligations under the Contract.

4.38 Termination

(a) Termination for Owner's Convenience

The Owner may at any time terminate the Contract for any reason by giving the Consultant a notice of termination. Upon receipt of the notice of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 34-	25.09.2014

termination, the Consultant shall either immediately or upon the date specified in the notice of termination

- (i) Cease all further work.
- (ii) terminate all subcontracts, except those to be assigned
- (iii) remove all Consultant's Equipments from the Site, repatriate the Consultant's and its SubConsultants' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition
- (iv) The Consultant, subject to the payment, shall
 - deliver to the Owner the data collected during the course of the consultancy services and study reports prepared up to the date of termination
 - Deliver to the Owner all non-proprietary drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Facilities.
 - In the event of termination of the Contract for Owner's convenience, the Owner shall pay to the Consultant the following amounts
 - the Contract Price, attributable to the parts of the Services executed by the Consultant as on the date of termination
 - the costs reasonably incurred by the Consultant in the removal of the Consultant's Equipment from the Site and in the repatriation of the Consultant's and its SubConsultants' personnel
 - any amounts to be paid by the Consultant to its SubConsultants in connection with the termination of any subcontracts, including any cancellation charges
 - the additional cost of satisfying other obligations, commitments and claims that the Consultant may in good faith have undertaken with third parties in connection with the Contract.

(b) Termination for Consultant's Default

- (i) The Owner, without prejudice to any other rights or remedies it may possess, may terminate the Contract forthwith in the following circumstances by giving a notice of termination and its reasons thereof to the Consultant:

the Consultant becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, if the Consultant is a corporation, a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Consultant takes or suffers any other analogous action in consequence of debt

If the Consultant assigns or transfers the Contract or any right or interest therein in violation of the provision.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 35-	25.09.2014

If the Consultant, in the judgement of the Owner has engaged in corrupt or fraudulent practices in competing for or in executing the Contract.

For the purpose of this Sub Clause:

"corrupt practice" means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution.

"fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Owner and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Owner of the benefits of free and open competition.

(ii) If the Consultant

- has abandoned or repudiated the Contract
- has without valid reason failed to commence the Consultancy Services promptly for more than *[twenty eight (28)]* days after receiving a written instruction from the Owner to proceed
- persistently fails to execute the Contract in accordance with the Contract or persistently neglects to carry out its obligations under the Contract without just cause
- refuses or is unable to provide sufficient personnel and other resources to execute the Services in the manner specified in the program at rates of progress that give reasonable assurance to the Owner that the Consultant can attain Completion of the Services by the Time for Completion as extended
- then the Owner may, without prejudice to any other rights it may possess under the Contract, give a notice to the Consultant stating the nature of the default and requiring the Consultant to remedy the same. If the Consultant fails to remedy or to take steps to remedy the same within *[fourteen (14)]* days of its receipt of such notice, then the Owner may terminate the Contract forthwith by giving a notice of termination to the Consultant.

(iii) The Consultant shall, either immediately or upon such date as is specified in the notice of termination,

- cease all further work,
- terminate all subcontracts, except those to be assigned to the Owner
- deliver to the Owner the data collected during the course of the consultancy services and study reports prepared up to the date of termination
- Deliver to the Owner all drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Services.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 36-	25.09.2014

- remove all Consultant's Equipments from the Site, repatriate the Consultant's and its SubConsultants' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition

(c) Termination by Consultant

i. If

- the Owner has failed to pay the Consultant any sum due under the Contract within the specified period, has failed to approve any invoice or supporting documents without just cause pursuant to [-----] (Terms and Procedures of Payment) of the Form of Contract Agreement, or commits a substantial breach of the Contract, the Consultant may give a notice to the Owner that requires payment of such sum, requires approval of such invoice or supporting documents, or specifies the breach and requires the Owner to remedy the same, as the case may be. If the Owner fails to pay such sum, fails to approve such invoice or supporting documents or give its reasons for withholding such approval, fails to remedy the breach or take steps to remedy the breach within [fourteen (14) days] after receipt of the Consultant's notice, or

- the Consultant is unable to carry out any of its obligations under the Contract for any reason attributable to the Owner, ,
then the Consultant may give a notice to the Owner thereof, and if the Owner has failed to pay the outstanding sum, to approve the invoice or supporting documents, to give its reasons for withholding such approval, or to remedy the breach within [twenty eight (28) days] of such notice, or if the Consultant is still unable to carry out any of its obligations under the Contract for any reason attributable to the Owner within twenty eight (28) days of the said notice.

If the Owner becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, being a corporation, if a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Owner takes or suffers any other analogous action in consequence of debt.

ii. If the Contract is terminated, then the Consultant shall immediately

- cease all further work, except for such work as may be necessary for the purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
- terminate all subcontracts, except those to be assigned to the Owner pursuant to paragraph (d)(ii)
- remove all Consultant's Equipment from the Site and repatriate the Consultant's and its SubConsultant's personnel from the Site

(v) The Consultant, subject to the payment, shall

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-I	- 37-	25.09.2014

- deliver to the Owner the data collected during the course of the consultancy services and study reports prepared up to the date of termination
- Deliver to the Owner all non-proprietary drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Facilities.

In the event of termination of the Contract for Owner's convenience, the Owner shall pay to the Consultant the following amounts

- the Contract Price, attributable to the parts of the Services executed by the Consultant as on the date of termination
- the costs reasonably incurred by the Consultant in the removal of the Consultant's Equipment from the Site and in the repatriation of the Consultant's and its SubConsultants' personnel
- any amounts to be paid by the Consultant to its SubConsultants in connection with the termination of any subcontracts, including any cancellation charges
- the additional cost of satisfying other obligations, commitments and claims that the Consultant may in good faith have undertaken with third parties in connection with the Contract.

4.39 Assignment

The Consultant shall not, without the express prior written consent of the Owner, assign to any third party the Contract or any part thereof, or any right, benefit, obligation or interest therein or there under, except that the Consultant shall be entitled to assign either absolutely or by way of charge any monies due and payable to it or that may become due and payable to it under the Contract.

 - Fax No: [-----]
 - E-Mail: [-----]

5.2 Effective Date

The Owner shall inform the successful Bidder of its acceptance of the Tender by a formal Letter of Acceptance. This Letter of Acceptance will be the Effective Date for determining the Time for Completion of the facilities and other milestones for execution of the Renovation & Modernization Consultancy work as per the scope of work under this tender by the Consultant.

The following three activities will be completed within *[two (2)]* months from the date of Letter of Acceptance:

(a) The contract agreement will be executed by the Owner and the Consultant. (b) The Consultant will submit to the Owner the Contract Performance Security, any Additional Performance Security associate etc if applicable, and the Advance Payment Security.

(c) The Owner will pay the Consultant the Advance Payment as per the Terms of Payment.

(d) The Consultant will submit the Inception Report and incorporate any change suggested by Owner in the Inception Report

The Owner will make the advance payment promptly once Consultant has fulfilled the necessary conditions specified in Terms of Payment. If payment of Advance is delayed beyond two months from the date of Letter of acceptance for reasons attributable to the Owner, the date of payment of advance shall be the effective date for determining the time for completion of facilities. However, failure of the

5.4 NOT USED

5.5 NOT USED

5.6 Contract Price

- a) The Contract Price shall be as (Contract Price and Terms of Payment) of the Form of Contract Agreement.
- b) The Consultant shall be deemed to have satisfied itself as to the correctness and sufficiency of the Contract Price, which shall, except as otherwise provided for in the Contract, cover all its obligations under the Contract.

5.7 Terms of Payment

- a) The Contract Price shall be paid as Terms and Procedures of Payment to the Form of Contract Agreement.
- b) No payment made by the Owner herein shall be deemed to constitute acceptance by the Owner of the Services or any part(s) thereof.
- c) All the payments will be made in INR.

5.8 Contract Securities

- a) The Consultant shall provide the securities specified below in favour of the Owner at the times, and in the amount, manner and form specified below.
- b) Advance Payment Security
 - The Consultant shall, within *[thirty (30)]* days of the Notification of Contract Award, provide a security for an amount equal to the advance payment, and in the same currency or currencies, with a initial validity of up to *[ninety (90)]* days beyond the schedule date of Completion of R&M Consultancy Services.
 - The security shall be in the form of an Unconditional Bank Guarantee. The Advance payment Security shall be reduced prorata every three (3) months after First Running Account Bill/Stage Payment under the Contract based on the value of Services received. The cumulative amount of reduction at any point of time shall not exceed ninety percent (90%) of the advance corresponding to cumulative value of the Services received as per a certificate issued by the Project Manager and the balance of 10% shall be released on Completion of R&M Consultancy Services and Owner's Acceptance thereof. It should be clearly understood that reduction in the value of security for advance shall not in any way dilute the Consultant's responsibility and liabilities under the Contract including in respect of the Services for which the reduction in the value of security is allowed.

c) Performance Security (Contract Performance Bank Guarantee)

The Consultant shall, within *[thirty (30)]* days of the notification of award, provide a security for the due performance of the Contract for five percent (5%) of the Contract Price with an initial validity upto *[ninety (90)]* days beyond the Scheduled Completion Date for R&M Consultancy Services.

If the bidder is a Consortium of Consultancy firms, in addition to the Contract Performance Bank Guarantee (CPBG) of 5% furnished by the Consortium Leader, each of the other consortium member shall furnish Additional Contract Performance Bank Guarantee equal to 2% of Contract Price.

Form of Contract Agreement

THIS CONTRACT AGREEMENT is made the _____day of _____, 20_____.
BETWEEN (1) [Name of Employer], a corporation incorporated under the laws of [country of Employer] and having its principal place of business at [address of Employer] (hereinafter called "the Employer"), and (2) [name of Contractor], a corporation incorporated under the laws of [country of Contractor] and having its principal place of business at [address of Contractor] (hereinafter called "the Contractor")

WHEREAS the Employer desires to engage the Contractor to provide R&M Consultancy Services comprising .
[.....]
[.....]
[.....]

("the R&M Consultancy Services") and the Contractor have agreed to such engagement upon and subject to the terms and conditions hereinafter appearing.
NOW IT IS HEREBY AGREED as follows:

1.1 Contract Documents

- a) Contract Documents means this signed Contract agreement and its annexure/Contract Schedules, and the complete documents, which are the basis of finalization of the contract, including correspondence exchanged from issue of tender till date of signing the contract. The following will constitute the Contract Documents:
 - i. The signed Contract Agreement & the annexure/ Contract Schedule thereto (highest precedence)
 - ii. Letter of award.
 - iii. Special Condition of Contract
 - iv. General Condition of Contract
 - v. Terms of Reference.
 - vi. The bid & its schedules/ attachment submitted by the contractor.
- b) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.
- c) The Contract will be signed in three originals and the Contractor shall be provided with one signed original and the rest will be retained by the Employer.

1.2 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Letter of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Volume-I, Annexure & Schedules	[2]	25.09.2014

- v. Terms of Reference.
- vi. The bid & schedules/ attachment submitted by the contractor.

1.3 Definitions

The Definitions of terms and expressions shall be as per General Conditions of Contract (GCC).

1.4 Contract Price

The Employer hereby agrees to pay to the Contractor the Contract Price in consideration of the performance by the Contractor of its obligations hereunder: [amount in local currency in words], [amount in figures], or such other sums as may be determined in accordance with the terms and conditions of the Contract.

1.5 Term of Payment

The terms and procedures of payment according to which the Employer will reimburse the Contractor are given in Contract Schedule 1 (Terms and Procedures of Payment) hereto.

1.6 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this shall be as follows:

Task/Milestone	Time for Completion
For Phase-I	
[.....]	By [.....] months from Effective Date
[.....]	[.....]
[.....]	By [.....] months from Effective Date
[.....]	[.....]
[.....]	
For Phase-II	
[.....]	By [.....]weeks from Phase-II Notice to Proceed
[.....]	[.....]
[.....]	[.....]
[.....]	[.....]

The detailed Time Schedule shall be as per Contract Schedule 2.

Contract Schedules

The Contract Schedules listed in the attached list of Contract Schedules shall be deemed to form an integral part of this Contract Agreement.

Reference in the Contract to any Contract Schedule shall mean the Contract Schedules attached hereto, and the Contract shall be read and construed accordingly.

Rs.....(Rupees.....only). Any such demand made by the OWNER on the Bank shall be conclusive and binding, absolute and unequivocal notwithstanding any difference between the OWNER and CONSULTANT or any dispute or disputes raised/ pending before any Court, Tribunal, Arbitrator or any other authority. The Bank agrees that the guarantee herein contained shall continue to be enforceable till this sum due to the OWNER is fully paid and claims satisfied or till the OWNER discharges this Guarantee.

- 3 The OWNER shall have the fullest liberty without affecting in any way the liability of the Bank under this guarantee, from time to time, to extend the time of Performance by the CONSULTANT. The Bank shall not be released from its liabilities under these presents by any exercise of the OWNER of the liberty with reference to the matter aforesaid.
- 4 The OWNER shall have the fullest liberty, without affecting this guarantee to postpone from time to time the exercise of any powers vested in them or of any right which they might have against the CONSULTANT and to exercise the same at any time in any manner, and either to enforce or to forbear to enforce any covenants, contained or implied in the CONTRACT between OWNER and the CONSULTANT or any other course or remedy or security available to the OWNER and the Bank shall not be released of its obligations/liabilities under these presents by any exercise by the OWNER of his liberty with reference to the matters aforesaid or any of them or by reasons of any other act or forbearance or other acts of omission or commission on the part of the OWNER or any other indulgence shown by the OWNER or by any other matter or thing whatsoever which under law would, but for this provision, have the effect of relieving the Bank Guarantee. The Bank further undertakes not to revoke this guarantee during its currency without the previous consent of the OWNER.
- 5 The Bank further agrees that the decision of the OWNER as to the failure on the part of the CONSULTANT to fulfill their obligations as aforesaid and/or as to the amount payable by the Bank to the OWNER hereunder shall be final, conclusive and binding on the Bank.
- 6 The OWNER shall have the fullest liberty to lodge their claim for encashment of the guaranteed sum either in full or part, in the manner suitable to them. However, payment made for a sum lesser than the guaranteed amount shall not relieve or discharge the bank from their obligations guaranteed under the bank guarantee, till the contractual obligations are fully performed by the Consultant or the Bank Guarantee is discharged by the OWNER, as the case may be and the Bank Guarantee shall continue to be in force till such time.
- 7 The Bank also agrees that the OWNER shall be entitled at his option to enforce this guarantee against the Bank as a Principal Debtor, in the first instance notwithstanding any other security or guarantee that it may have in relation to the CONSULTANT's liabilities.
- 8 This guarantee will not be discharged due to the change in the constitution of the Bank or the CONSULTANT(S).
- 9 Notwithstanding anything contained hereinabove, our liability under this guarantee is restricted to Rs..... (Rupees.....) and it will remain in force upto and including..... and shall be extended

Tender Document for Selection of R&M Consultant for Unit No. [..] Capacity [..] of [Name of the Power Plant]	[Logo of Utility]
---	-------------------

1 GENERAL

{Briefly explain the need and objective of R&M, give reference of the studies carried out to assess the health of the unit and the progress made till date for the implementation of R&M}

1.1 Project Background

{Give brief description of the unit and the latest performance parameters in terms of Average Load during the year, PLF, Availability Auxiliary Power Consumption, Heat Rate and the average Calorific Value of Coal being presently used in the Boiler.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-II	- 1 -	25.9.2014

2 ROLE OF R&M CONSULTANT

Role of R&M Consultant shall be as follows:-

- a. To assess the health condition of major systems; equipments and their components.
- b. To assess the causes of deterioration in performance and efficiency of the equipments/systems.
- c. To provide solutions for removing the deficiencies in performance and efficiency along with cost impact.
- d. To work out R&M options for improving the performance, output rating, extending the life of the plant and reducing the levels of emission from the unit.
- e. To carry out cost benefit analysis of various options and recommend the most attractive option for deciding the scope of work for R&M.
- f. To obtain necessary approvals from the concerned Regulatory Commission.
- g. Basic Design & Engineering and Preparation of Tender Documents.
- h. Support for Vendor Selection (up to placement of Letter of Award).

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-II	- 2 -	25.9.2014

3 SCOPE OF SERVICES

The detailed scope of services shall be as described below:

3.1 Data Collection

To collect the following data/information from the Employer:

- i) Operation data for the current year and the previous years.
- ii) Details of forced outages during the current and the previous years.
- iii) Information about the replacements / refurbishments done during the previous years.
- iv) Earlier reports of RLC/CA studies and Energy Audit Studies carried out, if any.
- v) Coal quality (along with its analysis) to be considered for redesign.
- vi) Any other information needed by R&M Consultant like original design specifications and drawings.

3.2 Studies to be carried out:

The R&M Consultant shall carry out the following studies through his team of experts:-

- i) Cold walk down survey of the plant covering all major systems/equipments.
- ii) Hot walk down survey of plant covering all major systems/equipments.
- iii) Residual Life Assessment / Condition Assessment of all applicable systems/equipments, including but not limited to the carrying out of following tests/studies:
 - a) Visual examinations
 - b) Fiberscopic /Boroscopic Inspections
 - c) Dye Penetration Tests
 - d) Magnetic Particle Inspection
 - e) Ultrasonic scanning
 - f) Ultrasonic thickness testing
 - g) Oxide Scale Thickness Measurements
 - h) In-situ Microstructure Replica Analysis
 - i) Hardness Measurement
 - j) Dimensional Measurement
 - k) Steam Path Audit
 - l) ELCID Test
 - m) Recurrent Surge Oscillograph (RSO) Test
 - n) Tan Delta Test
 - o) Destructive Tests to check the mechanical properties like tensile strength, yield strength, elongation etc.
- iv) Energy Audit:

R&M Consultant shall carry out the Energy Audit / Performance Tests of all major equipments/systems, including but not limited to the following:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-II	- 3-	25.9.2014

- a) Boiler Efficiency Test.
- b) Performance Test and Energy Audit of Air Pre-heaters.
- c) Performance Test and Energy Audit of Mills.
- d) Performance Test and Energy Audit of ID Fans, FD Fans and PA Fans.
- e) Performance Test of ESP.
- f) Performance Test for determining the Heat Rate of Turbine Generator.
- g) Performance Test of Condensers.
- h) Performance Test of LP/HP Feed Water Heaters.
- i) Performance Test and Energy Audit of CEPs/BFPs
- j) Performance Testing and Energy Audit of Water Intake Pumps, CW Pumps, RW Supply Pumps, Clarified Water Supply Pumps, DM Water Supply Pumps and Ash slurry Pumps.
- k) Cooling Tower Performance Test.
- l) Performance Test and Energy Audit of Compressed Air System.
- m) Performance Test and Energy Audit of Air Conditioning System.
- n) Energy Audit of Thermal Insulation.
- o) Energy Audit of Illumination System.
- p) Any other system considered important by the Utility.

3.3 Working out of R&M Options:

Working out of R&M options for the unit considering the following:

- i) Improving the Performance Parameters.
- ii) Increasing the Efficiency of equipments/systems.
- iii) Reducing the level of emissions so as to comply with the statutory norms.
- iv) Increasing the output from the unit.
- v) Extending the life of the unit by 20/25 years.

3.4 Cost Benefit Analysis:

Carrying out the cost benefit analysis of various options and arriving at the most attractive solution for the R&M of the unit.

3.5 Obtaining necessary approval:

The Consultant shall assist the Employer in obtaining necessary approval of the concerned Regulatory Commission.

3.6 Selection of R&M Contractor:

The Consultant will prepare RFQ & RFP for the selection of R&M Contractor. After the receipt of the Bids, the Consultant will prepare the Bid Evaluation Report.

3.7 Schedule For Completion Of Task:

The Contract will be implemented in accordance with the services indicated. The Consultant shall prepare and submit well in advance the complete schedule of completion of work and the schedule of manpower to be deployed.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-II	- 4-	25.9.2014

3.8 Final outputs required of the Consultant:

The following outputs are required from the Consultant:

1. Inception report within 30 days of date of effectiveness.
2. Residual Life Assessment / Condition Assessment Report.
3. Energy Audit Report.
4. Feasibility Report indicating various R&M options and their cost impact as well as selection of R&M option to be implemented.
5. Detailed Project Report.
6. RFQ & RFP for the R&M Contractor.
7. Technical Bid Evaluation Report for the selection of R&M Contractor.
8. Monthly Progress Reports.

4 FACILITIES TO BE PROVIDED BY THE CLIENT:

Facilities which will be provided to the Consultant by the Client will include the following: -

A. Facility for the visiting Consultant:

- Lodging in Business Class Hotel or equivalent accommodation.
- Local conveyance.

B. Facility for the manpower posted at site:

- The accommodation will be provided either in the plant colony or in the guest house.
- The available Canteen / Mess facility.
- Temporary office space with intercom phone connected to PBX. (Outside / International calls on chargeable basis.)

5 KEY PROFESSIONAL POSITIONS WHOSE CV WOULD BE EVALUATED:

S. No.	Key Position	Area of Specific Expertise desired	Minimum Qualification and Professional Experience Desired
1	Team Leader	Overall Management Team of R&M Consultant	Graduate Engineer with minimum 15 years relevant experience of Boiler / Turbine design/erection/commissioning preferably of 200 MW or above capacity. Good knowledge of project & safety aspects. The proposed individual should also have direct experience of handling an EPC Project of coal fired thermal power plant of 200 MW or above capacity.
2	Boiler Expert	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Mechanical Engineer with at least 5-10 years experience in the relevant fields, including direct experience of Boiler design/ erection /commissioning preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
3	Turbine Expert	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Mechanical Engineer with at least 5- 10 years experience in the relevant fields, including direct experience of Turbine design/ erection/ commissioning preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
4.	Mechanical BoP Expert	Design- Engineering / Production, Project planning Erection and Commissioning.	Graduate Mechanical Engineer with at least 5- 10 years experience in the relevant fields, including direct experience of Mechanical BoP of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
5	Electrical Expert	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Electrical Engineer in Electrical Systems with at least 5-10 years experience in the relevant fields, including direct experience of design /erection/commissioning of Electrical Equipment /systems preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
6	Control and Instrumentation Expert	DCS Installation and Commissioning	Graduate Instrumentation Engineer with at least 5-10 years experience in the relevant fields. Including direct experience of design/ erection/ commissioning of electrical systems preferably of 200 MW or above capacity.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-007	01	Tender Document for Selection of R&M Consultant Section-II	- 7 -	25.9.2014

S. No.	Key Position	Area of Specific Expertise desired	Minimum Qualification and Professional Experience Desired
7	Civil Expert	Design- Engineering/ Construction of Civil and Structural works.	Graduate Civil Engineer with at least 5-10 years experience in the relevant fields, including direct experience of Construction of Civil and Structural works of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.

Note:

After award of the contract the client expects all the proposed key personnel to be available during implementation of the contract as per the agreed staffing schedule at the time of negotiation. The Utility expects that Consultant will keep experts same throughout the contract period. If any replacement is required, the Consultant should ensure that there is a reasonable overlap between the staff to be replaced, wherever feasible/possible.

2 INSTRUCTIONS TO BIDDERS

2.1 Introduction

[Name of Utility], the Employer, intends to carry out the Renovation & Modernization of [Unit no.-XX ----- of the XXXX Power Plant]. [Name of The Utility] desires to appoint a Implementation Support Consultant.

Under the subject Tender, [Utility] invites bid for Implementation Support Consultancy Services to be carried out as per the accompanying Terms of Reference. The Bidder shall submit the offer for complete scope of work indicated in the Terms of Reference.

2.2 Address and Contact Details of Employer

[Designation, Address and Contact details

-----/

2.3 General Project Information

General information about the plant and R&M project is indicated in section 3.0 on General Project Information.

2.4 Cost of Bidding

The Bidder shall bear all costs associated with the preparation and submission of its bid, and the Employer will in no case be responsible or liable for these costs, regardless of the conduct or outcome of the bidding process.

2.5 Non-Transferability of Bid document

Transfer of Bid documents issued to one intending bidder to another is not permissible.

2.6 Scope of Work & Single Bidder Responsibility

The scope of the work shall be on the basis of single Bidder responsibility, covering the complete scope of work specified under these specifications and documents.

2.7 Time Schedule

The completion Time Schedule for Completion of Implementation Support Consultancy Services shall be as given in the SCC.

2.8 Tender Documents

The scope of contract, terms of reference, bidding procedures and contract terms are prescribed in the Tender Documents. The Tender Documents comprise, inter alia, the following Sections:

Section – I	:	Commercial Conditions
Section– I, Chapter-1	:	Invitation for Bid
Section – I, Chapter-2	:	Instructions To Bidders
Section – I, Chapter-3	:	General Project Information

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 3-	25.09.2014

Section – I, Chapter-4	:	General Condition of Contract (GCC)
Section – I, Chapter-5	:	Special Condition of Contract (SCC)
Section – I, Chapter-6	:	Forms & Schedules
Section – II	:	Terms of Reference

The Bidder is expected to examine all instructions, forms, terms and specifications in the Tender Documents including clarifications/corrigendum/amendments for completeness and obtain clarifications, if any, from the Employer.

Failure to furnish all information required as per the bidding documents or submission of a bid not substantially responsive to the bidding documents in every respect will be at the Bidder's risk and may result in rejection of its bid.

A prospective Bidder requiring any clarification to the Tender Documents may notify the Employer in writing by post or by e-mail followed by postal confirmation at the Employer's address indicated in ITB. The Employer will respond in writing by post or by e-mail followed by post confirmation to any request for clarification or modification of the bidding documents that it receives not later than fifteen (15) days prior to the deadline for submission of bids prescribed by the Employer. Employer's response will be sent to all prospective Bidders that have been issued the Bidding Documents.

The Bidder is advised to visit the plant and obtain on its own responsibility all information that may be necessary for preparing the bid. The Employer will facilitate the bidder to collect such information about the plant in the manner that does not interface with plant operation and does not in any way adversely impact the interest of the Employer. The costs of visiting the site including engaging any third party consultant by Bidder, if required as per the assessment of Bidder, shall be borne by the bidder fully.

The Bidder, its personnel and agents will release and indemnify the Owner and its personnel and agents from and against all liability during such information collection and will be responsible for death or personal injury, loss of or damage to property and any other loss, damage, costs and expenses incurred as a result of the inspection.

At any time prior to the deadline for submission of bids, the Employer may, for any reason, whether at its own initiative, or in response to a clarification requested by a prospective Bidder, amend the Tender Documents.

The amendment will be notified in writing by post or by e-mail followed by post confirmation to all prospective Bidders that have received the bidding documents and will be binding on them.

At any time prior to the deadline for submission of bids, the Owner, at its discretion may extend the deadline for submission of the bids.

2.9 Preparation of Bids

2.9.1 Language of Bid

The bid prepared by the Bidder and all correspondence and documents related to the bid shall be in English language, provided that any printed literature furnished by the Bidder may be written in another language, as long as such literature is

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 4 -	25.09.2014

accompanied by a translation of its pertinent passages in English language in which case, for purposes of interpretation of the bid, the translation shall govern.

2.9.2 Bidding Procedure

Single Stage Two Part Bidding Procedure will be followed for this package.

The bidders are required to submit, the bids for the Implementation Support Consultancy Services in two parts. Both the parts are to be submitted together before the indicated Bid submission Time & Dates.

The Part-I Bid comprises the techno-commercial bid without prices. The main components of the Techno-Commercial Bid are Bid Guarantee, Methodology & Work Plan for discharging the consultancy services as per Terms of Reference, Details of Key Personnel along with their Curriculum Vitae, Deviations to Terms of Reference, Deviation to commercial Conditions, Overall Completion Time Period & Network Schedule, Resource Deployment Schedule, Detail of Sub-Consultants, Details of the present commitments & details of contracts in hand etc. Part-II Bid will comprise Quoted Price. Initially, only the Part-I Bid will be opened and Part-II Bid will be kept in safe custody.

The Part-I Bid will be checked for responsiveness to techno-commercial conditions and a detailed Technical Evaluation will be carried out to assign a Technical Score to each Bid. Part-II Bid (Price Bid) of only those Bidders will be opened, whose Part-I Bid is found to be responsive to Tender Specifications and Conditions and Technical Score is above a specified level.

2.9.3 Bid Submission

- (1). Bid proposals shall be accepted from only those eligible bidders who are found qualified during the pre-qualification process & are issued Tender Documents. Unsolicited bids shall not be taken into cognizance.
- (2). All Bid proposals shall be prepared and submitted in two parts, part-wise in separate sealed covers, with all pages serially numbered.
- (3). *[One original and 3 (three) identical]* copies of the original with all enclosures shall be submitted by each Bidder for Part-I and Part-II, clearly indicating the original and the number of the copy (i.e., "Original", "Copy No. 1", "Copy No. 2" and "Copy No. 3").
- (4). In the event of discrepancy between "Original" and any copy of the bids, the hard copy of Original shall prevail.
- (5). All these covers shall be individually sealed and put in an outer cover which also shall be sealed and super scribed as in other covers.
- (6). The covers should be pasted properly before applying the wax seal. Failure to do so may result in rejection of such bids.
- (7). The Bidder's Bid and the documents attached thereto shall be considered as forming part of the Contract documents.
- (8). The Bid shall be submitted to [-----]. Bid submitted to any other office of Employer is liable for rejection. Bids submitted by Telefax or e-mail will be rejected

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 5-	25.09.2014

- (9). Employer will receive Bids in respect of entire scope of work as set forth in the accompanying Terms of Reference. All bids shall be prepared and submitted in accordance with the Tender Documents.
- (10). Failure to furnish all information required in the Tender Documents or submission of a Bid not substantially responsive to the Tender Conditions and Terms of Reference in every respect or bids received in incomplete shape shall be liable for rejection. A bid shall be determined as substantially responsive in every respect, if it conforms to all the terms, conditions and specifications specified in Tender Documents without material deviations, objections, conditionality or reservations.
- (11). A material deviation, objection, conditionality or reservation is one:
 - (i). That affects in any substantial way the scope, quality or performance of the contract;
 - (ii). That limits in any substantial way, inconsistent with the Tender Documents, the Employer's rights or the successful Bidder's obligations under the contract.
- (12). Deviation(s) to vital clauses listed under the Tender Documents shall be considered to be material deviation(s).
- (13). Notwithstanding any information and data, which may be contained in these Tender Documents, the Bidder has to make independent inquiries and generally obtain his own information on all matters that may in any way affect prices, risks and obligations of the Contractor under the Contract.

2.9.4 Bid Guarantee

- (1). The Bid shall be accompanied by Bid Guarantee either in the form of Bank Guarantee valid for [---] days from the scheduled date of opening of the Bids (Part-I) or Demand Draft of equivalent amount drawn in favour of "[-----]" payable at "[-----]".
- (2). The Bank Guarantee shall be from any scheduled commercial Bank in India authorized by Reserve Bank of India,, to issue such Bank Guarantee on a non-judicial stamp paper of value not less than Rs. [---]/-.The stamp paper shall be purchased in the name of the Bank. Foreign Bidders may submit the Bank Guarantee from any bank in India as above or from any foreign bank which is in the approved list of RBI.
- (3). Unless otherwise expressly stated,
 - a) The Bid Guarantee shall be executed only on behalf of the Bidder in whose name the Tender Documents have been issued.
 - b) The Bid and other documents shall be submitted only by the Bidder in whose name the Tender Documents have been issued.
 - c) The Bid Guarantee shall be executed only as per the format prescribed by Employer at ([-----]). In the event of any deviation in this regard, the decision of Employer as to whether the same could be accepted or not, will be final and binding on the Bidder.
- (4). The Bidder shall arrange for extension of validity of Bid and that of the Bid Guarantee upon request from the Employer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 6-	25.09.2014

- (5). No interest shall be paid on Bid Guarantee amount. The offer without Bid Guarantee or with short Bid Guarantee or Bid Guarantee in the form other than that specified herein above or from banks not specified hereinabove will be liable for rejection.
- (6). Any Bid not accompanied by the Bid Guarantee shall be rejected and the Bidder shall not be permitted to participate in the tender.
- (7). The Bid Guarantee shall be forfeited if the Bidder withdraws / modifies / changes / impairs / derogates the bid proposal on its own after the Bids are opened or submits forged/bogus certificates or fails to accept the Letter of Award issued by Employer or fails to submit Contract Performance Security (Bank Guarantee).
- (8). The Bid Guarantee of all unsuccessful Bidders shall be returned after selection of the successful Bidder. The Bid Guarantee of the successful Bidder shall be returned after furnishing of the Contract Performance Bank Guarantee to the Employer and acceptance thereof.

2.9.5 Bid Opening

1. This is a single stage two part tender. On the specified date and time of opening, Part– I Bid containing Bid Guarantee and Technical and Commercial Proposal without Prices will be opened. At the time of opening of Part–I of the bids, the names of the bidders who submitted their bids shall be read out and other such details as Employer, at its discretion, may consider appropriate, shall be read out.
2. If the Bidder desires to be present at the time of opening of Part-I of bids, it shall depute its representatives (not more than two persons) in time with due authorization for participating in the Bid opening.
3. Employer takes no responsibility for delays, loss or non-receipt of Bid documents or any letters sent by post/courier either way and also reserve the right to reject any Bid in part or full without assigning any reasons thereof.

2.10 Composition of Techno Commercial Bid (Part-I Bid)

This part shall, inter alia, include the following in the same order as listed below. One original and 3 (three) identical copies shall be submitted.

- (i). Duly filled in "Form of Bid" (As per Annexure-B of this Section).
- (ii). Bid Guarantee- as per Annexure A.
- (iii). Power of Attorney/Authorization with the seal of the company in favour of the person signing the Bid.
- (iv). Signed copy of all the corrigendum's/amendments/clarifications, if any issued for the tender
- (v). Overall Time Schedule as per Schedule – F2 and Bar chart/PERT Network schedule to achieve the time schedule
- (vi). Deviations to the Commercial Conditions, if any, as per Schedule – F3.
- (vii). Deviations to Terms of Reference, if any, as per Schedule – F4.
- (viii). Methodology and Work Plan for completing different tasks under the Consultancy Assignment. Bidder to indicate the scope of work to be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 7 -	25.09.2014

covered with sufficient details regarding the tasks and subtasks to be covered.

- (ix). Details of Key Personnel as per Schedule – F5. Bidder to indicate the minimum number of hours each identified key person will spend on the Consultancy Assignment
- (x). Curriculum Vitae of each key person as per Schedule-F6
- (xi). Organization Structure and Team Composition (Both Professional Staff and Support Staff)
- (xii). Staffing Schedule describing month-wise deployment of personnel
- (xiii). Details of the present commitments of the Bidder, details of contracts in hand
- (xiv). Details of Sub-Consultants, if any

The Part-I Bid shall not contain any Price data.

In addition to the hard copy of Part-I Bid, the Bidder shall submit soft copy the Bid in a compact disk (CD). However, hard copy alone will be considered as authentic for evaluation.

2.11 Composition of Price Bid (Part-II Bid)

The Bidders are requested to quote the Prices with break up as per Schedule-F1. Price given in Part-II Bid should cover the entire scope of work as given in Part-I of the offer. *[One original and 3 (three) identical]* copies shall be submitted.

1. The Price Bid shall contain the following :

- (i). Duly filled in Form of bid as per Annexure-C
 - (ii). Completely filled in Schedule of Prices Schedule – F1
2. The Bidder shall quote his price against each item of the schedules as indicated in the enclosed format (Price Schedule). The Bidder shall quote the prices only once after considering all the pros and cons, risks and contingencies. Rebate percentage etc., if any, should be spelt out by the Bidder in the first Bid itself.
 3. The amount shall be quoted both in figures and words clearly and legibly. No overwriting is allowed. All scoring and cancellations should be countersigned by the Bidder. In case of illegibility, the interpretation of the Employer shall be final. All entries shall be in English language only.
 4. The Price shall be quoted in Indian Rupees only.

2.12 Bid Prices

Bidders shall quote for the entire scope of work on single responsibility basis & the total bid price covers all the obligations of the Consultant mentioned in Tender Documents/Terms of Reference or to be reasonably inferred from the Tender Documents/Terms of Reference.

Bidders are required to quote the price for the entire commercial, contractual and technical obligations outlined in the tender documents.

Prices quoted by the Bidder shall remain firm for the term of the contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 8-	25.09.2014

2.13 Signature of Bids

Each page of the Bid must be signed and stamped by the Bidder with his usual signature. The names of all persons signing should also be typed or printed below the signature. Satisfactory evidences of authority of a person signing on behalf of the Bidder shall be furnished with the Bid. Erasures or corrections in the Bid documents if any shall be signed by the person signing the Bid. Printed literature, it enclosed need not be signed. Bids not conforming to the above requirements are liable to be treated as non-responsive.

2.14 Clarifications/Corrigendum/ Amendment of Tender Specifications

1. At any time prior to the deadline for submission of Bids, the Employer may, for any reason, whether at his own initiative or in response to clarification(s) requested by a prospective Bidder, modify the Tender Documents including the Terms of Reference by amendment.
2. Clarifications/Corrigendum/Amendment shall be construed to be an integral part of the Tender Documents. Amendments will be hosted in Employer's website. Bidders are requested to visit Employer's website and note amendments, if any, before submission of bid. Employer shall not be responsible if any bidder fails to notice any amendment.
3. Amendment shall be numbered serially. Signed copies of amendments & clarifications shall be enclosed in Part-I of bid by bidder.

2.15 Modification of Bids

The Bidder is not permitted to modify his Bid suo-moto after the Bid submission.

2.16 Policy of Bids under Consideration

Bids shall be deemed to be under consideration immediately after they are opened. While the Bids are under consideration, Bidder's and/or their representatives or other interested parties are advised to refrain from contacting by any means, the Employer and/or his employees/ representatives on matters related to the Bids under consideration. The Employer, if necessary will obtain clarifications on the Bids by requesting for such information from any or all the Bidders, in writing as may be necessary.

2.17 Validity of Bid

1. The Bid shall be kept valid for acceptance for *[120 days]* from the schedule date of opening of the Part-I Bid.
2. The Bidder will not be permitted to change the substance of the Bid suo-moto, after Bid has been opened.
3. Unilateral revision or withdrawal of offer by the Bidder within the subsistence of the validity period of offer shall not be permitted. Violation of this condition shall result in rejection of the Bid without notice, besides forfeiture of Bid Guarantee. The Bidder shall also be debarred either permanently or for a fixed period, at the discretion of Employer from participating in any of the Employer's tenders.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 9-	25.09.2014

2.18 Understanding & Clarification on Documents & Specifications

1. The Bidder is required to carefully examine the specifications and documents and fully informs himself as to all the conditions and matters which may in any way affect the 'Implementation Support Consultancy Services to be rendered or the cost thereof. Bidders are free to visit the plant. However, the Bidders' visit to site shall be at their cost and risk, without any liability on part of the Employer.
2. Bidders may seek clarifications to the prescribed clauses and / or different part of the Tender Specifications. Such a request for clarifications, if any, should reach the Employer at least *[7 (seven) days]* before the date stipulated for pre-bid meeting. The Employer then will issue interpretations and clarifications as it may think fit in during the pre-bid meeting. After pre-Bid meeting, Bidder may seek further clarification till *[14 days]* prior to schedule opening date of Part-I Bid. After receipt of such clarifications, the Bidder may submit its Bid but within the time and date as specified in the Invitation for Bid or as amended by the Employer. All such clarifications and the relevant exchange of correspondence between the parties shall be construed to form part of the tender specifications.
3. Pre-Bid Conference will be organized and outcome of the pre-bid conference is binding on all the Bidders. Outcome of the Pre-Bid Conference will be intimated by the Employer to all the Bidders.
4. A copy of such clarifications duly signed and stamped shall be enclosed with the Bid (Part-I). In case any queries remain un-replied, it shall be construed that in respect of those queries, the respective stipulations of the Tender Specifications/Conditions shall continue to apply and/or no new stipulations are made with respect to those queries.
5. No extension of time for submission of Bid will be granted on account of Bidders' request for interpretation/clarifications.

2.19 Latest Hour for Receipt of Bids

Bids must reach the designated Office of Employer not later than *[-----]* Hrs, Indian Standard Time (IST) on the date fixed for receipt of the Bid as indicated in the Invitation for Bid. Bids delivered / received after the time and date fixed for the receipt of the bids shall be liable for rejection.

2.20 No Claim for Compensation for Submission of Bid

1. The submission of any Bid connected with these documents and specifications shall constitute an agreement that the Bidder shall have no cause of action or claim against the Employer for rejection of his Bid.
2. Regardless of the conduct or outcome of the bidding process, Bidder shall not be entitled to claim any costs, charges and expenses incidental to or incurred by him through or in connection with his submission of Bid or its consideration by the Employer, even though the Employer may elect to modify/withdraw the Invitation for Bid or does not accept the Bid(s).

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 10-	25.09.2014

2.21 Evaluation of Bid

The selection of the successful Bidder for award of the Implementation Support Consultancy Services Contract will be based on both Quality of the Technical Proposal and Price quoted by the Bidder for the entire scope of work. The selection process will comprise the following steps:

1. First, Techno-Commercial offer will be assessed for completeness and responsiveness to commercial/contractual conditions. Only the Bids that are determined to be complete in all respects and responsive to commercial/contractual conditions will be taken up for further evaluation on the basis of Quality and Price.
2. Technical Proposal of Bidders, whose Bid is determined to be complete and responsive to commercial/contractual conditions, will be evaluated on the basis of Bidder's proposed methodology and Work Plan for discharging the Consultancy Assignment, experience of the Bidder and the experience & expertise of Key Personnel and will be assigned a Technical Score S_t . Only those Bidders whose Technical Proposals get a Technical Score of 70 marks or more out of 100 shall qualify for further consideration. All the Bidders with Technical Score of 70 or more will be considered for next stage of evaluation. It is not intended to short list a pre-determined number of Bidders on the basis of evaluation of Technical Proposal.
3. The Price Proposal of each Bidder with Technical Score of 70 or more will be assigned a Financial Score (S_f) on the basis of its cost competitiveness.
4. Each bidder will be assigned a Composite Score (S_c) equal to the weighted sum of Technical Score and Financial Score. Finally, the bidder with the highest Composite Score will be selected as Implementation Support Consultant for the subject Implementation Support Consultancy Services Contract.

2.21.1 Evaluation of Technical Proposal

The evaluation of Technical Proposal will have three elements as depicted in Table below:

Sl No	Parameter	Weightage	Basis of Evaluation
1	Methodology and Work Plan (S_{t-1})	20%	Bidder's understanding of Terms of Reference and clarity, completeness and soundness of methodology and work plan to achieve successful completion of the objectives of the Implementation Support Consultancy work. The Bidder with the best submission will be assigned a score of 100 ($S_{t-1} = 100$). Other Bidders will be assigned scores below 100 considering the relative quality of the submission with respect to the best submission.
2	Bidder's Experience (S_{t-2})	40%	Each Bidder has to list up to 5 technical consultancy projects, pertaining to thermal power plants of unit size 200 MW or above,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 11 -	25.09.2014

			successfully executed by it during the last 10 years. Bidder has to furnish detailed scope of work executed by it for each listed consultancy project. Each such Project will be assigned a score out of 20 on the basis of size, nature & complexity of scope and similarity with the subject R&M Consultancy Service. If any Bidder lists less than 5 projects, a score of zero will be assigned for the shortfall number of project(s). For each Bidder, the sum of scores for the five projects will be the score (St-2) out of 100.
3	Experience and Expertise Key Personnel (St-3)	40%	The Bidder has to list name and other details of 10 key personnel of specified area of expertise in Schedule-F5 who are likely to be substantially associated with this Implementation Support Consultancy assignment if the Bidder emerges as successful Bidder for award of the Implementation Support Consultancy Services Contract. The Bidder is required to submit detailed Curriculum Vitae of these key personnel as per the format at Schedule-..... Each identified Key Person will be assigned a score out of 10 based on their qualification and nature & quantum of experience in the specified area of expertise. For each Bidder, the sum of scores of these 10 key personnel will be the score (St-3) out of 100.

The Technical score of each Bidder will be equal to the weighted sum scores on three elements with indicated weights.

$$S_t = 0.2 \times S_{t-1} + 0.4 \times S_{t-2} + 0.4 \times S_{t-3}$$

2.21.2 Evaluation of Price Bid

The Price Bid should be complete, unconditional and unqualified. For financial evaluation, the total Price indicated in the Price Schedule F1 excluding Service Tax and associated surcharge & cess will be considered. The price indicated in the Price Bid shall be deemed as final and reflecting the total Price of the entire scope of services as per Terms of Reference. Failure by Bidder to include the price of any item shall not entitle the firm to be compensated and the Consultant shall be liable to fulfill its obligations as per the TOR. The Bidder with lowest quoted total price will be assigned a Financial Score (S_f) of 100. The financial score of other Bidders will be computed as follows:

$$S_f = 100 \times (\text{Lowest Quoted Total Price} / \text{Total Price quoted by the Bidder})$$

2.21.3 Composite Score

For selection of successful Bidder, the Technical Score will be a weight of 70% and Financial Score will be given a weight of 30%. For each Bidder, the Composite Score S_c will be computed as follows:

$$S_c = 0.7 \times S_t + 0.3 \times S_f$$

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 12-	25.09.2014

The Bidder who is determined to secure the highest Composite Score will be selected for award of the Implementation Support Consultancy Contract.

2.21.4 Other Evaluation Conditions

(1) Arithmetical errors will be rectified on the following basis:

- If there is any discrepancy between the unit price and the total price that is obtained by multiplying the unit price and the quantity, the unit price shall prevail and the total price will be corrected.
- If there is a discrepancy between the total Bid Price and the sum of total prices, the sum of the total prices shall prevail and the total Bid Price will be corrected.
- If there is discrepancy between the rates in figures and in words, the rates expressed in words shall only prevail and shall be adopted.

(2). Comparison of Bids will be between main Bids only. Alternative Bids will not be accepted and evaluated.

(3). All the Sl. Nos. and columns in the 'Schedules of Prices' shall be quoted. If no prices are envisaged for any of the entries, 'Nil' shall be mentioned. In this context "Nil" mentioned against any item shall construe that the Bidder shall not charge any amount separately for that item from the Employer. If the terms, such as 'not applicable' "-----" or blank are mentioned against any Sl. Nos./columns, the highest amount quoted for the concerned entry among all Bidders will be loaded for purposes of evaluating the Price Bids.

2.22 Deviations

1. Normally, deviations are not permitted in commercial terms & conditions and Terms of Reference. Nevertheless, if the Bidder takes any deviation, it shall be clearly indicated in the deviation schedule (Schedule – [-----] and Schedule- [-----] with a soft copy in MS-Word format in compact disc, with "Original" of Part-I of the Bid). Deviation listed elsewhere in the Bid shall be summarily rejected and ignored. Separate printed standard terms and conditions of the Bidder shall not be taken into cognizance and shall be totally rejected.
2. No alterations or disfigurement, other than filling in particulars wherever called for in the formats of the Tender Specifications shall be made in the Bid. Any changes/modifications made by the Bidder in Bid documents itself shall not be taken into consideration.
3. If at any later date, it is found that documents, information, averments and data submitted by the bidder in the Bid, based on which the Bidder has been considered eligible or successful or has been awarded the Contract is incorrect or false to the extent that had the correct or true information been made available to the Employer at time of tender evaluation, the Bid would have been declared ineligible or unsuccessful, the Bidder shall be forthwith disqualified or, as the case may be, the Contract awarded based on such incorrect or false information shall be cancelled and the Bid Guarantee / contract performance Guarantees deposited shall be appropriated by the Employer towards Employer's cost, loss and damage to Employer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 13-	25.09.2014

2.23 Blacklisting/Debarring

In case, certificates submitted by the Bidders are found to be a forged/untrue, the Bidder will not only be disqualified for this tender but also would be black listed/debarred by the Employer.

2.24 Award of Contract

1. Award Criteria

The Implementation Support Consultancy Service Contract will be awarded to the Bidder with the highest Composite Score as described in clause 2.21.

2. Employer's Right to Accept Any Bid and to Reject Any or All Bids

The Employer reserves the right to accept or reject any bid, for any reasons including National defense and security consideration and to annul the bidding process and to reject all bids at any time prior to award of contract, without thereby incurring any liability to the affected Bidder or bidders or any obligation to inform the affected Bidder or bidders of the grounds for the Employer's action.

3. Notification of Award

Prior to the expiration of the period of bid validity, the Employer will notify the successful Bidder in writing by registered letter or by email to be confirmed in writing by registered letter, that its bid has been accepted. The notification of award will constitute the formation of the contract.

Upon the successful Bidder's furnishing of the performance securities the Employer will promptly notify each unsuccessful Bidder and will discharge its bid security.

4. Signing the Contract Agreement

At the same time as the Employer notifies the successful Bidder that its bid has been accepted, the Employer will send to the Bidder the Contract Agreement provided in the bidding documents, incorporating all agreements between the parties.

Within *[twenty-eight (28)]* days of receipt of the Contract Agreement, the successful Bidder shall sign and date the Contract Agreement and return it to the Employer.

Cost of preparing Contract Agreement shall be borne by the bidder.

5. Performance Security

Within *[thirty (30) days]* after receipt of the Notification of Award, the successful Bidder shall furnish Contract Performance securities as per clause no 2.25. These Bank Guarantees shall be furnished in the form provided in the section "Forms and Procedures" of the bidding documents and shall be initially valid upto *[ninety (90)]* days after the scheduled date of completion of Implementation Support Consultancy Service.

Failure of the successful Bidder to submit Contract Performance Security within stipulated time shall constitute sufficient grounds for the annulment of the award and forfeiture of his bid security, in which event the Employer may make the award to the next lowest evaluated Bidder or call for new bids.

LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 14-	25.09.2014

6. Corrupt or Fraudulent Practices

The Employer requires that Bidders, Contractors and Consultants to observe the highest standard of ethics during the Pre-Qualification, Tendering (Request for Proposal) process and during the execution of the contracts. The Employer may reject a Bid Proposal of a successful Bidder if it emerges that the Bidder recommended for award has engaged in Corrupt or Fraudulent practices in competing for the subject contract. The Employer may declare a Bidding firm ineligible for participation in future tenders of the Employer, either indefinitely or for a stated period of time, if it at any time it emerges that the firm has engaged in Corrupt or Fraudulent practices in competing for or in executing a contract of the Employer. Corrupt Practice means the offering, giving, receiving or soliciting of anything of value to influence the tendering process or contract execution. Fraudulent practice means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Employer and includes collusive practice among Bidders designed to establish bid prices at artificial non-competitive levels and to deprive the Employer of the benefits of free and open competition.

2.25 Contract Performance Bank Guarantee (CPG)

As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Bank Guarantee (CPBG) in the Format attached as Annexure- G, in favour of the Employer within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to five percent (5%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in these documents and specifications. The CPG shall be valid till the Schedule Completion Time Period for Consultancy Services plus ninety (90) days grace period.

2.26 Vital Clauses

The following clauses in the Tender Specification & Draft Contract are vital. Bidder is advised not to take deviations to these clauses. If deviations are taken from the stipulations of these clauses, such Bids would be liable for rejection:

- Scope of Work
- Time Schedule
- Price Basis
- Contract Performance Guarantee
- Force Majeure
- Arbitration
- Taxes & Duties
- Bid Guarantee
- Patents, Indemnity
- Validity of Bids

LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 19-	25.09.2014

4.2 Contract Documents

- a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.
- b) The Contract will be signed in three originals and the Consultant shall be provided with one signed original and the rest will be retained by the Employer.

4.3 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Notification of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. The bid & schedules/ attachment submitted by the Consultant.
- vi. Terms of Reference

4.4 Interpretation

All Contract Documents, all correspondence and communications to be given, and all other documentation to be prepared and supplied under the Contract shall be written in English, and the Contract shall be construed and interpreted in accordance with English language.

The singular shall include the plural and the plural the singular, except where the context requires otherwise.

Unless inconsistent with any provision of the Contract, the meaning of any trade term and the rights and obligations of parties there under shall be as prescribed by Incoterms. Incoterms means latest edition of International Rules for Interpreting Trade Terms published by the International Chamber of Commerce Paris, France.

4.5 Independent Consultant

The Consultant shall be an independent Consultant performing the Contract. The Contract does not create any agency, partnership, joint venture or other joint relationship between the parties hereto.

Subject to the provisions of the Contract, the Consultant shall be solely responsible for the manner in which the Contract is performed. All employees, representatives or SubConsultants engaged by the Consultant in connection with the performance of the Contract shall be under the complete control of the Consultant and shall not be deemed to be employees of the Employer, and nothing contained in the Contract or in any subcontract awarded by the Consultant shall be construed to create any contractual relationship between any such employees, representatives or SubConsultants and the Employer.

4.6 Non-Waiver

No relaxation, forbearance, delay or indulgence by either party in enforcing any of the terms and conditions of the Contract or the granting of time by either party to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 20-	25.09.2014

the other shall prejudice, affect or restrict the rights of that party under the Contract, nor shall any waiver by either party of any breach of Contract operate as waiver of any subsequent or continuing breach of Contract. Any waiver of a party's rights, powers or remedies under the Contract must be in writing, must be dated and signed by an authorized representative of the party granting such waiver, and must specify the right and the extent to which it is being waived.

4.7 Severability

If any provision or condition of the Contract is prohibited or rendered invalid or unenforceable, such prohibition, invalidity or unenforceability shall not affect the validity or enforceability of any other provisions and conditions of the Contract.

4.8 Origin

"Origin" means the place where the materials, equipments and other supplies for the Facilities are mined, grown, produced or manufactured, and from which the services are provided.

4.9 Notices

All notices to be given under the Contract shall be in writing, and shall be sent by personal delivery, or post, or special courier, or telefax, or Electronic Data Interchange (EDI) to the address of the relevant party indicated in the Contract. Either party may change its postal, telefax number, or EDI address or addressee for receipt of such notices by ten (10) days' notice to the other party in writing

Notices shall be deemed to include any approvals, consents, instructions, orders and certificates to be given under the Contract.

4.10 Governing Laws

The Contract shall be governed by and interpreted in accordance with laws in force in India. The Courts of [...] shall have exclusive jurisdiction in all matters arising under the Contract.

4.11 Settlement of Disputes

a) Mutual Consultation

If any differences/ dispute arises between the Employer and the Consultant in connection with or arising out of the Contract, before or after the termination, abandonment or breach of the Contract—the Employer & Consultant shall seek to resolve any such dispute or difference by mutual consultation. If the parties fail to resolve such a dispute or difference by mutual consultation, then the dispute shall be referred in writing by either party to the Arbitrator, with a copy to the other party.

b) Arbitration

Either Employer or the Consultant may, of its intention to commence arbitration, as to the matter in dispute, and no arbitration may be commenced unless such notice is given.

Any dispute, in respect of which a notice of intention to commence arbitration has been given, as above shall be finally settled by arbitration. Arbitration may be commenced prior to or after completion of the Facilities

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 21 -	25.09.2014

Any dispute submitted by a party to arbitration shall be heard by an arbitration panel composed of three arbitrators, in accordance with the provisions set forth below.

The Employer and the Consultant shall each appoint one arbitrator, and these two arbitrators shall jointly appoint a third arbitrator, who shall chair the arbitration panel. If the two arbitrators do not succeed in appointing a third arbitrator within *[twenty eight (28)]* days after the latter of the two arbitrators has been appointed, the third arbitrator shall, at the request of either party, be appointed by President, Institution of Engineers as the Appointing Authority.

If one party fails to appoint its arbitrator within *[forty-two (42)]* days after the other party has named its arbitrator, the party which has named an arbitrator may request the Appointing Authority to appoint the second arbitrator.

If for any reason an arbitrator is unable to perform its function, the mandate of the Arbitrator shall terminate in accordance with the provisions of applicable laws and a substitute shall be appointed in the same manner as the original arbitrator.

Adjudication/Arbitration proceedings shall be conducted in accordance with Indian Arbitration and Conciliation Act 1996.

The Place for Arbitration shall be *[...]*, India.

The language of arbitration shall be English.

The decision of a majority of the arbitrators (or of the third arbitrator chairing the arbitration, if there is no such majority) shall be final and binding and shall be enforceable in any court of competent jurisdiction as decree of the court. The parties thereby waive any objections to or claims of immunity from such enforcement.

Notwithstanding any reference to the arbitration,

- the parties shall continue to perform their respective obligations under the Contract unless they otherwise agree
- The Employer shall pay the consideration Consultant due to the Consultant.

4.12 Scope of Services

The Scope of Services shall be as per the Terms of Reference Section-II.

4.13 Time for Commencement and Completion

- a) The Consultant shall commence work on the Scope of Services under this Tender from the date of Letter of Award. Consultant shall thereafter proceed with the Services in accordance with the time schedule specified in SCC & detailed network schedule agreed & appended to the contract.
- b) The Consultant shall attain Completion of the Consultancy Services (or of a part where a separate time for Completion of such part is specified in the Contract) within the time stated in the SCC subject to time extensions, the Consultant is entitled under the contract conditions or time extension expressly granted by the Employer.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 22-	25.09.2014

4.14 Consultant's Responsibilities

- a) Before entering into this contract the Consultant is responsible to have examined the data relating to the plant and facilities provided by the Employer, and on the basis of information that the Consultant could have obtained from a visual inspection of the Site and of other data readily available to it relating to the Plant & Facilities as at one month days prior to bid submission. Any failure to acquaint itself with all such data and information shall not relieve Consultant of its responsibility for properly estimating the difficulty or cost of successfully performing its scope of work under this contract.
- b) The Consultant shall acquire in its name all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings in the country where the Site is located that are necessary for the performance of the Contract, including, without limitation, visas for the Consultant's and SubConsultant's personnel and entry permits for all imported Consultant's Equipment.
- c) The Consultant shall perform the Services in accordance with the Applicable Laws and shall take all practicable steps to ensure that any Sub-Consultant, as well as the Personnel and agents of the Consultant and any Sub-Consultant, comply with the Applicable Laws. The Consultant shall comply with all laws in force in India and the place where the facility is located out. The laws will include all national, provincial, municipal or other laws that affect the performance of the Contract and bind upon the Consultant. The Consultant shall indemnify and hold harmless the Employer from and against any and all liabilities, damages, claims, fines, penalties and expenses of whatever nature arising or resulting from the violation of such laws by the Consultant.
- d) The Consultant shall perform the Services and carry out its obligations under this Contract with all due diligence, efficiency and economy, in accordance with generally accepted professional techniques and practices, and shall observe sound management practices, and employ appropriate advanced technology and safe and effective equipment, machinery, materials and methods. The Consultant shall always act, in respect of any matter relating to this Employer or to the Services, as a faithful advisor to the Employer, and shall at all times support and safeguard the Employer's legitimate interests in any dealings with Sub-Consultants or Third Parties.

4.15 Employer's Responsibilities

- a) The Employer shall be responsible for access to the plant and the Site and for providing possession of and access to all other areas reasonably required for the proper execution of the Contract.
- b) The Employer shall make available to the Consultant all the plant operation data, Manufacturer's Manual, O&M Manual and other Technical data/information to the extent available with the Employer and reasonably required by the Consultant for discharging Services as per the Terms of Reference
- c) The Employer shall acquire and pay for all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings, which such authorities or undertakings require the Employer to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 23-	25.09.2014

obtain them in the Employer's name, are necessary for the execution of the Contract.

- d) If requested by the Consultant, the Employer shall use its best endeavours to assist the Consultant in obtaining in a timely and expeditious manner all permits, approvals and/or licenses necessary for the execution of the Contract from all local, state or national government authorities or public service undertakings that such authorities or undertakings require the Consultant or SubConsultants or the personnel of the Consultant or SubConsultants, as the case may be, to obtain.

4.16 Taxes & Duties

- a) The Employer shall bear and promptly pay Service Tax along with applicable Surcharge and Cess thereon, in respect of direct transaction between the Employer and the Consultant payable in India as per Indian law. All other Taxes and Duties will be borne by the Consultant.
- b) If any tax exemptions, reductions, allowances or privileges may be available to the Consultant, the Employer shall use its best endeavours to enable the Consultant to benefit from any such tax savings to the maximum allowable extent.

4.17 Intellectual Property

The copyright in all drawings, documents and other materials containing data and information furnished to the Employer by the Consultant herein shall remain vested in the Consultant or, if they are furnished to the Employer directly or through the Consultant by any third party, including suppliers of materials, the copyright in such materials shall remain vested in such third party. The Employer shall however be free to reproduce all drawings, documents and other material furnished to the Employer for the purpose of the contract.

4.18 Confidential Information

- a) The Employer and the Consultant shall keep confidential and shall not, without the written consent of the other party hereto, divulge to any third party any documents, data or other information furnished directly or indirectly by the other party hereto in connection with the Contract, whether such information has been furnished prior to, during or following termination of the Contract. Notwithstanding the above, the Consultant may furnish to its SubConsultant(s) such documents, data and other information it receives from the Employer to the extent required for the SubConsultant(s) to perform its work under the Contract, in which event the Consultant shall obtain from such SubConsultant(s) an undertaking of confidentiality similar to that imposed on the Consultant.
- b) The obligation of a party, shall not apply to that information which
- now or hereafter enters the public domain through no fault of that party
 - can be proven to have been possessed by that party at the time of disclosure and which was not previously obtained, directly or indirectly, from the other party hereto
 - Otherwise lawfully becomes available to that party from a third party that has no obligation of confidentiality.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 24-	25.09.2014

4.19 Conflict of Interest

- a) The Consultant shall not have a Conflict of Interest and any breach hereof shall constitute a breach of the Agreement.
- b) During the term of this Contract and after its termination, the Consultant or any Associate or Consortium Partner thereof and any entity affiliated with the Consultant, as well as any Sub-Consultant and any entity affiliated with such Sub-Consultant, shall be disqualified from providing goods, works, services, loans or equity for any project resulting from or closely related to the Services and any breach of this obligation shall amount to a Conflict of Interest; provided that the restriction herein shall not apply after a period of five years from the completion of this assignment or to consulting assignments granted by banks/ lenders at any time; provided further that this restriction shall not apply to consultancy/ advisory services provided to the Employer in continuation of this Consultancy or to any subsequent consultancy/ advisory services provided to the Employer. For the avoidance of doubt, an entity affiliated with the Consultant shall include a partner in the Consultant's firm or a person who holds more than 5% (five per cent) of the subscribed and paid up share capital of the Consultant, as the case may be, and any Associate thereof.
- c) The Contract Price provided under the provisions of this Contract shall constitute the Implementation Support Consultant's sole remuneration in connection with this Contract or the Services and the Consultant shall not accept for its own benefit any trade commission, discount or similar payment in connection with activities pursuant to this Contract or to the Services or in the discharge of its obligations hereunder, and the Consultant shall use its best efforts to ensure that any Sub-Consultant, as well as the Personnel and agents of either of them, similarly shall not receive any such additional remuneration.

4.20 Representatives

d) Project Manager

If the Project Manager is not named in the Contract, then within fourteen (14) days of the Effective Date, the Employer shall appoint and notify the Consultant in writing of the name of the Project Manager. The Employer may from time to time appoint some other person as the Project Manager in place of the person previously so appointed, and shall give a notice of the name of such other person to the Consultant without delay. The Employer shall take reasonable care to see that no such appointment is made at such a time or in such a manner as to impede the progress of work on the Facilities. The Project Manager shall represent and act for the Employer at all times during the currency of the Contract. All notices, instructions, orders, certificates, approvals and all other communications under the Contract shall be given by the Project Manager, except as herein otherwise provided.

All notices, instructions, information and other communications given by the Consultant to the Employer under the Contract shall be given to the Project Manager, except as herein otherwise provided.

e) Consultant's Team Leader

- If the Consultant's Team Leader is not named in the Contract, then within *[fourteen (14) days]* of the Effective Date, the Consultant shall appoint

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 25 -	25.09.2014

the Consultant's Team Leader and shall request the Employer in writing to approve the person so appointed. If the Employer makes no objection to the appointment within [fourteen (14)] days, the Team Leader shall be deemed to have been approved. If the Employer objects to the appointment within [fourteen (14)] days giving the reason there for, then the Consultant shall appoint a replacement within [fourteen (14) days] of such objection.

- The Consultant's Representative shall represent and act for the Consultant at all times during the currency of the Contract and shall give to the Project Manager all the Consultant's notices, instructions, information and all other communications under the Contract. All notices, instructions, information and all other communications given by the Employer or the Project Manager to the Consultant under the Contract shall be given to the Consultant's Team Leader or, in its absence, its deputy, except as herein otherwise provided. The Consultant shall not revoke the appointment of the Consultant's Representative without the Employer's prior written consent, which shall not be unreasonably withheld. If the Employer consents thereto, the Consultant shall appoint some other person as the Team Leader.
- The Consultant's Team Leader may, subject to the approval of the Employer (which shall not be unreasonably withheld), at any time delegate to any person any of the powers, functions and authorities vested in him or her. Any such delegation may be revoked at any time. Any such delegation or revocation shall be subject to a prior notice signed by the Consultant's Team Leader, and shall specify the powers, functions and authorities thereby delegated or revoked. No such delegation or revocation shall take effect unless and until a copy thereof has been delivered to the Employer and the Project Manager.
- The Employer may by notice to the Consultant object to any representative or person employed by the Consultant in the execution of the Contract who, in the reasonable opinion of the Employer, may behave inappropriately, may be incompetent or negligent, or may commit a serious breach of the Site regulations. In such cases, the Consultant will arrange suitable replacement.

4.21 Work Program

a) Consultant's Organization

The Consultant's Organization chart and list of key personnel and Team Leader identified for the Project will be appended to the Contract Agreement. The Consultant shall ensure adequate and timely availability of these personnel to work on this Consultancy Services. Consultant will also ensure availability and services of any additional personnel required for the successful and timely completion of the Scope of Services as per the Terms of Reference.

b) Program of Performance

Within [twenty-eight (28)] days after the date of Notification of Award of Contract, the Consultant shall prepare and submit to the Project Manager a detailed Program of Performance of the Contract, made in the form specified in the SCC and showing the sequence in which it proposes to design, supply,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 26-	25.09.2014

transport, assemble, install and precommissioning the Facilities, as well as the date by which the Consultant reasonably requires that the Employer shall have fulfilled its obligations under the Contract so as to enable the Consultant to execute the Contract in accordance with the program and to achieve Completion and Acceptance of the Facilities in accordance with the Contract. The program so submitted by the Consultant shall accord with the Time Schedule included in Appendix 4 (Time Schedule) to the Form of Contract Agreement and any other dates and periods specified in the Contract. The Consultant shall update and revise the program as and when appropriate or when required by the Project Manager, but without modification in the Times for Completion.

c) Progress Report

The Progress Report shall be in a form acceptable to the Project Manager and shall indicate: (a) percentage completion achieved compared with the planned percentage completion for each activity; and (b) where any activity is behind the program, giving comments and likely consequences and stating the corrective action being taken.

d) Progress of Performance

If at any time the Consultant's actual progress falls behind the program, or it becomes apparent that it will so fall behind, the Consultant shall, at the request of the Employer or the Project Manager, prepare and submit to the Project Manager a revised program, taking into account the prevailing circumstances, and shall notify the Project Manager of the steps being taken to expedite progress so as to attain Completion of the Facilities within the Time for Completion.

e) Work Procedures

The Contract shall be executed in accordance with the Contract Documents and the procedures given in the section on Forms and Procedures of the Contract Documents.

If agreed between the Employer and the Consultant, the Consultant may execute the Contract in accordance with its own standard project execution plans and procedures to the extent that they do not conflict with the provisions contained in the Contract.

4.22 Substitution of Key Personnel

The Employer expects that all the Key Personnel specified in the Bid Proposal shall be available during the execution of Implementation Support Consultancy Services. The Employer will not consider any substitution of Key Personnel except under compelling circumstances beyond the control of the Consultant and the concerned Key Personnel. Such substitution may be permitted only in exceptional cases subject to equally or better qualified and experienced personnel being provided to the satisfaction of the Employer.

4.23 Sub-Consultant

The R&M Consultant or Consortium Leader or Associate shall not subcontract its entire scope of work back-to-back or otherwise. In any case, appointment of any Sub-Consultant to discharge any part of the Scope of Service under this

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 27 -	25.09.2014

Contract is subject to Employer's prior written approval. Employer may accept or reject any Sub-Consultant at its discretion.

4.24 Completion Time

The Consultant guarantees that it shall attain Completion of the entire Scope of Service as per the Terms of Reference or part thereof within the Time for Completion specified in the SCC.

4.25 Patents Indemnity

The Consultant shall indemnify and hold harmless the Employer and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, which the Employer may suffer as a result of any infringement or alleged infringement of any patent, utility model, registered design, trademark, copyright or other intellectual property right registered or otherwise existing at the date of the Contract by reason of: (a) the installation of the Facilities by the Consultant or the use of the such Facilities.

4.26 Accuracy of Data and Document

The Consultant shall be responsible for accuracy of the data collected by it directly or procured from other entities, the designs, drawings, estimates and all other details prepared by it as part of these services. Subject to the GCC provisions regarding limitation of Consultant's liability, the Consultant shall indemnify the Employer against any inaccuracy in its work which might surface during implementation of the R&M Project, if such inaccuracy is the result of any negligence or inadequate due diligence on part of the Consultant or arises out of its failure to conform to good industry practice. The Consultant shall also be responsible for promptly correcting, at its own cost and risk, the drawings including any re-survey / investigations.

4.27 Liability of Implementation Support Consultant

- a) The R&M Consultant's liability under this Agreement shall be determined by the Applicable Laws and the provisions hereunder.
- b) The Consultant shall, subject to the limitation specified hereunder, be liable to the Employer for any direct loss or damage accrued or likely to accrue due to deficiency in Services rendered by it.
- c) Except in cases of criminal negligence or wilful misconduct by the Consultant, the aggregate liability of the Consultant (Implementation Support Consultant) to the Employer, whether under the Contract, in tort or otherwise, shall not exceed the total Contract Price, provided that this limitation shall not apply to any obligation of the Consultant to indemnify the Employer with respect to patent infringement.
- d) Except in cases of criminal negligence or wilful misconduct by the Consultant, the Consultant shall not be liable to the Employer, whether in contract, tort, or otherwise, for any indirect or consequential loss or damage, loss of use, loss of production, or loss of profits or interest costs.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 28-	25.09.2014

4.28 Equipment and Material provided by the Employer

Equipment and materials made available to the Implementation Support Consultant by the Employer shall be the property of the Authority and shall be marked accordingly. Upon termination or expiration of this Contract Agreement, the Consultant shall furnish forthwith to the Employer, an inventory of such equipment and materials and shall return to the Employer or otherwise dispose of such equipment and materials in accordance with the instructions of the Employer. While in possession of such equipment and materials, the R&M Consultant shall, unless otherwise instructed by the Employer in writing, insure them in an amount equal to their full replacement value.

4.29 Loss of or Damage to Property; Accident or Injury; Indemnification

The Consultant shall indemnify and hold harmless the Employer and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, in respect of the death or injury of any person or loss of or damage to any property (other than the Facilities whether accepted or not), arising in connection with Consultancy Services and by reason of the negligence of the Consultant or its SubConsultants, or their employees, officers or agents, except any injury, death or property damage caused by the negligence of the Employer, its Consultants, employees, officers or agents.

4.30 Insurance

- a) The Consultant shall, for the duration of this Contract, take and maintain, and shall cause any Sub-Consultant to take and maintain, at its (or the Sub-Consultant's, as the case may be) own cost, but on terms and conditions approved by the Employer, insurance against the risks, and for the coverage, as specified hereunder and in accordance with good industry practice.
- b) Within 15 (fifteen) days of receiving any insurance policy certificate in respect of insurances required to be obtained and maintained under this clause, the Consultant shall furnish to the Employer, copies of such policy certificates, copies of the insurance policies and evidence that the insurance premia have been paid in respect of such insurance. No insurance shall be cancelled, modified or allowed to expire or lapse during the currency of this Contract.
- c) If the Consultant fails to effect and keep in force the aforesaid insurances for which it is responsible pursuant hereto, the Employer shall, apart from having other recourse available under this Contract, have the option, without prejudice to the obligations of the Consultant, to take out the aforesaid insurance, to keep in force any such insurances, and pay such premia and recover the costs thereof from the Consultant, and the Consultant shall be liable to pay such amounts on demand by the Employer.
- d) Except in case of Third Party liabilities, the insurance policies so procured shall mention the Employer as the beneficiary of the Consultant and the Consultant shall procure an undertaking from the insurance company to this effect; provided that in the event the Consultant has a general insurance policy that covers the risks specified in this Agreement and the amount of insurance cover is equivalent to 3 (three) times the cover required hereunder, such insurance

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 29 -	25.09.2014

policy may not mention the Employer as the sole beneficiary of the Consultant or require an undertaking to that effect.

- e) The risks and coverages shall include but not be limited to the following:
 - i. Third Party liability insurance as required under Applicable Laws, with a minimum coverage of [...].
 - ii. Employer's liability and workers' compensation insurance in respect of the Personnel of the Consultant and of any Sub-Consultant, in accordance with Applicable Laws.
 - iii. Professional liability insurance for an amount no less than the Agreement Value.
- f) In case of consortium, the policy should be in the name of Consortium Leader and not in the name of individual Members of the consortium.

4.31 Employer's Prior Approval

The Consultant shall obtain the Employer's written prior approval in writing before taking any of the following actions:

- a) Replacing any Key Personnel listed in the Contract Schedule
- b) Discontinuing participation of any Key Personnel in this R&M Consultancy Services during the currency of the Contract
- c) Any other action that is specified in the Tender Document or Contract Agreement.

4.32 Employership of Documents Prepared by Consultant

- a) All plans, drawings, specifications, designs, reports and other documents (collectively referred to as "Consultancy Documents") prepared by the Implementation Support Consultant (or by the Sub-Consultants or any Third Party) in performing the Services shall become and remain the property of the Employer, and all intellectual property rights in such Consultancy Documents shall vest with the Employer. Any Consultancy Document, of which the Employership or the intellectual property rights do not vest with the Employer under law, shall automatically stand assigned to the Employer as and when such Consultancy Document is created and the Consultant agrees to execute all papers and to perform such other acts as the Authority may deem necessary to secure its rights herein assigned by the Implementation Support Consultant.
- b) The Implementation Support Consultant shall, not later than termination or expiration of this Contract, deliver all Consultancy Documents to the Employer, together with a detailed inventory thereof. The Consultant may retain a copy of such Consultancy Documents. The Implementation Support Consultant, its Sub-Consultants or a Third Party shall not use these Consultancy Documents for purposes unrelated to this Contract without the prior written approval of the Employer.
- c) The Consultant shall hold the Employer harmless and indemnified for any losses, claims, damages, expenses (including all legal expenses), awards, penalties or injuries (collectively referred to as 'claims') which may arise from or due to any unauthorised use of such Consultancy Documents, or due to any breach or failure on part of the Consultant or its Sub-Consultants or a

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 30-	25.09.2014

Third Party to perform any of its duties or obligations in relation to securing the aforementioned rights of the Employer.

4.33 Change in Laws & Regulation

If, after the date *[seven (7)]* days prior to the date of Bid submission, in India, any law, regulation, ordinance, order or by-law having the force of law is enacted, promulgated, abrogated or changed (which shall be deemed to include any change in interpretation or application by the competent authorities) that subsequently affects the costs and expenses of the Consultant and/or the Time for Completion, the Contract Price shall be correspondingly increased or decreased, and/or the Time for Completion shall be reasonably adjusted to the extent that the Consultant has thereby been affected in the performance of any of its obligations under the Contract. However, these adjustments would be restricted to direct transactions between the Employer and the Consultant.

4.34 Force majeure

- (a) Force Majeure" shall mean any event beyond the reasonable control of the Employer or of the Consultant, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected.
- (b) If either party is prevented, hindered or delayed from or in performing any of its obligations under the Contract by an event of Force Majeure, then it shall notify the other in writing of the occurrence of such event and the circumstances thereof within *[fourteen (14)]* days after the occurrence of such event.
- (c) The party who has given such notice shall be excused from the performance or punctual performance of its obligations under the Contract for so long as the relevant event of Force Majeure continues and to the extent that such party's performance is prevented, hindered or delayed.
- (d) The party or parties affected by the event of Force Majeure shall use reasonable efforts to mitigate the effect thereof upon its or their performance of the Contract and to fulfil its or their obligations under the Contract, but without prejudice to either party's right.
- (e) No delay or non-performance by either party hereto caused by the occurrence of any event of Force Majeure shall
 - constitute a default or breach of the Contract
 - to any claim for damages or additional cost or expense occasioned thereby

if and to the extent that such delay or non-performance is caused by the occurrence of an event of Force Majeure.

- (f) If the performance of the Contract is substantially prevented, hindered or delayed for a single period of more than *[sixty (60)]* days or an aggregate period of more than one hundred and *[twenty (120)]* days on account of one or more events of Force Majeure during the currency of the Contract, the parties will attempt to develop a mutually satisfactory solution.
- (g) Force Majeure shall not apply to any obligation of the Employer to make payments to the Consultant herein.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 31 -	25.09.2014

4.35 Change in the Scope of Services

The Employer shall have the right to propose, and subsequently require, the Consultant during the performance of the Contract to make any change, modification, addition or deletion to, in or from the Scope of Services, provided that such Change falls within the general scope of the Services and does not constitute unrelated work and that it is technically practicable, taking into account both the state of advancement of the assignment and the technical feasibility. The parties will agree on the change in Contract Price due Change in Scope of Services on mutual consultation basis.

4.36 Extension of Time for Completion

- (a) The Time(s) for Completion specified in the SCC shall be extended if the Consultant is delayed or impeded in the performance of any of its obligations under the Contract by reason of any of the following:

- Any Change in the Facilities or
- any occurrence of Force Majeure or
- any suspension order given by the Employer or reduction in the rate of progress or
- any changes in laws and regulations or
- any default or breach of the Contract by the Employer, or any activity, act or omission of any other Consultants employed by the Employer or
- any other matter specifically mentioned in the Contract;

By such period as shall be fair and reasonable in all the circumstances and as shall fairly reflect the delay or impediment sustained by the Consultant.

- (b) Except where otherwise specifically provided in the Contract, the Consultant shall submit to the Project Manager a notice of a claim for an extension of the Time for Completion, together with particulars of the event or circumstance justifying such extension as soon as reasonably practicable after the commencement of such event or circumstance. As soon as reasonably practicable after receipt of such notice and supporting particulars of the claim, the Employer and the Consultant shall agree upon the period of such extension.
- (c) The Consultant shall at all times use its reasonable efforts to minimize any delay in the performance of its obligations under the Contract.

4.37 Termination

(a) Termination for Employer's Convenience

The Employer may at any time terminate the Contract for any reason by giving the Consultant a notice of termination. Upon receipt of the notice of termination, the Consultant shall either immediately or upon the date specified in the notice of termination

- (i) Cease all further work.
- (ii) terminate all subcontracts, except those to be assigned

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 32-	25.09.2014

- (iii) remove all Consultant's Equipments from the Site, repatriate the Consultant's and its SubConsultants' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition
- (iv) The Consultant, subject to the payment, shall
 - ✓ deliver to the Employer the data collected during the course of the consultancy services and study reports prepared up to the date of termination
 - ✓ Deliver to the Employer all non-proprietary drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Consultancy services.

In the event of termination of the Contract for Employer's convenience, the Employer shall pay to the Consultant the following amounts

- ✓ the Contract Price, attributable to the parts of the Services executed by the Consultant as on the date of termination
- ✓ the costs reasonably incurred by the Consultant in the removal of the Consultant's Equipment from the Site and in the repatriation of the Consultant's and its SubConsultants' personnel
- ✓ any amounts to be paid by the Consultant to its SubConsultants in connection with the termination of any subcontracts, including any cancellation charges
- ✓ the additional cost of satisfying other obligations, commitments and claims that the Consultant may in good faith have undertaken with third parties in connection with the Contract.

(b) Termination for Consultant's Default

- (i) The Employer, without prejudice to any other rights or remedies it may possess, may terminate the Contract forthwith in the following circumstances by giving a notice of termination and its reasons thereof to the Consultant:

the Consultant becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, if the Consultant is a corporation, a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Consultant takes or suffers any other analogous action in consequence of debt

If the Consultant assigns or transfers the Contract or any right or interest therein in violation of the provision.

If the Consultant, in the judgement of the Employer has engaged in corrupt or fraudulent practices in competing for or in executing the Contract.

For the purpose of this Sub Clause:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 33-	25.09.2014

"corrupt practice" means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution.

"fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Employer and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Employer of the benefits of free and open competition.

(ii) If the Consultant

- has abandoned or repudiated the Contract
- has without valid reason failed to commence the Consultancy Services promptly for more than *[twenty eight (28)]* days after receiving a written instruction from the Employer to proceed
- persistently fails to execute the Contract in accordance with the Contract or persistently neglects to carry out its obligations under the Contract without just cause
- refuses or is unable to provide sufficient personnel and other resources to execute the Services in the manner specified in the program at rates of progress that give reasonable assurance to the Employer that the Consultant can attain Completion of the Services by the Time for Completion as extended
- then the Employer may, without prejudice to any other rights it may possess under the Contract, give a notice to the Consultant stating the nature of the default and requiring the Consultant to remedy the same. If the Consultant fails to remedy or to take steps to remedy the same within *[fourteen (14)]* days of its receipt of such notice, then the Employer may terminate the Contract forthwith by giving a notice of termination to the Consultant.

(iii) The Consultant shall, either immediately or upon such date as is specified in the notice of termination,

- cease all further work,
- terminate all subcontracts, except those to be assigned to the Employer
- deliver to the Employer the data collected during the course of the consultancy services and study reports prepared up to the date of termination
- Deliver to the Employer all drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Services.
- remove all Consultant's Equipments from the Site, repatriate the Consultant's and its SubConsultants' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 34-	25.09.2014

(c) Termination by Consultant

i. If

- the Employer has failed to pay the Consultant any sum due under the Contract within the specified period, has failed to approve any invoice or supporting documents without just cause pursuant to [-----] (Terms and Procedures of Payment) of the Form of Contract Agreement, or commits a substantial breach of the Contract, the Consultant may give a notice to the Employer that requires payment of such sum, requires approval of such invoice or supporting documents, or specifies the breach and requires the Employer to remedy the same, as the case may be. If the Employer fails to pay such sum, fails to approve such invoice or supporting documents or give its reasons for withholding such approval, fails to remedy the breach or take steps to remedy the breach within *[fourteen (14) days]* after receipt of the Consultant's notice, or
- the Consultant is unable to carry out any of its obligations under the Contract for any reason attributable to the Employer, ,
then the Consultant may give a notice to the Employer thereof, and if the Employer has failed to pay the outstanding sum, to approve the invoice or supporting documents, to give its reasons for withholding such approval, or to remedy the breach within *[twenty eight (28) days]* of such notice, or if the Consultant is still unable to carry out any of its obligations under the Contract for any reason attributable to the Employer within twenty eight (28) days of the said notice.

If the Employer becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, being a corporation, if a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Employer takes or suffers any other analogous action in consequence of debt.

ii. If the Contract is terminated, then the Consultant shall immediately

- cease all further work, except for such work as may be necessary for the purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
- terminate all subcontracts, except those to be assigned to the Employer pursuant to paragraph (d)(ii)
- remove all Consultant's Equipment from the Site and repatriate the Consultant's and its SubConsultant's personnel from the Site

(v) The Consultant, subject to the payment, shall

- o deliver to the Employer the data collected during the course of the consultancy services and study reports prepared up to the date of termination

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 35-	25.09.2014

- Deliver to the Employer all non-proprietary drawings, specifications and other documents prepared by the Consultant or its SubConsultants as at the date of termination in connection with the Facilities.

In the event of termination of the Contract for Employer's convenience, the Employer shall pay to the Consultant the following amounts

- the Contract Price, attributable to the parts of the Services executed by the Consultant as on the date of termination
- the costs reasonably incurred by the Consultant in the removal of the Consultant's Equipment from the Site and in the repatriation of the Consultant's and its SubConsultants' personnel
- any amounts to be paid by the Consultant to its SubConsultants in connection with the termination of any subcontracts, including any cancellation charges
- the additional cost of satisfying other obligations, commitments and claims that the Consultant may in good faith have undertaken with third parties in connection with the Contract.

4.38 Assignment

The Consultant shall not, without the express prior written consent of the Employer, assign to any third party the Contract or any part thereof, or any right, benefit, obligation or interest therein or there under, except that the Consultant shall be entitled to assign either absolutely or by way of charge any monies due and payable to it or that may become due and payable to it under the Contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 36-	25.09.2014

5 SPECIAL CONDITIONS OF CONTRACT (SCC)

5.1 Contract Details

- **Name of Contract:** Implementation Support Consultancy Services for [-----]
- **Bid Document No. :** [-----]
- **The Employer is:**
 - Name of Employer: [-----]
 - Address of Employer: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]
- **The Project Manager is:**
 - Name of Project Manager: [-----]
 - Address of Project Manager: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]

5.2 Effective Date

The Employer shall inform the successful Bidder of its acceptance of the Tender by a formal Letter of Acceptance. This Letter of Acceptance will be the Effective Date for determining the Time for Completion of the facilities and other milestones for execution of the Implementation Support Consultancy work as per the scope of work under this tender by the Consultant.

The following three activities will be completed within *[two (2)]* months from the date of Letter of Acceptance:

- (a) The contract agreement will be executed by the Employer and the Consultant.
- (b) The Consultant will submit to the Employer the Contract Performance Security, any Additional Performance Security associate etc if applicable, and the Advance Payment Security.
- (c) The Employer will pay the Consultant the Advance Payment as per the Terms of Payment.
- (d) The Consultant will submit the Inception Report and incorporate any change suggested by Employer in the Inception Report

The Employer will make the advance payment promptly once Consultant has fulfilled the necessary conditions specified in Terms of Payment. If payment of Advance is delayed beyond two months from the date of Letter of acceptance for reasons attributable to the Employer, the date of payment of advance shall be the effective date for determining the time for completion of facilities. However,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 37-	25.09.2014

failure of the Consultant to provide all the required Bonds/Guarantees within the prescribed period will cause the Bid Security to be forfeited.

5.3 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Consultant under this tender shall be as follows:

	Task/Milestone	Time for Completion
1.	[.....]	[.....]
2.	[Finalization of Work Plan.....]	[.....]from Effective Date
3.	[Submission of Monthly Progress Report]	[First week of next month]
4.	[.....]	[.....]
5.	[Comment/Approval of each engineering drawing]	[10 days from the date of submission]
..	[.....]	[.....]
	[Approval of Quality Plans]	[.....]
	[.....]	[.....]

5.4 NOT USED

5.5 NOT USED

5.6 NOT USED

5.7 Contract Price

- The Contract Price shall be as indicated in the Contract Agreement based on the Total Price quoted by the Bidder in the Price Schedule F1. The Price quoted by Bidder in the Price Schedule F1 will be deemed to include compensation for all expenses/costs incurred by the Bidder incidental to rendering all the Services and discharging all other obligations under this Contract and remuneration for rendering all the services as per the Terms of Reference.
- The Consultant shall be deemed to have satisfied itself as to the correctness and sufficiency of the Contract Price, which shall, except as otherwise provided for in the Contract, cover all its obligations under the Contract.

5.8 Terms of Payment

- The Contract Price shall be paid as Terms and Procedures of Payment to the Form of Contract Agreement.
- No payment made by the Employer herein shall be deemed to constitute acceptance by the Employer of the Services or any part(s) thereof.
- All the payments will be made in INR.

5.9 Contract Securities

- The Consultant shall provide the securities specified below in favour of the Employer at the times, and in the amount, manner and form specified below.
- Advance Payment Security

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Section-I	- 38-	25.09.2014

- The Consultant shall, within *[thirty (30)]* days of the Notification of Contract Award, provide a security for an amount equal to the advance payment, and in the same currency or currencies, with a initial validity of up to *[ninety (90)]* days beyond the schedule date of Completion of R&M Consultancy Services.
- The security shall be in the form of an Unconditional Bank Guarantee. The Advance payment Security shall be reduced prorata every three (3) months after First Running Account Bill/Stage Payment under the Contract based on the value of Services received. The cumulative amount of reduction at any point of time shall not exceed ninety percent (90%) of the advance corresponding to cumulative value of the Services received as per a certificate issued by the Project Manager and the balance of 10% shall be released on Completion of R&M Consultancy Services and Employer's Acceptance thereof. It should be clearly understood that reduction in the value of security for advance shall not in any way dilute the Consultant's responsibility and liabilities under the Contract including in respect of the Services for which the reduction in the value of security is allowed.

c) Performance Security

The Consultant shall, within *[thirty (30)]* days of the notification of award, provide a security for the due performance of the Contract for five percent (5%) of the Contract Price with an initial validity upto *[ninety (90)]* days beyond the Scheduled Completion Date for R&M Consultancy Services.

Form of Contract Agreement

THIS CONTRACT AGREEMENT is made the _____day of _____, 20_____.
BETWEEN (1) [Name of Employer], a corporation incorporated under the laws of
[country of Employer] and having its principal place of business at [address of
Employer] (hereinafter called "the Employer"), and (2) [name of Contractor], a
corporation incorporated under the laws of [country of Contractor] and having its
principal place of business at [address of Contractor] (hereinafter called "the
Contractor")

WHEREAS the Employer desires to engage the Contractor to provide
Implementation Support Consultancy Services comprising .
[.....]
[.....]
[.....]

("the Implementation Support Consultancy Services") and the Contractor have
agreed to such engagement upon and subject to the terms and conditions
hereinafter appearing.

NOW IT IS HEREBY AGREED as follows:

1.1 Contract Documents

- a) Contract Documents means this signed Contract agreement and its
annexure/Contract Schedules, and the complete documents, which are the
basis of finalization of the contract, including correspondence exchanged from
issue of tender till date of signing the contract. The following will constitute
the Contract Documents:
 - i. The signed Contract Agreement & the annexure/ Contract Schedule
thereto (highest precedence)
 - ii. Letter of award.
 - iii. Special Condition of Contract
 - iv. General Condition of Contract
 - v. Terms of Reference.
 - vi. The bid & its schedules/ attachment submitted by the contractor.
- b) All documents forming part of the Contract (and all parts thereof) are intended
to be correlative, complementary and mutually explanatory. The Contract
shall be read as a whole.
- c) The Contract will be signed in three originals and the Contractor shall be
provided with one signed original and the rest will be retained by the
Employer.

1.2 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents,
the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest
precedence)
- ii. Letter of award.
- iii. Special Condition of Contract

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Volume-I, Annexure & Schedules	[2]	25.09.2014

- iv. General Condition of Contract
- v. Terms of Reference.
- vi. The bid & schedules/ attachment submitted by the contractor.

1.3 Definitions

The Definitions of terms and expressions shall be as per General Conditions of Contract (GCC).

1.4 Contract Price

The Employer hereby agrees to pay to the Contractor the Contract Price in consideration of the performance by the Contractor of its obligations hereunder: The Contract Price shall be:[amount of local currency in words], [amount in figures], or such other sums as may be determined in accordance with the terms and conditions of the Contract.

1.5 Term of Payment

The terms and procedures of payment according to which the Employer will reimburse the Contractor are given in Contract Schedule 1 (Terms and Procedures of Payment) hereto.

1.6 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this shall be as follows:

	Task	Time for Completion
1.	[.....]	[.....]
2.	[.....]	[.....]
3.	[.....]	[.....]
4.	[.....]	[.....]
5.	[.....]	[.....]

The detailed Time Schedule shall be as per Contract Schedule 2.

Contract Schedules

The Contract Schedules listed in the attached list of Contract Schedules shall be deemed to form an integral part of this Contract Agreement.

Reference in the Contract to any Contract Schedule shall mean the Contract Schedules attached hereto, and the Contract shall be read and construed accordingly.

IN WITNESS WHEREOF the Employer and the Contractor have caused this Agreement to be duly executed by their duly authorized representatives the day and year first above written.

ANNEXURE - G

CONTRACT PERFORMANCE BANK GUARANTEE FORMAT

[To be furnished by Consultant]

[Bank Guarantee shall be executed on non-judicial stamp paper of appropriate value]

Place:

Bank Guarantee No:

Date:

To:

[Name & Address of Owner (Utility)]

.....]

Dear Sirs,

1 In consideration of the [...] hereinafter referred to as the 'OWNER', which expression shall, unless repugnant to the context or meaning, thereof include its successors, representative and assignees, having awarded in favour of M/s.....[Consultant's Name] having its registered office at.....hereinafter referred to as the 'CONSULTANT', which expression shall, unless repugnant to the context or meaning thereof include its successors, administrators, representatives and assignees, a Contract, hereinafter referred to as the "CONTRACT" for the.....on terms and conditions set out inter alia, in the OWNER's Contract/Letter of Award No.....dated.....as well as 'CONTRACT' documents, valued at [amount in words], [amount in figures] and the same having been unequivocally accepted by the CONSULTANT and the CONSULTANT having agreed to provide a **Contract Performance Guarantee** for the faithful performance of the entire CONTRACT under the CONTRACT equivalent to 5% (five percent) of the said value of the CONTRACT to OWNER amounting to Rs.....(Rupees.....only) as Contract Security in the form of a Bank Guarantee.

2 We,.....[Name & Address of Bank] and having its Head Office at....., hereinafter referred to as the 'Bank' which expression shall, unless repugnant to the context or meaning thereof, include its successors, administrators, representatives and assignees do hereby irrevocably guarantee and undertake to pay the OWNER merely on demand without any previous notice and without any demur and without referring to any other source, any and all monies payable by the CONSULTANT by reason of any breach of the said CONSULTANT of any of the terms and conditions of the said CONTRACT including non-execution of the 'CONTRACT AGREEMENT', to the extent of(%)..... of the Contract price to OWNER amounting to

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of Implementation Support Consultant Volume-I, Annexure & Schedules	[1]	25.09.2014

Rs.....(Rupees.....only). Any such demand made by the OWNER on the Bank shall be conclusive and binding, absolute and unequivocal notwithstanding any difference between the OWNER and CONSULTANT or any dispute or disputes raised/ pending before any Court, Tribunal, Arbitrator or any other authority. The Bank agrees that the guarantee herein contained shall continue to be enforceable till this sum due to the OWNER is fully paid and claims satisfied or till the OWNER discharges this Guarantee.

- 3 The OWNER shall have the fullest liberty without affecting in any way the liability of the Bank under this guarantee, from time to time, to extend the time of Performance by the CONSULTANT. The Bank shall not be released from its liabilities under these presents by any exercise of the OWNER of the liberty with reference to the matter aforesaid.
- 4 The OWNER shall have the fullest liberty, without affecting this guarantee to postpone from time to time the exercise of any powers vested in them or of any right which they might have against the CONSULTANT and to exercise the same at any time in any manner, and either to enforce or to forbear to enforce any covenants, contained or implied in the CONTRACT between OWNER and the CONSULTANT or any other course or remedy or security available to the OWNER and the Bank shall not be released of its obligations/liabilities under these presents by any exercise by the OWNER of his liberty with reference to the matters aforesaid or any of them or by reasons of any other act or forbearance or other acts of omission or commission on the part of the OWNER or any other indulgence shown by the OWNER or by any other matter or thing whatsoever which under law would, but for this provision, have the effect of relieving the Bank Guarantee. The Bank further undertakes not to revoke this guarantee during its currency without the previous consent of the OWNER.
- 5 The Bank further agrees that the decision of the OWNER as to the failure on the part of the CONSULTANT to fulfill their obligations as aforesaid and/or as to the amount payable by the Bank to the OWNER hereunder shall be final, conclusive and binding on the Bank.
- 6 The OWNER shall have the fullest liberty to lodge their claim for encashment of the guaranteed sum either in full or part, in the manner suitable to them. However, payment made for a sum lesser than the guaranteed amount shall not relieve or discharge the bank from their obligations guaranteed under the bank guarantee, till the contractual obligations are fully performed by the Consultant or the Bank Guarantee is discharged by the OWNER, as the case may be and the Bank Guarantee shall continue to be in force till such time.
- 7 The Bank also agrees that the OWNER shall be entitled at his option to enforce this guarantee against the Bank as a Principal Debtor, in the first instance notwithstanding any other security or guarantee that it may have in relation to the CONSULTANT's liabilities.
- 8 This guarantee will not be discharged due to the change in the constitution of the Bank or the CONSULTANT(S).
- 9 Notwithstanding anything contained hereinabove, our liability under this guarantee is restricted to Rs..... (Rupees.....) and it will remain in force upto and including..... and shall be extended

1.1 Project Background

{Give brief description of the unit and the latest performance parameters in terms of Average Load during the year, PLF, Availability Auxiliary Power Consumption, Heat Rate and the average Calorific Value of Coal being presently used in the boiler.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of ISC Consultant Section-II	- 1 -	25.09.2014

2 ROLE OF IMPLEMENTATION SUPPORT CONSULTANT

Role of the ISC shall as follows:-

- a. To provide assistance to the Utility during detailed engineering, supply, implementation and commissioning of works.
- b. To prepare the work schedule and monitor the progress of works through close involvement with the Contractors and other agencies on behalf of the Utility.
- c. To review the detailed engineering drawings/design calculations, schedule planned for execution and commissioning of all the works in line with the broad parameters of accepted design.
- d. To assist the Utility in taking various decisions in the course of implementation of project and in taking timely actions to ensure that the time schedule envisaged for the project is adhered to.
- e. To draw attention of the Utility in case of any problems and suggest suitable remedial measures to control the situation.
- f. To assist the Utility in addressing any technical / commercial / contractual / legal / regulatory issues arising during the course of the implementation of the project.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of ISC Consultant Section-II	- 2 -	25.09.2014

3 SCOPE OF SERVICES

The detailed scope of services shall be as described below:

3.1 Data Collection

Reports of studies like RLA/CA Reports, Energy Audit Report, Feasibility Report and DPR will be made available to ISC by the Owner.

3.2 Detailed Engineering Phase:

During Detailed Engineering phase, ISC shall-

- i) Co-ordinate between Vendors and Owner.
- ii) Resolve problems arising during all phases.
- iii) Monitor the progress of the work as per approved schedule.
- iv) Approve master list of contractor's design drawings along with submission / schedule.
- v) Categorize drawings as 'for approval' and 'for information' only.
- vi) Review and approve contractor's drawings / data sheet to ensure conformity to the technical specification requirements.
- vii) Review design clarification.
- viii) Follow-up with the contractors for expeditious submission of drawings for approval.
- ix) Report any delay to the Owner along with remedial action.
- x) Finalize list of major equipments for which shop performance tests have to be carried out.
- xi) Finalize delivery schedules for major equipments and sequential supplies to ensure uninterrupted erection work.
- xii) Prepare overall initial project schedule - L1 network and review of L2 and L3 networks as submitted by the contractors.
- xiii) Approve PG test procedures.

3.3 Supply Phase:

During Supplies phase, ISC shall –

- i) Assist the Owner in dealing with statutory authorities such as Boiler Inspectorate Directorate, Pollution Control Board etc. (if required)
- ii) Follow-up with the contractors for expeditious supplies as per approved schedule.
- iii) Report any delay to the Owner along with remedial action.

3.4 R&M Implementation Phase:

During R&M Implementation phase, ISC shall –

- i) Review the implementation plan, the need of erection machinery, tools and tackles and availability of trained manpower with the vendor.
- ii) Take review of pre-commissioning documents including pre- commissioning check-list.
- iii) Take review of O&M manual and write-up instruction relating to initial operation of the Unit.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-008	01	Tender Document for Selection of ISC Consultant Section-II	- 3-	25.09.2014

- iv) Take review and approval of as-built drawings prepared by the contractors based on the marked-up drawings showing the modifications carried out by them during execution.
- v) Ensure overall coordination between various contractors in planning and fixing priority of construction and installation
- vi) Monitor the progress.
- vii) Witness the PG Test and evaluate PG Test Reports.

Note: ISC would not be a party for any technical / commercial / legal dispute arising between the Utility and the manufacturer / vendor / contractor.

3.5 Schedule of Completion of Task:

The Contract will be implemented in accordance with the services indicated. The ISC shall prepare and submit well in advance the complete schedule of completion of work and the schedule of manpower to be deployed.

3.6 Reports / output to be provided by ISC:

The following outputs are required from ISC. The ISC may note that the listed reports herein are minimum requirement only. The reports / reviews to be submitted and tasks to be fulfilled will be as per requirement of the work to complete the task successfully.

- i) Monthly progress reports.
- ii) Report pertaining to the initial Project Schedule L-1 network of each package and review/finalize L2 and L3 networks.
- iii) Approval of Master list of drawing/ Datasheet of all the Contractors of all procurement packages including submission schedule preferably.
- iv) Review Completion report and approval of contractor's drawings / data sheet to ensure conformity to the technical specification requirements
- v) Finalization of list of major equipments for which shop performance tests have to be carried out.
- vi) Finalization of delivery schedules for major equipments from manufacturing units.
- vii) Approval of PG test procedures.
- viii) Review and finalization of pre-commissioning documents including pre- commissioning check-list,
- ix) Review and finalization of O&M manuals and write-up instruction relating to other allied services for initial operation of the equipment and the plant prepared by the contractors.
- x) Review and approval of "as-built" drawings prepared by the contractors based on the marked-up drawings showing the modifications carried out by them during construction/erection.
- xi) Furnishing clarifications to specifications and drawings, arrangement for getting modified drawings, coordination between project site-office and owner's head-office as required during erection of equipment and construction of civil works.
- xii) Perusal and monitoring of quality plans and implementation schedules during phases of implementation.
- xiii) PG Test evaluation and acceptance.

4 KEY PROFESSIONAL POSITIONS WHOSE CV WOULD BE EVALUATED:

S. No.	Key Position	Area of Specific Expertise desired	Minimum Qualification and Professional Experience Desired
1	Team Leader (Project Management) and Specialist (Boiler/Turbine)	Overall Management of Project Implementation Support team.	Graduate Engineer, with minimum 15 years relevant experience in Project Management. Good knowledge of project safety & legal aspect. The proposed individual should also have direct experience of handling an EPC Project of coal fired thermal power plant of 200 MW or above capacity.
2	Specialist (Boiler)	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Mechanical Engineer with at least 5-10 years experience in the relevant fields, including direct experience of Boiler design/ erection /commissioning preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
3	Specialist (Turbine)	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Mechanical Engineer with at least 5- 10 years experience in the relevant fields, including direct experience of Turbine design/ erection/ commissioning preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
4	Specialist/s (Electrical)	Design- Engineering / Production, Project planning Erection and Commissioning	Graduate Electrical Engineer in Electrical Systems with at least 5-10 years experience in the relevant fields, including direct experience of design /erection/commissioning of Electrical Equipment /systems preferably of 200 MW or above capacity. Should have knowledge of relevant International and National testing code.
5	Specialist/s (Control and Instrumentation)	DCS Installation and Commissioning	Graduate Instrumentation Engineer with at least 5-10 years experience in the relevant field including direct experience of design/ erection/ commissioning of electrical systems preferably of 200 MW or above capacity.
6	Specialists - Civil	Supervision of civil and structural work	Graduate Civil Engineer with at least 5-10 years experience in the relevant fields including direct experience of design/ erection/ commissioning of electrical systems preferably of 200 MW or above capacity.
7	Besides the above mentioned experts, Consultant should appoint sufficient nos. of commissioning engineers of relevant faculty at site during Commissioning and PG Test. The owner will provide support staff of relevant faculty who will associate with the Experts of Consultant during site supervision and field quality monitoring as well as during preparing required reports.

1.0 INVITATION FOR BID

Tender No : [-----]

1.1 Introduction

[Give brief introduction about the name, ownership, business & Power Projects of the utility inviting tender for R & M work]

[XXX is undertaking renovation & modernization of XXX MW Unit no.-XX ----- of the Power Plant]

1.2 Invitation

[Name of The Utility], hereinafter referred to as “Employer / Owner / Purchaser”, invites sealed Tenders in English language from Prequalified Bidders for the Renovation & Modernization of Boiler & Auxiliaries package of Unit No.[XXX] of the [XXX] Power Plant on International Competitive Bidding (ICB) basis as per the scope of work given Technical Specification Volume-II.

1.3 Brief Scope of Work

The scope of work under this R&M package involves disassembly of existing equipment / systems, replacement of specified equipments / systems by supplying new equipments/ systems including supply of assembly materials, inspection & testing at suppliers works, supply of mandatory spares, packing and forwarding, transportation & insurance, receipt at site, unloading, handling & storage at site, pre-assembly, fabrication, repair, servicing/ overhauling, erection, all associated civil works including supply of cement, steel etc., testing & commissioning, successful completion of trial operation and guarantee tests for [XXX] package of Unit no. [XXX] of [XXX] Power Plant. The detailed scope of work is given in technical specification Vol. II.

The brief scope of work is given below: -

[-----]
[-----]
[-----]
]

For detailed Scope of Work & Services, refer Section-I of Volume-II of this Specification.

1.4 Tender Details

(a)	Cost of Tender Documents	:	INR [---]/ USD [---]/ EUR [---]
(b)	Bid Guarantee Amount	:	INR [-----]/ USD [-----]/ Euro [-----]
(c)	Date of issuance of Tender Document	:	[-----]

	Receipt of Bid (Both Part I & Part II)		
(f)	Date & Time of Opening of Unpriced Techno-Commercial Bid (Part-I)	:	[-----]

1.5 Time Schedule

The time schedule for completion of facilities and performance guarantee test shall be as per SCC.

1.6 Bid Submission

- The Tender Documents are issued to bidders already qualified in a pre-qualification process. The Tender documents are not transferable.
- The Bid proposals are to be submitted in two parts in separate sealed covers as follows:
 - Part I** : Bid Guarantee and Technical & Commercial Proposal without prices
 - Part II** : Price Schedule and Schedule of Functional Guarantee parameters with values.
- All other terms and conditions along with the Technical Specifications, General Conditions of Contract, Special Conditions of Contract, Time Schedule, Bid Guarantee details, Validity of Bid and Instructions to Bidders, etc. are contained in the Tender Documents.
- Bidder shall submit the bid on or before the scheduled date and time as specified. Any offer received after the expiry of the time specified for receiving the completed bids are liable for rejection. The bid shall be submitted to:

[Designation, Address and Contact details

-----]
-----]

- Issuance of Tender Documents to a Bidder shall not be construed to mean that such Bidder would be automatically considered.
- The Bid may be made in Indian Rupees as well as in Foreign Currencies (maximum three foreign currencies) and all payments for the entire scope will be made in Indian Rupees as well as in the respective quoted Foreign Currencies.
- Bids submitted by E-mail, Fax, E-tender etc. will not be accepted.
- The Tender Documents are meant for the exclusive purpose of bidding against the subject package and shall not be transferred, reproduced or otherwise used for purposes other than for which these are specifically issued.

2 INSTRUCTIONS TO BIDDERS

2.1 Introduction

[Name of Utility], the Owner, intends to carry out the Renovation & Modernization of [Unit no.-XX ----- of the XXXX Power Plant].

Under the subject Tender, [Utility] invites bid for Renovation & Modernization of Boiler & Auxiliaries package of the said Renovation & Modernization work to be carried out as per the accompanying Technical Specifications. The Bidder shall submit the offer for complete scope of work indicated in the Technical Specification.

2.2 Address and Contact Details of Owner

[Designation, Address and Contact details

-----]
-----]

2.3 General Project Information

General information about the plant and R&M project is indicated in section 3.0 on General Project Information.

2.4 Owner's Consultant

[-----], hereinafter referred to as "Consultant" is the Consulting Engineer for the project, appointed by the Owner, [-----], to provide project consultancy services.

2.5 Sources of Fund

[Utility] intends to finance the subject Package of the said renovation & modernization work, through Internal and other sources & External/ Domestic Commercial/ Borrowing from international development funding agencies. [Utility] has tied up the required fund for this package.

2.6 Cost of Bidding

The Bidder shall bear all costs associated with the preparation and submission of its bid, and the Owner will in no case be responsible or liable for these costs, regardless of the conduct or outcome of the bidding process.

2.7 Non-Transferability of Bid document

Transfer of Bid documents issued to one intending bidder to another is not permissible.

2.8 Scope of Work & Single Bidder Responsibility

The scope of the work shall be on the basis of single Bidder responsibility, covering the complete scope of work specified under these specifications and documents. It shall include the following:

- Disassembly of existing equipment/ systems as required.
- Detailed design of the systems/equipment covering all Mechanical, Electrical, Control & Instrumentation, Civil and Structural works.
- Complete manufacture, including shop inspection and testing.
- Providing engineering drawings, data, operational & maintenance manuals, etc., for the Owner's review/ approval.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 3-	30.09.2015

- (e) Packing, forwarding and transportation including insurance from the manufacturer's works to plant site and transportation from storage yard to erection site.
- (f) Receipt, storage, preservation and conservation of system/equipment at site including construction of storage facility viz. covered, semi-covered, air-conditioned, open yard at the space allocated at site by Owner including storage-cum-erection and all other specified & statutorily required insurance.
- (g) Pre-assembly, if any, erection, testing, commissioning, completion of plant and equipment/ system, conducting trial operation, performance guarantee test and handing over of all the plant and equipment/ system covered under this specification.
- (h) Carry out all related civil and structural works at site including construction of foundations, buildings, structures etc. Including supply of cement and steel and all other required materials.
- (i) Supply of mandatory spares and tools & tackles.
- (j) Training of Owner's personnel.

Detailed scope is provided in Volume-II of the Technical Specifications.

Bids not covering the entire scope mentioned hereinabove may be treated as incomplete and hence are liable for rejection.

2.9 Time Schedule

The completion Time Schedule for Completion of R&M work and Performance Guarantee Tests shall be as given in the SCC.

2.10 Tender Documents

The scope of contract, technical specification, bidding procedures and contract terms are prescribed in the Tender Documents. The Tender Documents comprise, inter alia, the following volumes:

Volume – I	:	Commercial
Volume – I Chapter-1	:	Invitation for Bid
Volume – I Chapter-2	:	Instructions To Bidders
Volume – I Chapter-3	:	General Project Information
Volume – I Chapter-4	:	General Condition of Contract (GCC)
Volume – I Chapter-5	:	Special Condition of Contract (SCC)
Volume – I Chapter-6	:	Forms & Schedules
Volume – II	:	Technical Specifications
Volume – II Section-I	:	Project Technical Specification
Volume – II	:	Detailed Technical Specification-Mechanical

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 4-	30.09.2015

Section-II, Part-A		
Volume – II Section-II, Part-B	:	Detailed Technical Specification-Electrical
Volume – II Section-II, Part-C	:	Detailed Technical Specification-I&C
Volume – II Section-II, Part-D	:	Detailed Technical Specification-Civil

Volume – III, Part-A	:	Technical Schedule-Mechanical
Volume – III, Part-A	:	Technical Schedule-Electrical
Volume – III, Part-A	:	Technical Schedule-I&C

The Bidder is expected to examine all instructions, forms, terms and specifications in the Tender Documents including clarifications/corrigendum/amendments for completeness and obtain clarifications, if any, from the Owner.

The Bidder is expected to examine all instructions, forms, terms, conditions, specifications and other information in the bidding documents. Failure to furnish all information required as per the bidding documents or submission of a bid not substantially responsive to the bidding documents in every respect will be at the Bidder's risk and may result in rejection of its bid.

A prospective Bidder requiring any clarification to the Tender Documents may notify the Owner in writing by post or by e-mail followed by postal confirmation at the Owner's address indicated in ITB. The Owner will respond in writing by post or by e-mail followed by post confirmation to any request for clarification or modification of the bidding documents that it receives not later than twenty-one (21) days prior to the deadline for submission of bids prescribed by the Owner. Owner's response will be sent to all prospective Bidders that have been issued the Bidding Documents.

The Bidder is advised to visit the plant and obtain on its own responsibility all information that may be necessary for preparing the bid. The Owner will facilitate the bidder to collect such information about the plant in the manner that does not interface with plant operational and does not any way adversely impact the interest of the Owner. The costs of visiting the site including engaging any third party consultant by Bidder, if required as per the assessment of Bidder, shall be borne by the bidder fully.

The Bidder, its personnel and agents will release and indemnify the Owner and its personnel and agents from and against all liability during such information collection and will be responsible for death or personal injury, loss of or damage to property and any other loss, damage, costs and expenses incurred as a result of the inspection.

At any time prior to the deadline for submission of bids, the Owner may, for any reason, whether at its own initiative, or in response to a clarification requested by a prospective Bidder, amend the bidding documents.

LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 5-	30.09.2015

The amendment will be notified in writing by post or by e-mail followed by post confirmation to all prospective Bidders that have received the bidding documents and will be binding on them.

At any time prior to the deadline for submission of bids, the Owner, at its discretion may extend the deadline for submission of the bids.

2.11 Preparation of Bids

2.11.1 Language of Bid

The bid prepared by the Bidder and all correspondence and documents related to the bid shall be in English language, provided that any printed literature furnished by the Bidder may be written in another language, as long as such literature is accompanied by a translation of its pertinent passages in English language in which case, for purposes of interpretation of the bid, the translation shall govern.

2.11.2 Bidding Procedure

Single Stage Two Part Bidding Procedure will be followed for this package.

The bidders are required to submit, the bids for the Renovation and Modernization work in two parts. Both the parts are to be submitted together before the indicated Bid submission Time & Dates.

The Part-I Bid comprises the techno-commercial bid without prices. The main components of the Techno-Commercial Bid are Bid Guarantee, Scope of Work & Terminal Points, Technical descriptions/details, Technical Data Sheets, List of Tools & Tackles, Deviations to Technical and Commercial Specifications/Conditions, Overall Completion Time Period & L-1 Network Schedule, Resource Deployment Schedule, Detail of Sub-Contractors/Sub-Suppliers/Sub-Vendors, Spares list, Quality Assurance Programme, Details of the present commitments & details of contracts in hand, Indices and Coefficients for Price Variation etc. Part-II Bid will comprise Quoted Price and Quoted Performance Guarantee Parameters. Initially, only the Part-I Bid will be opened and Part-II Bid is kept in safe custody.

After evaluation of the Techno-Commercial (Part-I) Bids, each Bidder who has submitted a broadly responsive Part-I Bid, will be invited for Techno-Commercial Discussion, during which, all the required amendments, additions, deletions and other adjustments are noted and recorded in a memorandum. Part-II Bid (Price Bid) of only those Bidders will be opened, whose Part-I Bid is found to be responsive to Tender Specifications and Conditions. The date & time for opening of Price Bid will be intimated separately.

Techno-Commercial Bid should not contain any price data.

Price Bid should not contain any matter in respect of Technical and / or Commercial aspects other than the details specifically sought by the Owner.

2.11.3 Bid Submission

- (1). Bid proposals shall be accepted from only those eligible bidders who are found qualified during the pre-qualification process & are issued Tender Documents. Unsolicited bids shall not be taken into cognizance.
- (2). All Bid proposals shall be prepared and submitted in two parts, part-wise in separate sealed covers, with all pages serially numbered. All bids shall be prepared in the English language only, by typing or printing.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 6-	30.09.2015

- (3). [One original and 9 (nine) identical] copies of the original with all enclosures shall be submitted by each Bidder for Part-I and Part-II, clearly indicating the original and the number of the copy (i.e., "Original", "Copy No. 1", "Copy No. 2" etc.).
- (4). All these covers shall be individually sealed and put in an outer cover which also shall be sealed and super scribed as in other covers.
- (5). The covers should be pasted properly before applying the wax seal. Failure to do so may result in rejection of such bids.
- (6). The Bidder's Bid and the documents attached thereto shall be considered as forming part of the Contract documents.
- (7). In the event of discrepancy between "Original" and any copy of the bids, the hard copy of Original shall prevail.
- (8). The Bid shall be submitted to [-----]. Bid submitted to any other office of Owner is liable for rejection. Bids submitted by Telefax or e-mail will be rejected
- (9). Owner will receive Bids in respect of all the equipment/systems and scope of work as set forth in the accompanying Technical Specifications. All bids shall be prepared and submitted in accordance with the Tender Documents.
- (10). Failure to furnish all information required in the Tender Documents or submission of a Bid not substantially responsive to the Tender Conditions and Technical Specifications in every respect or bids received in incomplete shape shall be liable for rejection. A bid shall be determined as substantially responsive in every respect, if it conforms to all the terms, conditions and specifications specified in Tender Documents without material deviations, objections, conditionality or reservations.
- (11). A material deviation, objection, conditionality or reservation is one:
 - (i). That affects in any substantial way the scope, quality or performance of the contract;
 - (ii). That limits in any substantial way, inconsistent with the Tender Documents, the Owner's rights or the successful Bidder's obligations under the contract.
- (12). Deviation(s) to vital clauses listed under the Tender Documents shall be considered to be material deviation(s).
- (13). Notwithstanding any information and data, which may be contained in these Tender Documents, the Bidder has to make independent inquiries and generally obtain his own information on all matters that may in any way affect prices, risks and obligations of the Contractor under the Contract.
- (14). Either the Indian agent or the foreign Principal directly could bid in a tender, but not both. The same applies to an Indian agent/dealer representing and Indian manufacturer. In case both submit the tenders, the tender of the manufacture will alone be considered.
- (15). An agent representing one manufacturer in a tender will not be allowed to quote on behalf of another manufacturer along with previous manufacturer in a subsequent / parallel tender for the same item.

2.11.4 Bid Guarantee

- (1). The Bid shall be accompanied by Bid Guarantee either in the form of Bank Guarantee valid for [---] days from the scheduled date of opening of the Bids (Part-I) or Demand Draft of equivalent amount drawn in favour of "[-----]" payable at "[-----]".

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 7 -	30.09.2015

- (2). The Bank Guarantee shall be from any scheduled commercial Bank in India authorized by Reserve Bank of India,, to issue such Bank Guarantee on a non-judicial stamp paper of value not less than Rs. [---]/-.The stamp paper shall be purchased in the name of the Bank. Foreign Bidders may submit the Bank Guarantee from any bank in India as above or from any foreign bank which is in the approved list of RBI.
- (3). Unless otherwise expressly stated,
 - a) The Bid Guarantee shall be executed only on behalf of the Bidder in whose name the Tender Documents have been issued.
 - b) The Bid and other documents shall be submitted only by the Bidder in whose name the Tender Documents have been issued.
 - c) The Bid Guarantee shall be executed only as per the format prescribed by Owner (at '[-----]'). In the event of any deviation in this regard, the decision of Owner as to whether the same could be accepted or not, is final and binding on the Bidder.
 - d) In case of foreign Bidder, the Bid Guarantee amount shall be in US Dollar / Euro/ Indian Rupee.
- (4). The Bidder shall arrange for extension of validity of Bid and that of the Bid Guarantee upon request from the Owner.
- (5). No interest shall be paid on Bid Guarantee amount. The offer without Bid Guarantee or with short Bid Guarantee or Bid Guarantee in the form other than that specified here in above or from banks not specified hereinabove will be liable for rejection.
- (6). Any Bid not accompanied by the Bid Guarantee shall be rejected and the Bidder shall not be permitted to participate in the tender.
- (7). The Bid Guarantee shall be forfeited if the Bidder withdraws / modifies / changes / impairs / derogates the bid proposal on its own after the Bids are opened or submits forged/bogus certificates or fails to accept the Letter of Award issued by Owner or fails to submit Contract Performance Guarantee
- (8). The Bid Guarantee of all unsuccessful Bidders shall be returned after price cover opening and price evaluation. The Bid Guarantee of the successful Bidder shall be returned after furnishing of the Contract Performance Bank Guarantee to the Owner and acceptance thereof.

2.11.5 Bid Opening

1. This is a single stage two part tender. On the specified date and time of opening, Part– I Bid containing Bid Guarantee and Technical and Commercial Proposal without Prices will be opened. At the time of opening of Part–I of the bids, the names of the bidders who submitted their bids shall be read out and other such details as Owner, at its discretion, may consider appropriate, shall be read out. The Part – II (Price Bid) will be lodged and opening of the same will be intimated separately to those Bidders whose Part-I Bid willd be determined to be substantially responsive to Tender Conditions and Technical specifications in all respects.
2. If the Bidder desires to be present at the time of opening of Part-I of bids, it shall depute its representatives (not more than two persons) in time with due authorization for participating in the Bid opening.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 8-	30.09.2015

3. Owner takes no responsibility for delays, loss or non-receipt of Bid documents or any letters sent by post/courier either way and also reserve the right to reject any Bid in part or full without assigning any reasons thereof.

2.12 Composition of Techno Commercial Bid (Part-1 Bid)

This part shall, inter alia, include the following in the same order as listed below. One original and 9 (nine) identical copies shall be submitted.

- (i). Duly filled in "Form of Bid" (As per Annexure-B of this Volume).
- (ii). Power of Attorney/Authorization with the seal of the company in favour of the person signing the Bid.
- (iii). Letter of consent: To be furnished by the Bidder Consortium Partners/Individual Companies of the Group (as the case may be)- as per Annexure—D of this Volume
- (iv). Letter of Unequivocal Consent to be furnished by the Bidder and Assignee as per Annexure-E of this Volume
- (v). Bid Guarantee- as per Annexure A.
- (vi). Schedule of Prices as per Schedule – F1 (Table 1 to Table-7) with the word "Quoted" in lieu of Price data and all other details except price data.
- (vii). Mandatory spares as per Technical Specifications (with the word "Quoted" in lieu of Price data)
- (viii). Recommended spares (with the word "Quoted" in lieu of Price data)
- (ix). Tools & Tackles as per Technical Specifications (with the word "Quoted" in lieu of Price data)
- (x). Schedule of Performance Guarantees- as per Schedule – F1 (Table-8) with the word "Quoted" in lieu of Performance Guarantee parameters
- (xi). Signed copy of all the corrigendum's/amendments/clarifications, if any issued for the tender
- (xii). Overall Time Schedule as per Schedule – F2 and Bar chart/PERT Network schedule to achieve the time schedule
- (xiii). Deviations to the Commercial specification, if any, as per Schedule – F3.
- (xiv). Deviations to Technical Specifications, if any, as per Schedule – F4.
- (xv). Requirements of the Contractor at site, as per Schedule – F5.
- (xvi). Resource deployment schedule as per Schedule – F6
- (xvii). Details of the present commitments of the Bidder, details of contracts in hand
- (xviii). Details of Sub-Contractors/Sub-Suppliers/Sub-Vendors, if any
- (xix). Quality Assurance Programme
- (xx). Technical Details to be furnished with the Bid as called for in the Technical Specification Vol-II and Technical Bid Data Sheet Vol-III.
- (xxi). Schedule of weights and dimensions
- (xxii). Coefficients and indices for price variation formula

The Part-I Bid shall not contain any Price data.

2.13 Composition of Price Bid (Part-II Bid)

The Bidders are requested to quote the Prices and the Performance Guarantee parameters only in the specified format. Price given in Part-II should cover the entire

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 9-	30.09.2015

scope of work as given in Part-I of the offer including list of mandatory spares and Tools & tackles with itemized price and should be as per Schedule of Price enclosed. **[One original and 9 (Nine) identical]** copies shall be submitted.

1. The Price Bid shall contain the following :

- (i). Duly filled in Form of bid as per Annexure-B & Annexure-C
 - (ii). Completely filled in Schedule of Prices Schedule – F1 (Table 1 to Table-7)
 - (iii). Completely filled in Schedule of Performance Guarantees Schedule – F1 (Table-8).
2. The Bidder shall quote his price against each item of the schedules as indicated in the enclosed formats. The Bidder shall quote the prices only once after considering all the pros and cons, risks and contingencies. Rebate percentage etc., if any, should be spelt out by the Bidder in the first Bid itself.
 3. The amount shall be quoted both in figures and words clearly and legibly. No overwriting is allowed. All scoring and cancellations should be countersigned by the Bidder. In case of illegibility, the interpretation of the Owner shall be final. All entries shall be in English language only.
 4. The Bid may be made in Indian Rupees as well as in Foreign Currencies (maximum three foreign currencies) and all payments for the entire scope will be made in Indian Rupees as well as in the quoted Foreign Currencies.
 5. Prices in Indian supply shall be quoted on Ex-works supply of plant & equipment basis including Packing & forwarding. Inland transportation, Insurance charges, etc. shall be indicated separately.
 6. Prices of imported supply of plant & equipment directly consigned to site shall be quoted on CIF Indian port of entry basis. The bidder shall also quote separately for FOB port of shipment price for ocean freight for Marine insurance, all port charges including customs clearance and inland transport charges from port of destination to Owner's site.
 7. Custom Duty, Excise Duty, Central sales tax (CST), service tax, Value Added Tax (VAT), VAT on Works Contract, other applicable taxes, duties and Cess shall be clearly indicated by the bidder in the price schedules and these taxes shall be considered for bid evaluation.

2.14 Bid Prices

Bidders shall quote for the entire scope of work on single responsibility basis & the total bid price covers all the Contractor's obligations mentioned in tender document specification or to be reasonably inferred from the tender documents/ specification in respect of the disassembly/ dismantling of existing equipment facility as specified, design, manufacture, including procurement and subcontracting (if any), delivery, construction, installation, commissioning, completion of the facilities and conductance of Performance Guarantee tests for the facilities including supply of mandatory spares, recommended spare & tools/ tackles (if any). This includes all requirements under the Contractor's responsibilities for testing, pre-commissioning and commissioning of the facilities, conducting Guarantee tests and, where so required by the tender documents, the acquisition of all permits, approvals and licenses, etc.; the operation, maintenance and training services and such other items and services as may be specified in the tender documents, all in accordance with the requirements of the Conditions of Contract and Technical Specifications.

Bidders are required to quote the price for the commercial, contractual and technical obligations outlined in the tender documents.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 10-	30.09.2015

Prices quoted by the Bidder shall be subject to adjustment during performance of the Contract to reflect changes in the cost of labour, material, etc. Bidder A bid submitted with a fixed price quotation will not be rejected, but the price adjustment will be treated as zero. The price adjustment provision will not be taken into consideration in bid evaluation.

2.15 Signature of Bids

Each page of the Bid must be signed and stamped by the Bidder with his usual signature. The names of all persons signing should also be typed or printed below the signature. Satisfactory evidences of authority of a person signing on behalf of the Bidder shall be furnished with the Bid. Erasures or corrections in the Bid documents if any shall be signed by the person signing the Bid. Printed literature, it enclosed need not be signed. Bids not conforming to the above requirements are liable to be treated as non-responsive.

2.16 Clarifications/Corrigendum/ Amendment of Tender Specifications

1. At any time prior to the deadline for submission of Bids, the Owner may, for any reason, whether at his own initiative or in response to clarification(s) requested by a prospective Bidder, modify the Tender Specifications by amendment.
2. Clarifications/Corrigendum/Amendment shall be construed to be an integral part of the Tender Specifications, which will be notified. Amendments will be hosted in Owner's website. Bidders are requested to visit Owner's website and note amendments, if any, before submission of bid. Owner shall not be responsible if any bidder fails to notice any amendment.
3. Amendment shall be numbered serially. Signed copies of amendments & clarifications shall be enclosed in Part-I of bid by bidder.

2.17 Modification of Bids

The Bidder is not permitted to modify his Bid suo-moto after the Bid submission.

2.18 Information to be Furnished with the Bid

1. The Bid (Part-I) must clearly indicate the name of the manufacturer, the type or model of each principal item of equipment proposed to be supplied and erected. The Bid should also contain drawings and descriptive materials indicating general dimensions, material from which the parts are manufactured, principles of operation and the extent of pre-assembly involved, major erection equipment required to be deployed, method of erection and the proposed erection Organization structure.
2. The above information shall be provided by the Bidder in the form of separate sheets, drawings, catalogues, etc.
3. Any Bid not containing sufficient descriptive material to describe accurately the system / equipment proposed may be treated as incomplete and hence rejected. Such descriptive materials and drawings submitted by the Bidder will be retained by the Owner. Any major departure from these 'drawings and descriptive material submitted will not be permitted during the execution of the Contract' without specific written permission of the Owner.
4. Oral statements made by the Bidder at any time regarding quality, quantity or arrangement of the equipment or any other matter will not be considered.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 11 -	30.09.2015

5. Standard catalogue pages and other documents of the Bidder may be used in the Bid to provide additional information and data as deemed necessary by the Bidder.
6. In addition to the hard copy of Part-I Bid, the Bidder shall submit soft copy of all data sheets, Schedule, List of Mandatory spares, tools & tackles and Bar Chart/PERT as well as deviation tables in a compact disk (CD). However, hard copy alone will be considered as authentic for evaluation. Bidder shall submit all the filled in datasheet also in soft copy. Bidder shall also furnish soft copies and hard copies of Data Sheet with filled in details wherever details are required to be indicated by the Bidder.

2.19 Policy of Bids under Consideration

Bids shall be deemed to be under consideration immediately after they are opened. While the Bids are under consideration, Bidder's and/or their representatives or other interested parties are advised to refrain from contacting by any means, the Owner and/or his employees/ representatives on matters related to the Bids under consideration. The Owner, if necessary will obtain clarifications on the Bids by requesting for such information from any or all the Bidders, in writing as may be necessary.

2.20 Validity of Bid

1. The Bid shall be kept valid for acceptance for **[180 days]** from the schedule date of opening of the Part-I Bid.
2. The Bidder will not be permitted to change the substance of the Bid suo-moto, after Bid has been opened.
3. Unilateral revision or withdrawal of offer by the Bidder within the subsistence of the validity period of offer shall not be permitted. Violation of this condition shall result in rejection of the Bid without notice, besides forfeiture of Bid Guarantee. The Bidder shall also be debarred either permanently or for a fixed period, at the discretion of Owner from participating in any of the Owner's tenders.

2.21 Understanding & Clarification on Documents & Specifications

1. The Bidder is required to carefully examine the specifications and documents and fully informs himself as to all the conditions and matters which may in any way affect the 'Renovation and Modernization work to be carried out or the cost thereof. Bidders are required to visit the plant to get familiarized with local conditions. However, the Bidders' visit to site shall be at their cost and risk, without any liability on part of the Owner.
2. Bidders may seek clarifications to the prescribed clauses and / or different part of the Tender Specifications. Such a request for clarifications, if any, should reach the Owner at least **[7 (seven) days]** before the date stipulated for pre-bid meeting. The Owner then will issue interpretations and clarifications as it may think fit in during the pre-bid meeting. After pre-Bid meeting, Bidder may seek further clarification till **[21 days]** prior to schedule opening date of Part-I Bid. After receipt of such clarifications, the Bidder may submit its Bid but within the time and date as specified in the Invitation for Bid or as amended by the Owner. All such clarifications and the relevant exchange of correspondence between the parties shall be construed to form part of the tender specifications.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 12-	30.09.2015

3. Pre-Bid Conference will be organized and outcome of the pre-bid conference is binding on all the Bidders. Outcome of the Pre-Bid Conference will be intimated by the Owner to all the Bidders.
4. A copy of such clarifications duly signed and stamped shall be enclosed with the Bid (Part-I). In case any queries remain un-replied, it shall be construed that in respect of those queries, the respective stipulations of the Tender Specifications/Conditions shall continue to apply and/or no new stipulations are made with respect to those queries.
5. No extension of time for submission of Bid will be granted on account of Bidders' request for interpretation/clarifications.

2.22 Latest Hour for Receipt of Bids

Bids must reach the designated Office of Owner not later than [-----] Hrs, Indian Standard Time (IST) on the date fixed for receipt of the Bid as indicated in the Invitation for Bid. Bids delivered / received after the time and date fixed for the receipt of the bids shall be liable for rejection.

2.23 Single Bidder Responsibility

1. The scope of supply and services shall be under single Bidder responsibility.
2. The successful Bidder should not sub contract the entire work on back to back basis or otherwise.

2.24 No Claim for Compensation for Submission of Bid

1. The submission of any Bid connected with these documents and specifications shall constitute an agreement that the Bidder shall have no cause of action or claim against the Owner for rejection of his Bid.
2. Regardless of the conduct or outcome of the bidding process, Bidder shall not be entitled to claim any costs, charges and expenses incidental to or incurred by him through or in connection with his submission of Bid or its consideration by the Owner, even though the Owner may elect to modify/withdraw the Invitation for Bid or does not accept the Bid(s).

2.25 Deputation of Representatives for Discussion

After opening of the Bid, if the Owner desires to have techno-commercial discussion on the Bid, the Bidder shall be in a position to depute his competent representatives of various disciplines at short notice with full authority for finalising technical parameters as well as Commercial Terms and Conditions of the Tender.

2.26 Evaluation of Bid

1. For evaluation and comparison of price bid, the prices indicated at [-----] summary of Prices as per Schedule [-----] will be considered. The Bids received will be evaluated by the Owner to ascertain the lowest evaluated substantially responsive Bid vis-à-vis the Tender Specifications. The Bidder has to satisfy himself that full information is furnished as required in the specifications. Lack of particulars or incomplete information furnished will run the risk of rejection of the bid. The following major procedures would be followed for evaluation of bids.
2. All the Bidders would be brought on par with reference to Technical Specification, Commercial Condition, Instructions to Bidders and subsequent techno-commercial discussions/ clarifications.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 13-	30.09.2015

3. After the evaluation of Part-I bids (techno-commercial bids) and before opening of Part-II bids (Price Bids), in case the bidders are asked to make changes to their techno commercial offer that may have price implications, Owner may give the bidders opportunity to submit addendum to price bid covering the price implication only against such changes before the opening of Part-II bids (Price Bids). All the bidders will be notified, at least 15 days before the Price Bid opening date, about such changes against which they can submit addendum to Price Bid.
4. Commercial loading would be done for non-compliance of commercial terms and conditions of the Tender Specifications other than the vital clauses, as the case may be.
5. To facilitate evaluation and comparison, the Owner will convert all bid prices expressed in foreign currencies into Indian Rupee at State Bank of India Bills Selling exchange rates prevailing on the date of opening of the price bid.
6. The Bidder is eligible for a price variation as per Tender Condition. However Price variation shall not be considered for Bid evaluation.
7. Technical loading will be done for omission of price data in respect of equipment/facilities, spares, tools & tackles, etc. The highest quoted corresponding price will be loaded against such omission. If no quoted price is available, the loading will be done as per the corresponding price as estimated by the Owner.
8. The Bidder has to meet the minimum functional performance levels indicated in Volume-II Technical Specification for all categories of Guarantees. If one or more of Functional Performance Parameters offered by the Bidder is inferior to the minimum functional performance level (i.e. higher or lower than maximum or minimum value specified in Technical Specification), then such bid will be considered non-responsive and rejected.
9. The quoted values for Performance Guaranteed Parameters given in Table below would be evaluated using evaluation factors specified. The evaluation factors shall be applicable to the differential values calculated from among the Bidders of corresponding item with appropriate highest or lowest value (i.e., the best quoted value) as the base. The evaluation will be based on the guarantee parameters inclusive of all tolerance furnished at the Guaranteed Condition. Bidders to note that the values indicated in the Schedule of Performance Guarantees shall be inclusive of all tolerances including measurement uncertainty.

Table-Bid Evaluation Factors

Sl. No.	Functional Performance Parameter	Evaluation Factor Rate
1.	BOILER Efficiency at 100% TMCR (At rated steam parameters)	[-----] INR per 0.01% difference in efficiency
2.	Auxiliary Power	[-----]INR per kW

The evaluation factors rate shall be prorated for any fractions of the specified value.

- (1). Arithmetical errors will be rectified on the following basis:

- If there is any discrepancy between the unit price and the total price that is obtained by multiplying the unit price and the quantity, the unit price shall prevail and the total price will be corrected.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 14-	30.09.2015

- If there is a discrepancy between the total Bid Price and the sum of total prices, the sum of the total prices shall prevail and the total Bid Price will be corrected.
 - If there is discrepancy between the rates in figures and in words, the rates expressed in words shall only prevail and shall be adopted.
- (2). All the Sl. Nos. and columns in the 'Schedules of Prices' shall be quoted. If no prices are envisaged for any of the entries, 'Nil' shall be mentioned. In this context "Nil" mentioned against any item shall construe that the Bidder shall not charge any amount separately for that item from the Owner. If the terms, such as 'not applicable' "-----" or blank are mentioned against any Sl. Nos./columns, the highest amount quoted for the concerned entry among all Bidders will be loaded for purposes of evaluating the Price Bids.

2.27 Local Conditions

1. The Bidder shall inspect the site and shall satisfy himself of the site conditions and shall apprise himself of the procedure for engagement of agencies/labour and shall collect any other information, which may be required before submitting the Bid.
2. Wages not less than Minimum wages for Contract labour shall be paid as applicable in this region from time to time. Claims and objections due to ignorance of site conditions will not be considered after submission of Bid.
 - (i). The Bidder is required to carefully examine the Technical & General Specification, commercial Terms and Conditions, drawings and other details relating to work given in the Tender Specification and get fully acquainted as to all conditions and matters which may in any way affect the work or the cost thereof.
 - (ii). The Bidder shall be deemed to have exhaustively examined the Tender Specifications including the Form of Contract, to have obtained all information and clarifications on all matters whatsoever that might affect the carrying out of the work and to have satisfied himself as to the adequacy of his Bid. He is deemed to have known the scope, nature and magnitude of the work and the requirements of materials and labour involved etc. and as to all work he has to complete in accordance with the Contract for the adequacy of his Bid.
 - (iii). The Bidder shall be deemed to have visited and carefully examined the plant/ site and surroundings, to have satisfied himself about the nature and details of all existing structures, if any, and also as to the nature and conditions of the railways, roads, bridges and culverts, means of transport and communications, whether by land, water or air and as to possible interruptions thereto and the access to and from the site, to have made independent enquiries, examined and satisfied himself as to the sources for obtaining earth, gravel, sand, stones, bricks and all other construction materials, the site for disposal of surplus earth and debris, the available accommodation, underground existing services, sub-soil water conditions, storms, prevailing winds, climatic conditions and all other similar matters which may affect the work.
 - (iv). The Bidder shall be deemed to have acquainted himself with the Indian Income tax Act, 1961, Indian Companies Act, 1956, Indian Customs Act,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 15-	30.09.2015

1962, Indian Central Excise Act, Value Added Tax, Indian Sales Tax Act, Indian Electricity Act, Central Electricity Authority Regulations, Indian Boiler Regulations, Factories Act, Pollution Control Regulations and other related Acts & Laws prevalent in the State of [-----] and in India and as amended from time to time. The Owner shall not entertain any request for clarifications from the Bidders regarding such local conditions.

- (v). Any neglect or omission or failure on the part of the bidder in obtaining necessary and reliable information as stated above or on any other matter affecting the Bidder shall not relieve him from any risk or liabilities or the entire responsibility for completion of the work in accordance with the Tender Specifications.

2.28 Deviations

1. Normally, deviations are not permitted in commercial terms & conditions and technical specification. Nevertheless, if the Bidder takes any deviation, it shall be clearly indicated in the deviation schedule (Schedule – [-----] and Schedule- [-----] with a soft copy in MS-Word format in compact disc, with “Original” of Part-I of the Bid). Deviation listed elsewhere in the Bid shall be summarily rejected and ignored. Separate printed standard terms and conditions of the Bidder shall not be taken into cognizance and shall be totally rejected.
2. No alterations or disfigurement, other than filling in particulars wherever called for in the formats of the Tender Specifications shall be made in the Bid. Any changes/modifications made by the Bidder in Bid documents itself shall not be taken into consideration.
3. If at any later date, it is found that documents, information, averments and data submitted by the bidder in the Bid, based on which the Bidder has been considered eligible or successful or has been awarded the Contract is incorrect or false to the extent that had the correct or true information been made available to the Owner at time of tender evaluation, the Bid would have been declared ineligible or unsuccessful, the Bidder shall be forthwith disqualified or, as the case may be, the Contract awarded based on such incorrect or false information shall be cancelled and the Bid Guarantee / contract performance Guarantees deposited shall be appropriated by the Owner towards Owner’s cost, loss and damage to Owner.

2.29 Blacklisting/Debaring

In case, certificates submitted by the Bidders are found to be a forged/untrue, the Bidder will not only be disqualified for this tender but also would be black listed/debarred by the Owner.

2.30 Award of Contract

1. Award Criteria
 - The Owner will award the contract to the successful Bidder whose Techno-commercial bid has been determined to be substantially responsive and Price Bid to be the lowest evaluated bid, further provided that the Bidder is determined to be qualified to perform the contract satisfactorily.
 - The Owner reserves the right to vary the quantity of any of the Items / Spares and / or delete any Item / Spares altogether at the time of Award of Contract.
2. Owner's Right to Accept Any Bid and to Reject Any or All Bids

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 16-	30.09.2015

The Owner reserves the right to accept or reject any bid, for any reasons including National defense and security consideration and to annul the bidding process and to reject all bids at any time prior to award of contract, without thereby incurring any liability to the affected Bidder or bidders or any obligation to inform the affected Bidder or bidders of the grounds for the Owner's action.

3. Notification of Award

Prior to the expiration of the period of bid validity, the Owner will notify the successful Bidder in writing by registered letter (Letter of Award or LOA) or by email to be confirmed in writing by registered letter, that its bid has been accepted. The notification of award will constitute the formation of the contract.

Upon the successful Bidder's furnishing of the performance securities the Owner will promptly notify each unsuccessful Bidder and will discharge its bid security.

4. Signing the Contract Agreement

At the same time as the Owner notifies the successful Bidder that its bid has been accepted, the Owner will send to the Bidder the Contract Agreement provided in the bidding documents, incorporating all agreements between the parties.

Within *[twenty-eight (28)]* days of receipt of the Contract Agreement, the successful Bidder / assignee of foreign bidder (if applicable) shall sign and date the Contract Agreement and return it to the Owner.

5. Corrupt or Fraudulent Practices

The Owner requires that Bidders, Contractors and Suppliers observe the highest standard of ethics during the procurement and execution of the contracts. In pursuance of this policy, the Owner:

- The Owner requires that Bidders, Contractors and Suppliers observe the highest standard of ethics during the procurement and execution of the contracts. In pursuance of this policy, the Owner :
 - "corrupt practice" means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution; and
 - "fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Owner, and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Owner of the benefits of free and open competition;
- will reject a proposal for award if it determines that the Bidder recommended for award has engaged in corrupt or fraudulent practices in competing for the contract in question;
- Will declare a firm ineligible, either indefinitely or for a stated period of time, to be awarded a contract if it at any time determines that the firm has engaged in corrupt or fraudulent practices in competing for or in executing a contract of the Owner.

6. Fraud Prevention Policy

The Bidder along with its associate/collaborator/sub-contractors/sub-vendors/consultants/service providers shall strictly adhere to the Fraud Prevention Policy of Owner displayed on its tender website and shall immediately apprise the Owner about any fraud or suspected fraud as soon as it comes to their notice. A certificate to this effect shall be furnished by the bidder along with his bid.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 17-	30.09.2015

2.31 Agency Commission

No Agency commission shall be payable under the Contract.

2.32 Contract Performance Bank Guarantee (CPBG)

As a Contract security, the successful Bidder, to whom the work is awarded, shall be required to furnish a Contract Performance Bank Guarantee (CPBG) in the Format attached as Annexure- G, in favour of the Owner within 30 days from the date of issue of Letter of Award (LOA). The guarantee amount shall be equal to ten percent (10%) of the 'Contract Price' and it shall guarantee the faithful performance of the 'Contract' in accordance with the terms and conditions specified in these documents and specifications. The CPG shall be valid till the end of 'Warranty Period' plus Ninety (90) days grace period. If the contract price is in more than one currency, CPBG shall be 10% of respective currency.

If the bidder is a joint venture of two firms who collectively meet the Qualifying Requirement, in addition to the Contract Performance Guarantee (CPBG) of 10% furnished by the bidder, each of the JV partner shall furnish Additional Contract Performance Guarantee equal to 1% of Contract Price. To clarify further, in such a case, the value of Contract Performance Bank Guarantee furnished by the Bidder and Additional Contract Performance Bank Guarantee furnished by the JV partners taken together shall be 12% of the Contract Price.

If the bidder is a Consortium of two firms, in addition to the Contract Performance Guarantee (CPBG) of 10% furnished by the Consortium Leader, the other consortium member will furnish Additional Contract Performance Bank Guarantee equal to 2% of Contract Price. To clarify further, in such a case, the value of Contract Performance Bank Guarantee furnished by the Bidder (Consortium Leader) and Additional Contract Performance Bank Guarantee furnished by the other consortium member taken together shall be 12% of the Contract Price.

In case of a successful foreign bidder, if the Owner accepts to enter into the Second Contract and / or Third Contract with the assignee, then, within Thirty (30) days after receipt of Letter of Award, the assignee shall furnish an additional Contract Performance Bank Guarantee for five percent (5%) of the value of the Contract entered into with the assignee (i.e. for five percent of aggregate value of component Contract(s) entered into with the assignee).

2.33 Contract Quality Assurance

1. The Bidder shall include in his Bid a detailed Quality Assurance Programme containing the overall quality, management and procedures which he proposes to follow in the performance of the 'Works' during various phases.
2. After Letter of Award (LOA) the detailed Quality Assurance Programme to be followed for the execution of the 'Contract' will be mutually discussed and agreed to and such agreed Programme shall form a part of the 'Contract'.

2.34 Codes & Standards

Specifications give reference to Indian or internationally accepted Standards. However, equipment or materials meeting other recognized National or International Standards, which ensure an equal or superior quality than Standards specified, will also be accepted. For details of codes and standards refer Technical specification, Volume-II.

2.35 Vital Clauses

The following clauses in the Tender Specification & Draft Contract are vital. Bidder is advised not to take deviations to these clauses. If deviations are taken from the stipulations of these clauses, such Bids would be liable for rejection:

- Scope of Work
- Time Schedule
- Price Basis
- Contract Performance Guarantee
- Warranty
- Liquidated Damages
- Force Majeure
- Arbitration
- Taxes & Duties
- Bid Guarantee
- Patents, Indemnity
- Validity of Bids

4 GENERAL CONDITIONS OF CONTRACT (GCC)

4.1 Definitions

- i. **"Applicable Laws"** means the laws of any national, state, local or municipal legislature in India, or of any other Competent Authority, including all laws, acts, judgments, statutes, rules, regulations, ordinances, orders, decrees, injunctions, governmental authorizations, requirements of Applicable Permits and any agreements, decisions, acts, instructions, requirements, directions and notifications of any competent or other Competent Authority or court or tribunal or arbitrator having jurisdiction over the matter in question, including those related to taxes, assessments, expropriation and duties, or authoritative interpretation, as amended, modified, enacted, reinterpreted or revised from time to time hereafter.
- ii. **"Applicable Permits"** means all permits, licenses, authorizations, consents, decrees, waivers, privileges, acknowledgements, concessions, approvals, rulings, decisions and visas from, filings with or applications submitted to, any Competent Authority or court or tribunal of competent jurisdiction necessary from time to time for or in relation to the performance of the Works, including as detailed in this GCC.
- iii. **"Agreement"** means the Contract Agreement (entitled "Contract Agreement") executed by the parties to which these Conditions are annexed and also includes supplements & amendments to the Contract Agreement.
- iv. **"Contract"** means the Agreement entered into between Owner and Contractor as per the 'Contract Agreement' signed by the parties, including contract documents, contract schedule, all attachments and appendices thereto and all documents incorporated by reference therein.
- v. **"Contract Documents"** means the complete documents, which are the basis of finalization of the contract, including correspondence exchanged from issue of tender till date of signing the contract. All such documents shall be listed in the Contract Agreement.
- vi. **"Contractor's Equipment"** means all plant, facilities, equipment, machinery, tools, apparatus, appliances or things of every kind required in or for installation, completion and maintenance of Facilities that are to be provided by the Contractor, but does not include Plant and Equipment, or other things intended to form or forming part of the Facilities.
- vii. **"Contractor"** means the person(s), Firm or a Company whose bid to perform the Contract has been accepted by the Owner and shall be named as such in the Contract Agreement, and includes the legal successors or permitted assigns of the Contractor.
- viii. **"Contract Price"** means any sum or sums finally accepted by the Owner for the execution of this contract, subject to such additions and adjustments thereto or deductions there from, as may be made pursuant to the Contract.
- ix. **"Contractor's Representative"** means any person nominated by the Contractor & approved by the Owner hereof to perform the duties delegated by the Contractor.
- x. **"Consulting Engineer"** means Owner's Engineer appointed by the Owner. Also refers to any other firm(s) or person(s) as may be appointed by the Owner from time to time.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 21-	30.09.2015

- xi. **“Commissioning”** means the construction of plant and equipment for operation of the Facility at rated capacity are complete and the plant and equipment achieves the designated full load/full capacity, at designated fuel/input.
- xii. **“Completion”** means that the Facilities (or a specific part thereof where specific parts are agreed) have been completed operationally and structurally and put in a tight and clean condition, and that all work in respect of pre-commissioning of the Facilities or such specific part thereof has been completed and commissioning has been attained as per Technical Specifications.
- xiii. **“Competent Authority”** means any agency, authority, department, inspectorate, ministry or statutory person (whether autonomous or not) of GOI, [Name of the State], Ministry of Environment and Forests (MoEF) any other State of the Republic of India or any local authority.
- xiv. **“Day”** means calendar day of the Gregorian calendar.
- xv. **“Defect Liability Period”** means the period of validity of the warranties given by the Contractor, commencing at completion of the Facilities or a part thereof, during which the Contractor is responsible for defects with respect to the Facilities.
- xvi. **“Effective Date”** means the date from which the Time for Completion of the facilities and other milestones for execution of the Renovation & Modernization work as per the scope of work under this tender by the Contractor shall be determined.
- xvii. **“Erection Services”** means those entire services ancillary to the supply of the plant and equipment for the Facilities, to be provided by the Contractor under the Contract. e.g. transportation and provision of marine or other similar insurance, inspection, expediting, site preparation works (including the provision and use of Contractor's Equipment and the supply of all construction materials required), installation, testing, Pre-commissioning, commissioning, operations, maintenance, the provision of operations and maintenance manuals, training of Owner's Personnel etc.
- xviii. **“Facilities”** means the plant and equipment to be supplied and installed, as well as all the Installation Services to be carried out by the Contractor under the Contract.
- xix. **“Force Majeure”** means mean any event beyond the reasonable control of the Owner or of the Contractor, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected.
- xx. **“GCC”** means the General Conditions of Contract hereof.
- xxi. **“Good Industry Practice”** means the exercise of that degree of skill, diligence and prudence which would reasonably and ordinarily be expected from a skilled and experienced Contractor, equipment manufacturer or operator applying the standards generally adopted by global Contractors, global equipment manufacturers and operators in the construction or operation of power generation facilities or the manufacture of equipment therefore, except in so far as inconsistent with any applicable Indian law or directive.
- xxii. **“Guarantee Test(s)”** means the test(s) specified in the Technical Specifications to be carried out to ascertain whether the Facilities or a

specified part thereof is able to attain the Functional/Performance Guarantees specified in the Technical Specification.

- xxiii. **"Incoterms"** means International rules for interpreting trade terms published by the International Chamber of Commerce (latest edition), Paris (France). Unless inconsistent with any provisions of the contract, the meaning of any trade term and the rights and obligations of the parties there under shall be as prescribed by Incoterms.
- xxiv. **"Inspector/Inspecting Engineer"** means the Owner or any person nominated by the Owner from time to time, to inspect the equipment of works under the contract and/or the duly authorized representative of the Owner.
- xxv. **"Latent Defect"** means the defects inherent in the material or arising out of design deficiency which does not manifest itself during the Warranty Period/Defect Liability Period, as described in this GCC.
- xxvi. **"Letter of Intent (LOI)/Letter of Award (LOA)"** means the official letter issued by the Owner notifying the Contractor that its Bid Proposal has been accepted.
- xxvii. **"Month"** means calendar month of the Gregorian calendar.
- xxviii. **"Manufacturer's Works" or "Contractor's Works"** means the place used by the Contractor, its manufacturer, supplier, collaborators or sub-contractors/vendors/sub-vendors for the performance of the works.
- xxix. **"Operational Acceptance"** means the acceptance by the Owner of the Facilities (or any part of the Facilities where the Contract provides for acceptance of the Facilities in parts), which certifies the Contractor's fulfillment of the Contract in respect of performance guarantees of the Facilities.
- xxx. **"Owner" or "Purchaser"** shall means the [Name of the Utility], , and includes its legal successors or permitted assignees.
- xxxi. **"Person"** means any natural person, firm, corporation, company, voluntary association, partnership, joint venture, trust, and incorporated organization, unincorporated organization, Competent Authority or other entity.
- xxxii. **"Pre-commissioning"** means the testing, checking and other requirements specified in the Technical specifications that are to be carried out by the Contractor in preparation for commissioning.
- xxxiii. **"Project"** means the Owner's [-----] in respect of which the Contract has been signed.
- xxxiv. **"Project Consultant" or "Owner's Consultant"** means the engineering firm or person(s) appointed by the Owner to render engineering project consultancy services for the project.
- xxxv. **"Project Manager"** means the person appointed by the Owner thereof and named as such, to perform the duties delegated by the Owner.
- xxxvi. **"Plant and Equipment"** means permanent plant, equipment, systems, machinery, apparatus, articles and things of all kinds to be provided and incorporated in the Facilities by the Contractor under the Contract (including the spare parts to be supplied by the Contractor under the Contract Agreement), but does not include Contractor's Equipment.
- xxxvii. **"SCC"** means the Special Conditions of Contract hereof.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 23-	30.09.2015

- xxxviii. **"Site"** means the land and other places upon which the Facilities are to be installed, and such other lands or places as may be specified in the Contract as forming part of the Site.
- xxxix. **"Sub Contractor", including "Vendors/Sub-Vendors"**, means any firm or person to whom execution of any part of the Facilities, including preparation of any design or supply of any plant and equipment is subcontracted directly or indirectly by the Contractor, and includes its legal successors or permitted assignees.
- xl. **"Tender Documents"** means the document, setting out a description and specification of the Works and statement of the technical and other standards to which the Works are to be performed including any modifications thereto made in accordance with the Conditions. This includes the technical & commercial specifications and other Tender Documents forming a part of the Contract and such other Schedules and drawings as may be mutually agreed upon.
- xli. **"Tenderer"/"Bidder"** means the Person(s), Firm/Company who has submitted its Bid Proposal in response to the bid invitation by the Owner, for the Project.
- xl.ii. **"Time for Completion"** means the time within which completion of the Facilities as a whole (or of a part of the Facilities where a separate time for completion of such part has been specified) is to be attained in accordance with the stipulations and provisions of the Contract.
- xl.iii. **"Warranty Period" or "Defect Liability Period"** means the period during which the Contractor shall remain liable for repair or replacement of any defective part of the works performed under the contract, free of cost.
- xl. iv. **"Work(s)"** means and includes the tasks of furnishing of equipment, labour & services, transport, handling, unloading and storage at site, civil construction and complete erection, testing, commissioning putting into satisfactory operation and completion of successful performance tests, reliability tests and any other guaranteed parameters as defined in the Contract, replacement, modification, repair of defective parts or equipment during warranty period and rectification of latent defects during latent defect period.
- xl. v. **"Writing" or "Written"** shall include any manuscript, type-written or printed statement, under or over signature and/or seal as the case may be.

When the words "Approved", "Subject to Approval", "Satisfactory", "Equal to", "Proper", "Requested", "As Directed", "Where Directed", "When Directed", "Determined by", "Accepted", "Permitted", or words and phrases of similar importance are used, the approval, judgment, direction, etc., is understood to be a function of the Owner. Words implying persons or the gender neutral pronoun 'it', shall include firms, companies, corporation, associations or body of individuals whether incorporated or not. Words implying masculine gender or singular number shall also include the feminine gender and plural number and vice-versa where the context so requires or permits.

Terms and expressions not herein defined shall have the same meaning as are assigned to them in the Indian Sale of Goods Act (1930), failing that in the Indian Contract Act (1872) and failing that in the General Clauses Act (1897) including amendments thereof, if any.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 24-	30.09.2015

4.2 Contract Documents

- a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.
- b) The Contract will be signed in three originals and the Contractor shall be provided with one signed original and the rest will be retained by the Owner.

4.3 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Notification of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender Drawing submitted by the contractor.
- vi. The bid & schedules/ attachment.

4.4 Interpretation

All Contract Documents, all correspondence and communications to be given, and all other documentation to be prepared and supplied under the Contract shall be written in English, and the Contract shall be construed and interpreted in accordance with English language.

The singular shall include the plural and the plural the singular, except where the context requires otherwise.

Unless inconsistent with any provision of the Contract, the meaning of any trade term and the rights and obligations of parties there under shall be as prescribed by Incoterms. Incoterms means latest edition of International Rules for Interpreting Trade Terms published by the International Chamber of Commerce Paris, France.

4.5 Construction of the Contract

The Contracts to be entered between the Owner and the Contractor shall be as under:

- 'First Contract' for CIF Supply of all Offshore Plant and Equipments and Materials including Mandatory Spares to be supplied from abroad.
- 'Second Contract' for Ex-Works Supply of all Plant and Equipments and Materials including Mandatory Spares of Indian origin.

'Third Contract' for providing all services i.e. Port Handling, Port Clearance and Port Charges for the imported goods, further Loading and Inland Transportation for Delivery at Site, Unloading, Storage, Handling at Site, Installation, Insurance, Testing and Commissioning including carrying out Guarantee Tests for all the Equipments supplied under the First Contract and the Second Contract and all other services specified in the Tender Documents. All the above Contracts will contain a cross-fall breach clause specifying that breach of one Contract will constitute breach of the other Contracts which will confer a right on the Owner to terminate the other Contracts also at the risk and the cost of the Contractor.

The foreign bidder, however, has the option, to be exercised as a part of its bid proposal, to propose an Assignee in its bid to execute the Second Contract and/or the Third Contract. Such foreign bidder shall furnish a written unequivocal consent (with Part-I Bid) of the proposed Assignee to work as independent Contractor on the terms

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 25-	30.09.2015

and conditions offered by the bidder For the scope of work envisaged by the foreign bidder, in its bid, to be executed by Assignee, the Assignee should have relevant/required capacity and experience of executing similar job. The bidder shall substantiate with relevant/required documents in the bid to establish capacity and experience of the Assignee.

If the foreign bidder has proposed an Assignee in its bid to execute the Second Contract and/or the Third Contract and has also furnished written unequivocal consent of the proposed Assignee to work as an independent Contractor on the terms and conditions offered by the bidder and if the Owner is satisfied with the capacity and experience of the Assignee proposed in the bid, the Owner will enter into the "Second Contract" and/or the "Third Contract" with the Assignee. However, if the Owner in its judgment does not find acceptable the Assignee proposed in the bid as its Contractor, then on the request of the Owner, the Bidder shall have option to propose an alternate Assignee on the same terms and conditions and cost as offered in its bid. In case the Assignee option is not exercised by the Bidder or if the Assignee fails to enter into Contract(s) with the Owner or if the Owner in its judgment does not find acceptance of the Assignee as its Contractor, then the foreign bidder shall be obliged to enter into and execute all the contracts envisaged to be entered upon this Tender with the Owner covering the entire scope of work envisaged in the Tender Documents on the same terms and conditions and cost as offered in its Bid.

If any foreign bidder has proposed an Assignee in his bid to execute the Second Contract and/or the Third Contract and has also furnished written unequivocal consent of the proposed Assignee to work as independent Contractor on the terms and conditions offered by the bidder and if the Owner is satisfied with capacity and experience of the Assignee, the Owner will enter into the 'Second Contract' and/or 'Third Contract' with the said Assignee. In case no Assignee has been proposed by the foreign bidder in his bid or if the Assignee fails to enter into the Second Contract and/or Third Contract with the Owner or if the Owner in its judgment does not find acceptance of the proposed Assignee as its Contractor, then the foreign bidder shall be obliged to enter into and execute all the three Contracts with the Owner.

If the Owner accepts to enter into Second Contract and/or Third Contract with the Assignee of foreign bidder, the said Assignee, in addition to the Contract Performance Securities to be provided by the foreign Contractor shall provide within [twenty eight (28)] days of Notification of Award, separate Contract Performance Bank Guarantee equivalent to ten percent (5%) of the value of the Contract(s) entered into with the Assignee for the due performance of the Contract, with an initial validity upto [ninety (90) days] beyond the scheduled Defects Liability Period.

The award of the separate Contracts shall not in any way dilute the responsibility of the Contractor for the successful completion of the Facilities as per Contract Documents and a breach in one Contract shall automatically be construed as a breach of the other Contract(s) which will confer a right on the Owner to terminate the other Contract(s) also at the risk and the cost of the Contractor.

4.6 Independent Contractor

The Contractor shall be an independent contractor performing the Contract. The Contract does not create any agency, partnership, joint venture or other joint relationship between the parties hereto.

Subject to the provisions of the Contract, the Contractor shall be solely responsible for the manner in which the Contract is performed. All employees, representatives or Subcontractors engaged by the Contractor in connection with the performance of the Contract shall be under the complete control of the Contractor and shall not be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 26-	30.09.2015

deemed to be employees of the Owner, and nothing contained in the Contract or in any subcontract awarded by the Contractor shall be construed to create any contractual relationship between any such employees, representatives or Subcontractors and the Owner.

4.7 Joint Venture or Consortium

If the Bidder/Contractor is a joint venture or consortium of two or more firms, all such firms shall be jointly and severally bound to the Owner for the fulfillment of the provisions of the Contract and the Bidder shall submit a letter of consent to this effect (with Part-I Bid) signed by all joint venture partners / consortium members. The joint venture/consortium partners shall designate one of such firms to act as a leader with authority to bind the joint venture or consortium. The composition or the constitution of the joint venture or consortium shall not be altered without the prior consent of the Owner.

4.8 Non-Waiver

No relaxation, forbearance, delay or indulgence by either party in enforcing any of the terms and conditions of the Contract or the granting of time by either party to the other shall prejudice, affect or restrict the rights of that party under the Contract, nor shall any waiver by either party of any breach of Contract operate as waiver of any subsequent or continuing breach of Contract. Any waiver of a party's rights, powers or remedies under the Contract must be in writing, must be dated and signed by an authorized representative of the party granting such waiver, and must specify the right and the extent to which it is being waived.

4.9 Severability

If any provision or condition of the Contract is prohibited or rendered invalid or unenforceable, such prohibition, invalidity or unenforceability shall not affect the validity or enforceability of any other provisions and conditions of the Contract.

4.10 Origin

"Origin" means the place where the materials, equipments and other supplies for the Facilities are mined, grown, produced or manufactured, and from which the services are provided.

4.11 Notices

All notices to be given under the Contract shall be in writing, and shall be sent by personal delivery, or post, or special courier, or telefax, or E-mail to the address of the relevant party indicated in the Contract.

Either party may change its postal address, telefax number, or E-mail address or addressee for receipt of such notices by ten (10) days' notice to the other party in writing

Notices shall be deemed to include any approvals, consents, instructions, orders and certificates to be given under the Contract.

4.12 Governing Laws

The Contract shall be governed by and interpreted in accordance with laws in force in India. The Courts of [.....] shall have exclusive jurisdiction in all matters arising under the Contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 27-	30.09.2015

4.13 Settlement Of Disputes

a) Mutual Consultation

If any differences/ dispute arises between the Owner and the Contractor in connection with or arising out of the Contract, before or after the termination, abandonment or breach of the Contract—the Owner & Contractor shall seek to resolve any such dispute or difference by mutual consultation. If the parties fail to resolve such a dispute or difference by mutual consultation, then the dispute shall be referred in writing by either party to the Arbitrator, with a copy to the other party.

b) Arbitration

Either Owner or the Contractor may, of its intention to commence arbitration, as to the matter in dispute, and no arbitration may be commenced unless such notice is given.

Any dispute, in respect of which a notice of intention to commence arbitration has been given, as above shall be finally settled by arbitration. Arbitration may be commenced prior to or after completion of the Facilities

Any dispute submitted by a party to arbitration shall be heard by an arbitration panel composed of three arbitrators, in accordance with the provisions set forth below.

The Owner and the Contractor shall each appoint one arbitrator, and these two arbitrators shall jointly appoint a third arbitrator, who shall chair the arbitration panel. If the two arbitrators do not succeed in appointing a third arbitrator within *[twenty eight (28)]* days after the latter of the two arbitrators has been appointed, the third arbitrator shall, at the request of either party, be appointed by the Appointing Authority for arbitrator is given below.

Appointing Authority for Arbitrator:

- President, Institution of Engineers in case of an Indian Contractor.
- President, International Chambers of Commerce, Paris in case of a Foreign Contractor.

If one party fails to appoint its arbitrator within *[forty-two (42)]* days after the other party has named its arbitrator, the party which has named an arbitrator may request the Appointing Authority to appoint the second arbitrator.

If for any reason an arbitrator is unable to perform its function, the mandate of the Arbitrator shall terminate in accordance with the provisions of applicable laws and a substitute shall be appointed in the same manner as the original arbitrator.

Arbitration proceedings as follows:-

- In case of a foreign contractor the arbitration proceeding shall be conducted in accordance with the United Nations Commission on International Trade Law (UNCITRAL) Arbitration Rules of 1976.
- In case of an Indian Contractor Adjudication/Arbitration proceedings shall be conducted in accordance with Indian Arbitration and Conciliation Act 1996
- In case of a foreign associate of the contractor, the arbitration proceedings shall be conducted in accordance with the United Nation Commission on International Trade Law (UNCITRAL) Arbitration Rules of 1976.

The Place for Arbitration shall be: *[New Delhi]*, India.

The language of arbitration shall be English.

LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 28-	30.09.2015

The decision of a majority of the arbitrators (or of the third arbitrator chairing the arbitration, if there is no such majority) shall be final and binding and shall be enforceable in any court of competent jurisdiction as decree of the court. The parties thereby waive any objections to or claims of immunity from such enforcement.

Notwithstanding any reference to the arbitration,

- the parties shall continue to perform their respective obligations under the Contract unless they otherwise agree
- The Owner shall pay the Contractor consideration due to the Contractor.

4.14 Scope of Facilities

- a) Unless otherwise expressly limited in the Technical Specifications, Facilities the Contractor's obligations cover the provision of all Plant and Equipments including spares and the performance of all Services required for design, manufacture (including procurement, quality assurance, construction, installation, associated civil works, Structural and others construction works, precommissioning and delivery) of the Plant and Equipment and the installation, commissioning, completion of facilities and performance testing of the Facilities in accordance with the plans, procedures, specifications, drawings, codes and any other documents as specified in the Technical Specifications. Such specifications include, but are not limited to, the provision of supervision and engineering services; the supply of labour, materials, equipment, spare parts and accessories; Contractor's Equipments; construction utilities and supplies; temporary materials, structures and facilities; transportation loading & unloading.
- b) The Contractor shall, unless specifically excluded in the Contract, perform all such work and/or supply all such items and materials not specifically mentioned in the Contract but that can be reasonably inferred from the Contract as being required for attaining Completion of the Facilities.

4.15 Time for Commencement and Completion

- a) The Contractor shall commence work on the scope of work under this Tender from the date of Letter of Award. Contractor shall thereafter proceed with the Facilities in accordance with the time schedule specified in SCC & detailed network schedule agreed & appended to the contract.
- b) The Contractor shall attain Completion of the Facilities (or of a part where a separate time for Completion of such part is specified in the Contract) within the time stated in the SCC subject to time extensions, the contractor is entitled under the contract conditions or time extension expressly grouted by the Owner.

4.16 Spare Parts

In addition to the supply of Mandatory Spare Parts included in the Contract, the Contractor agrees to supply other spare parts (recommended spares) required for the operation and maintenance of the Facilities for 3 years. However, the identity, specifications and quantities of such spare parts and the terms and conditions relating to the supply thereof are to be agreed between the Owner and the Contractor, and the price of such spare parts shall be that given in Price Schedule for recommended spares. The price of such spare parts shall include the purchase price therefor and other costs and expenses (including the Contractor's fees) relating to the supply of spare parts. The prices of recommended spares covered in price schedule shall be

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 29-	30.09.2015

valid for a period of six months after the date of Notification of Award of Main Equipment and Mandatory Spares.

- The Contractor shall supply the recommended spares at the same terms and conditions as are otherwise applicable to this Contract.
- All the spares for the equipment under the Contract will strictly conform to the Specification and other relevant documents and will be identical to the corresponding main equipment/components supplied under the Contract and shall be fully interchangeable.
- All the Mandatory Spares covered under the Contract shall be manufactured along with the main equipments as a continuous operation and the delivery of the spares will be affected along with the main equipments in a phased manner and the delivery would be completed by the respective dates for the various categories of equipment as per the agreed schedule. If order for the Recommended Spares has been placed with the Contractor prior to commencement of manufacture of the main equipment this shall be applicable for manufacturer of recommended spares as well.
- The Contractor will provide the Owner with the manufacturing drawings, catalogues, assembly drawings and any other document required by the for the recommended spares. Such details will be furnished to the Owner as soon as they are prepared but in any case not later than six months prior to commencement of manufacture of the corresponding main equipment.
- In addition to the spares recommended by the Contractor, if the Owner further identifies certain particular items of spares, the Contractor will submit the prices and delivery quotation for such spares within [30] days of receipt of such request with a validity period of 6 months for consideration by the Owner and placement of order for additional spares, if the Owner so desires.
- The quality plan and the inspection requirement finalised for the main equipment will also be applicable to the corresponding spares.
- The Contractor will provide the Owner with all the addresses and particulars of his sub-suppliers while placing the order on vendors for items/components/equipment covered under the Contract and will further ensure with his vendors that the Owner, if so desires, will have the right to place order for spares directly on them on mutually agreed terms based on offers of such vendors.
- The Contractor shall guarantee the long term availability of spares to the Owner for the full life of the equipment covered under the Contract. The same provision will also be applicable to spares supplied by Sub-contractors.
- For the first 6 years from the schedule date of completion of facilities the prices will be derived from the corresponding Ex-Works Price at which the order for such spares have been placed by Owner as a part of Mandatory Spares or Recommended Spares, or from the rates of Mandatory Spares or Recommended Spares as quoted by/negotiated with the Contractor. Ex-Works order price of future spares shall be computed in accordance with the price adjustment provisions covered under the main Contract excepting that the base indices will be counted from the scheduled date of Commissioning of the last equipment under the main project. The Contractor will indicate in advance the delivery period of the items of spares, which the Owner may procure in accordance with this clause. In case of emergent requirements of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 30-	30.09.2015

spares, the Contractor would make every effort to expedite the manufacture and delivery of such spares on the basis of mutually agreed time schedule.

- In case the Contractor fails to supply the mandatory or recommended spares in the terms stipulated above, the Owner shall be entitled to purchase the same from the alternate sources at the risk and the cost of the Contractor and recover from the Contractor, the excess amount paid by the Owner over the rates worked on the above basis. In the event of such risk purchase by the Owner, the purchases will be as per the Works and Procurement Policy of the Owner prevalent at the time of such purchases and the Owner at his option may include a representative from the Contractor in finalising the purchases.
- It is expressly understood that the final settlement between the parties in terms of relevant clauses of the Contract Documents shall not relieve the Contractor of any of his obligations under the provision of long term availability of spares and such provisions shall continue to be enforced till the expiry of 6 years period reckoned from the scheduled date of Commissioning of the Plant and Equipment unless otherwise discharged expressly in writing by the Owner.
- The Contractor shall warrant that all spares supplied will be new and in accordance with the Contract Documents and will be free from defects in design, material and workmanship. The defects liability period for spares shall be 12 months from the date it is put to use. In case of failure of any spare part due to fault in design material or workmanship the same part will be replaced by the contractor without any extra cost of the Owner.

In case of any failure in the original component/equipments due to faulty designs, materials and workmanship, the corresponding spare parts, if any, supplied will be replaced without any extra cost to the Owner unless a joint examination and analysis by the Owner and the Contractor of such spare parts prove that the defect found in the original part that failed, can safely be assumed not to be present in spare parts. Any replaced spare parts will have the Defects Liability period of 12 months from the date it is put in use. The discarded spare parts will become the property of the Contractor as soon as they have been replaced by the Contractor. In any case the defect liability of spares will expire at the end of 48 months from the date of their receipt at site

The Defects Liability of spares that are not used within 18 months from the respective date of the delivery at Site will, be subject to condition that all such spares are stored in accordance with Contractor's standard recommended practice, if any, and the same has been furnished to the Owner.

4.17 Contractor's Responsibilities

- a) The Contractor shall design, manufacture (including associated purchases and/or subcontracting), disassemble/dismantle wherever required, install, commission and complete the Facilities and carryout the Guarantee tests with due care and diligence in accordance with the Contract.
- b) Before entering into this contract the Contractor is responsible to have examined the data relating to the Facilities provided by the Owner, and on the basis of information that the Contractor could have obtained from a visual inspection of the Site and of other data readily available to it relating to the Facilities as at one month days prior to bid submission. Any failure to acquaint itself with all such data and information shall not relieve contractor of its responsibility for properly estimating the difficulty or cost of successfully performing its scope of work under this contract.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 31-	30.09.2015

- c) The Contractor shall acquire in its name all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings in the country where the Site is located that are necessary for the performance of the Contract, including, without limitation, visas for the Contractor's and Subcontractor's personnel and entry permits for all imported Contractor's Equipment.
- d) The Contractor shall comply with all laws in force in India and the place where the facility is located out. The laws will include all national, provincial, municipal or other laws that affect the performance of the Contract and bind upon the Contractor. The Contractor shall indemnify and hold harmless the Owner from and against any and all liabilities, damages, claims, fines, penalties and expenses of whatever nature arising or resulting from the violation of such laws by the Contractor.

4.18 Owner's Responsibilities

- a) The Owner shall be responsible for acquiring and providing legal and physical possession of the Site and access thereto, and for providing possession of and access to all other areas reasonably required for the proper execution of the Contract, including all requisite rights of way.
- b) The Owner shall acquire and pay for all permits, approvals and/or licenses from all local, state or national government authorities or public service undertakings, which such authorities or undertakings require the Owner to obtain them in the Owner's name, are necessary for the execution of the Contract.
- c) If requested by the Contractor, the Owner shall use its best endeavours to assist the Contractor in obtaining in a timely and expeditious manner all permits, approvals and/or licenses necessary for the execution of the Contract from all local, state or national government authorities or public service undertakings that such authorities or undertakings require the Contractor or Subcontractors or the personnel of the Contractor or Subcontractors, as the case may be, to obtain.
- d) The Owner shall be responsible for the continued operation of the Facilities after Completion.

4.19 Taxes & Duties

- a) Custom Duty, Excise Duty, Central sales tax (CST), service tax, Value Added Tax (VAT), VAT on Works Contract, other applicable taxes, duties and Cess shall be clearly indicated by the bidder in the price schedules and these taxes shall be considered for bid evaluation. The reimbursement of these taxes shall be on actual subject to the quoted value of these taxes as ceiling corresponding to the base price. Additional liability of taxes and duties arising out of price variation shall be reimbursed against documentary evidence over and above the ceiling (quoted value). Statutory variation in Indian taxes and duties will be dealt with as per the relevant stipulations of the specification. Except as otherwise specifically provided in the Contract, the Contractor shall bear and pay all Taxes, Duties, Levies and Charges including Entry Tax, Service Tax, if applicable in connection with the Facilities in India and outside India. All taxes, duties & levies on works contract, if any, shall be to the Contractor's account and no separate claim in this regard will be entertained by the Owner.
- b) All taxes, duties and levies including entry tax/octroi (if any) in respect of all components, equipments and material to be dispatched directly from the sub-

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 32-	30.09.2015

vendor's works to site shall be to the Contractor's account and no separate claim in this regard will be entertained by the Owner.

- c) In case there is introduction of GST or any other tax in lieu of existing Excise Duty/Service Tax and VAT/ Sales Tax, the contract price will be adjusted for the impact of any differential tax liability subject to documentary evidence. This will be restricted to direct transaction between the owner and contractor, and bought out items directly dispatched from sub-vendor's works to project site.
- d) Further all taxes, duties and levies including sales tax on works contract, Entry Tax, if any, in respect of civil construction works, erection & commissioning if any and custom duty/sales tax as applicable on the materials used for such construction works shall be to the contractor's account and no separate claim in this regard will be entertained by the Owner. Incidence of Service Tax & cess on any component of the Bid Price shall be to the Contractor's account and bidders shall include Service Tax as applicable at the date seven (7) days prior to the date of bid submission in the bid price. The Contract Price will be adjusted for impact of any change in the rate of service tax or cess on service tax subsequent to this date for direct transactions between the Owner and the Contractor.
- e) If any tax exemptions, reductions, allowances or privileges may be available to the Contractor, the Owner shall use its best endeavours to enable the Contractor to benefit from any such tax savings to the maximum allowable extent.

4.20 Intellectual Property

The copyright in all drawings, documents and other materials containing data and information furnished to the Owner by the Contractor herein shall remain vested in the Contractor or, if they are furnished to the Owner directly or through the Contractor by any third party, including suppliers of materials, the copyright in such materials shall remain vested in such third party. The Owner shall however be free to reproduce all drawings, documents and other material furnished to the Owner for the purpose of the contract including, if required, for operation and maintenance.

4.21 Confidential Information

- a) The Owner and the Contractor shall keep confidential and shall not, without the written consent of the other party hereto, divulge to any third party any documents, data or other information furnished directly or indirectly by the other party hereto in connection with the Contract, whether such information has been furnished prior to, during or following termination of the Contract. Notwithstanding the above, the Contractor may furnish to its Subcontractor(s) such documents, data and other information it receives from the Owner to the extent required for the Subcontractor(s) to perform its work under the Contract, in which event the Contractor shall obtain from such Subcontractor(s) an undertaking of confidentiality similar to that imposed on the Contractor.
- b) The Owner shall not use such documents, data and other information received from the Contractor for any purpose other than the operation and maintenance of the Facilities. Similarly, the Contractor shall not use such documents, data and other information received from the Owner for any purpose other than the design, procurement of Plant and Equipments, construction or such other work and services as are required for the performance of the Contract.
- c) The obligation of a party, shall not apply to that information which
 - now or hereafter enters the public domain through no fault of that party

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 33-	30.09.2015

- can be proven to have been possessed by that party at the time of disclosure and which was not previously obtained, directly or indirectly, from the other party hereto
- Otherwise lawfully becomes available to that party from a third party that has no obligation of confidentiality.

4.22 Representatives

a) Project Manager

If the Project Manager is not named in the Contract, then within fourteen (14) days of the Effective Date, the Owner shall appoint and notify the Contractor in writing of the name of the Project Manager. The Owner may from time to time appoint some other person as the Project Manager in place of the person previously so appointed, and shall give a notice of the name of such other person to the Contractor without delay. The Owner shall take reasonable care to see that no such appointment is made at such a time or in such a manner as to impede the progress of work on the Facilities. The Project Manager shall represent and act for the Owner at all times during the currency of the Contract. All notices, instructions, orders, certificates, approvals and all other communications under the Contract shall be given by the Project Manager, except as herein otherwise provided.

All notices, instructions, information and other communications given by the Contractor to the Owner under the Contract shall be given to the Project Manager, except as herein otherwise provided.

b) Contractor's Representative & Construction Manager

- If the Contractor's Representative is not named in the Contract, then within *[fourteen (14) days]* of the Effective Date, the Contractor shall appoint the Contractor's Representative and shall request the Owner in writing to approve the person so appointed. If the Owner makes no objection to the appointment within *[fourteen (14)]* days, the Contractor's Representative shall be deemed to have been approved. If the Owner objects to the appointment within *[fourteen (14)]* days giving the reason there for, then the Contractor shall appoint a replacement within *[fourteen (14) days]* of such objection.
- The Contractor's Representative shall represent and act for the Contractor at all times during the currency of the Contract and shall give to the Project Manager all the Contractor's notices, instructions, information and all other communications under the Contract. All notices, instructions, information and all other communications given by the Owner or the Project Manager to the Contractor under the Contract shall be given to the Contractor's Representative or, in its absence, its deputy, except as herein otherwise provided. The Contractor shall not revoke the appointment of the Contractor's Representative without the Owner's prior written consent, which shall not be unreasonably withheld. If the Owner consents thereto, the Contractor shall appoint some other person as the Contractor's Representative.
- The Contractor's Representative may, subject to the approval of the Owner (which shall not be unreasonably withheld), at any time delegate to any person any of the powers, functions and authorities vested in him or her. Any such delegation may be revoked at any time. Any such delegation or revocation shall be subject to a prior notice signed by the Contractor's Representative, and shall specify the powers, functions and authorities thereby delegated or revoked. No such delegation or revocation shall take

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 34-	30.09.2015

effect unless and until a copy thereof has been delivered to the Owner and the Project Manager.

- From the commencement of installation of the Facilities at the Site until Operational Acceptance, the Contractor's Representative shall appoint a suitable person as the construction manager (hereinafter referred to as "the Construction Manager"). The Construction Manager shall supervise all work done at the Site by the Contractor and shall be present at the Site throughout normal working hours except when on leave, sick or absent for reasons connected with the proper performance of the Contract. Whenever the Construction Manager is absent from the Site, a suitable person shall be appointed to act as his or her deputy.
- The Owner may by notice to the Contractor object to any representative or person employed by the Contractor in the execution of the Contract who, in the reasonable opinion of the Owner, may behave inappropriately, may be incompetent or negligent, or may commit a serious breach of the Site regulations.
- If any representative or person employed by the Contractor is removed.

4.23 Work Program

a) Contractor's Organization

The Contractor shall supply to the Owner and the Project Manager a chart showing the proposed organization to be established by the Contractor for carrying out work on the Facilities. The chart shall include the identities of the key personnel together with the curricula vitae of such key personnel to be employed within **[twenty one (21)]** days of the Effective Date. The Contractor shall promptly inform the Owner and the Project Manager in writing of any revision or alteration of such an organization chart.

b) Program of Performance

Within **[twenty-eight (28)]** days after the date of Notification of Award of Contract, the Contractor shall prepare and submit to the Project Manager a detailed Program of Performance of the Contract, made in the form specified in the SCC and showing the sequence in which it proposes to design, supply, transport, assemble, install and precommissioning the Facilities, as well as the date by which the Contractor reasonably requires that the Owner shall have fulfilled its obligations under the Contract so as to enable the Contractor to execute the Contract in accordance with the program and to achieve Completion and Acceptance of the Facilities in accordance with the Contract. The program so submitted by the Contractor shall accord with the Time Schedule included in Appendix 4 (Time Schedule) to the Form of Contract Agreement and any other dates and periods specified in the Contract. The Contractor shall update and revise the program as and when appropriate or when required by the Project Manager, but without modification in the Times for Completion.

c) Progress Report

The Progress Report shall be in a form acceptable to the Project Manager and shall indicate: (a) percentage completion achieved compared with the planned percentage completion for each activity; and (b) where any activity is behind the program, giving comments and likely consequences and stating the corrective action being taken.

d) Progress of Performance

If at any time the Contractor's actual progress falls behind the program, or it becomes apparent that it will so fall behind, the Contractor shall, at the request of the Owner or

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 35-	30.09.2015

the Project Manager, prepare and submit to the Project Manager a revised program, taking into account the prevailing circumstances, and shall notify the Project Manager of the steps being taken to expedite progress so as to attain Completion of the Facilities within the Time for Completion.

e) **Work Procedures**

The Contract shall be executed in accordance with the Contract Documents and the procedures given in the section on Forms and Procedures of the Contract Documents.

If agreed between the Owner and the Contractor, the Contractor may execute the Contract in accordance with its own standard project execution plans and procedures to the extent that they do not conflict with the provisions contained in the Contract.

4.24 Subcontracting

- a) The Contract Agreement specifies major items of supply or services and a list of approved Subcontractors against each item, including vendors. Insofar as no Subcontractors are listed against any such item, the Contractor shall prepare a list of Subcontractors for such item for inclusion in such list. The Contractor may from time to time propose any addition to or deletion from any such list. The Contractor shall submit any such list or any modification thereto to the Owner for its approval in sufficient time so as not to impede the progress of work on the Facilities. Such approval by the Owner for any of the Subcontractors shall not relieve the Contractor from any of its obligations, duties or responsibilities under the Contract.
- b) The Contractor shall select and employ its Subcontractors/Subvendors for such major items from those listed.

4.25 Design and Engineering

a) **Specifications and Drawings**

The Contractor shall execute the basic and detailed design and the engineering work in compliance with the provisions of the Contract, or where not so specified, in accordance with good engineering practice. The Contractor shall be responsible for any discrepancies, errors or omissions in the specifications, drawings and other technical documents that it has prepared, whether such specifications, drawings and other documents have been approved by the Project Manager or not, provided that such discrepancies, errors or omissions are not because of inaccurate information furnished in writing to the Contractor by or on behalf of the Owner.

b) **Codes and Standards**

Wherever references are made in the Contract to codes and standards in accordance with which the Contract shall be executed, the edition or the revised version of such codes and standards current at the date *[twenty eight (28)]* days prior to date of bid submission shall apply unless otherwise specified. During Contract execution, any changes in such codes and standards shall be applied after approval by the Owner.

c) **Approval/Review of Technical Documents by Project Manager**

The Contractor shall prepare (or cause its Subcontractors to prepare) and furnish to the Project Manager the documents for its approval Any part of the Facilities covered by or related to the documents to be approved by the Project Manager shall be executed only after the Project Manager's approval thereof.

Project Manager shall either return one copy thereof to the Contractor with its approval endorsed thereon or shall notify the Contractor in writing of its disapproval

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 36-	30.09.2015

thereof and the reasons there for and the modifications that the Project Manager proposes. The Project Manager shall not disapprove any document, except on the grounds that the document does not comply with some specified provision of the Contract or that it is contrary to good engineering practice. The procedure for submission of the documents by the Contractor and their approval by the Project Manager shall be discussed and finalised with the Contractor.

If any dispute or difference occurs between the Owner and the Contractor in connection with or arising out of the disapproval by the Project Manager of any document and/or any modification(s) thereto that cannot be settled between the parties within a reasonable period, then such dispute or difference may be referred to an Adjudicator. If such dispute or difference is referred to an Adjudicator, the Project Manager shall give instructions as to whether and if so, how, performance of the Contract is to proceed. The Contractor shall proceed with the Contract in accordance with the Project Manager's instructions, provided that if the Adjudicator upholds the Contractor's view on the dispute, then the Contractor shall be reimbursed by the Owner for any additional costs incurred by reason of such instructions and shall be relieved of such responsibility or liability in connection with the dispute and the execution of the instructions as the Adjudicator shall decide, and the Time for Completion shall be extended accordingly.

The Project Manager's approval, with or without modification of the document furnished by the Contractor, shall not relieve the Contractor of any responsibility or liability imposed upon it by any provisions of the Contract except to the extent that any subsequent failure results from modifications required by the Project Manager.

4.26 Procurement

a) Plant and Equipment

The Contractor shall manufacture or procure and transport all the Plant and Equipments in an expeditious and orderly manner to the Site.

b) Transportation

The Contractor shall at its own risk and expense transport all the Plant and Equipments and the Contractor's Equipments to the Site by the mode of transport that the Contractor judges most suitable under all the circumstances. Unless otherwise provided in the Contract, the Contractor shall be entitled to select any safe mode of transport operated by any person to carry the Plant and Equipments and the Contractor's Equipment. Upon dispatch of each shipment of the Plant and Equipments and the Contractor's Equipments, the Contractor shall notify the Owner by telex, cable, telefax, facsimile or Electronic Data Interchange (EDI) of the description of the Plant and Equipments and of the Contractor's Equipments, the point and means of dispatch, and the estimated time and point of arrival in the country where the Site is located, if applicable, and at the Site. The Contractor shall furnish the Owner with relevant shipping documents to be agreed upon between the parties.

The Contractor shall be responsible for obtaining, if necessary, approvals from the authorities for transportation of the Plant and Equipments and the Contractor's Equipments to the Site. The Owner shall use its best endeavours in a timely and expeditious manner to assist the Contractor in obtaining such approvals, if requested by the Contractor. The Contractor shall indemnify and hold harmless the Owner from and against any claim for damage to roads, bridges or any other traffic facilities that may be caused by the transport of the Plant and Equipments and the Contractor's Equipments to the Site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 37-	30.09.2015

- c) The Contractor shall, at its own expense, handle all imported Plant and Equipments and spares and Contractor's Equipments at the point(s) of import and shall handle any formalities for customs clearance

4.27 Installation

a) Setting Out/Supervision/Labor

Bench Mark: The Contractor shall be responsible for the true and proper setting-out of the Facilities in relation to bench marks, reference marks and lines provided to it in writing by or on behalf of the Owner.

If, at any time during the progress of installation of the Facilities, any error shall appear in the position, level or alignment of the Facilities, the Contractor shall forthwith notify the Project Manager of such error and, at its own expense, immediately rectify such error to the reasonable satisfaction of the Project Manager. If such error is based on incorrect data provided in writing by or on behalf of the Owner, the expense of rectifying the same shall be borne by the Owner.

Contractor's Supervision: The Contractor shall give or provide all necessary superintendence during the installation of the Facilities, and the Construction Manager or its deputy shall be constantly on the Site to provide full time superintendence of the installation. The Contractor shall provide and employ only technical personnel who are skilled and experienced in their respective callings and supervisory staff who are competent to adequately supervise the work at hand.

The Contractor shall provide and employ on the Site in the installation of the Facilities such skilled, semi-skilled and unskilled labor as is necessary for the proper and timely execution of the Contract. The Contractor is encouraged to use local labour that has the necessary skills. Unless otherwise provided in the Contract, the Contractor shall be responsible for the recruitment, transportation, accommodation and catering of all labour, local or expatriate, required for the execution of the Contract and for all payments in connection therewith.

The Contractor shall at its own expense provide the means of repatriation to all of its and its Subcontractor's personnel employed on the Contract at the Site to their various home countries. It shall also provide suitable temporary maintenance of all such persons from the cessation of their employment on the Contract to the date programmed for their departure. In the event that the Contractor defaults in providing such means of transportation and temporary maintenance, the Owner may provide the same to such personnel and recover the cost of doing so from the Contractor.

The Contractor shall, in all dealings with its labour and the labor of its Subcontractors currently employed on or connected with the Contract, pay due regard to all recognized festivals, official holidays, religious or other customs and all local laws and regulations pertaining to the employment of labor.

b) Contractor's Equipments

All Contractors' Equipments brought by the Contractor onto the Site shall be deemed to be intended to be used exclusively for the execution of the Contract. The Contractor shall not remove the same from the Site without the Project Manager's consent that such Contractor's Equipments are no longer required for the execution of the Contract. Unless otherwise specified in the Contract, upon completion of the Facilities, the Contractor shall remove from the Site all Equipments brought by the Contractor onto the Site and any surplus materials remaining thereon.

The Owner will, if requested, use its best endeavours to assist the Contractor in obtaining any local, state or national government permission required by the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 38-	30.09.2015

Contractor for the export of the Contractor's Equipments imported by the Contractor for use in the execution of the Contract that is no longer required for the execution of the Contract.

c) Site Regulations and Safety

The Owner and the Contractor shall establish Site regulations setting out the rules to be observed in the execution of the Contract at the Site and shall comply therewith. The Contractor shall prepare and submit to the Owner, with a copy to the Project Manager, proposed Site regulations for the Owner's approval, which approval shall not be unreasonably withheld.

Such Site regulations shall include, but shall not be limited to, rules in respect of security, safety of the Facilities, gate control, sanitation, medical care, and fire prevention.

d) Opportunities for Other Contractors

The Contractor shall, upon written request from the Owner or the Project Manager, give all reasonable opportunities for carrying out the work to any other contractors employed by the Owner on or near the Site. If the Contractor, upon written request from the Owner or the Project Manager, makes available to other contractors any roads or ways the maintenance for which the Contractor is responsible, permits the use by such other contractors of the Contractor's Equipments, or provides any other service of whatsoever nature for such other contractors, the Owner shall fully compensate the Contractor for any loss or damage caused or occasioned by such other contractors in respect of any such use or service, and shall pay to the Contractor reasonable remuneration for the use of such equipments or the provision of such services.

The Contractor shall also so arrange to perform its work as to minimize, to the extent possible, interference with the work of other contractors. The Project Manager shall determine the resolution of any difference or conflict that may arise between the Contractor and other contractors and the workers of the Owner in regard to their work.

The Contractor shall notify the Project Manager promptly of any defects in the other Contractors' work that come to its notice, and that could affect the Contractor's work. The Project Manager shall determine the corrective measures, if any, required to rectify the situation after inspection of the Facilities. Decisions made by the Project Manager shall be binding on the Contractor.

e) Emergency Work

If, by reason of an emergency arising in connection with and during the execution of the Contract, any protective or remedial work is necessary as a matter of urgency to prevent damage to the Facilities, the Contractor shall immediately carry out such work.

If the Contractor is unable or unwilling to do such work immediately, the Owner may do or cause such work to be done as the Owner may determine is necessary in order to prevent damage to the Facilities. In such event the Owner shall, as soon as practicable after the occurrence of any such emergency, notify the Contractor in writing of such emergency, the work done and the reasons there for. If the work done or caused to be done by the Owner is work that the Contractor was liable to do at its own expense under the Contract, the reasonable costs incurred by the Owner in connection therewith shall be paid by the Contractor to the Owner. Otherwise, the cost of such remedial work shall be borne by the Owner.

f) Site Clearance

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 39-	30.09.2015

Site Clearance in Course of Performance: In the course of carrying out the Contract, the Contractor shall keep the Site reasonably free from all unnecessary obstruction, store or remove any surplus materials, clear away any wreckage, rubbish or temporary works from the Site, and remove any Contractor's Equipments no longer required for execution of the Contract. **Clearance of Site after Completion:** After Completion of all parts of the Facilities, the Contractor shall clear away and remove all wreckage, rubbish and debris of any kind from the Site, and shall leave the Site and Facilities clean and safe.

g) Watching and Lighting

The Contractor shall provide and maintain at its own expense all lighting, fencing, and watching when and where necessary for the proper execution and the protection of the Facilities, or for the safety of the owners and occupiers of adjacent property and for the safety of the public as per specification.

4.28 Testing & Inspections

- a) The Contractor shall at its own expense carry out at the place of manufacture and/or on the Site all such tests and/or inspections of the Plant and Equipments and any part of the Facilities as are specified in the Contract.
- b) The Owner and the Project Manager or their designated representatives shall be entitled to attend the aforesaid test and/ or inspection, provided that the Owner shall bear all costs and expenses incurred in connection with such attendance including, but not limited to, all travelling and board and lodging expenses.
- c) Whenever the Contractor is ready to carry out any such test and/or inspection, the Contractor shall give a reasonable advance notice of such test and/or inspection and of the place and time thereof to the Project Manager. The Contractor shall obtain from any relevant third party or manufacturer any necessary permission or consent to enable the Owner and the Project Manager (or their designated representatives) to attend the test and/or inspection.
- d) The Contractor shall provide the Project Manager with a certified report of the results of any such test and/or inspection. If the Owner or Project Manager (or their designated representatives) fails to attend the test and/or inspection, or if it is agreed between the parties that such persons shall not do so, then the Contractor may proceed with the test and/or inspection in the absence of such persons, and may provide the Project Manager with a certified report of the results thereof.
- e) The Project Manager may require the Contractor to carry out any test and/or inspection not required by the Contract, provided that the Contractor's reasonable costs and expenses incurred in the carrying out of such test and/or inspection shall be added to the Contract Price. Further, if such test and/or inspection impede the progress of work on the Facilities and/or the Contractor's performance of its other obligations under the Contract, due allowance will be made in respect of the Time for Completion and the other obligations so affected.
- f) If any Plant and Equipment or any part of the Facilities fails to pass any test and/or inspection, the Contractor shall either rectify or replace such Plant and Equipment or part of the Facilities and shall repeat the test and/or inspection upon giving a notice.
- g) If any dispute or difference of opinion shall arise between the parties in connection with or arising out of the test and/or inspection of the Plant and Equipments or part of the Facilities that cannot be settled between the parties within a reasonable period of time, it may be referred to the Adjudicator.
- h) The Contractor shall afford the Owner and the Project Manager, at the Owner's expense, access at any reasonable time to any place where the Plant and

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 40-	30.09.2015

Equipments are being manufactured or the Facilities are being installed, in order to inspect the progress and the manner of manufacture or installation, provided that the Project Manager shall give the Contractor a reasonable prior notice.

- i) The Contractor agrees that neither the execution of a test and/ or inspection of Plant and Equipments or any part of the Facilities, nor the witnessing of any test by the Owner, nor the issuance of any test certificate shall relieve the Contractor of any obligation under this Contract.
- j) No part of the Facilities or foundations shall be covered up on the Site without the Contractor carrying out any test and/or inspection required under the Contract. The Contractor shall give a reasonable notice to the Project Manager whenever any such part of the Facilities or foundations is ready or about to be ready for test and/or inspection; such test and/or inspection and notice thereof shall be subject to the requirements of the Contract.
- k) The Contractor shall uncover any part of the Facilities or foundations, or shall make openings in or through the same as the Project Manager may from time to time require at the Site, and shall reinstate and make good such part or parts.

4.29 Completion of the Facilities

- a) As soon as the Facilities or any part thereof has, in the opinion of the Contractor, been completed operationally and structurally and put in a tight and clean condition as specified in the Technical Specifications, excluding minor items not materially affecting the operation or safety of the Facilities, the Contractor shall so notify the Owner in writing.
- b) The Owner shall supply the operating and maintenance personnel as specified in the Contract for Precomissioning of the Facilities or any part thereof.
- c) As soon as all works in respect of Precomissioning are completed and, in the opinion of the Contractor, the Facilities or any part thereof is ready for Commissioning, the Contractor shall commence Commissioning as per procedures stipulated in Technical Specifications, and as soon as Commissioning is satisfactorily completed, the Contractor shall so notify the Project Manager in writing.
- d) If the Project Manager notifies the Contractor of any defects and/ or deficiencies, the Contractor shall then correct such defects and/or deficiencies.

If the Project Manager is satisfied that the Facilities or that part thereof have reached Completion, the Project Manager shall, within **[seven (7)]** days after receipt of the Contractor's notice, issue a Completion Certificate stating that the Facilities or that part thereof have reached Completion as at the date of the Contractor's notice.

If the Project Manager is not so satisfied, then it shall notify the Contractor in writing of any defects and/or deficiencies within **[seven (7)]** days after receipt of the Contractor's notice, and the above procedure shall be repeated.

- e) If the Project Manager fails to issue the Completion Certificate and fails to inform the Contractor of any defects and/or deficiencies within **[seven (7)]** days after receipt of the Contractor's notice, or if the Owner makes use of the Facilities or part thereof, then the Facilities or that part thereof shall be deemed to have reached Completion as of the date of the Contractor's notice, or as of the Owner's use of the Facilities, as the case may be.
- f) As soon as possible after Completion, the Contractor shall complete all outstanding minor items so that the Facilities are fully in accordance with the requirements of the Contract, failing which the Owner will undertake such completion and deduct the costs thereof from any monies owing to the Contractor.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 41-	30.09.2015

- g) Upon Completion, the Owner shall be responsible for the care and custody of the Facilities or the relevant part thereof, together with the risk of loss or damage thereto, and shall thereafter take over the Facilities or the relevant part thereof.

4.30 Commissioning & Operation Acceptance

a) Commissioning

Commissioning of the Facilities or any part thereof Acceptance shall be completed by the Contractor as per procedures detailed in the Technical Specifications. The Contractor shall, unless otherwise specified in Contract/ Tender Specifications, supply the utilities, lubricants, chemicals, catalysts, facilities, services and other matters required for Commissioning.

b) Guarantee Test

The Guarantee Tests (and repeats thereof) shall be conducted by the Contractor after Commissioning of the Facilities or the relevant part thereof to ascertain whether the Facilities or the relevant part can attain the Functional Guarantees specified in the Contract Documents. The Contractor's and Project Manager's advisory personnel shall attend the Guarantee Test. The Owner shall promptly provide the Contractor with such information as the Contractor may reasonably require in relation to the conduct and results of the Guarantee Tests (and any repeats thereof). If for reasons not attributable to the Contractor, the Guarantee Tests of the Facilities or the relevant part thereof cannot be successfully completed within the period from the date of Completion, specified in the SCC or any other period agreed upon by the Owner and the Contractor, the Contractor shall be deemed to have fulfilled its obligations with respect to the Functional Guarantees.

c) Operational Acceptance

Operational Acceptance shall occur in respect of the Facilities or any part thereof when

- the Guarantee Tests have been successfully completed and the Functional Guarantees are met; or
- The Guarantee Tests have not been successfully completed or has not been carried out for reasons not attributable to the Contractor within the period from the date of Completion specified in the SCC or any other agreed upon period as specified in GCC.
- The Contractor may give a notice to the Project Manager requesting the issue of an Operational Acceptance Certificate in respect of the Facilities or the part thereof specified in such notice as at the date of such notice.
- The Project Manager shall, after consultation with the Owner, and within forty five (45) days after receipt of the Contractor's notice, issue an Operational Acceptance Certificate. If within [forty five (45)] days after receipt of the Contractor's notice, the Project Manager fails to issue the Operational Acceptance Certificate or fails to inform the Contractor in writing of the justifiable reasons why the Project Manager has not issued the Operational Acceptance Certificate, the Facilities or the relevant part thereof shall be deemed to have been accepted as at the date of the Contractor's said notice.

d) Partial Acceptance

If the Contract specifies that Completion, Commissioning and Guarantee Tests shall be carried out in respect of parts of the Facilities, the provisions relating to

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 42-	30.09.2015

Completion and Commissioning including the Guarantee Tests shall apply to each such part of the Facilities individually, and the Operational Acceptance Certificate shall be issued accordingly for each such part of the Facilities. If a part of the Facilities comprises facilities such as buildings, for which no Commissioning or Guarantee Tests are required, then the Project Manager shall issue the Operational Acceptance Certificate for such facility when it attains Completion, provided that the Contractor shall thereafter complete any outstanding minor items that are listed in the Operational Acceptance Certificate.

4.31 Completion Time and Liquidated Damage

a) **Completion Time Period**

The Contractor guarantees that it shall attain Completion of the Facilities (or a part for which a separate time for completion is specified in the SCC) within the Time for Completion specified in the SCC.

b) If the Contractor fails to attain Completion of the Facilities or any part thereof within the Time for Completion, the Contractor shall pay to the Owner liquidated damages in the amount computed at the rates specified in the SCC. The aggregate amount of such liquidated damages shall in no event exceed the amount specified as "Maximum" in the SCC.

However, the payment of liquidated damages shall not in any way relieve the Contractor from any of its obligations to complete the Facilities or from any other obligations and liabilities of the Contractor under the Contract.

c) No bonus will be given for earlier completion of the facilities or part thereof.

4.32 Defects Liability

a) The Contractor warrants that the Facilities or any part thereof shall be free from defects in the design, engineering, materials and workmanship of the Plant and Equipments supplied and of the work executed.

b) The Defects Liability Period shall be **[eighteen (18)]** months from the date of Completion of the Facilities (or any part thereof) or **[twelve (12)]** months from the date of Operational Acceptance of the Facilities (or any part thereof).

If during the Defects Liability Period any defect should be found in the design, engineering, materials and workmanship of the Plant and Equipments supplied or of the work executed by the Contractor, the Contractor shall promptly, in consultation and agreement with the Owner regarding appropriate remedying of the defects, and at its cost, repair, replace or otherwise make good (as the Contractor shall, at its discretion, determine) such defect as well as any damage to the Facilities caused by such defect. The Contractor shall not be responsible for the repair, replacement or making good of any defect or of any damage to the Facilities arising out of or resulting from any of the following causes:

- improper operation or maintenance of the Facilities by the Owner
- operation of the Facilities outside specifications provided in the Contract
- Normal wear and tear.

c) The Owner shall give the Contractor a notice stating the nature of any such defect together with all available evidence thereof, promptly following the discovery thereof. The Owner shall afford all reasonable opportunity for the Contractor to inspect any such defect.

d) The Owner shall afford the Contractor all necessary access to the Facilities and the Site to enable the Contractor to perform its obligations.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 43-	30.09.2015

- e) If the repair, replacement or making good is of such a character that it may affect the efficiency of the Facilities or any part thereof, the Owner may give to the Contractor a notice requiring that tests of the defective part of the Facilities shall be made by the Contractor immediately upon completion of such remedial work, whereupon the Contractor shall carry out such tests.
- f) If the Contractor fails to commence the work necessary to remedy such defect or any damage to the Facilities caused by such defect within a reasonable time (which shall in no event be considered to be less than fifteen (15) days), the Owner may, following notice to the Contractor, proceed to do such work, and the reasonable costs incurred by the Owner in connection therewith shall be paid to the Owner by the Contractor or may be deducted by the Owner from any monies due to the Contractor or claimed under the Performance Security.
If the Facilities or any part thereof cannot be used by reason of such defect and/or making good of such defect, the Defects Liability Period of the Facilities or such part, as the case may be, shall be extended by a period equal to the period during which the Facilities or such part cannot be used by the Owner because of any of the aforesaid reasons. Upon correction of the defects in the Facilities or any part thereof by repair/replacement, such repair/replacement shall have the Defects Liability Period extended by a period of **[twelve (12) month]** from the time such replacement/repair of the Facilities or any part thereof.

4.33 Functional Guarantees

The Contractor guarantees that during the Guarantee Tests, the Facilities and all parts thereof shall attain the Functional Guarantees as per the Contract. If, for reasons attributable to the Contractor, Functional Guarantees are not met either in whole or in part, the Contractor shall, within a mutually agreed time, at its cost and expense make such changes, modifications and/or additions to the Plant or any part thereof as may be necessary to meet such Guarantees. The Contractor shall notify the Owner upon completion of the necessary changes, modifications and/or additions, and shall seek the Owner's consent to repeat the Guarantee Test. If the specified Functional Guarantees are not established even during the repeat of the Guarantee Tests, the Owner may at its option, either reject the plant and equipment and recover from the Contractor payments already made or Accept the equipment/system/plant after levying Liquidated Damages as specified.

4.34 Patents Indemnity

The Contractor shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, which the Owner may suffer as a result of any infringement or alleged infringement of any patent, utility model, registered design, trademark, copyright or other intellectual property right registered or otherwise existing at the date of the Contract by reason of: (a) the installation of the Facilities by the Contractor or the use of the such Facilities.

4.35 Limitation of liability

Except in cases of criminal negligence or wilful misconduct by the Contractor, the aggregate liability of the Contractor to the Owner, whether under the Contract, in tort or otherwise, shall not exceed the total Contract Price, provided that this limitation shall not apply to any obligation of the Contractor to indemnify the Owner with respect to patent infringement.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 44-	30.09.2015

Except in cases of criminal negligence or wilful misconduct by the Contractor, the Contractor shall not be liable to the Owner, whether in contract, tort, or otherwise, for any indirect or consequential loss or damage, loss of use, loss of production, or loss of profits or interest costs, provided that this exclusion shall not apply to any obligation of the Contractor to pay liquidated damages to the Owner.

4.36 Transfer of Ownership

Ownership of the Plant and Equipments (including spare parts) to be imported into India shall be transferred to the Owner upon loading on to the mode of transport to be used to convey the Plant and Equipments from the country of origin to that country.

Ownership of the Plant and Equipments (including spare parts) procured from within India shall be transferred to the Owner when the Plant and Equipments including spares are loaded on to the mode of transport to be used to convey the Plant and Equipments including spares from the works to the site and upon endorsement of the despatch documents in favour of the Owner. Ownership of the Contractor's Equipments used by the Contractor and its Subcontractors in connection with the Contract shall remain with the Contractor or its Subcontractors. Ownership of any Plant and Equipments in excess of the requirements for the Facilities shall revert to the Contractor upon Completion of the Facilities or at such earlier time when the Owner and the Contractor agree that the Plant and Equipments in question are no longer required for the Facilities, provided quantity of any Plant and Equipments specifically stipulated in the Contract shall be the property of the Owner whether or not incorporated in the Facilities. Notwithstanding the transfer of ownership of the Plant and Equipments, the responsibility for care and custody thereof together with the risk of loss or damage shall remain with the Contractor until Completion of the Facilities.

4.37 Care of Facilities

The Contractor shall be responsible for the care and custody of the Facilities or any part thereof until the date of Completion of the Facilities, where the Contract provides for Completion of the Facilities in parts, until the date of Completion of the relevant part, and shall make good at its own cost any loss or damage that may occur to the Facilities or the relevant part thereof from any cause whatsoever during such period. The Contractor shall also be responsible for any loss or damage to the Facilities caused by the Contractor or its Subcontractors in the course of any work carried out.

4.38 Loss of or Damage to Property; Accident or Injury; Indemnification

The Contractor shall indemnify and hold harmless the Owner and its employees and officers from and against any and all suits, actions or administrative proceedings, claims, demands, losses, damages, costs, and expenses of whatsoever nature, including attorney's fees and expenses, in respect of the death or injury of any person or loss of or damage to any property (other than the Facilities whether accepted or not), arising in connection with the supply and installation of the Facilities and by reason of the negligence of the Contractor or its Subcontractors, or their employees, officers or agents, except any injury, death or property damage caused by the negligence of the Owner, its contractors, employees, officers or agents.

4.39 Insurance

- a) The Contractor shall at its expense take out and maintain in effect, or cause to be taken out and maintained in effect, during the performance of the Contract, the insurances set forth below in the sums and with the deductibles and other conditions as specified. The identity of the insurers and the form of the policies

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 45-	30.09.2015

shall be subject to the approval of the Owner, who should not unreasonably withhold such approval.

- Cargo Insurance during Transport:-Covering loss or damage occurring while in transit from the Contractor's or Subcontractor's works or stores until arrival at the Site, to the Plant and Equipments (including spare parts therefor) and to the Contractor's Equipments.
 - Installation All Risks Insurance:-Covering physical loss or damage to the Facilities at the Site, occurring prior to Completion of the Facilities, with an extended maintenance coverage for the Contractor's liability in respect of any loss or damage occurring during the Defects Liability Period while the Contractor is on the Site for the purpose of performing its obligations during the Defects Liability Period.
 - Third Party Liability Insurance: - Covering bodily injury or death suffered by third parties (including the Owner's personnel) and loss of or damage to property occurring in connection with the supply and installation of the Facilities.
 - Automobile Liability Insurance:-Covering use of all vehicles used by the Contractor or its Subcontractors (whether or not owned by them) in connection with the execution of the Contract.
 - Workers' Compensation:-In accordance with the statutory requirements applicable in any country where the Contract or any part thereof is executed.
 - Owner's Liability: - In accordance with the statutory requirements applicable in any country where the Contract or any part thereof is executed.
 - Other Insurances Such other insurances as may be specifically agreed upon by the parties.
- b) The Owner shall be named as co-insured under all insurance policies taken out by the Contractor pursuant except for the Third Party Liability, Workers' Compensation and Owner's Liability Insurances, and the Contractor's Subcontractors shall be named as co-insured's under all insurance policies taken out by the Contractor except for the Cargo Insurance During Transport, Workers' Compensation and Owner's Liability Insurances. All insurers' rights of subrogation against such co-insured's for losses or claims arising out of the performance of the Contract shall be waived under such policies.
- c) The Form of Contract Agreement, deliver to the Owner certificates of insurance (or copies of the insurance policies) as evidence that the required policies are in full force and effect. The certificates shall provide that no less than twenty one (21) days' notice shall be given to the Owner by insurers prior to cancellation or material modification of a policy.
- d) The Contractor shall ensure that, where applicable, its Subcontractor(s) shall take out and maintain in effect adequate insurance policies for their personnel and vehicles and for work executed by them under the Contract, unless such Subcontractors are covered by the policies taken out by the Contractor.
- e) The Owner shall at its expense take out and maintain in effect during the performance of the Contract those insurances specified.
- f) the Owner may take out and maintain in effect any such insurances and may from time to time deduct from any amount due the Contractor under the Contract any premium that the Owner shall have paid to the insurer, or may otherwise recover such amount as a debt due from the Contractor. If the Owner fails to take out and/or maintain in effect the insurances the Contractor may take out and maintain in effect any such insurances and may from time to time deduct from any amount

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 46-	30.09.2015

due the Owner under the Contract any premium that the Contractor shall have paid to the insurer, or may otherwise recover such amount as a debt due from the Owner. If the Contractor fails to or is unable to take out and maintain in effect any such insurances, the Contractor shall nevertheless have no liability or responsibility towards the Owner, and the Contractor shall have full recourse against the Owner for any and all liabilities of the Owner herein.

- g) The Owner shall give to the Contractor all such reasonable assistance as may be required by the Contractor. With respect to insurance claims in which the Owner's interest is involved, the Contractor shall not give any release or make any compromise with the insurer without the prior written consent of the Owner. With respect to insurance claims in which the Contractor's interest is involved, the Owner shall not give any release or make any compromise with the insurer without the prior written consent of the Contractor.
- h) Wherever total damages/loss of equipments/materials, would occur, the Contractor will be entitled to payment of all payments received from the underwriters except the following amounts:
 - The amount paid to the Contractor under the Contract in respect of equipments/materials damaged/lost (excluding the pro-rata initial advance) but including the entire amount of escalation, if any, already paid to the Contractor.
 - Custom Duties and taxes which have already been paid by the Owner.
 - In case of damage to any equipments/materials during any stage, the Contractor upon rectification of the damaged equipment to the satisfaction of the Owner shall be paid to the extent of full claims settled by the underwriters.
- i) All the Plants & Equipment being supplied by the Owner free of cost for installation of the equipment, cabling, earthing and lightning protection etc. by the Contractor, covered by this specification shall be kept insured by the Contractor against loss, damage, theft, pilferage, fire etc. from the point of unloading at Site upto the time of taking over by the Owner including handling, in plant transportation, storage, installation, testing and commissioning, etc. and the Contractor shall be fully responsible for making good of any loss or damage at his own cost within a reasonable time as mutually agreed upon by the Owner and the Contractor. Any loss/damage shall be brought to the Owner's notice immediately. The premium paid by the Contractor to the Insurance Company for such insurance shall be reimbursed by the Owner to the Contractor at actual against documentary proof to be furnished by the Contractor. The Contractor shall obtain competitive quotation for such insurance and shall take prior approval from the Owner before taking the insurance. The insurable value of the equipment being procured by the Owner will be intimated to the Contractor for the purpose of insurance.
 - It will be the responsibility of the Contractor to lodge, pursue and settle all claims with the Insurance Company in case of any damage, loss, theft, pilferage, fire, etc. and the Owner shall be kept informed about it. The losses, if any, will have to be borne by the Contractor, if the claims are not lodged and pursued properly or in the time or if the same are not settled by the Insurance Company.

4.40 Change in Laws & Regulation

- a) If, after the date **[seven (7)]** days prior to the date of Bid submission, in India, any law, regulation, ordinance, order or by-law having the force of law is enacted, promulgated, abrogated or changed (which shall be deemed to include any

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 47-	30.09.2015

change in interpretation or application by the competent authorities) that subsequently affects the costs and expenses of the Contractor and/or the Time for Completion, the Contract Price shall be correspondingly increased or decreased, and/or the Time for Completion shall be reasonably adjusted to the extent that the Contractor has thereby been affected in the performance of any of its obligations under the Contract. However, these adjustments would be restricted to direct transactions between the Owner and the Contractor and not on procurement of raw materials, intermediary components etc. by the Contractor. Notwithstanding the foregoing, such additional or reduced costs shall not be separately paid or credited if the same has already been accounted for in the price adjustment provisions wherever applicable.

4.41 Force Majeure

- (a) Force Majeure" shall mean any event beyond the reasonable control of the Owner or of the Contractor, as the case may be, and which is unavoidable notwithstanding the reasonable care of the party affected. Force Majeure events include Acts of God, Acts of Government, war, sabotage, riots, civil commotion, revolution, flood, earthquake, cyclone, fire, epidemic etc.
- (b) If either party is prevented, hindered or delayed from or in performing any of its obligations under the Contract by an event of Force Majeure, then it shall notify the other in writing of the occurrence of such event and the circumstances thereof within **[fourteen (14)]** days after the occurrence of such event.
- (c) The party who has given such notice shall be excused from the performance or punctual performance of its obligations under the Contract for so long as the relevant event of Force Majeure continues and to the extent that such party's performance is prevented, hindered or delayed.
- (d) The party or parties affected by the event of Force Majeure shall use reasonable efforts to mitigate the effect thereof upon its or their performance of the Contract and to fulfill its or their obligations under the Contract, but without prejudice to either party's right.
- (e) No delay or non-performance by either party hereto caused by the occurrence of any event of Force Majeure shall
 - constitute a default or breach of the Contract
 - to any claim for damages or additional cost or expense occasioned thereby
 if and to the extent that such delay or non-performance is caused by the occurrence of an event of Force Majeure.
- (f) If the performance of the Contract is substantially prevented, hindered or delayed for a single period of more than **[sixty (60)]** days or an aggregate period of more than one hundred and **[twenty (120)]** days on account of one or more events of Force Majeure during the currency of the Contract, the parties will attempt to develop a mutually satisfactory solution.
- (g) Force Majeure shall not apply to any obligation of the Owner to make payments to the Contractor herein.

4.42 Change in the Facilities

(a) Introducing a Change

- The Owner shall have the right to propose, and subsequently require, the Contractor during the performance of the Contract to make any change, modification, addition or deletion to, in or from the Facilities (hereinafter called "Change"), provided that such Change falls within the general scope of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 48-	30.09.2015

Facilities and does not constitute unrelated work and that it is technically practicable, taking into account both the state of advancement of the Facilities and the technical compatibility of the Change envisaged with the nature of the Facilities as specified in the Contract.

- The Contractor may from time to time during its performance of the Contract propose to the Owner (with a copy to the Project Manager) any Change that the Contractor considers necessary or desirable to improve the quality, efficiency or safety of the Facilities. This includes any additional scope of work that the contractor thinks is essential for achieving the minimum performance level specified in the SCC or the Contract. The Owner may at its discretion approve or reject any Change proposed by the Contractor.
- No change made necessary because of any default of the Contractor in the performance of its obligations under the Contract shall be deemed to be a Change, and such change shall not result in any adjustment of the Contract Price or the Time for Completion.

(b) Changes Originating from Owner

- If the Owner proposes a Change, it shall send to the Contractor a "Request for Change Proposal," requiring the Contractor to prepare and furnish to the Project Manager as soon as reasonably practicable a "Change Proposal," which shall include the following:
 - ✓ brief description of the Change
 - ✓ effect on the Time for Completion
 - ✓ estimated Cost of the Change
 - ✓ effect on Functional Guarantees (if any)
 - ✓ effect on any other provisions of the Contract.
- The pricing of any Change shall, as far as practicable, be calculated in accordance with the rates and prices included in the Contract. If the rates and prices of any change are not available in the Contract, the parties thereto shall agree on specific rates for the valuation of the Change.
- If before or during the preparation of the Change Proposal it becomes apparent that the aggregate effect of compliance therewith and with all other Change Orders that have already become binding upon the Contractor to increase or decrease the Contract Price as originally set forth in the Contract Agreement by more than fifteen (15) percent, the Contractor may give a written notice of objection thereto prior to furnishing the Change Proposal as aforesaid. If the Owner accepts the Contractor's objection, the Owner and the Contractor shall agree on specific rates for valuation of the change.
- Upon receipt of the Change Proposal, the Owner and the Contractor shall mutually agree upon all matters therein contained including agreement on rates if such rates are not available in the Contract or if the limit of 15% set forth has been exceeded. Within **[fourteen (14)]** days after such agreement, the Owner shall, if it intends to proceed with the Change, issue the Contractor with a Change Order.
- If the Owner is unable to reach a decision within **[fourteen (14)]** days, it shall notify the Contractor with details of when the Contractor can expect a decision.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 49-	30.09.2015

- If the Owner decides not to proceed with the Change for whatever reason, it shall, within the said period of *[fourteen (14)]* days, notify the Contractor accordingly.
- If the Owner and the Contractor cannot reach agreement on the price for the Change, an equitable adjustment to the Time for Completion, or any other matters identified in the Change Proposal, the Owner may nevertheless instruct the Contractor to proceed with the Change by issue of a "Pending Agreement Change Order."

Upon receipt of a Pending Agreement Change Order, the Contractor shall immediately proceed with effecting the Changes covered by such Order. The parties shall thereafter attempt to reach agreement on the outstanding issues under the Change Proposal.

(c) Changes Originating from Contractor

- The Contractor shall submit to the Project Manager a written "Application for Change Proposal," giving reasons for the proposed Change and including the information. Upon receipt of the Application for Change Proposal, the parties shall follow the procedures indicated above for "Request for Change Proposal."

4.43 Extension of Time for Completion

- (a) The Time(s) for Completion specified in the SCC shall be extended if the Contractor is delayed or impeded in the performance of any of its obligations under the Contract by reason of any of the following:
- Any Change in the Facilities or
 - any occurrence of Force Majeure or
 - any suspension order given by the Owner or reduction in the rate of progress or
 - any changes in laws and regulations or
 - any default or breach of the Contract by the Owner, or any activity, act or omission of any other contractors employed by the Owner or
 - any other matter specifically mentioned in the Contract;
- By such period as shall be fair and reasonable in all the circumstances and as shall fairly reflect the delay or impediment sustained by the Contractor.
- (b) Except where otherwise specifically provided in the Contract, the Contractor shall submit to the Project Manager a notice of a claim for an extension of the Time for Completion, together with particulars of the event or circumstance justifying such extension as soon as reasonably practicable after the commencement of such event or circumstance. As soon as reasonably practicable after receipt of such notice and supporting particulars of the claim, the Owner and the Contractor shall agree upon the period of such extension.
- (c) The Contractor shall at all times use its reasonable efforts to minimize any delay in the performance of its obligations under the Contract.

4.44 Suspension

- (a) The Owner/ Project Manager may, by notice to the Contractor, order the Contractor to suspend performance of any or all of its obligations under the Contract. Such notice shall specify the obligation of which performance is to be suspended, the effective date of the suspension and the reasons therefor. The

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 50-	30.09.2015

Contractor shall thereupon suspend performance of such obligation (except those obligations necessary for the care or preservation of the Facilities) until ordered in writing to resume such performance by the Project Manager/ Owner.

If, by virtue of a suspension order given by the Project Manager/ Owner, other than by reason of the Contractor's default or breach of the Contract, the Contractor's performance of any of its obligations is suspended for an aggregate period of more than *[ninety (90)]* days, then at any time thereafter and provided that at that time such performance is still suspended, the Contractor may give a notice to the Project Manager requiring that the Owner shall, within *[twenty eight (28)]* days of receipt of the notice, order the resumption of such performance or request and subsequently order a change, excluding the performance of the suspended obligations from the Contract.

- (b) If the Contractor is unable to carry out any of its obligations under the Contract for any reason attributable to the Owner, including but not limited to the Owner's failure to provide possession of or access to the Site or other areas;

Then the Contractor may by *[fourteen (14)]* days' notice to the Owner suspend performance of all or any of its obligations under the Contract, or reduce the rate of progress. If the Contractor's performance of its obligations is suspended or the rate of progress is reduced, then the Time for Completion shall be extended, and any and all additional costs or expenses incurred by the Contractor as a result of such suspension or reduction shall be paid by the Owner to the Contractor in addition to the Contract Price, except in the case of suspension order or reduction in the rate of progress by reason of the Contractor's default or breach of the Contract.

- (c) During the period of suspension, the Contractor shall not remove from the Site any Plant and Equipment, any part of the Facilities or any Contractor's Equipment, without the prior written consent of the Owner.

4.45 Termination

(a) Termination for Owner's Convenience

The Owner may at any time terminate the Contract for any reason by giving the Contractor a notice of termination. Upon receipt of the notice of termination, the Contractor shall either immediately or upon the date specified in the notice of termination

- (i) cease all further work, except for such work as the Owner may specify in the notice of termination for the sole purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition.
- (ii) terminate all subcontracts, except those to be assigned
- (iii) remove all Contractor's Equipments from the Site, repatriate the Contractor's and its Subcontractors' personnel from the Site, remove from the Site any wreckage, rubbish and debris of any kind, and leave the whole of the Site in a clean and safe condition
- (iv) The Contractor, subject to the payment, shall

- ✓ deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 51 -	30.09.2015

- ✓ to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Facilities and to the Plant and Equipments as at the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
- ✓ Deliver to the Owner all non-proprietary drawings, specifications and other documents prepared by the Contractor or its Subcontractors as at the date of termination in connection with the Facilities.

In the event of termination of the Contract for Owner's convenience, the Owner shall pay to the Contractor the following amounts

- ✓ the Contract Price, attributable to the parts of the Facilities executed by the Contractor as on the date of termination
- ✓ the costs reasonably incurred by the Contractor in the removal of the Contractor's Equipment from the Site and in the repatriation of the Contractor's and its Subcontractors' personnel
- ✓ any amounts to be paid by the Contractor to its Subcontractors in connection with the termination of any subcontracts, including any cancellation charges
- ✓ costs incurred by the Contractor in protecting the Facilities and leaving the Site in a clean and safe condition
- ✓ the additional cost of satisfying other obligations, commitments and claims that the Contractor may in good faith have undertaken with third parties in connection with the Contract.

(b) Termination for Contractor's Default

- (i) The Owner, without prejudice to any other rights or remedies it may possess, may terminate the Contract forthwith in the following circumstances by giving a notice of termination and its reasons therefor to the Contractor:

If the Contractor becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, if the Contractor is a corporation, a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Contractor takes or suffers any other analogous action in consequence of debt

If the Contractor assigns or transfers the Contract or any right or interest therein in violation of the provision.

If the Contractor, in the judgement of the Owner has engaged in corrupt or fraudulent practices in competing for or in executing the Contract.

For the purpose of this Sub Clause:

"corrupt practice" means the offering, giving, receiving or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution.

"fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Owner and includes collusive practice among Bidders

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 52-	30.09.2015

(prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Owner of the benefits of free and open competition.

(ii) If the Contractor

- has abandoned or repudiated the Contract
- has without valid reason failed to commence work on the Facilities promptly the progress of Contract performance for more than **[twenty eight (28)]** days after receiving a written instruction from the Owner to proceed
- persistently fails to execute the Contract in accordance with the Contract or persistently neglects to carry out its obligations under the Contract without just cause
- refuses or is unable to provide sufficient materials, services or labor to execute and complete the Facilities in the manner specified in the program at rates of progress that give reasonable assurance to the Owner that the Contractor can attain Completion of the Facilities by the Time for Completion as extended

then the Owner may, without prejudice to any other rights it may possess under the Contract, give a notice to the Contractor stating the nature of the default and requiring the Contractor to remedy the same. If the Contractor fails to remedy or to take steps to remedy the same within **[fourteen (14)]** days of its receipt of such notice, then the Owner may terminate the Contract forthwith by giving a notice of termination to the Contractor.

(iii) The Contractor shall, either immediately or upon such date as is specified in the notice of termination,

- cease all further work, except for such work as the Owner may specify in the notice of termination for the sole purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
- terminate all subcontracts, except those to be assigned to the Owner pursuant to paragraph (d) below
- deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination
- to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Works and to the Plant and Equipment as at the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
- Deliver to the Owner all drawings, specifications and other documents prepared by the Contractor or its Subcontractors as at the date of termination in connection with the Facilities.

(iv) The Owner may enter upon the Site, expel the Contractor, and complete the Facilities itself or by employing any third party. The Owner may, to the exclusion of any right of the Contractor over the same, take over and use with the payment of a fair rental rate to the Contractor, with all the maintenance costs to the account of the Owner and with an indemnification by the Owner for all liability including damage or injury to persons arising

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 53-	30.09.2015

out of the Owner's use of such equipment, any Contractor's Equipments owned by the Contractor and on the Site in connection with the Facilities for such reasonable period as the Owner considers expedient for the supply and installation of the Facilities.

Upon completion of the Facilities or at such earlier date as the Owner thinks appropriate, the Owner shall give notice to the Contractor that such Contractor's Equipment will be returned to the Contractor at or near the Site and shall return such Contractor's Equipments to the Contractor in accordance with such notice. The Contractor shall thereafter without delay and at its cost remove or arrange removal of the same from the Site.

- (v) The Contractor shall be entitled to be paid the Contract Price attributable to the Facilities executed as at the date of termination, the value of any unused or partially used Plant and Equipments on the Site, and the costs, if any, incurred in protecting the Facilities and in leaving the Site in a clean and safe condition. Any sums due to the Owner from the Contractor accruing prior to the date of termination shall be deducted from the amount to be paid to the Contractor under this Contract.
- (vi) If the Owner completes the Facilities, the cost of completing the Facilities by the Owner shall be determined.

If the sum that the Contractor is entitled to be paid, plus the reasonable costs incurred by the Owner in completing the Facilities, exceeds the Contract Price, the Contractor shall be liable for such excess.

The Owner and the Contractor shall agree, in writing, on the computation described above and the manner in which any sums shall be paid.

(c) Termination by Contractor

- i. If
 - the Owner has failed to pay the Contractor any sum due under the Contract within the specified period, has failed to approve any invoice or supporting documents without just cause pursuant to [-----] (Terms and Procedures of Payment) of the Form of Contract Agreement, or commits a substantial breach of the Contract, the Contractor may give a notice to the Owner that requires payment of such sum, requires approval of such invoice or supporting documents, or specifies the breach and requires the Owner to remedy the same, as the case may be. If the Owner fails to pay such sum, fails to approve such invoice or supporting documents or give its reasons for withholding such approval, fails to remedy the breach or take steps to remedy the breach within **[fourteen (14) days]** after receipt of the Contractor's notice, or
 - the Contractor is unable to carry out any of its obligations under the Contract for any reason attributable to the Owner, including but not limited to the Owner's failure to provide possession of or access to the Site or other areas or failure to obtain any governmental permit necessary for the execution and/or completion of the Facilities which the Owner is required to obtain as per provision of the Contract or as per relevant applicable laws of the country,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 54-	30.09.2015

then the Contractor may give a notice to the Owner thereof, and if the Owner has failed to pay the outstanding sum, to approve the invoice or supporting documents, to give its reasons for withholding such approval, or to remedy the breach within *[twenty eight (28) days]* of such notice, or if the Contractor is still unable to carry out any of its obligations under the Contract for any reason attributable to the Owner within twenty eight (28) days of the said notice, then the Contractor may terminate the Contract forthwith by giving a notice of termination to the Owner.

- ii. If the Owner becomes bankrupt or insolvent, has a receiving order issued against it, compounds with its creditors, or, being a corporation, if a resolution is passed or order is made for its winding up (other than a voluntary liquidation for the purposes of amalgamation or reconstruction), a receiver is appointed over any part of its undertaking or assets, or if the Owner takes or suffers any other analogous action in consequence of debt, then the Contractor may terminate the Contract forthwith by giving a notice of termination to the Owner.
- iii. If the Contract is terminated, then the Contractor shall immediately
 - cease all further work, except for such work as may be necessary for the purpose of protecting that part of the Facilities already executed, or any work required to leave the Site in a clean and safe condition
 - terminate all subcontracts, except those to be assigned to the Owner pursuant to paragraph (d)(ii)
 - remove all Contractor's Equipment from the Site and repatriate the Contractor's and its Subcontractor's personnel from the Site
 - In addition, the Contractor, subject to the payment, shall
 - ✓ deliver to the Owner the parts of the Facilities executed by the Contractor up to the date of termination
 - ✓ to the extent legally possible, assign to the Owner all right, title and benefit of the Contractor to the Facilities and to the Plant and Equipments as of the date of termination, and, as may be required by the Owner, in any subcontracts concluded between the Contractor and its Subcontractors
 - ✓ Deliver to the Owner all drawings, specifications and other documents prepared by the Contractor or its Subcontractors as of the date of termination in connection with the Facilities.
- iv. If the Contract is terminated, the Owner shall pay to the Contractor all payments, and reasonable compensation for all loss or damage sustained by the Contractor arising out of, in connection with or in consequence of such termination.
- (d) The expression "Facilities executed" shall include all work executed, Erection Services provided, any all Plant and Equipments acquired (or subject to a legally binding obligation to purchase) by the Contractor and used or intended to be used for the purpose of the Facilities, up to and including the date of termination.
- (e) In calculating any payment due from the Owner to the Contractor, account shall be taken of any sum previously paid by the Owner to the Contractor under the Contract, including any advance payment paid.

5 SPECIAL CONDITIONS OF CONTRACT (SCC)

5.1 Contract Details

- **Name of Contract:** Renovation & Modernization of Boiler & Auxiliaries Package for [-----]
- **Bid Document No. :** [-----]
- **The Owner is:**
 - Name of Owner: [-----]
 - Address of Owner: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]
- **The Project Manager is:**
 - Name of Project Manager: [-----]
 - Address of Project Manager: [-----]
 - Telephone No. : [-----]
 - Fax No: [-----]
 - E-Mail: [-----]

5.2 Effective Date

The Owner shall inform the successful Bidder of its acceptance of the Tender by a formal Letter of Acceptance. This Letter of Acceptance will be the Effective Date for determining the Time for Completion of the facilities and other milestones for execution of the Renovation & Modernization work as per the scope of work under this tender by the Contractor.

The following three activities will be completed within **[two (2)]** months from the date of Letter of Acceptance:

(a) The contract agreement will be executed by the Owner and the Contractor. (b) The Contractor will submit to the Owner the Contract Performance Bank Guarantee, any Additional Contract Performance Bank Guarantee by assignee, JV Partner, Consortium Member etc if applicable, and the Advance Payment Bank Guarantee.

(c) The Owner will pay the Contractor the Advance Payment as per the Terms of Payment.

The Owner will make the advance payment promptly once Contractor has fulfilled the necessary conditions specified in Terms of Payment. If payment of Advance is delayed beyond two months from the date of Letter of acceptance for reasons attributable to the Owner, the date of payment of advance shall be the effective date for determining the time for completion of facilities. However, failure of the contractor to provide all the required Bonds/Guarantees within the prescribed period will cause the Bid Security to be forfeited.

5.3 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this tender and commencement of unit shut down by Owner shall be as follows:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 57-	30.09.2015

1.	Time for completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	By [.....] months from Effective Date
2.	Time for Commencement (by Owner) of Unit Shut Down. (Note: In case Contractor fails to complete the engineering, supply and mobilization activities as at serial no.1, Owner may, at its discretion, reschedule commencement of unit shut down	By [.....] months from Effective Date
3.	Time for Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	By [.....] days from start of unit shut down
4.	Performance Guarantee Test (By Contractor)	By [.....] months from the completion of trial operation after completion of R&M activities

5.4 Liquidated Damage for Delay

5.5 Rate of Liquidated Damage for Delay

If the Contractor fails to successfully achieve completion of R&M activities and commissioning of the retrofitted facilities as per the scope of work within the time period specified in SCC, the Contractor shall pay to the Owner amount calculated as per the rates given in the following table as Liquidated Damage and not as penalty.

1.	Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	Liquidated Damage payable at the rate Rs.[.....] for each week of delay
2.	Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	Liquidated Damage payable at the rate Rs [.....] for each day of delay

The Liquidated Damage for Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network and Liquidated Damage for Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender are independent and shall be applied separately.

5.6 Liquidated Damage for Non-fulfilment of Functional Guarantees

If the Contractor fails to successfully achieve the Functional Guarantees during Performance Guarantee Test as per the Tender Specification, the Contractor shall pay

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 58-	30.09.2015

to the Owner amount calculated as per the rates given in the following table as Liquidated Damage and not as penalty.

Sl. No.	Functional Guarantee Parameter	Rate of Liquidated Damage
1	Boiler Capacity in TPH at rated parameters at superheater outlet, the coal being fired from the range specified.	[.....] INR per Tonnes/Hr. shortfall
2	Boiler Efficiency at 100% TMCR	[.....] INR per 0.01% decrease
3	Auxiliary Power in kW	[.....] INR per kW increase

The reference condition for Performance Guarantee Parameters shall be as per Volume-II Technical Specification.

The Liquidated Damage for non-fulfillment of the different Functional Guarantee Parameters are independent of one another and shall be applied separately.

{Note: The rate of LD for any Functional Guarantee Parameter shall be at least 1.5 times the corresponding Bid Evaluation Factor}

5.7 Maximum Leviable Liquidated Damages

The amount of Liquidated Damage for delay shall be limited to a maximum of 10 % of the total contracts price (i.e. sum of Ist, IInd and IIIrd)contracts, as applicable) price including price variation as per the provisions of the contract and excluding price of Mandatory Spares. This limit is applicable for the Liquidated Damage for Delay in completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network and Liquidated Damage for Delay in Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender taken together.

The aggregate amount of **Liquidated Damage for non-fulfillment of functional guarantee shall be limited to** a maximum of 10 % of the total contracts price (i.e. sum of Ist, IInd and IIIrd)contracts, as applicable) price including price variation as per the provisions of the contract and excluding price of Mandatory Spares.

The limit on maximum leviable Liquidated Damage for Delay and maximum leviable Liquidated Damage for non-fulfillment of functional guarantee are independent of each other and shall apply separately.

5.8 Payment of Liquidated Damages

Contractor shall pay to the owner any Liquidated Damages that are payable as per the provisions of the Contract within thirty (30) days of receipt of Owner's invoice setting forth amount of Liquidated Damages that are then due and payable. If Contractor delays payment of Liquidated Damages that are payable under the provisions of the Contract beyond thirty (30) days, Owner, at its discretion, shall be entitled to recover such amounts by either setting off the relevant unpaid amount against any payment(s) due to the Contractor or by making a demand under Contract Performance Bank Guarantee.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 59-	30.09.2015

5.9 Contract Price

- a) The Contract Price shall be as (Contract Price and Terms of Payment) of the Form of Contract Agreement.
- b) The Contractor shall be deemed to have satisfied itself as to the correctness and sufficiency of the Contract Price, which shall, except as otherwise provided for in the Contract, cover all its obligations under the Contract.

5.10 Terms of Payment

- a) The Contract Price shall be paid as Terms and Procedures of Payment to the Form of Contract Agreement. The procedures to be followed in making application.
- b) No payment made by the Owner herein shall be deemed to constitute acceptance by the Owner of the Facilities or any part(s) thereof.
- c) The currency or currencies in which payments are made to the Contractor under this Contract to the Form of Contract Agreement, subject to the general principle that payments will be made in the currency or currencies in which the Contract Price has been stated in the Contractor's bid.

5.11 Contract Securities (Bank Guarantees)

- a) The Contractor shall provide the Bank Guarantees specified below in favour of the Owner at the times, and in the amount, manner and form specified below.
- b) Advance Payment Bank Guarantee
 - The Contractor shall, within **[thirty (30)]** days of the Notification of Contract Award, provide a security for an amount equal to the advance payment, and in the same currency or currencies, with a initial validity of up to **[ninety (90)]** days beyond the date of Completion of Facilities.
 - The security shall be in the form of an Unconditional Bank Guarantee. The Advance payment Bank Guarantee shall be reduced prorata every three (3) months after First Running Account Bill/Stage Payment under the Contract based on the value of equipment/facilities received. The cumulative amount of reduction at any point of time shall not exceed ninety percent (90%) of the advance corresponding to cumulative value of the Facilities supplied and received as per a certificate issued by the Project Manager and the balance of 10% shall be released on Completion of those Facilities. It should be clearly understood that reduction in the value of security for advance shall not in any way dilute the Contractor's responsibility and liabilities under the Contract including in respect of the Facilities for which the reduction in the value of security is allowed.
- c) Performance Bank Guarantee
 - The Contractor shall, within **[thirty (30)]** days of the notification of award, provide a Bank Guarantee for the due performance of the Contract for ten percent (10%) of the Contract Price with an initial validity upto **[ninety (90)]** days beyond the Defects Liability Period. If the Owner enters into the Contract with the Assignee of a foreign Contractor, the said Assignee, in addition to the Contract Performance Bank Guarantee to be provided by the Contractor for ten percent (10%) of the value of all the Contracts shall provide within **[thirty (30)]** days of the Notification of Award, a separate Contract Performance Bank Guarantee equivalent to five percent (5%) of the value of Contract entered into with the assignee, (i.e. five percent of the aggregate value of the component Contracts entered to with the Assignee) for the due performance of Contract with an initial validity up to **[Ninety (90)]** days beyond the Defects Liability Period.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors– Boiler & Auxiliaries Volume-I	- 60-	30.09.2015

- If the bidder is a joint venture of two firms who collectively meet the Qualifying Requirement, in addition to the Contract Performance Guarantee (CPBG) of 10% furnished by the bidder, each of the JV partner shall furnish Additional Contract Performance Guarantee equal to 1% of Contract Price. To clarify further, in such a case, the value of Contract Performance Bank Guarantee furnished by the Bidder and Additional Contract Performance Bank Guarantee furnished by the JV partners taken together shall be 12% of the Contract Price.
- If the bidder is a Consortium of two firms, in addition to the Contract Performance Guarantee (CPBG) of 10% furnished by the Consortium Leader, the other consortium member will furnish Additional Contract Performance Bank Guarantee equal to 2% of Contract Price. To clarify further, in such a case, the value of Contract Performance Bank Guarantee furnished by the Bidder (Consortium Leader) and Additional Contract Performance Bank Guarantee furnished by the other consortium member taken together shall be 12% of the Contract Price.

d) The performance Bank Guarantees shall be denominated in the currency or currencies of the Contract, or in a freely convertible currency acceptable to the Owner.

5.12 Sequential Supply

The Contractor is required to supply the material and equipment under the Contract in a sequential manner as per the requirement at site for erection. If Contractor supplies any material/equipment ahead of the requirement as per the agreed Detailed Time Schedule, the Owner, at its discretion, may withhold progressive payment for such material/equipment till the time it is due for supply as per the agreed Detailed Time Schedule.

SCHEDULE - F6
CONTRACTOR'S RESOURCE DEPLOYMENT SCHEDULE

A) Construction Equipment

The Bidder shall indicate the schedule of construction equipment, proposed to be deployed at the site for executing the works as per the pro-forma below:

S. No.	Type of Resource	Months							
1									
2									
3									
...									
...									

B) Resource Deployment Schedule

The Bidder shall indicate the schedule of manpower resources proposed to be deployed at the site for executing the works as per the pro-forma below:

S. No.	Type of Resource	Months							
2.	Human Resources								
2.1	Engineering Category								
2.1.1	Project Engineers								
2.1.2	Mechanical Engineers								
2.1.3	Electrical Engineers								
2.1.4	Civil Engineers								
2.1.5	C&I Engineers								
2.1.6	Commissioning Engineers								
2.1.7	Structural Engineers								
2.1.8	Others (bidder shall indicate) as applicable for the work								
2.2	Supervisory Category								
2.2.1	Const. Manager								
2.2.2	Electrical Supervisors								
2.2.3	Mechanical Supervisors								
2.2.4	C&I Supervisors								
2.2.5	Civil Supervisors								
2.2.6	Purchase Officer (s)								
2.2.7	Finance/Site Office								
2.2.8	Inspection/Quality Control								
2.2.9	Others (Bidder shall indicate) as applicable for the work

Form of Contract Agreement

THIS CONTRACT AGREEMENT is made the _____ day of _____, 20_____.
 BETWEEN (1) [Name of Employer], a corporation incorporated under the laws of [country of Employer] and having its principal place of business at [address of Employer] (hereinafter called “the Employer”), and (2) [name of Contractor], a corporation incorporated under the laws of [country of Contractor] and having its principal place of business at [address of Contractor] (hereinafter called “the Contractor”)

WHEREAS the Employer desires to engage the Contractor to dismantle/disassemble, design, manufacture, test, deliver, install, complete and commission certain Facilities, viz.

[.....]
 [.....]
 [.....]

(“the Facilities”) and the Contractor have agreed to such engagement upon and subject to the terms and conditions hereinafter appearing.

NOW IT IS HEREBY AGREED as follows:

1.1 Contract Documents

a) Contract Documents means this signed Contract agreement and its annexure/appendices, and the complete documents, which are the basis of finalization of the contract, including correspondence exchanged from issue of tender till date of signing the contract. The following will constitute the Contract Documents:

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Letter of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender Drawing.
- vi. The bid & its schedules/ attachment submitted by the contractor.

a) All documents forming part of the Contract (and all parts thereof) are intended to be correlative, complementary and mutually explanatory. The Contract shall be read as a whole.

b) The Contract will be signed in three originals and the Contractor shall be provided with one signed original and the rest will be retained by the Employer.

1.2 Order of Precedence of Contract Documents

In case there is any ambiguity of conflict between different contract documents, the order of precedence shall be as follows:-

- i. The signed Contract Agreement & the annexure/ appendices thereto (highest precedence)
- ii. Letter of award.
- iii. Special Condition of Contract
- iv. General Condition of Contract
- v. Technical specification & Tender Drawing.
- vi. The bid & schedules/ attachment submitted by the contractor.

1.3 Definitions

" The Definitions of terms and expressions shall be as per GCC clause 4.1. Terms and expressions not defined in GCC shall have the same meaning as are assigned to them in the Indian Sale of Goods Act (1930), failing that in the Indian Contract Act (1872) and failing that in the General Clauses Act (1897) including amendments thereof, if any.

1.4 Contract Price

The Employer hereby agrees to pay to the Contractor the Contract Price in consideration of the performance by the Contractor of its obligations hereunder: The Contract Price shall be the aggregate of: [amount of foreign currency in words], [amount in figures], and [amount of local currency in words], [amount in figures], or such other sums as may be determined in accordance with the terms and conditions of the Contract.

1.5 Term of Payment

The terms and procedures of payment according to which the Employer will reimburse the Contractor are given in Contract Schedule 1 (Terms and Procedures of Payment) hereto.

1.6 Time for Commencement and Completion

The Time Schedule for the execution of the scope of work by the Contractor under this tender and commencement of unit shut down by Employer shall be as follows:

1.	Time for completion (by Contractor) of Engineering and Supply activities and other resources mobilization that are required to be completed before unit shut down as per L-2 network	By [.....] months from Effective Date
2.	Time for Commencement (by Employer) of Unit Shut Down. (Note: In case Contractor fails to complete the engineering, supply and mobilization activities as at serial no.1, Employer may, at its discretion, reschedule commencement of unit shut down	By [.....] months from Effective Date
3.	Time for Completion of all R&M activities that are to be carried out under unit shut down and subsequent commissioning activities including trial operation as per the scope of work under this tender	By [.....] days from start of unit shut down
4.	Performance Guarantee Test (By Contractor)	By [.....] months from the completion of trial operation after completion of R&M activities

The detailed Time Schedule shall be as per Contract Schedule 2.

Contract Schedules

The Contract Schedules listed in the attached list of Contract Schedules shall be deemed to form an integral part of this Contract Agreement.

Reference in the Contract to any Contract Schedule shall mean the Contract Schedules attached hereto, and the Contract shall be read and construed accordingly.

IN WITNESS WHEREOF the Employer and the Contractor have caused this Agreement to be duly executed by their duly authorized representatives the day and year first above written.

Signed by for and on behalf of the Employer

Contract Schedule-1

Terms of Payment

The Owner shall pay the Contractor in the following manner and at the following times, on the basis of the Price Break down given in the Section on Price Schedules. Payments will be made in the currencies quoted by the Bidder unless otherwise agreed between the parties. Application for payment in respect of part deliveries may be made by the Contractor as work proceeds.

I. Terms of Payment for Supply of Plant and Equipment (excluding Mandatory Spares and Recommended Spares) supplied from Abroad:

1	10% of the total FOB price	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	50% of FOB price for each identified equipment as progressive payment and 100% of Ocean Freight and Marine Insurance Charges pro-rata to the value of the equipment	Upon dispatch of the identified equipment after dispatch clearance by employer on raising of Invoice by the Contractor and submission of evidence of shipment
3	15% of FOB price for each identified equipment	On receipt of equipment at site and physical verification and certification by the Employer
4	20% of the total FOB price	On Completion of Facilities
5	5% of the total FOB price	Successful completion of Performance Guarantee Test

II. Terms of Payment for Supply of Plant and Equipment (excluding Mandatory Spares and Recommended Spares) supplied from within India:

1	10% of the total Ex-Works price	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	50% of Ex-Works price for each identified equipment as progressive payment	Upon dispatch of the identified equipment after dispatch clearance by employer on raising of Invoice by the Contractor and submission of evidence of shipment
3	15% of Ex-Works price for each identified equipment	On receipt of equipment at site and physical verification and certification by the Employer

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[5]	30.09.2015

4	20% of the total Ex-Works price	On Completion of Facilities
5	5% of the total Ex-Works price	Successful completion of Performance Guarantee Test

III. Terms of Payment for Supply of Mandatory Spares and Recommended Spares

1	70% of the CIF Price of each Spare from Abroad or 70% of the Ex-Works Price of each Spare from within India	Upon dispatch of the identified Spare after dispatch clearance by employer on raising of invoice by the Contractor and submission of evidence of shipment
2	30% of the CIF Price of each Spare from Abroad or 30% of the Ex-Works Price of each Spare from within India	On receipt of Spare at site and physical verification and certification by the Employer

IV. Terms of Payment for Local Transportation, Inland Transit Insurance and port clearance charges & port charges

For Plant & Equipment except Spares		
1	100% of Local Transportation, Inland Transit Insurance and Port Clearance & Port Charges pro-rata to value of the equipment	On receipt of Equipment at site and upon raising of Invoice by the Contractor
For Spares		
2	100% of Local Transportation, Inland Transit Insurance and Port Clearance & Port Charges pro-rata to value of Spare	On receipt of Spare at site and upon raising of Invoice by the Contractor

V. Terms of Payment for Erection of Plant & Equipment

1	10% of Total Price for Erection of Plant & Equipment	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	75% of Price for Erection of Plant & Equipment as progressive payment pro-rata to value of plant & equipment erected	On certification by Employer of successful erection of plant & equipment and successfully passing of quality checks
3	10% of Total Price for Erection of Plant & Equipment	On Completion of Facilities
4	5% of Total Price for Erection of Plant & Equipment	Successful completion of Performance Guarantee Test

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[6]	30.09.2015

VI. Terms of Payment for Civil Works

1	10% of Total Price for Civil Works	Initial Advance on Acceptance of Letter of Award by the Contractor, Signing of Contract Agreement and submission of Contract Performance Bank Guarantee, Additional Contract Performance Bank Guarantee and Advance Payment Bank Guarantee by Contractor
2	75% of Price for Civil Works as progressive payment	On certification by Employer regarding value of work completed & successfully passing of quality checks
3	10% of Total Price for Civil Works	On Completion of Facilities
4	5% of Total Price for Civil Works	Successful completion of Performance Guarantee Test

VII. Terms of Payment for Price Adjustment Amount

Any increase in the Price of any component Contract shall be paid as per the Terms of Payment for base price. The initial 10% advance payment pertaining to increase in price shall be paid along with progressive payment of that equipment. Reduction to the Contract Price, if any, due to price adjustment provisions, shall be effected by recovering 100% of the reduction amount (including advance) from any of the Contractor's bills falling immediately due for payment.

VIII. Terms of Payment for Taxes & Duties

Any Tax or Duty payable by Employer as per the Terms & Conditions of Contract and is directly payable to Statutory Authorities/Government as per law shall be directly paid to the concerned authority or Government by the Employer. Any other Tax or Duty payable by Employer as per the Terms & Conditions of Contract shall be reimbursed to the Contractor/Assignee upon receipt of corresponding Plant & Equipment or Spare at site and submission of evidence by the Contractor/Assignee to the Employer as to the Contractor/Assignee having paid such Taxes & Duties.

IX. Terms of Payment for Statutory Variation in Taxes & Duties

Any amount towards statutory variation in Taxes & Duties payable by Employer as per the Terms & Conditions of Contract shall be reimbursed to the Contractor/Assignee upon submission of evidence by the Contractor/Assignee to the Employer as to the Contractor/Assignee having paid such variation.

Document Number	Rev No	Description	Page No.	Date of Issue

Contract Schedule-2

PRICE ADJUSTMENT

- (i) The Contract Price shall be subject to price adjustment during performance of the Contract to reflect changes in the cost of labour and material in accordance with the provisions described below.
- (ii) Only following components of the Contract Price will be subject to Price adjustment :
 - (a) Ex-Works (India) price of plant and equipment excluding Mandatory Spares manufactured within India and FOB price component for plant and equipment excluding Mandatory spares supplied from abroad. The price adjustment amounts towards these price components shall be without any ceiling.
 - (b) Erection Services component of the Contract Price. The price adjustment amounts towards this price component shall be without any ceiling.
 - (c) Civil Works component of the Contract Price. The price adjustment amounts towards this price component shall be without any ceiling.
- (iii) Price adjustment amounts towards aforesaid components of Contract Price shall be paid in the respective currencies of Contract.
- (iv) The indices for price adjustment shall necessarily be of the country of origin of goods/labour and shall be well established and nationally recognized in that country. Preferably Government indices shall be used.
- (v) The price adjustment formula for the components of the Contract Price above shall be as stipulated hereinafter.
- (vi) **Ex-Works/FOB price component of Plant and Equipment excluding mandatory spares**

The price component of the equipment for any shipment/ dispatch comprises of a fixed portion (designated as 'F' and the value of which is specified hereunder) and a variable portion linked with the indices for various materials and labour.

The amount of price adjustment towards variable portion payable/recoverable on each shipment/dispatch shall be computed as under:

$$ES = ES_1 - ES_0$$

ES₁ will be computed as follows:

$$ES_1 = ES_0 \left\{ F + a \times \frac{A_1}{A_0} \times f_1 + b \times \frac{B_1}{B_0} \times f_2 + c \times \frac{C_1}{C_0} \times f_3 + Lb \times \frac{L_1}{L_0} \times f_{lb} \right\}$$

Where

ES = Adjustment to Ex-Works/FOB price component expressed in the currency of the Contract payable to the contractor for each shipment/dispatch

ES₁ = Adjusted amount of Ex-works/FOB price component expressed in the

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[8]	30.09.2015

currency of the Contract payable to the Contractor for each shipment/dispatch

ES_0 = Ex-works/FOB price for the plant and equipment in the currency of the Contract, shipment/dispatch wise.

- The fixed portion of the ex-works/FOB component of the Contract Price (F) shall be 0.15.
- a, b, c etc. shall be co-efficient of major materials/items involved in the ex-works/FOB component of the Contract Price. The sum of these co-efficient shall be between 0.50 to 0.60.
- A, B, C etc. shall be published price indices of corresponding major materials/items. Such indices shall necessarily be of the country of origin of goods.
- 'Lb' shall be co-efficient for labour component in the ex-works/ FOB component of the Contract Price which shall be between 0.25 to 0.35.
- 'L' shall be labour index.
- Sum of all the material co-efficient and the labour co-efficient shall be 0.85.

f_1, f_2, f_3, f_{lb} etc. are Exchange rate correction factors for the respective materials and f_{lb} is the exchange rate correction factor for labour with reference to the currency of the country of origin of index and the respective contract currency, such that

$$f = \frac{Z_0}{Z_1}$$

where Z is the no. of units of the currency of the country of the origin of index, which is equivalent to one unit of the respective contract currency. The exchange rates to be used for calculation of factor 'f' shall be as per State Bank of India Bills Selling Exchange Rates.

For the indices(A, B, C etc.), subscript 'o' refers to indices as on 30 days prior to original scheduled date for opening of Part-I Bid.. For ' Z_0 ', subscript 'o' refers to value as on the date of opening of Part-I Bid.

Subscript '1' refers to indices/exchange rates as of:

- (a) three months prior to the date of shipment/dispatch for labour, and
- (b) six months prior to the date of shipment/dispatch for material.

In case of shipments/dispatches which are delayed beyond the schedule date of shipment/dispatch for reasons attributable to the Contractor, the price adjustment provision shall not be applicable for the period of time between the schedule date of shipment/dispatch and the actual date of shipment/dispatch.

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[9]	30.09.2015

The above formula for price adjustment will be applicable if the currency in which the contract price is expressed is different from the currency of the country of origin of labour and material indices. In other case, formula shall be applied without the exchange rate correction factor 'f'.

(vii) Erection Services Component

The price component for erection services comprises of a fixed portion and a variable portion linked with the index of labour.

The monthly price adjustment amount for the erection services component of the Contract Price will be computed separately for Indian currency and for foreign currency part, if any, related to expatriate supervision/labour as per the formula given below:

(a) Indian Rupee part of the Erection Services

$$ER = ER_1 - ER_0$$

ER₁ will be computed as follows:

$$ER_1 = ER_0 (0.15 + 0.85 \frac{FL_1}{FL_0})$$

Where:

ER	=	Adjustment to erection services component of contract price expressed in Indian Rupees payable to the contractor for each billing.
ER ₁	=	Adjusted amount of erection services component of Contract Price expressed in Indian Rupees payable to the Contractor.
ER ₀	=	Value of the Erection work done in the billing period (month)
FL	=	Indian field labour index namely, All India Consumer Price Index for Industrial Workers (All India Monthly Average) as published by Labour Bureau, Simla, Government of India.

(b) Foreign Currency portion of the Erection Services

$$EE = EE_1 - EE_0$$

EE₁ will be computed as follows:

$$EE_1 = EE_0 (0.15 + 0.85 \frac{EF_1}{EF_0} \times f)$$

Where:

EE	=	Adjustment to erection services component of Contract Price expressed in foreign currency payable to the contractor for each billing.
EE ₁	=	Adjusted amount of erection services component of Contract Price expressed in foreign currency payable to the contractor for each billing.
EE ₀	=	Value of foreign currency portion of Erection work done in the billing period (month)

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[10]	30.09.2015

EF = Index for Expatriate field labour component of the Erection Price of Installation work. Such index shall necessarily be of the country of nationality of the labour.

f = Exchange rate correction factor for expatriate labour with reference to currency of country of origin of index for expatriate labour and the respective contract currency, such that

$$f = \frac{Z_0}{Z_1}$$

where Z is the no. of units of the currency of the country of origin of index, which is equivalent to one unit of the respective contract currency. The ex-change rates to be used for calculation of factor 'f' shall be as per State Bank of India Bills Selling Exchange.

For the indices, subscript 'o' refers to indices as on 30 days prior to date set for opening of bids. For 'Z₀', subscript 'o' refers to value as on the date of opening of Part-I Bid.

For the indices, subscript '1' refers to the indices as applicable for the month of execution of the erection work. For the exchange rates, subscript '1' refers to the exchange rates as applicable on the last day of the month of execution of the erection work.

In case of erection activities which are delayed beyond the schedule date for reasons attributable to the contractor, the price adjustment provision shall not be applicable for the period of time between the schedule date of completion and actual date of completion of the respective erection activity.

(viii) The following components of the contract price shall not be subject to price adjustment and shall remain firm during the execution of the contract :

- (1) Ocean Freight and Marine Insurance for Plant and Equipment, mandatory spares and recommended spares.
- (2) Ex-works/FOB price component for Mandatory spares & Recommended Spares.
- (3) Inland Transportation charges (including Inland Transit Insurance, port clearance, port handling & port charges) for plant & equipment and Spare Parts.

(ix) Civil Works Component

The Price of Civil Works for any month comprises a fixed part designated as 'F' and variable parts linked to indices for labour, steel, cement, other commodities and Fuel & Power. The monthly price adjustment amount for the civil works component of the Contract Price will be computed as per the formula given below:

$$EC = EC_1 - EC_0$$

EC₁ will be computed as follows:

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	03	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules-2	[11]	30.09.2015

$$EC_1 = EC_0 \left\{ F + a \times \frac{MI_1}{MI_0} + b \times \frac{LI_1}{LI_0} + c \times \frac{FI_1}{FI_0} + d \times \frac{SI_1}{SI_0} + e \times \frac{CI_1}{CI_0} \right\}$$

Where

EC = Adjustment to Civil Works price component expressed in the currency of the Contract payable to the contractor for each month

EC₁ = Adjusted amount of Civil Works price component expressed in the currency of the Contract payable to the Contractor for each month

EC₀ = Value of Civil Works done expressed in the currency of the Contract for the billing period (month).

- The fixed portion (F) of the Civil Works component of the Contract Price shall be 0.15.
- 'a' is the coefficient for material cost other than cement and steel involved in the Civil Works component of the Contract Price and it shall be 0.15.
'b' is the coefficient for labour cost involved in the Civil Works component of the Contract Price and it shall be 0.3.
'c' is the coefficient for Fuel & Power cost involved in the Civil Works component of the Contract Price and it shall be 0.05.
'd' is the coefficient for steel cost involved in the Civil Works component of the Contract Price and it shall be 0.25.
'e' is the coefficient for cement cost involved in the Civil Works component of the Contract Price and it shall be 0.10.

- MI shall be All India Whole Sale Price Index for all commodities as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry.

LI shall be All India Consumer Price Index for industrial labour as published by Labour Bureau, Government of India

FI shall Index Number of Wholesale Price for group Fuel & Power as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry

SI shall Index Number of Wholesale Price for Steel as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry

CI shall Index Number of Wholesale Price for Cement as published by the Economic Adviser to Government of India, Ministry of Commerce & Industry

For the indices(MI, LI,FI, SI and CI), subscript 'o' refers to indices as on 30 days prior to original scheduled date for opening of Part-I Bid. Subscript '1' refers to indices as of one prior to the month for which Civil Works is being billed.

Dear Sirs,

- 1 In consideration of the [...] hereinafter referred to as the 'OWNER', which expression shall, unless repugnant to the context or meaning, thereof include its successors, representative and assignees, having awarded in favour of M/s.....[Contractor's Name] having its registered office at.....hereinafter referred to as the 'CONTRACTOR', which expression shall, unless repugnant to the context or meaning thereof include its successors, administrators, representatives and assignees, a Contract, hereinafter referred to as the "CONTRACT" for the.....on terms and conditions set out inter alia, in the OWNER's Contract/Letter of Award No.....dated.....as well as 'CONTRACT' documents, valued at [amount of foreign currency in words], [amount in figures], and [amount of local currency in words], [amount in figures] and the same having been unequivocally accepted by the CONTRACTOR and the CONTRACTOR having agreed to provide a **Contract Performance Bank Guarantee** for the faithful performance of the entire CONTRACT including the Warranty Obligations /Liabilities under the CONTRACT equivalent to 10% (ten percent) of the said value of the CONTRACT to OWNER amounting to Rs.....(Rupees.....only) as Contract Security in the form of a Bank Guarantee.

- 2 We,.....[Name & Address of Bank] and having its Head Office at....., hereinafter referred to as the 'Bank' which expression shall, unless repugnant to the context or meaning thereof, include its successors, administrators, representatives and assignees do hereby irrevocably guarantee and undertake to pay the OWNER merely on demand without any previous notice and without any demur and without referring to any other source, any and all monies payable by the CONTRACTOR by reason of any breach of the said CONTRACT of any of the terms and conditions of the said CONTRACT including non-execution of the 'CONTRACT AGREEMENT', to the extent of(%)..... of the Contract price to OWNER amounting to Rs.....(Rupees.....only). Any

Document Number	Rev No	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	02	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-I, Annexure & Schedules	[1]	25.09.2014

such demand made by the OWNER on the Bank shall be conclusive and binding, absolute and unequivocal notwithstanding any difference between the OWNER and CONTRACTOR or any dispute or disputes raised/ pending before any Court, Tribunal, Arbitrator or any other authority. The Bank agrees that the guarantee herein contained shall continue to be enforceable till this sum due to the OWNER is fully paid and claims satisfied or till the OWNER discharges this Guarantee.

- 3 The Bank further irrevocably guarantees and undertakes to pay any amount due and payable by the CONTRACTOR by reasons of non-fulfilment of any of the following obligations of the Contractor:
 - (a) Successful and satisfactory operation of the plant & equipment supplied and erected under the said Contract as per the Technical Specifications and other Tender/Contract documents.
 - (b) That the equipment installed under the said Contract shall be new and in accordance with Contract Documents and be free from all defects in design, engineering, material workmanship and performance for a period of 12 calendar months after final takeover of the equipment by the OWNER and that upon written notice from the OWNER, the CONTRACTOR shall remedy free of any expense to the OWNER, such defects as noticed and developed under the normal use of the said plant & equipment, within the said guarantee period.
- 4 The OWNER shall have the fullest liberty without affecting in any way the liability of the Bank under this guarantee, from time to time, to extend the time of Performance by the CONTRACTOR. The Bank shall not be released from its liabilities under these presents by any exercise of the OWNER of the liberty with reference to the matter aforesaid.
- 5 The OWNER shall have the fullest liberty, without affecting this guarantee to postpone from time to time the exercise of any powers vested in them or of any right which they might have against the CONTRACTOR and to exercise the same at any time in any manner, and either to enforce or to forbear to enforce any covenants, contained or implied in the CONTRACT between OWNER and the CONTRACTOR or any other course or remedy or security available to the OWNER and the Bank shall not be released of its obligations/liabilities under these presents by any exercise by the OWNER of his liberty with reference to the matters aforesaid or any of them or by reasons of any other act or forbearance or other acts of omission or commission on the part of the OWNER or any other indulgence shown by the OWNER or by any other matter or thing whatsoever which under law would, but for this provision, have the effect of relieving the Bank Guarantee. The Bank further undertakes not to revoke this guarantee during its currency without the previous consent of the OWNER.
- 6 The Bank further agrees that the decision of the OWNER as to the failure on the part of the CONTRACTOR to fulfill their obligations as aforesaid and/or as to the amount payable by the Bank to the OWNER hereunder shall be final, conclusive and binding on the Bank.
- 7 The OWNER shall have the fullest liberty to lodge their claim for encashment of the guaranteed sum either in full or part, in the manner suitable to them. However, payment made for a sum lesser than the guaranteed amount shall not relieve or discharge the bank from their obligations guaranteed under the bank guarantee, till the contractual obligations are fully performed by the Contractor or the Bank Guarantee is discharged by the OWNER, as the case may be and the Bank Guarantee shall continue to be in force till such time.
- 8 The Bank also agrees that the OWNER shall be entitled at his option to enforce this guarantee against the Bank as a Principal Debtor, in the first instance notwithstanding any other security or guarantee that it may have in relation to the CONTRACTOR's liabilities.

- 9 This guarantee will not be discharged due to the change in the constitution of the Bank or the CONTRACTOR(S).
- 10 Notwithstanding anything contained hereinabove, our liability under this guarantee is restricted to Rs..... (Rupees.....) and it will remain in force upto and including..... and shall be extended from time to time for such period as may be desired by [Name of Contractor.....] on whose behalf this guarantee has been given.
- 11 Signed at.....this.....day of.....20.....

LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[xiii]	15.01.2016

1 INTENT OF SPECIFICATION

- 1.1 The intent of this Specification is to Renovate and Modernize various equipment & systems of Boiler and it's auxiliaries including but not limited to [Coal Mills, Coal Feeders, Primary Air fans, Forced Draft fans, Induced Draft fans, Electro Static Precipitator, Main steam piping, Cold reheat piping, Hot reheat piping, Upstream & downstream piping of HP & LP Turbine bypass valve, Auxiliary Steam System, Valves and all associated Electrical system, Control & Instrumentation systems and associated Civil & Structural work]. The renovated Boiler shall be capable of operating with the following parameters to feed the Turbo-Generator which is being renovated to give the output of [210/215/220/250] MW. Steam Parameters at the outlet of HP turbine and Feed Water parameters at the inlet of Economiser under the scope of Turbo Generator Package are also given below:

Table: 1.1

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[...]
Steam Pressure at ESV inlet	kg/cm2	[...]
Steam Temperature at ESV inlet	deg C	[...]
Re-heater Flow	T / hr	[...]
Steam Pressure at HPT outlet	kg/cm2	[...]
Steam Temperature at HPT outlet	deg C	[...]
Steam Pressure at IV inlet	kg/cm2	[...]
Steam Temperature at IV inlet	deg C	[...]
Feed Water Flow	T / hr	[...]
Feed Water Pressure at inlet of Economiser	kg/cm2	[...]
Feed Water Temperature at inlet of Economiser.	deg C	[...]

- 1.2 The Bidder shall carry out the required replacement / refurbishment / retrofitting of the Boiler & its Auxiliaries as per the requirements of his design so as to make the same capable of operating for an extended life of [20/25] years and producing the steam at the desired parameters mentioned in Table-1.1 in order to be compatible with the requirement of Turbo-Generator package. The scope

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[1]	15.01.2016

of replacement / refurbishment / retrofitting shall include but shall not be limited to the scope of work mentioned at clause 4.6 which is based on the recommendation of RLA/CA and EA studies conducted during [...]. However, any other items/systems which have not been specifically mentioned but are considered necessary by the Bidder for giving the intended performance of Boiler & its Auxiliaries, shall also be included in the scope of Bidder and shall be separately highlighted by the Bidder in his proposal.

- 1.3 Bidders are required to quote the performance guarantee values for Boiler output, Boiler efficiency, ESP outlet emission and the Auxiliary power consumption in response to the minimum/maximum performance parameters specified in the Table 1.2 below.

Table: 1.2

S.No.	Parameter	Performance Guarantee Values
1	Boiler Output/Capacity in TPH at BMCR Condition (at rated parameters at superheater outlet, the coal being fired from the range specified)	[...]
2	Boiler Efficiency at 100% TMCR (%)	[...]
3	Maximum Auxiliary Power Consumption (kW)	[...]
4	ESP Outlet Dust Emission (mg/Nm ³)	[...]

Bidders to note that in case performance guarantee values quoted for Boiler output and ESP outlet emission are inferior to the minimum/maximum specified values, the bids will be considered as non responsive. In case of Boiler efficiency and Auxiliary power consumption, the best quoted value shall be considered as base parameter and other bids shall be cost loaded as per difference between base parameter and respective quoted guaranteed parameter multiplied by evaluation factors specified in the Commercial Volume (Volume-I).

- 1.4 The modified/replaced/retrofitted equipment will conform to the requirements of the Specification prescribed in Section-II of Volume-II. The relevant technical details like OEM's Specifications and Drawings for the existing equipment required to be modified / replaced / retrofitted have also been provided in Volume-II, Section-II for the reference of the Bidders.
- 1.5 Bidders are required to carry out necessary modifications / replacement in the existing mechanical / electrical equipment or systems including related civil/structural works as per Specification requirement and also based on their own assessment.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[2]	15.01.2016

- 1.6 The scope of work for R&M shall include designing / re-designing, basic and detailed engineering, re-engineering, refurbishing / retrofitting, supply, inspection and testing at supplier's works, packing, forwarding to site, forwarding from site to Bidder's facilities, unloading and storage at site, pre-assembly, machining if required, site fabrication, erection, replacing of various equipment and systems, application of thermal insulation, carrying out all pre-commissioning checks/ tests and any other work required to complete the system, commissioning and trial operation, performance tests of various equipment and systems covered under this Specification. Bidder's scope shall also include dismantling of the existing equipment/ facilities, including unloading & transportation to designated storage / disposal yard, wherever required as a result of augmentation of existing mechanical, electrical, I&C and civil/structural/ architectural works. The Bidder shall restore the equipment/ facilities, whenever applicable, after carrying out necessary renovations/modifications under the scope of R&M works.
- All the tools & tackles, labour and other facilities required for dismantling and restoration shall also be in the scope of the Bidder.
- Bidder shall also put back into service all the systems/equipment of the units after completion of R&M works, whether any modification is carried out on the same or not. All necessary tools, tackles, labour, instruments, spares, consumables etc. required for putting back into operation shall also be provided by the Bidder.
- 1.7 It is not the intent to specify completely herein all aspects of services and equipment to be provided by the Bidder who in any case shall be responsible for fulfillment of the intent of Specification. Irrespective of whether specifically mentioned or not, the services, equipment and systems to be provided in accordance with this Specification shall also form a part of the scope of work and shall conform in all respects to the highest standard of engineering, design, quality and workmanship so that after completion of R&M work by the Bidder, the plant shall be capable of performing completely in a safe, reliable and sustained manner as acceptable to the Owner.
- 1.8 Unless otherwise specifically clarified by the Owner, interpretation by the Owner in respect of scope of supplies & services and the meaning of the Specifications, drawings, requirements of operation, maintenance, redundancy etc., shall be final and binding on the Bidder. Owner shall have the right to reject or accept any work or material which in his assessment is not technically complete and proven to meet the requirements of this Specifications and/or applicable National and International Codes & Standards mentioned elsewhere in this Specification.
- 1.9 The requirements, conditions, appendices etc, given in various parts/ sections of technical Specifications shall form integral part of this Specification. Bidder is required to carefully examine and understand the Specifications and seek clarifications, if required, to ensure that he has understood the Specifications as intended by the Owner. In the absence of any specific clarifications made to the Owner during Bidding stage, the interpretation of Owner shall be final. The

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[3]	15.01.2016

Bidder's offer should not carry any sections like clarifications, interpretations and/or assumptions. All such points are required to be clarified & resolved during Bidding stage.

- 1.10 Any deviation or variation from the scope of supply and services or the intent of the Specification shall be clearly brought out under the schedule of Technical / Commercial deviations, irrespective of the fact that such deviation / variation may be standard practice or possible interpretation of the Specifications by the Bidder. In case, no clear and specific deviation is taken by the Bidder in the relevant schedule of Bid Proposal Sheet while making his Bid proposal, it will be construed that the Bidder shall comply with the stipulations of the Specification fully with regard to scope of services and supplies to be provided by him to achieve the objective of R&M. Further, unless otherwise specifically clarified by the Owner, the interpretation by the Owner in respect of scope of supplies and services to be performed by the Bidder shall be final and binding.

- 1.11 If the Bidder feels that, in his opinion certain features brought out in his offer are superior to what has been specified, these may be highlighted separately in the Bid. The Bidder at his own discretion may also make Alternate offers, which in his opinion are of superior technology, material etc. to the specified requirements leading to better performance like efficiency / output etc. of the units after renovation. In such case, the Bidder shall carry out a comprehensive study and clearly identify the scope of offer in his alternate proposal. The Bidder shall furnish that detailed study to Owner along with the Bid where the Bidder shall bring out in detail the scope of modifications required to be carried out by him in the various systems and equipment including but not limited to *[Boiler & auxiliaries, Coal Mills, Coal Feeders, Primary Air fans, Forced Draft fans, Induced Draft fans, Electro Static Precipitator, Main steam piping, Cold reheat piping, Hot reheat piping, Upstream & downstream piping of HP & LP Turbine bypass valve, Auxiliary Steam System, valves and all associated Electrical system, Control & Instrumentation systems and associated Civil & Structural work etc.]*.

Such Alternate proposals shall be supplemented with sufficient amount of information like specified design standards and performance requirements, Bidder's experience, operating feedback, provenness, etc. for justifying such proposals. Implications of such Alternate offers on the performance, output, efficiency, auxiliary power consumption, etc. shall be clearly brought out in the Bid to enable the Owner to determine the advantages, superiority and acceptability of the proposals.

However the Bidder's Base offer shall necessarily be in line with the Specification requirements. Under no circumstances the equipment and services as specified shall be brought out as an Alternate offer.

The Base offers will be evaluated as per procedure outlined in the Bid documents and the Alternate Offers of the lowest evaluated Bidder will only be considered for acceptance or otherwise. Owner may reject alternative proposals submitted by the Bidder at his sole discretion, without assigning any reason what so ever.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[4]	15.01.2016

- 1.12 In the event of conflict between requirements of any two clauses of the Specification documents or requirements of different Codes/ Standards specified, the more stringent requirement as per the interpretation of the Owner shall apply, unless confirmed otherwise by the Owner in writing.
- 1.13 The General technical conditions pursuant to the Contract, placed separately in this Specification, shall form an integral part of the Specification. These conditions shall supplement all the detailed technical Specification and requirement identified in this Specification.
- 1.14 Out of complete unit comprising of mechanical, electrical, C&I systems and equipment, some components/systems are envisaged to be replaced with new ones having better design features while some of the other components are to be refurbished / upgraded by the Bidder under present R&M Work. It shall be the responsibility of the Bidder to ensure that components/ equipment/ systems being supplied new OR components/ equipment/ systems being refurbished / upgraded by him are fully compatible and integrated with the existing equipment / systems so as to give safe, reliable and sustained operation of the complete unit. Modifications needed on the assembled equipment to ensure complete integration are to be brought out by the Bidder in the Bid and such modifications, if any, after Owner's approval shall be carried out by the Bidder to the satisfaction of the Owner.
- 1.15 The unit shall be designed to operate continuously in base load and cyclic load operation. The systems shall operate without any restriction over the entire range of operating conditions. The Bidder shall ensure that after R&M there are no restrictions/ alterations in modes of operations of this unit, as per the original/existing plant operation philosophy, including achieving base load, peak load and cyclic load operation.
- 1.16 As the various equipment/ systems/ components are to be fitted in the unit, Bidder is advised to visit the plant site to get fully conversant with the job, site conditions, and constraints, and collect all the information as required and as available before quoting against this Specification.
- 1.17 A brief extract of the existing unit, the original design details/ performance parameters along with plant details, operating history and known problem areas; wherever possible are brought out in the successive section of this Specification. Relevant plant layout drawings and certain key schematic drawings, as available, have also been provided in Annexure-I of this section of the specification for the purpose of familiarization & guidance only. The successful Bidder shall prepare and provide the additional drawings and documents describing the design and engineering details and the manuals for carrying out erection, commissioning and operation of the renovated unit.

C	Demineralised Water for Power Cycle Make up		
The quality parameters of demineralised water is in use for make up to the condenser hotwell and make up to the closed cycle equipment cooling water (ECW) system is as below:			
1	pH	{6.8 – 7.2}
2	Silica, as SiO ₂	ppm	≤{0.01}
3	Conductivity	micro mho/cm	≤{0.1}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[14]	15.01.2016

3 EXISTING PLANT DETAILS

The Power Plant, is of the configuration of [...x...MW]. The Unit no. [...] of the power plant, which is proposed to be taken up for Renovation and Modernization was first commissioned in the year [...]. For the above unit, M/s [...] and M/s [...] are the Original Equipment Manufacturers (OEMs) for the Boiler and Turbo-Generator, respectively. The boiler for the unit is of [PF/CFBC] design. The boiler is provided with [front & rear/ corner/down shot] firing system. LP stage of Turbine is designed with [Bauman] exhaust. Condenser cooling system of the unit is designed on [once through / re-circulation system]. Power generated from the unit is being supplied to [...State/Central grid]. Power is being evacuated through [...numbers of 220/400kV Double/Single Circuit lines] to [... substation.] The primary fuel is [domestic/imported/blended] [coal/lignite] fuel being sourced from [...&...] coal mines. The consumptive water for the power plant is being sourced from [...river /...sea].

3.1 Operational Background

Unit No [...] of [...] Thermal Power Station having a Generating Capacity of [210 MW] was commissioned in the year [...]. The boiler is of [...] design and the turbine is of [LMZ] design. Though the boiler was originally designed for coal with Gross Calorific Value (GCV) of [...kCal/kg], it presently operates on coal supplied with GCV of about [...kCal/kg]. The deterioration experienced over the years in Plant's Average Performance Parameters is shown in Table 3.1.

{Furnish in the Table 3.1 below, the Average Values over the life (say 25 years)}

Table: 3.1
Unit's Average Performance Parameters over the Life

Years after Installation	PLF (%)	Availability (%)	Output (MW)	Aux. Power Consumption (%)	Specific Oil Consumption (ml/kWh)	Unit's Gross Efficiency (%)	Unit's Gross Heat Rate (kCal/kWh)

3.1.2

Stack Emissions, Ambient Air Quality and Process Effluents

The Project has been regularly monitoring the environmental parameters such as stack monitoring, ambient air quality (AAQ), noise pollution and liquid waste pollution in accordance with applicable norms by employing [M/s....., which is an agency approved by State Pollution Control Board].

The existing environmental data and the limits specified for different pollutants, the locations of their measurements and the frequency of monitoring are given in the table below.

Table 3.3
Status of Stack Emissions, Ambient Air Quality and Process Effluents

3.2 Salient Technical Feature of Boiler & its Auxiliaries

{Describe in this sub-section, the Design Parameters and Salient Features of all the important Equipment and Systems of Pulverized Fuel (PF) Boiler & Auxiliaries or Circulating Fluidized Bed Combustion Boilers(CFBC), as applicable and as mentioned below.}

3.2.1 PF Boiler & Auxiliaries

a) PF Boiler

[The Boiler is of natural circulation, pulverized fuel fired, dry bottom, balanced draft using direct firing system. The design parameters of the Boiler are furnished below]

Table: 3.9

Description	Units	Design Parameters
Steam Flow at Final SH outlet	T / hr	[...]
Steam Pressure at SH outlet	kg/cm ²	[...]
Steam Temperature at SH outlet	deg C	[...]
Re-heater Flow	T / hr	[...]
Steam Pressure at RH outlet	kg/cm ²	[...]
Steam Temperature at RH outlet	deg C	[...]
Feed Water Flow	T / hr	[...]
Feed Water Pressure at inlet of Economiser	kg/cm ²	[...]
Feed Water Temperature at inlet of Economiser.	deg C	[...]

b) Furnace

[The boiler is equipped with a water cooled furnace of balanced draft and fusion welded membrane wall construction. It is equipped with.....numbers of coal burners and.....numbers of oil burners located at numbers of elevations. The design parameters of the Furnace are furnished below.]

Table: 3.10

f) **Air Pre-Heater**

The air pre-heater is of regenerative rotary type. Special sealing arrangements have been provided in the air pre-heater to prevent leakage between air and gas sides. Adjustable sector plates have also been provided to prevent the leakage during expansion. The heating surfaces of the air pre-heater have been provided with two types of cleaning systems, soot blowing and water washing system.]

a) Raw Coal Bunkers

[Each boiler is provided with [...] raw coal bunkers. The total capacity of the bunkers is to meet [...] hour's requirement at maximum mills capacity of the unit. The upper portion of the bunkers is of cylindrical shape made of carbon steel plate, while the conical portion is made of stainless steel plate. Each outlet of the bunker is provided with an isolation gate which is motor operated. In addition to the isolation gates, rod gates have been provided to control the flow of coal from the bunkers]

b) Raw Coal Feeders

[One gravimetric type of raw coal feeder has been provided for each coal mill. The coal feeders have been provided with micro-processor based controls with variable frequency drive. The feeders have been provided with dual independently measuring load cells. All parts of the feeders coming in contact with coal, except the belt, are made of stainless steel]

3.2.2 CFBC Boiler and Auxiliaries

a) CFBC Boiler

[The Boiler is of natural circulation, circulating fuel bed combustion, single drum, dry bottom, balanced draft using limestone /dolomite as absorbent The boiler is provided with water cooled/ steam cooled Cyclone Separator(s) to remove coarser entrained solid particles from the flue gases which are returned to the combustor bed via loop seal. An External Fluidized Bed Heat Exchanger (EFBHE) has also been provided to extract heat from a part of the solids before their return to the combustor bed. The design parameters of the Boiler are furnished below.]

b) **Furnace**

[The furnace consists of membrane type water walls to provide most of evaporative boiler surface. The fuel for the boiler is (coal/lignite). The combustor bed material for the boiler is composed of (ash, sand and sorbent). Lower zone of the furnace is lined with refractory. Staged combustion is achieved by injecting the primary air under the bed and the secondary air above the refractory zone. The bottom of the furnace is provided with a fluidizing air distributor grid. Stainless steel air nozzles are mounted on the distributor grid to supply the primary air. Design Parameters of the furnace are furnished below.]

l) Fuel Bunkers

[The boiler is provided with [...] bunkers of fuel (coal/lignite). The capacity of each bunker is to meet [...] hour's requirement of the boiler. The conical hopper portions of the bunker are lined with stainless steel.]

m) Fuel Feeding System

[From the bunkers, fuel flows down a vertical chute to individual extraction feeders placed under each conical hoppers, which are of drag chain type. These feeders are provided with variable frequency drives (VFDs) so that fuel feed rate can be controlled by varying the speed of the feeders. Fuel from these box feeders is again fed to common main drag chain feeders from where the fuel is conveyed to the combustor bed of the furnace.]

n) Sorbent Bunker

[The boiler is provided with [...] sorbent bunkers of Limestone/ dolomite. The capacity of each bunker is to meet [...] hour's requirement of the boiler. Flow of sorbent is controlled with gravimetric feeders]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[44]	15.01.2016

o) Start up Burners

[Start up burners using LDO have been provided to raise the temperature of the combustor bed to the auto ignition temperature of the fuel. For this purpose, [...] burners have been placed in the primary air duct leading to the combustor bed]

p) Primary Air Fans

[Two Primary Air (PA) Fans have been provided for each boiler. Each PA Fan is designed to meet 60% MCR condition of the boiler. The PA Fans are Hot PA Fans. Details are given below:]

Table: 3.29

Tender Document for R&M of Unit No. [..] Capacity [...] of [Name of the Power Plant]	[Logo of Utility]
--	-------------------

3.2.3 Electrical System

a) General Technical Parameters

[The Major design parameters of the electrical systems/Equipment are furnished below:]

Table: 3.35

Description	Units	Design Parameters
Make/Manufacturer		[....]
Model No		[If applicable]
Installation		[....]
Nominal voltage	kV	[....]
Highest System voltage	kV	[....]
Short circuit current	kA	[....]
Impulse withstand voltage	kV (Peak)	[....]
One minute power frequency withstand voltage	kV (rms)	[....]
Reference ambient temperature	°C	[....]
Rated Current	Amp	[....]

6.6/0.433 kV Transformer

[The 6.6 / 0.433 kV transformer is designed to cater 100% of Power plant auxiliary load of respective system like Boiler auxiliary, HVAC etc, with 2 x100% configuration is followed. For ESP system electrical scope of work shall start from 6.6 kV Unit switchgear outgoing and shall include HV cable termination, HV cable, LT transformer, NSPBD, LV switchgear and further distribution. The design parameters of the 6.6 / 0.433 kV transformer are furnished below:]

Table: 3.36

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Type		[Oil/Dry.....]
Transformer application		[..Service]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[52]	15.01.2016

Description	Units	Design Parameters
Installation		[...Indoor/Outdoor.]
Rating of transformer	MVA	[.....]
No load voltage ratio at principal tap HV/LV	kV	[.....]
Impedance value at principal tap on rated MVA base.	%	[.....]
Tolerance on impedance at nominal tap		[.....]
Rated frequency	Hz	[.....]
Winding connection and vector group		[.....]
System fault level	kA	[HV.....]; [LV.....]
Impulse withstand voltage / Power frequency withstand voltage of windings	kV	[.....]
System earthing (a) HV (b) LV		[.....] [.....]
Type of tap changer		[.....]
Guaranteed no load loss	kW	[.....]
Guaranteed load loss	kW	[.....]
Guaranteed efficiency at a) Full load b) 75% load	%	[.....]
No of Cooler Bank and Capacity (If applicable)	No & %	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[53]	15.01.2016

Description	Units	Design Parameters

b) LV Switchgear (PMCC/MCC)

[The LV Switchgear is provided with two incomers and bus coupler with outgoing feeders intend for specific Auxiliary services. All the MCC/PMCC to feed the boiler auxiliary like ESP PCC/PMCC/MCC, FOPH PCC/PMCC/MCC, Boiler MCC, Boiler Valve MCC, Soot Blower MCC, Bottom Ash Handling System MCC, Emergency MCCs, AC ventilation MCC, PDBs, ACDBs, etc. are the part of Boiler package. The design parameters of the LV Switchgear are furnished below:]

Table: 3.37

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Rated voltage, phases & frequency	V, Hz	[.....]
System neutral earthing		[.....]
Maximum system voltage	V	[.....]
One minute power frequency Voltage		[.....]
(a) Power circuits	V	[.....]
(b) Control Circuits	V	[.....]
Continuous current rating of bus bars		[.....]
Short Circuit rating of Bus bar with duration	kA & sec	[.....]
Bus bar Material	Al/Cu	[.....]
Type- Fully Draw out/Fixed		[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[54]	15.01.2016

c) Non Segregated Phase Bus Duct (NSPBD)

[Diesel generating sets are installed for meeting the power requirements of essential auxiliaries (viz. jacking oil pumps, AC lube oil pump, hydrogen seal oil pump, float charger for DC battery, emergency lighting, scanner air fan and stator cooling water pump) during total failure of AC Power Supply in the power station. Diesel generating sets are located in the CD bay at the ground floor. The details are mentioned below]

[The NSPBD which connects 6.6 / 0.433 kV transformer to LV Switchgear required for boiler auxiliaries and associated equipment. The design parameters of the NSPBD are furnished below:

Table: 3.38

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Type of bus duct		[.....]
Rated voltage and No. of phase	V	[.....]
Material of Bus bar and Enclosure		[.....]
Rated Current	A	[.....]
Designation (From and To)		[.....]
Type of cooling (NSPBD)		[.....]
Maximum temperature rise of conductor over 50°C ambient	°C	[.....]
Maximum temperature rise of enclosure over 50°C ambient	°C	[.....]
One minute power frequency voltage withstand	KV (RMS)	[.....]
Continuous current rating at 50°C design	A	[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[55]	15.01.2016

Description	Units	Design Parameters
ambient air temperature		
One second short circuit withstand rating	KA (RMS)	[.....]
Momentary short circuit withstand current	KA (Peak)	[.....]

d) **HV Cables**

[The HV cables of 6.6kV UE Voltage grade is used for feeding 6.6kV motors as well as 6.6 / 0.433 kV transformers (under boiler package) from 6.6 kV Unit or station switchgear. HV cable termination at both the end shall be in boiler package. The design parameters of the HV Cables are furnished below:]

Table: 3.39

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Voltage Grade		[.....]
Nominal Power System Voltage	kV	[.....]
Maximum System Voltage	kV	[.....]
System Neutral Earthing		[.....]
No. of Cores		[.....]
Conductor Material		[.....]
Conductor (stranded/solid)		[.....]
Conductor Screen		[.....]
Insulation		[.....]
Insulation Screen		[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[56]	15.01.2016

Description	Units	Design Parameters
Inner Sheath		[.....]
Outer Sheath		[.....]
Armoured/Unarmoured		[.....]
Material of cable drum		[.....]
Type of End Sealing		[.....]

e) **LV Cables**

[The LV cables of 1.1kV Voltage grade are used for feeding LV motors as well as for sub distribution system boards/MCC/PMCC/ACDB/DBs etc. The design parameters of the LV Cables are furnished below:

Table: 3.40

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Voltage Grade		[.....]
Nominal Power System Voltage	kV	[.....]
Maximum System Voltage	kV	[.....]
System Neutral Earthing		[.....]
No. of Cores		[.....]
Conductor Material		[.....]
Conductor (stranded/solid)		[.....]
Conductor Screen		[.....]
Insulation		[.....]
Insulation Screen		[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[57]	15.01.2016

Description	Units	Design Parameters
Inner Sheath		[.....]
Outer Sheath		[.....]
Armoured/Unarmoured		[.....]
Material of cable drum		[.....]
Type of End Sealing		[.....]

f) Control (Core) Cables

[The Control cables of 1.1kV Voltage grade are used for Protection, CT, VT connection and feedback/interlock signals. The design parameters of the LV Cables are furnished below:

Table: 3.41

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Voltage Grade		[.....]
Nominal Power System Voltage	kV	[.....]
Maximum System Voltage	kV	[.....]
System Neutral Earthing		[.....]
No. of Cores		[.....]
Conductor Material		[.....]
Conductor (stranded/solid)		[.....]
Conductor Screen		[.....]
Insulation		[.....]

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[58]	15.01.2016

Description	Units	Design Parameters
Insulation Screen		[.....]
Inner Sheath		[.....]
Outer Sheath		[.....]
Armoured/Unarmoured		[.....]
Material of cable drum		[.....]
Type of End Sealing		[.....]

g) 6.6 kV Motor

[All the 6.6kV motor in boiler packages shall be directly fed from the 6.6kV Unit/station switchgear. 6.6kV Unit and station switchgear shall be part of TG package. The provision of Nos of outgoing feeder shall be kept in 6.6kV switchgear in co-ordination with the boiler package Bidder. The design parameters of 6.6 kV motors used in Boiler package are furnished below]:

Table: 3.42

Description	Units	Design Parameters
Make/Manufacturer		[.....]
Application		[.....](For each application)
Rating	kW	[.....]
Rated Voltage, Phase, Frequency	kV, Hz	[.....]
Frame Size		[.....]

Type		[... Integral/Non Integral.....]
Class of Insulation		[.....]

j) **Illumination System**

[The illumination system of Unit No. [...] of [Name of the Power Plant] is categorized mainly as Normal, Emergency and DC lighting. The illumination system of indoor area/Building (under the scope of Boiler package), Outdoor area are covered in this Boiler Package. Lighting system for other area are covered respective packages. Lighting Distribution Board (LDB) is normally getting supply from 415V PMCC. Each LDB is provided with lighting transformer for isolation of lighting circuit from power circuit and also for limiting short time current rating. Outgoing circuits of LDB will feed Lighting panels which is placed local to fixtures. It is envisaged that separate LDB for indoor as well as for outdoor area. Emergency Lighting system is same as normal system however it will get supply from Emergency 41V PMCC backed up with DG set. The Design parameters of Illumination System and its major components comprising of LDB with transformer, Lighting Panel, Lighting Fixtures, Lighting wires and Lighting Poles are furnished below]:

Table: 3.45

Description	Units	Design Parameters
Lighting System:

Type of Poles		

k) Cable Carrier System

[The Cable Carrier system of Unit No. [...] of [Name of the Power Plant] is described as below: Indoor Buildings are provided with Cable cellar/Trench and outdoor areas are provided with Pipe cum cable rack/Duct bank/Trench. Separate Tray is envisaged for HV cables. LV cables, Control cables and Instrumentation cables in the order that HV cables Tray at the top followed by LV, Control and Instrumentation Tray. Ladder type tray is used for HV, LV and Control cables, however Perforated Tray to be used for Instrumentation cables. The Cable carrier system of indoor area/Building (under the Boiler package), Outdoor area are covered in this Boiler Package. Cable carrier system for other area are covered in respective packages. However if any cable of other package comes under the boiler area, Boiler package Bidder has to provide sufficient space in their cable carrier system to accommodate other package cables. Similarly if Boiler package cable run though any other package area, they will keep the provision of sufficient space in their cable carrier system to accommodate the boiler package cables. The Design parameters of Cable Carrier System are furnished below]:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[64]	15.01.2016

I) Earthing and Lightning System

[The Earthing & Lightning System of Unit No. ...] of [Name of the Power Plant] is described as below:

All above ground earthing of boiler auxiliaries / structure /equipments / skids / pipes /column etc are under the boiler package. Earth point/earth pad of the each equipment shall be connected to the main earth grid via risers. Provision of Sufficient nos. of riser shall be kept in the BOP package. Sizes of the earth flat/bar/wire shall be depending

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[65]	15.01.2016

upon the rating of equipment and earth fault current is to be carried during fault condition. The Design parameters of Earthing and Lightning System are furnished below]:

3.2.4 Control & Instrumentation

[The existing control and instrumentation system generally is an old analogue based system and requires large scale replacement owing to obsolescence of the existing equipment. Furnace Supervisory Safeguard System (FSSS) is of obsolete design for which, no spares are available. Soot blowers are of manual type. No online Boiler Tube Leakage detection system has been provided. HP- LP bypass system is in the form of standalone control panel. Integrated microprocessor based closed loop control, open loop control, sequential control and bulk data acquisition system for Boiler & auxiliaries, TG & auxiliaries, station C&I including auxiliaries in hierarchical levels and integrated unit monitoring and station monitoring systems in the upper level are therefore to be envisaged for the plant.]

3.2.5 Civil Works

Bidder shall go through the details of the existing Buildings / Structures / Foundations / Facilities mentioned hereunder (but not limited to) for the thorough understanding of conditions of the same. In order to assess the quantum of Civil / Structural / Architectural R&M work within the package, Bidder shall also carry out a brief or detailed survey (as required) of the site to acknowledge and obtain any other information/data about present conditions at site and identification of modification requirements in any other structure or foundation not included here. Conditional details of important buildings / structures / foundations / facilities which require major modifications have been described below:

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[67]	15.01.2016

{Details of the existing foundations in the boiler area, with its auxiliaries like PA fan, FD fan, ID fan as well as Electrostatic Precipitator shall be indicated in this section. Also the available GA/Construction Drawing including Load Data shall also be provided.}

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[68]	15.01.2016

4 SCOPE OF SUPPLY & SERVICES

4.1 The scope of supply and services

The scope of supply and services to be provided by the Bidder shall include all such activities as required to meet the target and intent of this Specification. The scope for each unit shall generally cover, but will not be limited to the following:

- (i) Replacement of some of the existing components with new components of improved and better design.
- (ii) Incorporation of new systems / components wherever required in line with the Specification.
- (iii) Refurbishing / Retrofitting of some of the components in the existing equipment/system.
- (iv) All types of civil/structural works like modification and strengthening of foundation of existing and upgraded equipment, making new structures or foundations (if applicable), dismantling, restoration, supply and erection of any temporary supports or any other construction work required for implementation of renovation work.

All structural modifications/strengthening of existing structure of building, Boiler, Fans, ESP etc. including supply, fabrication and erection of any new structure and provision of any additional platform if required for access to new equipment or existing equipment as specified.

Supply of all materials, equipments, machinery and manpower required for civil/structural R&M works.

Site enabling works as per the requirements to support civil/structural R&M works.

- (v) Design, engineering, submission of design calculations for review and approval, manufacturing, inspection and testing at suppliers' works, packing, forwarding to site, unloading, erection, supervision, pre-commissioning, testing and commissioning and performance testing of the equipment / systems and works indicated in clause No. 4.5 of this technical Specification.
- (vi) Mandatory spares, start-up and commissioning spares. The general requirements in respect of various types of spares are given in Clause 9 of this section of Technical Specification.
- (vii) Packing, transportation and transit insurance of all materials required for renovation / replacement work as per this Specification from the supplier's/sub supplier's works to [Name of the Plant], unloading, preservation and storage at site. Packing, transportation, transit insurance, clearance from all concerned agencies etc. of all components/materials required to be forwarded from [Name of the Plant] to Bidder's facilities and back to [Name of the Plant].
- (viii) Dismantling of the systems, handling and storage of dismantled equipment, reassembly and re-erection / reinstallation along with associated inspection, testing,

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[69]	15.01.2016

commissioning and trial run of equipment individually as well integrated with the overall plant trial operation.

- (ix) Materials which are removed from the existing machines but are not re-used during the re-assembly of the machines as well as those components which are found to be beyond refurbishment shall be the property of Owner and shall be deposited at Owner's designated stores. Bidder shall prepare a record of all such dismantled material and hand it over to the Owner.
- (x) Loading, transportation, unloading and disposal of scrap to the designated storage/disposal yard.
- (xi) It shall be responsibility of the Bidder to obtain on behalf of the Owner the necessary approvals of Inspection Authority / Chief Inspector of Boilers as may be required for design and design calculations, manufacturing, erection procedure renovation as called for under the IBR. Bidder shall also be responsible for obtaining approval from the other statutory authorities in India, as may be required, for other plants and systems supplied by him. All such documentation submitted to statutory authorities shall also be submitted to the Owner for his review.

Handling of materials at site including handling / transportation as required to take equipment components to the workshop for carrying out the modification work and to bring it back for installation. All arrangement for such activities is to be done by the Bidder.

- (xii) Erection of all material supplied new for renovation (including erection of components, replacing old components). Re-erection of any component / equipment removed for modification so as to make complete unit consisting of Boiler and related auxiliaries including electrical & control and instrumentation equipment /system ready for commissioning.
- (xiii) All gas cutting / dismantling, edge preparation, welding, bolting etc. and conductance of all NDTs like radiography, ultrasonic testing, MPI, die penetration testing etc. Any new matching pieces, piping, hangers & supports etc. required for assembly of equipment/ systems, as per system requirements shall also be included in the scope of the Bidder.
- (xiv) All Pre-commissioning activities as may be required such as hydraulic testing, air & gas tightness test, steam blowing, floating of safety valves, oil flushing etc. including erection and dismantling of all temporary systems like piping / tanks etc. and Conductance of all demonstration tests including performance test.
- (xv) Assisting and coordinating with Owner in tuning various control loops finalizing protection and control requirements of all boiler auxiliaries.
- (xvi) Insurance for all items / activities in line with the provisions of General Condition of Contract of Volume-I.
- (xvii) Civil / Mechanical work (such as grouting, cutting, welding etc.) related to mounting of New Cabinets, CRT / Keyboards, laying & termination of associated Cables.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[70]	15.01.2016

- (xviii) Supply of all necessary tools, tackles, commissioning spares, test instruments and deputing of experienced personnel for completion of the above erection, testing and commissioning work.
- (xix) Dismantling of existing C&I cabinets along with associated cabling, for Boiler & Auxiliaries related to the unit for retrofitting the new C&I systems, based on requirement as described in clause No. 4.5.
- (xx) Providing all site execution and supervision by qualified and experienced engineering personnel during execution of all works under the scope of Bidder. Also providing all facilities and qualified personnel for implementing the approved quality assurance programme.
- (xxi) Dismantling of the existing Instrumentation Cables and relaying of new cables as may be required.
- (xxii) The Bidder shall conduct all shop and site tests as per the requirements of this Specification and Owner approved "Quality Assurance Program" to be finalised before the award of this Contract. Facilitating inspection, witness of shop and site tests by the representatives of Owner shall be in the scope of the Bidder.
- (xxiii) Performance Guarantee tests after successful completion of initial operation.
- (xxiv) Electrical

The scope of electrical system of Boiler and auxiliary's package will include all electrical equipment listed below (if applicable).

[Note: Scope of work of auxiliary system for SG shall be suitably modified with respect to specific project and accordingly list of attachments as given in 'Volume-II, Section-II, Part B' shall be enclosed]

- a) *[All 415 V MCCs for SG package (Boiler. MCC, Boiler valve MCC etc.) as required and ACDBs/PDBs and DCDBs for drives and equipment covered in SG package.*
- b) *6.6 / 0.433 kV transformers, 415 V non segregated phase bus ducts.*
- c) *Welding sockets in SG area with necessary Welding DBs.*
- d) *Control stations / Local Push Button stations.*
- e) *HV/LV A.C. motors and actuators for all the drives in the scope of SG package and DC Motors and DC starters as required in SG area.*
- f) *Installation, Interconnection laying and termination of all Bidder supplied HV/LV power and control cables with termination kits for all auxiliaries in TG area.*
- g) *Illumination System including Lighting Transformers, MLDBs, Lighting DBs/ Lighting Panels for the Steam Generator Island.*
- h) *Grounding system for the SG Island and grounding connection to all equipment in SG area. Making arrangement for proper electrical grounding of all systems, supplied by him as required by the system design. All required accessories including grounding cables.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[71]	15.01.2016

- i) *Lightning Protection system for SG Building and other equipment/building covered in SG Island.*
- j) *Complete cable racks with necessary supporting structures and foundations within SG area, cable Trays with support system, cable trenches and accessories in SG area. Fire proof sealing system in SG area.*
- k) *Variable frequency drives for HV and LV system of SG package].*

(xxv) Construction Water:

[Construction water shall be made available to Bidder at a single point in a suitable location. The Bidder shall arrange at his own cost the required pumps, distribution pipe line network for further distribution as required to carry out construction work.]

(xxvi) Construction Power

[Construction power shall be made available to bidder at single point at [...] kV level. Further distribution as required to carry out the construction work shall be carried out by Bidder at his own cost.]

(xxvii) Providing all other services necessary for meeting the intent and requirement of this Specification. This shall include but not limited to system engineering, furnishing drawings, data, information for Owner's review, participation in meeting & reviews, System warranty, revision of O&M Manuals etc.

4.2 Tools & Tackles

One (1) set of special tools and tackles required for the maintenance of equipment/systems have to be supplied by the Bidder. These tools and tackles shall be separately packed and brought to site. These shall not be used for erection/commissioning purposes and shall be in an unused and new condition, when they are handed over to the Owner. A list of all such special tools and tackles shall be submitted along with the offer.

For C&I system, Bidder shall supply one set for each unit of special non standard tools, module testing kit, cables, and any other equipment required for erection commissioning, testing, trouble shooting, calibration, maintenance and inspection of all systems / equipment provided. Any tools required to make changes (DIP shunt cutter, soldering irons, tips, wire wrap guns and bit unwrapping tools, strippers, terminal guard, connector repair tool, dies etc.) shall also be supplied.

Bidder's scope shall also include supply of all Cranes, welding sets and NDT testing equipment, scaffolding, special tools and tackles, jigs and fixtures as may be required during modification / erection and commissioning. Those items specifically brought to site solely for erection / modification purpose and if no more needed for regular maintenance of the equipment, can however, be taken back by the Bidder after completion of the work at site, subject to the approval of Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[72]	15.01.2016

4.3 Safety

4.3.1 The design of the equipment shall incorporate every reasonable precaution and provision for the safety of all personnel and for the safety and security of all persons and property. The design shall comply with all appropriate statutory regulations relating to safety.

Newly constructed structures and equipment shall be designed and constructed to withstand every foreseeable static and dynamic loading condition, including loading under earthquake conditions, with an adequate margin of safety.

Ready and safe access with clear head room shall be provided to all the newly supplied parts of the plant for operation, inspection, cleaning and maintenance.

4.3.2 While carrying out the R&M work as per this Specification, the Bidder may have to modify the existing equipment foundations, or do the excavation work and make new foundations. The Bidder may also have to make new supporting arrangements with / without modified loads for the items/ equipment supplied by him. Under all such conditions Bidder shall be solely responsible for ensuring the safety of the adjacent equipment / foundations and of the existing supporting structures. The R&M work by the Bidder shall be carried out in such a manner that no damage is caused to existing equipment / foundations / structure and all precautions, including strengthening of existing structures, as may be necessary, shall be taken by the Bidder to ensure safety of existing plant / equipment / foundation / structures.

4.4 Training Requirements

Bidder shall include in his offer the training programme for Owner's Operation & Maintenance staff in view of introduction of new systems/ equipment. This training shall be organized before handing over the unit.

In case there is any difference in scope of work and services as described in this section of the Specifications and individual Specification volumes, then more stringent of the Scope of work and services shall prevail.

4.5 Detail Scope of Work:

4.5.1 Boiler & Its Auxiliary System

{Describe in this chapter, all the equipment/components which need to be replaced/refurbished/retrofitted as finalized in the DPR on the basis of RLA/CA and EA report. Scope with regard to Civil, structural and architectural work as required for the Power Plant due to incorporation of new equipment/components shall also be incorporated in this chapter.

Generally there is a considerable time elapsed between the 'RLA/CA & EA Studies' and the 'Award of R&M Contract'. Due to this time gap, the unit suffers further deterioration which is not factored into the bidding document. To ensure that the Renovation & Modernization Project goals are successfully achieved, it is advisable to convey to the bidders the real health condition of the unit, while issuing the bidding documents. The utilities are therefore advised to get a Baseline Test conducted before

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[73]	15.01.2016

issuing the bidding documents. Such Baseline Test may be conducted through an Independent Consultant for the Performance Evaluation of Boiler, TG and the Major BOPs of the Unit. Parameters to be evaluated during the Baseline Test are being enclosed separately.}

The Bidder shall include in his scope the following works for the R&M of the Unit, which are based on RLA/CA and EA studies. The overall scope of work shall include but shall not be limited to the scope of work mentioned below. DCS & other common system/items, if applicable, procured by owner separately, shall not be considered under SG package. Any other items not specifically mentioned but considered necessary by the Bidder for carrying out the R&M work, shall also be included in his scope so as to meet the intended performance of Boiler & Auxiliaries as specified in Clause No. 1.1

	[.....]	[.....]
	[.....]	[.....]

In addition to the above listed works, scope of civil / structural / architectural works and supplies shall be as detailed below.

Bidder shall carry out a brief or detailed survey (as required) of the site to acknowledge and obtain any other information/data about present conditions of the buildings, structures, foundations & facilities mentioned in this Specification and identification of modification requirements in any other structure or foundation not included here.

Subsequently Bidder shall prepare and submit for approval by Owner, a detailed scheme including methods techniques, requirements etc. for carrying out civil/structural/architectural R&M works to executed in the plant.

Bidder shall be provided with the existing drawings and documents as listed in Annexure-I by the Owner to facilitate the civil / structural / architectural refurbishment and replacement works.

The scope of Civil / Structural / Architectural works to be carried out by the Bidder under this package shall generally cover the following:

- Inspection and checking the design adequacy of the existing structure foundations like *[boiler, ESP, bunker bay/building, fans and mill foundations, flue gas duct support foundations etc.]* for all the applicable loads and construction of new foundations / modification of existing, wherever required.
- Inspection and checking the design adequacy of existing structures *[such as boiler structures, ESP structures, duct support structures, bunker bay / building structures,*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[100]	15.01.2016

pipe & cable racks etc.] for any corrosion/damage and rectification / strengthening of the same.

- Carrying out all interior / exterior architectural replacement works *[such as flooring, painting, plastering, door/windows, roof finishing, water proofing, new false ceiling, glass partitions, lighting works replacement or modification of AC duct where ever applicable]* is also included in Bidders scope. etc.
- Any other civil related work required in buildings / structures of the package from aesthetics ambience & ease of operation point of view.

In addition to this any other modification/alteration to existing nearby foundation/structural steel/concrete/underground pipes work if required for satisfactory execution of intended work covered under this Specification shall be carried out by the Bidder. Supply of all material required for the above work is included in Bidder's scope

Supplies for Civil/Structural Work

The Bidder shall supply all material needed for completion of all civil, structural and Architectural works as per this Specification. The Bidder's scope of supply generally includes but is not limited to the following:

- Supply of cement, steel (for reinforcement as well as for any other use), grout, admixture for RCC work, sand and all other construction/architectural / building materials as may be required for any modification of existing civil works / foundation or for construction of new foundation / civil works.
- Supply of structural steel for all structural erection / modification / strengthening.
- Supply of all foundation bolts, and nuts base plates, embedments with lugs, miscellaneous steel where ever needed
- Supply of steel helical springs and viscous dampers for new equipment (if any).

Construction Enabling Works

Following facilities shall be made available / constructed as per the requirements for successful completion of the R&M works.

a) Temporary Site Buildings

The Bidder shall provide at his cost the following buildings/facilities for proper execution and quality control of the job, while meeting the provision stipulated by Factory Rules regarding staff welfare facilities. All these buildings shall have brick / metal cladding. GI/Colour coated metal sheet roofing over steel structure with cement concrete flooring and false ceiling with air conditioning, as required.

- **Temporary Stores**

A covered store shall be provided with brick cladding and / or GI/Colour coated metal sheeting to store at least one-month requirement of cement. Cement in bags shall be stored on a raised floor well away from outer walls and insulated from the floor to avoid moisture. Not more than 15 bags shall be stacked in any tier. Each consignment of cement shall be stored separately and consumed in its order of receipt.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[101]	15.01.2016

Covered storage area may also be provided to store other construction material, which will be affected on exposure to wind, sun and rain.

Reinforcement shall be stacked on top of timber sleepers to avoid contact with ground / water.

Suitable paving / flooring shall be provided in storage yard for storage of material. Proper lighting arrangement shall also be provided for the store complex. Proper fencing and security arrangement shall be provided for the stores complex.

- **Temporary Workshop and Garage**

The Bidder shall provide for a temporary workshop and garage to attend to routine maintenance and repair of the construction equipment as well as his fleet of vehicles used for construction activities.

- b) Fabrication Yard**

Depending on the extent of fabrication envisaged at site, the Bidder shall establish a full fledged structural fabrication yard with adequate handling facility during and after the fabrication. A fully equipped testing laboratory providing radiography, ultrasonic, dye penetration, magnetic particle test facilities shall be ensured adjacent to the fabrication yard to enforce strict quality control. Portion of the yard shall have covered shed with H.O.T / E.O.T cranes so that fabrication work can proceed even during inclement weather.

- c) Quality Control Laboratory**

A fully equipped quality control laboratory shall be established at site with qualified personnel to conduct acceptance test on all construction material, weldments, concrete cubes etc. This laboratory shall be housed in a covered building with A/C facility as required by the testing facility. All testing equipment shall be periodically calibrated to the satisfaction of the Owner.

- d) Fuel Storage area**

The Bidder shall obtain necessary permission from competent authorities and establish and operate a POL outlet with proper storage, dispensing and adequate fire fighting facility.

- e) Staff Welfare facility**

The Bidder shall provide adequate facility for his staff inside the plant boundary such as toilets for both gents and ladies, canteens, drinking water facility, rest places, creches etc.

The Bidder shall also provide for proper disposal of sewage and other wastewater arising from his construction team and his other temporary facilities, to meet with the requirement of Pollution Control Board.

The Bidder shall identify sufficient area inside the plant boundary to locate his staff and labour colony. Construction and maintenance of the staff and labour colony to satisfy all statutory requirement is the sole responsibility of the Bidder.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[102]	15.01.2016

The Bidder shall be preliminary responsible for all statutory deductions and contributions on account of CPF/EPF as per rules/act in force and subsequent amendments during Contract period.

f) Construction Tools & Materials Supplied By the Bidder

The Bidder shall provide and maintain at the site necessary number and type of machinery and equipment including survey instruments in good working condition for proper setting out and timely completion of the various works covered under this Specification and scope of the work. All arrangements for transporting the equipment to and from the site shall be done by the Bidder at his own expense. No claim shall be entertained for mobilizing additional equipment and / or personnel to complete the work within the stipulated time.

The Bidder shall provide all fuels and lubricants required for the operation and maintenance of construction machinery and equipment as well as his transport vehicles at his own cost.

It shall be ensured by the Bidder that work shall proceed uninterrupted even in the event of power failure. As such, adequate number of liquid fuel operated power generating equipments shall be provided by the Bidder at his own cost as an alternative arrangement.

The Bidder shall ensure continuous supply of coarse and fine aggregate conforming to the Specification.

All materials supplied by the Bidder shall be of the best quality and shall conform to the given Specifications. Approval in writing shall be obtained from the Owner before any alternative or equivalent material is used other than what is specifically mentioned in the drawings / Specification / Bid document.

The Bidder shall furnish manufacturer's test certificate for all the manufactured items supplied by him. Representative specimens of the material shall also be submitted to the Owner and shall be tested at a recognised testing laboratory at the Bidder's cost in case Owner so desire.

The Owner reserves the right to get any construction material supplied by the Bidder tested in a recognized testing laboratory at the Bidder's cost. In case the sample materials do not meet the Specification requirements, he shall replace the defective material at his own cost.

g) Work Execution and Supervision:

The Bidder shall have at the site accredited and qualified engineers and foremen / supervisors with adequate number of years of experience in execution of similar works and also operators of machinery and equipment, for satisfactory progress and timely completion of the works.

The Bidder's Engineer-in-charge of the work at site shall be capable of interpreting the Specification and drawings and make adequate site decisions as and when required.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[103]	15.01.2016

He shall also take instructions from the Owner and be responsible for carrying out the instructions.

The Bidder shall be fully responsible for the correctness and accuracy of the tests performed, results obtained / tabulated, interpretation of test results and recommendations made. The work shall be executed in a professional manner with full understanding of the importance of work for a R&M project of this magnitude.

In the event of occurrence of any accidents at / near the site of the work or in connection with execution of the work, a report shall be made immediately to the Owner, giving full details of the accident. He shall also report such accidents to all the competent authorities wherever such reports are required by those authorities.

Owner reserves the right to order in writing, from time to time, during the progress of the work, removal and re-execution of any work which in the opinion of the Owner is not in accordance with the Specification / Bid document.

During inclement weather, rains etc., the Bidder shall suspend all works for such time as the Owner may direct and shall protect from damage all works already in progress or completed just then. All such temporary protective measures shall be at the Bidder's cost and any damage to works shall be made good by the Bidder at his own expense.

During the course of the Bidder's work, other works, either by the Owner or by other Bidders or by both simultaneously will be in progress within the Plant area. The Bidder shall make his best effort to work in harmony with others in the best overall interest of the project and towards its speedy completion.

h) Mobilisation

All mobilisation costs shall be the Bidder's responsibility and shall include all activities as described below.

- **Areas Allocated for the Bidder**

The Owner will provide the Bidder with uncovered area at the site for the storage of plant equipment and materials. The Bidder shall be responsible for preparation of the site to suit the required purposes.

The areas allocated to the Bidder shall be used solely for construction purposes such as site offices, prefabrication, maintenance, storage or similar activities. The Bidder shall not erect in these areas any form of residential or messing facilities.

- **Transport Conditions**

It is the Bidder's responsibility to ensure safe delivery of material upto the work-site. The Bidder shall make good all damages caused to public, private or government property e.g. roads etc. caused while transporting equipment etc. up to the work-site.

- **Temporary Site Services**

Prior to erecting any temporary facilities, the Bidder shall submit the detailed drawings of the proposed temporary facilities and the number of personnel using these facilities, to the Owner, for approval.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[104]	15.01.2016

The Owner shall then decide as to whether the Bidder's proposals comply with the Owner's requirements.

- **Communications at Site**

- Telefax, E-mail and Telephone:

The Bidder shall make his own arrangements for installation of telefax, email and telephone facility at the Site office and temporary facilities. Where possible, the Owner's representative may assist the Bidder in obtaining suitable connection. The Bidder shall pay all associated bills and costs.

- Signboards

The signboards shall be approved by the Owner and shall be in Hindi and English. The signboards shall be removed upon demobilisation.

- Medical Facilities

The Bidder shall, within a period of 14 days after mobilisation at work site, provide and maintain first aid facilities for emergency treatment. The Bidder shall also arrange with nearby hospital for dealing with emergency cases. The Bidder's staff shall be made aware of the available first aid facilities and emergency treatment arrangements.

- Maintenance

The Bidder shall be responsible for the proper maintenance of all temporary facilities erected within the allocated areas including the fences, gates, generators, access roads, etc. constructed by the Bidder. The Bidder shall be responsible for preventing dust from affecting the existing facilities.

i) Demobilisation of Temporary Facilities:

The Bidder shall demobilise all Bidder's site facilities including, but not limited to, office buildings, covered areas, workshops, prefabrication shops, storage facilities, toilet facilities, electrical and water distribution systems, camping upon the completion of work after intimating the Owner in advance. The Bidder shall reinstate the area to a clean and tidy condition to the satisfaction of the Owner. The Bidder shall demobilise within a reasonable period when advised by the Owner.

Safety of Adjacent Plant/Equipment and Civil Structure

While carrying out the R&M work as per this Specification, the Bidder may have to modify the existing equipment foundations, or do the excavation work and make new foundations. The Bidder may also have to make new supporting arrangements with / without modified loads for the items / equipments supplied by him. Under all such conditions Bidder shall be solely responsible for ensuring the safety of the adjacent equipments / foundations and of the existing supporting structures. The R&M work by the Bidder shall be carried out in such a manner that no damage is caused to existing equipments / foundations / structures and all precautions, including strengthening of existing structures, as may be necessary, shall be taken by the Bidder to ensure safety of existing plant / equipment / foundation / structures.

4.5.2 Spares

All spares as specified in Annexure-II of this Specification in accordance with Clause No. 9.

4.5.3 Consumable, Oil & Lubricants

All the first fill and consumables such as greases, oil, lubricants, servo fluids/control fluids, gases and essential chemicals etc. as required up to the complete commissioning of the Boiler & Auxiliaries, are covered in the scope of Bidder. Suitable standard lubricants as available in India are preferable. Efforts should be made to limit the variety of lubricants to minimum.

4.5.4 Embedded Parts & Fixture

All fixtures, embedded parts, steel embedment including fixing lugs and welding between them, foundation plates, grouting, nuts, bolts etc. for fixing all the equipment, piping on civil works shall be included in scope work of this package. All structures which would be required by the Bidder for supporting the piping shall also be included in scope of work of this package.

4.5.5 Other Services

The scope of Erection, Commissioning and Testing shall include the following:

- a) Complete pre-commissioning work including tests of facilities such as line flushing, hydraulic testing of Boiler pressure parts, air and gas tightness tests of Boiler enclosure, electrostatic precipitators and duct work, chemical cleaning of pressure parts, steam blowing, gas distribution tests of electrostatic precipitators etc. and all other tests as mutually agreed in the Bidder's quality assurance programme as well as those identified in the Specification.
- b) Supply of all consumables (except coal and fuel oil for firing) like chemicals for chemical cleaning, passivation, inhibition etc., oil for line flushing, nitrogen for blanketing, consumables for air/gas tightness tests and any other consumable as required for above pre-commissioning/ commissioning activities.
- c) Necessary arrangement as requires for the start up of Boiler & Auxiliaries. However, Owner will arrange start up power, coal & fuel oil, instrument & service air and DM water as required for the star up purpose of the Boiler & Auxiliaries system.
- d) Supply of all temporary equipment such as tanks, piping, including supports, valves, nitrogen blanketing equipment including nitrogen cylinders, pumps and all necessary instrumentation for successful conductance of pre-commissioning and commissioning activities. All temporary equipment and instruments shall be clearly listed out in the Bid.
- e) Providing safety barricades and signage during dismantling, erection and testing etc.
- f) Supply of all labour, skilled/semi skilled supervisors, engineers and any other manpower.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[106]	15.01.2016

- g) All the erection materials and consumables like shims, welding rods, soldering and brazing alloys, industrial gases, insulating tapes, compounds, chemicals etc. required for the erection and commissioning works.

Note: The temporary equipment specifically brought by the Bidder solely for the pre-commissioning and commissioning work shall, on completion of these activities, remain the property of the Bidder. Nitrogen blanketing equipment including nitrogen cylinders shall get included in the Bidder's permanent scope of supply and become property of the Owner.

The selection of material of all the temporary equipment/instruments shall be compatible with the service conditions expected during pre-commissioning/ commissioning activities.

Document Number	Rev No.	Description	Page No.	Date of Issue

5 TERMINAL POINTS & EXCLUSIONS

5.1 Terminal Points

{ Terminal points are project specific }

For all terminal points, scope of this Contract shall include supply of matching flanges, gaskets, bolts, nuts etc including any isolation valve. Terminal Points mean Engineering, Procurement and Erection in entirety. The terminal points of the complete package to be supplied shall be as follows.

(a) Steam & Feed water System

- (i) *[Main Steam: Inlet of Main Steam Stop Valve at Turbine hall]*
- (ii) *[Cold Reheat: Outlet of HP turbine]*
- (iii) *[Hot Reheat: Inlet of Reheat Steam Stop Valve.]*
- (iv) *[HP/LP turbine Bypass: Inlet of HP Turbine Bypass Valve and Outlet of HP Turbine Bypass Valve (Entire upstream and downstream piping of HPTB & LPTB Valve is in the scope of Bidder).]*
- (v) *[Blow Down: Boiler blow down tank outlet up to drain pit.]*
- (vi) *[Feed Water: At Economiser Inlet stop valve.]*

(b) Fuel Firing System:

[Coal-Raw Coal Bunker Inlet Flange, Fuel Oil-20 m from Discharge Flange of pressurizing pump]

(c) Mill Reject Handling System:

[Outlet Flange of Mill Spout.]

(d) Flue Gas Duct

[Inlet Flange of Chimney Flue]

(e) Ash Handling System:

[Up to Furnace Bottom Ash Hopper, Economiser, Air preheater and ESP Hopper outlet flanges.]

(f) Electrical

- (i) *[6.6 kV Supply: At the terminal of 6.6kV Unit/Station switchgears for power supply to 6.6 / 0.433 kV transformers and 6.6kV Motors of Boiler package. All Power and control cables from the terminals of 6.6 kV Unit/Station Switchgears are included in the scope of Boiler package. 6.6kV Unit/Station Switchgear is in scope of TG package.]*
- (ii) *[ESP system terminal point is the outgoing at 6.6 kV Unit switchgear: For ESP system electrical scope of work shall start from 6.6k V Unit switchgear outgoing and shall include HV cable termination, HV cable, LV transformer, 415 V NSPBD, 415 V LV switchgear and further distribution]*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[108]	15.01.2016

- (iii) *[Power Supply to Boiler MCC, Boiler Valve MCC, Soot Blower MCC, Boiler Emergency MCC, Boiler ACDB: Power supply at 415 V level at the outgoing terminals of 415 V Unit Service Switchgear / 415 V Unit Emergency Switchboard. All cables from the above terminal points are included in the scope of Boiler package. 415 V Unit Service Switchgear and 415 V Unit Emergency Switchboard are in the scope of TG package.]*
 - (iv) *[Power Supply to Illumination System of Boiler area: Power supply at 415 V level at the outgoing terminals of 415 V LV Switchgear. All cables from the above terminal points are included in the scope of Boiler package. Main Lighting Distribution Board (MLDB) and further distribution up to and including lighting fixtures is in the scope of TG Package.]*
 - (v) *[Power Supply to Welding System of Boiler area: Power supply at 415 V level at the outgoing terminals of 415 V Welding Service Switchgear. All cables from the above terminal points are included in the scope of Boiler package. Welding Service switchgear is in the scope of TG Package.]*
 - (vi) *[Power Supply to Bottom Ash Handling System MCC: Power supply at 415V level at the outgoing terminals of 415 V Ash Handling Service Switchgear. All cables from the above terminal points are included in the scope of Boiler package. Ash Handling Service switchgear is in the scope of BOP Package.]*
 - (vii) *[Grounding: Above grounding earthing from riser up to all the equipment under the scope of Boiler package in scope of Boiler package. Main ground grid and grounding conductor ring along with two test link at opposite corner of the Boiler switchgear building/structure shall be in BOP package. Suitable nos. of riser shall be provided by Bidder.]*
 - (viii) *[For all the inputs required by Boiler Bidder from other packages, the required relay contacts (1 NO/1 NC) will be provided by the other package Bidder. The required auxiliary relays, control cables including their laying & termination shall be in the scope of Boiler package Bidder. Similarly, necessary contact (1 NO/1 NC) required by other package Bidders shall be provided by Boiler package Bidder.]*
 - (ix) *[Wherever Power is tapped from Owner's board or any other package boards, Bidder's scope starts from the outgoing terminals of the respective board. Bidder has to include all necessary termination materials, cables, trays, conduits, supporting structure, terminations, and necessary earthing accessories in his scope.]*
- (g) Control & Instrumentation**
- (i) *[Inst. & Control Cabling: Up to BMS/FSSS panel for SG integral control systems and for rest up to Junction Boxes.]*
 - (ii) *[Instruments upto HP turbine Inlet & Outlet (MS & CRH line), IP turbine Inlet (HRH Line) and HP-LP Bypass systems instruments.]*

5.2 Exclusions

Following are to be excluded from the scope of work under R&M Works for Boiler & Auxiliaries:

- (a) *[Turbine Generator & Its Auxiliary Equipment including HPTB & LPTB Valve and all Feed Cycle Equipment]*
- (b) *[Turbine Extraction piping and Feed Water Piping]*
- (c) *[Plant Water System including DM plant]*
- (d) *[Air Conditioning System]*
- (e) *[Fuel Oil Unloading, Storage & Forwarding System]*
- (f) *[Compressed Air System]*
- (g) *[Coal Handling System]*
- (h) *[Ash Handling System]*
- (i) *[Distributed Control System (DCS)]*
- (j) *[Vibration Monitoring System.]*
- (k) *[6.6kV Unit / Station Switchgears & Unit Auxiliary Switchgears]*
- (l) *[6.6kV/ 433 V Unit Transformers and 415 V Unit Service Switchgears.]*
- (m) *[6.6kV / 433 V Lighting Transformers and 415 V Switchgears for lighting]*
- (n) *[6.6kV / 433 V Welding Transformers and 415 V Welding Service Switchgear.]*
- (o) *[415 V Ash Handling Service Switchgear]*
- (p) *[220 V Battery, Battery Charger and Unit DCDB.]*
- (q) *[Unit UPS and its ACDBs.]*
- (r) *[Emergency DG sets and 415 V Unit Emergency Switchboard.]*
- (s) *[Plant communication system]*

LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[110]	15.01.2016

6 GENERAL TECHNICAL REQUIREMENTS

6.1 Codes & Standards

- 6.1.1 Apart from some specific application, the proposed R&M equipment shall comply with the appropriate Indian Standard / DIN or equivalent international Standard. Specification as listed below in this section and mentioned in detailed Specifications, each incorporating the latest revisions at the time of tendering.
- 6.1.2 Wherever specified or required the Plant & Equipment shall conform to various statutory regulations such as Indian Boiler Regulations, Indian Electricity Rules/Act, Factories Act, etc.
- 6.1.3 In the event of any conflict between the codes and standards referred above, and the requirements of this Specification, the requirements, which are more stringent, shall govern.
- 6.1.4 In case of any change of code, standards and regulations between the date of purchase order and the date, the Bidder proceeds with manufacturing, the Owner shall have the option to incorporate the changed requirements.
- 6.1.5 List of Reference Codes/Standard
- a)** American Society of Mechanical Engineers (ASME).
 - b)** American National Standards Institute (ANSI).
 - c)** American Society for Testing and Materials (ASTM).
 - d)** American Institute of Steel Construction (AISC).
 - e)** American Welding Society (AWS).
 - f)** Architecture Institute of Japan (AIJ).
 - g)** Bureau of Indian Standards Institution (BIS).
 - h)** British Standards (BS)
 - i)** Central Board of Irrigation and Power (CBIP) Publications.
 - j)** Deutsches Institut für Normung (DIN).
 - k)** Electric Power Research Institute (EPRI).
 - l)** Electricity Act 2003.
 - m)** Emission regulation of Central Pollution Control Board (CPCB)
 - n)** Federal Occupational Safety and Health Regulations (OSHA)
 - o)** Heat Exchanger Institute (HEI).
 - p)** Hydraulic Institute (HIS).
 - q)** Indian Electricity Rules.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[111]	15.01.2016

- r)** Indian Boiler Regulations (IBR).
- s)** Indian Explosives Act.
- t)** Indian Factories Act.
- u)** Institute of Electrical and Electronics Engineers (IEEE).
- v)** International Electro-Technical Commission Publications.
- w)** Instrument Society of America (ISA).
- x)** International Organization for Standardization (ISO).
- y)** International Electro-technical Commission (IEC).
- z)** Japanese Standards (JIS).
- aa)** Japanese Electro-technical Committee (JEC).
- bb)** National Fire Protection Association (NFPA).
- cc)** National Electrical Manufacturer's Association (NEMA).
- dd)** National Electric Code (NEC).
- ee)** Power Test Code for Steam Turbines (PTC).
- ff)** Pollution Control regulations of Dept. of Environment, Govt. of India
- gg)** Regulations of CEA.
- hh)** Standards of Manufacturer's Standardization Society (MSS).
- ii)** Tariff Advisory Committee (TAC) rules.
- jj)** Tubular Exchanger Manufacturer's Association (TEMA).

6.2 Name Plates

- 6.2.1** Instruction plates, nameplates or labels shall be permanently attached to each main and auxiliary item of plant in a conspicuous position. These plates shall be engraved with the identifying name, type and manufacturers serial number, together with the loading conditions under which the item of plant has been designed to operate.
- 6.2.2** Items such as valves, which are subject to hand operation, shall be provided with nameplates so constructed as to remain clearly legible throughout the life of the plant giving due consideration to the difficult climatic conditions to be encountered. Nameplates shall be securely mounted where they will not be obscured in service by insulation, cladding, actuators or other equipment. Direction of flow is also to be engraved.
- 6.2.3** All trade nameplates and labels shall be in Bilingual language. All measurements shall be in M.K.S. Units.
- 6.2.4** The size and location of nameplates shall be subject to Approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[112]	15.01.2016

6.3 Guards and Fences

- 6.3.1 Effective guards and fences must be provided to prevent injury to operators.
- 6.3.2 Mesh guards which allow visual inspection of equipment with the guard in place are generally preferable. The guards shall be constructed of mesh attached to a rigid framework of mild steel rod, tube, or angle and the whole galvanized to prevent loss of strength by rusting or corrosion. The guards shall be designed to facilitate removal and replacement during maintenance.
- 6.3.3 Guards for couplings and rotating shafts shall be in accordance with BS 5304-1975 or similar approved standard. All rotating shafts and parts of shafts must be covered.

6.4 Operation, Maintenance & Availability

- 6.4.1 Equipment/works offered shall be designed for high availability, high reliability, low maintenance and ease of operation & maintenance. The Bidder shall specifically state the design features incorporated to achieve high degree of reliability, availability, operability and ease of maintenance. He shall also furnish details of availability records in plants stated in his experience list.
- 6.4.2 Wherever required platforms and walkways with access ladders having hand rails shall be provided to facilitate operation and maintenance.

6.5 Materials

- 6.5.1 In selecting materials of construction of equipment, the Bidder shall pay particular attention to the atmospheric conditions existing at the Site and the nature of material/fluid handled. Wherever deviations are taken in respect of materials specified, the reasons shall be spelt out clearly in the proposal.
- All materials shall be new, and shall be of the quality most suited to the proposed application.
- 6.5.2 As far as possible; materials shall be in accordance with Indian or international standard Specifications. Where such standards are not available, sufficient information shall be provided to allow the Owner to assess the suitability of the material for the particular application.
- All materials used shall have performed lengthy satisfactory service in similar or more arduous conditions to those proposed by the Bidder.
- 6.5.3 All parts which could deteriorate or corrode under the influence of the atmospheric, meteorological or soil conditions at the Site, or under the influence of the working conditions shall be suitably and effectively protected so that such deterioration or corrosion is a minimum over the life of the plant.

6.6 Lubricants, Control Fluids and Chemicals

- 6.6.1 Provision shall be made for suitable efficient lubrication where necessary to ensure smooth operation free from undue wear.
- 6.6.2 Non ferrous capillary tubing shall be used throughout.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[113]	15.01.2016

- 6.6.3 Oil baths shall be provided with filling and drain plugs, both of adequate size. An approved means of oil indication including level switches and temperature indication shall be provided.
- 6.6.4 Lubrication points shall be conveniently situated for maintenance purposes. It must be possible to carry out lubrication from a gangway or landing and without the removal of guarding or having to insert the hand into it. Where accessibility to a bearing for oiling purposes would be difficult a method of remote lubrication shall be fitted.
- 6.6.5 The Bidder shall provide a detailed and comprehensive Specification for all lubricating oils, greases and control fluids required for Boiler & Auxiliaries. A sufficient supply of these shall be provided by the Bidder for initial commissioning, first fill and till handing over of the unit.
- 6.6.6 Chemicals for Boiler Water conditioning for operation of the Boiler shall be provided by the Owner. However, chemicals for Boiler cleaning shall be arranged by Bidder.
- 6.6.7 The Bidder shall supply a detailed schedule giving the lubricant testing, cleaning and replacement procedures. All equipment and facilities necessary for the testing, cleaning and changing of lubricants and control fluids shall be provided. The Bidder shall endeavour to reduce the varieties and grades of required lubricants, chemicals and control fluids to a minimum, matching them where possible to those already in use in the generating station in order to simplify procurement and minimize storage requirements. All lubricants, chemicals and control fluids shall be of internationally recognized standards and shall be easily obtainable from a large number of Indian suppliers. Bidder shall also indicate the equivalent Indian Standard for the above for easy procurement in future.
- 6.6.8 No lubricant or control fluid shall have toxic or other harmful effects on personnel or on the environment.

6.7 Plant Life and Modes of Operation

- 6.7.1 On completion of the R&M project, the plant/equipment and systems individually and collectively shall be possible to operate continuously with routine maintenance and overhauls for an economic service life of not less than **[20/25 years]** under the prevailing site conditions and for the type of duty intended.
- 6.7.2 After R&M of Boiler and associated auxiliaries, the unit shall be able to operate to its rated capacity continuously and there shall be no restriction of the operation of the unit during Base Load, Peak Load & Cyclic Load operation.
- 6.7.3 The capability of the unit operations including Cold, Hot & Warm Startups shall be in no way inferior to its original design capabilities. Accordingly, Bidder shall indicate the operation capabilities in various regime of operation in his Bid.

6.8 Packaging & Marking

All the equipment shall be suitably protected, coated, covered or boxed and crated to prevent damage or deterioration during transit, handling and storage at site till the time of erection. While packing all the materials, the limitations from the point of view of

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[114]	15.01.2016

availability of railway wagon sizes in India should be taken account of. The details of various wagons normally available with Indian Railways for transportation of heavy equipment shall be considered by the Bidder. The Bidder shall be responsible for all loss or damage during transportation, handling and storage due to improper packing.

The identification marking indicating the name and address of the consignee shall be clearly marked in indelible ink on two opposite sides and top of each of the packages. In addition the Bidder shall include in the marking gross and net weight, outer dimension and cubic measurement. Each package shall be accompanied by a packing note (in weather proof paper) quoting specifically the name of the Bidder, the number and date of Contract and names of the office placing the Contract, nomenclature of contents and Bill of Material.

6.9 Protection

Equipment having antifriction or sleeve bearings shall be protected by weather-tight enclosures. Coated surfaces shall be protected against impact, abrasion, discoloration and other damages. Surfaces that are damaged shall be repainted.

Electrical and C&I equipment shall be protected against moisture and water damages. All external gasket surfaces and flange faces, couplings, rotating equipment shafts, bearings and like items shall be thoroughly cleaned and coated with rust preventive compound as specified above and protected with suitable wood, metal or other substantial type covering to ensure their full protection. All exposed threaded parts shall be greased and protected with metallic or other substantial type protectors.

All piping, tubing and conduit connections on equipment and other equipment openings shall be closed with rough usage covers or plugs. Male threaded openings shall be closed with rough usage covers or plugs. Female threaded openings shall be closed with forged steel plugs. The closures shall be taped to seal the interior of the equipment. Open ends of piping, tubing and conduit shall be sealed and taped.

Returnable containers and special shipping devices shall be returned by the manufacturer's field representative at the Bidder's expense.

6.10 Painting

6.10.1 General

All exposed metallic surfaces subject to corrosion shall be protected by shop application of suitable coatings. Surfaces not easily accessible after shop assembly shall be treated before-hand and protected for life of the equipment. Surfaces to be finish painted after installation shall be shop painted with at least two (2) coats of primer. Steel surfaces, which are not to be painted, shall be coated with suitable rust preventive compound subject to the approval of the Owner.

All paints shall be used in accordance with the manufacturer's instructions. No thinners or other substance shall be added to the coating material without the approval of the Owner. The quality and vendor of the paints shall require approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[115]	15.01.2016

All paints, when applied in a normal full coat, shall be free from runs, sags, wrinkles, patchiness, brush marks or other defects.

All primers shall be well marked into the surface, particularly in areas where pitting is evident, and the first priming coat shall be applied as soon as possible after cleaning, within four hours maximum. If the drying interval between successive coats, which should not exceed one week, has been so long as to endanger the adhesion of the following coat, the paint already applied shall be lightly rubbed down with fine abrasive paper before putting on the next coat.

Paint spraying on large surfaces shall not normally be done indoors, except with the approval of the Owner. Spray guns shall not be used outdoors in windy weather or near unprotected surfaces of a contrasting colour and under no circumstances shall spray guns be used where spray may be carried into or onto exposed electrical equipment.

Paint containers shall not be opened until required and the paint shall be mechanically mixed thoroughly before use, and agitated occasionally during use.

Electrical equipment shall be shop finished with one or more coats of primer and two coats of high-grade oil resistant enamel. The interior of all panels' cabinets and enclosures shall be finished with gloss white enamel.

The Bidder shall furnish sufficient touch up paint for one complete finish coat on all exterior factory surfaces of each item of equipment. The touch up paint shall be of the same type and colour as the factory applied paint and shall be carefully packed to avoid damage during shipment. Complete painting instructions shall be furnished.

Shop primer for steel and iron surfaces which will have a continuous operating temperature below 35 °C shall be selected by the Bidder, in accordance to the relevant standard. Special high temperature primer shall be used on surface exposed to operating temperature above 35 °C.

The colour scheme shall be submitted during execution of Contract for approval by the Owner.

6.10.2 Preparation

Oil and grease shall be removed from the surface by washing with a suitable detergent, rinsing with clean water, and drying.

Surfaces to be shot blasted shall be cleaned to Swedish Standard SA 2.5 or equivalent, and all dust remaining after cleaning shall be removed.

The priming coat shall be applied without delay.

6.10.3 Damaged Paintwork

Any damaged paintwork shall be corrected / modified as follows:

- a) The damaged area, together with an area extending 25mm around its boundary, shall be cleaned down to bare metal.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[116]	15.01.2016

- b) A priming coat shall be immediately applied, followed by a full paint finish equal to that originally applied and extending 50mm around the perimeter of the original damage.
- c) The repainted surface shall present a smooth surface. This shall be obtained by carefully chamfering the paint edges before and after priming.

6.10.4 Painting Systems

The requirements for the dry film thickness (DFT) of paint and the materials to be used shall be as stated below, unless otherwise specified elsewhere in this Specification.

a) Surfaces Subject to Weathering

All surfaces shall have a minimum of four coats of paint made up as follows:

Primer coat	:	35 micron DFT
Tie coat	:	35 micron DFT
Finishing coat (2 Nos.)	:	35 micron DFT per coat

The total minimum DFT shall be 140 micron.

b) Surfaces Inside Buildings

All surfaces shall have a minimum of four coats of paint made up as follows:

Primer coat	:	35 micron DFT
Tie coat	:	35 micron DFT
Finishing coat (2 Nos.)	:	25 micron DFT per coat

The total minimum DFT shall be 120 micron.

The type and colour of primer & finish coat shall be selected by the Bidder after approval by the Owner.

6.11 Environment Protection

6.11.1 Environment Protection

The plant & equipment under this R&M project shall be designed for installation and operation in harmony with the surrounding environment and all measures of pollution control shall be ensured by the Bidder to restrict pollution from the liquid effluent and stack emission within the limits as given below with due consideration of Environment (Protection) Rules.

6.11.2 For Liquid Effluent

During construction activities, Bidder shall maintain the statutory compliance of State Pollution Control Board and MoEF in respect of pollution control and environmental protection within and around plant boundary. Any specific requirement of State Pollution Authorities over and above shall be maintained.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[117]	15.01.2016

6.11.3 For Air Quality

{Utilities to mention the Limit for SPM and NOx at Stack emission and Ground level concentration for SOx, NOx, SPM, RPM as stipulated by State Pollution Control Board.}

- a) Suspended Particulate Matter i.e. dust burden at chimney outlet – Maximum [...] mg/Nm³ (with worst coal and one field out in each path).
- b) NOx - Shall not exceed [...] gm/GJ at 6% excess O₂ dry at chimney outlet.

In absence of Indian Standard for emission from power plants as on date, for certain gaseous effluents, the internationally accepted World Bank Standard is to be followed.

6.11.4 Noise Level Requirement

The plant & equipment under this R&M project will be designed, constructed and provided with suitable acoustic measures to ensure the noise level criteria as per the following stipulations of MoEF & State Pollution Control Board.

- a) Maximum noise level shall not exceed 85 dB (A) when measured at 1.0 m away from the noise emission source.
- b) Maximum noise level from its source within the premises shall not exceed 70 dB (A) as per Environment (Protection) Rules 1986, Schedule-III, 'Ambient Air Quality Standards' in respect of noise.
- c) Any statutory changes in stipulations regarding noise limitation that may occur in future according to State Pollution Control Board or Central pollution Control Board or Ministry of Environment & Forest regulation during tenure of the Contract, the Bidder shall comply with the updated/amended requirement.

An exception will be made for the plant at startup operations of other big pressure reducing devices operating during emergency periods and for the safety valves.

6.12 Inspection and Testing

6.12.1 Inspection and Tests during Manufacture

- 6.12.1.1 The method and techniques to be used by the Bidder for the control of quality during manufacture of all plant and equipment shall be agreed with the Owner prior to the Award of Contract.
- 6.12.1.2 The Owner's general requirements on quality control and shop tests as mentioned in Section II of Volume-II.
- 6.12.1.3 Owner shall be informed for witnessing the shop tests of any item of the plant or equipment for checking the compliance with the Specification requirement and or related standards prior to leave place of manufacturing.
- 6.12.1.4 Advance notice shall be given to the Owner as agreed in the Contract, prior to the stage of manufacture being reached, and the piece of plant must be held at this stage until the Owner has inspected the piece, or has advised in writing that inspection is waived. If having consulted the Owner and given reasonable notice in writing of the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[118]	15.01.2016

date on which the piece of plant will be available for inspection, the Owner does not attend, the Bidder may proceed with manufacture having forwarded to the Owner duly certified copies of his own inspection and test results.

- 6.12.1.5 The Bidder shall forthwith forward to the Owner the Test Certificates in [...] copies for approval..
- 6.12.1.6 Under no circumstances any repair or welding of castings be carried out without the consent of the Owner. Proof of the effectiveness of each repair by radiographic and/or other non destructive testing technique, shall be provided to the Owner.
- 6.12.1.7 All the individual and assembled rotating parts shall be statically and dynamically balanced in the works.
- 6.12.1.8 Where accurate alignment is necessary for component parts of machinery normally assembled on site, the Bidder shall allow for trial assembly prior to dispatch from place of manufacture.
- 6.12.1.9 All materials used for the manufacture of equipment covered under this Specification shall be of tested quality. Relevant test certificates shall be made available to the Owner. The certificates shall include tests for mechanical properties and chemical analysis of representative material.
- 6.12.1.10 All pressure parts connected to pumping main shall be subjected to hydraulic testing at a pressure of 150% of design pressure. The duration of the pressure tests shall be sufficient, as approved by the Owner, to show any leakage paths and to permit a thorough examination of the component whilst under pressure.
- 6.12.1.11 All necessary non destructive examinations shall be performed to meet the applicable code requirements.
- 6.12.1.12 All welding procedures adopted for performing welding work shall be qualified in accordance with the requirements of Section-IX of ASME code or IBR as applicable. All welded joints for pressure parts shall be tested by liquid penetrant examination according to the method outlined in ASME Boiler and Pressure Vessel code. Radiography, magnetic particle examination magnuflux and ultrasonic testing shall be employed wherever necessary/ recommended by the applicable code. At least 10% of all major butt welding joints shall be radio graphed. Payments in respect of IBR approvals including inspection shall be made by Owner. Bidder scope shall be limited to preparation of all necessary documents, coordination and follow up for above approvals.
- 6.12.1.13 The Bidder shall furnish the quality procedures to be adopted for assuring quality from the receipt of material at site, during storage, erection, pre-commissioning to tests on completion and commissioning of the complete system/equipment.

6.12.2 Performance Tests at Site

- 6.12.2.1 The full requirements for testing the system shall be agreed between the Owner and the Bidder prior to Award of Contract. The completely erected System shall be tested by the Bidder on site under normal operating conditions. The Bidder shall also ensure

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[119]	15.01.2016

the correct performance of the System under abnormal conditions, i.e. the correct working of the various emergency and safety devices, interlocks, etc.

- 6.12.2.2 The Bidder shall provide complete details of his normal procedures for testing, for the quality of erection and for the performance of the erected plant. These tests shall include site pressure test on all erected pipe work to demonstrate the quality of the piping and the adequacy of joints made at site.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[120]	15.01.2016

7 LAYOUT CONSIDERATION

{Effort should be given to keep the Layout of the newly equipped system / packages under the R&M project unchanged to the extent possible with respect to existing layout to avoid disturbance to the existing equipment & facilities for which any modification/changes are not envisaged based on RLA/LA and EA assessment. However general guidelines, which need to be followed, as required, are given below :}

The broad salient features of the existing and expected layout arrangements of various equipment in the main plant building housing the turbine generator and its auxiliaries and Boiler area are given as hereunder:

- 7.1 The arrangement of the turbine- generator in the main plant building is of [longitudinal type]. The boiler centre line is in the [same as that of TG condenser]. Unit pitching distance between centre lines of two boilers is [approximately 120m]. The column spacing of main plant building is [about 10 m].
- 7.2 [The conventional arrangement of AB, BC and CD longitudinal bays with D row as first row of boiler columns is adopted with their respective widths of about 30m, 10m and 11m. The mill bunker buildings shall be about 12m wide on each side of the boiler].
- 7.3 [Two transverse bays at 0.0 m elevation equivalent to minimum area ofm² has been provided for unloading and maintenance at one end of main plant building].
- 7.4 [The location of control room (common for two units) is in BC bay at the operating floor level. Adjoining the control room, there is a control tower which accommodates control equipment room, AC plant room, battery room and UPS for C&I system, cable vault etc. at its different floor levels].
- 7.5 The local pits/trenches in main plant building/ mill bunker bay building/ boiler/ ESP area is to be avoided as far as possible.
- 7.6 Clear walk ways of minimum 1.5 m width at all the levels shall be provided in the main plant building. Adequate fire escape staircases shall be provided with fire doors at each landing.
- 7.7 [Interconnecting walkways (minimum 2.0 m clear) shall be provided between main plant building and boiler on either side of boiler at three elevations viz. mezzanine, operating and deaerator floor levels. Two nos. walkways each shall be provided on either side of the boiler between boiler and mill bunker building at feeder floor level, tripper floor level and roof of mill bay].
- 7.8 [The layout arrangement of critical piping connecting the Boiler and steam turbine shall be developed in such a way as to optimize the use of materials and resulting in minimum pressure losses in the steam flow].
- 7.9 In the boiler area, facility of crane/ chain pulley block/ monorail hoist etc. shall be provided along with provision of space for maintenance/ overhauling of equipment such as mills, coal feeders, boiler circulation pumps, fans, motors, and handling of APH baskets and coils of economizer and SCAPH etc.

LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[121]	15.01.2016

Tender Document for R&M of Unit No. [..] Capacity [...] of [Name of the Power Plant]	[Logo of Utility]
---	--------------------------

- 7.10 Clear approach width of minimum 10m with 8m clear height shall be maintained at the front and rear of ESP.
- 7.11 *[The VFD control equipment and transformers for radial type ID fans, if provided, shall be located along with the ESP control equipment in the ESP control room].*
- 7.12 Trestles to be provided for routing of cables, pipes etc. shall have a clear height of 8.0m at road crossings so as to clear the road spaces, approach to maintenance bays of different equipment. A walkway with hand rails and toe guards of 750mm (minimum) width shall be provided all along length of the trestle for maintenance of cables and pipes. Ladders for approach to these platforms shall be provided near roads, passage ways.
- 7.13 Floor drains shall be provided at all floors and drain discharge pipes shall be properly sized taking into account the fire water sprinkler system wherever provided.
- 7.14 Valves shall be located in accessible positions. All piping shall be routed at a clear height of minimum 2.5 m from the nearest access level for clear man movement. Best engineering practices shall be adopted for keeping the minimum clear working space around equipment and clear headroom within main structures and cable trays etc.
- 7.15 Fire water pipes in main plant area may be routed in trenches filled with sand and covered with pre-cast RCC covers.
- 7.16 The safety requirements as per the Factories Act, Indian Electricity Rules and other applicable codes/standards etc. shall be observed while developing the layout.
- 7.17 The available existing layout details of the plant are indicated in the enclosed drawings as Annexure-I. However, Bidder to suggest his own modified layout arrangement which shall be subject to approval of the Owner.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[122]	15.01.2016

8 PERFORMANCE GUARANTEES

The term "Performance Guarantees" wherever appears in this Section shall have the same meaning and shall be synonymous to "Functional Guarantees".

Similarly the term "Performance Tests" wherever appears in this Section shall have the same meaning and shall be synonymous to "Guarantee Test(s)".

The term "BMCR" (Boiler Maximum Continuous Rating) appearing in the Technical Specification shall mean the maximum continuous steam output at super heater outlet of Boiler at rated parameters.

The term "TMCR" (Turbine maximum continuous rating) appearing in the Technical Specification shall mean [210/215/220/250] MW electrical power output at generator terminals under 0% cycle make-up and [76] mm Hg (abs) condenser pressure, unless used in conjunction with a different cycle make-up.

8.1 General Requirements

- 8.1.1 The Bidder shall guarantee that the equipment offered shall meet the ratings and performance requirements stipulated for various equipment covered in this technical Specifications.
- 8.1.2 The guaranteed performance parameters furnished by the Bidder in the Bid proposal, shall be without any tolerance values and all margins required for instrument inaccuracies and other uncertainties shall be deemed to have been included in the guaranteed figures.
- 8.1.3 The Bidder shall demonstrate all the guarantees covered herein under Category I, II & III during functional guarantee / acceptance test. The various tests which are to be carried out during performance guarantee/acceptance test are listed elsewhere in this -Section. The guarantee tests shall be conducted by the Bidder at site in presence of Owner on the unit.
- 8.1.4 All costs associated with the tests including the cost associated with the supply, calibration, installation and removal of test instrumentation shall be included in the price offered by Bidder.
- 8.1.5 At all times during the Performance Tests the emissions and effluents from the Plant shall not exceed the Guaranteed Emission and Effluent Limits.
- 8.1.6 It shall be the responsibility of the Bidder to make the plant ready for the performance guarantee tests.
- 8.1.7 All instruments required for performance testing shall be of the type and accuracy required by the code and prior to the test, the Bidder shall get these instruments calibrated in an independent test institute approved by the Owner. All test instrumentation required for performance tests shall be supplied by the Bidder and shall be retained by him upon satisfactory completion of all such tests at site. All calibration procedures and standards shall be subjected to the approval of the Owner. The protecting tubes, pressure connections and other test connections required for conducting guarantee test shall conform to the relevant codes.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[123]	15.01.2016

- 8.1.8 Tools and tackles, thermo wells (both screwed and welded) instruments/devices including flow devices, matching flanges, impulse piping & valves etc. and any special equipment, required for the successful completion of the tests, shall be provided by the Bidder free of cost.
- 8.1.9 The Performance/ Acceptance test shall be carried out as per the agreed procedure. The PG test procedure including demonstration tests shall be submitted within **[90 days]** of the date of Notification of Award and finalization of the PG test procedure shall be done within **[180 days]** from the date of Notification of Award. After the conductance of Performance test, the Bidder shall submit the test evaluation report of Performance test results to Owner promptly but not later than one month from the date of conductance of Performance test. However, preliminary test reports shall be submitted to the Owner after completing each test run.
- 8.1.10 The PG test procedures shall be submitted for equipment/ system & subsystem under Bidder's scope for all Guarantees under category I, II & III as mentioned below, as per latest International codes & standard including correction curves, meeting the Specification requirements along with sample calculations & detailed activity plan of preparation (including test instrumentation), conductance and evaluation of Guarantees.
- 8.1.11 The Bidder shall submit for Owner's approval the detailed Performance Test procedure containing the following:
- Objective of the test.
 - Various guaranteed parameters & tests as per Contract.
 - Method of conductance of test and test code.
 - Duration of test, frequency of readings & number of test runs.
 - Method of calculation.
 - Correction curves.
 - Instrument list consisting of range, accuracy, least count, and location of instruments.
 - Scheme showing measurement points.
 - Sample calculation.
 - Acceptance criteria.
 - Any other information required for conducting the test.
- 8.1.12 In case, during performance guarantee tests, it is found that the equipment/systems has failed to meet the guarantees, the Bidder shall carry out all necessary modifications and/or replacements to make the equipment/system comply with the guaranteed requirements at no extra cost to the Owner. However, if the Bidder is not able to demonstrate the guarantees, even after the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[124]	15.01.2016

above modifications/replacements within *[ninety (90) days]* or a reasonable period allowed by the Owner after the initial performance guarantee tests have been completed, the Owner will have the right to impose the stipulated clauses under Guarantee Category I, II & III as specified in this Specification:

8.1.13 For Category-I Guarantees

Reject the equipment/system/plant and recover from the Contractor payments already made.

(OR)

Accept the equipment/system/plant after levying Liquidated Damages (LD) as specified in Clause No. 5.6 of Volume I. The LDs shall be prorated for the fractional parts of the deficiencies.

8.1.14 For Category-II Guarantees

Reject the equipment/plant/system and recover, from the Contractor, the payments already made. Conformance to the performance requirements under Category-II is mandatory.

8.1.15 For Category-III Guarantees

Reject the equipment/system/plant & recover, from the Contractor, the payments already made.

(OR)

Accept the equipment/system after assessing the deficiency in respect of the various ratings, performance parameters and capabilities and recover from the Contract price an amount equivalent to the damages as determined by the Owner. Such damages shall however be limited to the cost of replacement of the equipment/systems replacement of which shall remove the deficiency so as to achieve the guaranteed performance.

8.2 Performance Guarantees under Category-I

The performance guarantees which will attract liquidated damages shall be as follows:

- (i) Boiler steaming capacity in Tons per Hour (TPH) of steam at 100% BMCR at rated steam parameters at superheater outlet and at rated steam temperature at reheater outlet (with any combination of mills working as per Owner's discretion) with the coal being fired from within the range specified in the Technical Specifications.
- (ii) Efficiency of the Boiler at 100%TMCR unit load at 0% Make-up with site design ambient condition, while firing the design coal, at rated steam parameters at superheater outlet and at rated steam temperature at reheater outlet, and rated excess air.
- (iii) Auxiliary Power Consumption for Boiler & its Auxiliaries at 100% TMCR unit load at condenser pressure of *[76]* mm Hg (abs) with 0% make-up and with design ambient air condition.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[125]	15.01.2016

Tender Document for R&M of Unit No. [..] Capacity [...] of [Name of the Power Plant]	[Logo of Utility]
--	-------------------

Note: Power consumption of each of the pump/fan/compressors etc. wherever mentioned shall be measured with its own drive.

8.2.1 Limit of Technical Parameters under Liquidated Damages Applicable For Category-I Guarantees:

Table: 8.1

S.No.	Parameter	Performance Limit
1	Boiler Capacity in TPH at rated parameters at superheater outlet, the coal being fired from the range specified.	Shortfall beyond [1%] of guaranteed value [(i.e. – 1.0 %)]
2	Boiler Efficiency at 100% TMCR	Shortfall beyond [0.5%] of guaranteed value [(i.e. – 0.5 %)]
3	Auxiliary Power	Increase beyond [5%] of guaranteed value/. [(i.e. + 5.0 %)]

8.2.2 Specific and Limiting Requirements For Boiler Efficiency

{Efficiency of the Boiler should be determined by Heat Loss Method as per the ASME Code PTC – 4 discussed below.}

The efficiency quoted by the Bidder shall comply with following limiting parameters with design coal firing:

Table: 8.2

S.No	Detail	Description
1.	Excess air at economizer outlet at [105% & 100% TMCR load]	[20%] (min.)
2.	Corrected flue gas temperature at air preheater outlet at [105% & 100% TMCR]	[135 degree C] or as predicted by the Bidder whichever is higher
3.	Boiler Efficiency Loss due to unburnt carbon	[1.0%] (min.)

Bidder to note that no credit shall be given in the Bid evaluation or in the

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[126]	15.01.2016

evaluation of the results of the guarantee tests for performance predictions/ guarantees etc. if the values considered by the Bidder for parameters indicated above are lower than those specified above.

For the purposes of guarantees the ambient air temperature and relative humidity shall be taken as *[27 degree Celsius and 60%]* respectively.

Unless otherwise specified, the guarantees shall be based on design coal firing with coal/ ash analysis as given with this Technical Specification.

The performance guarantee test will be carried out within three months after the successful completion of Initial Operation of facilities or as per the time frame specified for a particular equipment/ plant/ system in the Technical Specifications. Delay in conductance of the test beyond this period will not be normally permitted by the Owner. In the event of Owner agreeing to conductance of such tests after three months, for reasons not attributable to the Owner, as assessed by the Owner, no factor for ageing shall be considered for computing performance of the equipment.

Note: In addition to above, major requirements/ method of Boiler Efficiency Tests

- i) Ambient air condition : *[27 degree Celsius temperature (Dry bulb) and 60% relative humidity]*. The reference air temperature for the Boiler efficiency guarantee / testing shall be taken as the temperature of air (i.e. *[27 degree Celsius]*) entering PA and FD fans.
- ii) No. of readings : Two sets of consistent readings for each of test loads. Average of the test efficiencies based on above two readings for each load shall be considered for Boiler efficiency.
- iii) Measurement and computation of heat losses will include but not be limited to the following:

A. ASME Code PTC – 4 Guidelines

Boiler Efficiency should be worked out by determining the total heat loss.

Total Heat Loss consists of the following items:

- i) *Heat Loss due to dry flue gases.*
- ii) *Heat Loss due to evaporation of moisture in fuel.*
- iii) *Heat Loss due to hydrogen in fuel.*
- iv) *Heat Loss due to moisture in Air.*
- v) *Heat Loss due to incomplete combustion to CO.*
- vi) *Heat Loss due to un-burnt carbon.*

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[127]	15.01.2016

- vii) Heat Loss due to mill (pulveriser) rejects.
- viii) Heat Loss due to Radiation and convection (Difficult to evaluate. Hence Design Value [normally 0.18%] should be considered.)

The Efficiency of Steam Generator should be worked out by the following equation.

$$\text{Efficiency} = 100 - \% \text{ Losses of Heat Input.}$$

Locations of Installing Measuring Instruments:

For conducting the Boiler Efficiency Test, following locations should be used for installing the measuring instruments and for collecting the samples:

- Flue gas analysis at the air pre-heater inlet and outlet for measuring O₂, CO & CO₂.
- Temperature of flue gas at air pre-heater inlet and outlet.
- Fly ash sampling at Economizer outlet and ESP Hoppers for unburnt carbon in fly ash.
- Sampling of bottom ash from hopper or scrapper.
- Sampling of raw coal from RC feeder of the mill for proximate and ultimate analysis of fuel and finding its Gross Calorific Value (GCV).
- Pulverised coal samples from each mill for sieve analysis.
- Sample of mill rejects for finding GCV.

Notes:

- (i) Before the Efficiency Test is conducted, the contractor will submit a detailed procedure for conducting the test which will be subject to the approval of the owner. Among other things, the procedure will also include the type of instruments to be used and the locations of various measuring instruments and sampling points.
 - (ii) During the Efficiency Test, the Steam Generator blow downs and the use of auxiliary steam for purposes like soot blowing should be stopped, since, accurate evaluation of heat loss due to these items is difficult.
 - (iii) Test Instruments should have 0.5% accuracy. Calibration of the instruments should not be more than six months old. Instruments calibration should be certified by Govt. Accredited Laboratories i.e. NABL approved laboratories.
 - (iv) During the test, the operating parameters should be kept stable and close to design parameters.
 - (v) During the Boiler Efficiency Test, quality of fuel to be used should be as close as possible of the design quality.
- iv) Correction to tested efficiency shall be applicable for variation in following parameter only:
- Ambient air temperature.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[128]	15.01.2016

- Relative humidity of ambient air.
- Hydrogen in coal.
- Moisture in coal.
- GCV of coal.

8.2.3 Auxiliary Power Consumption

The respective auxiliary power consumption as is illustrated hereunder:

a) Auxiliary Power Consumption

The auxiliary power consumption shall be calculated using the following relationship.

$$P_{au} = \sum P_u$$

P_{au} = Guaranteed Unit Auxiliary Power Consumption.

P_u = Power consumed by each of the continuously running equipment of Boiler & Auxiliaries.

While guaranteeing the auxiliary power consumption, the Bidder shall necessarily include all continuously operating equipment of Boiler & auxiliaries. The auxiliaries to be considered shall include but not be limited to the following:

- Mills (Number of Mills to be considered in operation will correspond to the number of mills required to be operated for design coal).
- PA Fans
- FD Fans.
- ID Fans.
- Air Heaters.
- Coal Feeders.
- Boiler Start up drain recirculation Pumps (If applicable).
- Seal Air Fans.
- Lube oil pumps for fans/ Air heaters & mill system etc.
- Scanner air fans.
- Electrostatic Precipitator with all ESP fields of all ESP passes working and rapping system in normal operation (as measured at the input terminals of the TR set. Refer Note 3 below).
- Gas Recirculation Fan (if applicable)
- DM Cooling (normally working) Water pumps to supply cooling water on the primary (DM) side of the plate type heat exchangers in the closed loop Equipment cooling dedicated to Boiler & Auxiliaries.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[129]	15.01.2016

- n) Auxiliary Cooling (normally working) water pumps to supply cooling water on the secondary side of the plate type heat exchangers in the closed loop Equipment cooling dedicated to Boiler & Auxiliaries.
- o) Power consumption of any other continuously operating auxiliary for Boiler and its Auxiliaries operation at 100% TMCR.

Note:

1. The Bidder shall furnish a list of equipment to be covered under Unit auxiliary power consumption, which shall be subject to Owner's approval.
2. The Bidder shall ensure that power supply to all such equipment to be covered under auxiliary power consumption is fed from unit board.
3. Method of Computation of Auxiliary Power consumption for ESP:-

For guarantee purpose, total maximum continuous Auxiliary power consumption will be the power consumption of corona power (excluding power consumption by hopper heaters, insulator heaters, rapping system, ventilation fans etc.) of all fields of all passes of ESPs for one unit. Corona power of TR sets will be computed at the input terminals of the TR sets when all ESP fields of all ESP passes are working and rapping system is in normal operation at the guarantee point condition. The measurement for guaranteed auxiliary power consumption shall be carried out during ESP collection efficiency test. The method for computing the corona power shall be as described below:-

- a) Power consumption of TR sets will be measured pass wise and for one pass (Say ESP-A) at a time with the help of energy meter in ESP MCC.
- b) Energy meter reading will be taken before starting the collection efficiency test and after completion of collection efficiency test.
- c) Before starting collection efficiency test, switch off all the TR sets serving to one pass (ESP-A) temporally and note down energy meter readings for period t1 i.e. E1. Power consumed by hopper heaters, shaft and support insulator heaters and rapping systems shall be $W1 = E1/t1$. The time period t1 shall be minimum 4 hours.
- d) During the collection efficiency test the total energy fed in to ESP MCC of one pass (say ESP-A) will be measured during entire period of collection efficiency test i.e. E2. Total time period (t2) of test shall be noted. The power consumption shall be $W2=E2/t2$. During this period, no change in the status of hopper heaters, insulator heaters, rapping system, ventilation fans etc. will be allowed w.r.t. the condition at clause c) above. In case there is any change in the status of hopper heaters, insulator heaters, rapping system, ventilation fans etc., then auxiliary power consumption test will be repeated again.
- e) Measured corona power consumption for one pass (say ESP-A)= $(W2-W1)$
- f) Measured corona power of one unit= Corona power of (ESP-A + ESP-8 + ESP-C +ESP-D + ESP-E + ESP-F).

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[130]	15.01.2016

8.3 Guarantees under Category-II

The Performance Guarantees, conformance to which is mandatory are as follows:

i. Particulate Emission/ ESP Efficiency

Maximum [...] mg/Nm³] (With worst coal and one field out in each path)

The performance test on electrostatic precipitator will commence after a minimum period of fifteen hundred (1500) hours of continuous operation after completion of initial operation. During the interval between the commencement of initial operation and the commencement of performance test only routine maintenance shall be carried out. No physical or chemical cleaning of ESP shall be permitted during this period or immediately before the conductance of the performance tests.

The test efficiency shall be based on the overall performance of the electrostatic precipitator over a mutually agreed period of operation under the conditions given in this Specification and allowing the normal operation of the unit including rapping and normal soot blowing and/or when fuel oil is being fired in the igniters and/or warm up guns.

The overall test efficiency and test temperature/inlet dust burden for one set of ESP passes (streams) serving one Boiler shall be worked out as follows:-

- a) Vm (guarantee point test flow) shall be the total of inlet gas flows to, say six gas streams at the time of test.
- b) Test inlet dust burden (Di) shall be weighted mean of the inlet dust burdens for the individual streams i.e.:

$$\{(Vm1*Di1)+(Vm2*Di2) + (Vm3*Di3)+(Vm4*Di4)+(Vm5*Di5)+(Vm6*Di6)\}$$

$$Di = \frac{\{(Vm1*Di1)+(Vm2*Di2) + (Vm3*Di3)+(Vm4*Di4)+(Vm5*Di5)+(Vm6*Di6)\}}{(Vm1+ Vm2 + Vm3 + Vm4+ Vm5 + Vm6)}$$

$$(Vm1+ Vm2 + Vm3 + Vm4+ Vm5 + Vm6)$$

Where suffix 1, 2,3,4,5 & 6 represents the six gas streams.

Similarly the test outlet dust burden (Do) will be calculated based on outlet gas flow.

- c) The weighted test inlet gas temperature (Ti) shall also be worked out in a similar manner i.e.

$$(Ti1*Vm1)+(Ti2*Vm2)+(Ti3*Vm3)+(Ti4*Vm4)+(Ti5*Vm5)+(Ti6*Vm6)$$

$$Ti = \frac{(Ti1*Vm1)+(Ti2*Vm2)+(Ti3*Vm3)+(Ti4*Vm4)+(Ti5*Vm5)+(Ti6*Vm6)}{(Vm1+ Vm2 + Vm3 + Vm4 + Vm5 + Vm6)}$$

$$(Vm1+ Vm2 + Vm3 + Vm4 + Vm5 + Vm6)$$

- d) The measured test efficiency shall be :

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[131]	15.01.2016

(Di-Do)

$$Em = \frac{Di - Do}{Di} \times 100\%$$

- e) The corrections for the flue gas flow and ESP inlet flue gas temperature in excess of the values for these parameters under guarantee point conditions, shall be allowed only in case and to the extent such variations are caused solely due to changes in specified coal properties and ambient conditions. Further, the corrections for the flue gas flow and temperature lower than the guarantee point values shall be applied based on actually measured test values. Subject to the above, the corrections for the variation in flue gas flow, inlet dust burden and ESP inlet flue gas temperature shall be based on the above computed test values and the procedure given below:
- f) At the time of performance testing if the inlet flue gas conditions are not consistent with the specified conditions, due to variation in coal characteristics from the design coal and boiler operating conditions the precipitator performance conforming to this Specification, shall be determined using performance curves and correction factors accepted at the time of award of Contract. However, the test efficiency shall be corrected to the guarantee point conditions in the following manner:

1. $Ec = 1 - eZ$

Where Ec = Corrected test efficiency to guarantee point conditions.

$$Z = C \ln \frac{1}{1 - Eg}$$

1

and $C = \frac{Ca \cdot Cb \cdot Cc \cdot \text{etc.}}{Ec}$

Ca. Cb. Cc. etc.

Ca.Cb.Cc etc. are Correction factors for flue gas at temperature, moisture content in flue gas, ESP inlet dust loading, sulphur and sodium contents of coal ash based on correction curves furnished by the Bidder and approved by the Owner.

2. $Eg = 1 - eY$

Where $Y = \{(Vm/Vg)^{0.5}\} \cdot \ln (1 - Em)$

Eg = Measured test efficiency corrected to the specified guarantee point flow

Vg = Specified Guarantee point gas flow (m³/sec)

Vm = Measured gas flow (m³/sec)

Em = Measured test efficiency

\ln = Logarithm, natural base.

Document Number	Rev No.	Description	Page No.	Date of Issue
LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[132]	15.01.2016

The correction curves should be realistic for expected range of operation and variation in characteristics specified.

The test efficiency shall be the average of at least three corrected test efficiencies.

The Performance tests shall be carried out in accordance with method-17 of EPA (Environmental Protection Agency of USA) code. The details of the test shall, however be mutually agreed upon between the Owner and the Bidder.

Further, during the performance test of the Electrostatic Precipitator, if the Bidder establishes that the average of three tested outlet dust burden (Do) values (uncorrected) are either equal to or less than [...] mg/Nm³], then the Bidder shall also be deemed to have successfully met the guaranteed ESP efficiency.

ii. Liquid Effluent

Liquid Effluent discharge to an outside body, from the plant battery limit, shall meet statutory requirements State Pollution Control Board.

8.4 Guarantees under Category-III

The parameters/capabilities to be demonstrated for various systems/ equipment shall include but not be limited to the following:

8.4.1 Noise

All the plant, equipment and systems covered under this Specification shall perform continuously without exceeding the noise level over the entire range of output and operating frequency specified.

Noise level measurement shall be carried out using applicable and internationally acceptable standards. The measurement shall be carried out with a calibrated integrating sound level meter meeting the requirement of IEC 651 or BS 5969 or IS 9779.

Equivalent "A" weighted Sound pressure shall be measured all around the equipment at a distance of 1.0 m from the Noise emitting source.

A minimum of 6 points around each equipment shall be covered for measurement. Additional measurement points shall be considered based on the applicable standards and the size of the equipment. The measurement shall be done with slow response on the A - weighting scale. The average of A-weighted sound pressure level measurements expressed in decibels to a reference of 0.0002 micro bar shall not exceed the guaranteed value. Corrections for background noise shall be considered in line with the applicable standards. All the necessary data for determining these corrections, in line with the applicable standards, shall be collected during the tests.

LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[133]	15.01.2016

If the noise level recorded is beyond the limits specified above, the Bidder should provide suitable acoustic cladding to mitigate the noise level to within allowable limits.

8.4.2 Start-up, loading, Unloading and Shutdown Capabilities

a) Boiler Start-up

Start-up time (up to full load), and loading capabilities for the Boiler for cold start conditions [(greater than 36 hours shutdown)], warm start conditions [(between 8 and 36 hours shutdown)] and hot start conditions [(less than 8 hours shutdown)] as indicated by the Bidder in the offer and accepted by the Owner shall be demonstrated, ensuring various parameters like tube metal temperature, excess air level etc is within design limits.

b) Sudden Total Loss of External Load

When the steam turbine generator unit experiences sudden total loss of all external load, the steam turbine generator unit shall not trip on over speed but shall continue to be in operation (house-load conditions) under the control of its speed governor to supply power for the plant auxiliary load and during such condition Boiler shall be capable of producing steam as per the requirement of Turbo Generator. The same shall be demonstrated.

8.4.3 Other Parameters for Boiler and Auxiliaries

a) Mill Capacity at Rated Fineness {Applicable for PF Boilers but not for CFBC Boilers}

Performance testing shall be done on each mill towards establishing its capacity specified at the rated fineness, applying corrections for the variation in coal characteristics i.e. HGI & total moisture. The Bidder shall guarantee the capacity output not less than the offered value for each mill with following conditions occurring simultaneously during testing with the available coal from the specified range:

- Coal fineness: Not less than [70% through 200 mesh] and not less than [99% through 50 mesh] screen.
- Mill loading: Not to exceed [90%] of maximum load for worst coal.

The Bidder shall guarantee that the above capacity shall be maintained and demonstrated with the installed grinding elements in nearly worn-out condition as mutually agreed for the purpose of ascertaining wear life of any of the wear parts. During the above mentioned operating period of the mill, manufacturer's operating instructions shall be followed and mill shall be operated with the specified range of coals without any such readjustment that requires a shutdown of the mill or reduction of the load and/or any replacement of any mill wear parts.

For the purpose of testing to demonstrate the capacity, if HGI and total moisture vary from those given in coal characteristics, the above pulverizer measured capacity shall be corrected using the capacity correction curves furnished by the Bidder and approved by the Owner. HGI versus mill capacity curve shall be furnished for HGI variation up to a

LII-GETS12021-G-00129-001	04	Tender Document for Selection of R&M Contractors – Boiler & Auxiliaries Volume-II, Section-I	[134]	15.01.2016

value above which the capacity remain constant. Capacity guarantee shall be conducted and demonstrated on each coal pulverizer individually.

b) Coal Mill Wear Parts Warranty {Applicable for PF Boilers but not for CFBC Boilers}

Life of mill wear parts, in hours of operation, for the entire range of coal characteristics specified.

The Bidder shall warrant the wear life of all wear parts of the pulveriser when grinding the specified range of coal. Pulveriser wear parts are defined as those parts of the pulveriser which are in contact with coal or coal dust and are likely to wear out during the operation of the pulveriser. The guarantee/warranty shall be demonstrated on each pulveriser during the Guarantee Trial Period commencing after establishing successful operation of the pulveriser continuously for a period of not less than [24 (twenty four)] hours, at or near its warranty rated capacity. The Guarantee Trial Period for the respective wear part(s) shall be at least three years or the wear life of any wear part that wear part(s), whichever occurs later. The establishment of the warranty will be based on actual total hours of operation of the pulveriser, regardless of the specified fuel or fuel loading of the pulveriser. The wear parts shall be considered to have passed their warranted operating life when they have successfully demonstrated their capability to meet the full load rated capacity of the pulveriser during the guaranteed life of the wear part. In case any of the wear part has worn out to such an extent that either the normal or safe operation of the pulveriser is jeopardised if this part is not replaced/repared, or continuous use with this part may lead to exposure or wear of other parts which are not meant for the purpose of checking the shortfall in wear life, even if there is no reduction in pulveriser rated capacity, then the part shall be deemed to have outlived its wear life. The rated capacity of pulveriser is as per manufacturer standard supplied mills. If any of the wear parts fail to meet the warranted life, additional quantities of these wear parts shall be supplied on prorata basis.

Pulveriser Warranty Shortfall Settlement Procedure (With Example)

For all wear parts of each pulveriser:
